About 300 miles out of Honolulu the air squadron ran into treacherous winds that tossed the giant planes as though they were corks.

"For an hour and a half," said Lieut. Comdr. William H. McDade, the flight chief, "we battled the storm, but could not get through. Thick as pea soup, it had trapped us completely. At one point it momentarily stopped us cold."

Louis Serpa, second pilot in McDade's plane, said the flight chief finally ordered the squadron to split up into three-plane groups.

"The planes in each group had to fly within 25 feet of their leaders in order to see each other," said Serpa. "We hit winds on every side, making rough riding, like going over Niagara Falls. At 9,000 feet we hit a wall of wind that threw us up like a toy balloon."

The squadron eventually soared into a clear spot and climbed over the remainder of the storm.

19 OF AIRBOATS READY, SEATTLE TO RECEIVE 12

S.D. SUN— 2-5-37

Six Bombers Assigned To San Diego Squadron; 176 On Contracts

Tentative assignments of remaining PBY-1 Navy patrol bombers under construction at Consolidated Aircraft Corp. have been made, The Sun learned today.

Nineteen of the big airboats have been completed and delivered to the Air Station. The first 12 have been flown to Honolulu, where they are now in service with Patrol Squadron Six.

12 To Seattle

Planes 13 to 23 inclusive will be attached to Squadron VP-11, which, with the original PBY plane flown non-stop from the Canal Zone to San Francisco by Lieut.-Comdr. Knefler McGinnis in 1935, will possess 12 of the bombers.

Delivery of 12 more planes will be made to Patrol Squadron 12 of the Naval Air Station, Seattle, and six are to be assigned to San Diego's Patrol Squadron Nine.

Another long-distance flight will probably be made June or July to Coco Solo, where 12 airboats will constitute Patrol Squadron Three. Final seven planes in the group of 60 PBY-1 airships will be used as replacements while others undergo overhaul.

These five dozen airboats represent the first group of 176 planes for the building of which Consolidated holds three Navy contracts totalling approximately $19,000,000.

Lindbergh Field Enhanced By New Ramp

S.D. UNION 2-6-37

Virtual completion of the seaplane ramp and runway on Lindbergh field, as well as the broad "apron" that greatly will enlarge the capabilities of the field for the use of both land and seaplanes was announced yesterday by Joe Brennan, port director.

Maj. Rueben H. Fleet, president, Consolidated Aircraft Corp., in commenting upon the new ramp, said, "The usefulness of Lindbergh field to seaplanes has certainly been greatly enhanced by the completion of this ramp, and much more business will be brought to San Diego because of it."

William Van Dusen, president of the board of air control, said that the ramp, combined with other seaplane facilities completed and planned, will make this city an outstanding seaplane port of the world.

FASTEST AIR TRANSPORT DUE

S D SUN 2-10-37

Production of a transport monoplane 30 miles an hour faster than any commercial airplane in the United States is under way at Burbank, officials of Lockheed Aircraft Corp., said today.

The new seven and one-half ton airliner will be an all-metal, twin-engined plane carrying 11 passengers, two pilots and a stewardess. It will be capable of a top speed of 265 miles per hour, a cruising speed of 240 miles, and a non-stop flying range of 1950 miles, company officers said.

Powered by two Wright Cyclone 840 horsepower engines, the plane, designed as the Lockheed "14", will take off in 11 seconds in the comparatively short run of 610 feet. With full gross weight of 15,000 pounds, it will climb to an absolute ceiling of more than five miles and will operate, with one motor shut off, at an altitude of 14,000 feet, the plane's designers claimed.

NAVY ASSIGNS NEW SQUADRON TO SAN DIEGO

S.D. SUN— 2-11-37

Seattle Unit Transferred To Base At North Island

San Diego's Navy aviation establishment soon will be expanded to include another patrol squadron, the Aircraft Base Force operations office revealed today.

Officers and men of Squadron VP-12, now stationed at Seattle, will be transferred to North Island and go into service with the aviation units to be attached to the USS Langley.

Langley Due Back

The Langley is scheduled to return here from Mare Island Navy Yard next Wednesday on completion of extensive repairs which have converted her from an aircraft carrier into a tender.

Two planes of Squadron VP-12 were flown here from Seattle this week to undergo overhaul before being transferred to VP-17, commissioned on North Island Jan. 2 and due to begin operations in the Washington city next month. The remaining four craft of VP-12 are being delivered to another of Seattle's new squadrons, VP-16.

Bombers Added

Twelve Consolidated PBY patrol bombers will be assigned to VP-12 during the next few weeks, the Base Force operations office announced. The squadron is commanded by Lieut.-Comdr. James E. Dyer.

Fliers Defeat Storm Gods

Couldn't Get Past, But Did

HONOLULU Star-Bulletin 1-29-37

How the 12 big planes of squadron VP-6 fought through a storm after striking a veritable wall of wind some 300 miles distant from Pearl Harbor at midnight last night was related by squadron personnel following their arrival here at 3:50 this morning from San Diego.

"We flew as low as 1,000 feet, and ascended to 14,000 feet to get over it, but it extended on up higher," Lt. Cmdr. William M. (Shorty) McDade said after he stepped out of his plane on the fleet air base ramp.

"It was just one of those things you can't get through," he said.

Trapped by Storm

But the planes did get through, unable to fly above a storm which, to use the words flashed in a radio message from his plane to the air base, extended upward "solid from the surface" to an undetermined height.

"We were trapped in it," Cmdr. McDade said.

The elevations of 1,000 and 14,000 feet were the lowest and highest which the squadron reached on its 2,631 mile voyage from San Diego.

"We were delayed an hour and a half—between here and the Pelican."

The Pelican is an aircraft tender at Pearl Harbor. She was stationed out approximately 300 miles from Pearl Harbor to furnish weather reports.

"Didn't Slow—We Stopped"

Asked how much the storm had slowed the planes down, Cmdr. McDade said, "We weren't slowed down. We were stopped cold."

At one time, he said, the squadron flew back for some distance away from Pearl Harbor before turning again to cope anew with the storm.

"We tried everything," he said. to do was get out

ime spent in battling e storm was estimat- 200 miles deep.

ee lightning but we kept well out of it," Cmdr. McDade added.

Headwinds At Beginning

Cmdr. McDade said the squadron encountered more headwinds than it expected. Headwinds set in shortly after the takeoff, but had been cleared by noon.

The squadron commander expressed himself as pleased with the performance of the planes. He spoke warmly of the officers and

(Continued on Page 9, Col. 8)

NAVY FLIERS VANQUISH STORM GODS OVER SEA

(Continued from Page 1)

men who formed the plane crews.

Speeds varied from 75 to 140 knots.

Louis Serpa, aviation chief machinist mate and second pilot in Cmdr. McDade's plane, looked fresh but confessed he would "like to stretch out on top of a bunk and just sleep. I've been going since 3 o'clock yesterday morning. That's when I got up before our takeoff.

"Just before midnight we hit a wall of wind. Air currents were coming every way. They tossed the planes up like balloons."

"Just a Business Trip"

The squadron finally set a straight course into the storm and battled through it, crew members said.

Cmdr. McDade, grinning, was overheard telling a friend after his arrival here that the flight was "just a business trip."

Thomas Duval, a husky machinist mate first class in Cmdr. McDade's plane, said, "The flight was okay. It got a little cold, though."

Officers and enlisted men were gayly welcomed by wives and friends. In the VP-6 hangar they drank coffee and ate sandwiches. On a table was a four foot cake across the white surface of which appeared in pink icing the legend, "Aloha—Honolulu, January 28, 1937 —VP-6."

In opposite corners appeared, in brown chocolate, maps showing the place of takeoff at San Diego and the fleet air base at Pearl Harbor.

Cmdr. McDade cut the cake after the crew of the last plane to arrive had stepped ashore.

Above are eight of 13 officers who flew from San Diego to Pearl Harbor, arriving this morning in new patrol bombing planes. They are shown alongside number 2 plane of squadron, inside hangar at fleet air base following arrival here. Photograph furnishes some indication of size of planes, whose wingspread measures 104 feet. Left to right, Lt. (jg) J. B. H. Young; Lt. (jg) J. L. Heap; Lt. W. W. Ha Briant; Lt. Cmdr. W. M. McDade, commanding oficer executive officer; Lt. (jg) L. O. Matthews, and Lt. Star-Bulletin photos.

He Can Do Just About Anything—In A Jungle

Richard Archbold, 29, Waits Delivery Of PBY Plane

S.D SUN 1-31-37

At 29, Richard Archbold, a New Yorker with a British accent, has been chief pilot, chief photographer, and leader of tropical expeditions; he can rattle off the scientific names and complete descriptions of mammals from the Australian "teddy bear" (koala to him) to the giant panda of Manchukuo; and he can nonchalantly maneuver a giant amphibian plane against a cross wind into a seven-knot current of a narrow stream which offers only 50-foot clearance from the wing tips.

Mr. Archbold, apparently, has feared getting a one-track mind. In his extreme youth, he had ambitions to explore. Combine the two and you have quite a versatile person.

Strenuous Life Devotee

A devotee of the strenuous life, but not to the point of flaunting it in the face of every city-dweller he meets, Mr. Archbold is taking it relatively easy right now. Consolidated Aircraft Corp. has provided him with an office, and during the next few months he is going to watch them turn out one of their famous PBY patrol bombers for him.

First Private Sale

Mr. Archbold is purchaser of the first PBY to be sold a private individual. Of course, it won't carry any bombs or other armament. This daring young man will use the huge airboat on another expedition into New Guinea next November for the American Museum of Natural History. He happens to be Research Associate of the Department of Mammals in this venerable institution.

The plane will be used to penetrate inaccessible jungle country traversed by rivers. When advance parties travel miles away from their base camp, use of the PBY will enable Mr. Archbold to drop food to the scientists.

Extremely Shy

The aviator-explorer-photographer gives an impression of extreme shyness. He'd look younger were it not for his unruly shock of black hair and thick mustache. He doesn't remember where he picked up the accent. Yes, he's lived in Australia, but not long enough to speak like a dyed-in-the wool Britisher.

He got his first job at the age of 21 as photographer in an expedition to Madagascar, sponsored by the American, British and French Museums of Natural History. He wound up this trip as an animal collector, and found the work so fascinating he decided to make a career out of exploration, even if it meant living in fever-infested jugles much of his life.

Authority On Fever

Fever. That's another subject about which Mr. Archbold can talk authoritatively. He has provided lodging for malarial spirochetes since 1933. In the jungles you dose yourself continually with quinine to build up resistance against the dread tropical mosquito which squirts the malarial germ into your blood stream.

"I became careless in the 1933 expedition which I led into Papua, New Guinea," he recalled. "I neglected to take the quinine, and the inevitable fever hit me.

Medicine Can't Help

"When malaria strikes, there's nothing you can do. You just lie in agony waiting for the sickness to turn one way or the other. You either live or die. No medicine can help you."

The fever stayed in his blood stream after the attack passed.

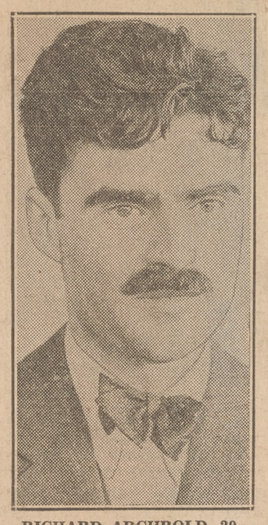
Since then, he has never known when the next attack will occur. "That's the way with malaria," he said. "If it's in you, it's liable to pop up actively at any moment. Then your temperature can bounce up to 105 degrees in 15 minutes."

15 Grains Quinine Daily

Since his second attack last January, Mr. Archbold has been sentenced to a medicine diet of 15 grains of quinine daily. And you may know how quinine tastes.

Permission for the sale of the plane had to be granted by the State Department. Since delivery of a U. S. military craft is forbidden for one year after the first plane is received by the government, Mr. Archbold must wait until next November before taking the PBY out of the country.

He will probably follow the course taken by the 12 Navy bombers to Hawaii, continuing to Midway Island, Wake Island, Guam and thence to New Guinea. The scientists will join him in Hawaii.



RICHARD ARCHBOLD, 29
Seeks new jungles to conquer.

NAVY AIRBOATS BEAT STORM TO HAWAII BASE

S.D SUN 1-29-37

Record Mass Flight Ends After S. D. Bombers Outrace Winds

Successfully fighting their way through a 'wall' of stormy weather 185 miles from Pearl Harbor, 12 Navy patrol bombers reached Honolulu at 6:20 a. m. (Pacific time) today to complete the most daring mass flight in U. S. aviation history, the United Press reported.

The first plane of the armada which flew the 2553-mile (2270 nautical miles) distance from San Diego to Hawaii landed at 6:29 a. m. and the other planes followed it to the water in rapid succession.

The exact total elapsed time of the flight, 21 hours and 48 minutes, was almost three hours less than that of the previous Navy trans-Pacific hop of six seaplanes led by Lieut.-Comd. Knefler McGinnis in January, 1934. Flying a distance about 200 miles shorter, from San Francisco to Hawaii, McGinnis' squadron crossed the Pacific in 24 hours, 45 minutes.

Two patches of unsettled weather delayed the planes on the long hop after they left San Diego at 8:30 a. m. yesterday. The first was encountered yesterday morning, soon after the takeoff. The second was early today when the fleet was within 185 miles of Pearl Harbor.

Driving rain and thunder showers forced the planes to shift from their course to escape the storm which earlier swept Oahu. Visibility became better closer to Honolulu and a brilliant moon flooded the ocean as the airmen winged their last few miles.

Through Bad Wall

Lieut. Arnold E. True, Pearl harbor aerologist, said that the "wall" of bad weather through which the fliers came was the worst reported in the area in years.

Wives and sweethearts of the aviators—left behind when the men left for San Diego last August—rushed to greet the men when then came ashore after crews, wearing bathing suits, swam out to attach mooring gears to the planes.

In Perfect Formation

The big airboats first were sighted rounding Makapuu Point, on the northeast corner of Oahu, at 5:49 a. m. At 6:20 a. m. they circled over Honolulu in perfect formation.

Six Navy surface craft were stationed across the ocean at 300-mile intervals to aid the fliers. The aircraft tender Pelican, 300 miles from Honolulu, was left behind before 3 a. m. and the fifth ship, the mine destroyer Breese, 610 miles out, was sighted at 12:30 a. m. today.

The new bombers, carrying 78 officers and enlisted men and two civilians, both employes of the builders, Consolidated Aircraft Corporation, will be used to replace obsolete planes in service in the Hawaiian islands area. They are forerunners of a giant fleet of 216 planes to be spotted at strategic points along the Pacific coast from Hawaii on the west to Puget Sound on the north and Panama on the south.

In Contact With S. D.

Regular contact was maintained with the San Diego Naval station, Pearl Harbor and the six surface craft stationed along the route, by means of powerful radio equipment.

The first surface ship, the aircraft tender Sandpiper, was passed at 12:30 p. m. about 340 miles at sea from San Diego. Headwinds were encountered which slowed down the giant seabirds.

Hold Speed Of 130

The destroyer Chandler, about 700 miles from San Diego, was sighted after the planes had skirted a low pressure area at 3:30 p. m. At 7:15 p. m. the planes passed the third patrol vessel, Gannet, about halfway on the 2553 mile journey (2270 nautical miles).

Two hours later, the fourth patrol ship, the aicraft tender Swan, was passed by the air fleet. By this time the weather had cleared and the squadron experienced no difficulty in holding and sometimes exceeding its cruising speed of 130 miles per hour.

The squadron of 12 planes is commanded by Lieut. Comdr. W. M. McDade of Pearl Harbor. Each ship carries a crew of six or seven and enough fuel for a 3000-mile flight.

Cooperation of the Harbor Department and other local maritime authorities was lauded today by Rear Adm. Ernest J. King, who declared that the difficult takeoffs of the 12 patrol bombers yesterday were considerably aided when civilian boats kept clear of the harbor runways.

In a dispatch to 11th Naval District headquarters, Adm. King recorded his appreciation, indicating that courtesy of commercial vessels had contributed to the safety of personnel in the big airboats.

The takeoff runways extended practically the entire length of the bay, from the ferry lanes to Point Loma, and even that distance of two to three miles was almost insufficient for the planes which did succeed in rising from the water in a westerly direction.

Finally, it became necessary for the pilots to take a course beginning at La Playa. With a little head wind helping to lift them from the water, they were able to shorten the runway at least a mile. S.D SUN 1-29-37

S.D TRIBUNE 2-9-37

HONOLULU 'ALOHA' CAKE FINDS S. D. FLIERS RECEPTIVE

Even a battle against the elements could not prevent the crew of the flagship in the navy's airplane San Diego-Honolulu flight from lining up for a share of "Aloha" cake at Honolulu at the end of the greatest mass flight, as shown here in an Associated Press photo. Left to right: E. J. McCormick, Louis Serpa, Lt. C. H. Ostrom, Lt. Comdr. W. M. McDade, flight commander; Henry Hutley, Thomas Duval, Reginald Fourcher. The storm the San Diego navy fliers encountered 11 days ago moved on across the Pacific and struck San Diego Saturday producing torrential rains here.

GANNET LEAVES ON MID-PACIFIC PATROL DUTY

S.D SUN 1-21-37

The San Diego aircraft tender Gannet left the harbor this morning for an unannounced destination in the Pacific, believed to be a point midway between here and Hawaii, where the vessel will undertake "plane guard" duty on the flight to Pearl Harbor next week of 12 Consolidated PBY patrol bombers.

Swan, Avocet Depart

Meanwhile, the aircraft tenders Swan and Avocet, attached to the Fleet Air Base at Pearl Harbor, left Hawaii yesterday, 11th Naval District headquarters were notified today. These ships will probably be stationed at 300-mile intervals and will constitute the last two plane guards on the long flight.

Following the Gannet, which will be posted approximately 1000 miles south of here, will be the aircraft tender Sandpiper, and the Wright, flagship of Rear Adm. Ernest J. King.

Airboats To Hop

The 12 airboats to make the flight are commanded by Lieut.-Comdr. William M. McDade of Pearl Harbor's Patrol Squadron Six. All have undergone 24-hour non-stop endurance tests and are beblieved in fit condition for the transpacific flight, which will probably start from Alameda.

'Plane Guards' To Leave

To engage in "plane guard" duty on the trans-Pacific flight next week of 12 Consolidated PBY patrol bombers, the flagship of Rear Adm. Ernest J. King, USS Wright, the aircraft tender Sandpiper and two destroyers will probably leave the harbor over the weekend. The Gannet preceded these craft to her station 1000 miles south of here yesterday.

Weather data will be flashed to the plane squadron in order that Lieut.-Comdr. William M. McDade, commanding officer, may decide the most satisfactory time of departure for the islands.

S.D. SUN 1-22-37

S.D. SUN 1-19-37

There was a lot of scurrying about at Rockwell Field yesterday getting things in readiness for one of the rare surprise visits to San Diego by high-ranking Army officers.

With only a few hours advance notice, Brig. Gen. A. W. Robbins, assistant chief of the Army Air Corps in charge of the Materiel Division, dropped in on the depot for a semi-official tour of inspection.

Five Officers Accompany

Gen. Robbins was accompanied by five fellow officers in a Lockheed Electra Army transport. They were Lieut.-Col. Oliver P. Echols, chief of the engineering section of the Materiel Division; Lieut.-Col. William F. Voiandt, Maj. Bennett E. Meyers, who represented the Chief of the Air Corp's Field Service Section, under whose jurisdiction the Rockwell Field Air Depot operates, and pilots of the plane, Capts. Frank G. Irvin and Turner A. Sims Jr.

Probability that Consolidated Aircraft Corp. may soon bid on an Army plane contract was seen in the inspection of the local plant yesterday by Gen. Robbins, who is responsible for procurement of Army aviation equipment.

Paving of Ramp Approach To Start Today S.D.SUN 1-21-37

Paving of the runway extending to the municipal ramp was to begin today, weather permitting, Port Director Joe Brennan reported.

The paved strip will enable Consolidated Aircraft Corp. to move newly-built PBY planes to the ramp with little difficulty, according to Brennan. Launching of the airboats from an improvized ramp reached after "rough going" across a beach is a troublesome affair at present.

12 NAVAL PLANES LAND IN HONOLULU

WASH STAR 1-29-37

21 Hours and 48 Minutes Time for 2,553-Mile Flight From San Diego.

By the Associated Press.

HONOLULU, January 29.—Battling through thick weather in the last stages of their record-breaking flight, 12 huge United States naval seaplanes completed the longest over-water mass flight in history at 3:30 a.m. today (9:20 a.m. Eastern standard time).

They officially covered the 2,553 miles from San Diego to Honolulu in 21 hours 48 minutes elapsed time.

During the last 300 miles the squadron maneuvered between altitudes of 2,000 and 15,000 feet to escape what Lieut. Comdr. William H. McDade described as "very bad weather."

Arrive in Formation.

They came out into bright moonlight, sparkling on the calm waters, as they flew over the Pearl Harbor Naval Base in perfect formation, their flying lights twinkling.

The first plane came down on the harbor at 4:29 a.m. (9:59 a.m. Eastern standard time).

The official takeoff time from San Diego was announced as 6:02 a.m., Honolulu time, yesterday, and the arrival at Pearl Harbor at 3:50 a.m. today.

Six in Previous Flight.

The only previous mass transpacific flight was three years ago when Lieut. Commander Kneffler McGinnis led a squadron of six naval planes on another "routine" flight of 2,400 miles from San Francisco Bay. The elapsed time then was 24 hours, 45 minutes, about three hours longer for the shorter distance.

Today Comdr. McDade led his squadron in circling the harbor for 39 minutes before the first plane swooped down to a perfect landing on the calm, flood-lighted channel. Only 150 spectators, mostly families of the 80 flyers, were on hand to watch the end of the spectacular demonstration of the precision of naval flying.

McDade, who did not appear tired, related a bitter struggle with [illegible]

12 Navy Planes [illegible] HITS HAWAII AS PLANES WING IN

Low Pressure Area Sweeps Eastward In Night With Thunder, Lightning

A low pressure area which swept eastward across Hawaii, unloosing a vicious storm at it went, provided a brief but intensive disturbance here late Thursday and a furious onslaught in the path of the 12 navy planes flying from San Diego to Pearl Harbor.

Menacing dark clouds were the forerunner of the storm in Honolulu. Against a sea ranging in tones from pea green to deepest blue a slate gray curtain stretched from horizon to miles high in the sky. Curling lines of surf appeared snow white before the unusually dark background.

Shortly before 6:30 p. m. rain broke in waves over Honolulu, accompanied by lightning and pealing thunder.

According to Walter Feldwisch, weatherman, the low pressure area continued today but appeared to be disintegrating, although a repetition of the disturbance was possible.

Presence of the disturbance to the west was shown in weather reports Thursday but the weatherman said he did not anticipate that it would move as rapidly as it did in this direction.

Weather today, he said, was likely to continue unsettled with variable winds.

A thunderstorm Thursday was reported from Lanai City where rains were heavy. Rainfall in downtown Honolulu in a 24 hour period ending at 8 a. m. today was a fraction below an inch although precipitation in valleys and uplands was considerably heavier. Lihue, Kauai, reported heavy rains Thursday. The rainfall report from Hilo, Ha-

FASTEST AIR TRANSPORT DUE

S.D. SUN — 2-10-37

Production of a transport monoplane 30 miles an hour faster than any commercial airplane in the United States is under way at Burbank, officials of Lockheed Aircraft Corp., said today.

The new seven and one-half ton airliner will be an all-metal, twin-engined plane carrying 11 passengers, two pilots and a stewardess. It will be capable of a top speed of 265 miles per hour, a cruising speed of 240 miles, and a non-stop flying range of 1950 miles, company officers said.

Powered by two Wright Cyclone 840 horsepower engines, the plane, designed as the Lockheed "14", will take off in 11 seconds in the comparatively short run of 610 feet. With full gross weight of 15,000 pounds, it will climb to an absolute ceiling of more than five miles and will operate, with one motor shut off, at an altitude of 14,000 feet, the plane's designers claimed.

NAVY ASSIGNS NEW SQUADRON TO SAN DIEGO

S.D. SUN — 2-11-37

Seattle Unit Transferred To Base At North Island

San Diego's Navy aviation establishment soon will be expanded to include another patrol squadron, the Aircraft Base Force operations office revealed today.

Officers and men of Squadron VP-12, now stationed at Seattle, will be transferred to North Island and go into service with the aviation units to be attached to the USS Langley.

Langley Due Back

The Langley is scheduled to return here from Mare Island Navy Yard next Wednesday on completion of extensive repairs which have converted her from an aircraft carrier into a tender.

Two planes of Squadron VP-12 were flown here from Seattle this week to undergo overhaul before being transferred to VP-17, commissioned on North Island Jan. 2 and due to begin operations in the Washington city next month. The remaining four craft of VP-12 are being delivered to another of Seattle's new squadrons, VP-16.

Bombers Added

Twelve Consolidated PBY patrol bombers will be assigned to VP-12 during the next few weeks, the Base Force operations office announced. The squadron is commanded by Lieut.-Comdr. James E. Dyer.

"It was just one of those things you can't get through," he said.

Trapped by Storm

But the planes did get through, unable to fly above a storm which, to use the words flashed in a radio message from his plane to the air base, extended upward "solid from the surface" to an undetermined height.

"We were trapped in it," Cmdr. McDade said.

The elevations of 1,000 and 14,000 feet were the lowest and highest which the squadron reached on its 2,631 mile voyage from San Diego.

"We were delayed an hour and a half—between here and the Pelican."

The Pelican is an aircraft tender at Pearl Harbor. She was stationed out approximately 300 miles from Pearl Harbor to furnish weather reports.

"Didn't Slow—We Stopped"

Asked how much the storm had slowed the planes down, Cmdr. McDade said, "We weren't slowed down. We were stopped cold."

At one time, he said, the squadron flew back for some distance away from Pearl Harbor before turning again to cope anew with the storm.

"We tried everything," he said. "All I wanted to do was get out of it."

Judged by time spent in battling the weather, the storm was estimated to be about 200 miles deep.

"We could see lightning but we kept well out of it," Cmdr. McDade added.

Headwinds At Beginning

Cmdr. McDade said the squadron encountered more headwinds than it expected. Headwinds set in shortly after the takeoff, but had been cleared by noon.

The squadron commander expressed himself as pleased with the performance of the planes. He spoke warmly of the officers and

NAVY FLIERS VANQUISH STORM GODS OVER SEA

(Continued from Page 1)

men who formed the plane crews.

Speeds varied from 75 to 140 knots.

Louis Serpa, aviation chief machinist mate and second pilot in Cmdr. McDade's plane, looked fresh but confessed he would "like to stretch out on top of a bunk and just sleep. I've been going since 3 o'clock yesterday morning. That's when I got up before our takeoff.

"Just before midnight we hit a wall of wind. Air currents were coming every way. They tossed the planes up like balloons."

"Just a Business Trip"

The squadron finally set a straight course into the storm and battled through it, crew members said.

Cmdr. McDade, grinning, was overheard telling a friend after his arrival here that the flight was "just a business trip."

Thomas Duval, a husky machinist mate first class in Cmdr. McDade's plane, said, "The flight was okay. It got a little cold, though."

Officers and enlisted men were gayly welcomed by wives and friends. In the VP-6 hangar they drank coffee and ate sandwiches. On a table was a four foot cake across the white surface of which appeared in pink icing the legend, "Aloha—Honolulu, January 28, 1937—VP-6."

In opposite corners appeared, in brown chocolate, maps showing the place of takeoff at San Diego and the fleet air base at Pearl Harbor.

Cmdr. McDade cut the cake after the crew of the last plane to arrive had stepped ashore.

12 Navy Planes Due At 1 Friday Morning

TAILWINDS AID SQUADRON ON HAWAII FLIGHT

Planes Leave San Diego At 6:05 Honolulu Time On 2,631 Mile Journey

Making Good Progress As Headwinds End, Gasoline Loads Are Lightened

At 12 noon today, Honolulu time, the 12 navy planes of squadron VP-6 reported by radio their position as exactly one quarter of the way across the Pacific to Pearl Harbor from San Diego, navy authorities here announced.

The squadron reported it had flown out of head winds which delayed the flight in its initial stages, and for the rest of the aerial voyage to Pearl Harbor expected either no wind at all or favorable wind.

Arrival here is still placed after midnight tonight, probably about 1 Friday morning.

The quarter mark would place the planes approximately 657 miles out of San Diego. The six hour time elapsed over that distance would put their average speed at approximately 109½ miles an hour.

SAN DIEGO, Cal., Jan. 28 (AP).—Increasing their speeds as gasoline loads lightened, 12 navy planes en route to Honolulu reported this afternoon they were making good time with "everything going fine."

Light headwinds encountered during the forenoon were succeeded by tailwinds which were expected to continue during the remainder of the flight.

Th squadron passed the first surface ship, the aircraft tender Sandpiper, at 10 this morning, Honolulu time.

Later this afternoon the planes passed over the destroyer Chandler, 680 knots west of San Diego they wirelessed to the radio station.

The planes started their 2,631 mile mass flight to Honolulu at 8:35 this morning (6:05 HST).

It required 98 minutes for the planes to get into formation in the air and head out to the west over the Pacific.

The first of the seaplanes rose from the water at 6:39 and the others followed at regular intervals. Each circled over the navy air station, gaining altitude, until the 12th ship hopped at 7:36.

Then Lt. Cmdr. William H. McDade, commander of the flight, signaled for formation at 10,000 feet. The pilots put their ships into gradual climbs and at 8:35 squadron formation of 12 was made and the ships sped out to sea.

A total personnel of 80, 13 officers and 67 men, was aboard the planes. Some of the flying boats

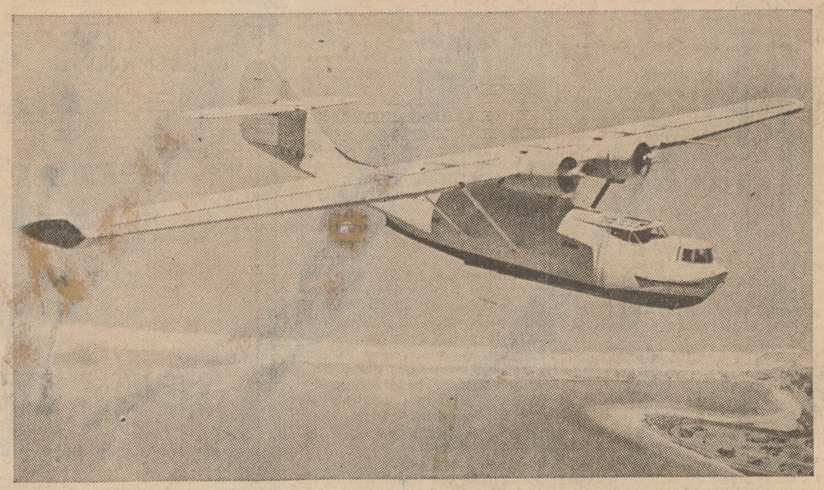
12 OF THESE NAVY PLANES HOP FOR HAWAII



One of the 12 PBY-1 patrol bombing planes which left San Diego at 6:05 this morning Honolulu time for Pearl Harbor appears above in a recent test flight over the California coast line. These planes, latest addition to the flying squadrons of the fleet, have a cruising range exceeding 3,400 miles. Lt. Cmdr. William M. McDade commands the flight, which will reach the fleet air base about midnight or early Friday morning, as replacements for old equipment in squadron VP-6 stationed here.

WINDS DELAY NAVY'S FLIGHT

(Continued from Page 1)

carried six and others seven.

Seven surface ships were spaced along the course of the flight, the Chandler, Gannet, Sandpiper, Avocet, Swan, Breese and Whippoorwill, the last four from Pearl Harbor.

Crowds assembled along the waterfront and at Point Loma to watch the planes get into the air, while friends and relatives of the fliers went to the North Island naval air station to say their final goodbyes.

Satisfactory weather over the Pacific was reported for the flight. The personnel expected to alight at Pearl Harbor within 20 hours and to eat a late night "breakfast" at the air station there.

Everything is in readiness here for handling the planes on their arrival.

Because the navy regards the flight as a routine replacement trip made at a time when transpacific flying has become almost commonplace, no reception program will be held.

However, wives and close friends of the fliers will be on hand to greet them. They have been absent since last fall, when they went to San Diego to take charge of the new planes.

The squadron is winging toward Pearl Harbor over a 2,631 land mile ocean route between San Diego and Oahu.

Although the navy is making its routine flight today with no attempt at any speed marks, a review of elapsed time in other flights from the mainland to Hawaii cammands interest.

The fastest time ever recorded on the 2,400 mile eastward run from Alameda to Pearl Harbor was established December 3, 1936, when Capt. A. E. La Porte brought Pan American Airways' Hawaii Clipper to a landing here in 15 hours and 58 minutes.

Lt. Cmdr. Knefler McGinnis led six planes of squadron VP-10 to the fleet air base over the same route in 24 hours and 45 minutes in 1934, arriving here January 11 of that year.

The famous sailing ship Sovereign of the Seas, one of the fleetest vessels in America's proud clipper fleet, crossd from San Francisco to Honolulu in 23 days in 1853. A fast voyage was made in 1852 when the bark Pathfinder made the run here from San Francisco in 11 days.

Commanding Officers

Commanding officers and pilots of the 12 planes are: 6P-1, Lt. Cmdr. William M. McDade, flight commander; 6P-2. Lt. (jg) G. C. Briant; 6P-3, Lt. (jg) Douglas B. Brokenshire; 6P-4, Lt. Warren W. Harvey; 6P-5, Lt. (jg) J. B. H. Young; 6P-6, Lt. (jg) L. O. Mathews Jr.

6P-7, Lt. R. W. D. Woods; 6P-8, Lt. (jg) G. L. Heap; 6P-9, Lt. (jg) J. O. Biglow; 6P-10, Lt. (jg) W. M. Drane; 6P-11, Lt. (jg) R. C. Bauer; 6P-12, Lt. (jg) J. A. Murphy. Lt. (jg) C. H. Ostrom is making the flight, assisting in navigation and communications.

AERONAUTICAL SALES INCREASE 85% IN 1936

Broadest Gains Shown in Deliveries of Both Planes and Engines for Military Uses

WALL ST. Journal 2-2-37

Dow Jones News Service

NEW YORK—Leighton W. Rogers, president of the Aeronautical Chamber of Commerce of America, Inc., reported to members at the annual meeting that sales and deliveries of aircraft, aircraft engines and spare parts last year totaled $76,804,818, an increase of 85% over the 1935 total of $41,545,000.

Deliveries of commercial aircraft totaled 1,528 units valued at $12,535,526, compared with 1,046 units, valued at $9,669,814, in 1935, an increase of 29% over the 1935 value.

Of the total of 1,528 commercial aircraft delivered, 1,356 machines were for two, three or four persons, compared with 914 of the same type in 1935.

Deliveries of multi-engnie land planes and amphibians in the air transport class totaled 126, compared with 115 in 1935. Of the 1936 deliveries, however, 41 were delivered during the last quarter, indicating that the large orders placed for air line equipment were just beginning to leave assembly lines late in the year, and should continue, therefore, in 1937.

Deliveries of military aircraft totaled 1,024 machines valued at $26,898,916, compared with 344 planes, valued at $8,876,303, in 1935.

Deliveries of commercial aircraft engines totaled 2,527 units valued at $7,946,015, compared with 1,886 engines, valued at $6,397,751, in 1935, an increase of 24%.

Deliveries of military aircraft engines totaled 1,794 valued at $14,619,453, compared with 894, valued at $5,906,258, in 1935.

Test Pilot, Service Expert Saw Ships Put Through Paces By Heavy Storm

By JOHN WILLIAMS

A couple of civilians, William B. Wheatley and Al Koster, most of all enjoyed the mass flight of 12 navy airboats from San Diego to Pearl Harbor that arrived at dawn Friday.

They climbed from the airboats stroking overnight beards and beaming like catnipped cats.

Nobody gave them a lei, nobody fussed over them.

But they were mighty happy. It had been a great flight. One of the navy pilots said it was like going over Niagara in a barrel. But the airboats and their crews had taken it.

As each airboat was wheeled into the hangar, Bill and Al walked among them, as a hen struts among her chicks.

Indeed, these great man made birds are somehow a part of Bill and Al because they helped build them and then supervised their exhaustive test flying and delivery to the navy.

Famed In Testing, Servicing

Bill Wheatley is one of the most famed American test pilots and Al is a service expert. What the navy boys know about the new airboats, Bill and Al have told them.

These young men somehow symbolize the world leadership of American aviation.

They are young—Bill's 35, Al's 32—and their devotion to their job has made them inseparable pals. Friday's arrival at Pearl Harbor marked Bill's eighth year with the Consolidated Aircraft Corp., San Diego, and Al's served seven years.

It was Bill who test flew the 12 airboats, turned them over to Al for checking and rechecking. They pounded the airboats in heavy seas. They did everything they should not have done. That's why they enjoy the work: deliberately trying to bust what they've built.

They came down in the airboats to observe them in ocean flight and they're glad they winged their un-

(Continued on Page 4, Col. 5)

(Continued from Page 1)

erring way into tough flying conditions.

Need A Fireplace

Only fault the boys could find: Most of the way they flew in the air of 35 degrees temperature and there was no interior heating! They swear to adjust this matter in the next type they build.

There was superlative heating, however, for food. Aboard Bill's boat, the 6-P-4, the mechanic went so far as to write menus. On electric flat tops he fried ham and eggs for sandwiches.

"Boy," beamed Bill, "and they smelled good. The menus—we ate like horses—started at soup and went through to coffee and cookies. When we came to the big storm, the 'cook' squawked because the eggs rolled 'round the pan."

Bill and Al won't talk about themselves. They'll yarn about their planes all night.

They are devoted to their boss, Maj. Reuben H. Fleet, an ex-air corps pilot, founder and president of Consolidated. Since 1923 Maj. Fleet's company has built something like 2,500 planes. Consolidated, for example, built the famed Commodore airboats, really aviation's first transocean planes, which Pan American Airways used on its South American routes.

Built Fleet Trainers

The success of the Commodores gave Consolidated confidence. They built many types for the army and navy. Famous is the Fleet Trainer and to cope with the demand Consolidated has a Canadian factory, which supplies the trainers to the British empire and every European country.

The 1930 Consolidated absorbed the Thomas Morse Aircraft Co. and soon moved production units from the east to San Diego to be right on the job with the navy, across the harbor from North Island.

Today the factory employs 3,700 men. The main workshop is 1,000 by 300 feet. Eleven planes are being produced monthly, the world's greatest output for one factory. In an experimental "hush-hush" shop nearby is being built an airboat designed for greater size and performances than these now at Pearl Harbor.

Consolidated is specializing in service to the navy. Today it is fulfilling a $19,000,000 contract on 176 navy airboats.

Bill and Al flying down with the airboats is an example of what the new deal in building for Uncle Sam means.

They will remain at Pearl Harbor just so long as they can find errors (if any) in the airboats.

The more they can get together with the navy boys means the better air defense America will have.

NAVAL PLANES BATTLE STORM ON HAWAII HOP

Eighty Men Pilot Craft Over Pacific From San Diego In 21 Hours 48 Minutes

McDade Puts Ship Down In Pearl Harbor at 4:29 A. M. To Receive Welcome

Honolulu Star-Bulletin 1-29-37

By JOHN TERRY

Thirteen officers and 67 enlisted men of the fleet air base are resting today after bringing the 12 new patrol bombing planes of Squadron VP-6 safely to Pearl Harbor through a violent storm in the closing hours of a flight from San Diego.

Behind the silver hulls of the navy's newest aircraft lies a 2,631 mile ocean route, successfully covered in a 21 hour 48 minute flight, which ended when Lt. Cmdr. William M. McDade, squadron commander, radioed his arrival time at Pearl Harbor at 3:50 this morning.

His plane, first to land, swept down on the channel surface opposite the air base at 4:29. A few minutes later he was ashore, bringing with him the first detailed report of an hour's fight with a storm encountered approximately 300 miles from Pearl Harbor at midnight.

Radio Reports Bad Weather

Preliminary indications of weather trouble were afforded by radio messages, the first at 12 p. m. last night saying, "Am in very bad weather at 12,000 feet in vicinity of Pelican (aircraft tender). Give weather report immediately."

At 3 the communications office at the fleet air base picked up another message reading, "Have been trapped in heavy weather for the past hour. Solid from surface to 15,000 feet. Am in the clear now. Coming in on bearings."

Just as a red dawn was breaking behind Diamond Head, Lt. (jg) J. B. H. Young's plane, last of the group to land, touched water at 6:35, bringing to a close the biggest

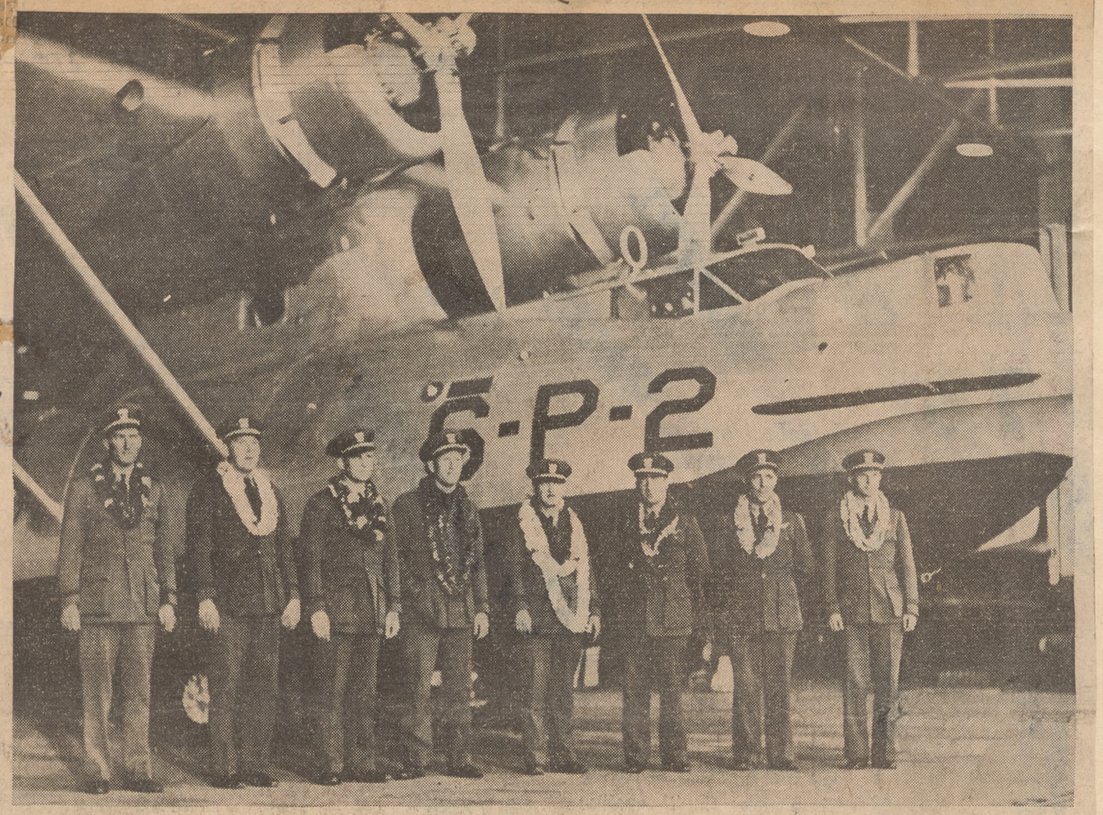
(Continued on Page 9. Col. 1)

WASHINGTON, Jan. 29. (AP)—Secretary of the Navy Claude A Swanson expressed the navy's elation today at the completion this morning of the flight of 12 new patrol planes from San Diego to Honolulu.

"While the flight was routine for the delivery of new planes to replace obsolete planes at Honolulu," the secretary said, "it was nevertheless a grueling test of the new patrol planes and the skill of the operating personnel.

"To fly 12 large planes in formation through all kinds of weather for a distance of 2,600 miles and maintain a schedule of departure and arrival fixed several weeks ago is a gratifying example of the efficiency of our naval aviation."

NAVY PILOTS WHO VANQUISHED STORM AT SEA



Above are eight of 13 officers who flew from San Diego to Pearl Harbor, arriving this morning in new patrol bombing planes. Young; Lt. (jg) J. L. Heap; Lt. W. W. Harvey; Lt. (jg) G. C. Briant; Lt. Cmdr. W M McDade, commanding officer; Lt. R. W. D. Woods, executive officer; Lt. (jg) L. O. Matthews, and Lt. (jg) W. M. Drane. Missing from the picture are Lt. (jg) Douglas B. Brokenshire, Lt. (jg) J. O. Biglow, Lt. (jg) R. C. Bauer, Lt. (jg) J. A. Murphy, Lt. (jg) C. H. Ostrum.—Star-Bulletin photo.

ARMY & NAVY

Routine Record Time 2/8/37

In January 1934, Navy flyers made the longest non-stop formation flight in aviation history. Patrol Squadron VP-10, consisting of six big Wright Cyclone-powered Consolidated Navy patrol flying boats and 30 officers and men, flew 2,399 mi. over the Pacific Ocean from San Francisco to Honolulu's Pearl Harbor in 24 hr. 45 min. (TIME, Jan. 22, 1934). The Navy's high command modestly waved aside the acclaim that followed this remarkable flight, said it was merely a routine transfer of men and equipment. Last week the Navy effected another "routine transfer of men and equipment," surpassed Squadron VP-10's mass-flight record.

One morning Lieut. Commander William McDade and 80 officers and men of Patrol Plane Squadron VP-6 climbed into twelve huge low-slung flying boats in San Diego Harbor, roared off without ceremony in trim formation toward Pearl Harbor, 2,553 mi. away. Next morning, 21 hr. 48 min. later, Patrol Squadron VP-6 completed its routine task without mishap at Pearl Harbor.

Patrol Squadron VP-6's new flying boats are called PBY-1 patrol bombers. With 1,100-h. p. Twin Row Wasp engines, retractable wing pontoons and clipper lines, they are the first twelve of 176 such ships ordered by the Navy from Consolidated Aircraft Corp.

San Diego-Built Airboats Assigned To Langley

S.D. UNION 2-24-37

Patrol Squadrons 11 and 12 of the fleet patrol wing, composed of airboats being delivered by Consolidated Aircraft Corp., are to be attached to the U. S. S. Langley. Converted from a carrier to a tender, the Langley is attached to base force units commanded by Rear Adm. Ernest J. King.

Patrol Squadrons 7 and 9, also Consolidated air cruisers have been assigned to the U. S. S. Wright.

Replacing the Puget Sound squadrons which are attached to the base force aircraft forces at San Diego will be Squadrons 15 and 17. These units will not be equipped with Consolidated air boats but with Martin seaplanes that have been in service for the last two years. These two squadrons will base at Sand Point, Wash.

A total of 36 Consolidated airboats will be delivered prior to June 1. Later deliveries will be assigned to new squadrons to be organized for duty in the Canal Zone, Hawaii and eventually at the new seaplane operating bse at Alameda.

12 NAVY PLANES ARRIVE AT P. H.

(Continued from Page 1)

mass flight ever made between the mainland and Hawaii — a flight which the navy describes as a routine replacement of old craft here.

It was 6:02 yesterday morning when the squadron formed over San Diego and sped on its over-water path to Pearl Harbor.

Approximaetly 170 men and women, and even a few children, lined the shoreside of the squadron's hangar to welcome the fliers.

Capt. Kenneth Whiting, air base commander, and Cmdr. Henry M. Mullinnix, air base executive offi-

NEW YORK—Leighton W. Rogers, president of the Aeronautical Chamber of Commerce of America, Inc., reported to members at the annual meeting that sales and deliveries of aircraft, aircraft engines and spare parts last year totaled $76,804,818, an increase of 85% over the 1935 total of $41,545,000.

Deliveries of commercial aircraft totaled 1,528 units valued at $12,535,526, compared with 1,046 units, valued at $9,669,814, in 1935, an increase of 29% over the 1935 value.

Of the total of 1,528 commercial aircraft delivered, 1,356 machines were for two, three or four persons, compared with 914 of the same type in 1935.

Deliveries of multi-engnie land planes and amphibians in the air transport class totaled 126, compared with 115 in 1935. Of the 1936 deliveries, however, 41 were delivered during the last quarter, indicating that the large orders placed for air line equipment were just beginning to leave assembly lines late in the year, and should continue, therefore, in 1937.

Deliveries of military aircraft totaled 1,024 machines valued at $26,898,916, compared with 344 planes, valued at $8,876,303, in 1935.

Deliveries of commercial aircraft engines totaled 2,527 units valued at $7,946,015, compared with 1,886 engines, valued at $6,397,751, in 1935, an increase of 24%.

Deliveries of military aircraft engines totaled 1,794 valued at $14,619,453, compared with 894, valued at $5,906,258, in 1935.

Test Pilot, Service Expert Saw Ships Put Through Paces By Heavy Storm

By JOHN WILLIAMS

A couple of civilians, William B. Wheatley and Al Koster, most of all enjoyed the mass flight of 12 navy airboats from San Diego to Pearl Harbor that arrived at dawn Friday.

They climbed from the airboats stroking overnight beards and beaming like catnipped cats.

Nobody gave them a lei, nobody fussed over them.

But they were mighty happy. It had been a great flight. One of the navy pilots said it was like going over Niagara in a barrel. But the airboats and their crews had taken it.

As each airboat was wheeled into the hangar, Bill and Al walked among them, as a hen struts among her chicks.

Indeed, these great man made birds are somehow a part of Bill and Al because they helped build them and then supervised their exhaustive test flying and delivery to the navy.

Famed In Testing, Servicing

Bill Wheatley is one of the most famed American test pilots and Al is a service expert. What the navy boys know about the new airboats, Bill and Al have told them.

These young men somehow symbolize the world leadership of American aviation.

They are young—Bill's 35, Al's 32—and their devotion to their job has made them inseparable pals. Friday's arrival at Pearl Harbor marked Bill's eighth year with the Consolidated Aircraft Corp., San Diego, and Al's served seven years.

It was Bill who test flew the 12 airboats, turned them over to Al for checking and rechecking. They pounded the airboats in heavy seas. They did everything they should not have done. That's why they enjoy the work: deliberately trying to bust what they've built.

They came down in the airboats to observe them in ocean flight and they're glad they winged their un-

(Continued on Page 4, Col. 5)

(Continued from Page 1)

erring way into tough flying conditions.

Need A Fireplace

Only fault the boys could find: Most of the way they flew in the air of 35 degrees temperature and there was no interior heating! They swear to adjust this matter in the next type they build.

There was superlative heating, however, for food. Aboard Bill's boat, the 6-P-4, the mechanic went so far as to write menus. On electric flat tops he fried ham and eggs for sandwiches.

"Boy," beamed Bill, "and they smelled good. The menus—we ate like horses—started at soup and went through to coffee and cookies. When we came to the big storm, the 'cook' squawked because the eggs rolled 'round the pan."

Bill and Al won't talk about themselves. They'll yarn about their planes all night.

They are devoted to their boss, Maj. Reuben H. Fleet, an ex-air corps pilot, founder and president of Consolidated. Since 1923 Maj. Fleet's company has built something like 2,500 planes. Consolidated, for example, built the famed Commodore airboats, really aviation's first transocean planes, which Pan American Airways used on its South American routes.

Built Fleet Trainers

The success of the Commodores gave Consolidated confidence. They built many types for the army and navy. Famous is the Fleet Trainer and to cope with the demand Consolidated has a Canadian factory, which supplies the trainers to the British empire and every European country.

The 1930 Consolidated absorbed the Thomas Morse Aircraft Co. and soon moved production units from the east to San Diego to be right on the job with the navy, across the harbor from North Island.

Today the factory employs 3,700 men. The main workshop is 1,000 by 300 feet. Eleven planes are being produced monthly, the world's greatest output for one factory. In an experimental "hush-hush" shop nearby is being built an airboat designed for greater size and performances than these now at Pearl Harbor.

Consolidated is specializing in service to the navy. Today it is fulfilling a $19,000,000 contract on 176 navy airboats.

Bill and Al flying down with the airboats is an example of what the new deal in building for Uncle Sam means.

They will remain at Pearl Harbor just so long as they can find errors (if any) in the airboats.

The more they can get together with the navy boys means the better air defense America will have.

NAVAL PLANES BATTLE STORM ON HAWAII HOP

Eighty Men Pilot Craft Over Pacific From San Diego In 21 Hours 48 Minutes

McDade Puts Ship Down In Pearl Harbor at 4:29 A. M. To Receive Welcome

Honolulu Star-Bulletin 1-29-37

By JOHN TERRY

Thirteen officers and 67 enlisted men of the fleet air base are resting today after bringing the 12 new patrol bombing planes of Squadron VP-6 safely to Pearl Harbor through a violent storm in the closing hours of a flight from San Diego.

Behind the silver hulls of the navy's newest aircraft lies a 2,631 mile ocean route, successfully covered in a 21 hour 48 minute flight, which ended when Lt. Cmdr. William M. McDade, squadron commander, radioed his arrival time at Pearl Harbor at 3:50 this morning.

His plane, first to land, swept down on the channel surface opposite the air base at 4:29. A few minutes later he was ashore, bringing with him the first detailed report of an hour's fight with a storm encountered approximately 300 miles from Pearl Harbor at midnight.

Radio Reports Bad Weather

Preliminary indications of weather trouble were afforded by radio messages, the first at 12 p. m. last night saying, "Am in very bad weather at 12,000 feet in vicinity of Pelican (aircraft tender). Give weather report immediately."

At 3 the communications office at the fleet air base picked up another message reading, "Have been trapped in heavy weather for the past hour. Solid from surface to 15,000 feet. Am in the clear now. Coming in on bearings."

Just as a red dawn was breaking behind Diamond Head, Lt. (jg) J. B. H. Young's plane, last of the group to land, touched water at 6:35, bringing to a close the biggest

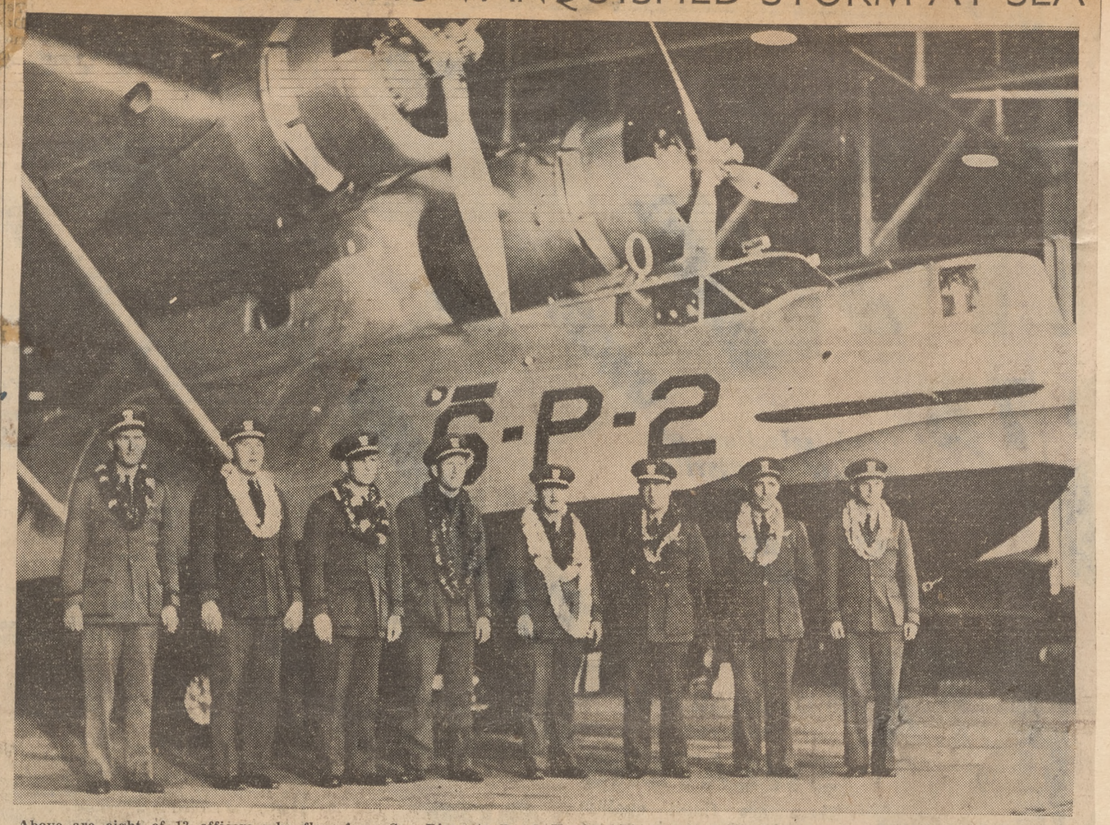
(Continued on Page 9. Col. 1)

WASHINGTON, Jan. 29. (AP)—Secretary of the Navy Claude A Swanson expressed the navy's elation today at the completion this morning of the flight of 12 new patrol planes from San Diego to Honolulu.

"While the flight was routine for the delivery of new planes to replace obsolete planes at Honolulu," the secretary said, "it was nevertheless a grueling test of the new patrol planes and the skill of the operating personnel.

"To fly 12 large planes in formation through all kinds of weather for a distance of 2,600 miles and maintain a schedule of departure and arrival fixed several weeks ago is a gratifying example of the efficiency of our naval aviation."

NAVY PILOTS WHO VANQUISHED STORM AT SEA



Above are eight of 13 officers who flew from San Diego to Pearl Harbor, arriving this morning in new patrol bombing planes. They are shown alongside number 2 plane of squadron, inside hangar at fleet air base. Photograph indicates size of planes, whose wingspread measures 104 feet. Left to right, Lt. (jg) J. B. H. Young; Lt. (jg) J. L. Heap; Lt. W. W. Harvey; Lt. (jg) G. C. Briant; Lt. Cmdr. W M McDade, commanding officer; Lt. R. W. D. Woods, executive officer; Lt. (jg) L. O. Matthews, and Lt. (jg) W. M. Drane. Missing from the picture are Lt. (jg) Douglas B. Brokenshire, Lt. (jg) J. O. Biglow, Lt. (jg) R. C. Bauer, Lt. (jg) J. A. Murphy, Lt. (jg) C. H. Ostrum.—Star-Bulletin photo.

ARMY & NAVY

Routine Record Time 2/8/37

In January 1934, Navy flyers made the longest non-stop formation flight in aviation history. Patrol Squadron VP-10, consisting of six big Wright Cyclone-powered Consolidated Navy patrol flying boats and 30 officers and men, flew 2,399 mi. over the Pacific Ocean from San Francisco to Honolulu's Pearl Harbor in 24 hr. 45 min. (TIME, Jan. 22, 1934). The Navy's high command modestly waved aside the acclaim that followed this remarkable flight, said it was merely a routine transfer of men and equipment. Last week the Navy effected another "routine transfer of men and equipment," surpassed Squadron VP-10's mass-flight record.

One morning Lieut. Commander William McDade and 80 officers and men of Patrol Plane Squadron VP-6 climbed into twelve huge low-slung flying boats in San Diego Harbor, roared off without ceremony in trim formation toward Pearl Harbor, 2,553 mi. away. Next morning, 21 hr. 48 min. later, Patrol Squadron VP-6 completed its routine task without mishap at Pearl Harbor.

Patrol Squadron VP-6's new flying boats are called PBY-1 patrol bombers. With 1,100-h. p. Twin Row Wasp engines, retractable wing pontoons and clipper lines, they are the first twelve of 176 such ships ordered by the Navy from Consolidated Aircraft Corp.

San Diego-Built Airboats Assigned To Langley

S.D. UNION 2-24-37

Patrol Squadrons 11 and 12 of the fleet patrol wing, composed of airboats being delivered by Consolidated Aircraft Corp., are to be attached to the U. S. S. Langley. Converted from a carrier to a tender, the Langley is attached to base force units commanded by Rear Adm. Ernest J. King.

Patrol Squadrons 7 and 9, also Consolidated air cruisers have been assigned to the U. S. S. Wright.

Replacing the Puget Sound squadrons which are attached to the base force aircraft forces at San Diego will be Squadrons 15 and 17. These units will not be equipped with Consolidated air boats but with Martin seaplanes that have been in service for the last two years. These two squadrons will base at Sand Point, Wash.

A total of 36 Consolidated airboats will be delivered prior to June 1. Later deliveries will be assigned to new squadrons to be organized for duty in the Canal Zone, Hawaii and eventually at the new seaplane operating bse at Alameda.

12 NAVY PLANES ARRIVE AT P. H.

(Continued from Page 1)

mass flight ever made between the mainland and Hawaii — a flight which the navy describes as a routine replacement of old craft here.

It was 6:02 yesterday morning when the squadron formed over San Diego and sped on its over-water path to Pearl Harbor.

Approximaetly 170 men and women, and even a few children, lined the shoreside of the squadron's hangar to welcome the fliers.

Capt. Kenneth Whiting, air base commander, and Cmdr. Henry M. Mullinnix, air base executive officer, were among the first to greet Cmdr. McDade.

Capt. Whiting laid an arm around the squadron commander's shoulder.

"Nice work, Shorty," he said.

Trying Voyage Completed

It was a commendation from one of the navy's first airplane pilots to a flier who had brought his planes through a trying voyage.

Shortly before 4 the red and green lights of the squadron appeared in the eastern sky approaching Pearl Harbor. The soft hum of engines swelled to a roar as the planes swept over the base.

"They're making sweet music," an enlisted man commented.

The moon was riding almost directly overhead, shining through fleecy clouds. Against it the planes were silhouetted like immense black birds.

Green rockets arched into the sky, signaling to the fliers that the channel was clear for a landing.

Circles Base Twice

Shortly after 3:50 Cmdr. McDade came in for a landing. His plane roared low over the water, then rose with blue fire streaming from exhausts of the two engines, to circle over the base again.

He was down at 4:29. Beach crews met his plane at the ramp's edge and brought it ashore by tractor.

Remaining planes made their landings in accordance with flares fired from shore, green denoting a clear channel, red warning of obstructions.

Occasional pieces of debris drifted down the channel, washed into the water by heavy rains which accompanied a storm that broke over Oahu at midafternoon.

Morning Breaks Clear

Serene morning skies bore little resemblance to the black clouds that had piled up over the island earlier.

The aircraft tender Pelican from Pearl Harbor, stationed 300 miles toward San Diego from Pearl Harbor, had notified the squadron before its takeoff on the coast that a thunder shower was gathering over the islands.

Squadron personnel is expected back on duty Monday. The new twin engined planes, capable of flying in excess of 3,400 miles, face a strenuous period of training operations, making up for time which crews lost while their planes were being completed.

Crews were as follows:

6-P1—Lt. Cmdr. W. M. McDade, commanding the entire flight, pilot; Louis Serpa, ACMM, NAP, second pilot; Henry Hurley, ACMM, plane captain; T. D. Duval, AMM1c, mechanic; E. J. McCormick, CRM, radio.

6-P2—Lt. (jg) G. C. Briant, pilot; F. M. Screws, AMM1c, NAP, second pilot; C. H. Bishop, ACMM, plane captain; P. L. Smith, AMM1c, mechanic; W. E. Benham, RM1c, radio; H. R. Green, RM2c, radio.

6-P3—Lt. (jg) Douglas B. Brokenshire, pilot; B. Sears, AMM1c, NAP, second pilot; R. R. Metzger, ACMM, plane captain; K. K. Kimmons, AMM2c, mechanic; J. F. Siebenthal, RM1c, radio; L. O. Polk, RM2, radio; J. Alkov, AMM1c, instruments.

6-P4—Lt. Warren W. Harvey, pilot; N. W. Woodruff, ACMM, NAP, second pilot; H. G. Byron, ACMM, plane captain; C. Hensen, AMM1c, mechanic; O. W. Miller, RM1c, radio.

6-P5 —Lt. (jg) J. B. H. Young, pilot; H. C. Smathers, AMM1c, NAP, second pilot; M. S. Harrell, ACMM, plane captain; W. Z. Paulk, AMM1c, mechanic; F. M. Williams, RM2c, radio; H. E. Rutherford, AMM1c, NAP, third pilot.

6-P6—Lt. (jg) L. O. Matthews Jr., pilot; A. E. White, AMM1c, NAP, second pilot; H. E. Leedom, AMM1c, NAP, third pilot; N. Evaschuk, AMM1c, plane captain; C. L. English, AMM2c, mechanic; L. M. Hurtado, CRM, radio.

6-P7—Lt. R. W. D. Woods, pilot; W. P. Brett, ACMM, NAP, second pilot; C. D. Conway, ACMM, plane captain; E. A. Turner, AMM1c, mechanic; D. E. Standford, RM1c, radio.

6-P8—Lt. (jg) G. L. Heap, pilot; J. E. Desjardines, ACMM, NAP, second pilot; L. A. Knight, ACMM, plane captain; H. J. Kolb, AMM1c, mechanic; W. H. Harris, RM1c, radio.

6-P9—Lt. (jg) J. O. Biglow, pilot; K. L. Moser, AMM2c, NAP, second pilot; S. W. Wooten, ACMM, plane captain; J. D. Kirk, AMM2c, mechanic; A. W. Andrews, RM2c, radio.

6-P10—Lt. (jg) W. M. Drane, pilot; D. B. Mommsen, AMM1c, NAP, second pilot; W. C. Curry, ACMM, plane captain; J. H. Bell, AMM1c, mechanic; L. E. Leonard, RM1c, radio.

6-P11—Lt. (jg) R. C. Bauer, pilot; H. H. Karr, ACMM, NAP, second pilot; D. B. McKay, ACCM, plane captain; B. S. Frick, AMM1c, mechanic; T. E. Muran, RM2c, radio.

6-P12—Lt. (jg) J. A. Murphy, pilot; R. P. Minnicar, AMM2c, NAP, second pilot; H. S. Schutt, ACMM, plane captain; A. B. Herb, AMM1c, mechanic; H. M. Davis, RM2c, radio.

Others included on the flight list of the second detachment (last six crews above) are H. A. Wolfe, ACMM, NAP; W. T. Whitham, RM1c, and R. B. Reuger, RM1c.

ALOHA TO SQUADRON VP-6; PLANE CREWS RELAX AFTER FLIGHT

Honolulu Star-Bulletin 1-29-37

Scenes following arrival at Pearl Harbor of 12 new patrol bombing planes at 3:50 this morning from San Diego appear above. 1—Crew of lead plane commanded by Lt. Cmdr. W. M. McDade prepare to cut aloha cake. Left to right, E. J. McCormick, CRM; Louis Serpa, aviation chief machinist mate and second pilot; Lt. (jg) C. H. Ostrom; Cmdr. McDade; Henry Hurley, aviation chief machinist mate; Thomas Duval, aviation machinist mate first class; Reginald Fourcher, radioman second class. 2—Lt. (jg) W. M. Drane, pilot of plane 6-P-10, and Mrs. Drane. 3—Thomas Duval, left, and Reginald Fourcher, right, try out coffee and sandwiches in VP-6 hangar. 4.—Cmdr. McDade cuts aloha cake. 5—Lt. (jg) L. O. Matthews, commanding plane 6-P-6, offers Joe Christmas a bite of Swiss cheese sandwich. 6—Cmdr. Henry M. Mullinnix, fleet air base executive officer (left), and Capt. Kenneth Whiting, air base commander (right), greet Cmdr. McDade (center), alongside his plane.—Star-Bulletin photos.

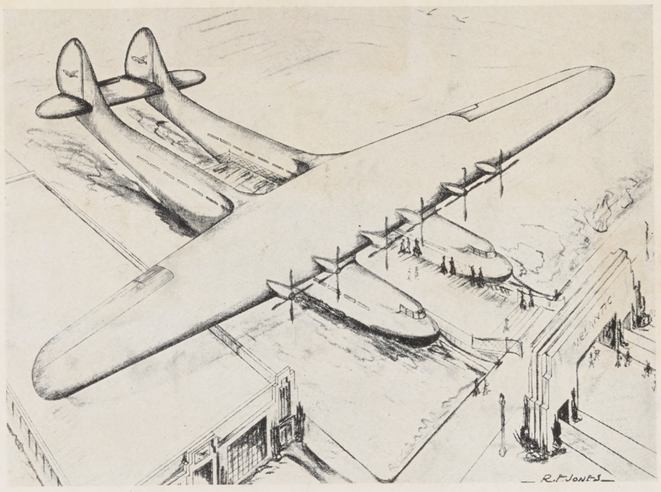
Air Giants to Come

Experts Predicting Flying Boats and Planes up to 500 Tons

EDITOR'S Note—The "airplane of the future" is being discussed more and more. Predictions by leading aeronautical engineers as to the size of the air transports to come are hitting the front pages of newspapers with increasing frequency. Previous mention has been made of the new forty-one ton Boeing clippers now under construction and of the designs by Glenn L. Martin for transoceanic flying boats of enormous size. Here are the opinions of three experts revealed in various ways in the public prints recently.



Artist's design of a twin-hulled 15-passenger flying boat described by Mr. Laddon. Courtesy of *The Consolidator*, Consolidated Aircraft Co.

CONSOLIDATED

Flying 300,000 pounds through the air at more than four miles per minute may seem fantastic but present design trends indicate that we may expect flying boats of this size and speed within the near future, according to I. M. Laddon, chief engineer of Consolidated Aircraft Corporation, San Diego. Mr. Laddon's comments appeared in a recent issued of *The Consolidator*, the company's house magazine.

"Our engineering department has made a study of a flying boat based on characteristics of racing type seaplanes which have attained speeds of 440 miles per hour," he said. "Making appropriate changes in size and improvements consistent with the present day knowledge the general appearance and performance of a large flying boat has been determined. A maximum speed of 260 miles per hour with a cruising speed of 230 miles per hour are attainable.

"One hundred and fifty passengers can travel in this air liner amid luxurious facilities for recreation and traveling comfort. Extra-fare passengers can enjoy the privacy of staterooms while others will be provided with commodious Pullman seats convertible to sleeping berths for overnight travel. The state rooms and recreational facilities will be housed in the wing. The twin hulls will carry a majority of the passengers and part of the crew of twenty, as well as tons of express and mail. Fuel tanks in the outer wing panels will carry over 15,000 gallons of gasoline which will be sufficient for 4,000 miles of flight.

"The design of the twin hulls is based on the most advanced type tested by the National Advisory Committee for Aeronautics at Langley Field, Virginia. This type gives very low water and air resistance.

"Each of the six and three-quarter foot propellers is driven by two 1500 horsepower engines housed in the leading edge of the wing where they can be serviced in flight. The streamlined structure supporting the propellers will contain the power plant accessories. The total combined output of the engines will be 18,000 horsepower approximately half of which could be disconnected for servicing in flight."

Mr. Laddon said that while the design study was based on light gasoline engine design, the great strides that are being made in Diesel engine development make it reasonable to believe that they also may be available for airplanes of this size. "The Diesel engine would give even greater efficiency resulting in lower cost of operation.

"A landing speed of 60-75 miles per hour (dependent upon loading) will be obtained by the use of wing flaps and is considered entirely safe for a flying boat of this size. The application of twin hulls to this design permits a wider distribution of weight along the wing span with a corresponding reduction in wing weight.

"An initial wing loading of forty-six pounds per square foot will insure riding comfort hitherto unknown. Although the range of the airplane would permit circumnavigation of a storm area, it is not believed that the craft would be uncomfortable if driven through mild storms. Wing loadings have successfully increased from fifteen pounds to thirty pounds per square foot with increase in size of much smaller flying boats. This increase in loading has been accompanied with increased comfort and therefore, a still further increase is logical especially for long range where a considerable change in weight occurs due to consumption of fuel.

"More technical data are accumulating daily toward the solutions of the problems accompanying the development of large aircraft. Devices for control of super-sized aircraft are rapidly being worked out so that great forward strides are inevitable."

N A A Magazine January 193-

$80,000,000 Army-Navy Contracts

1,543 Airplanes and 2,500 Engines Now Being Built

THE Army and Navy start the year 1937 with almost $80,000,000 in contracts for airplanes and engines now in the process of being filled—probably the largest amount of peace-time aircraft construction experienced so far by the aviation industry.

While some of these contracts were let quite some time ago, they represent the actual working orders which are keeping American aircraft manufacturers busy. Most of the companies supplying military aircraft are working at top speed. A number of contracts of fairly recent origin were completed in quick order and have not been included in the compilation herewith of orders now being filled.

Douglas Aircraft, Northrop, North American and Consolidated have been the big recipients during the past year for aircraft orders, while engine orders in large quantities have gone to Pratt and Whitney and Wright Aeronautical.

The contracts call for 1,543 planes and 2,500 aircraft engines, divided as follows: Army, 950 planes and 1,425 engines; Navy, 593 planes and 975 engines.

ARMY AIRPLANES

Contractor	*Type*	*Quantity*	*Contract Price*

RUSSIA TO RECEIVE S. D. PLANE NOV. 1

S.D. UNION — 2-28-37

Officials of the Consolidated Aircraft Corp., announced yesterday that a seaplane, similar in type to the navy's BY-1 but to be used exclusively for commercial purposes, will be delivered to the Russian government about Nov. 1. It is understood the airboat is to be used in passenger and airmail service in the Baltic sea and along the Volga.

Six airboats now under construction at Consolidated for the Argentine government will be ready for trial flights about June 1. It is hoped to fly the planes from San Diego to Buenos Aires.

RUSS BUY PLANE; CONSOLIDATED TO AID SOVIET PLANT

S.D. UNION — 3-1-37

Consolidated Aircraft Corp. has sold a huge seaplane, many spare parts and construction plans to the Soviet government, and has detailed 13 engineers and mechanics to the task of instructing Russian factory workers in production of the big flying boats for which Consolidated has become famous, David Fleet, son of Maj. Rueben Fleet, president of Consolidated, said yesterday.

The Russian plane factory, which Consolidated personnel will completely reorganize on a mass-production basis, is near the Azov sea, in the southeast part of the Soviet Union.

Three persons already have been assigned by Consolidated to the duty in Russia, Cass Gurney, who will direct work of mechanics; A. E. Petzon, chief of tool designing, and Etienne Dormoy, chief of engineering.

Living quarters and food of the employes will be furnished by the Russian government, and Consolidated will pay their salaries for at least one year. The Soviet government will reimburse Consolidated for the amount of the salaries, Fleet said. The men will leave within 60 days.

Fleet said that the flying boat being sold to Russia will not be used for military purposes.

AIRCRAFT WORKERS TO HOLD MEETING

S.D. SUN 2-26-37

Union employes of Consolidated Aircraft Corp. and other San Diego aviation plants will conduct a mass meeting at 8 p. m., today in Eagles Hall to discuss present labor problems in the aircraft industry, it was announced by James McDermott, president of Aircraft Local 1125, a branch of the International Association of Machinists.

Speakers will include Prof. Harry Steinmetz of San Diego State College, international vice-president of the American Federation of Teachers; and George Castleman, district representative of the International Association of Machinists.

S. D. AIRCRAFT GROUP TO DINE

S.D. SUN — 2-26-37

More than 50 members of the Irvin Aircraft Mechanics Association, who have completed advanced aeronautical training, will convene in El Cortez Hotel in their monthly dinner meeting at 7 p. m. tomorrow.

Speakers will include R. S. Schofield, representative of the Sperry Gyroscope Co., who will show movies describing the manufacture, operation and maintenance of the automatic pilot; Robert Betzinger, representative of Pratt & Whitney Co., manufacturers of the huge engines which power Consolidated's new PBY bombers, and C. A. Van Dusen, vice-president and works manager of Consolidated Aircraft Corp.

FLEET LEAVES CITY FOR KIN'S FUNERAL

EVENING TRIBUNE 2-24-37

Maj. R. H. Fleet, head of Consolidated Aircraft Corp., is en route to Aberdeen, Wash., to attend the funeral of his father, David W. Fleet, 86, who died there last night, it was reported today at the Consolidated plant. The elder Fleet was a pioneer Gray's Harbor resident, The Associated Press reports.

MAJOR FLEET'S FATHER EXPIRES

S.D. UNION 2-24-37

ABERDEEN, Wash., Feb. 23 (A. P.) — David W. Fleet, 86, pioneer Grays Harbor resident and father of Maj. Reuben H. Fleet, president of the Consolidated Aircraft Corp. of San Diego, died at home here tonight.

U.S. PROBES SAN DIEGO SITUATION

S.D. UNION — 2-27-37

Consolidated Aircraft Corp. Named in Complaints Similar to Those Filed at L. A.; 340 Workers Released.

LOS ANGELES, Feb. 26 (A.P.) — Some 200 sit-down strikers peacefully evacuated the Northrop Aircraft factory today as 343 indicted strikers arrested at the near-by Douglas plant were arraigned.

Afterward the Douglas strikers who had remained in jail since their arrest yesterday evening were released on their own recognizance by Superior Judge Emmet Wilson, after he had questioned each on his length of service with the aircraft concern.

Will Plead Tuesday

Previously Superior Judge Charles W. Fricke, before whom they were arraigned, ordered them to return to court next Tuesday to enter pleas.

The Douglas workers surrendered only after Dr. Towne Nylander, director of the regional federal labor board, entered the plant in the midst of a tense situation and assured them their recently filed complaint against the company would be heard not later than March 5.

The complaint accuses the company of violating the Wagner labor act by refusing to recognize the union and discharging men for union activities.

On behalf of Northrop employes, the United Automobile Workers union, the C. I. O. organization involved in both disputes, filed a complaint with the labor board today, charging employers with interfering with organization efforts and supporting the Northrop Employes' association.

James McDermott, president of the Aircraft local 1125 of the International Association of Machinists, principal Consolidated aircraft union, said last night that he had not been notified that Dr. Nylander was coming here, though he said complaints on the discharges of union men had been filed and the union is seeking to force an immediate vote on the collective bargaining question.

Charles A. Van Dusen, vice president of Consolidated, said he had not been notified of any visit from Dr. Nylander, who could not be located at any local hotel.

More than 650 Consolidated employes gathered at an open meeting in Eagles hall last night to hear machinist's union organizers and officers of the union.

Election Requested

Each complaint asks an election among employes to designate a collective bargaining agency.

Director Nylander of the labor board went to San Diego today to investigate a similar complaint from the machinists union against the Consolidated Aircraft Corp. there.

The San Diego complaint charges discriminatory discharge

(Continued on Page 3, Col. 2)

LABOR COMPLAINT AT CONSOLIDATED PROBED BY U. S.

(Continued from Page 1)

of two union men, spy activities against the union and fostering of a company union. It also asks a plant election to select a collective bargaining agency.

The Douglas plant will resume operations within less than a week, said a statement issued on behalf of President Donald Douglas from the company office.

The statement denied that reopening was awaiting the labor board hearing on the Douglas employes' complaint, scheduled for next Friday, March 5.

The Northrop workers came out after Chief Deputy District Attorney William Simpson and President John K. Northrop visited them in the plant.

Simpson warned them they would be indicted as the Douglas strikers were unless they evacuated this afternoon. Northrop invited them to return to work Monday and promised to deal with their elected representatives on their strike demands.

Northrop conferred privately with the leaders. He and Charles Hollingshead, strike strategy chairman, shook hands before the workmen and addressed them.

Besides the Douglas and Northrop employes' complaints, the regional labor board also has on file a complaint against the Northrop Co. from the International Association of Machinists, American Federation of Labor union. It charges Northrop is illegally fostering a company union and has been guilty of one case of discriminatory discharge.

Seek Same Objectives

Northrop Corp., a Douglas subsidiary employing 1150 men, closed its plant yesterday morning at the start of a sit-down strike seeking the same objectives as those of the Douglas strikers—15 cents an hour pay increase, recognition of a C. I. O. union and other benefits.

The county grand jury was to have held a special session this afternoon to consider indicting the Northrop sitters.

Tediously, one by one, the Douglas workers were arraigned in superior court after spending the night in jail.

They were brought from a crowded jail, where some of them had to sleep on the floor last night, and huddled into a small courtroom. There, the formality of arraigning each one separately extended long into the afternoon. The men seemed still in the sprightly mood that characterized their surrender.

First to be arraigned were William Busick and Andrew Schmolder, C. I. O. organizers, both Los Angeles residents for several years, released on bond last night.

Would Resume Picketing

They declared the strike would go on and Busick expressed hope the indicted workers could gain immediate release so they could go back on the picket lines. The Douglas plant remained closed today.

Counsel for the group said bail of $341,000—or $1000 for each man—was arranged before they came to court.

The bail bond firm, Cantillon, Groves and Glasser, reported the premium of $20,000 for the bonds came from the C. I. O. in Detroit.

S. D. AIRCRAFT UNIT ASKS RECOGNITION

S.D.SUN — 2-27-37

Consolidated Chiefs Wait Return Of Major Fleet From East

By United Press

LOS ANGELES, Feb. 27.—Dr. Towne Nylander, regional director of the National Relations Board, said today that no hearing would be set on a request of employes of the Consolidated Aircraft Corporation for certification of an election to select a collective bargaining agency until after March 5. Nylander returned from San Diego today.

The San Diego request, he said, had no connection with the Douglas and Northrop strikes.

Recognition of Aircraft Local 1125, International Association of Machinists, as the official bargaining unit of employes at Consolidated Aircraft Corp. yesterday was requested by George Castleman, district organizer for the union.

Mr. Castleman revealed to 750 Consolidated employes at a mass meeting in Eagles' Hall last night that he had conferred with C. A. Van Dusen, assistant to the president and works manager, for 2½ hours yesterday afternoon and had made two requests:

1. Recognition of the union as the collective bargaining agency for the employes.

2. If this is not agreeable, to hold an election in the plant to allow employes to determine what group shall represent them.

Mr. Van Dusen, according to Mr. Castleman, said he did not have the power to act on these issues.

It would be necessary to contact Maj. Reuben Fleet, president of the concern, who is now in Washington, D. C., on business, Mr. Castleman said Mr. Van Dusen informed him.

Mr. Van Dusen said he had spoken to Dr. Towne Nylander, director of the regional Federal Labor Board, who was here briefly yesterday.

Informal Talks Held

"The conference was on regular National Labor Relations Board business," Mr. Van Dusen said.

"We have also had purely informal talks with Mr. Castleman in the past. Nothing of importance was discussed. We have never refused to meet with people who claim to represent our employes."

James McDermott, president of Aircraft Local 1125, which is an affiliate of the American Federation of Labor, said that charges have been filed with the National Labor Relations Board against

Turn to Page 2, Col. 2.

AIR UNIT ASKS RECOGNITION

(Continued from Page 1)

Consolidated Aircraft Corp.

He affirmed reports from Los Angeles that a case is pending before the NLRB dealing with asserted discriminatory discharge against two union men.

Fleet Soon Back

"If the company refuses to permit an election," Mr. McDermott said, "the National Labor Relations Board takes the case to court as a civil matter, on the basis that the concern has defied the Wagner Labor act."

Maj. Fleet is expected to return to San Diego in about two weeks, according to Mr. Van Dusen.

Last night's meeting was presided over by McDermott and other speakers included Prof. Harry Steinmetz of San Diego State College, international vice president of the American Federation of Teachers.

Prof. Steinmetz gave a survey of labor troubles throughout the world.

Urges Drastic Action

"There is one spy out of every 20 workers in San Diego," he declared, adding, "It is time that they were run out of town."

He insisted that aircraft concerns "can't afford to have labor troubles," because "the competition for skilled workers is so great."

Three Men Assigned By Consolidated To Jobs in Russia

S.D. Tribune — 3-2-37

Three Consolidated Aircraft Corp. employes, first of 13 engineers and mechanics of the firm detailed to the task of instructing Russian factory workers in the production of Consolidated-type flying boats have been assigned to duty at a Russian plane factory near the Azov sea, in the southeast part of the Soviet union. They are C. Gurney, who will direct the work of mechanics; A. E. Petzon, chief of tool designing, and Etienne Dormoy, chief of engineering, who are expected to leave within 60 days.

Word of their assignment came as Consolidated officials announced that their firm has sold a huge seaplane, many spare parts and construction plans to the Soviet government. David Fleet, son of Maj. R. H. Fleet, president of Consolidated, said living quarters and food of the Consolidated employes will be furnished by the Russian government, with Consolidated paying their salaries for at least one year, later being reimbursed by the Soviet government for the amount of the salaries. Fleet said the flying boat being sold to Russia will not be used for military purposes.

S.D. SUN — 3-3-37

CONSOLIDATED STOCKS BREAKS 8-YEAR MARK

Consolidated Aircraft common stock spurted 3⅞ points to a new eight-year high of 33½, on the New York Curb Exchange today.

The issue closed at 32⅞, up 3¼ from the Saturday close, on turnover of 22,000 shares. Price reached today by stock of the local aircraft company marks a new high since 1929.

The issue reachced a 1936-37 low of 14¾. The depression low was set in 1933 at 6.

CONSAIR LABOR HEARING SET

S.D.SUN — 3-4-37

Relations Board To Act On Thursday

A National Labor Relations Board hearing to discuss the holding of a labor vote at the Consolidated Aircraft Co. plant has been set for Thursday at 10 a. m. in the local Federal building, it was learned here today.

Officials of Aircraft Local 1125, International Association of Machinists, had applied to Dr. Towne Nylander, NLIB regional director for certification of an election to determine which agency shall represent the employes in collective bargaining.

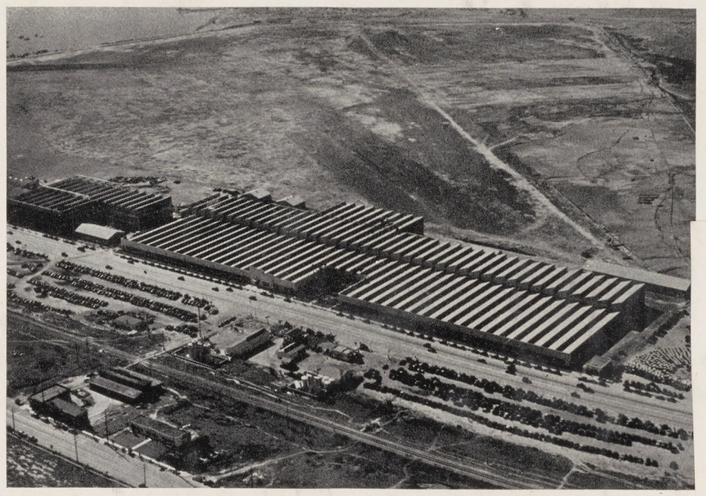
Maj. Reuben Fleet, president of Consolidated, who has been kept informed of the labor development at his plant, is in the east on important business matters, and is expected to return here about March 17.

We Visit Consolidated

A Story of the Fourteen Years of Existence of the Aircraft Manufacturing Corporation Whose New Home Is at San Diego, California

By JACK FROST

Secretary to the President of Consolidated



This air view is of the extensive new plant at San Diego, California, of the Consolidated Aircraft Corporation. The plant is situated on Lindbergh Field on San Diego's water front.

CONSOLIDATED Aircraft Corporation was founded by Major R. H. Fleet, May 23, 1923. Since that time the company has manufactured and sold over $27,000,000 worth of aircraft and parts. At the present time the company has an additional backlog of $17,250,000.

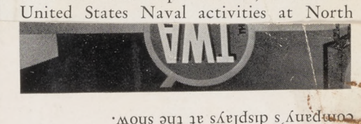
Airplanes designed and manufactured by this company have flown a total of more than 250,000,000 miles and have a record for safety and ease of maintenance unequalled by those of any company in the world.

For ten years the company carried on its business at Buffalo, N. Y. For five years a careful survey was made of all cities in the United States having more than 100,000 population, to select the best location for a permanent factory. Twice each year Major Fleet flew around the country examining localities and municipal airports. A site was wanted on a publicly owned and operated airport, having publicly owned water front on a good but not congested harbor, with a seaplane base and ramp on adjacent protected water, in a city large enough to furnish a reasonable supply of labor and materials, and in a southern climate unhampered by snow and ice and yet not unbearably hot. Finally San Diego, California, was decided upon as the best site for its future home.

The magnitude of a move of a plant the size of Consolidated, can hardly be realized until it actually is effected. More than 300 selected employees moved with the company from the East to form the nucleus of the company's trained organization, hundreds more followed within a short time and on October 20, 1935, the new plant was officially dedicated at San Diego with some 875 employees on the payroll.

The plant, as constructed, was considered to be the last word in aircraft factory efficiency. Every proved device for the safe and rapid manufacture of aircraft was made a part of the equipment installed in the plant. Nevertheless, within a few months, the tremendous volume of business gained by the company, had trebled the payroll and in order to meet scheduled deliveries, it was decided to increase the size of the plant by approximately 80 per cent.

Again all construction records were broken and within a few months Consolidated was moving new equipment into the enlarged and improved plant. The factory as it stands today has a total floor space, including paved yard (good manufacturing space in such a mild climate) of approximately 475,000 square feet. With over 3600 employees, the payroll exceeds $400,000 per month. This modern factory applies line production methods so successfully used by the automotive industry. Its location on Lindbergh Field, providing both land and seaplane bases, is close to United States Naval activities at North



Show at New York

tracted Great Attention and

THOUSANDS of men, women and children outside the air transport industry—and a whole lot of the industry itself—had an opportunity late in January and early this month to see first hand at the National Aviation Show, New York, just what Transcontinental & Western Air, Inc., is doing in the way of research, development and improvement in air travel.

The pictures reproduced herewith disclose some of the TWA displays at the show. To say that our displays attracted wide attention is putting it mildly. Every one was interested intensely in TWA's experimental overweather laboratory plane, the Northrop Gamma, and everyone also was interested in the homing direction finder as applied by TWA. In fact these two displays were features outstanding of the annual aeronautical exhibition.

The Gamma was in the show as a guest, so to speak, of the show management, but all other TWA features were displayed by the company. Aside from the homing direction finder with its anti-storm static loop, our displays included the great new Wright Cyclone engine which is to power our SDT's and DC-3's; the gyro pilot with which TWA's fleet of planes is and will be equipped, and other interesting features developed and used by this company.

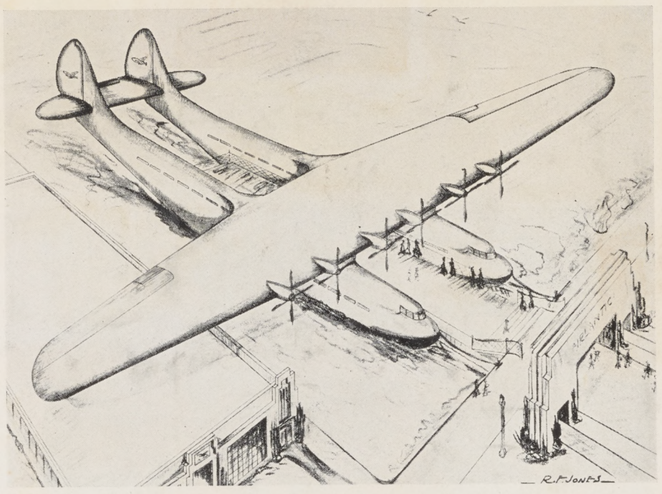
In another picture reproduced herewith are shown Jack Frye, president of TWA; Miss Lily Pons, noted operatic and radio star, and Miss Pons's fiance, Andre Kostelanetz, composer and conductor. The three were photographed before one of the company's displays at the show.

N.A.A. Magazine - January 1937

Air Giants to Come

Experts Predicting Flying Boats and Planes up to 500 Tons

EDITOR'S Note—The "airplane of the future" is being discussed more and more. Predictions by leading aeronautical engineers as to the size of the air transports to come are hitting the front pages of newspapers with increasing frequency. Previous mention has been made of the new forty-one ton Boeing clippers now under construction and of the designs by Glenn L. Martin for transoceanic flying boats of enormous size. Here are the opinions of three experts revealed in various ways in the public prints recently.



Artist's design of a twin-hulled 15-passenger flying boat described by Mr. Laddon. Courtesy of *The Consolidator*, Consolidated Aircraft Co.

CONSOLIDATED

Flying 300,000 pounds through the air at more than four miles per minute may seem fantastic but present design trends indicate that we may expect flying boats of this size and speed within the near future, according to I. M. Laddon, chief engineer of Consolidated Aircraft Corporation, San Diego. Mr. Laddon's comments appeared in a recent issued of *The Consolidator*, the company's house magazine.

"Our engineering department has made a study of a flying boat based on characteristics of racing type seaplanes which have attained speeds of 440 miles per hour," he said. "Making appropriate changes in size and improvements consistent with the present day knowledge the general appearance and performance of a large flying boat has been determined. A maximum speed of 260 miles per hour with a cruising speed of 230 miles per hour are attainable.

"One hundred and fifty passengers can travel in this air liner amid luxurious facilities for recreation and traveling comfort. Extra-fare passengers can enjoy the privacy of staterooms while others will be provided with commodious Pullman seats convertible to sleeping berths for overnight travel. The state rooms and recreational facilities will be housed in the wing. The twin hulls will carry a majority of the passengers and part of the crew of twenty, as well as tons of express and mail. Fuel tanks in the outer wing panels will carry over 15,000 gallons of gasoline which will be sufficient for 4,000 miles of flight.

"The design of the twin hulls is based on the most advanced type tested by the National Advisory Committee for Aeronautics at Langley Field, Virginia. This type gives very low water and air resistance.

"Each of the six and three-quarter foot propellers is driven by two 1500 horsepower engines housed in the leading edge of the wing where they can be serviced in flight. The streamlined structure supporting the propellers will contain the power plant accessories. The total combined output of the engines will be 18,000 horsepower approximately half of which could be disconnected for servicing in flight."

Mr. Laddon said that while the design study was based on light gasoline engine design, the great strides that are being made in Diesel engine development make it reasonable to believe that they also may be available for airplanes of this size. "The Diesel engine would give even greater efficiency resulting in lower cost of operation.

"A landing speed of 60-75 miles per hour (dependent upon loading) will be obtained by the use of wing flaps and is considered entirely safe for a flying boat of this size. The application of twin hulls to this design permits a wider distribution of weight along the wing span with a corresponding reduction in wing weight.

"An initial wing loading of forty-six pounds per square foot will insure riding comfort hitherto unknown. Although the range of the airplane would permit circumnavigation of a storm area, it is not believed that the craft would be uncomfortable if driven through mild storms. Wing loadings have successfully increased from fifteen pounds to thirty pounds per square foot with increase in size of much smaller flying boats. This increase in loading has been accompanied with increased comfort and therefore, a still further increase is logical especially for long range where a considerable change in weight occurs due to consumption of fuel.

"More technical data are accumulating daily toward the solutions of the problems accompanying the development of large aircraft. Devices for control of super-sized aircraft are rapidly being worked out so that great forward strides are inevitable."

N.A.A. Magazine January 1937

$80,000,000 Army-Navy Contracts

1,543 Airplanes and 2,500 Engines Now Being Built

THE Army and Navy start the year 1937 with almost $80,000,000 in contracts for airplanes and engines now in the process of being filled—probably the largest amount of peace-time aircraft construction experienced so far by the aviation industry.

While some of these contracts were let quite some time ago, they represent the actual working orders which are keeping American aircraft manufacturers busy. Most of the companies supplying military aircraft are working at top speed. A number of contracts of fairly recent origin were completed in quick order and have not been included in the compilation herewith of orders now being filled.

Douglas Aircraft, Northrop, North American and Consolidated have been the big recipients during the past year for aircraft orders, while engine orders in large quantities have gone to Pratt and Whitney and Wright Aeronautical.

The contracts call for 1,543 planes and 2,500 aircraft engines, divided as follows: Army, 950 planes and 1,425 engines; Navy, 593 planes and 975 engines.

ARMY AIRPLANES

Contractor	*Type*	*Quantity*	*Contract Price*

RUSSIA TO RECEIVE S. D. PLANE NOV. 1

S.D. UNION — 2-28-37

Officials of the Consolidated Aircraft Corp., announced yesterday that a seaplane, similar in type to the navy's BY-1 but to be used exclusively for commercial purposes, will be delivered to the Russian government about Nov. 1. It is understood the airboat is to be used in passenger and airmail service in the Baltic sea and along the Volga.

Six airboats now under construction at Consolidated for the Argentine government will be ready for trial flights about June 1. It is hoped to fly the planes from San Diego to Buenos Aires.

RUSS BUY PLANE; CONSOLIDATED TO AID SOVIET PLANT

S.D. UNION — 3-1-37

Consolidated Aircraft Corp. has sold a huge seaplane, many spare parts and construction plans to the Soviet government, and has detailed 13 engineers and mechanics to the task of instructing Russian factory workers in production of the big flying boats for which Consolidated has become famous, David Fleet, son of Maj. Rueben Fleet, president of Consolidated, said yesterday.

The Russian plane factory, which Consolidated personnel will completely reorganize on a mass-production basis, is near the Azov sea, in the southeast part of the Soviet Union.

Three persons already have been assigned by Consolidated to the duty in Russia, Cass Gurney, who will direct work of mechanics; A. E. Petzon, chief of tool designing, and Etienne Dormoy, chief of engineering.

Living quarters and food of the employes will be furnished by the Russian government, and Consolidated will pay their salaries for at least one year. The Soviet government will reimburse Consolidated for the amount of the salaries, Fleet said. The men will leave within 60 days.

Fleet said that the flying boat being sold to Russia will not be used for military purposes.

AIRCRAFT WORKERS TO HOLD MEETING

S.D. SUN 2-26-37

Union employes of Consolidated Aircraft Corp. and other San Diego aviation plants will conduct a mass meeting at 8 p. m., today in Eagles Hall to discuss present labor problems in the aircraft industry, it was announced by James McDermott, president of Aircraft Local 1125, a branch of the International Association of Machinists.

Speakers will include Prof. Harry Steinmetz of San Diego State College, international vice-president of the American Federation of Teachers; and George Castleman, district representative of the International Association of Machinists.

S. D. AIRCRAFT GROUP TO DINE

S.D. SUN — 2-26-37

More than 50 members of the Irvin Aircraft Mechanics Association, who have completed advanced aeronautical training, will convene in El Cortez Hotel in their monthly dinner meeting at 7 p. m. tomorrow.

Speakers will include R. S. Schofield, representative of the Sperry Gyroscope Co., who will show movies describing the manufacture, operation and maintenance of the automatic pilot; Robert Betzinger, representative of Pratt & Whitney Co., manufacturers of the huge engines which power Consolidated's new PBY bombers, and C. A. Van Dusen, vice-president and works manager of Consolidated Aircraft Corp.

FLEET LEAVES CITY FOR KIN'S FUNERAL

EVENING TRIBUNE 2-24-37

Maj. R. H. Fleet, head of Consolidated Aircraft Corp., is en route to Aberdeen, Wash., to attend the funeral of his father, David W. Fleet, 86, who died there last night, it was reported today at the Consolidated plant. The elder Fleet was a pioneer Gray's Harbor resident, The Associated Press reports.

MAJOR FLEET'S FATHER EXPIRES

S.D. UNION 2-24-37

ABERDEEN, Wash., Feb. 23 (A. P.) — David W. Fleet, 86, pioneer Grays Harbor resident and father of Maj. Reuben H. Fleet, president of the Consolidated Aircraft Corp. of San Diego, died at home here tonight.

U.S. PROBES SAN DIEGO SITUATION

S.D. UNION — 2-27-37

Consolidated Aircraft Corp. Named in Complaints Similar to Those Filed at L. A.; 340 Workers Released.

LOS ANGELES, Feb. 26 (A.P.) — Some 200 sit-down strikers peacefully evacuated the Northrop Aircraft factory today as 343 indicted strikers arrested at the near-by Douglas plant were arraigned.

Afterward the Douglas strikers who had remained in jail since their arrest yesterday evening were released on their own recognizance by Superior Judge Emmet Wilson, after he had questioned each on his length of service with the aircraft concern.

Will Plead Tuesday

Previously Superior Judge Charles W. Fricke, before whom they were arraigned, ordered them to return to court next Tuesday to enter pleas.

The Douglas workers surrendered only after Dr. Towne Nylander, director of the regional federal labor board, entered the plant in the midst of a tense situation and assured them their recently filed complaint against the company would be heard not later than March 5.

The complaint accuses the company of violating the Wagner labor act by refusing to recognize the union and discharging men for union activities.

On behalf of Northrop employes, the United Automobile Workers union, the C. I. O. organization involved in both disputes, filed a complaint with the labor board today, charging employers with interfering with organization efforts and supporting the Northrop Employes' association.

James McDermott, president of the Aircraft local 1125 of the International Association of Machinists, principal Consolidated aircraft union, said last night that he had not been notified that Dr. Nylander was coming here, though he said complaints on the discharges of union men had been filed and the union is seeking to force an immediate vote on the collective bargaining question.

Charles A. Van Dusen, vice president of Consolidated, said he had not been notified of any visit from Dr. Nylander, who could not be located at any local hotel.

More than 650 Consolidated employes gathered at an open meeting in Eagles hall last night to hear machinist's union organizers and officers of the union.

Election Requested

Each complaint asks an election among employes to designate a collective bargaining agency.

Director Nylander of the labor board went to San Diego today to investigate a similar complaint from the machinists union against the Consolidated Aircraft Corp. there.

The San Diego complaint charges discriminatory discharge

(Continued on Page 3, Col. 2)

LABOR COMPLAINT AT CONSOLIDATED PROBED BY U. S.

(Continued from Page 1)

of two union men, spy activities against the union and fostering of a company union. It also asks a plant election to select a collective bargaining agency.

The Douglas plant will resume operations within less than a week, said a statement issued on behalf of President Donald Douglas from the company office.

The statement denied that reopening was awaiting the labor board hearing on the Douglas employes' complaint, scheduled for next Friday, March 5.

The Northrop workers came out after Chief Deputy District Attorney William Simpson and President John K. Northrop visited them in the plant.

Simpson warned them they would be indicted as the Douglas strikers were unless they evacuated this afternoon. Northrop invited them to return to work Monday and promised to deal with their elected representatives on their strike demands.

Northrop conferred privately with the leaders. He and Charles Hollingshead, strike strategy chairman, shook hands before the workmen and addressed them.

Besides the Douglas and Northrop employes' complaints, the regional labor board also has on file a complaint against the Northrop Co. from the International Association of Machinists, American Federation of Labor union. It charges Northrop is illegally fostering a company union and has been guilty of one case of discriminatory discharge.

Seek Same Objectives

Northrop Corp., a Douglas subsidiary employing 1150 men, closed its plant yesterday morning at the start of a sit-down strike seeking the same objectives as those of the Douglas strikers—15 cents an hour pay increase, recognition of a C. I. O. union and other benefits.

The county grand jury was to have held a special session this afternoon to consider indicting the Northrop sitters.

Tediously, one by one, the Douglas workers were arraigned in superior court after spending the night in jail.

They were brought from a crowded jail, where some of them had to sleep on the floor last night, and huddled into a small courtroom. There, the formality of arraigning each one separately extended long into the afternoon. The men seemed still in the sprightly mood that characterized their surrender.

First to be arraigned were William Busick and Andrew Schmolder, C. I. O. organizers, both Los Angeles residents for several years, released on bond last night.

Would Resume Picketing

They declared the strike would go on and Busick expressed hope the indicted workers could gain immediate release so they could go back on the picket lines. The Douglas plant remained closed today.

Counsel for the group said bail of $341,000—or $1000 for each man—was arranged before they came to court.

The bail bond firm, Cantillon, Groves and Glasser, reported the premium of $20,000 for the bonds came from the C. I. O. in Detroit.

S. D. AIRCRAFT UNIT ASKS RECOGNITION

S.D. SUN — 2-27-37

Consolidated Chiefs Wait Return Of Major Fleet From East

By United Press

LOS ANGELES, Feb. 27.—Dr. Towne Nylander, regional director of the National Relations Board, said today that no hearing would be set on a request of employes of the Consolidated Aircraft Corporation for certification of an election to select a collective bargaining agency until after March 5. Nylander returned from San Diego today.

The San Diego request, he said, had no connection with the Douglas and Northrop strikes.

Recognition of Aircraft Local 1125, International Association of Machinists, as the official bargaining unit of employes at Consolidated Aircraft Corp. yesterday was requested by George Castleman, district organizer for the union.

Mr. Castleman revealed to 750 Consolidated employes at a mass meeting in Eagles' Hall last night that he had conferred with C. A. Van Dusen, assistant to the president and works manager, for 2½ hours yesterday afternoon and had made two requests:

1. Recognition of the union as the collective bargaining agency for the employes.

2. If this is not agreeable, to hold an election in the plant to allow employes to determine what group shall represent them.

Mr. Van Dusen, according to Mr. Castleman, said he did not have the power to act on these issues.

It would be necessary to contact Maj. Reuben Fleet, president of the concern, who is now in Washington, D. C., on business, Mr. Castleman said Mr. Van Dusen informed him.

Mr. Van Dusen said he had spoken to Dr. Towne Nylander, director of the regional Federal Labor Board, who was here briefly yesterday.

Informal Talks Held

"The conference was on regular National Labor Relations Board business," Mr. Van Dusen said.

"We have also had purely informal talks with Mr. Castleman in the past. Nothing of importance was discussed. We have never refused to meet with people who claim to represent our employes."

James McDermott, president of Aircraft Local 1125, which is an affiliate of the American Federation of Labor, said that charges have been filed with the National Labor Relations Board against

Turn to Page 2, Col. 2.

AIR UNIT ASKS RECOGNITION

(Continued from Page 1)

Consolidated Aircraft Corp.

He affirmed reports from Los Angeles that a case is pending before the NLRB dealing with asserted discriminatory discharge against two union men.

Fleet Soon Back

"If the company refuses to permit an election," Mr. McDermott said, "the National Labor Relations Board takes the case to court as a civil matter, on the basis that the concern has defied the Wagner Labor act."

Maj. Fleet is expected to return to San Diego in about two weeks, according to Mr. Van Dusen.

Last night's meeting was presided over by McDermott and other speakers included Prof. Harry Steinmetz of San Diego State College, international vice president of the American Federation of Teachers.

Prof. Steinmetz gave a survey of labor troubles throughout the world.

Urges Drastic Action

"There is one spy out of every 20 workers in San Diego," he declared, adding, "It is time that they were run out of town."

He insisted that aircraft concerns "can't afford to have labor troubles," because "the competition for skilled workers is so great."

Three Men Assigned By Consolidated To Jobs in Russia

S.D. Tribune — 3-2-37

Three Consolidated Aircraft Corp. employes, first of 13 engineers and mechanics of the firm detailed to the task of instructing Russian factory workers in the production of Consolidated-type flying boats, have been assigned to duty at a Russian plane factory near the Azov sea, in the southeast part of the Soviet union. They are C. Gurney, who will direct the work of mechanics; A. E. Petzon, chief of tool designing, and Etienne Dormoy, chief of engineering, who are expected to leave within 60 days.

Word of their assignment came as Consolidated officials announced that their firm has sold a huge seaplane, many spare parts and construction plans to the Soviet government. David Fleet, son of Maj. R. H. Fleet, president of Consolidated, said living quarters and food of the Consolidated employes will be furnished by the Russian government, with Consolidated paying their salaries for at least one year, later being reimbursed by the Soviet government for the amount of the salaries. Fleet said the flying boat being sold to Russia will not be used for military purposes.

S.D. SUN — 3-3-37

CONSOLIDATED STOCKS BREAKS 8-YEAR MARK

Consolidated Aircraft common stock spurted 3⅞ points to a new eight-year high of 33½, on the New York Curb Exchange today.

The issue closed at 32⅞, up 3¼ from the Saturday close, on turnover of 22,000 shares. Price reached today by stock of the local aircraft company marks a new high since 1929.

The issue reacheed a 1936-37 low of 14¾. The depression low was set in 1933 at 6.

CONSAIR LABOR HEARING SET

S.D. SUN — 3-4-37

Relations Board To Act On Thursday

A National Labor Relations Board hearing to discuss the holding of a labor vote at the Consolidated Aircraft Co. plant has been set for Thursday at 10 a. m. in the local Federal building, it was learned here today.

Officials of Aircraft Local 1125, International Association of Machinists, had applied to Dr. Towne Nylander, NLIB regional director for certification of an election to determine which agency shall represent the employes in collective bargaining.

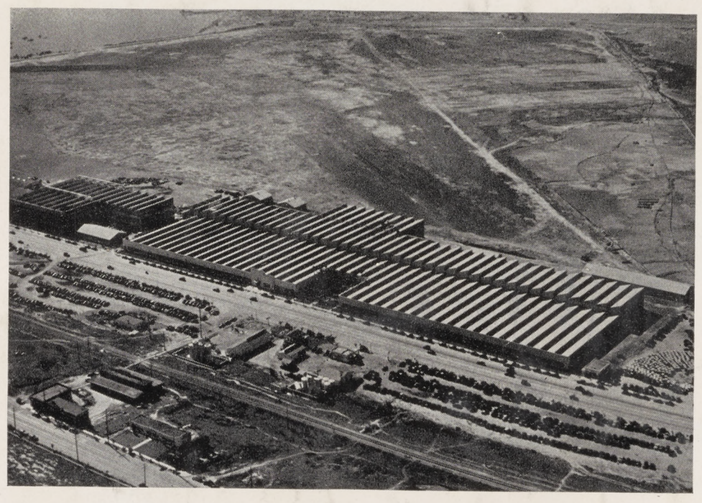
Maj. Reuben Fleet, president of Consolidated, who has been kept informed of the labor development at his plant, is in the east on important business matters, and is expected to return here about March 17.

We Visit Consolidated

A Story of the Fourteen Years of Existence of the Aircraft Manufacturing Corporation Whose New Home Is at San Diego, California

By JACK FROST

Secretary to the President of Consolidated



This air view is of the extensive new plant at San Diego, California, of the Consolidated Aircraft Corporation. The plant is situated on Lindbergh Field on San Diego's water front.

CONSOLIDATED Aircraft Corporation was founded by Major R. H. Fleet, May 23, 1923. Since that time the company has manufactured and sold over $27,000,000 worth of aircraft and parts. At the present time the company has an additional backlog of $17,250,000.

Airplanes designed and manufactured by this company have flown a total of more than 250,000,000 miles and have a record for safety and ease of maintenance unequalled by those of any company in the world.

For ten years the company carried on its business at Buffalo, N. Y. For five years a careful survey was made of all cities in the United States having more than 100,000 population, to select the best location for a permanent factory. Twice each year Major Fleet flew around the country examining localities and municipal airports. A site was wanted on a publicly owned and operated airport, having publicly owned water front on a good but not congested harbor, with a seaplane base and ramp on adjacent protected water, in a city large enough to furnish a reasonable supply of labor and materials, and in a southern clime unhampered by snow and ice and yet not unbearably hot. Finally San Diego, California, was decided upon as the best site for its future home.

The magnitude of a move of a plant the size of Consolidated, can hardly be realized until it actually is effected. More than 300 selected employees moved with the company from the East to form the nucleus of the company's trained organization, hundreds more followed within a short time and on October 20, 1935, the new plant was officially dedicated at San Diego with some 875 employees on the payroll.

The plant, as constructed, was considered to be the last word in aircraft factory efficiency. Every proved device for the safe and rapid manufacture of aircraft was made a part of the equipment installed in the plant. Nevertheless, within a few months, the tremendous volume of business gained by the company, had trebled the payroll and in order to meet scheduled deliveries, it was decided to increase the size of the plant by approximately 80 per cent.

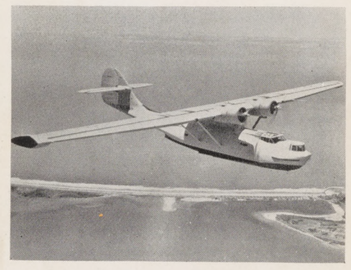
Again all construction records were broken and within a few months Consolidated was moving new equipment into the enlarged and improved plant. The factory as it stands today has a total floor space, including paved yard (good manufacturing space in such a mild climate) of approximately 475,000 square feet. With over 3600 employees, the payroll exceeds $400,000 per month. This modern factory applies line production methods so successfully used by the automotive industry. Its location on Lindbergh Field, providing both land and seaplane bases, is close to United States Naval activities at North Island, and unequalled weather conditions, is undoubtedly the finest in the United States.

Consolidated products have been prominent in all phases of aviation since the company's inception. The Fleet trainers, which have changed little since their early design, are about the sturdiest training airplane in existence today, as practically any pilot knows. The Commodore flying boats that were supplied to NYRBA Line and Pan American Airways for use in the Carribean Sea, have proved themselves to be the finest of their time.

In more recent years, the company's facilities have been completely used up in supplying Uncle Sam's Army and Navy with aircraft. Consolidated was the designer and manufacturer of the P2Y-1 and P2Y-3 flying boats, the former breaking the world's mass formation distance record, flying in formation non stop from San Francisco to Honolulu, a distance of 2408 miles in January 1934. Last year the com-

Continued on next page

PATROL BOMBER



One of the recent developments of Consolidated Aircraft is the Navy's patrol bomber, pictured herewith in flight.

WE VISIT CONSOLIDATED

pany completed an order for PB2-A two-seater pursuit planes for the U. S. Army Air Corps, the highest performing airplane at altitude of any aircraft of its type in the country.

The largest part of the company's production at present is on an order for 176 units, plus spares equivalent to 35 additional boats, or a total of 211 units of huge PBY type patrol bombing boats for the United States Navy. This boat, which has a wing span of over 100 feet has passed tests proving it to be capable of landing and taking off in rough sea, is the same type boat which was flown non-stop from Coco Solo in the Panama Canal Zone, to San Francisco in October 1935, by Commander McGinnis of the United States Navy, breaking the distance record for this type of airplane. This record still holds. The actual cruising range of this flying boat has not been released by Consolidated but is known to be in excess of 3500 miles.

The company has an experimental building in which aircraft larger than anything in use today can be constructed. In this department, some new large and improved boats and commercial developments are in the making.

Major Fleet, who has been president of Consolidated since its organization, is truly a pioneer of aviation. Along with Jack Frye, president of TWA, he is one of the few active heads of aviation companies who is a pilot himself. "Rube" Fleet learned to fly at North Island, within a few miles of the present site of Consolidated, in 1917. He saw service in the war and flew the first mail plane from New York to Washington on May 15, 1918. He is a regular user of TWA. To his friends he is known as a keen, resourceful and energetic business executive, yet one who has a sense of humor and friendliness known throughout the entire aviation industry.

AIRCRAFT UNION DENIES CHARGE

S.D. SUN — 3-5-37

Charges that their organization is a company union were denied yesterday at two mass meetings of the Consolidators, employes' group at Consolidated Aircraft Corp.

The meetings were held in Broadway Pier auditorium.

Roy Smeltzer, president, revealed he had asked Consolidated executives to grant his agency the right to bargain collectively for its members.

"I was told that this would be impossible," he said, "because the company then would also have to recognize the A. F. of L. union, thus causing a lot of friction in the plant."

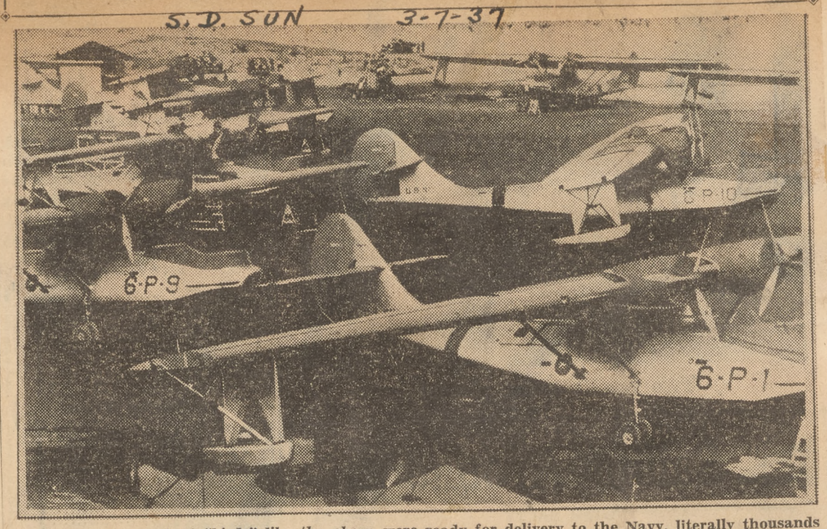
An election to determine which group shall represent the employes in collective bargaining—Aircraft Local 1125, International Association of Machinists, or the Consolidators—probably will be held within the coming month, Smeltzer said.

"We differ with the A. F. of L. in the matter of who shall be allowed to vote at the election," he declared. "We want everybody in the plant, except foremen, department heads and executives, to vote. This latter fact proves we are not a company union.

"But the Aircraft Local wishes the election to be confined to men working with tools. Thus, about 800 people in the plant, such as office workers, janitors, etc., would be discriminated against."

Giant 'Birds' Result Of Many Experiments

S.D. SUN 3-7-37



Before a flock of giant "birds" like the above were ready for delivery to the Navy, literally thousands of hours and dollars were sunk in experimental work by San Diego's Consolidated Aircraft Corp. A long, competitive process is undergone by aircraft manufacturers before they reach the goal when actual profits may be realized. Consolidated executives will tell you in explaining the arduous steps which led to the contract for 176 patrol bombers.

☼ ☼ ☼

Plane Firms Gamble In Bidding For Navy Work

Item: the U. S. Navy wants a new airplane capable of performing a certain mission with a given loading.

Item: various companies submit designs and calculations to show they can do the job.

Now, the next item, you think, ought to be: Such-and-such company gets job; goes into production.

Not That Simple

But it's not as simple as that, officials at Consolidated Aircraft Corp. will tell you. And they should know all about this business of bidding for construction of Navy planes. They have the largest Navy aircraft order in the country, 176 patrol bombers costing about $19,000,000, an order obtained only after the most highly competitive bidding.

After three-view drawings of the proposed plane are submitted, the Navy inspects them carefully, makes an agreement with the concerns whose plans appear most feasible. Up to this point, several thousand dollars have already been spent in the preparation of the preliminary design alone.

A Navy contract for experimental airplanes is usually set up in three segments.

Three Options

There is Option One, in which a more detailed design is made on the basis of the preliminary drawings. Four or five companies may be working for the Navy on this option.

Option Two, the next step toward promised land, requires the preparation of actual working drawings of the plane. By this time, some of the competing concerns have dropped out of the picture.

After severe scrutiny of the "mockup"—or full-size wooden plane—the Navy decides which company gets the all-important Option Three, which calls for building of the actual fighting craft.

The work incurred by all the unsuccessful bidders for the contract must cheerfully be chalked up to experience. There is no other option.

Here's another interesting point: as soon as the Navy decides which plane it likes best, it automatically becomes owner of the design, and its specifications are sent to reputable aircraft concerns for bids.

Several Companies Bid

Thus, the specifications of a Consolidated-engineered ship, for example, may be given to such competitors as Douglas, Martin, Boeing, etc., for them to decide how much they could afford to build that specific plane.

Usually, of course, the company which does all the experimental work gets the final contract, but that other rankling possibility is still there.

A lot of ground has been covered when the Navy exercises Option Three. Literally thousands of samples of the metals used in construction of the plane have undergone rigid tests to determine allowable stresses in such vulnerable parts as the wings.

Materials Tested

Heavy loads have been applied on small sections first, then on larger pieces, until finally the entire wing, for example, has been subjected to strains far beyond any required in normal Navy use.

New sets of dies and tools must be fabricated for a new plane model, and all this preparatory work adds up to a large sum of money which constitutes the company's gamble it is going to get the ultimate contract.

And there's always a sadder but wiser "loser" in the end. In the competition for the PBY contracts, Douglas was edged out by Consolidated. The former concern had spent thousands of hours, had invested a huge sum, but failed to get the job. All of which makes aircraft manufacturers ungrudging fatalists.

AVIATION

Mass Flight U.S. NAVAL INST. PRO. MAR. 1937

Star, Washington, January 29.—Battleing through thick weather in the last stages of their record-breaking flight, 12 huge United States Navy seaplanes completed the longest over-water mass flight in history at 3:30 A.M. today (9:20 A.M. Eastern Standard Time).

They officially covered the 2,553 miles from San Diego to Honolulu in 21 hours 48 minutes elapsed time.

During the last 300 miles the squadron maneuvered between altitudes of 2,000 and 15,000 ft. to escape what Lieutenant Commander William M. McDade described as "very bad weather."

They came out into bright moonlight, sparkling on the calm waters, as they flew over the Pearl Harbor Naval Base in perfect formation, their flying lights twinkling.

The first plane came down on the harbor at 4:29 A.M. (9:59 A.M. Eastern Standard Time).

The official take-off time from San Diego was announced as 6:02 A.M., Honolulu time, yesterday, and the arrival at Pearl Harbor at 3:50 A.M. today.

The only previous mass transpacific flight was 3 years ago when Lieutenant Commander Knefler McGinnis led a squadron of 6 naval planes on another "routine" flight of 2,400 miles from San Francisco Bay. The elapsed time was then 24 hours, 45 minutes, about 3 hours longer for the shorter distance.

Today Commander McDade led his squadron in circling the harbor for 39 minutes before the first plane swooped down to a perfect landing on the calm, flood-lighted channel. Only 150 spectators, mostly families of the 80 flyers, were on hand to watch the end of the spectactular demonstration of the precision of naval flying.—Honolulu, January 29.

S.D. SUN SERVICE NOTES 3-9-37

Navy Ready To Fly 12 Airboats To Panama Base

By HAROLD KEEN

Another long-distance flight of Consolidated PBY patrol bombers is in the offing.

Pilots and flight crews of Squadron VP-3, stationed at Coco Solo, Canal Zone, will arrive in San Diego this spring to take delivery on a dozen of the big airboats, it was revealed at the Naval Air Station today.

Pilots Due In Month

Personnel of VP-3 may come here aboard the Aircraft Base Force flagship of Rear Adm. Ernest J. King, the USS Wright, on completion of current maneuvers in the Caribbean. If they are not aboard the Wright when she ties up at the Air Station dock March 27, they will probably arrive no later than April, it is believed.

A similar routine will be followed by the Canal Zone squadron as that observed by the fliers of Honolulu's VP-6, who nonchalantly "ferried" 12 bombers across the Pacific last January.

Instruction Ordered

About a month's instruction in the operation of the PBY airboats will be required before the mass flight from San Diego to the Canal Zone is undertaken. Rumors are to the effect that the second long delivery hop will be made in June. The San Diego-Coco Solo flight is not deemed as hazardous as that across the Pacific because the airboats will be in fairly close proximity to the Mexican and Central American shores most of the trip.

◇ ◇ ◇

San Diego's patrol squadron 11 has been fully equipped with 12 airboats, and Patrol Squadron 12, formerly of Seattle, has about six more due. Then VP-9 will be equipped with the bombers before any are assigned to the Coco Solo squadron.

◇ ◇ ◇

Patrol plane maneuvers in the Caribbean area are approaching their climax under the direction of Adm. King. The USS Wright is operating out of two bases, at Coco Solo and Guantanamo, Cuba, and squadrons from Norfolk, Va., as well as those from the Canal Zone are participating. Departure of the Wright for San Diego will take place March 18.

◇ ◇ ◇

Among the San Diego dignitaries extending official welcome to P. A. S. Franklin, chairman of the board of the International Mercantile Marine Corp., on his arrival here last night aboard the Panama Pacific liner Virginia, was Rear Adm. Thomas J. Senn, ret., former commandant of the 11th Naval District.

◇ ◇ ◇

Loss of three submarines through decommissioning of the Barracuda, Bass and Bonita will have been two-thirds compensated with the arrival at 1:30 p. m. today of the new underseas craft USS Pike.

The Pike joins the Shark in Subdivision 13 of Squadron Six as the two latest additions to San Diego's "sub" forces.

◇ ◇ ◇

Brightest youths at the Naval Training Station during the past week were the following, who were awarded honor man ratings:

Len L. Lewis of Snyder, Colo., enlisted Dec. 11; John N. De Lahunt of Burbank, enlisted Dec. 15; William J. Fuchs of Waco, Tex., enlisted Dec. 14; Jack R. Stinson of Elma, Wash., enlisted Dec. 16; Lyle C. Smith of Northboro, Ia., enlisted Jan. 8; Lexitt E. Kruger of Clark, S. Dak., enlisted Jan. 8; Donald E. Barnier of Morgan Hill, Calif., enlisted Jan. 14; and Vincent J. Vlach of St. Michael, Neb., enlisted Jan. 12.

A.C. NEWS LETTER MAR '37

iarize pilots with high altitude conditions and the use of oxygen equipment.

Flights for the purpose of recording measurements of cosmic ray intensities were made at Bolling Field, D.C., December 21st and 22nd, in a C-8 photographic plane, observations being conducted at altitudes of 10,000, 15,000 and 20,000 feet.

Lieut. W.R. Robertson, 33rd Pursuit Squadron, Langley Field, Va., flew a PB-2A airplane up to 39,200 feet and remained at that altitude for approximately 20 minutes. At this altitude the controls froze and the pilot had to throttle back to lose altitude and return to a warmer layer.

A.C. NEWS LETTER ----- Mar. '37

LONG DISTANCE FLIGHTS

The largest mass flight of U.S. Army planes made to a possession beyond the continental limits of this country was completed on February 28th, with the arrival in the Panama Canal Zone of 13 P-12 and 11 B-6 airplanes. These planes, used by Air Corps organizations at Langley Field, and transferred to Panama to replace unserviceable aircraft, were ferried by Air Corps pilots on duty in the Panama Canal Department. Leaving Langley Field on February 11th, the flight proceeded via Atlanta, Ga., to the San Antonio Air Depot for mechanical check-up of the planes. Taking off from San Antonio on February 21st, the flight proceeded to destination via Brownsville, Texas; Tampico and Vera Cruz, Mexico; Guatemala City, Guatemala; Managua, Nicaragua, and San Jose, Costa Rica. Lieut. Colonel Charles T. Phillips was flight leader of the Pursuit contingent and Lieut. Colonel Junius H. Houghton of the Bombardment.

Piloting three new PB-2A planes, Lieut. Col. Ralph Royce, Major Alfred E. Kessler and Capt. Robert C. Oliver flew from the plant of the Consolidated Aircraft Co., San Diego, Calif., to Selfridge Field in 13 hours and 10 minutes of actual flying time.

Major Ira C. Eaker, Air Corps, piloting a single-seater Pursuit plane, landed at Los Angeles, Calif., on June 7th, following a flight started June 3rd from Mitchel Field, N.Y., during which he relied solely on the instruments in the plane to guide him to his destination. Owing to the limited gasoline supply of the small Pursuit plane, the flight was made in easy stages. Major W.E. Kepner, in another Pursuit plane, served as a convoy to avert any mishaps.

Consair In Control Of Union, Charge At Labor Board Hearing

Federal Examiner Opens Inquiry Into Dispute Over Collective Bargaining In San Diego Factory; Van Dusen Testifies

S.D. SUN 3-11-37

Charges that Consolidators Association, a group of Consolidated Aircraft Corp. employes, is "dominated and controlled by the management," were made in a National Labor Relations Board hearing here today by Leonard Janofsky, attorney for the International Association of Machinists.

In S. D. Hearing

George O. Pratt, above, trial examiner for the National Labor Relations Board, is conducting today's hearing on the Consolidated Aircraft Corp. labor dispute. Below is C. A. Van Dusen, vice president of the corporation, a witness in the labor hearing.

The hearings started today to obtain facts on which the labor board will determine whether a vote of the aircraft firm's employes shall be held to decide what unit shall represent them in collective bargaining.

Petition Allowed

Janofsky's motion to prevent the Consolidators from petitioning for a place on a ballot was denied by Trial Examiner George O. Pratt.

William Cary, attorney for the corporation, filed a motion to dismiss the hearing on the ground that the company is not engaged in commerce as defined by the National Labor Relations Act and therefore is not under the board's jurisdiction. Pratt also denied this motion.

Van Dusen Questioned

A request from Aircraft Local 1125, International Association of Machinists, an A. F. of L. affiliate, that it be recognized as the sole bargaining unit for mechanical employes only, was made for the first time yesterday, C. A. Van Dusen, Consolidated vice president, testified.

He denied that such a request was made on or about Feb. 26, when he met with George Castleman, grand lodge representative of the union.

Consolidators Association within the past 30 days asked company executives for the right to represent their own members only, including clerical and office workers as well as mechanical employes, Mr. Van Dusen testified. "I agreed to discuss labor conditions with the Consolidators at any time without formal recognition of that organization, however."

Janofsky claimed that the Consolidators is "not a true labor organization within the meaning of the National Labor Relations act. Evidence proves that this group is definitely tied-in and is dominated and controlled by the management," he said.

S.D. UNION 3-11-37

AIRCRAFT LABOR HEARING TODAY

A hearing on whether Consolidated Aircraft Corp. workers will vote on which of their organizations will be allowed to represent the whole group of employes in collective bargaining will be held in the Federal building at 10 this morning before George O. Pratt, Washington, trial examiner of the National Labor Relations board.

The question to be settled is whether employes of the firm will be allowed to hold an election to determine whether the Consolidators or the Aircraft local of the International Association of Machinists will be the official bargaining body for workers at the local aircraft factory.

George Castleman, grand lodge representative of the machinists' association, was reported to have arrived in San Diego yesterday from Burbank, where he oversaw negotiations of workers of Lockheed Aviation Corp. for the establishment of collective bargaining precedents.

CALL FLEET TO HEARING AT L. A.

EVENING TRIBUNE 3-11-37

Maj. Reuben H. Fleet, president Consolidated Aircraft Corp., is expected to testify at a delayed session in Los Angeles next week of a National Labor Relations board hearing which started here today. Fleet, now in the east, is due to arrive in southern California the first of the week, and according to report at the local federal building, where the hearing now is under way, he will give testimony at Los Angeles Tuesday. The hearing locally, involving an investigation as to what labor organization is the choice of the majority of employes of Consolidated Aircraft Corp. for purposes of collective bargaining, is expected to last about two days before the matter is transferred to Los Angeles. Ultimate decision in the matter will be made at Washington, D. C., it was said.

Lt. Comdr. Emile Chourre, U.S.N., who is in charge of the office of inspector of naval aircraft at Consolidated Aircraft Corp., was the last witness before an adjournment was taken until 10 a.m. tomorrow morning when the hearing will be resumed in the chamber of commerce auditorium. Under questioning by Ralph Seward, attorney representing the national labor relations board, he testified regarding to activities as inspector of aircraft at the plant.

LOCAL AIRCRAFT FIRM OPENS WAY TO LABOR PARLEY

S.D. UNION 3-13-37

After a statement of labor policy that Consolidated Aircraft Corp. is ready to discuss collective bargaining with representatives of "any group or groups for their own members," had been read into the record, a regional labor board hearing of employe complaints in chamber of commerce auditorium, adjourned last night.

Examiner George O. Pratt announced that the hearing would be resumed in the federal building in Los Angeles, at 10 Tuesday morning when Maj. Reuben H. Fleet, president of the corporation, will appear before the trial board.

C. A. Van Dusen, vice president of Consolidated, presented the written statement of policy at a special night session.

Company's Statement

"The time has come for this company to make a statement in regard to its policy in dealing with the employes," he read. "First, however, we want to state that the testimony presented today in regard to our branding union representatives as Communists is entirely and absolutely incorrect. In my conversation with Dr. (Towne) Nylander (regional labor board director), I told him that we had been informed that the leadership of union labor in San Diego included individuals who had displayed communistic tendencies. Naturally as a unit of the national defense, we are concerned about communistic activities.

"The company does not wish to advise its employes as to how they should act in the matter of securing collective bargaining. Pending a determination of our status under the Wagner act, we do not wish to deny our employes the right to consult with the management in matters affecting rates of pay, hours of labor and other working conditions. On the contrary, the management always has been and is now ready to discuss with representatives of any group or groups for their own members, or with any individual, these various matters.

"This includes the American Federation of Labor, the C.I.O., the Consolidators' association or others. We have endeavored to conduct ourselves in such a fashion that our people will have confidence in our policies. We believe that our organization will continue to display the good judgment that has resulted in the avoidance of labor disputes and that we can look forward to continuing pleasant relations."

Workers Testify

The statement was entered at the end of the second day of the hearing, during which testimony was taken from William A. Rasp, sheet metal worker; George D. Dayton, sheet metal worker and a union officer, and James S. Burney, lead man, by counsel for Aircraft local 1125, International Association of Machinists, affiliated with the American Federation of Labor, and W. C. Bowlen, lead man, by counsel for the Consolidators' association. Union members have charged during the hearing that the latter organization is "company dominated."

Testimony will be completed in Los Angeles and a transcript, together with an informal report by Pratt will be submitted to the national labor relations board in Washington, D. C. The board's decision as to whether an election of employes shall be held to decide upon a collective bargaining committee or group, and what organizations shall appear on the ballot and what employes shall be eligible to vote, can be expected in from 15 to 30 days after the end of the hearing, Pratt said.

5 S. D. PLANES END HOP AT SEATTLE

S.D. UNION 5-15-37

Five Consolidated flying boats, forming Patrol Squadron 17, arrived in formation at Seattle, Wash., yesterday after a one-stop flight from San Diego, The Associated Press reported.

Under command of Lt. Comdr. E. C. Allen, the squadron left San Diego Saturday morning stopping ovrnight at Sausalito, on San Francisco bay, and completing the flight yesterday.

The squadron will be based permanently at the Sand Point naval air base near Seattle. The squadron comprises 109 officers and men.

WE'LL BARGAIN, CONSAIR CLAIMS

Union Never Labeled 'Red,' Official Declares

S.D. SUN 3-13-37

Consolidated Aircraft Corp., today for the first time since establishment in San Diego, has revealed its policy in dealing with factory employes.

At a special night hearing by the National Labor Relations Board yesterday, C. A. Van Dusen, vice president and works manager of the concern, submitted a formal written statement in which the management declared its readiness to deal with employes on matters effecting rates of pay, hours of labor and other working conditions.

Mr. Van Dusen denied the statement made at the hearing yesterday morning by George Dayton, financial secretary of Aircraft Local No. 1125, that he had branded members of that union, "Communists."

Further testimony will be received from Maj. Ruben H. Fleet, president of Consolidated, at Los

Turn to Page 2, Col. 6.

Consair Officer Claims Firm Ready To Meet Unions

(Continued from Page 1)

Angeles Tuesday. Mr. Fleet is now in Washington, D. C., on business.

Statement Issued

Mr. Van Dusen's complete statement, which was entered in the records of the hearing, is as follows:

"The time has come for this company to make a statement in regard to its policy in dealing with the employes," he read. "First, however, we want to state that the testimony presented today in regard to our branding union representatives as Communists is entirely and absolutely incorrect. In my conversation with Dr. (Towne) Nylander (regional labor board director), I told him that we had been informed that the leadership of union labor in San Diego included individuals who had displayed Communistic tendencies. Naturally as a unit of the national defense, we are concerned about Communistic activities.

"The company does not wish to advise its employes as to how they should act in the matter of securing collective bargaining. Pending a determination of our status under the Wagner act, we do not wish to deny our employes the right to consult with the managemen in matters affecting rates of pay, hours of labor and other working conditions. On the contrary, the management always has been and is now ready to discuss with representatives of any group or groups for their own members, or with any individual, these various matters.

"This includes the American Federation of Labor, the C. I. O., the Consolidators' Association or others. We have endeavored to conduct ourselves in such a fashion that our people will have confidence in our policies. We believe that our organization will continue to display the good judgment that has resulted in the avoidance of labor disputes and that we can look forward to continuing pleasant relations."

Wheatley Prefers Planes, Shies From Ocean Liners

S.D. SUN 3-14-37

Bill Wheatley, Consolidated Aircraft Corp.'s chief test pilot, is a modest sort of fellow but he doesn't mind boasting of one thing—

He has been, among other places, to South America and to Hawaii, but he has yet to step aboard an ocean-going steamer.

BILL WHEATLEY
Planes preferred

Non-Ship Traveler

Bill is quite proud of this non-ship-traveling record, even if that does make him seem like a character out of one of Stoopnagle and Budd's radio skits.

How did he get across and back, you ask? Quite simple. In 1934, he sat at the controls of Consolidated's patrol boat P2-Y1 on the long flight to Colombia, South America from the concern's Buffalo plant.

Consair Plane Both Ways

After making the delivery, Mr. Wheatley settled himself into another Consolidated plane, one of Pan-American Airways' Commodores (built in 1929, these sturdy craft are still in active service) and was winged back to the United States.

Two months ago, Bill went along with the crews of twelve Consolidated PBY's on the long over-water hop from San Francisco to Hawaii. For several weeks he acted as factory representative in the servicing of the huge craft; then a few days ago he popped up in town again, back from Pearl Harbor, this time again by plane.

Yes, he's never been on an ocean liner, and he probably intends to preserve that distinction.

Mr. Wheatley brought back some interesting information regarding the PBY's and Pan American Airways.

Stiff Test

Successful completion of the trans-Pacific flight under the handicap of stiff headwinds practically the entire route is proof that the patrol bombers have what it takes to make efficient fighting planes, he believes.

"In an emergency, the PBY would not have to be grounded until favorable weather sets in," he remarked. "The Hawaii flight thus was an unexpectedly excellent test of the planes' stamina."

It will be recalled that Lieut.-Comdr. William McDade, squadron commander, immediately upon landing at Pearl Harbor, radioed to North Island that "Patrol Squadron Six arrived in excellent condition, and is ready for service."

The minute efficiency with which Pan American Airways operates on its "safety first" principle was demonstrated to Mr. Wheatley in a unique manner.

Plane Turns Back

On March 2, the Hawaii Clipper, piloted by Capt. Jack Tilton, took off for Alameda. The Consolidated flier was one of the 11 passengers. Thirty-five minutes out of Honolulu, a minor flaw was noted in one of the engines' performance.

It constituted little if any danger, yet the pilot decided to turn back to the base. Before landing at Honolulu, all of the fuel was dumped out of the sea wings. Approximately $400 tossed into the ocean so the plane would be lighter in landing. Here was another precaution which seemingly was unnecessary, but Pan American can't afford to take any chances. Its stake in trans-ocean air travel is too great.

There were plenty of disappointed passengers, according to Mr. Wheatley, but Pan American intends to keep their passengers alive, sometimes in spite of themselves.

The repair was made, the gasoline restored, but no takeoff occurred that day. It was after sundown and Pan American has a strict ruling against starting a trip in the dark.

Not until 2:55 p. m. (Pacific Standard time) on March 3 did the Hawaii Clipper resume its flight.

The estimated time of the hop was 17 hours. The Clipper landed in San Francisco Bay in 16 hours and 59 minutes. Just another example of Pan American's navigation skill.

From San Francisco, Mr. Wheatley, still possessed of the aviator's mania for going places in a hurry, flew to San Diego via United Air Lines and Western Air Express.

Still in Honolulu, watching for maladjustments in the Navy's dozen PBY's is A. W. Koster of Consolidated, who will probably be a Hawaii resident for several more months.

AIR FIRM ORDERS SHOW INCREASE

S.D. TRIBUNE 3-16-37

Consolidated Aircraft Corp. of San Diego kept pace with other aviation firms in California during 1936, The Associated Press reporting today in a dispatch from San Francisco that employment figures from the state's aviation industry indicate more than double the rate of operations of the previous year. Consolidated Aircraft had a backlog of $18,169,726 of unfilled orders at the end of 1936, against $8,955,864 a year earlier. The company earned less in 1936 than in 1935, however, $192,411 against $322,731. Other indications of increased activity included the report of United Air Lines, which showed a 1936 net profit of $367,283 against $1393 net loss in 1935, with passenger volume up about 22 percent and air mail volume up 24 percent.

MAJ. FLEET READY TO BARGAIN

CONSOLIDATED AIR PLANT DOUBLES '36 PLANE ORDERS

S.D.SUN 3/16/37

FIRM'S INCOME FALLS BELOW 1936 VOLUME

Flying Boat Sale Result Not Shown In Annual Report

Net income of Consolidated Aircraft Corp. for 1936 fell below the total for the preceding year, but unfilled orders on Dec. 31, last, were double unfilled orders a year earlier.

Annual report of the corporation and its subsidiaries for the calendar year 1936, released yesterday, showed net income of $192,411 after surtax. This was equal, after deducting dividends paid on the preferred stock issued during the year, to 29 cents a common share.

Dividends Reduced

This compared with $322,731, or 56 cents a common share in 1935. Unfilled orders at the close of the year amounted to $18,169,726, against $8,955,864 at the close of 1935.

Net income of the corporation before provision for taxes on income, taxes on undistributed profits and other extraneous charges totaled $376,518.18 for 1936, against $373,708.24, R. S. Madison, treasurer, explained today.

U. S. Taxes Increase

In addition, he pointed out, the corporation paid dividends of $25,848.52 on the preferred stock issued during the year, and had expenses incident to financing aggregating $58,184.09.

Taxes on income and on undistributed profits came to $125,923.03 for 1936, against taxes on income of $50,976.58 in 1935, when the undistributed profits tax was not in effect.

The company did not show a profit or loss on sales of large flying boats last year, Mr. Madison said, since due to the size of the Federal orders this item could be realized only over a longer term.

CONSAIR LABOR DATA RUSHED TO WASHINGTON

S.D.SUN — 3-17-37

Speeding to Washington today was testimony on Consolidated Aircraft Corp.'s labor situation.

The National Labor Relations Board in Los Angeles yesterday referred to Washington testimony taken in a hearing over advisability of calling an election for collective bargaining at the San Diego plant.

Decision to refer the case to Washington was announced by Trial Examiner George O. Pratt. A final decision in the case probably will not be handed down for several weeks, he said.

Major R. H. Fleet, president of Consolidated, testified his belief that labor troubles at the plant could be settled without intervention of the Federal agency.

The hearing was called at the request of the Machinists' Union, affiliate of the American Federation of Labor, on a petition for an election to determine the collective bargaining agency at the plant.

Bargaining Okehed

"I would like to get together with all of my men and I believe we can work out all our differences," Major Fleet said. "All groups in the plant are entitled to a hearing and I am not in favor of riding roughshod over any minority group."

Maj. Fleet, in yesterday's hearing, reiterated the stand of C. A. Van Dusen, vice president and works manager of Consolidated, who declared last Friday night at a San Diego hearing of the Labor Board, that the management was ready to consult with employes on matters pertaining to working conditions and rates of pay.

Sessions were held in San Diego last Thursday and Friday and were adjourned until today to enable Maj. Fleet, who had been in Washington, D. C., to testify.

Washington Action Next On Consolidated Ballot

EVENING TRIBUNE 3-17-37

The findings of Trial Examiner George Pratt on a request to the national labor relations board for an employes' election at the Consolidated Aircraft Corp. here were prepared today for forwarding to Washington, The Associated Press reports in a dispatch from Los Angeles. The request was made by the International Association of Machinists, an American Federation of Labor affiliate. The Consolidators' association, a factory organization, intervened. The hearings began last Thursday in San Diego and were concluded at Los Angeles yesterday with the testimony of Maj. R. H. Fleet, president of the concern. Ralph Seward of the labor board said Fleet told the trial examiner that Consolidated was willing to bargain with the representatives of any group of employes for its own membership, but would not accept one group as representing all of the plant's 3600 workers.

S.D. SUN 3-18-37

FLEET STUDIES LABOR PROBLEM

Labor problems of Consolidated Aircraft Corp., today were observed at first hand by Maj. Reuben H. Fleet, president, as he returned to the plant after a several weeks' absence in Washington, D. C. on business matters.

In the final session of a National Labor Relations Board hearing in Los Angeles Tuesday, Maj. Fleet declared his willingness to deal with employes to iron out prevailing differences. He said he was not in favor of "riding rough-shod over any minority group."

Washington headquarters of the N. L. R. B. will study Trial Examiner George O. Pratt's findings and decide whether an election shall be held at the factory to determine whether Aircraft Local 1125, International Association of Machinists, or the Consolidators shall represent all the workers in collective bargaining.

Meanwhile, the contesting unions will continue their drives for more membership at meetings this weekend.

CONSAIR LABOR GROUPS WAIT BOARD RULING

S.D SUN — 3-25-37

With decision of the National Labor Relations Board regarding a labor vote at Consolidated Aircraft Corp. expected momentarily, a mass meeting will be conducted in Eagles Hall tomorrow night by Aircraft Local 1125, International Association of Machinists.

The N. L. R. B. message, due today or tomorrow, according to President James McDermott of the aircraft union, will determine whether an election shall be held at Consolidated to choose the collective bargaining agency for all the workers. Recent hearings were held in San Diego and Los Angeles on the petitions of Aircraft Local 1125 and the Consolidators, another employes' organization, to appear on the election ballot.

MAJ. FLEET BACK AT CONSOLIDATED AFTER U. S. TOUR

S.D UNION 3-18-37

Maj. Reuben H. Fleet, Consolidated Aircraft Corp. president, returned yesterday after a nationwide business trip and testifying Tuesday before the national labor relations board trial examiner at Los Angeles.

Maj. R. H. Fleet

The findings of George Pratt, trial examiner, on a request to the national labor relations board for an employes' election at the Consolidated Aircraft Corp. plant here were prepared yesterday at Los Angeles for forwarding to Washington, D. C., The Associated Press reported.

Request for the election was made by the International Association of Machinists, American Federation of Labor affiliate. The Consolidators' association, factory organization, intervened.

Testimony began a week ago and was completed Tuesday with Maj. Fleet's appearance. Ralph Seward of the labor board quoted Fleet as saying that Consolidated is willing to bargain with the representatives of any group of employes for its own membership, but will not accept one group as representing all of the plant's 3600 workers.

'36 CONSOLIDATED TRADE FAVORABLE

S.D UNION 3-17-37

Business of the Consolidated Aircraft Corp., of San Diego, compared favorably with that of other California aviation concerns in 1936, The Associated Press reported yesterday in a dispatch from San Francisco which added that employment figures for the state's aviation industry show more than twice the rate of operations of the previous year.

Consolidated Aircraft had a backlog of $18,169,726 of unfilled orders at the end of 1936, against $8,955,864 in 1935. The company earned less in 1936 than in 1935, however, $192,411 against $322,731. Other indications of increased activity included report of United Air lines, which showed a 1936 net profit of $367,283 against $1393 net loss in 1935, with passenger volume up about 22 percent and air mail volume up 24 percent.

NEW NAVAL BOMBERS JOIN TENDER LANGLEY

S.D. SUN 3-17-37

Eleven of the Navy's newest patrol bombers today were operating with the aircraft tender USS Langley at Port San Luis, off Pismo Beach.

Attached to the San Diego-based Patrol Squadron 11, the planes took off from North Island yesterday. The big airboats are the first of the San Diego-based PBY's to perform the open sea tactics now taking place at Port San Luis since their delivery to the Navy by Consolidated Aircraft Co.

LABOR ISSUES CAN BE MET WITHOUT U. S.

S.D. SUN — 3-16-37

By United Press

LOS ANGELES, March 16.—Major R. H. Fleet, president of Consolidated Aircraft Corporation of San Diego today testified before a hearing of the National Labor Relations Board his belief that labor troubles at the plant could be settled without intervention of the Federal agency.

Wants To Meet Men

The hearing was called at the request of the Machinists' Union, affiliate of the American Federation of Labor, on a petition for an election to determine the collective bargaining agency at the plant.

"I would like to get together with all of my men and I believe we can work out all our differences," Major Fleet said. "All groups in the plant are entitled to a hearing and I am not in favor of riding roughshod over any minority group."

Van Dusen Testifies

Following Maj. Fleet's testimony, C. A. Van Dusen, vice president of the corporation, started a lengthy explanation of duties of employes in various departments. He was expected to testify most of the afternoon after which it was believed the labor board would take the union request under submission.

BARGAINING DATE WITH GROUP SET BY CONSOLIDATED

S.D UNION 3-26-37

Bulletin board notices that a collective bargaining meeting of executives of the company and representatives of Consolidators' association has been set for Tuesday afternoon at 3, were posted in the Consolidated Aircraft Corp. plant here last night, C. A. Van Dusen, vice president, announced.

"As a result of a request from the Consolidators' association to meet with their representatives, this company has arranged for a meeting and invites representatives of organized groups of our employes to attend under certain conditions," the announcement stated.

At recent hearings before a regional labor board examiner, members of Aircraft Local 1125, International Association of Machinists, charged that the Consolidators comprised "a company union." A finding of the labor board is now pending.

"We announced at the close of hearings in Los Angeles that we were ready to meet with any groups of our employes," said Van Dusen. "We have not taken the initiative in setting this meeting, but are merely complying with a written request by officers of the Consolidators. We thought it only fair that any other organizations be allowed to send delegates."

The conditions imposed in the announcement were that representatives should appear in the plant lobby before 3 on the afternoon of the meeting, should carry a notarized statement of proper selection and membership strength of their organizations, copies of which were ordered forwarded to company officials in advance of the meeting.

S.D. TRIBUNE 2-30-37

36 CRAFT DELIVERED BY CONSOLIDATED

Of 182 planes ordered by the navy from Consolidated Aircraft Corp., 36 already have been delivered to the naval air station here. The plane factory also is under contract to furnish spare parts to the navy for 20 planes.

CONSAIR LABOR PACTS HELD UP

S.D.SUN — 3-31-37

An order to withhold labor agreements for the present has been received by Consolidated Aircraft Corp. from the National Labor Relations Board, George Dayton, business agent of the A. F. of L. Aircraft Local 1125, said today.

The N. L. R. B. informed him that Consolidated has been advised to "maintain the status quo" until a decision on the recent hearings of the concern's labor problem is made, according to Mr. Dayton.

This, in effect, will suspend negotiations with any groups of employes until the Board decides whether an election shall be held at the plant to determine whether the A. F. of L. union or the Consolidators, another labor organization, represents the workers in collective bargaining.

S.D.UNION 3-27-37

NAVY HERE GETS 36 PLANES BUILT BY CONSOLIDATED

Thirty-six of the 182 air boats contracted by the navy from the Consolidated Aircraft Corp. have been delivered to the Naval Air station, it was announced yesterday.

In addition to the 182 flying boats, Consolidated is under contract to furnish spare parts to the navy for 20 planes.

Consolidated officials report that three planes being constructed for the Argentine government and a seaplane for the Russian government are nearing completion.

Aviation Machinists Reject Labor Parley

S.D. UNION 3-29-37

A new rift in Consolidated Aircraft Corp., labor relations appeared last night when officers of Aircraft Local 1125, International Association of Machinists, announced they would not send representatives to the collective bargaining meeting to be held Tuesday afternoon.

In a public statement, the machinists charged that the Consolidators association is not "recognized as a labor union entitled to represent any employe of Consolidated aircraft, because it has been prove to us that the Consolidators have been fostered by the corporation and is now receiving all instruction as to method of procedure from the corporation."

LOCAL NOT INVITED TO AIRCRAFT PARLEY

S.D. TRIBUNE 3-29-37

Aircraft Local 1125, International Association of Machinists, has not been invited officially to attend tomorrow's meeting of representatives of the firm and of the Consolidators' association at Consolidated Aircraft Corp. plant for purpose of collective bargaining, officials of the local state. "We have never recognized the Consolidators' association as a labor union entitled to represent any employe of Consolidated Aircraft, because it has been proven to us that the Consolidators have been fostered by the Consolidated Aircraft Corp. and is now receiving all instruction as to its method of procedure from the corporation," a public announcement by the local stated. "Aircraft Local 1125 has already taken steps (as proved by recent hearings) to enter into collective bargaining with the corporation in the manner prescribed by the law of the land. Aircraft Local 1125 is willing to abide by the ruling of the national labor relations board. Why all this haste on the part of the corporation to enter into collective bargaining?"

AIRCRAFT UNION DENIES INVITE TO BARGAINING

Workers Reply To Statement Of Consolidated Official

S.D. SUN — 3-28-37

An official statement, denying that the Aircraft Local No. 1125 had been invited to attend a Consolidated Aircraft Corp. meeting to enter into collective bargaining, was issued last night by George D. Dayton, financial secretary and business representative of the union.

The statement was issued in reply to an announcement made Friday by Charles A. Van Dusen, vice president of the Consolidated Aircraft Corp.

Dayton further declared that "we do not now, and never have, recognized the Consolidators Association as a labor union entitled to represent any employes of Consolidated Aircraft, because it has been proved to us that it has been fostered by the Consolidated Corporation and is now receiving all instruction as to methods of procedure from the corporation.

"If no other reason existed for us not to attend this conference, then the fact that this conference was brought about by a meeting called by the Consolidators (which was attended by about 80 persons and half of them supervisors in the plant) is enough proof to us, and should be to the public of San Diego, that they do not represent anyone.

"Aircraft Local No. 1125 already has taken steps (as proved by recent labor hearings) to enter into collective bargaining with the corporation in the manner prescribed by law.

"Aircraft Local No. 1125 is willing to abide by the ruling of the National Labor Relations Board. Why all this haste on the part of the corporation to enter into collective bargaining?

"We leave it to the general public to answer," the statement concluded.

NAVY SLATES RECORD HOP, S.D. TO CANAL

12 Airboats To Take Part In Service's Longest Mass Flight

S.D. SUN — 4-1-37

Approximately 100 officers and men have begun intensive training at North Island preparatory to undertaking the longest non-stop mass flight in United States Navy aviation history, The Sun learned today.

The men compose Patrol Squadron Three, based at the Canal Zone, and are training here with the new Consolidated flying boats for a delivery flight to the Canal Zone this summer.

Arrived On Wright

The personnel of Squadron VP-3 arrived in San Diego recently aboard the Aircraft Base Force flagship, USS Wright, used as headquarters by Rear Adm. Ernest J. King during patrol plane maneuvers in the Caribbean last month.

Twelve Consolidated patrol bombers will be delivered to the squadron at North Island in the near future for preliminary "shakedown" tests. None of the craft has been assigned to the Canal Zone personnel yet, but instruction in operation of this type of flying boat is now under way.

Farther Than Hawaii

The mass flight to the Canal Zone will eclipse the performance of Patrol Squadron Six, which flew non-stop from San Diego to Hawaii, about 2200 miles, in February. The airline distance to the Canal Zone is approximately 2700 miles.

Under command of Lieut.-Comdr. Robert W. Morse, the squadron will take off from San Diego harbor probably in June or July, according to Aircraft Base Force staff officers.

Meanwhile, aviation officers at North Island refused to discuss the rumor of another San Diego-Hawaii airboat flight contemplated for this month.

AIR LOCAL INVITED TO PARLEY, CLAIM

S.D. TRIBUNE — 4-1-37

A member of Consolidators' association said today he was "burned up" over a statement by officials of Aircraft Local 1125, International Association of Machinists, published Monday, to the effect that Local 1125 had not been invited officially to attend Tuesday's meeting of representatives of Consolidated Aircraft Co. and of Consolidators' association for purposes of collective bargaining. "I imagine that members of Local 1125 didn't attend the meeting," said the Consolidator, "but they were invited." He exhibited a notice which he said had been posted at the plant before the meeting. This, dated March 25, states that "as a result of a request from the Consolidators' association to meet with their representatives, this company has arranged for a meeting and invites representatives of organized groups of our employes to attend under the following conditions." Six conditions were listed. One was that "representatives should present at this meeting a notarized statement signed by local officers showing the number of our employes who are members of their organizations." Another was that "such representatives should also present notarized documentary evidence of authority from the organization which they represent."

12 MORE PLANES BUILT HERE TO BE FLOWN TO HAWAII

S.D. UNION — 4-2-37

Twelve more Consolidated flying boats will be flown from San Diego to Pearl Harbor in the period April 12 to 17, it was reported in naval circles yesterday.

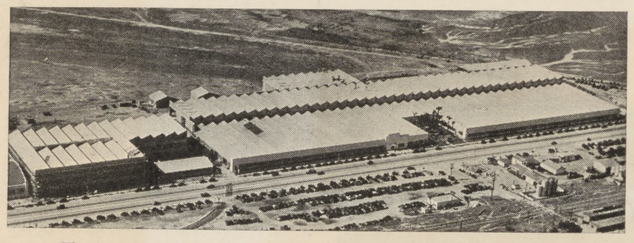
Adm. Arthur J. Hepburn, U. S. fleet commander, announced that the flight is scheduled but that the date will be determined by Rear Adm. Ernest J. King, commander of the fleet patrol wing. The ships will join the 12 planes which were flown from San Diego to Hawaii in January.

Adm. Hepburn denied reports from Honolulu that the 24 air boats will make a mass flight from Pearl Harbor to French Frigate shoals in the six weeks that the surface ships and aircraft are engaged in fleet problem 18 in the eastern Pacific. There will be no flight to the Aleutian islands.

Of the 186 Consolidated air boats contracted for by the navy 39 have been delivered to the North Island Naval Air station. Twenty-four of these air cruisers are to be stationed in the Canal Zone and it is reported the first 12 will leave here in June for Coco Solo.

PACIFIC FACTORY MAGAZINE — FEB. 1937

Biographical Briefs of West Coast Industrial Plants



The Consolidated Aircraft Corporation's new plant at Lindberg Field, San Diego

Wings for the World . . .

Who—Consolidated Aircraft Corp.
Where—San Diego, California.
What—Airplanes and parts.
When founded—1923.
How many—3500 employees.

The world has become air-minded; the airplane industry has become West-minded.

In May, 1923, Major R. H. Fleet, who won his wings the hard way, as a navy flyer during the world war, formed the Consolidated Aircraft Corporation, acquiring and merging the Gallaudet Co. and the Dayton-Wright Airplane Co. Started on a capital of $25,000, the assets of the concern now are in the vicinity of $3,000,000.

October 20, 1935, Consolidated moved west from Buffalo, N. Y., opening its extensive new plant at Lindberg Field, San Diego. At that time, employees numbered 874; today there are 3500. Unfilled orders aggregated $9,000,000, and as of October, 1936, they were nearly 13 million dollars. As the company has grown in personnel and business, there has been a growth in the plant. A new experimental building was completed in October.

Sales territory is national and foreign, and the company specializes in the manufacture of seaplanes. Maj. Fleet visualizes gigantic planes carrying hundreds of passengers across the Atlantic, planes powered by 2000 to 2500 h.p. motors, as a result of government sponsored research.

Personnel—President-Manager, Maj. R. H. Fleet; Vice-President, Works Mgr., C. A. Van Dusen; Vice-President and Chief Engineer, I. M. Laddon; Vice-President of Materials Division, C. Leigh; Secretary-Treasurer, R. S. Madison; Assistant Secretary, R. A. Stanbury; Assistant to President, E. N. Gott.

HAWAII FLIGHT SET APRIL 12

12 Navy Planes To Hop Off From S. D. Bay

S.D. SUN — 4-2-37

By United Press

LOS ANGELES, April 2.—Adm. Arthur J. Hepburn, commander-in-chief of the United States fleet, announced today 12 more of the 76 giant Consolidated patrol flying boats will make a 2600-mile nonstop delivery flight to their permanent air base in Pearl Harbor, Hawaii, the week of April 12.

Hepburn said the flight would be merely routine delivery of the planes.

The admiral denied reports that squadron 12 and its 12 sister flying boats already in Pearl Harbor will attempt a mass flight to Aleutian Islands from Hawaii in connection with the fleet war games in early May.

The takeoff will be from San Diego where the ships are manufactured.

HOP CONFIRMED BY CHIEF OF U.S. FLEET

S.D. TRIBUNE — 4-2-37

Confirmation of reports on navy flights from San Diego to Honolulu and Panama soon was forthcoming today in an announcement by Adm. Arthur J. Hepburn, commander-in-chief United States fleet. Twelve patrol flying boats, built at the Consolidated Aircraft Corp. plant here for the navy, will make a 2600-mile non-stop "delivery flight" to Hawaii during the week of April 11, and another squadron of bi-motored patrol planes will make a similar nonstop flight to the Coco Solo air base at Panama late in May, Hepburn said, The Asosciated Press reports in a dispatch from San Pedro.

The Hawaiian hop is a "routine operation," the fleet commander-in-chief emphasized. He declared it is only coincidental to the naval maneuvers in the Pacific starting later this month. He denied that two patrol squadrons already flown to Pearl Harbor would attempt a mass flight to the Aleutian islands from Hawaii via French Frigate Shoals in connection with the fleet war games.

'EXPEDITION' TO CONSTRUCT BIG AIRBOATS

Seven Families To Meet In New York, Then Go To Soviet

S.D. SUN — 4-3-37

The vanguard of a Consolidated Aircraft Corp. "expedition" to Soviet Russia to inaugurate mass production of the concern's PBY-1 type planes there left San Diego today, company officials revealed.

Seven highly skilled engineers from the local plant and their families will meet April 14, in New York City, where they will board the liner President Roosevelt for Europe.

Will Supervise Building

Their destination is Taganrog, on the shores of the Sea of Azov, in southern Russia, where they will supervise the building in large quantities of the Consolidated airboat, the design of which has been purchased by the Soviet Union.

Leader of the group, French-born Etienne Dormoy, and Mrs. Dormoy, leave for the east Monday, as does Thomas G. Palsulich, design engineer.

Others Gone

Others who have already departed are:

H. F. Ries, design engineer, and his wife; Arthur E. Petzon, tool designing executive, his wife, and son, Ronald; Cass Gurney, shop production executive, his wife and daughters, Dorothy and Florence; Minor J. Wells, design engineer; Edwin A. Reynolds, design engineer, and wife.

Second Group

A second group of six engineers will leave for the Soviet Union in June, Mr. Dormoy said. They will be C. Garner Green, design engineer and stress analyst; Harry Campbell, design engineer; Basil O. Isham, group leader for hull design; Felix Kallis, group leader for power plant; James P. Steves, shop planning executive; and Gilbert A. Henry, design engineer.

Airboat Purchased

A Consolidated airboat, similar to those now being manufactured for the United States Navy, has been purchased by Russia and will be shipped there, complete without armaments, in November. A large number of spare parts to be used by the Russians in assembling another airboat, has also been bought.

RUSSIA PLANS TO DUPLICATE NAVY'S HUGE FLYING BOATS

L.A. TIMES — 4-4-37

SAN DIEGO, April 3. (U.P.)—Soviet Russia is planning to build huge flying boats, almost exact duplicates of the United States Navy's famed long-range patrol bombers, it was disclosed here today.

The Russian planes, similar in every detail to the PBY-1 class planes which recently made a mass, nonstop flight from San Diego to Hawaii, are to be constructed at Taganrog, on the shores of the Sea of Azov.

GOING TO RUSSIA

To aid the soviet engineers in construction of the planes a group of seven skilled experts from the Consolidated Aircraft Company plant here, where the Navy's planes were constructed, left today for Russia, via New York.

In June a second group of six engineers will make the trip to the soviet.

Consolidated officials disclosed the soviet government has purchased one of the PBY-1 boats, and it will be shipped to the Taganrog factory complete, except for armaments, together with a large number of spare parts to be used in assembling other craft.

ENGINEERS VISITORS

It also was learned today that for the last two months a group of soviet engineers has been in the Consolidated plant here conferring with company officials.

It was stressed these soviet engineers have been kept "carefully segregated" so they could not gain access to parts of the shops where highly secretive experimental work is being carried on for the Navy.

Navy Sea Flight Skipper Named

Pope Will Command Twelve Huge Craft on Hawaii Trip April 12

L.A. TIMES - 4-4-37

Lieutenant-Commander L. A. Pope will command the twelve giant consolidated flying boats of Patrol Squadron Eleven on their attempted 2600-mile nonstop delivery flight to a permanent station at Pearl Harbor, Hawaii, during the week of April 12, it was announced yesterday by Admiral Arthur J. Hepburn, commander-in-chief of the United States Fleet.

Admiral Hepburn also announced that a cordon of navy ships will be on station as plane guards between here and Hawaii during the flight, as they were when twelve identical "PBY-1" planes of Patrol Squadron 6 made a similar ferry flight to Pearl Harbor in January.

Flight crews on the hop will comprise twelve officer pilots and sixty enlisted men, an average of six men to a plane. On arrival, the air cruisers will be turned over to Patrol Squadron 8, regularly based at Pearl Harbor.

All twenty-four of the "PBY-1's" when in Hawaii will participate in "United States Fleet Problem XVIII" on which the surface and air squadrons will depart the San Pedro-San Diego area April 16.

CONSAIR BAND MOSCOW-BOUND

Continued from Page 1

will leave for the Soviet Union in June, Mr. Dormoy said. They will be C. Garner Green, design engineer and stress analyst; Harry Campbell, design engineer; Basil O. Isham, group leader for hull design; Felix Kallis, group leader for power plant; James P. Steves, shop planning executive; and Gilbert A. Henry, design engineer.

Airboat Purchased

A Consolidated airboat, similar to those now being manufactured for the United States Navy, has been purchased by Russia and will be shipped there, complete without armaments, in November. A large number of spare parts to be used by the Russians in assembling another airboat, has also been bought.

Two Years' Stay

During the last two months, a group of Soviet engineers have been performing liaison duty between their government and Consolidated at the San Diego plant. They have been kept carefully segregated because of the large amount of secret experimental work being performed for the Navy.

Two years will probably be required in the work of the Consolidate engineers, according to Mr. Dormoy. They will remain in Russia until the first complete Russian-built PBY-1 has been tested and proved acceptable.

Screen Shrouds Deal

The men selected for this expedition are experts in the four integral divisions of plane-manufacturing, body and hull, wing, equipment and engines.

Whether Russia will use the planes for military or commercial purposes as soon as mass production is started has not been revealed. A great deal of secrecy has, in fact, surrounded the Russian negotiations with Consolidated.

VOTE IS ORDERED AT CONSOLIDATED

S.D. UNION — 4-7-37

Executives of Consolidated Aircraft Corp. have been notified that the national labor relations board in Washington has ordered a plant election to decide the collective bargaining agency for employes, C. A. Van Dusen, vice president, announced last night.

The ballot will carry names of Aircraft local 1125, International Machinists' union, an affiliate of the American Federation of Labor, and the Consolidators' association.

Van Dusen said date for the election had not been set and said he understood it would be arranged by regional labor board officers.

"As far as the company is concerned, we have no statement to make," said Van Dusen. "This is merely routine of carrying out the law."

Representatives of the machinists' union said earlier in the day that all production workers on an hourly basis, excluding clerks, engineers and office workers, had been designated as the voting unit and that a preliminary meeting to decide the election date would be held tomorrow.

Consolidated Workers To Vote on Bargaining

S.D. UNION — 4-8-37

Consolidated Aircraft Corp. employes will vote Saturday whether the Consolidators or Aircraft local 1125, American Federation of Labor affiliate, will represent them in collective bargaining. Dr. Towne Nylander, national labor relations regional director, will superintend the casting of ballots.

MASS HAWAIIAN HOP NEXT WEEK

S.D. UNION — 4-7-37

Official announcement that VP-11 squadron, composed of 12 new Consolidated air cruisers and commanded by Lt. Comdr. Laverne A. Pope, will take off from San Diego harbor for a continuous flight to Hawaii next week, was made yesterday by Rear Adm. Ernest J. King.

The airplanes will start early in the morning and are expected to land at Pearl Harbor at dawn next day. The chamber of commerce is making arrangements to bring the five major newsreels here to film the take-off.

Another squadron of 12 Consolidated planes will be flown direct from San Diego to Coco Solo, C. Z., early in June.

SEATTLE PLANE WORKERS' CHIEF PLANS ADDRESS

Collective Bargaining Vote Count Due At Factory Saturday Night

S.D. SUN — 4-8-37

On the eve of a National Relations Board election to determine their agency for collective bargaining, employes of Consolidated Aircraft Corporation will attend a mass meeting in Russ Auditorium at 8 p. m. tomorrow, it was announced today.

Called by Aircraft Lodge No. 1125, A. F. of L. affiliate which seeks power to represent all employes of the huge San Diego factory, the meeting will be addressed by Jim Lynch, president of Aircraft Mechanics Lodge No. 751, Seattle.

Vote Set Saturday

Saturday, the aircraft workers will mark government ballots under the supervision of Towne Nylander, regional director for the National Labor Relations Board.

Two squares appear on the ballot.

An "X" in the first is a vote for Aircraft Lodge No. 1125, International Association of Machinists, as representative for collective bargaining purposes.

A mark in the second square will be a vote for the Consolidators.

Observers Present

Lynch, who will address the mass meeting tomorrow night, is in Southern California for the purpose of attending a joint meeting of the agreement committees from Seattle, Burbank and San Diego aircraft lodges, according to George B. Dayton, financial secretary and business agent for the local unit.

The election of a collective bargaining agency will begin at 12:30 p. m. and conclude at 10:30 p. m. Saturday. Eleven observers representing the Consolidators and 11 representing the Aircraft Lodge will be present to act as watchers at the polling place, which will be in the hangar at the end of the tool storage building behind the factory.

Immediate Count Due

Those eligible to vote in the election are hourly paid employes of Consolidated with the exception of general office and other office and clerical employes and those classified as executives or time keepers.

Ballots will be counted by Nylander in the presence of party observers as soon as possible after the close of voting Saturday night.

SERVICE NOTES

Crews For Hawaii Flight To Return On Navy Vessels

S.D. SUN 4-7-37

By HAROLD KEEN

When Lieut.-Comdr. Loverne A. Pope and his crew of 72 officers and men take off from San Diego harbor for Hawaii some time next week, it will not be "good-bye" to them but merely "au revoir."

Personnel To Return

The planes of Patrol Squadron 11 will remain at Honolulu, where they will be permanently based, but personnel of the 12 Consolidated bombers will return here as soon as convenient, probably by Navy transport, according to Aircraft Base Force officials.

Actual takeoff date is still tentative. Weather conditions here and along the line of flight will determine when the big airboats leave San Diego.

Already four aircraft tenders, two from Pearl Harbor, and the San Diego-based Gannet and Sandpiper, have left for sea, presumably to keep North Island posted on conditions across the Pacific.

Tenders Leave Early

The Gannet and Sandpiper are scheduled for arrival at Pearl Harbor Navy Yard April 17, which indicates that the trans-Pacific flight ought to be completed at least by that date.

Patrol Squadron 11 was the first group to receive the new Consolidated PBY planes and acted as "tutors" to personnel of Patrol Squadron Six, which made a record-breaking hop from San Diego to Hawaii in February.

◇ ◇ ◇

CONSAIR LABOR VOTE SPEEDED

S.D. SUN — 4-7-37

Nylander Arrives To Set Bargaining Election

Consolidated Aircraft Corp's labor problems today appeared on the road to definite settlement as Dr. Towne Nylander, National Labor Relations Board regional director, arrived here to arrange for a labor election in the plant.

The election was ordered by the board after hearings in San Diego and Los Angeles on petitions of Aircraft Local 1125 and the Consolidators, opposing labor organizations, to appear on the ballot.

Winner of the election, which will be restricted to production workers employed on an hourly basis and excluding clerks, engineers, and office workers, will have the right to represent the factory employes in collective bargaining, according to George Dayton, business agent of Aircraft Local 1125.

SERVICE NOTES

Navy To Set S. D.-Hawaii Flight Takeoff Tomorrow

By HAROLD KEEN

S.D. SUN 4-9-37

Announcement of definite takeoff time of the San Diego-Hawaii mass flight of 12 Consolidated patrol bombers is forthcoming tomorrow, the Aircraft Base Force operations office reported today.

Weather Data Gathered

The trans-Pacific hop has been tentatively set for some time next week, and a group of Honolulu and San Diego-based aircraft tenders are already in the Pacific gathering weather data for use by the aviators.

Instead of shipping a whole squadron of officers and men from Hawaii to North Island, as was done in the case of Honolulu's Patrol Squadron Six, when it accepted delivery on the PBY's several months ago, a reverse process is taking place now.

'Ferry' Squad Planned

Under Lieut.-Comdr. Loverne A. Pope, the personnel of Squadron VP-11, stationed at North Island, is to fly the airboats to Hawaii, turn them over to Patrol Squadron Eight as replacements, and return by Navy vessel to resume duty in their own aviation unit.

Patrol Squadron Three of Coco Solo, Canal Zone, at present is training at North Island for a non-stop delivery flight to Panama this summer.

◇ ◇ ◇

A. F. L. AFFILIATE BIDS FOR CONSAIR

S.D. SUN — 4-9-37

A final bid for support of Consolidated Aircraft Corp. factory employes will be made by Aircraft Local 1125, A. F. L. affiliate, in a mass meeting in Russ Auditorium.

Tomorrow afternoon, workers employed in mechanical trades on an hourly basis will ballot to determine whether Aircraft Local 1125 or the Consolidators shall represent them in collective bargaining. Chief speaker at tonight's rally will be James Lynch, president of Boeing Aircraft Lodge, Seattle.

WILL TALK VOTE AT AIRCRAFT MEETING

S.D. TRIBUNE — 4-8-37

Aircraft lodge No. 1125, International Association of Machinists, affiliated with the American Federation of Labor, will hold a mass meeting at 8 p.m. tomorrow at Russ auditorium for all aircraft workers, it was reported today by George L. Dayton, financial secretary and business agent of the lodge. He said the purpose of the meeting is for discussion and instructions to the membership and those few remaining workers not members concerning an election to be held by hourly paid employes of Consolidated Aircraft Corp. Saturday afternoon and evening on the question of representation for purposes of collective bargaining with their employer. The election is a United States government election under the direction of Dr. Towne Nylander, director of the 21st region, national labor relations board, and will be by secret ballot, according to a notice of election posted.

Dayton reports the principal speaker of the evening will be Jim Lynch, president of Aircraft Mechanics lodge No. 751, of Seattle, who is in southern California for the purpose of attending a joint meeting of the agreement committees from Lodge No. 751, Seattle; Lodge No. 727, Burbank, and Lodge No. 1125, San Diego.

The purpose of this meeting, Dayton explained, is to work out a standardized agreement applicable to all airplane factories on the Pacific coast.

Saturday's election will enable those eligible to vote to choose between Aircraft Lodge No. 1125 and Consolidators as an agency for collective bargaining. The election, which will be held in a hangar at the Consolidated plant, was ordered last week by the national labor relations board, which last month held a hearing on the matter here. Those eligible to vote, according to the notice of election, are the hourly paid employes of the Consolidated Aircraft Corp., except the general office and other office and clerical employes, wherever located, those engaged in the engineering department, and those classified as executives or time-keepers on the payroll of Consolidated as of April 8. So-called clerks who regularly handle goods and materials are included in the appropriate unit and are eligible to vote in the election.

Balloting will be conducted under the supervision of Nylander and his assistants. The polls for the election will be open from 12:30 p.m. until 10:30 p.m. Saturday.

PLANE CREWS TO DECIDE ON BARGAIN UNIT

S.D. SUN — 4-6-37

An election to determine what organization shall represent employes in collective bargaining with the Consolidated Aircraft Corp. has been ordered by the National Labor Relations Board in Washington.

This information was received here today by George D. Dayton, business manager of Aircraft Local 1125, from Dr. Towne Nylander, regional labor board director.

Result Of Hearings

Calling of the election was the result of recent hearings conducted before the Regional Labor Board.

"A preliminary meeting will be held in the Consolidated plant Thursday," Dayton said, "and the date for the election probably will be set then."

The labor board, according to Dayton, ordered that an "appropriate" voting unit shall consist of all production workers on an hourly basis, excluding all clerks, engineers and office workers.

2000 Members Claimed

Aircraft Local 1125 claims more than 2000 members in the plant. Another employes' organization known as the "consolidators" has been declared a company union by the Aircraft local.

The victorious organization in the election will bargain exclusively on behalf of Consolidated employes.

12 NAVY PLANES TO START HAWAII FLIGHT MONDAY

S.D. UNION — 4-10-37

Weather conditions over the San Diego-Pearl Harbor airway permitting, 12 Consolidated air cruisers, comprising VP-11 squadron of the fleet patrol wing under command of Lt. Comdr. Loverne A. Pope, will take off from the harbor Monday, Hawaii-bound.

Adm. Arthur J. Hepburn, U. S. fleet commander, announced aboard the flagship Pennsylvania yesterday that the squadron was ready for the flight to the "crossroads of the Pacific" and was only awaiting suitable weather conditions.

The planes will follow the same course as that flown by 12 Consolidated seaplanes in their flight from San Diego to Pearl Harbor Jan. 28. These planes flew the 2270 nautical miles in 21 hours and 40 minutes. The squadron was commanded by Lt. Comdr. William McDade.

Patrol Vessels Under Way

In January, 1934, six Consolidated airboats, commanded by Comdr. Kneffler McGinnis, flew from San Francisco to Hawaii, 2400 miles, in 24 hours and 45 minutes.

Plane patrol vessels, mostly mine sweepers, are proceeding to their stations along the line of flight and are sending weather reports at frequent intervals to the Naval Air station here. Adm. Hepburn reported that a weather chart will be made up tomorrow night, and if the outlook is favorable, the planes will leave Monday.

It is reported that the take-off will be some time between 8 and 11 in the morning when the heavily laden planes will have the benefit of suitable wind conditions. In the January flight the air boats encountered trouble getting into the air, taking off just at dawn, and when there was no breeze to help them lift off the water in taxiing down channel, several of them headed about and went barging down the south bay and over the strand to the sea.

Fishermen Warned

Small boat operators and fishermen have been warned to steer their craft clear of the channel which will be used by the air boats in getting aloft. This channel will be patrolled by navy launches and cutters each flying a red danger flag and all approaching surface craft will be warned to steer clear of the danger zone.

Newsreel pictures were taken of the squadron yesterday afternoon at North Island.

12 NAVY PLANES READY TO HOP THIS AFTERNOON FOR HONOLULU

S.D. UNION — 4-12-37

First of 12 giant navy air cruisers will roar down San Diego bay at 2:30 this afternoon and fly into the path of the setting sun toward Honolulu, weather permitting, Rear Adm. Ernest J. King, commander aircraft base force, said last night after a perusal of the night weather reports.

Rear Adm. King will give final orders for the start of the mass flight after study of this morning's weather reports.

Like massive sleek gray geese, the flying boats of squadron V-P11 will be slipped into the bay from the long white concrete aprons on the naval air station this afternoon.

One by one, the planes will make the long run down to bay toward Pt. Loma, their motors roaring to lift the fuel-burdened ships from the water.

A rendezvous will be set, probably at sea.

The flying boats will join the formation and the planes, veritable giants of the air, will wing their way toward their new station of duty, the fleet air base at Pearl Harbor, T. H.

Under the command of Lt. Comdr. Loverne A. Pope, the 12 flying boats all constructed at the San Diego plant of the Consolidated Aircraft Corp., will follow the same course as that flown by another squadron of 12 planes of the same type Jan. 28. The route will be guarded by naval aircraft tenders.

The course from here to Honolulu is 2270 miles and was covered by the previous squadron flight in 21 hours, 40 minutes. The previous squadron ran into a fierce storm which was battled for several hours.

The flight will be the third mass flight of navy planes from the Pacific coast to Hawaii. Six seaplanes, under Comdr. Kneffler McGinnis, flew to San Francisco to Honolulu in January, 1934.

AIRCRAFT WORKERS FAVOR A.F.L. UNIT

S.D. TRIBUNE — 4-12-37

Aircraft Lodge 1125, International Association of Machinists, affiliated with the American Federation of Labor, was selected Saturday by employes of Consolidated Aircraft Corp., as bargaining agency of hourly workers in the mechanical departments. In an election to determine whether Aircraft lodge 1125 or the Consolidators' association should be the bargaining agency, the former organization was chosen by a vote of 1823 to 531. Dr. Towne Nylander, regional director of the national labor relations board, under whose direction the election was held, said it was conducted in the most orderly manner of any he had seen. He complimented the employes on their conduct and officials of the company for their cooperation. Following the election union officials said negotiating efforts would be started immediately.

A. F. L. UNIT WINS IN ORDERLY VOTE AT CONSOLIDATED

S.D. UNION — 4-11-37

By a 3-to-1 vote, employes of Consolidated Aircraft Corp. yesterday chose the American Federation of Labor affiliated union, Aircraft local 1125, International Association of Machinists, as the bargaining agency of hourly wage workers in mechanical departments.

Total vote in the election was 1823 for the Machinists and 531 for the Consolidators' association, a non-affiliated organization. Dr. Towne Nylander, regional director of the national labor relations board, announced late last night. In all, 2370 ballots were cast. Fifteen were challenged and one voided.

Booths Borrowed

Dr. Nylander said the election was conducted in the most orderly manner of any he had seen. Balloting booths were borrowed from the city and set up in a large assembly room. Rope lines kept voters moving in queues during peak voting hours. In one 25-minute period of a luncheon hour, ballots of more than 1000 employes were handled by election officials at 11 tables, Dr. Nylander said.

He complimented officials of the corporation for their cooperation in the handling of the election and the employes on their conduct.

'Fairness' Lauded

Corporation officials also were lauded "for the fairness and cooperation shown" in a statement issued by George D. Dayton, business manager of the Machinists.

The vote was ordered by the national labor relations board after a hearing conducted here several weeks ago. Union officials said negotiation efforts would be started immediately.

HAWAII HOP MONDAY IF WEATHER O. K.

S.D. TRIBUNE — 4-10-37

Navy authorities studied weather charts today in preparation for the takeoff early next week of 12 Consolidated-built patrol planes to be flown from San Diego to Hawaii. Adm. Arthur J. Hepburn, commander-in-chief United States fleet, announced that if weather conditions are favorable the planes will leave Monday, The Associated Press reports. The squadron, VP-11 of the fleet patrol wing under command of Lt. Comdr. Loverne A. Pope, will follow the same course as that followed by another squadron of 12 seaplanes last Jan. 28. The course from here to Honolulu is 2270 miles and was covered by the previous squadron flight in 21 hours, 40 minutes. A notice to mariners has been issued requesting boat operators in San Diego harbor to watch for signal displays at North Island advising of the flight and to stay clear of the lengthy takeoff area in the bay at the start of the flight.

NAVY HOP TO HONOLULU SCHEDULED FOR MONDAY

12 CONSAIR CRUISERS FLY TO NEW BASE

Flight Set For Morning Hours; Weather Conditions Checked

S.D. SUN — 4-10-37

The start of the Navy's mass flight to Honolulu is in the hands of the Weatherman.

Ready to hop are 12 Consolidated air cruisers of fleet patrol wing squadron VP-11 under command of Lieut. Comdr. Loverne A. Pope.

2270-Mile Flight

Weather permitting, the planes will roar into the sky from San Diego bay between 8 and 11 Monday morning, point their noses toward Honolulu and follow them for 2270 miles to their new base.

The fleet's commander-in-chief, Adm. Arthur J. Hepburn, aboard his flagship USS Pennsylvania, announced that the weather chart drawn up tomorrow night will determine whether or not the takeoff may be carried out on schedule.

Weather Watched

Conditions are expected to be more favorable than those at the dawn hop of Jan. 28 when lack of breeze to help lift the planes from the water made the take-off difficult.

The channel will be patroled by Navy launches flying red warning flags and all harbor traffic will be diverted to assure a clear run for the flying boats Monday.

The trans-Pacific flight is expected to take between 21 and 22 hours. Personnel of the flight:

11-P-1
Pope, L. A., Lt. Comdr.; Gage, J. A. Jr., Av. Cadet; Balske, C. A., ACMM (PA), (NAP); Potts, W. H., ACMM (PA); Mayer, A., CRM (AA); Potter, G. E., RMlc; Robinson, E. C., ALMMlc.

11-P-2
Haman, Claude W., Lieut.; West, L. J., ACMM (PA), (NAP); McPherson, H. A., AMMlc (NAP); Cloud, P. S. ACMM (AA); Johnson, E. G., AMMlc; Cheney, O. W., Y2c; Anderson, M. L., RMlc.

11-P-3
Turner, Frank, Lieut.; Cusick, J. O., AMMlc (NAP); Fitzmaurice, M. J., ACMM (PA); Rawls, J., RM2c; Griffin, G. G., AMM2c; Sippel, R. G., ACMM (PA).

11-P-4
Dey, W. C., Jr., Lieut.; Royer, T. W., Av. Cadet; Anderson, J. M., AMMlc (NAP); Sunderland, J., ACMM (PA); Hester, J. H., RMlc; Niedzwiecki, J. G., AMMlc; Morrill, N. G., Matt. 1c.

11-P-5
Ramsey, Paul H., Lieut.; *Evans, C. H., AMM2c (NAP); Spraggins, J. A., RM2c (NAP); Buck, H. D., ACMM (AA); Leftwich, L. L., RM2c; Carr, R. L., AMMlc; Meneough, H. M., Sealc.

11-P-6
McKechnie, A. W., Lieut.; *Eddy, W. D., AMM2c (NAP); Woodson, J. D., AMMlc (NAP); Cinq-Mars, G. M., ACMM (AA); Daniels, H. E., RMlc; Oliver, G. C., AMM3c; Price, R. S., ACMM (PA).

11-P-7
Whaley, W. B., Lieut.; McLaughlin, S. R., Av. Cadet; Dixon, L. A., ACOM (PA), (NAP); Asher, A. E., ACMM (PA); Lentz, F. C., SRM (PA); Ronicker, G. M., AMMlc.

11-P-8
Craig, Kenneth, Lieut.; *Davies, J. H., AMM2c (NAP); Weaver, R. M., AMMlc (NAP); Coburn, J. F. Jr., AMMlc; Matter, W. E., RM2c; Joyce, J. L., AMM2c; Logan, G. R., AMMlc.

11-P-9
Ashford, W. H. Jr., Lieut.; Kuhn, T. H., ACMM (PA), (NAP); Morton, G. T., ACMM (AA); Bailey, H. A., RM2c; McDowell, M. H., AMMlc; Daly, H. F., ACMM (AA).

11-P-10
Perrill, H. K., Lieut.; Coward, C. G., ACMM (AA), (NAP); Taylor, H. B., AOMlc (NAP); Cossett, O. P., ACMM (PA); Strack, F. Jr., RMlc; Miller, P. B., AMM2c.

11-P-11
Cooper, E. G., Lieut.; Kaenel, L. J., RM2c (NAP); Harper, T. A., AMMlc; Roley, J. E., RM2c; Griffin, R. V. B., AMM2c; McManus, M. J., ACMM (PA).

11-P-12
Hale, H. H., Lieut. (jg); Lasseter, P., ACMM (PA), (NAP); Waldrop, J. P., AMMlc; Gunsolley, J. W., RM2c; Hannah, A. H., AMM2c; Burnish, W. B., CBM (AA).
*—NAP'S for transportation to Pearl Harbor for duty.

Aircraft Workers Union Victor Over 'Consolidators' By 1823-531

Consolidated Employes Cast Ballot To Name Bargaining Unit

S.D. SUN — 4-11-37

Aircraft Local 1125, an American Federation of Labor affiliate, yesterday won the right to represent 3295 Consolidated Aircraft Corp, employes in collective bargaining with the management.

This union scored an overwhelming victory over its rival labor organization, the Consolidators, in a National Labor Relations Board election conducted yesterday on the company property.

The official tally was:
Aircraft Local 1125—1823.
Consolidators—531.

Total number of factory workers eligible to vote was 3295.

'White Collars' Excluded

Today's election excluded all "white collar" workers—clerks, office help and engineers—and was restricted to employes engaged in manual trades on an hourly basis.

Observers from the National Labor Relations Board, headed by Dr. Towne Nylander, regional director, and from both the unions were present throughout the balloting.

Within the first half-hour after the polls opened at 12:30 p. m., more than 1000 votes had been cast. A steady dribbling of ballots during the remainder of the day and until closing time at 10:30 p. m., swelled the total to almost 2400.

The election and its result—recognition of Aircraft Local 1125 as the factory employes' sole collective bargaining agency—put an end to several months of unrest at Consolidated Aircraft Corp.

A Labor Relations Board hearing was required last month to pass on the petitions of the two contesting unions for places on the ballot. Previous requests of Aircraft Local 1125 to the company management that this A. F. of L. affiliate be recognized had been denied.

Casting their ballots in Consolidated Aircraft Corp.'s election yesterday are, left to right, James Burney, William Wallace and Charles Slife, with Miss Peggy Conners, National Labor Relations Board election clerk, acting as observer.

Mass meetings were held, both by the A. F. of L. union and the Consolidators to gain support for their respective organizations. Charges were made by officials of the Aircraft Local that the rival group was a "company union." The claim that "outsiders" were trying to run Consolidated's labor affairs was made by the Consolidators.

Rumors that labor troubles would break into the open and possibly tie up production of 176 Navy patrol bombers now in the Consolidated assembly lines were heard from time to time. Despite the intense feeling aroused over the battle between the two unions, work on the big airboats was not interrupted and a steady output continued to equip patrol plane squadrons at North Island and Hawaii.

CONSAIR WORKERS VOTE ON UNIONS

NEXT MOVE OF CONSAIR LABOR UNION AWAITED

A. F. Of L. Affiliate To Start Collective Bargaining

S.D. SUN — 4-12-37

What is the next move in the Consolidated Aircraft Corp, labor situation?

Now that Aircraft Local 1125, A. F. of L. Affiliate, has been established as the sole collective bargaining agency for factory employes, company officials today anticipated demands by this organization.

Defeats Consolidators

The union, victorious over its rival labor unit, the Consolidators, at a plant election Saturday, is expected to prepare its idea of a working agreement at its regular weekly meeting in Eagles' Hall tonight, according to George Dayton, business agent.

"We will present an agreement to the management within three days," he said today. "It will ask for an increase in wages, though how much I am not prepared to say."

Proposals of the Aircraft Local will be similar to those over which negotiations are now in progress at the Boeing plant in Seattle, and the Lockheed factory in Burbank, Dayton said.

The agreement would expire July 1, at which time a new one-year contract would be sought.

Defeated Group To Remain

Meanwhile, officials of the Consolidators today were planning the future status of their organization. Though defeated, 1823 to 531, in Saturday's election, the group does not intend to disband, according to C. L. R. Smeltzer, president. The program of the organization, however, will undergo adjustments as a result of its defeat.

The intense interest of Consolidated factory workers in the election was manifested by the heavy vote cast. Out of 3295 employes eligible to cast ballots, 2370 visited the polls. Fifteen votes were challenged, and one, marked "I am mutual," was void.

The humor of this latter ballot is contained in the fact that several hundred employes have been members of both organizations, a revelation made at recent National Labor Relations Board hearings on the company's labor problems.

TAKE-OFF SET AT 2:30 FOR HAWAII FLIGHT

12 Navy Airboats From S. D. To Carry 80 Men To Isles

S.D. SUN — 4-12-37

Eighty men in 12 giant Navy airboats were to soar away from San Diego Harbor at 2:30 p. m. today on a 2270-mile nonstop flight across the Pacific to Hawaii.

Last minute weather reports received by Aircraft Base Force officials from the six Navy vessels stationed along the flight route indicated favorable flying conditions.

20-Hours In Air

The officers and men, commanded by Lieut.-Comdr. Loverne A. Pope of Patrol Squadron 11, will make the hazardous flight in about 20 hours, depending on wind velocity and direction, it was predicted at North Island today.

The last transpacific mass hop Jan. 28 of a dozen Consolidated patrol bombers was accomplished in 21 hours 48 minutes after the squadron bucked a heavy storm 300 miles before reaching its destination.

'Routine Delivery'

Today's flight is characterized by Rear Adm. Ernest J. King, Aircraft Base Force commander, as a routine delivery of the airboats to Pearl Harbor for replacement of obsolete planes in Patrol Squadron 8.

The plane of Lieut. Comdr. Pope will probably take off first, and the other craft were to roar down a guarded runway in the harbor in rapid succession. At a 10,000-foot rendezvous, the airboats will gather in formation and point their noses toward the open sea and Pearl Harbor, 2270 nautical miles distant.

12 AT LINE AIMED FOR HAWAII

S.D. TRIBUNE — 4-12-37

The first plane took off at 2:32 p.m. The others took to the air in rapid order and the last left the water at 2:57. They were to rendezvous at sea and then head for Honolulu.

The navy spread its wings over the Pacific this afternoon for another flight from San Diego to Honolulu—the second attempted this year. Twelve San Diego-built patrol planes, commanded by Lt. Comdr. L. A. Pope and carrying 78 officers and men, were scheduled to take off on the flight of 2553 statute miles to Pearl Harbor.

Weather Fair

Six of the planes were in the water at 2:30 p.m., the time which had been tentatively set for the take-off. They left the north beach at North Island and taxied southeast across the bay to a point off Fishermen's pier, at the foot of G st. There they turned north, proceeding past Broadway pier in preparation for a "straight shot" westward takeoff over Pt. Loma.

A fair crowd was gathered at the end of Broadway pier for the takeoff. Approximately 150 officers and men were on the beach at North Island before the planes slid into the water.

All small boats and other harbor craft were warned to stay clear of the take-off area, and a fleet of small navy boats was stationed between all warships to keep other boats clear.

Here's Ballot In Aircraft Election

OFFICIAL BALLOT
HOURLY PAID EMPLOYEES
CONSOLIDATED AIRCRAFT CORPORATION EMPLOYEES

1. This is a secret ballot.
2. Make your choice of organization to represent you by marking "X" in one square only.
3. Do not sign your name.
4. If you spoil your ballot, return it to the Government Representative and get a new one.
5. Fold your ballot to conceal the "X" you have made and deposit it in the ballot box.

If you desire to be represented for purposes of collective bargaining by AIRCRAFT LODGE NO. 1125, International Association of Machinists, mark "X" in this square: ☐

If you desire to be represented for purposes of collective bargaining by the CONSOLIDATORS, mark "X" in this square: ☐

Here is a sample of the official ballot being marked by Consolidated Aircraft Corp. employes today to determine which of two organizations shall represent them in collective bargaining.

RIVAL CHIEFS CONIDENT OF LABOR VICTORY

Seattle Local President Describes Battle For Contract

S.D. SUN — 4-10-37

Factory workers at Consolidated Aircraft Corp., today were to cast ballots to determine whether Aircraft Local 1125, A. F. of L. affiliate, or the Consolidators, a rival

GEORGE DAYTON

labor organization, is to represent them in collective bargaining.

The election, ordered by the National Labor Relations Board, was to be held from 12:30 p. m. to 10:30 p. m. in the company's hangar.

Fight Described

Meanwhile, plans to establish uniform working agreements between unions and aircraft factories throughout the west were revealed last night by James Lynch, president of Boeing Aircraft local, Seattle, at a mass meeting in Russ auditorium.

Lynch described the struggles of his organization to obtain the first labor contract on the Pacific coast with an aviation concern.

Leaders Confident

Uniform wage scales in all aircraft plants are desirable, he

C. L. R. SMELTZER

pointed out, because employers would be on an even competitive basis as far as labor costs are concerned.

Leaders of the rival organizations, George Dayton, business manager of the Aircraft union, and C. L. R. Smeltzer, president of the Consolidators, both were confident of victory.

Eleven observers from each group was to watch the balloting being conducted by Dr. Towne Nyland, regional director of the National Labor Relations Board.

Weather Good for Hop Of S. D.-Hawaii Fliers

S.D. TRIBUNE — 4-12-37

Their goal Honolulu, 12 navy patrol planes of VP squadron 11-F were ready to start a nonstop flight attempt from here at 2:30 p.m. today. Weather conditions between southern California and the Hawaiian islands were reported good.

"This flight is a routine delivery of new airplanes built for the navy by Consolidated Aircraft Corp. at San Diego," said Rear Adm. Ernest J. King, commander of aircraft base force. He said the flight will be guarded by six vessels spaced along the great circle route from southern California to Honolulu.

The planes, lined up on the beach at North Island this morning, were not expected to enter the water for the take-off until shortly before 2:30, it was reported. Memorial services were held at the air station this afternoon for four fliers killed last Tuesday in a scouting bomber collision off Pt. Loma—Lts. Ludwell Pickett and Joseph J. Loughlin, Harry M. Bradley, chief machinist's mate, and John J. Carney, aviation machinist's mate—and the start of the Hawaiian flight was not scheduled until after the services.

The distance to be covered in the flight is 2270 nautical miles, or 2553 statute miles.

Pope in Command

Lt. Comdr. L. A. Pope is in command, and after the planes arrive at their destination they will be turned over to patrol squadron 8-F, stationed at Pearl Harbor. The personnel of VP squadron 11-F will be returned to San Diego in the U.S.S. Wright, base force aircraft tender, upon completion of United States fleet exercises which start Friday and last for six weeks

King said the patrol planes have a wing span of 104 feet and are 63 feet, 6½ inches long and 18 feet, 6 inches high. They are powered with two Pratt-Whitney engines.

"The estimated flight time is 20 hours, depending on the weather conditions, including force and direction of the wind," said the admiral.

The flight is the second of its kind this year. Another squadron of 12 planes flew from here to Honolulu in January in 21 hours, 40 minutes.

The following is a list of members of the flight crews of VP Squadron 11-F, making the flight to Honolulu:

11-P-1—Pope, L. A., lt. comdr.; Gage, J. A. jr., Av. Cadet; Balske, C. A., A.C.M.M. (P.A.) (N.A.P.); Potts, W. H., A.C.M.M. (P.A.); Mayer, A., C.R.M. (A.A.); Potter, G. E., R.M.1c; Robinson, E. C., A.M.M.1c.

11-P-2—Haman, Claude W., lt.; West, L. J., A.C.M.M. (P.A.), (N.A.P.); McPherron, H. A., A.M.M.1c (N.A.P.); Cloud, P. S., A.C.M.M. (A.A.); John, E. G., A.M.M.1c; Cheney, O. W., Y2c; Anderson, M. L., R.M.1c.

11-P-3—Turner, Frank, lt.; Cusick, J. O., A.M.M.1c (N.A.P.); Fitzmaurice, M. J., A.C.M.M. (P.A.); Rawls, J., R.M.2c; Griffin, G. G., A.M.M.2c; Sippel, R. G., A.C.M.M. (P.A.).

11-P-4—Dey, W. C. jr., lt.; Royer, T. W., Av. Cadet; Anderson, J. M., A.M.M.1c (N.A.P.); Sunderland, J., A.C.M.M. (P.A.); Hester, J. H., R.M.1c; Niedzwiecki, J. G., A.M.M.1c; Morrill, N. G., Matt.1c.

11-P-5—Ramsey, Paul H., lt.; *Evans, C. H., A.M.M.2c (N.A.P.); Spraggins, J. A., R.M.2c (N.A.P.); Buck, H. D., A.C.M.M. (A.A.); Leftwich, L. L., R.M.2c; Carr, R. L., A.M.M.1c; Meneough, H. M., Sea.1c.

11-P-6—McKechnie, A. W., lt.; *Eddy, W. D., A.M.M.2c (N.A.P.); Woodson, J. D., A.M.M.1c (N.A.P.); Cinq-Mars, G. J., A.C.M.M. (A.A.); Daniels, H. E., R.M.1c; Oliver, G. C., A.M.M.3c; Price, R. S., A.C.M.M. (P.A.).

11-P-7—Whaley, W. B., lt.; McLaughlin, S. R., Av. Cadet; Dixon, L. A., A.C.O.M. (P.A.), (N.A.P.); Asher, A. E., A.C.M. (P.A.); Lentz, P. C., C.R.M. (P.A.); Roncker, G. M., A.M.M.1c.

11-P-8—Craig, Kenneth, lt.; *Davies, J. H., A.M.M.2c (N.A.P.); Weaver, R. M., A.M.M.1c (N.A.P.); Coburn, J. F. jr., A.M.M.1c; Matter, W. E., R.M.2c; Joyce, J. L., A.M.M.2c; Logan, G. R., A.M.M.1c.

11-P-9—Ashford, W. H. jr., lt.; Kuhn, T. H., A.C.M.M. (P.A.), (N.A.P.); Morton, G. T., A.C.M.M. (A.A.); Bailey, H. A., R.M.2c; McDowell, M. H., A.M.M.1c; Daly, H. F., A.C.M.M. (A.A.).

11-P-10—Perrill, H. K., lt.; Coward, C. G., A.C.M.M. (A.A.), (N.A.P.); Taylor, H. B., A.O.M.1c (N.A.P.); Cossett, O. P., A.C.M.M. (P.A.); Strack, F. jr., R.M.1c; Miller, P. B., A.M.M.2c.

11-P-11—Cooper, E. G., lt.; Kaenel, L. J., R.M.2c (N.A.P.); Harper, T. A., A.M.M.1c; Roley, J. E., R.M.2c; Griffin, R. V. B., A.M.M.2c; McManus, M. J., A.C.M.M. (P.A.).

11-P-12—Hale, H. H., lt. j.g.; Lasseter, P., A.C.M.M. (P.A.), (N.A.P.); Waldrop, J. P., A.M.M.1c; Gunsolley, J. W., R.M.2c; Hannah, A. H., A.M.M.2c; Burnish, W. B., C.B.M. (A.A.).

*N.A.P.'s for transportation to Pearl Harbor for duty.

S. D. SQUADRON NEARS HALF-WAY MARK

PACIFIC HOP TO END AT 10:30 TODAY

12 Big Planes Report Ideal Weather After Afternoon Take-Off; Six Vessels Guard 2270-Mile Route.

S.D. UNION BULLETIN 4-13-37

Last reported to The Union as 1163 nautical miles out at 2 a. m., the San Diego plane squadron was nearing Hawaii early today. The planes were 68 miles east of the U. S. S. Gannett at 2 a. m. With the fuel load diminishing, the planes were expected to pick up speed and to set a new San Diego-to-Honolulu record.

Twelve navy air cruisers which roared away from San Diego yesterday afternoon were nearly half way to Honolulu at midnight, with 933 miles and nine and one-half hours behind them on the scheduled 20-hour, 2270-nautical-mile flight.

"Fine flying weather" was reported by the squadron as the planes winged their way through the Pacific night in V formation like a flock of 12 giant geese.

Without incident the patrol planes had reported they were 315 miles west of San Diego last night at 6, 478 miles out at 8 and 738 miles out at 10.

Surface Craft Waiting

While squadron VP-11, newest addition to the fleet's patrol wing, roared steadily overhead through the night, six surface vessels at intervals of 340 miles along the course of flight awaited any emergency.

The navy's second mass flight of Consolidated patrol planes from San Diego to the Hawaiian islands was scheduled to arrive over the fleet air base at Pearl Harbor this morning at 10:30, P. S. T.

There was many a taut throat among the 80 officers and men of the air cruisers as they boarded the planes. The flight originally scheduled to start at 2 was postponed to 2:30 because flag officers feared the planes' 24 Pratt-Whitney engines would disrupt a memorial service being held in North island chapel for four navy airmen killed in the two-plane crash off Pt. Loma last week. A number of the planes' personnel attended the services.

At 2:15 the motors roared at high pitch. Last farewells were exchanged by the airmen with their wives, children, sweethearts, friends and shipmates. They clambered to their places in the planes.

While Rear Adm. Ernest J. King, commander of aircraft, base force, watched the maneuver, the first plane, 11-P-2, was wheeled into the water with Lt. Claude W. Haman at the controls.

Military precision marked the take-off of the planes under direction of the squadron commander, Lt. Comdr. L. A. Pope in 11-P-1. His plane was in the water at 2:32.

ramp.

After being launched from the seaplane ramp, the planes taxied southward down the bay with motors throttled and turned across the bow of the destroyer tender Whitney, then heading northward to the starting point 200 yards west of the mole pier.

At 2:30 Lt. Haman in plane 2 opened the throttles of the two powerful engines. Sprindrift cascaded over the wings and hull as the air cruiser swiftly sped down the course. Within less than a mile the plane lifted off the water.

Plane 2 was between the aircraft carrier Langley and the cruiser Concord when Lt. Frank Turner in plane 3 tuned up his motors With a roar the seaplane followed in the wake of plane 2 and in exactly 45 seconds the hull was free of the water.

In succession, the remaining 10 planes rose into the air. The last plane with Lt. Comdr. Pope at the controls left the water at 2:49.

Steadily gaining altitude, the air cruisers went into formation, a long V 40 miles off Pt. Loma at 10,000 feet elevation over a solid fog bank that was visible from the mainland.

To newspapermen, Rear Adm. King remarked the precision of the take-off. He smiled frequently as he commented on the flight.

The flight, he said, was a routine delivery of the patrol planes to replace obsolete craft at Pearl Harbor. Seven planes will be returned to North Island from Honolulu by aircraft tender and carrier for utility use, including towing targets.

Definite data on the planes' construction was not given under the navy order which orders silence on the craft until they have been in service for a year. The patrol planes are powered with two Pratt-Whitney engines each, using three-bladed propellers. The planes are 63 feet, 6½ inches long, 18 feet, 6 inches high, with a wing span of 104 feet.

Aerologist Joins

Lt. E. W. Stephens, aerologist on this flight and the massed flight last January, joined Plane 7 late yesterday.

The surface vessels acting as patrol guards are stationed 340 miles apart between Pt. Loma and Diamond Head in the following order:

Minesweeper Thrush, destroyer Gilmer, destroyer Chandler, aircraft tender Gannett, minelayer Ramsay and minesweeper Sandpiper.

The planes will be turned over to VP-squadron 8 on arrival at Pearl Harbor. They will join the 12 Consolidated planes flown to Hawaii from San Diego last January. Late this month the 24 planes will participate in Fleet Problem 18 in the Hawaii-Alaska-California triangle.

Since Sunday morning at 6, the Seagull has been stationed 1040 miles northeast of Honolulu as a weather observation station.

Lt. Comdr. Pope radioed Naval Air station at 6 last night that the planes were 315 miles west of San Diego. At 8 he reported the planes were 478 miles west and 140 miles east of the guard ship Gilmer. Flying conditions were perfect, he reported.

Speed of the planes was expected to increase as the load was lightened by use of fuel.

The majority of the officers and men making yesterday's flight will return to San Diego aboard the aircraft tender Wright June 4.

Crews of Planes

The following is a list of members of the flight crews of VP Squadron 11-P, making the flight to Honolulu:

11-P-1—Pope, L. A., lt. comdr.; Gage, J. A. jr., Av. Cadet; Balske, C. A., A.C.M.M. (P.A.), (N.A.P.); Potts, W. H., A.C.M.M. (P.A.); Mayer, A., C.R.M. (A.A.); Potter, G. E., R.M.1c; Robinson, E. C., A.M.M.1c.

11-P-2—Haman, Claude W., lt.; West, L. J., A.C.M.M. (P.A.), (N.A.P.); McPherron, H. A., A.M.M.1c (N.A.P.); Cloud, P. S., A.C.M.M. (A.A.); John, E. G., A.M.M.1c; Cheney, O. W., Y2c; Anderson, M. L., R.M.1c.

11-P-3—Turner, Frank, lt.; Cusick, J. O., A.M.M.1c (N.A.P.); Fitzmaurice, M. J., A.C.M.M. (P.A.); Rawls, J., R.M.2c; Griffin, G. G., A.M.M.2c; Sippel, R. G., A.C.M.M. (P.A.).

11-P-4—Dey, W. C. jr., lt.; Royer, T. W., Av. Cadet; Anderson, J. M., A.M.M.1c (N.A.P.); Sunderland, J., A.C.M.M. (P.A.); Hester, J. H., R.M.1c; Niedzwiecki, J. G., A.M.M.1c; Morrill, N. G., Matt.1c.

11-P-5—Ramsey, Paul H., lt.; *Evans, C. H., A.M.M.2c (N.A.P.); Spraggins, J. A., R.M.2c (N.A.P.); Buck, H. D., A.C.M.M. (A.A.); Leftwich, L. L., R.M.2c; Carr, R. L., A.M.M.1c; Meneough, H. M., Sea.1c.

11-P-6—McKechnie, A. W., lt.; *Eddy, W. D., A.M.M.2c (N.A.P.); Woodson, J. D., A.M.M.1c (N.A.P.); Cinq-Mars, G. J., A.C.M.M. (A.A.); Daniels, H. E., R.M.1c; Oliver, G. C., A.M.M.3c; Price, R. S., A.C.M.M. (P.A.).

11-P-7—Whaley, W. B., lt.; Stephens, E. W., lt.; McLaughlin, S.R., Av. Cadet; Dixon, L.A., A.C.O.M. (P.A.), (N.A.P.); Asher, A. E. A.C.M. (P.A.); Lentz, F. C., C.R.M. (P.A.); Ronicker, G. M., A.M.M.1c.

11-P-8—Craig, Kenneth, lt.; *Davies, J. H., A.M.M.2c (N.A.P.); Weaver, R. M., A.M.M.1c (N.A.P.); Coburn, J. F. jr., A.M.M.1c; Matter, W. E., R.M.2c; Joyce, J. L., A.M.M.2c; Logan, G. R., A.M.M.1c.

11-P-9—Ashford, W. H. jr., lt.; Kuhn, T. H., A.C.M.M. (P.A.), (N.A.P.); Morton, G. T., A.C.M.M. (A.A.); Bailey, H. A., R.M.2c; McDowell, M. H., A.M.M.1c; Daly, H. F., A.C.M.M. (A.A.).

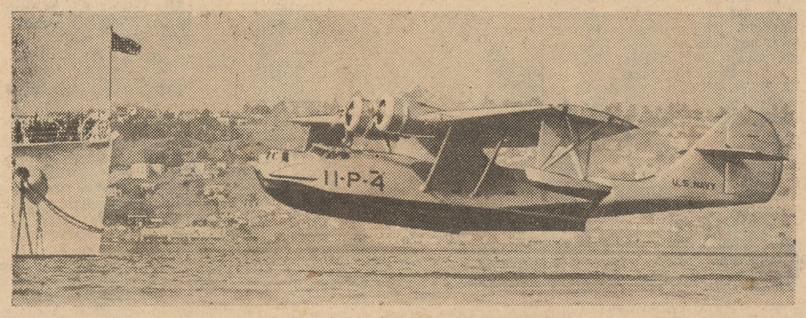
11-P-10—Perrill, H. K., lt.; Coward, C. G., A.C.M.M. (A.A.), (N.A.P.); Taylor, H. B., A.O.M.1c (N.A.P.); Cossett, O. P., A.C.M.M. (P.A.); Strack, F. jr., R.M.1c; Miller, P B., A.M.M.2c.

11-P-11—Cooper, E. G., lt.; Kaenel, L. J., R.M.2c (N.A.P.); Harper, T. A., A.M.M.1c; Roley, J. E., R.M.2c; Griffin, R. V. B., A.M.M.2c; McManus, M. J., A.C.M.M. (P.A.).

11-P-12—Hale, H. H., lt. j.g.; Lasseter, P., A.C.M.M. (P.A.), (N.A.P.); Waldrop, J. P., A.M.M.1c; Gunsolley, J. W., R.M.2c; Hannah, A. H., A.M.M.2c; Burnish, W. B., C.B.M. (A.A.).

SKY CRUISERS FROM HERE ON LONG JOURNEY

One of the great gray patrol planes yesterday as it was being wheeled from Naval Air station ramp into the water for the San Diego-Honolulu massed flight.



Spindrift flying high, this new navy air cruiser cuts over the water an instant before it went into the air to join the flight formation.

Navy Planes Inspected After S. D.-Hawaii Hop

S. D. TRIBUNE 4-13-37

Their record 2553-mile San Diego-Honolulu flight adding another colorful chapter to American naval aviation history, 12 Consolidated-built navy patrol planes were undergoing inspection by naval experts at Pearl Harbor this afternoon following their arrival at the mid-Pacific naval air base at 12:10 p.m.

After circling over Honolulu the squadron broke its tight V-formation for landing. The planes were removed from the water at once to hangars for inspection, the International News Service reports:

A "squall area" off the Hawaiian islands, which the planes were forced to detour, caused them to arrive behind schedule. The fliers, according to an International News Service dispatch, had planned to land at 11 a.m. (PST). The officers and men, led by Lt. Comdr. L. A. Pope, flight commander,, reported they had enjoyed favorable weather along the 2553-mile route until they neared the squall area.

Pope said most of the flight, which started at San Diego at 2:50 p.m. yesterday, was made at an altitude of 10,000 feet.

Rear Adm. Ernest J. King, commander of aircraft base force, under whose direction the patrol planes operate, declared himself "quite pleased" with the flight. A similar statement was forthcoming from officials of the Consolidated Aircraft Corp.

Base force aircraft authorities here give the official flight time as 21 hours, 21 minutes.

PAN AMERICAN PLANE SPEEDS TO ALAMEDA

By United Press S.D.SUN 4-13-37

MIAMI, April 13.—A Pan American Airways Commodore plane took off today for Alameda, to enter Pacific air service.

The plane, piloted by Capt. Wallace D. Culbertson, was scheduled to make three overnight stops enroute to the West Coast.

Navy Planes' Mass Flight to Hawaii Second Great Feat Of Kind Negotiated by San Diego-Built Craft

Aviation History Made With King In Command

S.D. Tribune 4-13-37

"Hawaiian flight? What's that?"

With this question Rear Adm. Ernest J. King, then chief of the bureau of aeronautics, navy department, parried interviewers at North Island on Oct. 25, 1933, when he was here on an official tour of inspection. Lt. Comdr. Kneffler McGinnis, earlier in the month had made aviation history when he commanded a flight of flying boats from Panama to San Diego with only one stop en route, covering the 2898 miles in 32 hours and 21 minutes actual flying time, and rumors were current that the squadron would be flown from California to Hawaii.

"I have nothing to do with it," declared King, adding that it was for Rear Adm. A. W. Johnson, then commander of aircraft base force, and Rear Adm. John Halligan, who then was commander of aircraft battle force, to decide. Johnson, himself, had just made aviation history, by flying with McGinnis from Acapulco to San Diego on the second lap of the flight. However, neither he nor Halligan at the time issued any statements on the rumored Hawaiian flight.

Then, in January, 1934, McGinnis commanded the navy's first group flight to Hawaii.

Scenes yesterday afternoon as the planes of VP squadron 11-F left San Diego for Honolulu on the navy's second Hawaiian flight this year. Planes 11-P-6, Lt. A. W. McKechnie, is shown entering the water from the Naval Air station, following planes 11-P-5, Lt. Paul H. Ramsey. The base force aircraft tender Langley is shown in the background in midstream. The planes roared past the stern of the Langley from a starting point off Pier 1 as the long flight to the mid-Pacific islands got under way.

Today, King, now on duty here as commander of aircraft base force, watched the completion of the third group flight of planes from California to Hawaii—and the second since he has been commander of aircraft base force. On Jan. 28-29 this year 12 planes, under the command of Lt. Comdr. William H. McDade, flew the 2553 miles from Pt. Loma to Diamond Head in 21 hours, 48 minutes, battling thick weather the last 300 miles. In the January flight the planes left San Diego at 8:32 a.m., Jan. 28, officially arriving over Honolulu at 3:50 a.m.

All three flights have been made by Consolidated-built aircraft. The 1934 flight was by planes which Consolidated Aircraft Corp. built when their plant was back in Buffalo. The 24 planes making the two flights this year were manufactured at San Diego.

HAWAII FLIERS SET RECORD

S. D.-Hawaii Air Record Set

BIG PLANES HIT STORMS NEAR GOAL

Flying Time 21 Hours, 25 Minutes; Formation Held During All of 2553-Mile Journey Despite Squalls.

S.D. UNION — 4-14-37

HONOLULU, April 13 (A.P.) —Naval aviators today completed the third "routine transfer" of big fighting planes from the mainland to Honolulu with the arrival of 12 air cruisers bearing 78 men on a non-stop flight from San Diego.

The big planes negotiated the 2553-mile all-water route without trouble, arriving in formation officially at 12:15 p. m. (P. S. T.) to make the flying time 21 hours, 25 minutes.

Six Times Contacted

In charge of Lt. Comdr. L. A. Pope, the squadron flew over six surface ships stationed along the route but throughout the operation reported "all well."

"We had excellent weather most of the way," said Pope, "but about one hour was added to our flying time by squalls a few hundred miles out of Honolulu."

The squalls forced the squadron off its course for a time but it remained in "V" formation all the way, with the planes about 300 yards apart.

Pope's squadron bettered the time made last Jan. by 12 planes led by Lt. Comdr. William Dade in the second "routine transfer." The Dade squadron covered the same distance in 21 hours, 40 minutes.

Six planes in charge of Comdr. Kneffler McGinnis made the first "routine transfer" from San Francisco bay to Honolulu in 1934. That squadron, flying only 2400 miles, required 24 hours, 45 minutes.

PLAN SCHOOL FOR TRAINING CRAFTSMEN

S.D. Tribune — 4-14-37

At the suggestion of San Diego industrialists who are badly in need of technically-trained craftsmen, the Associated Manufacturers of San Diego today authorized a survey into the feasibility of a local trade school.

President Karl Morrill of the trade-at-home group was directed to name a committee to make a survey of the situation, and report to the executive committee. He will announce the personnel of the committee within a few days.

The problem of finding expert workers in all lines was laid before the manufacturers at their April meeting last night at the University club.

Principal speakers, Ray Reynolds, president of the school board, and Percy Heron, supervisor of technical and vocational education in the city schools, pointed out the advantage of a trade school to be operated by properly trained instructors. Students would be admitted to the school because of their ability and fitness.

Reynolds urged establishment of a school, possibly with United States government backing, because of the importance of such an institution in case of war.

Admitting that there is a serious lack of trained craftsmen today, heads of San Diego aircraft plants promised to cooperate with the manufacturers' survey committee.

Experts Needed

C. A. Van Dusen, vice president of Consolidated Aircraft Corp., said "our plant needs expert mechanics. We are now being forced to train young, inexperienced men. We are maintaining our monthly schedule of 12 flying boats only because we have 35 mechanics and a number of tool makers we brought with us."

Ed Price, president of Solar Aircraft Co., said he too is forced at considerable expense to train his own welders and sheet metal workers. He urged founding of the trade school on a small scale, with "possibly no more than 12 graduates in the first class."

T. Claude Ryan indorsed the plan, insisting that some academic work be taught.

Others who offered to assist in establishing such a school include. Ernest Schiefer, office fixture manufacturer; Ed Magouirk, of the Brown Military school; Frank Brown of Woodrow Wilson Junior high and others.

QUOTATION ERROR, VAN DUSEN EXPLAINS

S.D. TRIBUNE 4-15-37

In a correction of a statement in which he was quoted in The Evening Tribune yesterday as saying that "we have 35 mechanics and a number of toolmakers we brought with us," C. A. Van Dusen, vice president, Consolidated Aircraft Corp., today declared that "when we came from Buffalo we had 35 first-class toolmakers out of the force of approximately 325 men we brought with us. Since then, as a result of making special tools and as a result of the experience of the people brought here from Buffalo, plus the employment of experienced people here, we have been able to train a large number of inexperienced personnel." Yesterday's statement appeared in a story discussing authorization by the Associated Manufacturers of San Diego of a survey into the feasibility of a local trade school.

'NO TROUBLE' ON FLIGHT TO HONOLULU

EVENING TRIBUNE 4-14-37

Their 2553-mile record flight a matter of aviation history, 78 officers and men who landed at Honolulu yesterday noon in 12 naval patrol planes, after an overnight flight from San Diego, rested today.

"There was no trouble, but about one hour was added to the time for the flight by squalls we met a few hundred miles out of Honolulu," Lt. Comdr. L. A. Pope, flight commander, told the Associated Press. "These forced the squadron off its course."

The planes flew at 10,000-foot altitude in squadron formation, 300 yards apart, all the way, he added. Their average speed was 110 miles an hour.

Lt. Comdr. William McDade and other officers who trained with the present fliers at San Diego and preceded them in a 12-plane flight from here to Honolulu in January, greeted the newcomers.

The Associated Press states that, through what officers said was a radio transmission error, the time of arrival was reported to the navy department as 12:15 p.m. (PST) and that time will stand as official, although the first plane landed seven minutes earlier. This time of arrival makes the flight time 21 hours, 25 minutes. Local base force air authorities reported yesterday when the flight ended that the time of the flight was 21 hours, 21 minutes.

The present flight was featured by speedy take-offs and landings. Observers here said only 18 minutes' time elapsed from the time of the first plane's take-off until the flight was under way. At Honolulu the last plane alighted 17 minutes after the first.

12 Reach Honolulu After Detour To Escape Squall Area

S.D. Tribune — 4-13-37

Beating its own record for the 2553-mile flight from San Diego to Honolulu, established in January, the navy today had 12 giant patrol planes over the mid-Pacific island city at 12:10 p.m. (P.S.T.)—21 hours, 21 minutes after the takeoff from here. A similar flight Jan. 28-29 was made in 21 hours, 48 minutes.

Delayed Half Hour

Under command of Lt. Comdr. L. A. Pope, the squadron, which left San Diego at 2:50 p.m. yesterday, flew over six surface boats stationed along the course, and reported all well throughout the day and night, according to The Associated Press.

The International News Service, in a dispatch from Honolulu, said stormy weather off Hawaii caused the planes to "detour a small squall area." Pearl Harbor naval authorities said the "detour" delayed the planes by nearly an hour and a half.

All reports received here indicate the flight was uneventful.

The fliers made their departure from here yesterday afternoon without incident. Pope's plane was the last to rise from the surface of San Diego bay, following in the wake of the 11 other planes which roared to a takeoff on a westerly course from off the foot of Broadway. Soaring out over the harbor entrance, the planes rendesvouzed 40 miles off Pt. Loma at 10,000 feet, forming into a long V before streaking westward as a group.

Following is the log of the mass flight:

2:50 p.m.—Flight officially under way.
6 p.m.—315 miles west of San Diego.
8 p.m.—478 miles west.
10 p.m.—738 miles west.
Midnight—933 miles west.
2 a.m.—1163 miles west.
4 a.m.—1406 miles west.
6 a.m.—1598 miles west.
8 a.m.—402 miles from Honolulu.
10 a.m.—260 miles from Honolulu.

Rear Adm. Ernest J. King, commander of aircraft base force, witnessed the takeoff yesterday afternoon. After the planes were wheeled into the water from North Island they taxied up to the piers, proceeding just north of Broadway pier for the start. Despite the heavy loads carried, they rose without difficulty after a run of less than a mile. Small navy patrol boats kept the takeoff area clear.

Six navy craft were spaced at intervals of 340 miles apart between here and Honolulu to act as station ships. They are the minesweeper Thrush, destroyer Gilmer, destroyer Chandler, tender Gannett, minelayer Ramsey and minesweeper Sandpiper

At Honolulu the planes, all Consolidated Aircraft Corp.-built craft, will be turned over to VP squadron 8-F. The fliers will be returned to San Diego on the base force aircraft tender Wright at the completion of United States fleet maneuvers which start Friday and last six weks.

CONSAIR OPENS BARGAINING

S.D. SUN — 4-15-37

Collective bargaining between the management of Consolidated Aircraft Corp. and its factory employes was under way today.

Representing the workers was Aircraft Lodge 1125, A. F. of L. affiliate. which scored an overwhelming victory over its rival labor organization, the Consolidators, at a plant election last Saturday.

A working agreement was presented to C. A. Van Dusen, vice president and works manager of the company, by representatives of the union yesterday. It asked for an increase in wages, a 40-hour week, closed shop and seniority rights.

Mr. Van Dusen said he was not prepared to make any statement regarding the negotiations, though he admitted that collective bargaining was in progress.

CONSAIR PLANE OFF TO ALAMEDA

S.D. Sun — 4-17-37

Enroute to Alameda for service with the Pacific division of Pan-American Airways, a Consolidated Commodore airboat took off from San Diego harbor at 10:50 a. m. today.

The plane, piloted by Capt. Wallace Culbertson and a crew of three, landed here at 6:30 p. m. yesterday from Mazatlan, Mexico, on its trip from Miami, where it had formerly been based while in use on the South American run.

Consair Planes Set Record to Honolulu

S.D. Club Life — 4-21-37

In new — though unsought — record time, the Navy's newest batch of Consolidated Aircraft flying boats, 12 in number, flew the 2553 miles from San Diego to Hawaii in 21 hours, 25 minutes, last week. Lt. Comdr. L. A. Pope, squadron commander, was skipper of the mass flight which was described as a "routine transfer of personnel and equipment."

The huge flying boats are the latest and longest ranged aircraft of the Navy. They were built in San Diego.

PAN-AMERICAN VETERAN PLANE FLYING TO S. D.

Consolidated Commodore En Route From Miami To Alameda

S.D. SUN — 4-16-37

One of the first planes to be placed into service by Pan-American Airways—a 32-passenger Consolidated Commodore—was to arrive in San Diego harbor at 4 p. m. today.

Built in 1929 at Consolidated Aircraft Corp.'s Buffalo plant, the Commodore is one of a fleet of 14 which has been in use for the past eight years on the South American run. It has a record of about 8000 hours and one million miles in the air.

En Route From Florida

The plane is en route to Alameda from its previous base at Miami. It will enter auxiliary service in the Pacific division of Pan-American Airways.

Piloted by Capt. Wallace Culbertson and a crew of three, the big seaplane was to leave Mazatlan, Mexico, at daybreak today for the 880 nautical-mile hop to San Diego. Stops have been made at Carmen, on the east coast of Mexico, and Acapulco on the present flight of the two-motored Commodore.

High Safety Record

The Commodores, hailed in 1929 as the finest flying equipment in commercial use, have an almost unparalleled record of safety, according to Consolidated officials. Not one passenger has been injured in one of these planes, it is said.

The airboat will be handled by a Consolidated Corp. crew on arrival here. It will leave tomorrow morning for Alameda, according to present plans.

AWAIT VET AIRLINER BUILT BY S. D. FIRM

S.D. Tribune — 4-16-37

A Consolidated Aircraft Corp. built "sky trail-blazer" of an earlier day, a twin-motored Commodore plane which Consolidated built in 1929 at its Buffalo, N. Y., plant, was due to arrive at San Diego late this afternoon from Miami, Fla. The Commodore, expected here between 5 and 6 p.m., left Miami Tuesday and came to the west coast via Acapulco, Mex., where it stayed last night. It will be serviced here tonight and is to proceed on to Alameda early tomorrow. The plane, which has been operated by Pan-American Airways for the last eight years in the Miami-South American service, is to be used in Pan-American's Pacific service, it is reported. Capt. Wallace D. Culbertson is in command of the flight.

DEMANDS PRESENTED BY AIRCRAFT WORKERS

SD TRIBUNE 4-15-37

A working agreement, including higher wages, the 40-hour week, closed shop and seniority rights was submitted to the Consolidated Aircraft Corp yesterday by Aircraft Lodge 1125, International Association of Machinists, officials of the organization reported today. Aircraft Lodge 1125 was designated as the sole bargaining agent for the plant's employes by the government. Conclusion of last Saturday's labor vote at Consolidated, which resulted in an overwhelming victory for Aircraft Lodge 1125 over the Consolidators' association, laid the foundation for presenting the agreement and the beginning of negotiations between the company and the union. The executive board of the lodge declared it is confident conferences will be arranged immediately to discuss grievances and arrive at a favorable agreement.

Consolidated Receives Union's Wage Demands

S.D. UNION — 4-15-37

Representing about 3800 workers, Aircraft Local 1125, American Federation of Labor, yesterday presented wages and working demands to the Consolidated Aircraft Corp. The union was selected by a majority of the workers as the collective bargaining agent in an election last Saturday. The union's demands were not announced.

Plane of 1929 'Vintage' Arrives On Trip with 3 From Miami

Built in Buffalo By Consolidated; Flies North

S. D. Tribune 4-17-37

A product of the Consolidated Aircraft Corp. of 1929, when the firm's plant was at Buffalo, N. Y., a Commodore commercial airboat alighted on San Diego bay late yesterday and taxied to a new mooring for seaplanes, which the harbor department has installed at the municipal seaplane basin off Lindberg field. The craft, first visiting plane to use the new seaplane basin, was flown here from Miami, Fla., via Acapulco, Mex., by Capt. Wallace D. Culbertson, Pan American pilot, and a crew of three. It left for Alameda, where Pan American Airways will use it as an auxiliary ship in their Pacific division.

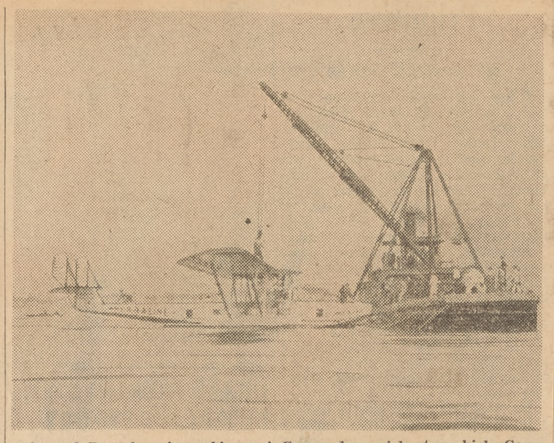
To William B. Wheatley, chief test pilot for Consolidated, the arrival of the airboat was of special significance. He was the first pilot ever to fly this craft, and with several other Consolidated people who came here from Buffalo when the plant was established in San Diego in 1935, was on hand to meet the Commodore. Wheatley recalled the difficulties in launching the Commodore at the Buffalo plant, when a crane mounted on a power barge was used to lift the plane from shore into the water.

One of Fleet of 12

With the Commodore here, there was gathered at Lindbergh field three of the older types of planes which Consolidated has manufactured. The Thomas Morse O-19-B plane—army observation craft—which the 514th observation squadron, air corps reserve, has at its Lindbergh field base, was built by Consolidated at Buffalo in 1929, while the local air corps reserve squadron's three PT-3 planes, a type of one of the most famous training planes in the country, were built by Consolidated in 1927.

The Commodore is one of a fleet of 12. The Consolidated Commodores, developed from the Model XPY-1 patrol flying boat built for the United States navy, were constructed for the New York, Rio & Buenos Aires Line, Inc., and when Pan American bought N.Y.R.B.A. they acquired 14 Commodores. Two were destroyed in a hangar fire, but the fact that the 12 are still in service is a tribute to Consolidated's design and construction and to Pan American's service and maintenance, airmen say. The flying time of each of these planes is in excess of 7000 hours.

Flying north with Culbertson today is Howard Cone, junior pilot of the Pan American Airways system from Alameda to Manila. He came here yesterday to meet the Commodore plane. Flying to San Diego from Miami with Culbertson were First Officer Brock, Engineer Officer Lee and Radio Officer Dickson.



One of Pan American Airways' Commodore airboats, which Consolidated Aircraft Corp. built eight years ago at Buffalo, N. Y., is shown here being launched by a crane on a power barge in Niagara river—sharp contrast to the launching facilities afforded Consolidated at its new San Diego plant. A Commodore airboat landed here late yesterday after a flight from Miami, Fla., over the Gulf of Mexico and across the Mexican mainland.

2 Chosen To Serve as Directors Of Consolidated Corporation

S.D. Tribune 4-20-37

Number Increased To 15 Serving On Board

A World war field artillery captain is one of two new directors of the Consolidated Aircraft Corp. He is Robert Lehman, of the firm of Lehman Bros., New York, who with John D. Hertz, partner in Lehman Bros. since Jan. 1, 1934, was elected to the board of directors recently, increasing the number of directors of the corporation to 15.

Lehman, 44, is the son of Philip Lehman, who is senior partner of Lehman Bros. He is a graduate of Yale, 1913 class. He was captain, Battery B, 318th field artillery, in the A.E.F. during the war. He is a director of many corporations, and recently was elected president of the Lehman Corp.

Hertz started his career as reporter on the Chicago Record. He left newspaper work to become automobile salesman and developed the Yellow Cab systems, from which developed The Yellow Cab Manufacturing Co., which was absorbed by General Motors Corp. Like Lehman he also is a director of many corporations.

JOHN D. HERTZ ROBERT LEHMAN

28 S. D. PLANES IN U. S. ARMY MANEUVERS

S.D. Tribune 4-21-37

Twenty-eight Consolidated Aircraft Corp.-built planes will take part in next month's army air corps "mobility" tests and maneuvers in California, The Associated Press reports. Of the 28, 18 will be flown to Hamilton field, San Rafael, from Langley field, Va., while 10 will be flown to Hamilton field from Selfridge field, Mich.

Maj. Gen. Frank McAndrews, commander of the general headquarters air force, announces that Brig. Gen. Gerald C. Brant, second wing commander, would leave Langley field April 30 with a staff of eight officers to establish headquarters at Hamilton field. Units from Langley field, Mitchell Field, N. Y., and Selfridge Field, will join the maneuvers.

Brant, who will make stops at Kansas City and Cheyenne, en route to the west coast, will be accompanied by two A-17 attack planes. Langley field units to leave May 1 include 11 Martin bombers, second bombardment group, and 18 Consolidated two - seat pursuit planes, 37th attack squadron. Six Martin bombers of the 9th bombardment group will go from Mitchell Field.

In addition to 56 P-26 Boeing pursuit planes, of the first pursuit group, and 10 PB-2 Consolidated two-seater pursuit planes, 14 cargo and transport planes will leave Selfridge field, May 1, to move personnel and supplies to Hamilton field headquarters.

Members of Brant's staff will include Maj. Malcolm N. Stewart, communications officer; Maj. E. A. Lynn, ordnance officer; 1st Lt. John Davies, aid, 1st Lt. D. D. Hale, assistant operations officer; Lt. Col. Carl Spatz, executive officer; Lt. Col. I. B. March medical corps surgeon, and Maj. Edgar E. Glenn, air corps, intelligence and material officer.

Navy Profits From Past Mistakes In Hawaii Hop

Aviators Avoid Errors Made On First Flight From San Diego

S.D. SUN 4-18-37

The Navy is one of those institutions where the same mistake is rarely, if ever, made twice.

Never was this axiom more perfectly illustrated than in the case of the takeoff from San Diego Harbor last Monday of 12 Consolidated patrol bombers on a non-stop mass flight to Hawaii.

Last January 28, a similar flight was made, but the circumstances attending the first takeoff were altogether different from those of the second.

Ragged Execution

The planes entered the water in slow order, taxied down the bay to the ferry channel, turned about and roared toward Point Loma while sister ships were still moving in the opposite direction to start of the takeoff lane.

The takeoffs themselves were far from successful. There was little wind to help lift the airboats from the water, and several planes bounded along dangerously, unable to lift themselves with their 10-ton fuel loads.

Required Two Hours

Altogether, what with slow launchings, faulty takeoffs and other minor annoyances (the motor of one plane went dead for a few minutes, then suddenly "kicked over" into full power again), it required about two hours from the time the first plane entered the water until all 12 airboats rendezvoused over Point Loma preparatory to heading for Hawaii.

The whole project was approached differently last week. In the first place, a different takeoff time was decided upon. At 2:30 p. m., there normally is a spanking breeze in the harbor. This was necessary for successful takeoffs. Previously, an early morning calm had almost caused disaster to the bombers.

Take Off In Quick Order

Then, the planes were all lined up, one directly behind the other, on the approach to the seaplane ramp, and it was almost a matter only of seconds after one plane was launched that another was being wheeled into the water.

In a steady parade they taxied to an area near the municipal piers, where all congregated before the first one sped down the harbor runway. The heavy fuel loads proved no hindrance to easy takeoffs.

Join Formation En Route

Since cruising over Point Loma at 10,000 foot altitude waiting for the remaining planes to join the squadron formation had proved both a waste of time and fuel, the bombers this trip set out for sea and went into formation en route.

The net result was one of the neatest jobs of dispatching big aircraft in military history. Whereas the first San Diego-Hawaii mass flight required about two hours from the time the first plane was launched to the time all 12 airboats actually pointed for Hawaii, last week's operation took exactly 35 minutes.

It was a tribute to the planning of Rear Adm. Ernest J. King, Aircraft Base Force commander, his staff, and Lieut. Comdr. Loverne A. Pope, commander of Patrol Squadron 11, which delivered the planes to Pearl Harbor.

They well demonstrated the truism that the Navy knows well how to profit from former shortcomings.

REAR ADM. ERNEST J. KING
His Planning Helped Flight.

NAVY TO SHIFT HIGH OFFICERS

Coming as a surprise even to the officers concerned, a shakeup in commands of the Aircraft Battle Force has been revealed in Washington.

When the fleet returns from its spring war games, the changes which will be made will affect the following officers:

Capt. John H. Towers, chief of staff to Vice Adm. Frederick J. Horne, Aircraft Battle Force commander, will take command of the aircraft carrier Saratoga, Adm. Horne's flagship.

Capt. P. N. L. Bellinger will be transferred from command of the Ranger to Capt. Towers' present post.

Capt. Aubrey Fitch will be relieved by Capt. Leigh Noyes of command of the carrier Lexington, and Capt. J. S. McKain, commanding officer of the Naval Air Base, Coco Solo, will assume the helm of the Ranger.

As relief of Rear Adm. Charles A. Blakely as commander of the Naval Air Training Station, Pensacola, Capt. William F. Halsey Jr., will be transferred from the Saratoga. Adm. Blakely is slated to become the first commander of Carrier Division Two, comprising the new vessels Yorktown and Enterprise.

SAN DIEGO-BUILT PLANES TO FLY IN ARMY TESTS

S.D. Tribune 4-22-37

Participating in next month's army air corps mobility tests and maneuvers, which will bring a formidable display of America's air power to California, will be 28 planes built by Consolidated Aircraft Corp., including 10 of the firm's PB-2 two-seater pursuit planes, The Associated Press reported yesterday.

In addition to the 10 Consolidated PB-2's, 56 P-26 Boeing pursuit planes, six Martin bombers, 14 cargo and transport planes and other aircraft will engage in the tests, which will be held at Hamilton field, San Rafael.

Brig. Gen. Gerald C. Brant, second wing commander, will leave Langley field, Va., April 30 with a staff of eight officers to establish headquarters, Maj. Gen. Frank McAndrews, commander of the G. H. Q. air force, announced.

Members of Brant's staff will include Maj. Malcolm N. Stewart, communications officer; Maj. E. A. Lynn, ordnance officer; 1st Lt. John Davies, aid; 1st Lt. D. D. Hale, assistant operations officer; Lt. Col. Carl Spatz, executive officer; Lt. Col. I. B. March, medical corps surgeon; and Maj. Edgar E. Gleen, air corps, intelligence and material officer.

L.A. TIMES 4-28-37

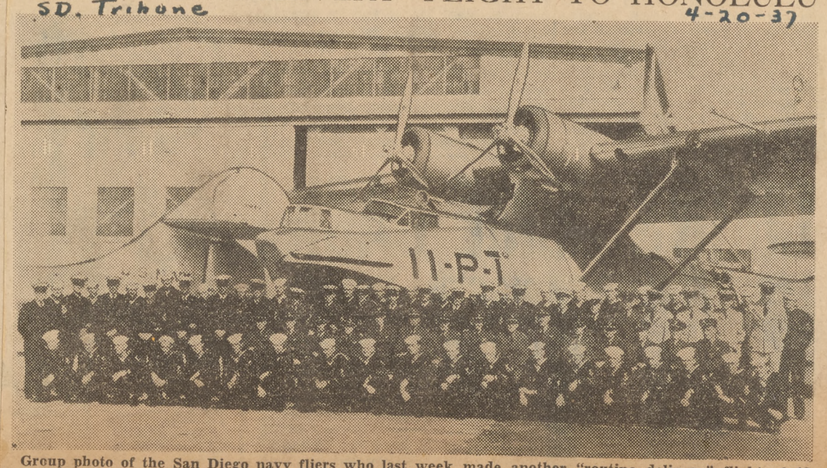
Aircraft Workers Given Pay Increase

SAN DIEGO, April 27.—More than 3000 workers at the Consolidated Aircraft Company factory here have been granted pay increases in an agreement signed with the management today, Maj. Reuben H. Fleet, president, announced.

The agreement also establishes a forty-hour working week, Maj. Fleet said.

SECOND IN 'DELIVERY' FLIGHT TO HONOLULU

SD. Tribune 4-20-37



Group photo of the San Diego navy fliers who last week made another "routine delivery" flight of 12 Consolidated Aircraft Corp.-built PBY-1 naval patrol planes from San Diego to Honolulu. The flight, led by Comdr. L. A. Pope, ended a week ago today, The Associated Press listing the flying time as 21 hours 25 minutes for the 2553-mile hop. It was the second flight of 12 Consolidated-built planes from San Diego to Honolulu this year, the first having been made in January in 21 hours 48 minutes.

S.D. UNION

FOUR SQUADRONS IN MASS FLIGHT TO GOLDEN GATE

MAY 24/1937

Four squadrons of the navy's big patrol planes will stage a mass flight to San Francisco May 27, it was reported yesterday.

Completed recently at the Consolidated plant, the planes were up yesterday in practice flights over the bay. There will be 200 officers and men involved in the flight, it is reported.

Squadrons which will make the flight, and their commanding officers, are listed as the following: VP3F, Lt. Robert W. Morse;; VP7F, Lt. Comdr. Robert I. Fuller; VP9F, Lt. Comdr. James B. Sykes; VP12F, Lt. Comdr. James E. Dyer.

CONSOLIDATED BOOSTS PAY

SCENE AS AIRCRAFT LABOR PACT SIGNED

S.D. TRIBUNE 4-27-37

Left to right: James McDermott, president, Aircraft Lodge 1125, International Association of Machinists; C. F. Grow, general vice president, International Association of Machinists, and Maj. R. H. Fleet, president and manager, Consolidated Aircraft Corp.—(Photo by George Booher, Evening Tribune staff photographer.)

New race plane built

Consolidated employes construct craft

Western Flying Apr. '37

A new contender for national racing honors was completed last month by a group of Consolidated Aircraft Corporation employees led by C. C. Flagg of the final assembly inspection department. Powered by a 90 h.p. English Pobjoy engine, the little plane is said to have a top speed of 200 m.p.h. and a anding speed with flaps of 58 m.p.h. The baby racer has an overall length of 12 ft. 6 in., height of 3 ft. 10 in., and a span of 14 ft. 6 in.

The wings are full cantilever with plywood skin; fuselage is welded chrome-moly steel, spruce formers and screen wire and fabric covered; control surfaces are steel tubing, fabric covered.

Consolidated Aircraft

Net profit for 1935 drops below 1936 figure

Western Flying April '37

Consolidated Aircraft Corporation showed a net earning of $192,411.06 for the year ended December 31, 1936 after deduction of all income charges including depreciation, amortization of development charges and provision for taxes on income and undistributed profits. This compares to a net profit of $322,731 made in 1935.

40-Hour Week O.K.'d In Year's Contract Signed With Union

In the first aircraft company labor-management agreement in the United States since the supreme court ruled upon the constitutionality of the Wagner labor relations act, Consolidated Aircraft Corp. of San Diego signed an agreement today with hourly-paid employes with respect to rates of pay, wages, hours of employment and other conditions of employment.

Ends 4-Day Session

The 10-point agreement, the terms of which provide it shall be given "one year of fair trial immediately following this date," was signed at 10 a.m. by Maj. R. H. Fleet, president and manager of Consolidated Aircraft Corp.; C. F. Grow of San Francisco, general vice president, International Association of Machinists, and James McDermott, president, Aircraft Lodge No. 1125, International Association of Machinists, San Diego.

The signing of the agreement followed four days of negotiating sessions, culminating in a meeting of members of Aircraft Lodge No. 1125 last night, when favorable vote on the terms resulted. Fleet, Grow and McDermott were unanimous in their praise for the "orderly and friendly manner" in which the negotiations were carried on.

The agreement provides among other things a minimum rate of pay for inexperienced personnel of 40 cents an hour for minors and 50 cents an hour for adults for the first four months of employment, which company officials said corresponds to present rates. However, effective May 2 the company will make a blanket increase of 10 percent to every employe affected by the agreement, and on that date overtime will be paid for at the rate of one and one-half times hourly rate, an increase from the rate of one and one-third which has been in effect.

3295 Affected

Number of employes affected by the agreement is announced as 3295. Consolidated officials said the total number employed at the plant is 3840, and Fleet said that action now is being considered relative to insuring fairness to the employes not covered by the agreement.

Today's action in signing the labor agreement comes within seven weeks of a labor board hearing which was held here March 11 and 12 before Examiner George Pratt. On April 2 the board issued an order for an election to be held at Consolidated to determine which organization at the plant should be exclusive agent for collective bargaining. The two labor agencies involved were Consolidators' association and Aircraft Lodge No. 1125, International Association of Machinists, affiliated with the American Federation of Labor. The election was held April 10, with Aircraft Lodge No. 1125 overwhelmingly victorious. Four days later a working agreement, which included higher wages, the 40-hour week, closed shop and seniority rights was submitted to the Consolidated Aircraft Corp. by Aircraft Lodge No. 1125.

Organized in 1923

The Consolidated Aircraft Corp., organized under the laws of the state of Delaware on May 29, 1923, first operated in a small factory at East Greenwich, R.I. Early in its corporate existence it moved to Buffalo, N. Y., where it leased a large building suitable for aircraft manufacture. Here Consolidated grew rapidly and became one of the foremost manufacturers of aircraft in the United States.

In August, 1935, Consolidated moved from Buffalo to its newly-built factory on Lindbergh field, San Diego. This change was motivated in order to concentrate on the manufacture of large flying boats, which require suitable weather and facilities for all-year launchings and operations. The Consolidated factory has approximately 450,000 square feet of floor space. It is considered one of the most modern aircraft factories in the world.

Negotiations which led up to the signing of the agreement today started last Thursday. Members of the agreement committee who represented the employes are McDermott, Grow, George Dayton, financial secretary and business agent of Aircraft lodge No. 1125; Mike Goldbarnes, M. J. Castle, James Burney and Wilbur Cox. Consolidated officials who were on the agreement committee are Fleet, C. A. Van Dusen, vice president and works manager; I. M. Laddon, vice president and chief engineer; C. T. Leigh, vice president and material supervisor; Donald Fry, personnel director; Dave Fleet, assistant to manager ; Lt. Comdr. Emile Chourre, inspector of naval aircraft at the Consolidated plant, and Lt. F. E. Deam, assistant inspector of naval aircraft.

Fleet Statement

After the agreement was signed, Fleet isued the following statement:

"It is our pleasure to announce today to our employes and to San Diego that we have reached an amicable agreement with Aircraft Lodge 1125, International Association of Machinists, affiliated with the American Federation of Labor and selected as the exclusive collective bargaining agency for the hourly paid employes of this company at an election ordered by and held under the direction of the national labor relations board on April 10. The agreement was signed at 10 o'clock this morning and is the result of three days of conference between the committee representing the lodge, and myself and associates.

'This is the first agreement with an aircraft company in the United States since the supreme court ruled upon the constitutionality of the Wagner labor relations act and we hope and believe it will be a pattern to govern other companies in our line of business in this country in their dealings with organized labor.

"We feel that the election on April 10 last was conducted fairly; that the large majority of our employes selected Aircraft Lodge 1125 as its representative; and we believe that we are entering upon the new day in a spirit in keeping with the times. Experience has shown that labor is more successful for itself when it organizes. This principle is now the law of the land and the management which does not cheerfully recognize it as such and cooperate whole-heartedly is backward indeed and due for much trouble.

'Consider Other Employes'

"We are now considering what action should be taken in regard to our employes not covered by this agreement, in order to insure fairness to them.

"We believe that the country is better off if industry pays a high wage and operates on a basis under which employes do not suffer from overwork and have time for pleasure and enjoyment.

"Personally, I believe that our president has in mind proposing a minimum wage and maximum working day bill to the congress and that this is in the back of his great mind in the controversy which is going on in Washington regarding enlargement of the supreme court.

"I feel that the enactment of a federal minimum wage and maximum hour law would be a great boon to our people, and to industry in that it would place all on a fair competitive basis.

Great Future Seen

"A great future lies before aviation. I believe that aircraft will be always the fastest, safest and cheapest means of conveyance that mankind will have on this earth, and that aviation will in the not distant future promote and guarantee world peace. With the present temperament of mankind, world peace will come only when forced, and force must back any agreement that is to stand the test of time.

"It may not have to be employed; its existence may be sufficient. As a force, air power does not occupy foriegn soil to compel observance of agreements; it knows no boundary within its range; whole continents are within its sphere of action and can be crossed within a few hours. The airplane is already man's greatest means of making friendly neighbors of all nations.

"We in this company are equipping the finest navy in the world with an aerial arm capable of patrolling our coasts and territories. The mere possession of these airboats by our navy will mean much toward maintaining peace for our country."

Agreement Given

The following is the agreement signed today:

AGREEMENT made this 26th day of April, 1937, between CONSOLIDATED AIRCRAFT CORP., herein called the "company" and AIRCRAFT LODGE 1125, INTERNATIONAL ASSOCIATION OF MACHINISTS, herein called the "union."

WITNESSETH:

WHEREAS on April 10, 1937, there was held at the plant of the company under the direction of the national labor relations board, an election for the unit comprising the hourly paid employes of the company to determine the question of representation for the purpose of collective bargaining with their employer, and,

WHEREAS in such election the union received 1823 votes of 2354 ballots cast and of 3295 employes comprising the unit and entitled to vote, and

WHEREAS by such ballot the union fairly received a majority not only of the ballots cast but also of all employes qualified to vote and embraced within such unit, and

WHEREAS it is the desire of the union to enter into an agreement with the company with respect to rates of pay, wages, hours of employment and other conditions of employment.

NOW, THEREFORE, in consideration of the premises, the parties hereto hereby agree as follows:

Bargaining Unit

1. Recognition: The company hereby recognizes the union as the exclusive collective bargaining representative of all of the employes in the unit as defined by the national labor relations board prior to such election, to wit: All hourly paid employes, exclusive of timekeepers and excepted clerks.

2. Rates of pay: The minimum rate of pay for inexperienced personnel shall be 40 cents an hour for minors and 50 cents for adults for the first four months of employment.

Effective May 2, overtime shall be paid for at the rate of one and one-half times hourly rate.

3. Wages: Effective May 2, the company will make a blanket increase of 10 percent to every employe affected by this agreement. Without promising further general raises—a policy that would act as a deterrent upon interim increases that may be earned by efficiency—the company agrees to consider in June next on its merits, a further 10 percent raise and to review individual wage rates every four months and in addition to make such individual increases upon merit as and when it determines such are justified.

40-Hour Week

4. Hours of employment: The working week shall consist of 40 hours work and shall run from Monday through Friday, or for janitors, watchmen and maintenance men through five consecutive days. With the exception of janitors, watchmen and maintenance men, eight hours of labor shall be worked within 8½ consecutive hours. Work after eight working hours in any shift shall be considered overtime. After three hours overtime on any one day and five hours on Saturday, double time shall be paid. With the exception of janitors, watchmen and maintenance men, work on Sundays shall be paid for at double time. Work on the following legal holidays (if week days), New Year's day, Washington's birthday, Decoration day, Independence day, Labor day, Thanksgiving day and Christmas day, also shall be paid for at double time. Until June 30 next the company will continue the present weekly schedules for day and night shifts.

5. Representation: The union shall nominate company employes in and for the following department groupings who shall constitute an employes' welfare committee: One sheet metal, machine shop, tank, heat-treating; one draw bench, welding, tubing, metal bench; two wings and tails; one hulls; one paint; one final assembly; one tool and wood shops; one experimental; one miscellaneous; one night shift,

"No Unfairness"

It is the intent of the company that unfairness to employes shall not exist and that complaints will be settled with the foremen. No complaint shall be considered by the committee until it has been taken up with the foremen concerned. In event satisfaction is not obtained, the employe may present his complaint in writing to the company's personal supervisor, who shall take it up with the works manager and if not settled satisfactorily in this manner, it shall be submitted to the committee. The company agrees to meet with the committee each third Thursday evening of each month to discuss the welfare of the company and its employes and to hear and settle any complaints. All grievances made to the committee shall be submitted in writing, signed by the complainant and by the department representative.

6. Discharge: Whenever an employe is discharged, the company following present practice, agrees to furnish him with the reason for his discharge. Whenever requested to do so in writing by any discharged hourly employe, the company agrees to furnish the union with the reason for discharge, within three days after receipt of such request.

Regulations Necessary

7. Regulations: The union and the company agree that the regulations set forth in the company's rule book, attached and made a part of this agreement, are necessary for the efficient operation of the company's plant and that infraction of any rule constitutes cause for discharge or other disciplinary action.

8. Intimidation and discrimination: The company agrees not to intimidate nor in any way discriminate against any employe because of his union activities; the union agrees not to intimidate nor in any way discriminate against any employe of the company not belonging to the union.

9. Bulletin boards: The company will furnish two bulletin boards on its property at places selected by its manager, for the exclusive use of the union, and the union agrees to post thereon only signed notices and nothing maligning the company or its employes and to do no distributing of literature, hand bills or printed matter, and no soliciting or collecting, on the company's property.

10. Terms: This agreement shall be given one year of fair trial immediately following this date and shall continue thereafter in force and effect unless and until it has been amended by agreement upon 30 days written prior notice by either party thereto or unless by legal procedure such as the election on April 10, 1937, a majority of the employes in the unit should elect other representation.

Consair Chief Forecasts Plant Expansion, With 10,000 Workers

S.D. SUN — 4-28-37

An example of enlightened management was provided by the willingness and promptness with which Maj. Reuben H. Fleet, president of Consolidated Aircraft Corp., reached a working agreement with Aircraft Lodge 1125, officials of the union declared today.

Pledging cooperation with the management to create greater efficiency in the plant, C. F. Grow, general vice president of the International Association of Machinists, with which A. F. of L. organization Aircraft Lodge 1125 is affiliated, lauded the contract signed yesterday as a step toward dispelling the atmosphere of uncertainty and fear in the factory.

Workers To Cooperate

Shortly after he affixed his signature to the contract providing for a 10 per cent wage increase and higher overtime rates, Grow turned to Maj. Fleet and said:

"I can assure you that the workers will cooperate with the management to make a 'winning team' for Consolidated."

Maj. Fleet admitted that increased labor costs would necessitate asking higher prices for planes in future bids, but he added, "As long as we are furnishing planes for the Government, the least we can do is abide by the rules of the game as set down by that Government." He was referring to the Wagner Labor Act.

Standards Set Up

"Any company that cannot compete successfully with other concerns by operating according to the Government's regulations does not belong in business," he added.

"Experience has shown that labor is more successful for itself when it organizes. This principle is now the law of the land and the management which does not cheerfully recognize it as such and co-operate whole-heartedly is backward indeed and due for much trouble."

With labor problems solved, Maj. Fleet went on to predict that plant expansion would proceed so rapidly that within the next few years, 10,000 workers would be on the Consolidated payroll, almost three times the present number.

MINIMUM PAY SET; OVERTIME SCALE UPPED

3295 Aircraft Workers Win Added Income Under Agreement

Consair Signs Union Pact; Wages Boosted 10 Per Cent

Continued from Page 1

9:30 p. m. yesterday in Maj. Fleet's office after three days of bargaining.

"This is the first agreement with an aircraft company in the United States since the Supreme Court ruled upon the constitutionality of the Wagner Labor Relations Act and we hope and believe it will be a pattern to govern other companies in our line of business in this country in their dealings with organized labor," Maj. Fleet said with a smile this morning after he had put his siganture to the document.

On behalf of the employes, C. F. Grow, general vice president of the International Association of Machinists, and James C. McDermott, president of Aircraft Lodge 1125, signed the contract, which will "be given one year of fair trial immediately following this date."

'White Collars' Unaffected

The wage increases will affect all factory workers employed on an hourly rate. The collective bargaining did not affect the so-called "white-collar" group. Thousands of dollars annually were expected to be added to the payroll.

Consolidated's labor difficulties smouldered throughout the winter and finally came to a head when Aircraft Lodge 1125, a chapter of the International Association of Machinists, asked the National Labor Relations Board in January to certify an election in the factory to determine a collective bargaining agency.

A rival labor organization, known as the Consolidators, sprang up, and both groups began a vigorous campaign to recruit members.

Election Held

As a result of hearings by the National Labor Relations Board several weeks ago, Consolidated executives were ordered to allow an election to be held in the plant, and Aircraft Lodge 1125 emerged overwhelmingly victorious. Collective bargaining immediately was started and to the union's demands the company submitted counter-proposals.

Threats of strikes were heard occasionally. With the signing of the contract today, however, industrial peace appeared certain to continue.

Child Bride To Be Freed; Mother Ends Hunger Strike

By United Press

PERRY, Okla., April 27.—Mrs. Mary West ended her hunger strike today and promised to file suit to have her 12-year-old daughter's marriage to a 38-year-old neighbor annulled.

County Atty. Judson Pierce said he was willing to drop perjury charges against the mother, and to release her from jail.

She had refused to eat since she was arrested Saturday, along with John Lawrence Burns, one of two neighbors who married Mrs. West's two daughters in a double ceremony before a blind justice [illegible] overtime. After three hours overtime on any one day and five hours on Saturday, double time shall be paid. Work on Sundays and legal holidays also shall be paid for at double time.

don't care to live with him any more," the girl said. "John is a smooth talker."

The mother had been working in a WPA sewing room to support the two girls.

Eyes Grow On Lizard's Tail For Scientist

Expansion Planned, Says Fleet; 'Fair Conditions' Aim

S.D. TRIBUNE — 4-27-37

A Consolidated Aircraft Corp. factory at San Diego, employing 10,000, or nearly three times the present employe total, is envisioned by Maj. Reuben H. Fleet, president of the firm, who today signd a labor agreement affecting 3295 of the company's 3840 employes.

"Contentment Goal"

Contentment and security of the people working at the Consolidated plant are a goal in the management's expanding manufacturing program, Fleet said.

Pointing out that Consolidated Aircraft Corp. today is America's second largest aircraft manufacturing plant, turning out planes which are flown on every continent, Fleet said he looked for a continued expansion in the company's plant. He expressed complete satisfaction over the signing of the labor agreement affecting wages, hours of work and other employment conditions of the hourly-paid employes.

"The Consolidated management feels that the country is better off," he said, "if industry pays a high wage and operates on a basis under [illegible] from pleas- e and ement Inter- hinists, Feder- tern to ur line n their r."

Fleet, president and manager, Consolidated Aircraft Corp.—(Photo by George Booher, Evening Tribune staff photographer.)

New race plane built

Consolidated employes construct craft

Western Flying Apr. '37

A new contender for national racing honors was completed last month by a group of Consolidated Aircraft Corporation employees led by C. C. Flagg of the final assembly inspection department. Powered by a 90 h.p. English Pobjoy engine, the little plane is said to have a top speed of 200 m.p.h. and a anding speed with flaps of 58 m.p.h. The baby racer has an overall length of 12 ft. 6 in., height of 3 ft. 10 in., and a span of 14 ft. 6 in.

The wings are full cantilever with plywood skin; fuselage is welded chrome-moly steel, spruce formers and screen wire and fabric covered; control surfaces are steel tubing, fabric covered.

Consolidated Aircraft

Net profit for 1935 drops below 1936 figure

Western Flying April '37

Consolidated Aircraft Corporation showed a net earning of $192,411.06 for the year ended December 31, 1936 after deduction of all income charges including depreciation, amortization of development charges and provision for taxes on income and undistributed profits. This compares to a net profit of $322,731 made in 1935.

40-Hour Week O.K.'d In Year's Contract Signed With Union

In the first aircraft company labor-management agreement in the United States since the supreme court ruled upon the constitutionality of the Wagner labor relations act, Consolidated Aircraft Corp. of San Diego signed an agreement today with hourly-paid employes with respect to rates of pay, wages, hours of employment and other conditions of employment.

Ends 4-Day Session

The 10-point agreement, the terms of which provide it shall be given "one year of fair trial immediately following this date," was signed at 10 a.m. by Maj. R. H. Fleet, president and manager of Consolidated Aircraft Corp.; C. F. Grow of San Francisco, general vice president, International Association of Machinists, and James McDermott, president, Aircraft Lodge No. 1125, International Association of Machinists, San Diego.

The signing of the agreement followed four days of negotiating sessions, culminating in a meeting of members of Aircraft Lodge No. 1125 last night, when favorable vote on the terms resulted. Fleet, Grow and McDermott were unanimous in their praise for the "orderly and friendly manner" in which the negotiations were carried on.

The agreement provides among other things a minimum rate of pay for inexperienced personnel of 40 cents an hour for minors and 50 cents an hour for adults for the first four months of employment, which company officials said corresponds to present rates. However, effective May 2 the company will make a blanket increase of 10 percent to every employe affected by the agreement, and on that date overtime will be paid for at the rate of one and one-half times hourly rate, an increase from the rate of one and one-third which has been in effect.

3295 Affected

Number of employes affected by the agreement is announced as 3295. Consolidated officials said the total number employed at the plant is 3840, and Fleet said that action now is being considered relative to insuring fairness to the employes not covered by the agreement.

Today's action in signing the labor agreement comes within seven weeks of a labor board hearing which was held here March 11 and 12 before Examiner George Pratt. On April 2 the board issued an order for an election to be held at Consolidated to determine which organization at the plant should be exclusive agent for collective bargaining. The two labor agencies involved were Consolidators' association and Aircraft Lodge No. 1125, International Association of Machinists, affiliated with the American Federation of Labor. The election was held April 10, with Aircraft Lodge No. 1125 overwhelmingly victorious. Four days later a working agreement, which included higher wages, the 40-hour week, closed shop and seniority rights was submitted to the Consolidated Aircraft Corp. by Aircraft Lodge No. 1125.

Organized in 1923

The Consolidated Aircraft Corp., organized under the laws of the state of Delaware on May 29, 1923, first operated in a small factory at East Greenwich, R.I. Early in its corporate existence it moved to Buffalo, N. Y., where it leased a large building suitable for aircraft manufacture. Here Consolidated grew rapidly and became one of the foremost manufacturers of aircraft in the United States.

In August, 1935, Consolidated moved from Buffalo to its newly-built factory on Lindbergh field, San Diego. This change was motivated in order to concentrate on the manufacture of large flying boats, which require suitable weather and facilities for all-year launchings and operations. The Consolidated factory has approximately 450,000 square feet of floor space. It is considered one of the most modern aircraft factories in the world.

Negotiations which led up to the signing of the agreement today started last Thursday. Members of the agreement committee who represented the employes are McDermott, Grow, George Dayton, financial secretary and business agent of Aircraft lodge No. 1125; Mike Goldbarnes, M. J. Castle, James Burney and Wilbur Cox. Consolidated officials who were on the agreement committee are Fleet, C. A. Van Dusen, vice president and works manager; I. M. Laddon, vice president and chief engineer; C. T. Leigh, vice president and material supervisor; Donald Fry, personnel director; Dave Fleet, assistant to manager ; Lt. Comdr. Emile Chourre, inspector of naval aircraft at the Consolidated plant, and Lt. F. E. Deam, assistant inspector of naval aircraft.

Fleet Statement

After the agreement was signed, Fleet isued the following statement:

"It is our pleasure to announce today to our employes and to San Diego that we have reached an amicable agreement with Aircraft Lodge 1125, International Association of Machinists, affiliated with the American Federation of Labor and selected as the exclusive collective bargaining agency for the hourly paid employes of this company at an election ordered by and held under the direction of the national labor relations board on April 10. The agreement was signed at 10 o'clock this morning and is the result of three days of conference between the committee representing the lodge, and myself and associates.

'This is the first agreement with an aircraft company in the United States since the supreme court ruled upon the constitutionality of the Wagner labor relations act and we hope and believe it will be a pattern to govern other companies in our line of business in this country in their dealings with organized labor.

"We feel that the election on April 10 last was conducted fairly; that the large majority of our employes selected Aircraft Lodge 1125 as its representative; and we believe that we are entering upon the new day in a spirit in keeping with the times. Experience has shown that labor is more successful for itself when it organizes. This principle is now the law of the land and the management which does not cheerfully recognize it as such and cooperate whole-heartedly is backward indeed and due for much trouble.

'Consider Other Employes'

"We are now considering what action should be taken in regard to our employes not covered by this agreement, in order to insure fairness to them.

"We believe that the country is better off if industry pays a high wage and operates on a basis under which employes do not suffer from overwork and have time for pleasure and enjoyment.

"Personally, I believe that our president has in mind proposing a minimum wage and maximum working day bill to the congress and that this is in the back of his great mind in the controversy which is going on in Washington regarding enlargement of the supreme court.

"I feel that the enactment of a federal minimum wage and maximum hour law would be a great boon to our people, and to industry in that it would place all on a fair competitive basis.

Great Future Seen

"A great future lies before aviation. I believe that aircraft will be always the fastest, safest and cheapest means of conveyance that mankind will have on this earth, and that aviation will in the not distant future promote and guarantee world peace. With the present temperament of mankind, world peace will come only when forced, and force must back any agreement that is to stand the test of time.

"It may not have to be employed; its existence may be sufficient. As a force, air power does not occupy foriegn soil to compel observance of agreements; it knows no boundary within its range; whole continents are within its sphere of action and can be crossed within a few hours. The airplane is already man's greatest means of making friendly neighbors of all nations.

"We in this company are equipping the finest navy in the world with an aerial arm capable of patrolling our coasts and territories. The mere possession of these airboats by our navy will mean much toward maintaining peace for our country."

Agreement Given

The following is the agreement signed today:

AGREEMENT made this 26th day of April, 1937, between CONSOLIDATED AIRCRAFT CORP., herein called the "company" and AIRCRAFT LODGE 1125, INTERNATIONAL ASSOCIATION OF MACHINISTS, herein called the "union."

WITNESSETH:

WHEREAS on April 10, 1937, there was held at the plant of the company under the direction of the national labor relations board, an election for the unit comprising the hourly paid employes of the company to determine the question of representation for the purpose of collective bargaining with their employer, and,

WHEREAS in such election the union received 1823 votes of 2354 ballots cast and of 3295 employes comprising the unit and entitled to vote, and

WHEREAS by such ballot the union fairly received a majority not only of the ballots cast but also of all employes qualified to vote and embraced within such unit, and

WHEREAS it is the desire of the union to enter into an agreement with the company with respect to rates of pay, wages, hours of employment and other conditions of employment.

NOW, THEREFORE, in consideration of the premises, the parties hereto hereby agree as follows:

Bargaining Unit

1. Recognition: The company hereby recognizes the union as the exclusive collective bargaining representative of all of the employes in the unit as defined by the national labor relations board prior to such election, to wit: All hourly paid employes, exclusive of timekeepers and excepted clerks.

2. Rates of pay: The minimum rate of pay for inexperienced personnel shall be 40 cents an hour for minors and 50 cents for adults for the first four months of employment.

Effective May 2, overtime shall be paid for at the rate of one and one-half times hourly rate.

3. Wages: Effective May 2, the company will make a blanket increase of 10 percent to every employe affected by this agreement. Without promising further general raises—a policy that would act as a deterrent upon interim increases that may be earned by efficiency—the company agrees to consider in June next on its merits, a further 10 percent raise and to review individual wage rates every four months and in addition to make such individual increases upon merit as and when it determines such are justified.

40-Hour Week

4. Hours of employment: The working week shall consist of 40 hours work and shall run from Monday through Friday, or for janitors, watchmen and maintenance men through five consecutive days. With the exception of janitors, watchmen and maintenance men, eight hours of labor shall be worked within 8½ consecutive hours. Work after eight working hours in any shift shall be considered overtime. After three hours overtime on any one day and five hours on Saturday, double time shall be paid. With the exception of janitors, watchmen and maintenance men, work on Sundays shall be paid for at double time. Work on the following legal holidays (if week days), New Year's day, Washington's birthday, Decoration day, Independence day, Labor day, Thanksgiving day and Christmas day, also shall be paid for at double time. Until June 30 next the company will continue the present weekly schedules for day and night shifts.

5. Representation: The union shall nominate company employes in and for the following department groupings who shall constitute an employes' welfare committee: One sheet metal, machine shop, tank, heat-treating; one draw bench, welding, tubing, metal bench; two wings and tails; one hulls; one paint; one final assembly; one tool and wood shops; one experimental; one miscellaneous; one night shift,

"No Unfairness"

It is the intent of the company that unfairness to employes shall not exist and that complaints will be settled with the foremen. No complaint shall be considered by the committee until it has been taken up with the foremen concerned. In event satisfaction is not obtained, the employe may present his complaint in writing to the company's personal supervisor, who shall take it up with the works manager and if not settled satisfactorily in this manner, it shall be submitted to the committee. The company agrees to meet with the committee each third Thursday evening of each month to discuss the welfare of the company and its employes and to hear and settle any complaints. All grievances made to the committee shall be submitted in writing, signed by the complainant and by the department representative.

6. Discharge: Whenever an employe is discharged, the company following present practice, agrees to furnish him with the reason for his discharge. Whenever requested to do so in writing by any discharged hourly employe, the company agrees to furnish the union with the reason for discharge, within three days after receipt of such request.

Regulations Necessary

7. Regulations: The union and the company agree that the regulations set forth in the company's rule book, attached and made a part of this agreement, are necessary for the efficient operation of the company's plant and that infraction of any rule constitutes cause for discharge or other disciplinary action.

8. Intimidation and discrimination: The company agrees not to intimidate nor in any way discriminate against any employe because of his union activities; the union agrees not to intimidate nor in any way discriminate against any employe of the company not belonging to the union.

9. Bulletin boards: The company will furnish two bulletin boards on its property at places selected by its manager, for the exclusive use of the union, and the union agrees to post thereon only signed notices and nothing maligning the company or its employes and to do no distributing of literature, hand bills or printed matter, and no soliciting or collecting, on the company's property.

10. Terms: This agreement shall be given one year of fair trial immediately following this date and shall continue thereafter in force and effect unless and until it has been amended by agreement upon 30 days written prior notice by either party thereto or unless by legal procedure such as the election on April 10, 1937, a majority of the employes in the unit should elect other representation.

CONSOLIDATED SEES 10,000 PAYROLL

CONSAIR SIGNS UNION CONTRACT; WAGES BOOSTED TEN PER CENT

UNIONISTS LAUD MAJ. FLEET FOR LABOR POLICIES

Consair Chief Forecasts Plant Expansion, With 10,000 Workers

S.D. SUN — 4-28-37

An example of enlightened management was provided by the willingness and promptness with which Maj. Reuben H. Fleet, president of Consolidated Aircraft Corp., reached a working agreement with Aircraft Lodge 1125, officials of the union declared today.

Pledging cooperation with the management to create greater efficiency in the plant, C. F. Grow, general vice president of the International Association of Machinists, with which A. F. of L. organization Aircraft Lodge 1125 is affiliated, lauded the contract signed yesterday as a step toward dispelling the atmosphere of uncertainty and fear in the factory.

Workers To Cooperate

Shortly after he affixed his signature to the contract providing for a 10 per cent wage increase and higher overtime rates, Grow turned to Maj. Fleet and said:

"I can assure you that the workers will cooperate with the management to make a 'winning team' for Consolidated."

Maj. Fleet admitted that increased labor costs would necessitate asking higher prices for planes in future bids, but he added, "As long as we are furnishing planes for the Government, the least we can do is abide by the rules of the game as set down by that Government." He was referring to the Wagner Labor Act.

Standards Set Up

"Any company that cannot compete successfully with other concerns by operating according to the Government's regulations does not belong in business," he added.

"Experience has shown that labor is more successful for itself when it organizes. This principle is now the law of the land and the management which does not cheerfully recognize it as such and co-operate whole-heartedly is backward indeed and due for much trouble."

With labor problems solved, Maj. Fleet went on to predict that plant expansion would proceed so rapidly that within the next few years, 10,000 workers would be on the Consolidated payroll, almost three times the present number.

"The story," said the literary mystic from Allegheny, Pa., "is based on an incident in a French provincial hotel near my home.

"The serving maid had an af- [illegible] hairless dog on the stage.

"Of course not," said Miss Stein, laughing, "Julia danced the part of Pepe. You know, little dogs resemble little girls."

Aircraft Labor Peace Assured

Three men scratched their signatures on a contract in the Consolidated Aircraft Corp. factory this morning, and as a result 3295 factory workers next week will be given 10 per cent wage increases. Shown above in the office of Maj. Reuben H. Fleet as they assured peace to San Diego's largest industry are, left to right, C. F. Grow, general vice president of International Association of Machinists; Maj. Fleet, president of Consolidated, and James C. McDermott, president of Aircraft Lodge 1125. Grow and McDermott represented the workers.

MINIMUM PAY SET; OVERTIME SCALE UPPED

3295 Aircraft Workers Win Added Income Under Agreement

S.D. SUN — 4-27-37

Ending several months of labor bickering, Maj. Reuben H. Fleet, president of Consolidated Aircraft Corp., this morning signed an agreement with Aircraft Lodge 1125, A. F. of L. affiliate, establishing working conditions, wages and hours.

Negotiations between executives and employes, which had been under way since the A. F. of L. union won the right to represent the workers in collective bargaining at an election several weeks ago, were climaxed last night at the plant when terms of the contract were agreed upon.

Following are the pertinent terms of the agreement:

1—The company recognizes the union as the exclusive collective bargaining representative of the factory employes.

2—The minimum rate of pay for inexperienced personnel shall be 40 cents per hour for minors and 50 cents for adults for the first four months of employment.

3—Effective May 2, 1937, overtime shall be paid for at the rate of one and one-half times houriy rate. (Previously, the overtime rate had been one and one-third times hourly rate).

4—Effective May 2, 1937, the company shall make a blanket increase of 10 per cent to every employee affected by this agreement. (3295 workers are affected by the agreement; for the remainder of the 3840 employes at the plant, Maj. Fleet is considering further action in order to "insure fairness to them," according to a statement issued by him today).

5—Without promising further general raises, the company agrees to consider in June a further 10-per-cent raise and to review individual wage rates every four months.

6—The working week shall consist of 40 hours' work and shall run from Monday through Friday, or for janitors, watchmen and maintenance men through five consecutive days. Work after eight working hours in any shift shall be considered overtime. After three hours overtime on any one day and five hours on Saturday, double time shall be paid. Work on Sundays and legal holidays also shall be paid for at double time.

OVER

Expansion Planned, Says Fleet; 'Fair Conditions' Aim

S.D. TRIBUNE — 4-27-37

A Consolidated Aircraft Corp. factory at San Diego, employing 10,000, or nearly three times the present employe total, is envisioned by Maj. Reuben H. Fleet, president of the firm, who today signd a labor agreement affecting 3295 of the company's 3840 employes.

"Contentment Goal"

Contentment and security of the people working at the Consolidated plant are a goal in the management's expanding manufacturing program, Fleet said.

Pointing out that Consolidated Aircraft Corp. today is America's second largest aircraft manufacturing plant, turning out planes which are flown on every continent, Fleet said he looked for a continued expansion in the company's plant. He expressed complete satisfaction over the signing of the labor agreement affecting wages, hours of work and other employment conditions of the hourly-paid employes.

"The Consolidated management feels that the country is better off," he said, "if industry pays a high wage and operates on a basis under which employes do not suffer from overwork and have time for pleasure and enjoyment. We hope and believe that the amicable agreement with Aircraft Lodge No. 1125, International Association of Machinists, affiliated with the American Federation of Labor, will be a pattern to govern other companies in our line of business in this country in their dealings with organized labor."

Pay Raise Granted

Today's agreement provides, among other things, a 10 percent increase effective May 2 for every employe affected by the agreement. Fleet declared steps will be taken to insure fairness to the 545 employes not govered by the agreement.

Declaring Consolidated's San Diego plant, which was established late in the summer of 1935 when the firm moved here from Buffalo, N.Y., is the most modern aircraft factory in America, Fleet said he hopes for continual increase in factory operations and employment. He urged employes to recognize that the management is trying to make for "security and contentment," and is striving to gain for Consolidated world-wide recognition as a highly efficient producing plant.

FACTORY, WORKERS' REPRESENTATIVES SIGN AGREEMENT

An accord reached after four days of negotiations, Consolidated Aircraft Corp. officials and representatives of the employes yesterday signed an agreement regulating working conditions. As the document was made official (left to right), C. F. Grow, San Francisco, general vice president of the Machinist's union; Maj. R. H. Fleet, president of the company, and James C. McDermott, president of the local union.

CONSAIR BOOSTS HOURLY WAGE IN PACT WITH UNION

(Continued from Page 1)

on the terms resulted. Fleet, Grow and McDermott were unanimous in their praise for the "orderly and friendly manner" in which the negotiations were carried on.

Minimum Pay Listed

The agreement provides among other things a minimum rate of pay for inexperienced personnel of 40 cents an hour for minors and 50 cents an hour for adults for the first four months of employment, which company officials said corresponds to present rates. However, effective May 2 the company will make a blanket increase of 10 percent to every employe affected by the agreement, and on that date overtime will be paid for at the rate of one and one-half times hourly rate, an increase from the rate of one and one-third which has been in effect.

Number of employes affected by the agreement is announced as 3295. Consolidated officials said the total number employed at the plant is 3840, and Fleet said that action now is being considered relative to insuring fairness to the employes not covered by the agreement.

Follows Labor Hearing

Yesterday's action in signing the labor agreement comes within seven weeks of a labor board hearing which was held here March 11 and 12 before Examiner George Pratt. On April 2 the board issued an order for an election to be held at Consolidated to determine which organization at the plant should be exclusive agent for collective bargaining. The two labor agencies involved were Consolidators' association and Aircraft Lodge No. 1125, International Association of Machinists, affiliated with the American Federation of Labor. The election was held April 10, with Aircraft Lodge No. 1125 overwhelmingly victorious. Four days later a working agreement, which included higher wages, the 40-hour week, closed shop and seniority rights was submitted to the Consolidated Aircraft Corp. by Aircraft Lodge No. 1125.

The Consolidated Aircraft Corp. organized under the laws of the state of Delaware on May 29, 1923, first operated in a small factory at East Greenwich, R.I. Early in its corporate existence it moved to Buffalo, N. Y., where it leased a large building suitable for aircraft manufacture. Here Consolidated grew rapidly and became one of the foremost manufacturers of aircraft in the United States.

In August, 1935, Consolidated moved from Buffalo to its newly-built factory on Lindbergh field, San Diego. This change was motivated in order to concentrate on the manufacture of large flying boats, which require suitable weather and facilities for all-year launchings and operations. The Consolidated factory has approximately 450,000 square feet of floor space. It is considered one of the most modern aircraft factories in the world.

Parley Began Thursday

Negotiations which led up to the signing of the agreement today started last Thursday. Members of the agreement committee who represented the employes are McDermott, Grow, George Dayton, financial secretary and business agent of Aircraft lodge No. 1125; Mike Goldenberg, William Plympton, Heaton Barnes, M. J. Castle, James Burney and Wilbur Cox. Consolidated officials who were on the agreement committee are Fleet, C. A. Van Dusen, vice president and works manager; I. M. Laddon, vice president and chief engineer; C. T. Leigh, vice president and material supervisor; Donald Fry, personnel director; Dave Fleet, assistant to manager ; Lt. Comdr. Emile Chourre, inspector of naval aircraft at the Consolidated plant, and Lt. F. E. Deam, assistant inspector of naval aircraft.

After the agreement was signed, Fleet isued the following statement:

"It is our pleasure to announce today to our employes and to San Diego that we have reached an amicable agreement with Aircraft Lodge 1125, International Association of Machinists, affiliated with the American Federation of Labor and selected as the exclusive collective bargaining agency for the hourly paid employes of this company at an election ordered by and held under the direction of the na-

Company Trying To Keep Force Contented

Latest air view of the Consolidated Aircraft plant on Lindbergh field, where a labor agreement was signed yesterday affecting 3295 hourly-paid employes. The factory has been in operation less than 20 months and has increased the number of its employes from 600 to 3840.

An expanding Consolidated Aircraft Corp. plant at San Diego, showing continued growth until it is large enough to employ 10,000, nearly triple the present number now working there, is envisioned by Maj. Reuben H. Fleet, president of the firm, who yesterday signed a labor agreement affecting 3295 of the company's 3840 employes.

After the agreement was signed Fleet made a statement in which he urged employes to recognize that the Consolidated Aircraft Corp. is trying to make for "security and contentment" for them and is striving to gain world-wide recognition as a highly efficient producing plant. "We feel that the country as a whole is better off," he said, "if industry pays a high wage and operates on a basis under which employes do not suffer from overwork, and have time for pleasure and enjoyment."

Fleet's goal of a plant large enough to employ thousands more has a background of a constantly enlarging plant, which during the nearly 20 months it has been in operation here has increased its original employment total more than six-fold. When work was started in the new factory in September, 1935, there were 600 employed, of whom nearly half came to San Diego from Buffalo as "key men." Construction work was started at once on 50 army combat planes, and by Oct. 21, 1935, when the factory dedication ceremonies drew more than 30,000 visitors to the plant, the number of persons employed had risen to 874.

Expansion Rapid

Expansion of the Consolidated factory has been rapid. On March 3, 1936, six months after the plant started operations, Fleet announced plans for increasing its size by the construction of a three-story experimental building to the south and by widening the existing main building, at a cost of $600,000. The new addition occupies an area 300 feet by 200 feet, and the new addition to the main building is 50 feet by 900 feet. Work on the addition was completed last fall, virtually doubling the floor space by an increase from 240,000 square feet to 440,000 square feet. In March last year there were 2000 employed, and this number had risen to 2300 by last July, 11 months after the plant opened. More employes were added last fall and early winter, and by Jan. 1 this year there were 3613 on the Consolidated payrolls. Today, four months later, there are 3840.

"Port Director Joe Brennan looked puzzled when Consolidated first asked fo so much land at Lindbergh field," said Fleet. "Now we have 22 acres, with an option on 10 additional acres."

Four Planes Weekly

In the first of three navy plane orders, with a total valuation of nearly $20,000,000, Consolidated has been turning out four planes a week, it was reported at the plant. The first plane of the second order is to be flown early in May, and Consolidated officials expect that the first plane of the third order will take to the air in July for its trials. The three orders comprise 176 planes, with spare parts amounting to the equivalent of 211 flying boats.

Pointing out that Consolidated Aircraft Corp. today is America's second largest aircraft manufacturing plant, and one of the most modern in the world, turning out planes which are flown on every continent, Fleet declares he looks for a continued expansion in the company's plant. He expressed complete satisfaction over the signing of the labor agreement affecting wages, hours of work and other employment conditions of the hourly-paid employes, and declared that "we hope and believe that the amicable agreement with Aircraft Lodge No. 1125, International Association of Machinists, affiliated with the American Federation of Labor, will be a pattern to govern other companies in our line of business in this country in their dealings with organized labor."

FACTORY, WORKE ER SAN DIEGO
DAY MORNING, APRIL 28

An accord reached after four days tives of the employes yesterday was made official (left to right), union; Maj. R. H. Fleet, president

IRS. smissed

WAGE, HOUR PACT SIGNED BY CONSAIR

Agreement With Union Provides for Overtime; Short Week; 10 Pct. Pay Boost Due Sunday; 3295 Benefit

S.D. UNION — 4-28-37

Assuring industrial peace between San Diego's largest manufacturing concern and 3295 of its employes, and marking the first aircraft company labor-management agreement since constitutionality of the Wagner national labor relations act was upheld, Consolidated Aircraft Corp. yesterday signed an agreement with hourly paid employes covering pay rates, wages, hours and other conditions of employment.

Ends 4-Day Session

The 10-point agreement, the terms of which provide it shall be given "one year of fair trial immediately following this date," was signed at 10 a.m. by Maj. R. H. Fleet, president and manager of Consolidated Aircraft Corp.; C. F. Grow of San Francisco, general vice president, International Association of Machinists, and James McDermott, president, Aircraft Lodge No. 1125, International Association of Machinists, San Diego.

The signing of the agreement followed four days of negotiating sessions, culminating in a meeting of members of Aircraft Lodge No. 1125 Monday night, when favorable vote

(Continued on Page 2, Col. 2)

change was motivated in order to concentrate on the manufacture of large flying boats, which require suitable weather and facilities for all-year launchings and operations. The Consolidated factory has approximately 450,000 square feet of floor space. It is considered one of the most modern aircraft factories in the world.

Parley Began Thursday

Negotiations which led up to the signing of the agreement today started last Thursday. Members of the agreement committee who represented the employes are McDermott, Grow, George Dayton, financial secretary and business agent of Aircraft lodge No. 1125; Mike Goldenberg, William Plympton, Heaton Barnes, M. J. Castle, James Burney and Wilbur Cox. Consolidated officials who were on the agreement committee are Fleet, C. A. Van Dusen, vice president and works manager; I. M. Laddon, vice president and chief engineer; C. T. Leigh, vice president and material supervisor; Donald Fry, personnel director; Dave Fleet, assistant to manager; Lt. Comdr. Emile Chourre, inspector of naval aircraft at the Consolidated plant, and Lt. F. E. Deam, assistant inspector of naval aircraft.

After the agreement was signed, Fleet isued the following statement:

"It is our pleasure to announce today to our employes and to San Diego that we have reached an amicable agreement with Aircraft Lodge 1125, International Association of Machinists, affiliated with the American Federation of Labor and selected as the exclusive collective bargaining agency for the hourly paid employes of this company at an election ordered by and held under the direction of the national labor relations board on April 10. The agreement was signed at 10 o'clock this morning and is the result of three days of conference between the committee representing the lodge, and myself and associates.

'This is the first agreement with an aircraft company in the United States since the supreme court ruled upon the constitutionality of the Wagner labor relations act and we hope and believe it will be a pattern to govern other companies in our line of business in this country in their dealings with organized labor.

"We feel that the election on April 10 last was conducted fairly; that the large majority of our employes selected Aircraft Lodge 1125 as its representative; and we believe that we are entering upon the new day in a spirit in keeping with the times. Experience has shown that labor is more successful for itself when it organizes. This principle is now the law of the land and the management which does not cheerfully recognize it as such and cooperate whole-heartedly is backward indeed and due for much trouble.

'Consider Other Employes'

"We are now considering what action should be taken in regard to our employes not covered by this agreement, in order to insure fairness to them.

"We believe that the country is better off if industry pays a high wage and operates on a basis under which employes do not suffer from overwork and have time for pleasure and enjoyment.

"Personally, I believe that our president has in mind proposing a minimum wage and maximum working day bill to the congress and that this is in the back of his great mind in the controversy which is going on in Washington regarding enlargement of the supreme court.

"I feel that the enactment of a federal minimum wage and maximum hour law would be a great boon to our people, and to industry in that it would place all on a fair competitive basis.

Great Future Seen

"A great future lies before aviation. I believe that aircraft will be always the fastest, safest and cheapest means of conveyance that mankind will have on this earth, and that aviation will in the not distant future promote and guarantee world peace. With the present temperament of mankind, world peace will come only when forced, and force must back any agreement that is to stand the test of time.

"It may not have to be employed; its existence may be sufficient. As a force, air power does not occupy foriegn soil to compel observance of agreements; it knows no boundary within its range; whole continents are within its sphere of action and can be crossed within a few hours. The airplane is already man's greatest means of making friendly neighbors of all nations.

"We in this company are equipping the finest navy in the world with an aerial arm capable of patrolling our coasts and territories. The mere possession of these airboats by our navy will mean much toward maintaining peace for our country."

CONSAIR BOOSTS HOURLY WAGE IN PACT WITH UNION

(Continued from Page 1)

on the terms resulted. Fleet, Grow and McDermott were unanimous in their praise for the "orderly and friendly manner" in which the negotiations were carried on.

Minimum Pay Listed

The agreement provides among other things a minimum rate of pay for inexperienced personnel of 40 cents an hour for minors and 50 cents an hour for adults for the first four months of employment, which company officials said corresponds to present rates. However, effective May 2 the company will make a blanket increase of 10 percent to every employe affected by the agreement, and on that date overtime will be paid for at the rate of one and one-half times hourly rate, an increase from the rate of one and one-third which has been in effect.

Number of employes affected by the agreement is announced as 3295. Consolidated officials said the total number employed at the plant is 3840, and Fleet said that action now is being considered relative to insuring fairness to the employes not covered by the agreement.

Follows Labor Hearing

Yesterday's action in signing the labor agreement comes within seven weeks of a labor board hearing which was held here March 11 and 12 before Examiner George Pratt. On April 2 the board issued an order for an election to be held at Consolidated to determine which organization at the plant should be exclusive agent for collective bargaining. The two labor agencies involved were Consolidators' association and Aircraft Lodge No. 1125, International Association of Machinists, affiliated with the American Federation of Labor. The election was held April 10, with Aircraft Lodge No. 1125 overwhelmingly victorious. Four days later a working agreement, which included higher wages, the 40-hour week, closed shop and seniority rights was submitted to the Consolidated Aircraft Corp. by Aircraft Lodge No. 1125.

Fleet Envisions 10,000 on Consolidated Roll In Continuous Growth of Plane Firm

S.D. TRIB. — 4-28-37

Company Trying To Keep Force Contented

An expanding Consolidated Aircraft Corp. plant at San Diego, showing continued growth until it is large enough to employ 10,000, nearly triple the present number now working there, is envisioned by Maj. Reuben H. Fleet, president of the firm, who yesterday signed a labor agreement affecting 3295 of the company's 3840 employes.

After the agreement was signed Fleet made a statement in which he urged employes to recognize that the Consolidated Aircraft Corp. is trying to make for "security and contentment" for them and is striving to gain world-wide recognition as a highly efficient producing plant. "We feel that the country as a whole is better off," he said, "if industry pays a high wage and operates on a basis under which employes do not suffer from overwork, and have time for pleasure and enjoyment."

Fleet's goal of a plant large enough to employ thousands more has a background of a constantly enlarging plant, which during the nearly 20 months it has been in operation here has increased its original employment total more than six-fold. When work was started in the new factory in September, 1935, there were 600 employed, of whom nearly half came to San Diego from Buffalo as "key men." Construction work was started at once on 50 army combat planes, and by Oct. 21, 1935, when the factory dedication ceremonies drew more than 30,000 visitors to the plant, the number of persons employed had risen to 874.

VOL DE GROUPE AU-DESSUS DU PACIFIQUE

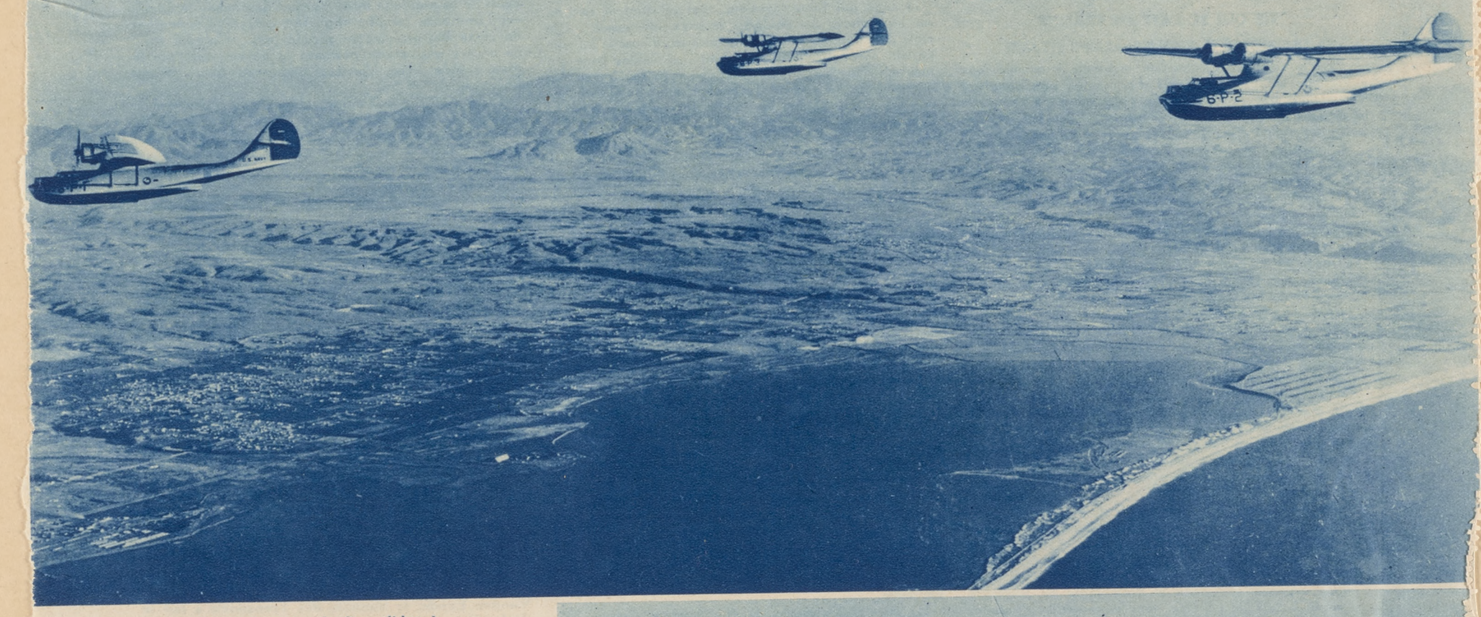
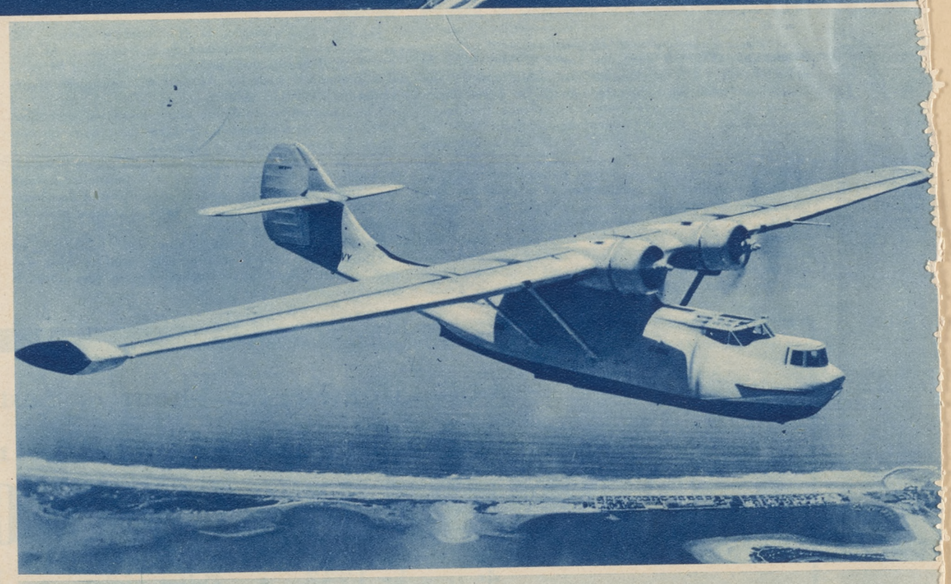
A propos du plus long survol maritime accompli en formation

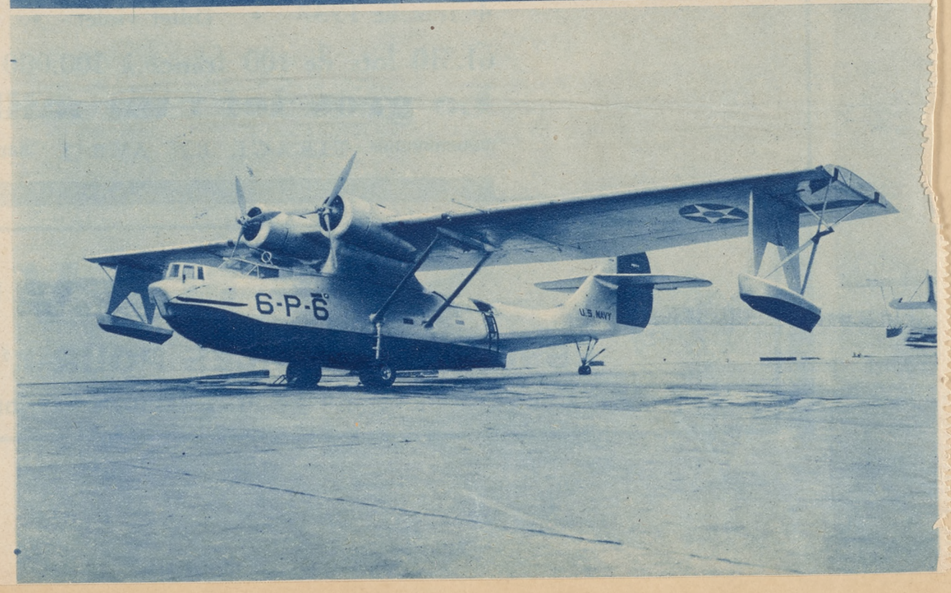


Patrouille de 3 appareils Consolidated PBY-I, survolant la Côte d'Or, à San Diego.

On notera, sur ces photographies, la position donnée en vol, aux flotteurs équilibreurs, qui peuvent être ramenés dans le prolongement de l'aile, afin de diminuer les résistances passives.

(Par courtoisie de la « Consolidated Aircraft Corporation ».)





Nous avons attendu, pour parler avec quelque détail de l'exploit accompli en janvier dernier par l'aviation navale américaine, d'être à même de présenter à nos lecteurs quelques illustrations intéressantes à ce sujet.

C'est ce que nous faisons dans cette page.

Donc le 28 janvier, douze hydravions bimoteurs « Consolidated » PBY. 1. à moteurs Pratt & Whitney « Twin Wasp » quittaient la rade de San Diego. Après 21 h. 43 de vol, accomplis à une altitude de 3.000 m., les 12 appareils se posaient, en formation parfaite, à 4.100 km. de la côte Californienne à Pearl Harbor, aux Iles Hawaï. Ce voyage était effectué pour mettre en place le nouveau matériel de patrouille de haute mer destiné à relever les appareils d'un type périmé.

La formation comportait un total de 80 hommes, commandés par le Lt Cr W. M. Mc Dade. Elle rencontra à environ 500 km. de Honolulu un violent orage mais après 1 h. 1/2 de lutte contre les éléments déchaînés les appareils purent se regrouper.

Le matériel utilisé est dérivé de celui qui composait l'escadrille de six hydravions qui, en 1934, sous le commandement du Lt Cr K. Mc Ginnis, couvrit en formation la distance de 3.800 km. séparant Honolulu de San Francisco. Un ordre de 176 appareils de ce type est en cours d'exécution pour l'aviation navale américaine.

PROGRAM MARKS ANNIVERSARY OF LINDY HOP

Dedication Of New Coast Guard Air Base Planned

S.D. Sun May 1, '37

Ten years of aviation progress, beginning with Lindbergh's history-making flight across the Atlantic, will be memorialized next week in a series of events sponsored by the city and Chamber of Commerce.

Primary incentive for the celebrations is the 10th anniversary of the Lone Eagle's takeoff from San Diego in his locally-built "Spirit of St. Louis." Lindy left for St. Louis from North Island on May 10, 1927, and continued on to New York, where he began his trans-atlantic hop May 20.

Dedication Starts Program

Dedication of the new Coast Guard air base at Lindbergh Field next Saturday will inaugurate the 10th anniversary schedule of events.

Civic leaders, representatives of the Treasury Department and the Navy will convene at a luncheon in the Air Base quarters. The base then will be open for public inspection from 2 to 4 p. m. Saturday and 10 a. m. to 4 p. m. Sunday.

'Open House' At Airport

Next Sunday, all facilities at the municipal airport will hold "open house." Among organizations participating will be Airtech, Ryan Aeronautical Co. and Western Air Express.

Ten courtesy flights will be given approximately 200 San Diegans on one of the new 21-passenger Douglas airliners of TWA, beginning 10 a. m. Sunday. A similar craft of United Air Lines will in the meantime be on exhibition.

Mrs. Lindbergh Remembered

A "Mother's Day" greeting wi be sent next Sunday by the Avia tion Committee of the Chamber Commerce to Mrs. Evangelin Lindbergh, mother of the Lon Eagle, at her midwestern home.

On Monday, May 10, the actual anniversary date, covers which have been pouring into the Chamber of Commerce from all parts of the country will be air-mailed to the senders with a special cachet stamped on the envelopes. To Lindbergh himself an aerial picture of the field which today is a monument to his flight will be sent by the Chamber of Commerce.

Bonds for the municipal airport were voted September, 1927, and work on the dredging was started the following December.

To Recall Progress

"One of the purposes of this celebration," Tom Bomar, secretary of the Chamber of Commerce aviation committee, which is sponsoring the anniversary celebration, said yesterday, "is to recall for the people of San Diego the great strides that have been made in aviation here in the past 10 years."

Today San Diego boasts a first class airport and aviation base, three commercial aircraft concerns (Consolidated, Ryan and Solar), two seaplane ramps and a $400,000 Coast Guard air base. And work still continues on the improvement of Lindbergh Field.

In the CHART HOUSE

S.D. Sun May 21, 1937

By HAROLD KEEN

LAST Tuesday Major Reuben H. Fleet, president of Consolidated Aircraft Corp., held the center of the stage in San Diego and he made good use of the spotlight focussed on him.

He had just signed an agreement to boost the wages of 3295 workers 10 per cent, and while other executives of the plant may have been inclined to begrudge the employees their newly-won advantage, not so the top man of the organization.

Because he's boss, his position on many matters may, of course, be misunderstood by the factory employe, who may not realize the sometimes appalling production problems which confront Maj. Fleet.

At heart, however, last Tuesday he showed himself to be just an Army man with a devotion to the theory of "playing the rules of the game."

"All my life, I've tried to abide by the rules," he commented after he laid down the pen which placed his signature on the agreement, "and now that the Government has laid down certain rules, I want to play according to them." Which meant he did not intend to be a stubborn industrialist bucking the Wagner Labor Act.

It, consequently, was a pleasure for the writer to meet Maj. Fleet for the first time under circumstances such as this. Somehow when he mentioned his ambitions of expanding the plant to the point where 10,000 workers are necessary, he didn't sound as though he were talking through his hat.

UNFILLED ORDERS HIT $13,000,000 AT CONSOLIDATED

S.D. UNION MAY 4, 1937

Backlog for Coast Plants $56,000,000; Work Under Way on 462 Army Planes.

Aviation construction in southern California had one of its best months in April, with $56,000,000 of back orders on hand, a survey disclosed yesterday.

Consolidated Aircraft Corp., at San Diego, reported $13,000,000 in unfilled orders.

At Los Angeles, Douglas Aircraft led the builders with $23,000,000 in unfilled orders, The Associated Press reported. North American aviation had $7,000,000; Northrup Corp., $6,000,000; Lockheed aircraft, $4,000,000, and Vultee Corp., $4,000,000.

Of the 700 fighting ships ordered for the U. S. army, 462 are being built in southern California plants, The Associated Press reported.

CONSAIR SETS SALES RECORD

S.D. SUN MAY 4, 1937

Southern California is the aircraft manufacturing capital of the United States, and San Diego's Consolidated Aircraft Corp. is the second largest producer in this region.

This was revealed today as aviation concerns reported the amount of unfilled orders on hand. Consolidated, with a $13,000,000 backlog, is second to Douglas Aircraft Corp. of Santa Monica, which has $23,000,000 in unfilled orders.

Following these leaders are North American Aviation Corp., $7,000,000; Northrup Corp., $6,000,000; Lockheed Aircraft Corp., $4,000,000, and Vultee Corp., $4,000,000. Of 700 U. S. Army planes now under construction, 462 are being built in Southern California plants, the survey showed.

$685,000 Raise for 3850 On Consolidated Rolls

S.D. EVENING TRIBUNE MAY 6, 1937

An annual payroll increase of approximately $685,000 for 3850 hourly-paid and salary employes at Consolidated Aircraft Corp. went into effect over the week-end, as a result of a blanket 10 percent raise in pay, officials at the aircraft plant report. Consolidated's annual payroll now is in excess of $6,100,000.

Only 14 at the plant did not get a raise. They are executives. When Maj. R. H. Fleet, president, signed a labor agreement last week with Aircraft lodge No. 1125, International Association of Machinists, he agreed to a 10 percent increase in wages for 3295 hourly-paid employes who were affected by the agreement, and said that action would be taken to insure fairness to employes at the plant not covered by the agreement. The result was a blanket 10 percent increase for 3850 employes.

The $6,100,000 annual payroll of Consolidated is significant in that the firm has been in operation here only 20 months. Consolidated Aircraft Corp. was founded 14 years ago this month, on May 29, 1923, by Fleet. Before moving the plant to San Diego from Buffalo, N. Y., in the summer of 1935, Fleet spent more than five years in surveying all cities in the United States having more than 100,000 population, to select the best location for the factory.

"Twice a year I flew around the country examining localities and municipal airports," said Fleet. "We wanted a site on a publicly-owned and operated airport having publicly-owned waterfront on a good but not congested harbor, with a seaplane base and ramp on adjacent protected water, in a city large enough to furnish a reasonable supply of labor and materials, in a

(Continued on Next Page, Col. 7)

3850 GET $685,000 IN CONSOLIDATED RAISE

CONTINUED FROM PAGE ONE

southern clime unhampered by snow and ice and yet not unbearably hot, with all-year-round flying weather for test flying and flight deliveries."

The answer was San Diego, and since work was started in the new factory at San Diego in September, 1935, the number of employes has jumped from 600 to 3850. The value of the plant on Lindbergh field, including building, machinery and equipment, is approximately $1,500,000.

During the 12½ years before Consolidated moved to San Diego the firm manufactured and sold more than $23,000,000 of aircraft and parts, and unfilled orders booked at the time of starting work here amounted to approximately $9,000,000.

Today, the backlog of unfilled orders at Consolidated is approximately $13,500,000, representing 155 planes, including spare parts. During the 20 months of operation at San Diego Consolidated has manufactured 110 planes, valued at approximately $7,500,000.

With the 10 percent increase an increase in overtime pay also went into effect. Overtime is paid at the rate of one and one-half times hourly rate, instead of at the rate of one and one-third, formerly in effect.

3850 BENEFIT IN $685,000 PAY BOOST AT CONSOLIDATED

S.D. UNION — MAY 7, 1937

Wage increases totaling $685,000 annually for 3850 employes of Consolidated Aircraft Corp., bringing the annual payroll to $6,100,000, went into effect at the plant last week-end, company officials announced yesterday.

Only 14 at the plant did not get a raise. They are executives. When Maj. R. H. Fleet, president, signed a labor agreement last week with Aircraft lodge No. 1125, International Association of Machinists, he agreed to a 10 percent increase in wages for 3295 hourly-paid employes who were affected by the agreement, and said that action would be taken to insure fairness to employes at the plant not covered by the agreement. The result was a blanket 10 percent increase for 3850 employes.

The $6,100,000 annual payroll of Consolidated is significant in that the firm has been in operation here only 20 months. Consolidated Aircraft Corp. was founded 14 years ago this month, on May 29, 1923, by Fleet. Before moving the plant to San Diego from Buffalo, N. Y., in the summer of 1935, Fleet spent more than five years in surveying all cities in the United States having more than 100,000 population, to select the best location for the factory.

"Twice a year I flew around the country examining localities and municipal airports," said Fleet. "We wanted a site on a publicly-owned and operated airport having publicly-owned waterfront on a good but not congested harbor, with a seaplane base and ramp on adjacent protected water, in a city large enough to furnish a reasonable supply of labor and materials, in a southern clime unhampered by snow and ice and yet not unbearably hot, with all-year-round flying weather for test flying and flight deliveries."

The answer was San Diego, and since work was started in the new factory at San Diego in September, 1935, the number of employes has jumped from 600 to 3850. The value of the plant on Lindbergh field, including building, machinery and equipment, is approximately $1,500,000.

During the 12½ years before Consolidated moved to San Diego the firm manufactured and sold more than $23,000,000 of aircraft and parts, and unfilled orders booked at the time of starting work here amounted to approximately $9,000,000.

Plane Factories Have $43,000,000 of Back Orders, Report Says

With $43,000,000 worth of back orders on hand, enough work to keep them busy for more than two years without booking another pennyworth of business, and with airline passenger and express service increasing, Los Angeles aviation industrialists yesterday reported that April was the best month in their history.

A Chamber of Commerce statement showed Douglas Aircraft Corporation leading the list of builders with $23,600,000 in unfilled orders on its books.

OUTSTRIP NATION

Next came North American Aviation, $7,000,000; Northrop Corporation, $6,000,000; Lockheed Aircraft Corporation, more than $3,000,000, and the Vultee Corporation, $4,000,000.

By April 30 Los Angeles had far outstripped the rest of America in aircraft construction. Especially were its United States Army orders in the van, with 462 of the 700 fighting ships for 1937 ordered from local plants.

EXPANSION CONTINUES

Expansion, too, continued apace, the report disclosed.

More than $300,000 will go into added ground space at the North American Aviation Corporation's factory at Municipal Airport. Lockheed is completing a $1,000,000 expansion program at Burbank. And Vultee officials disclosed that their mounting export trade has caused an increase in their factory staff of 675 men.

BUILDING SKY GIANT

Among pertinent features of April's aircraft building program was the progress of Douglas' four-engined, forty-passenger ship. Financed by a five-way pool among the major airlines, the sky giant will cost $1,000,000. It will be ready next fall. On a production basis, the craft will cost $250,000.

Menasco Motors and Thompson Products are thriving in the Los Angeles field, the chamber's report stated. The latter corporation, an eastern parts manufacturing firm, has purchased a factory at Bell

SCHEDULES SLASHED

In the airlines, United announced the beginning of its 15h., 20m. schedule to New York on larger ships. Western Air Express, working with United, slashed a half-hour from its Los Angeles-Salt Lake City run by using larger, faster equipment.

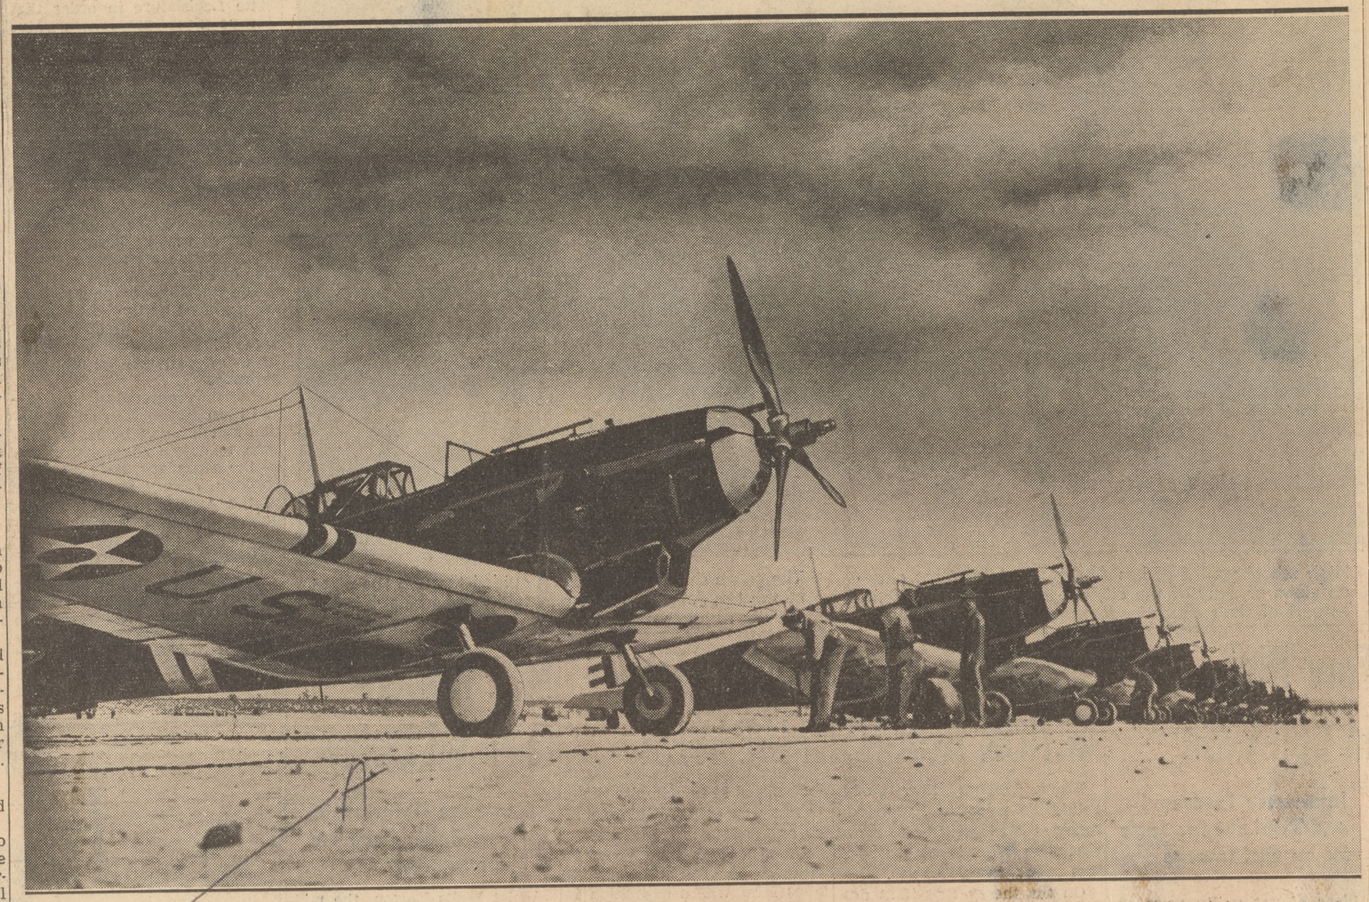
Fourteen hour service will be inaugurated across the nation by TWA in June, the report continued.

INCREASE REPORTED

American Airlines announced a 44 per cent boost in its passenger business over 1936, and 34 per cent over the previous month of 1937.

Meanwhile, air express carriage leaped 72 per cent in poundage over March, it was stated. One new company, Coastal Air Freight Lines, hauling air baggage north from Los Angeles, was formed.

ARMY'S CRACK SKY FIGHTERS FLOCK TO SOUTHLAND



Arriving at Muroc Dry Lake, fifteen of the Army's finest pursuit planes —all P.B.-2 B's—are shown as they are being tied down at the Army Air Corps camp established there. They have just arrived from Langley Field, Va., and will be based on the famed dry lake while engaging in general headquarters force maneuvers. Wide World photo

Enlisted personnel of the Army Air Corps' camp established at Muroc Dry Lake as they receive their issue of blankets in preparations for settling down to take care of flock of Army planes that will base there during maneuvers. Wide World photo

54TH PLANE READY FOR NAVY DELIVERY

Consolidated Aircraft Corp. has completed the 54th plane of a 60 patrol bombing plane order for the navy under a $6,600,000 contract, officials of the firm report. Of the 54 planes 53 have been delivered, with the newest plane scheduled for delivery this week. The planes are of PBY-1 designation. The first plane of a $4,993,000 PBY-2 contract for 50 planes is to be tested here next week, with delivery expected to be started in June. A trial board of 10 naval officers from the bureau of aeronautics, navy department, Washington, D. C., and the fleet is expected here to observe the tests. Consolidated officials report that construction has been started on parts for a $6,021,000 contrct for PBY-3 planes.

53 BOMBERS DELIVERED TO NAVY BY CONSOLIDATED ON BIG ORDER

S.D. UNION — MAY 12, 1937

Completion of construction on 54 of 60 patrol bombing planes under a $6,600,000 contract for the navy was announced yesterday by Consolidated Aircraft Corp. officials.

Fifty-three of the planes, designated as the PBY-1 type, have been delivered and the 54th will be ready for the navy this week. Seven of the planes will be "spares."

A trial board of 10 high-ranking naval officers from the bureau of aeronautics at Washington, D. C., and the fleet will be here next week to observe tests on the first of the PBY-2 patrol bombers, completed recently.

The PBY-2 contract calls for construction of 50 planes at a cost of $4,993,000 in the Consolidated plant. Delivery on the PBY-2 type to the navy probably will start next June.

Manufacture of parts and part assembly of the PBY-2 planes are under way at the plant.

Consolidated officials said yesterday that construction also has been started on parts for the PBY-3 planes which will be built under a $6,021,000 contract.

Charles A. Van Dusen, vice president and works manager at Consolidated, said, "We understand the navy is tremendously pleased because Consolidated has not only met, but has exceeded delivery requirements on the PBY-1 contract.

"As many as four planes in one week and 14 planes in one month have been delivered from Consolidated to the navy.

"The production ability of the Consolidated plant has proved to the satisfaction of the company's officers that the plant is superbly designed for aircraft manufacture."

CONSAIR STARTS 50 NEW PLANES

S.D. SUN — MAY 12, '37

With work on the first Navy contract for 60 patrol bombers nearing completion, the Consolidated Aircraft Corp. plant today was being geared to high-speed production of 50 planes in a second order.

Fifty-four of the 60 PBY-1 planes in the initial $6,600,000 contract will have been completed by the end of the week, company officials reported today.

After a trial board from the Bureau of Aeronautics, Washington, stamps its approval on the PBY-2 craft, scheduled to undergo official tests next week, assembly work on 50 of these planes costing $4,993,000 will be started. Parts are already under construction for this type as well as for the PBY-3 planes, of which 66 will be built under a third contract, calling for expenditure of $6,021,000.

May 12, 1937 SAN DIEGO CLUB LIFE

"Labor Troubles" at End, Consair Plant Reported Secretly Building Gigantic 200-foot Flying Boat

Without rioting or "sit-downing," Consolidated Aircraft employees and Maj. R. H. Fleet, energetic head of this big San Diego plane factory, have just signed a labor pact which means an increase in pay for 3,295 of the 3,840 employees, plus certain other agreements as to hours and conditions of employment.

Meanwhile, Maj. Fleet announced his dreams of continuing the growth of Consolidated to eventually include 10,000 on the payroll in a plant covering 40 or more acres.

Closely guarded by the government, the plant last week was rumored busy on plans for a 200-foot wingspan flying boat, which will be the largest flying boat ever built in this country. Whether true or not, this rumor recalls the published scheme of the firm's engineers that a 200-foot airboat is "practical." This was disclosed in the first issue of the "Consolidator," some time ago.

KEPT SECRET

Details of such experimental projects, however, are kept secret because of commitments to the government. Routine work of the firm now is centered in the construction of the big 104-foot span airboats for the Navy and other purchasers.

Expansion of the Consolidated factory has been rapid. On March 3, 1936, six months after the plant started operations, Maj. Fleet announced plans for increasing its size by the construction of a three-story experimental building to the south and by widening the existing main building, at a cost of $600,000. The new addition occupies an area 300 feet by 200 feet, and the new addition to the main building is 50 feet by 900 feet. Work on the addition was completed last fall, virtually doubling the floor space by an increase from 240,000 square feet to 440,000 square feet. In March last year there were 2000 employed, and this number had risen to 2300 by last July, 11 months after the plant opened. More employes were added last fall and early winter, and by Jan. 1 this year there were 3613 on the Consolidated payrolls. Today, four months later, there are 3840.

"Port Director Joe Brennan looked puzzled when Consolidated first asked for so much land at Lindbergh field," said Fleet. "Now we have 22 acres, with an option on 10 additional acres."

FOUR PLANES WEEKLY

In the first of three navy plane orders, with a total valuation of nearly $20,000,000, Consolidated has been turning out four planes a week, it was reported at the plant. The first plane of the second order is to be flown early in May, and Consolidated officials expect that the first plane of the third order will take to the air in July for its trials. The three orders comprise 176 planes, with spare parts amounting to the equivalent of 211 flying boats.

Pointing out that Consolidated Aircraft Corp. today is America's second largest aircraft manufacturing plant, and one of the most modern in the world, turning out planes which are flown on every continent, Maj. Fleet declares he looks for a continued expansion in the company's plant. He expressed complete satisfaction over the signing of the labor agreement affecting wages, hours of work and other employment conditions of the hourly-paid employes, and declared that "we hope and believe that the amicable agreement with Aircraft Lodge No. 1125, International Association of Machinists, affiliated with the American Federation of Labor, will be a pattern to govern other companies in our line of business in this country in their dealing with organized labor."

◇ ◇ ◇

Completion of the new giant bombardment plane, now under construction at Boeing Aircraft Co., Seattle, will enable the Army Air Corps to determine the type of bomber from which it can receive maximum service.

Already in use are the twin-engine Martin Bombers, representing the smaller, light weight-carrying craft, and capable of great speed; the Boeing YB-17's, known as the "Flying Fortress," a medium-size plane; and the new development, a large, maximum weight-carrying machine, successor to the YB-17.

The Air Corps, it is believed, will compare all three, to decide which type is most desirable from engineering, tactical, and operating standpoints.

Under cover of utmost secrecy, the latest Army Air Corps project has been progressing for more than two and one-half years. The plane is a four-engined, all metal, mid-wing type monoplane, basically similar to the "Flying Fortress," though larger because of additional weight-carrying capacity.

The Army long has been trying to solve its large bombardment airplane problem. Back in the period from 1920 to 1925, the Barling Bomber was designed, a tri-plane with a wing span of 120 feet, and powered by six Liberty engines. Capable of a maximum speed at sea level of 96 miles per hour and a service ceiling of 7275 feet, the plane established world's records of that time for altitude, duration of flight and weight-carrying. S.D. SUN 5/12/37

BOMBER SOLD TO ARGENTINA AWAITS TEST

S.D. SUN — MAY 13, 1937

Southern Nation Sends Navy Officer To S. D. For Consair Plane

First of six patrol bombers being built by Consolidated Aircraft Corp. for the Argentine government will be given flight tests next week, with Lieut. Julio Bachini, Argentine naval inspector at the plant, and Capt. Zar, head of the South American Republic's naval aviation corps, as official observers.

Capt. Zar is en route to San Diego to accept delivery on the plane, a P2-Y3 model, which is predecessor to the PBY-1 bombers now being completed for the U. S. Navy.

Design Proved Good

Comdr. Knefler McGinnis led a squadron of six P2-Y3s in a mass flight from San Francisco to Honolulu in 1934, setting a world record which since has been eclipsed twice—by Consolidated-built PBY-1s which flew from San Diego to Hawaii.

Whether the planes will be shipped by freighter or flown to Argentina will be decided by Capt. Zar when he arrives here.

New Type Tested

Meanwhile, as work on the contract for 50 PBY-1 U. S. planes neared completion, Chief Test Pilot William Wheatley yesterday began preliminary trials on the first PBY-2 off the assembly lines. Next week, a Naval trial board from the Bureau of Aeronautics will test the plane, one of 60 in a second contract. Parts are already being built for the 66 BPY-3s comprising the third Navy patrol bomber contract held by Consolidated.

Company officials said the final PBY-1 would be delivered to patrol squadrons at North Island by the end of the month, and that production on the PBY-2s would start immediately thereafter.

Off To New Guinea

The first PBY-1 to be sold for commercial purposes will be flight-tested late next week for Richard Archbold, research associate of the American Museum of Natural History, who plans to use the de-militarized craft on a scientific expedition to New Guinea next December.

Archbold will fly the plane on a "shakedown" round-trip from San Diego to New York before leaving the mainland in December for Hawaii, following the Pan-American Airways' route on to Guam or Wake, and then cutting down to New Guinea.

S.D. SUN MAY 12, 1937

SERVICE NOTES

Navy Bombers On Special Tactics Flight To North

By HAROLD KEEN

The six new Consolidated patrol bombers of Squadron VP-9 were maneuvering in special aerial tactics off Port San Luis, halfway between Los Angeles and San Francisco.

The planes, led by Lieut.-Comdr. J. B. Sykes, soared away from San Diego harbor yesterday morning for their advance base. They were preceded by the aircraft tender Thrush, which steamed north Monday.

These open-sea maneuvers are scheduled at approximately two-month intervals. Accompanying the planes on the last trip to Port San Luis was the aircraft tender Langley, which is now with the Fleet in Hawaii.

Rumors are prevalent at North Island that Patrol Squadron Nine's planes will be delivered to Pearl Harbor in the third mass flight from San Diego this year. Time has not been definitely set. Personnel of the squadron then would return to the local Naval Air Station and take over a dozen new bombers.

Officers and men of Patrol Squadron 11 will return to San Diego with the remainder of the Fleet, probably at the close of this month. VP-11 successfully delivered 12 planes to Hawaii in a "Routine" trans-Pacific mass hop last month.

MAY 7

12 PLANES OFF ON 3-DAY NAVY EXERCISES

TRIBUNE

Twelve navy patrol planes took off from San Diego bay this morning to engage in three days coastal exercises which will take them as far north as Port San Luis, on the coast near San Luis Obispo. The flight is under command of Lt. Robert Morse, commanding VP-3 squadron. As the planes left San Diego, word was received here that the U.S.S. Gannet and U.S.S. Sandpiper, which acted as station ships during last month's 12-plane flight from San Diego to Honolulu, are en route to San Francisco from Hawaii. They left Pearl Harbor over the week-end and are due at San Francisco, May 26, remaining there for the Golden Gate bridge celebration. The U.S.S. Tarpon, new submarine en route to San Diego from the east coast, is posted for arrival here at 7 a.m. Wednesday.

STOWAWAYS

Navy Wars on Fleas Aboard Planes

California fleas and mosquit are not wanted in Hawaii therefore the navy departm has ordered that all Consolidat built navy airboats be thoroug sprayed with insecticide bef taking off from San Diego for islands.

The navy department order issued at the behest of the circ quarantine inspector of Honol

It was unofficially reported yesterday that the behest was voiced after a dog belonging to one of the Hawaiian inspectors began to run around in circles on the Honolulu waterfront. Old-timers, it is said, agreed that nothing but a hungry California flea could make a dog act that way. Anyway, the decision for complete insecticide treatment was soon reached. The verdict is practically unanimous that the flea which caused all the trouble came from the Los Angeles harbor district.

NAVY TO SEND AIR SQUAD TO PAN

By United Press

WASHINGTON, May 1 Navy Department plans to squadron of new patrol b planes from San Diego Coco Solo air base, Panam the next month, it was revealed

The number of planes to cluded in the squadron a date for the takeoff have n definitely fixed, it was saidint

Navy officials characterizti flight as "routine," the pr being a combination of lor tance flight training and t livery of the planes from t tory to the area where th serve. While the flight is for nonstop, plans have bee for a landing at Acapulco if necessary.

S.D.SO MAY 15

PANAMA PATROL PLANES FLY TO PORT SAN LUIS

Maneuvers Off Central California Coast To End This Week

SUN MAY 16

Officers and men of the Canal Zone's patrol bomber squadron, VP-3, today were to fly their recently delivered Consolidated airboats to Port San Luis, midway between Los Angeles and San Francisco, for open-sea maneuvers with the aircraft tender USS Thrush, the Aircraft Base Force patrol wing office at North Island reported.

Squadrons VP-12 and VP-9, stationed at the San Diego Naval Air Station, have already completed their periodic tactics at Port San Luis. Squadron VP-3 is scheduled to return to North Island Wednesday, with the Thrush due back in the harbor on the same day.

The maneuvers off the central California coast will be doubly important for the personnel of VP-3, inasmuch as the plane crews will be given added opportunity to test their new airboats in actual flight problems prior to leaving San Diego on a delivery hop, to Panama early next month.

Meanwhile, patrol plane squadrons at North Island are still awaiting expected orders regarding participation in the mass flight over San Francisco Bay in connection with the Golden Gate Bridge Fiesta beginning May 27. Lead by Vice Adm. Frederick J. Horne, commander Aircraft Battle Force, practically all land planes attached to the aircraft carriers Saratoga, Lexington and Ranger have already been listed as certain to take part in this aerial review.

S.D. TRIBUNE MAY 18, 1937

NAVY IN TEST OF S. D.-BUILT BOMBERS

Test flights on the first of the new PBY-2 patrol bombers, being built by Consolidated Aircraft Corp. here for the navy, are being made this week, it was announced at the plant today. The first test flights were made yesterday, and the plane was aloft again today.

The PBY-2 contract calls for construction of 50 planes at a cost of $4,993,000, with delivery expected to be started next month. A trial board of 10 high-ranking naval officers from the bureau of aeronautics at Washington, D. C., is expected to be here later this week to observe the tests.

Construction of 54 of 60 patrol bombing planes of the PBY-1 type was completed last week. The PBY-1 contract was for $6,000,000. Meanwile, construction has been started on parts for a third group—the PBY-3 type, which will be built under a $6,021,000 contract.

The question of how an order of Consolidated-built planes for the Argentine government will be sent to the South American country—whether by shipment or by flight—will be decided within a few days. An Argentine naval air force delegation, headed by Capt. Marcos A. Zar, chief of Argentine naval aviation, is in San Diego now, it was reported today.

All Hands Soon Ordered To 'Man Spray Guns'

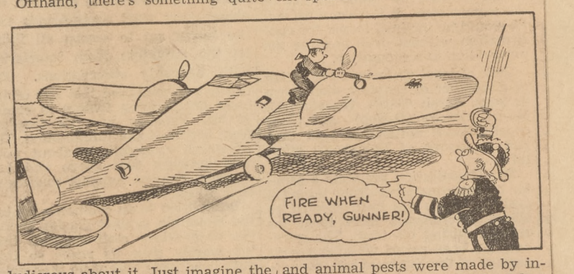
S.D. TRIBUNE MAY 20, 1937

By NEWELL JONES

And now the admiral will be saying, whenever the flying boats prepare to shove off from San Diego for Honolulu, "all hands on deck and man the spray-guns."

That no vagrant, hitch-hiking California flea, mosquito or similar pest may sneak across the Pacific by plane to sully the Hawaiian shore, it has been decreed that the Consolidated - built navy patrol planes must be completely sprayed with insecticide before departing for the islands.

Offhand, there's something quite ludicrous about it. Just imagine the officer of the deck shouting, "A little more phlitt on the port wing, boys!" But behind it there's a story of a quiet, unseen warfare that's constantly waged on a thousand fronts—man's battle against agricultural pests. A California bug transplanted in Hawaii, or vice versa, may become a billion-dollar menace to orchards, fields or livestock.



U. S. Mail Examined

California itself is o... leaders in protecti... importation of ... is of entry, the coast and in... state and county agricultural inspectors examine incoming ship, truck and auto for the tiny menaces.

No potential carrier of the pests is overlooked. Even the mails are examined. They, too, may carry hidden dangers; collectors ship butterflies and other insects all over the world, fruits and vegetables are mailed between friends, and a wide variety of trees and plants are always in the mail.

So down in a corner of the post-office here, officers of the state department of agriculture's plant quarantine service and inspectors from the office of R. R. McLean, county agricultural commissioner, may be found studying minutely a bundle of young trees, a basket of fruit or a box of moths. If a destructive insect or other parasite is discovered, the consignee of the shipment is promptly notified and the shipment destroyed. And the collectors' specimens must have been shipped dead.

Nor is the danger imaginary, or even overdrawn. Officials of the department recently pointed to a single month's interceptions as an example of the constant discovery of material which might become a source of serious and costly attacks upon California crops.

Bulb Flies Discovered

During the month, The Associated Press reports from Sacramento, 477 interceptions representing 59 different species of insect, disease, weed and animal pests were made by inspectors in plant materials taken from the baggage of travelers or from their vehicles at the border highway inspection stations alone.

At a station up along the California-Oregon border, bulb flies were discovered in a shipment of Irish potatoes. This was a particularly important discovery, because it was not known before that potatoes were carriers of the pest.

East of San Diego, over at Yuma, he inspectors discovered one day in single small potato of a Texas ipment destined for Los Angeles one of the most serious threats to California agriculture—sweet potato weevils.

Seeds of the loco weed was found in grass packing of pottery from Mexico. Its finding may have averted at some future time the poisoning of California livestock, for plants of the loco weed are poisonous to stock.

A specimen of what is believed to be a new species of citrus feeding thrips was intercepted on a grapefruit.

Hickory nut weevils and pecan shuck worms, both potential threats to California's developing pecan industry, were another of the month's discoveries.

An innocent appearing box of books contained another menace. Packing in the box, which was being carried by a motorist, contained seed of the white horse nettle.

And on 123 different occasions, one of the more restructive scale

200 FLYING TO S. F. IN S. D. NAVY PLANES

TRIBUNE MAY 21

Two hundred officers and men will fly to San Francisco from San Diego May 27 in four squadrons of naval patrol planes to participate in the Golden Gate bridge opening celebration, according to report by Lt. Comdr. George D. Price, commander patrol wing. Squadrons and their commanding officers are VP-3F, Lt. Robert W. Morse; VP-7F, Lt. Comdr. Robert L. Fuller; VP-9F, Lt. Comdr. James B. Sykes; VP-12F, Lt. Comdr. James E. Dyer.

S.D. SUN MAY 21, 1937

CONSAIR TESTS P2Y3 BOMBER

While a P2Y3 Consolidated patrol bomber today was being prepared for test flights for Argentine Naval observers, officials of the aircraft concern were completing arrangements for the production schedule on the remaining five similar craft to be delivered to Argentina.

Delivery of the first airboat will take place next month, one more in July, two in August and two in September, company officials reported today.

Capt. Marcos Zar, chief of Argentine Naval aviation, arrived in San Diego early this week at the head of a delegation of three aviation experts who will observe tests on the first plane in the order. The P2Y3 is predecessor of Consolidated's PBY-1 airboat on which the U. S. Navy has been taking delivery.

CONSAIR LEADS WAY IN GROWTH OF SAN DIEGO

S.D. SUN MAY 30

176 Bombers Under Way For Navy; Experimental Work Hastened

San Diego's largest industry —Consolidated Aircraft Corp. —today is possessor of three United States Navy contracts totalling $19,000,000, a contract with the Argentine government for approximately $1,000,000, and is supervising the establishment of mass production in Russia of huge airboats.

Engineers In Russia

Its three Navy orders call for the construction of 176 twin-motored patrol bombers and parts for about two score additional planes. Of these, approximately 60 have been delivered to patrol squadrons at North Island in San Diego harbor, 24 have been flown to their permanent bases in Pearl Harbor, with record-breaking performances recorded in flights of the two 12-plane squadrons across the Pacific.

Six planes for the Argentine navy are nearing completion at the San Diego plant. A corps of engineers has been sent to Russia by Consolidated to supervise large-scale construction of airboats whose manufacturing rights have been purchased by the Soviet Union.

Expansion Rapid

Rapid expansion of the plant's facilities since it moved from Buffalo, N. Y., to San Diego in August, 1935, has caused large increases in personnel, and today the company employs approximately 3800 persons.

For more than five years before moving to San Diego, Consolidated officials carefully surveyed all cities in the United States having more than 100,000 population. The ideal was found in San Diego, which met the requirements of President Reuben H. Fleet, as outlined by him in his address dedicating the new plant Oct. 20, 1935

Experimental Work

"We wanted a site on a publicly owned and operated airport having publicly owned water front on a good but not congested harbor, with a seaplane base and ramp on adjacent protected water, in a city large enough to furnish a reasonable supply of labor and materials, in a Southern clime unhampered by snow and ice, and yet not unbearably hot, with all-year-round flying weather for test flying and flight deliveries."

Secret experimental work now is well under way at the plant to develop military and commercial planes of unprecedented size and power. New Navy contracts are anticipated, and continued capacity use of this largest producer of military planes in the country is assured for many years.

Vanguard of Fleet Due In Port Next Friday

TRIBUNE MAY 21

Forty San Diego-based warships will arrive in port here from Honolulu a week from today, with three vessels posted for arrival from Hawaii a week from tomorrow, according to an official navy release received here today. Meanwhile, 14 locally-based ships are posted for arrival at San Francisco a week from today, remaining there for the Golden Gate bridge opening ceremonies before continuing on to San Diego.

Three tenders, the U.S.S. Dobbin, U.S.S. Whitney and U.S.S. Melville, and four minesweepers, the U.S.S. Rail, U.S.S. Kingfisher, U.S.S. Brant and U.S.S. Robbin, are posted for arrival in port here at 9 a.m. next Friday. The remaining 33 ships are destroyers and one light cruiser, with no announcement yet as to the actual hour of their arrival in San Diego. They are the destroyers Borie, Perry, Trevor, McCormick, MacLeish, Simpson, Truxtun, Goff, Bainbridge, Reuben James, Southard, Chandler, Hovey, Long, Dallas, Hopkins, Brooks, Fox, Gilmer, Williamson, Barry, Humphreys, King, Lawrence, Dewey, Hull, MacDonough, Worden, Farragut, Dale, Monaghan and Aylwin, and the light cruiser Richmond. No movement report was released on the submarine tender Holland or the submarines, although it was reported that the U.S.S. Bushnell, submarine force flagship, and the submarines S-1

(Continued on Next Page, Col. 1)

and S-30 would arrive here May 29.

The S-1 and S-30 are reported en route to the east coast, since, effective yesterday, the home port of the S-1 was changed to Philadelphia and that of the S-30 to New London, Conn.

The ships going to San Francisco direct from Honolulu will arrive there at 3 p.m. next Friday, it was reported. Locally-based ships en route to that port are the light cruisers Concord, Trenton, Cincinnati, Memphis, Milwaukee and Detroit, the destroyers Broome, Wasmuth, Zane, Sturtevant, Childs and Sands, and the base force aircraft tenders Wright and Langley.

The fleet's maneuvers in the Hawaiian islands this spring have been "highly successful," reports Capt. Andrew C. Pickens, former chief of staff to Adm. Arthur J. Hepburn, commander-in-chief, United States fleet. Pickens arrived in San Pedro yesterday from Honolulu, en route to Washington, D. C., where on June 17 he will be made a rear admiral and become chief of the bureau of ordnance, The Associated Press reports.

"The new long-range patrol planes did particularly fine work in sustained scouting operations far from bases," said Pickens. "This year's exercises are probably the most strenuous problem the fleet has had in many years, but ships, planes and men withstood the exacting requirements in remarkable fashion."

North American Magazine

Consolidated— May 1, 1937

On April 12-13 twelve Consolidated PBY-1 patrol space bomber airboats, under the command of Lt. Commander L. A. Pope, made a non-stop formation routine delivery flight from San Diego Bay to Pearl Harbor, Territory of Hawaii. The distance of 2553 miles was completed in 21 hours, 31 minutes.

Consolidated men, without group insurance, who are convalescing from illness, are enabled to earn a few dollars in a novel way. Miscellaneous nuts and bolts which had been accumulating in a hopelessly mixed state to an alarming degree had been a constant source of annoyance to foremen and clerks. These are now brought in large pans to the bedsides of laid-up men. They separate the steel from dural by means of a magnet and the resultant sorted material is returned to the factory in paper bags where it is weighed up and credited to the one who has done the sorting. The work occupies a goodly portion of their time and keeps them from thinking how slowly the hands move around on the face of the clock.

ARGENTINE PLANES WILL BE SHIPPED

S.D. UNION 5-20-37

Decision of the Argentine government to ship by chartered steamer from San Diego rather than to fly to Rio de Janeiro the six Consolidated airboats nearing completion at the Consolidated factory on Lindbergh field, was announced yesterday b Capt. Marcos Zar, chief of Arge tine naval aviation.

Whether an Argentine freigh or American freighter will be u in transporting the planes to has not been decided. Some t ago efforts were made to induce th South American republic to fly th planes direct from San Diego to th Naval Air station near Rio. Th plan was abandoned because of th expense involved in sending a larg number of Argentine aviators an mechanics here for special trainin in preparation for such a long a hazardous flight.

Consolidated officials said the sh airboats will be ready for delivery in July.

LT. DEAM TO LEAVE CONSOLIDATED POST

S.D. SUN MAY 30

Lieut. Frank E. Dean, assistant inspector of Naval aircraft at Consolidated Aircraft Corp., has been ordered transferred to Patrol Squadron 11, attached to the San Diego aircraft tender USS Langley. Lieut. Dean's orders are to take effect Tuesday, and he will be relieved by Lieut. Henry J. McRoberts, who has been taking a post-graduate course at Annapolis.

Lieut. Dean, who has served at Consolidated for the past six months, has specialized in the field of Naval inspection, having been assigned to the Stearman Aircraft Co., Wichita, the Great Lakes Aircraft Corp., Cleveland, and the Douglas Aircraft Co., Santa Monica, prior to his local duty.

S.D. UNION

36 NAVY PLANES RETURN FROM S.F.

JUNE 2, 1937

Rear Adm. Ernest J. King, fleet patrol wing commander, will arrive here from San Francisco aboard the tender Wright tomorrow morning. Accompanying the Wright will be the tender Langley.

Four squadrons of 36 Consolidated navy air boats that flew from San Diego to San Francisco last week to participate in the dedication of the Golden Gate bridge, returned to North island yesterday morning.

Vice Adm. Frederick J. Horne, commander aircraft, battle force will land at the Naval Air station advance of the aircraft squadro and will maintain his offices ashc during the summer air concentr tion, June 5 to Sept. 1.

Flight Of 36 Planes Leaves San Diego At Dawn In Mass Formation

SUN MAY 27

Encountering no difficulty despite lack of headwind to help lift the planes from the water, 36 Consolidated patrol bombers of four squadrons took off at daybreak today in a mass flight to San Francisco where they landed at 10:20 a. m., the Aircraft Base Force duty officer reported.

Commanded by Lieut. Comdr. George D. Price, the big airboats tomorrow morning will join land planes of the aircraft carriers Ranger, Saratoga and Lexington in a gigantic demonstration of Naval air strength over San Francisco in connection with the Golden Gate bridge fiesta.

Take Off in 57 Minutes

The takeoff this morning, third for a mass flight of Consolidated bombers this year, was accomplished in 57 minutes. The first plane, of Squadron VP-7, left the water at 4:21 a. m. and the final airboat, of Squadron VP-3, with Lieut. Comdr. Price at the controls, was in the air at 5:18 a. m.

The planes taxied to an area near the municipal piers and took off in a westerly direction. There was perfect visibility and a light breeze.

215 Men on Ships

Squadrons participating are VP-7, six P2Y3 planes, predecessors to the newest Consolidated airboats, commanded by Lieut. Comdr. Arnold J. Isbell; VP-9, six PBY planes, commanded by Lieut Comdr. J. B. Sykes; VP-12, 12 PB planes, commanded by Lieut Comdr. J. E. Dyer, and VP-3 of the Canal Zone, commanded by Lieut. R. W. Morse.

A personnel of approximately 215 officers and men operated the craft. The airboats will use as their base ships the Wright and Langley, due in San Francisco today; and the Sandpiper, Gannet and Thrush, already at the northern port.

Patrol bomber squadrons have been breaking records habitually since the first mass flight to Pearl Harbor last January.

Yesterday's takeoff of 36 big airboats for San Francisco was accomplished in 57 minutes, as compared to at least that length of time required by only 12 planes on the first San Diego-Hawaii flight.

Fuel loads were smaller, but the dispatch with which the planes were launched, taxied to the beginning of the takeoff lanes and wheeled about showed vast improvement. S.D. SUN MAY 26

As a result, three dozen planes were able to take to the air in slightly over one and one-half minutes each!

◇ ◇ ◇

HAWAII FLIGHT CREWS HOME

S.D. SUN MAY 29

Personnel of Patrol Squadron 11, which piloted a dozen Consolidated bombers from San Diego to Hawaii in record-breaking time recently, today had returned to North Island.

After participating in the war games, the officers and men, commanded by Lieut.-Comdr. L. A. Pope, were transported to San Francisco on the aircraft tenders Wright and Langley, which arrived at the Golden Gate yesterday.

The VP-11 crew returned here yesterday in five P-H seaplanes flown from San Francisco for use in utility squadron VJ-2 at North Island. The planes, recently stationed at Pearl Harbor, were brought to San Francisco on the Wright and Langley.

First of the vessels which participated in Fleet Problem 18 due to arrive in San Francisco harbor for the Golden Gate Bridge Fiesta are the San Diego aircraft tenders, Sandpiper and Gannet. They completed their run from Pearl Harbor, Hawaii yesterday. SUN MAY 25

Another aircraft tender, the Thrush, left yesterday for the Bay area, and is expected to arrive there tomorrow to join its sister ships. These vessels, in addition to the Wright and Langley, will be used as base ships by the 36 planes of four patrol bomber squadrons which will take part in the mass flight over the new bridge Friday.

Majority of the planes will be new Consolidated PBY's, of Squadron VP-3, here from the Canal Zone to make a delivery hop of a dozen aircraft to Panama next month; and of Squadrons VP-7, 9 and 12, all based at North Island. Commanding the entire group will be Lieut-Comdr. George Price, commanding officer of the Patrol Wing at the Naval Air Station.

◇ ◇ ◇

EXCHANGE ADMITS CONSAIR STOCK

WLD. - SUN - MAY 26

Consolidated Aircraft Corp. stock today was admitted to listing on the New York Stock Exchange, the United Press reported to The Sun. The stock was formerly listed on the Curb Exchange.

The new listing will comprise 579,000 shares of common stock, par value $1, which are issued and are outstanding; 48,000 additional shares to be issued on official notice of issuance upon conversion of 24,000 shares of convertible $3 preferred stock, without par value, and 21,000 additional shares of common stock on official notice of issuance upon the exercise of employe stock option warrants. Consolidated common stock sold today on the Curb Exchange at 23⅞.

M'ROBERTS SUCCESSOR OF DEAM AT C. A. C.

Lt. Frank E. Deam, who has been on duty at the Consolidated Aircraft Corp. as assistant inspector of naval aircraft, leaves about June 1 for duty as a member of VP squadron 11, attached to the U.S.S. Langley. A naval academy graduate of the class of 1924, deam has served as inspector of naval aircraft at the Stearman Aircraft Co., Wichita, Kant, and the Great Lakes Aircraft Corp., Cleveland. Previous to his appointment to Consolidated Aircraft he was assistant inspector of naval aircraft at the Douglas Aircraft Co., Santa Monica. He is being relieved at the plant by Lt. Henry J. McRoberts, who has been taking a post-graduate course at Annapolis.

300 PLANES LEAD SHIPS TO S. F. AS MANEUVERS END

S. DIVISION - MAY 29

ABOARD BATTLESHIP PENNSYLVANIA, May 28 (A.P.)—The most powerful sea force in the nation's history swept into San Francisco bay today by sea and air as the U. S. fleet completed six weeks of hard-fought war games.

The fleet's arrival was the most impressive feature of the celebration opening the $35,000,000 Golden Gate bridge. Several hours before the men-o'-war steamed into the arbor, 300 fighting planes flew into the city from aircraft carriers standing off the Gate.

The 10-mile column of trim gray fighting ships gave no outward evidence of the all-night fight against a 42-knot gale. Some boats were smashed on one battleship but that was the only damage from the storm, demonstrating how aircraft carriers can ride through a gale with hundreds of planes lashed to their open decks.

Adm. Arthur J. Hepburn, commanding all fleet units, expressed admiration for the performance of the navy air forces, particularly the new giant sky patrol cruisers which accomplished perhaps the most effective work ever seen in naval maneuvers.

"Our air force is second to none," Adm. Hepburn declared.

One outstanding feature of the maneuvers was the almost continuous stormy weather, revealing the efficiency of weather forecasting by the "polar front" method. This enabled the fleet to take advantage of weather conditions by foreknowledge, rather than permit unexpected weather to delay operations.

While the six weeks of maneuvers were the most hazardous ever undertaken, only two lives were lost. This accident occurred three years ago when a plane from the Saratoga plunged into the sea off Hawaii.

SERVICE NOTES

Consair Bids On New PBY Planes For Navy

By HAROLD KEEN

With 55 PBY-1 planes in its first airboat contract completed for the Navy, Consolidated Aircraft Corp. already is looking forward to results of its bidding on the fourth contract PBY type bombers.

Consolidated, possessor of three Navy contracts totalling $19,000,000, has submitted bids on what company officials term the PBY-4 plane. The Navy is expected to announce results of the competitive bidding in June.

Two estimates were submitted, it is reported. One calls for the cost per plane should a maximum of 15 and a minimum of eight be ordered. The second bid is for construction of 55 to 66 planes.

Since Consolidated has done all the preliminary engineering on the PBY planes, it naturally has the "inside track" on the fourth contract. The airboats already in operation have more than satisfied the Navy high command with their efficiency, and, at times, phenomenal performance, it is believed.

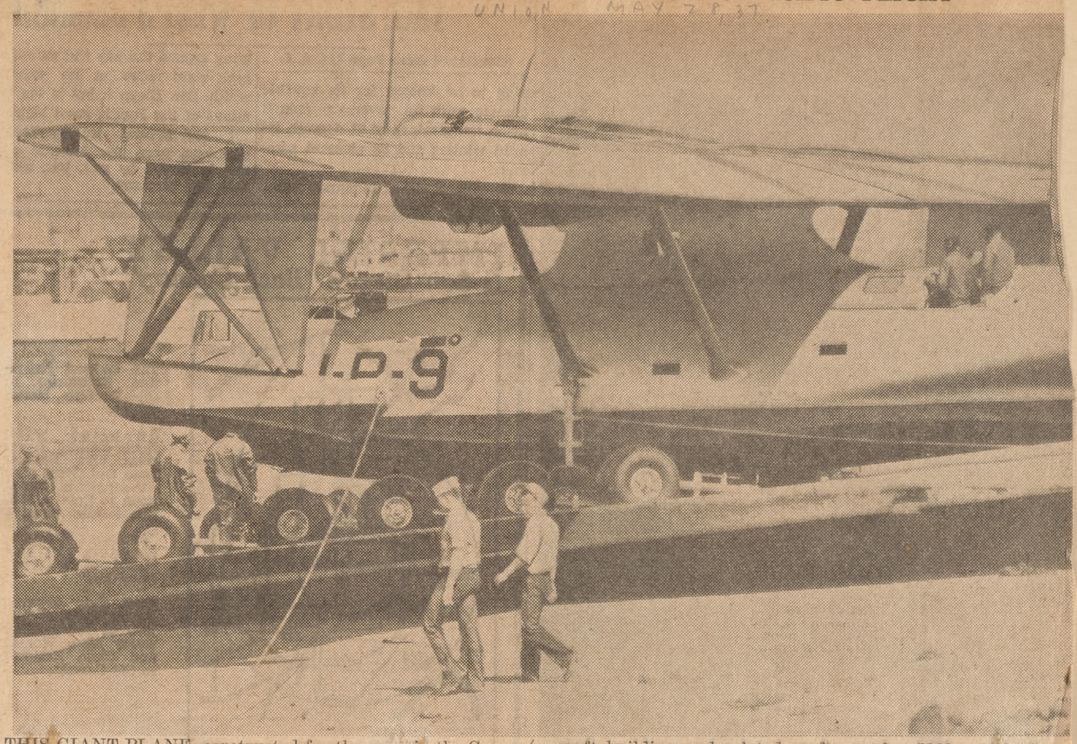
Consolidated's bid was governed, in part, by increased labor cost resulting from wage raises granted in the contract signed several weeks ago with the International Association of Machinists.

Maj. Reuben H. Fleet, president of the concern, admitted this in an article published in the current issue of the "Consolidator," employes' magazine. He wrote:

"In our recent bids for PBY-4's we listened patiently to your representatives and asked them what was in their hearts and their minds. Ascertaining, we bid accordingly and hope that our Navy will find us low enough. If you don't get the PBY-4 business a substantial reduction in force will be necessary."

SAN DIEGO-BUILT PLANE READY FOR TRANS-PACIFIC FLIGHT

UNION MAY 27 '37



THIS GIANT PLANE, constructed for the navy in the Consolidated Aircraft Corp. San Diego plant, is being launched for a flight to Honolulu from the North Island naval air station with 11 other patrol planes of the squadron. Aircraft building and related crafts employ 5000 men in San Diego, the "air capital of the west." Three plane and parts factories are located here.

Midget Plane Built at S. D. Plant For Cleveland National Air Races

S.D. TRIBUNE JUNE 1, '37

Speed of 200 Miles For Product of Consolidated

They call it "Flagg's ship" at the Consolidated Aircraft Corp.—the new little racing plane which several employes of the aircraft plant, led by C. C. Flagg, of the company's final assembly inspection, have built for entry in the National air races at Cleveland next September. The "mighty midget," which stands only three feet, 10 inches high, was designed by Flagg and was built to attempt to set a series of world records for planes of the fourth category (440 pounds, or less).

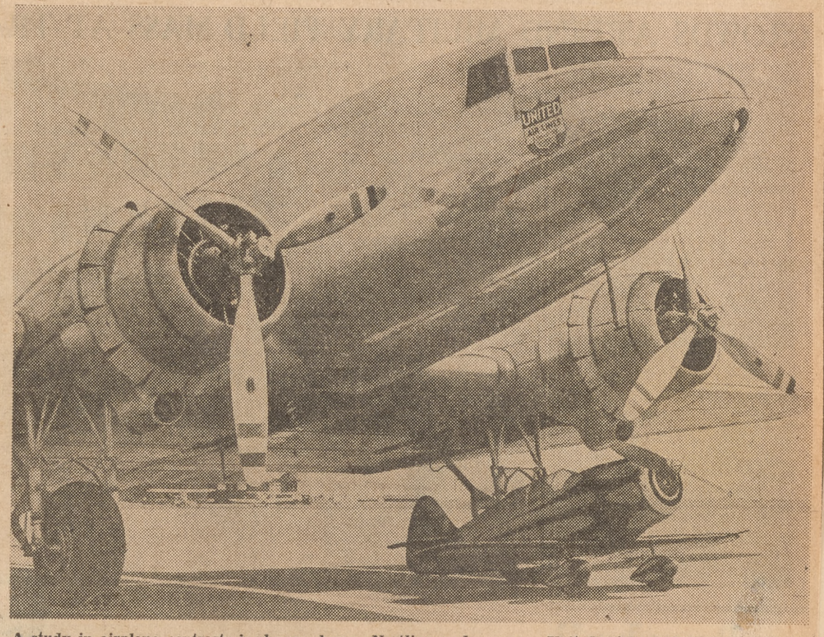
The design incorporated Flagg's ideas of what a small racing plane should be. He had charge of all construction and was assisted by Young McClure and Lionel Machado, of the sheet metal department; Herbert Jewel and Joe McCannon, of final assembly, and Joe Sturgess, of the hull department. After weeks of work, the ship was turned over to Hugh Nicholson jr., also of final assembly inspection, who took it up on its initial hop.

Takes 12 Gallons Gas

The job of piloting the small racing ship to victory at the Cleveland races will be entrusted to Tony La Vere. The craft, powered by an English Pabjoy Niagara engine of 90 horsepower, has a top speed of 200 miles an hour.

General characteristics of the craft follow: Wing area, 35 square feet; span, 14 feet, 6 inches; length, 12 feet, 6 inches; height, three feet, 10 inches; weight (empty), 408 pounds; gas capacity, 12 gallons; oil capacity, two gallons; propeller (wood), 62 inches diameter; speed, 200 miles an hour; landing speed (with flaps), 58 miles an hour; landing speed (without flaps), 70 miles an hour.

The wings are single-piece cantilever type, having two spruce spars and plywood skin. The fuselage is welded chrome moly steel tubing faired with spruce formers, screen wire and fabric covering. Control surfaces are steel tube construction fabric covered.



A study in airplane contrasts is shown above. Nestling under a new United Airlines Mainliner, which has a weight of 24,000 pounds, is a tiny racing plane built by a group of employes of Consolidated Aircraft Corp. The midget plane has a weight, when empty, of 408 pounds. It stands only 3 feet 10 inches high.

Tiny Plane 3 Feet, 10 Inches High But Makes 200 M.P.H.; Built for Races

The "mighty midget" would be an appropriate description to give the new little racing plane recently completed by employes of Consolidated Aircroft Corp., for entry in the national air races at Cleveland next September. The craft was constructed by Young McClure, Lionel Machado, Herbert Jewel, Joe McCannon and Joe Sturgess at the airsraft plant, under direction of C. C. Flagg, final assembly inspector.

Hugh Nicholson jr., also of the final assembly department, took the midget ship up on its first flight. Tony LaVerre will have the job of piyloting the plane at the Cleveland races.

The plane, only three feet 10 inches high, is powered by an English Pabjoy Niagara engine of 90 horsepower, and has a top spread of 200 miles an hour. It was designed by Flagg and was built for entry in contests in which planes of the fourth category (440 pounds, or less) may participate.

The fuselage is welded crome moley steel tubing, faired with spruce formers, screen wire and fabric covering. The wings are single-piece cantilever type, having two spruce spars and plywood skin. Control surfaces are steel tube construction, fabric covered.

Other general characteristics of the plane include wing area, 35 square feet; span, 14 feet, 6 inches; length, 12 feet, 8 inches; height, three feet, 10 inches; weight (empty), 408 pounds; gas capacity, 12 gallons; oil capacity, two gallons; propellor, 62 inches diameter; speed, 200 miles an hour; landing speed, with flaps, 58 miles an hour; landing speed, without flaps, 70 miles an hour.

HAWAIIAN FLIGHT: The first few days of the period, 9-23 April, were spent by Patrol Eleven in making final preparations for the flight from San Diego to Honolulu. All planes were fueled and loaded on Friday, 9 April, in preparation for the expected take-off Monday, 12 April. The time of take-off was planned for 2:00 p.m., in order that the landfall would be made shortly after daylight on the following morning. For several days prior to the flight all hands had spent considerable time in the study of weather reports and weather maps, and the results obtained by various pilots ran all the way from a Nebraska blizzard to a tropical moonlight night, with not a cloud in the sky all the way out.

Amid fond farewells from families, sweethearts, and friends, all hands manned their planes at 2:00 p.m. At 2:15 p.m. the first plane was launched and proceeded to the point of take-off. The departure report was sent at 2:50 p. m. at which time the commanding officer in 11-P-1 passed over Point Loma, headed on the initial course. A gradual climb to 10,000 feet was commenced immediately after the rendezvous was accomplished. This altitude was maintained during most of the night.

Celestial navigation was done by all planes throughout the night, and the squadron position was determined by averaging the positions reported by each patrol plane. It is believed, and observations proved, that the positions arrived at were accurate to within small amounts. No drift sights were taken due to clouds and all corrections to courses steered were made from positions shown by celestial fixes.

The arrival at Honolulu was made twenty-one hours and forty minutes after departure from San Diego. The usual muchly appreciated leis, handshakes, and words of welcome were forthcoming immediately, and one hilarious gathering, upon investigation, proved to be the presentation ceremonies of a "Hero 3c" medal to the Chief Naval Aviation Pilot in 11-P-1, who had previously been on duty in Pearl Harbor.

All in all the flight was very comfortable and all hands are ready for anything there is to offer. Needless to say, no general quarters or emergency drills were held on the way out. For a comfortable and pleasant trip from San Diego to Hawaii, this squadron recommends that it be made by air. NAVY NEWS JUNE 1937

NAVY DELAYS HOP TO PANAMA CANAL

S.D. SUN — JUNE 6, 1937

A non-stop mass flight of 12 Navy patrol bombers from San Diego to the Canal Zone, originally scheduled early this month, will not take place for at least another week, Aircraft Base Force officials announced today.

The flight will be made by Patrol Squadron Three of Coco Solo, and will constitute the longest non-stop mass hop in Navy history. Should weather conditions prove unafavorable, the planes may land at Acapulco, Mexico, where tenders will be based to meet emergencies.

TWELVE huge Navy amphibian bombers, flying in perfect formation, landed at Pearl Harbor at 9:52 A.M. (3:22 P.M. E.S.T.) today, completing a 2,200-mile hop from San Diego.

The squadron conquered a rain storm as it approached Hawaii, skirted the squall successfully and landed more than an hour later than its schedule called for.

Time for the flight from the mainland was 21 hours, 48 minutes.

First of the huge seaplanes to land was the flag plane of Lieutenant Commander L. A. Pope. The others alighted in quick succession.

The squadron carried 80 men. Naval officials here termed the spectacular mass flight from the mainland a "routine transfer of men and machines."

The fleet of bombers was first sighted, flying in V formation, over Koko Head at 9:33, then came into clear view above Diamond Head. Circling Honolulu in graceful salute, the craft then settled at one-minute intervals to mooring buoys in Pearl Harbor.

Strong tail winds aided the fliers on their mass hop from San Diego. They left yesterday at 2:34 P.M. U.S. NAVAL PROCEEDINGS JUNE 1937

The 12 bombers, Lieutenant Commander Pope said, maintained flight height at 12,000 ft. for nearly the entire distance.—*Herald*, Washington. Honolulu, T. H., April 13 (U.S.).

ANNUAL OUTPUT OF AIRPLANES BREAKS MARK

1936 Plane Production Now Doubles Total Of Previous Year

S.D. SUN — JUNE 11, 1937

Rapidly developing into one of the nation's most important industries, production of civil and military aircraft, engines, equipment and spare parts in the United States during 1936 reached a total value of $78,148,893, the Bureau of Air Commerce announced today.

Employment for more than 30,000 persons was furnished by aircraft manufacturers.

The total production of 3010 planes was valued at $47,531,565, and nearly doubled the amount manufactured in 1935. Cost of the 4295 aircraft engines built was $26,383,055. Propellers, parachutes and pontoons were valued at $4,234,273.

Three captive and two free balloons were produced during the year. These lighter-than-air craft, plus spare parts, cost $38,709.

The Bureau of Air Commerce totals cover aircraft and equipment for civilian use, for military deliveries and for exporting to purchasers in foreign countries.

San Diego's Consolidated Aircraft Corp. is the second largest plane factory in the United States, at present specializing in the production of military aircraft.

NAVY PLANS MASS HOP TO SEATTLE

S.D. SUN JUNE 18

With non-stop mass flights apparently becoming the vogue among squadrons of the Fleet patrol wing, 24 Consolidated-built airboats are being groomed for a hop to Seattle July 1 to establish a base in the Puget Sound area for six weeks, Aircraft Base Force officials reported today.

The San Diego planes will parciptae in extensive maneuvers over Alaskan waters. They will operate with the aircraft tenders Sandpiper and Langley, scheduled to leave San Diego for Seattle June 21 and 26, respectively. The planes and accompanying vessels will return here Aug. 15.

Western Flyers June 1937

Three contracts granted

Navy opens engine bids, but no engine orders are awarded

Three aircraft manufacturers were awarded contracts for airplanes by the Navy during the last thirty days and bids on four additional contracts were opened during the period without contracts being let. This last group of openings included bids on engines and airplane design data and drawings as well as on aircraft.

Bids awarded included Navy 900-644 to Grumman Aircraft Engineering Corporation for fifteen VJ (amphibians for general utility purposes) airplanes at $571,923; Navy 500-18 to Curtiss Aeroplane Division, Curtiss-Wright Corporation for 83 VSO (scouting type) airplanes at $2,119,687.20; and Navy 500-11 to the Sikorsky Division of the United Aircraft Corporation for VJR airplanes (quantity not released) at $1,960,790.

Bids opened without contracts being awarded included Navy 500-17 for aircraft engines with United Aircraft Corporation the only bidder at $584,444.88; Navy 500-13 for aircraft engines with United Aircraft bidding $2,230,523.54 on lot 2 and Wright Aeronautical Corporation $2,003,054 on lot 1; Navy 500-25 for aircraft engines with Wright Aeronautical Corporation, the only bidder at $177,935; and Navy 500-9 for airplane design data and drawings. Both Consolidated Aircraft Corporation and the Glenn L. Martin Company offered bids on this last contract which was split up in 26 items. The total amount of the Consolidated bids was $4,636,613 and Martin, $5,185,003.

Russia Buys All-Purpose Amphibian

S.D. SUN JUNE 6, 1937

Able to operate from land, water, ice or snow, the unique Seversky amphibian plane has been chosen as one of the foreign planes the Russian government plans to produce in large quantities.

A $780,000 contract has been let by the Amtorg Trading Corp., on behalf of the Soviet Government, for two amphibians, the manufacturing rights on these planes, and an option for two additional amphibians, together with complete tooling adequate for their production at the rate of 10 a day.

Consolidated Aircraft Corp. of San Diego has a similar agreement with Russia on its patrol bombers, and already has sent groups of engineers to the Soviet Union to install mass production methods.

Russia expects to benefit from the advantages of the Seversky universal landing gear. Most of the country is covered half the year with heavy snow and in its great stretches of wilderness proper landing facilities and airports are difficult to establish and maintain.

NAVY REPEATS

Flying the 2550 mile distance from San Diego to Honolulu non-stop without trouble of any kind, a group of 12 Navy Consolidated patrol planes under command of Lt. Comdr. L. A. Pope duplicated last month the successful flight of a similar squadron in January. Navy orders have been placed for 176 airplanes of this type, all to be equipped with Twin Wasp engines and Hamilton Standard constant speed propellers.

Consair And Aircrafters Clarify Lay-Off Situation

Company Denies Published Statements Were Made By Officials Of Concern

C. A. Van Dusen, vice-president of Consolidated Aircraft Corp., today denied that any one in authority at the plant had stated that "increased labor costs resulting from a blanket raise in pay last April made it impossible to lower Consolidated's estimate" on a new Navy plane contract.

His statement was issued after a conference with Aircraft union officials.

Cox Makes Statement

Union officials, through Wilbur Cox, vice president of Aircraft Lodge No. 1125, also issued a statement to members, disclaiming any responsibility for reports in The Sun June 9 that wholesale layoffs are foreseen at Consolidated if the company fails to obtain the new Navy contract.

"Members of the executive board," Cox said, "are interested in seeing that Consolidated receives a contract for PBY-4s, but insist that under no circumstances shall labor have to sacrifice any of its demands in order that the company obtain this business."

Not Authorized

Mr. Van Dusen also said that "no one with authority to speak for Consolidated" had said that "labor would have to sacrifice some of its demands" in order that the company might obtain this new business, as reported in The Sun.

"The company has a large volume of work on its books and has excellent prospects of obtaining a reasonable volume of new business over a period of time," Mr. Van Dusen said.

"The company has had many meetings with the officials of Aircraft Lodge No. 1125 for collective bargaining purposes. These meetings have resulted in harmonious relations with our employes. It is anticipated that there will be further meetings as occasion demands," he said.

"The company does not believe that labor's demands will be unreasonable, and thus prevent the company from obtaining business to the disadvantage of all.

"While we are clearing up these matters, regarding our bid, we want to add that this company did not say the Navy had suggested to the company a price it would be willing to pay on the plane contract."

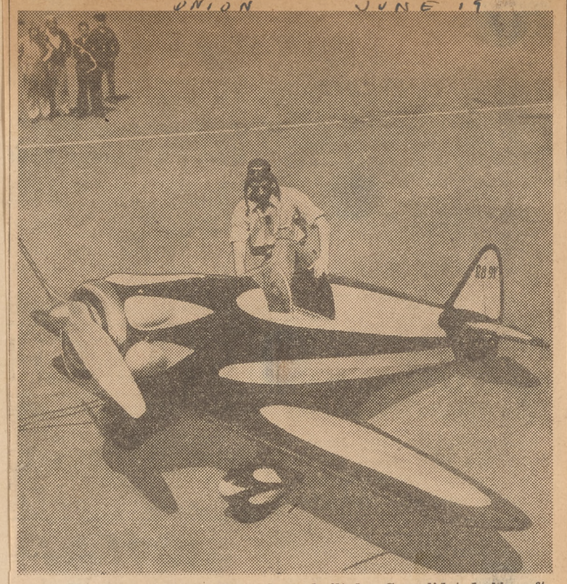
IT'S THE WORLD'S SMALLEST PLANE



Here is the world's smallest plane, built by Consolidated Aircraft Corp. employes, which will be towed across the country in a trailer to Cleveland for participation in the National Air races. The plane weighs 408 pounds, has a wing spread of 14 feet, is 12 feet long, carries 12 gallons of gas and two gallons of oil, and can fly 225 miles an hour. Tony Levier piloted it on a trial flight recently for the benefit of newsreel cameramen.

MIDGET, GIANT PLANES OF CONSAIR PICTURED

S.D. SUN — JUNE 16

Newsreels of the world's largest and smallest privately owned commercial planes, both Consolidated Aircraft Corp. products, were taken yesterday at Lindbergh Field by Paramount, Hearst Metrotone and Movietone News, the publicity department of the Chamber of Commerce reported.

The baby plane, only 12 feet long, was photographed under the 160-foot wing spread of a plane built for Richard Archibold for surveying operations in New Guinea.

Newsreels 'Snap' World's Largest, Smallest Planes

UNION — JUNE 16, 37

Newsreel pictures of the world's largest and smallest privately owned commercial planes, both products of the Consolidated Aircraft Corp., were taken at Lindbergh field yesterday by crews from Paramount, Hearst Metrotone and Movietone News.

The baby plane, weighing 408 pounds and equipped with a 90-horsepower motor, was snuggled under the 160-foot wings of the giant plane built for Richard Archbold for surveying operations in New Guinea.

The tiny plane, designed by C. C. Flagg and built and owned by Young McClure, Lionel Machado, Joe Sturgis, Herbert Jewell and L. M. McCannon, is to be towed across the country in a trailer to the national air races at Cleveland.

The plane, according to Flagg, has a wing spread of 14 feet, is 12 feet long, has a speed of 225 miles an hour and covers 43 miles on a gallon of gas. During the newsreel picture taken yesterday it was piloted by Tony Levier.

The publicity department of the chamber of commerce, which arranged for yesterday's newsreel pictures, announced that moving picture crews also will film the review of the second brigade of marines to be held at 5 p. m. today at the marine base in honor of Maj. Gen. Thomas Holcomb, commandant of the marine corps.

S. D.-BUILT PLANES TO BE SHIPPED TO ARGENTINE IN JULY

S.D. UNION — JUNE 20

Freighters of the General Steamship Corp. and the McCormick line will call here to load the six flying boats nearing completion at the Consolidated plant for the Argentine government.

Consolidated officials announced yesterday that three of the airboats will be ready for shipment to Buenos Aires July 15 and the last three Aug. 15.

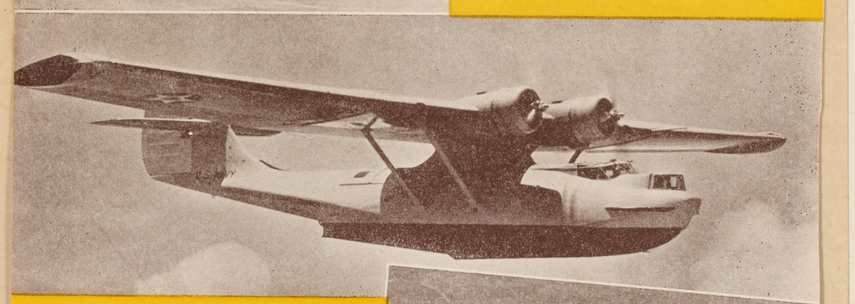
The planes will be reassembled at the naval air station near Buenos Aires. They are to be used in training and patrol duty along the Argentine coast.

Cons. Aircraft Preferred Dividend

Consolidated Aircraft Corp. has declared the regular quarterly dividend of 75 cents on convertible $3 preferred stock, payable June 30 to stock of record June 19.

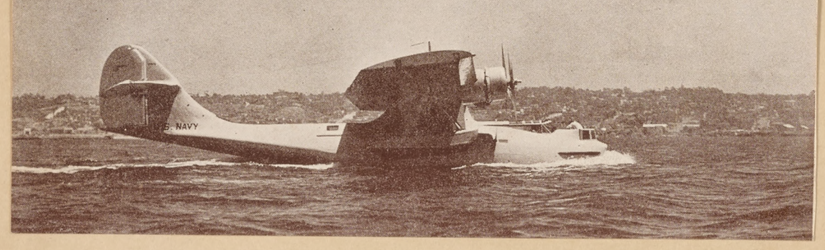
Pennzoiler Summer, 1937

BATTLE ★BIRDS★



Manufactured for the United States Government by The Consolidated Aircraft Corporation of San Diego, the air "warriors" shown here are typical of those being supplied by Consolidated to our army and navy. All planes made at the Consolidated plant are protected with Pennzoil during their crucial test flights.

The "flying boat" bombers pictured are of the same type which recently completed a mass flight from San Diego to Honolulu. The two-man attack plane illustrated is heavily armed and exceptionally speedy.



"Vuelo" April, 1937 Bogota, Colombia

RECORDS DE TACTICA

En enero de 1934, los pilotos de la Marina de Estados Unidos efectuaron el vuelo más largo en formación y sin etapas conocido en la historia hasta entonces. El escuadrón de patrulla VP-10, compuesto de seis botes volantes y con una tripulación de 30 oficiales, voló 2.399 millas sobre el Océano Pacífico, de San Francisco de California hasta la Bahía Pearl, en Honolulu, empleando 24 horas y 45 minutos.* El alto comando del Cuerpo Aéreo de la Marina manifestó muy modestamente que esta hazaña era únicamente parte del programa de táctica con el objeto de movilizar tropas y equipo.

En la primera semana de febrero del presente año la Marina efectuó otro vuelo en formación que sobrepasó en todo sentido el récord anterior. Una mañana el teniente comandante William McDade y los 80 oficiales que componen el escuadrón de patrulla VP-6, ocuparon los puestos correspondientes en 12 enormes botes volantes en la Bahía de San Diego de California y, sin ninguna ceremonia, decolaron en formación hacia la Bahía Pearl, a 2.553 millas de distancia. Veintiúna horas y 48 minutos más tarde el escuadrón de patrulla VP-6 completó su programa de rutina, llegando a Honolulu sin el menor inconveniente.

El escuadrón VP-6 está compuesto de botes volantes CONSOLIDATED PBY-1 con motores Wasp dobles de 1.100 H/P, flotadores auxiliares repiegables y de líneas fuseladas. Estos botes volantes son los 12 primeros de la serie de 176 iguales que actualmente se construyen por orden de la Marina en la fábrica CONSOLIDATED AIRCRAFT CORP.

* Botes iguales al sesquiplano de la Aviación Militar colombiana.

Profits of Consolidated Aircraft Are Cut in Two

Consolidated Aircraft Corp. reports consolidated net income for 1936 was $192,411, equal to 29 cents a common share, against $322,731, or 56 cents a share, in 1935.

National Air News June 2, 1937

Wall St Journal June 16, 1937

Dow Jones News Service

NEW YORK—Consolidated Aircraft Corp., in its application for transfer to the New York Stock Exchange from the Curb Exchange, has outlined its policy in respect to charging off experimental and development costs.

The cost of experimental and development work directly applicable to specific projects is capitalized as a good will type of asset and subsequently amortized within a reasonable time against the costs of resultant production orders received or in prospect.

If the number of units sold is fewer than the number originally estimated, then the costs not equitably amortized against such fewer number of units are written off against the income of the period in which the necessity for such adjustment becomes apparent.

Most companies have followed a similar policy as that outlined by Consolidated. Generally it results in small profits during the early life of a model but in greater profits if the model can be sold beyond the originally estimated period of usefulness. This was well illustrated in the case of Douglas Aircraft Co. Its profits in 1935 rose substantially over 1934 because it was still selling its DC-2 model transport on which the experimental costs were largely written off in 1934.

The listing application also states that the costs of specific experimental and development work on any projects which are abandoned before completion are written off against income in the period abandoned.

The cost of experimental and development work not directly applicable to a particular project, that is, general research work, is absorbed in the current operating expenses of the period in which incurred.

Consolidated Aircraft Corporation

Financial World June 16, 1937

AMONG the newcomers in the unlisted market are the non-cumulative convertible $3 preferred shares of the Consolidated Aircraft Corporation, incorporated in 1923 under Delaware laws. This issue was offered last July and proceeds utilized by the company for plant and equipment purposes as well as for additional working capital. There are 22,976 preferred shares now outstanding, on which dividends are being paid 75 cents quarterly. They are convertible into the common (of which 574,400 shares are outstanding) on the basis of one preferred for two common. The company has no funded debt. Recent price of the preferred was 56 bid, 58 asked.

During 1936, earnings of Consolidated Aircraft were equivalent to $8.35 a share on the new preferred and 29 cents a share on the common. Unfilled orders of the company currently are placed at about $19 million, against about $9 million at the start of 1936.

Through an expenditure of $600,000 to complete a new unit, Consolidated Aircraft has expanded its facilities to meet increased business.

The company follows a policy of reporting as sales only completed orders actually delivered and with some large orders now near completion it is expected 1937 business and earnings will show an increase over last year. The company manufactures airplanes for commercial, mail and military use on land or sea. Its principal customer is the United States Government.

Following is a record of earnings:

	1936	1935	1934
Net sales	$4,218,399	$2,841,753	$1,552,210
Oper. income.....D	2,022,640	403,731	48,116
Total income.....D	1,987,579	433,117	58,154
Net income.....*	192,411	322,732	6,560

D Deficit. *After a credit of $2,669,784 representing increase in costs accumulated on contracts.

Because of the conversion privilege, the preferred shares of the company offer an appeal that is dual in nature: a dividend rate that is currently being adequately earned and the potentiality of market value appreciation if the common, which is listed on the Curb, should advance. Recent price of the latter was around 24.

S. D. SHIPS FLYING TO LAKE MEAD AND COCO SOLO

TRIBUNE — JUNE 17, '37

Lake Meade, at Boulder dam, and Coco Solo, C. Z., are goals in flights to be made within the next four days by Consolidated Aircraft Corp.-built planes, it was announced today at the plant on Lindbergh field.

Distinction of being the first flying boat to land on Lake Meade, created by the water being impounded by Boulder dam, will be held tomorrow by a privately-owned PBY-1 flying boat at Consolidated for Richard Archbold, research associate of the American Museum of Natural history. The plane, which has been undergoing extensive tests here the last few weeks, is to leave San Diego about 8 a.m. tomorrow, carrying six men, to fly to the dam and land on the lake.

An official navy release is expected this afternoon or tomorrow from base force aircraft authorities on a flight of 12 new Consolidated-built navy patrol planes, which are to be transferred from San Diego to Coca Solo. At the Consolidated plant this morning it was announced that the flight will start Monday. Lt. R. W. Morse, commanding VP-3F squadron, is to be in command, according to recent announcement by naval authorities. A report from Panama states that the U.S.S. Lapwing left Panama bay yesterday for plane guard station, presumably in connection with the San Diego-Coco Solo flight.

Ontario Leaves Samoa

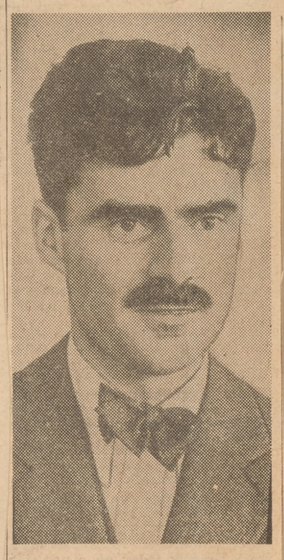
The U.S.S. Ontario left Tutuila, Samoa, today for plane guard station, reportedly in connection with Amelia Earhart's round-the-world flight.

Tomorrow's flight from San Diego to Boulder dam will be made by Archbold, Russell Rogers, Archbold's chief test pilot; Jerry Brown, chief machinist; William Wheatley, chief test pilot for Consolidated, and Frank Learman, assistant to the manager at the plant. With them will be a motion picture cameraman. Only one landing and take-off is planned, it was said at the plant.

Archbold's plane, said to be the world's largest privately-owned plane, is to be used in an expedition next winter from the United States to New Guinea, under the sponsorship of the American Museum of Natural history. The plane is equipped with two 1000-h.p. engines and has a cruising speed of 140 miles an hour. It has a two-way radio equipment and a cruising range of approximately 4000 miles. The exact route Archbold will follow across the Pacific has not been determined as yet, but according to plans announced this spring he will cross from San Francisco by way of Honolulu, Midway island, Wake island and Guam, from which point he may proceed straight south to New Guinea, a distance of 2000 miles.

S.D.-BUILT PLANE FIRST TO LAND AT DAM

TRIBUNE JUNE 18, 1937



Upper, PBY-1 flying boat (Associated Press photo). Lower, Richard Archbold, owner.

The first plane to alight on the waters of Lake Meade, created at Boulder dam, a PBY-1 flying boat, built at the Consolidated Aircraft Corp. plant on Lindbergh field for Richard Archbold, research associate of the American Museum of Natural History, landed there at 10:42 a.m. today.

The huge flying boat, carrying six men, with William Wheatley, Consolidated chief test pilot, at the controls, left San Diego at 8 a.m. The flight is the last of a series of extensive test flights.

With Archbold and Wheatley in the plane were Russell Rogers, Archbold's chief test pilot; Jerry Brown, chief machinist; Frank Learman, assistant to the manager at Consolidated, and a movie cameraman. Before they left Learman said they would return to San Diego this afternoon.

The plane itself was built for a scientific expedition flight from the United States to New Guinea, which is expected to be started next winter. The object of the expedi-

(Continued on Next Page.)

Big Consair Seaplane Tested For Far East Jungle Work

S.D. SUN — JUNE 18, 1937

A San Diego seaplane this morning winged across 280 miles of land toward Boulder Dam, where it landed at 10:42 a. m. in one of the greatest man-made bodies of water in the world—Lake Mead.

Built by Consolidated Aircraft Corp. along the exact lines of the PBY-1 patrol bombers on which delivery to the Navy has been completed, the big craft contained four members of a contemplated expedition to New Guinea late this year, and Bill Wheatley, Consolidated is chief test pilot.

Leader on Hop

Leader of the expedition, Richard Archbold, 29-year-old research associate of the American Museum of Natural History, was one of the passengers, and the crew consisted of Russell Rogers, pilot, Jerry Brown, flight mechanic, and Harold Ramm, radio operator.

This first flight of a seaplane to Boulder Dam is in the nature of a final test and demonstration of the airboat's ability, Consolidated officials announced. It was to be accompanied by a seven-passenger Fleetster cabin monoplane, carrying company executives and photographers.

Confidence in Craft

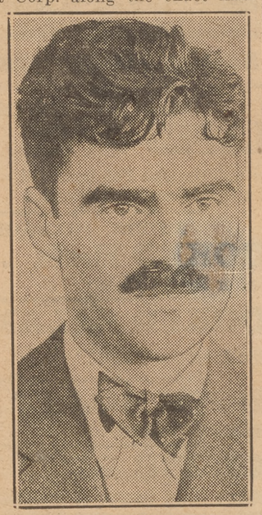
A daring overland flight from San Diego to New Orleans or Pensacola, Fla., will be undertaken June 26. Although a forced landing would be disastrous, Archbold is so confident of the plane's efficiency that he has ordered it flown 1800 miles on a non-stop hop. From New Orleans or Pensacola, the big plane will fly to New York City, headquarters of the expedition.

Archbold and his crew will return to San Diego about July 15 for further tests, including altitude flights over the Rocky Mountains in Wyoming.

November Departure

Next November, they will fly across the Pacific to Hawaii and on to Dutch New Guinea, where two years of zoological research will be conducted.

Nine men will comprise the expedition, the first group of four leaving by ship from New York Oct. 1. The plane, carrying the remaining five, will be used to establish bases deep in the New Guinea wilderness, where previous scientific groups have been unable to remain because of difficulty in obtaining food supplies. These will be dropped from the plane through a specially constructed device at the rear of the fuselage, Archbold explained.



RICHARD ARCHBOLD
Explorer explores air

Because of Navy regulations, the airboat cannot be taken out of the United States until November, which is one year after delivery of the first PBY-1 plane to aircraft squadrons at North Island.

Archbold, 1st to Land on Mead Lake, Returns to S. D.; Plans Explorations

UNION — JUNE 19, 1937

Lifting easily over the coast range of mountains to settle gently on Lake Mead, Richard Archbold's exploration air cruiser, product of Consolidated Aircraft Corp., here, yesterday became the first flying boat to land on the lake created by Boulder dam.

The "first" established by Archbold in the big ship, is one of many it expected to accomplish. It was designed to penetrate the interior of New Guinea as the "eyes" of a scientific expedition planned by Archbold who is a research associate of the American Museum of Natural History.

Taking off from here early yesterday, the big ship was accompanied by a smaller Fleetster in which Frank Learman jr., assistant to the manager of the aircraft company, test pilots and a newsreel cameraman flew. The big air boat, wingspread 104 feet, was photographed against snow capped mountains, with Boulder dam and with Lake Mead in the background.

It was landed on the man-made lake at 10:42 a. m. Members of its crew, including Archbold and William Wheatley, Consolidated chief test pilot, and the men aboard the Fleetster went to lunch in Boulder City.

The return flight started in the afternoon, with the newsreel cameraman shifting to the big ship. The planes landed here in the afternoon between 4:30 and 5.

Archbold is expected to fly the big ship to the east next week. Two routes are under consideration for the flight, one a non-stop cross country flight from San Diego to New York and the other over the gulf to Pensacola, Fla., and thence along the east coast.

If Archbold attempts the cross country flight, it will be one of the first times that a big airship, equipped to land on water only, has made such a trip. Archbold, 29, is internationally known as an explorer. He will leave from San Francisco some time this winter on the projected exploration flight, proceeding via Hawaii, Midway and Wake islands and Guam, then to New Guinea.

NAVY SQUADRONS AT S. D. WILL FLY TO SEATTLE, ZONE

UNION — JUNE 16, 37

Rear Adm. Ernest J. King, commander of the fleet patrol wing, announced yesterday that three squadrons—VP-7, 9 and 12, totaling 24 airboats—will leave San Diego July 1 on a non-stop flight to Seattle preparatory to engaging in extensive flight operations in the Alaska-Puget Sound sector in July and early August.

The planes will be accompanied by the tenders Langley and Sandpiper. The Wright, flagship of Adm. King, is at the Mare Island navy yard for interim overhaul and will not participate in the north Pacific flight operations.

Adm. King said plans are being perfected for the flight of Squadron VP-3 from San Diego to Coco Solo, C. Z., which will take place within the next fortnight. This squadron is to be stationed permanently in the canal zone.

The Wright, Langley, Sandpiper and the three squadrons will return to their base here Aug. 15.

In addition to the Coco Solo flight, Consolidated-built planes will fly to Lake Mead, Boulder dam, within the next four days, it was announced yesterday at the plant on Lindbergh field.

A privately-owned Consolidated PBY-1 flying boat will have the distinction of being the first flying boat to land on Lake Mead. Richard Archbold, research associate of the American Museum of Natural History, and a crew of five are scheduled to leave in the plane at 8 a. m. today and will fly to the dam and land on the lake.

Accompanying Archbold will be Russell Rogers, his chief test pilot; Jerry Brown, chief machinist; William Wheatley, chief test pilot for Consolidated; Frank Learman, assistant to the manager at the plant, and a motion picture cameraman.

S. D. PLANE HOPS FROM LAKE TAHOE IN ALTITUDE TEST

UNION JUNE 21, '37

A giant two-motored Consolidated flying boat, valued at more than $250,000 with its special equipment, is scheduled to return to San Diego today from Lake Tahoe after successful experiments with altitude conditions similar to those expected to be encountered on a projected expedition to New Guinea.

The plane, which left San Diego early Saturday, was the second plane ever to land on Lake Tahoe, 6224 feet above sea level.

Carrying a full load, the plane took off successfully from Lake Tahoe yesterday. Richard Archbald, representing the American Museum of Natural History, said he believed the plane could be depended upon to raise itself from New Guinea

(Continued on Page 3, Col. 6)

(Continued from Page 1)

lakes 10,000 feet above sea level. Because of rarified atmosphere at high altitudes, motors require immense reserve power to lift a plane.

The test marked the first time a plane ever took off from Tahoe's surface with a load. With Archbald and four other men aboard and carrying heavy baggage, the museum's plane twice lifted itself from the lake. Archbald said the plane would remain at the lake last night and start the six-hour flight to San Diego today.

The ship, with 104 foot wing spread, was built at the San Diego Consolidated Aircraft Corp. plant. A number of construction details have been kept secret because similar models are being constructed for the navy.

The expedition to New Guinea will be headed by Archbald, research associate of the American Museum of Natural History; A. L. Rand, fellow scientist; R. R. Rogers, pilot, and two mechanics from the Consolidated plant. They form the plane's crew on the current flight.

After returning to San Diego, the plane is scheduled to fly to New York soon.

The expedition, the fifth sponsored by the American Museum of Natural History, is expected to start from New York Jan. 1, 1938, for New Guinea to study birds and plant life.

ARCHBOLD TRIES OUT PLANE IN TAHOE FLIGHT

Researcher Tests Ship At High Altitude; Plans Hop To N. Y.

S.D. SUN — JUNE 21

Now that Richard Archbold has taken delivery on his $250,000 Consolidated-built airboat, the 29-year-old research associate of the American Museum of Natural History, evidently is determined to see just what the big craft can do under abnormal conditions.

The engines had barely cooled after a round trip inland hop of 560 miles to Lake Mead at Boulder Dam last Friday when the plane was taken aloft again Saturday morning by Archbold—this time to Lake Tahoe.

Unknown to Officials

Not even the company officials knew of this trip. Archbold, his crew of three and Dr. Austin L. Rand, scientist, who will accompany Archbold in an expedition to New Guinea late this year, left at 10 a. m. and four hours later landed at Lake Tahoe, more than 6000 feet above sea level.

This morning, the plane took off from the lake for the return trip, landing in San Diego bay at 12:48 p. m.

Purpose of the Lake Tahoe trip was to test the airboat's take-off power in rarefied atmosphere high above sea level, a condition which will have to be faced in the New Guinea exploration. The plane was said to have satisfied Archbold in its altitude performance.

Next Saturday, the young scientist will head for New York City in a transcontinental flight. The ship is not equipped for alighting on land.

CONSAIR BOMBERS HOP BELIEVED NEAR

UNION — JUNE 17, 1937

An indication that the mass flight from San Diego to the Canal Zone of 12 Consolidated patrol bombers will take place soon was provided today in a dispatch to 11th Naval District headquarters from Panama.

The Navy vessel Lapwing, attached to the Fleet Air Base at Coco Selo, left yesterday for a "plane guard" station in the Pacific. Aircraft Base Force officials this morning intimated this duty would be in connection with the delivery flight by the Canal Zone's Patrol Squadron Three, which has been training here.

'KEEP CLEAR', NAVY ADVISES

S.D. SUN — JUNE 20

To prevent any mishap at the outset of the San Diego-Panama mass flight of 12 Navy patrol bombers at 11 a. m. tomorrow, an urgent appeal has been made by the 11th Naval District port director's office to operators of small harbor craft to help keep the takeoff lanes clear.

The Consolidated airboats will be laden to capacity with gasoline and oil, and especially long runways will be necessary in order that the planes may lift from the water.

The following request was therefore issued by Navy authorities:

"Prior to the flight an International "U" (Unit) flag will be displayed by day from Hangar No. 69 at the Naval Air Station, and at night two vertical red lights.

"A patrol of small boats will be under a Naval representative at vital points in the operating area where the flight takeoff is to be. These boats will be equipped each with a large red flag and a red lantern for night use. The waving of the red flag or red light at an approaching boat is to be construed as a danger signal.

"Small boats so warned should immediately look for and sight the plane or planes, alter course as necessary, but preferably hauling immediately to the side of the channel and waiting for a clear time to proceed."

NAVY PLANES POISED FOR 3,000-MILE HOP

Dozen Twin-Motored Ships Will Take-Off Today for Coco Solo, Canal Zone.

By the Associated Press.

SAN DIEGO, Calif., June 21.—A dozen twin-motored Navy patrol planes poised ready to take off today on the longest mass non-stop flight in United States naval history.

The ships, carrying 16 officers and 56 enlisted men, were routed for Coco Solo, Canal Zone, 3,000 miles away.

The flight was described as merely "routine" delivery of the new ships, constructed here.

These latest additions to the Navy's air armada have wing spreads of 104 feet. Navy authorities have guarded all details with customary secrecy.

The route for the trip, set to begin sometime today, is almost entirely over water—down the coast of Mexico and Central America.

where is "Consolidated" mentioned?

12 Planes Off Monday On Non-Stop Canal Trip

TRIBUNE — JUNE 18, 1937

With the tentative take-off time 11 a.m. Monday, 12 officers and 60 navy enlisted men will leave San Diego next week in 12 Consolidated Aircraft Corp.-built PBY-1 planes on a 3057-mile non-stop ferry flight to Coco Solo, C. Z., where the planes will be used. The planes are identical in all respects to the 24 planes ferried earlier this year from San Diego to Pearl Harbor, Honolulu, by VP squadrons 6 and 11-F, reports Rear Adm. Ernest J. King, commander of aircraft base force.

While flights of navy planes between San Diego and Panama have been made on several occasions in recent years, the flight scheduled for next week differs from the former flights in that the last part of it will be made along the east coast of Nicaragua, Costa Rica and Panama. Heretofore, the flights have been made along the west coast of Mexico and Central America.

The route of the forthcoming flight is from San Diego over the regular steamer lane to Acapulco, on the west coast of Mexico and thence to the Gulf of Fonseca, which is bordered by three Central American countries — Salvador, Honduras and Nicaragua. From the Gulf of Fonseca the planes will proceed on a west-to-east course, crossing Nicaragua, and then proceeding on to the Canal Zone along

(Continued on Next Page, Col. 5)

CONTINUED FROM PAGE ONE

the east coast of Central America.

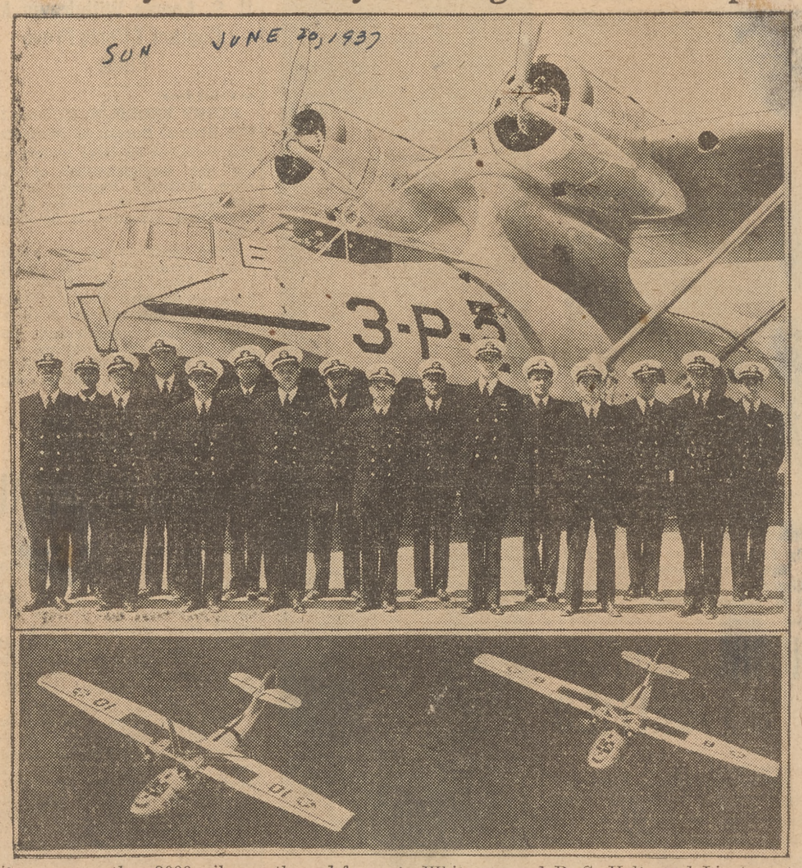
King said it is expected that the total flight time will be approximately 24 hours for the 3057 statute miles.

Lt. R. L. Morse, U.S.N., will be in command of the flight. There will be an average of six officers and men in each plane.

Preparatory to the start of the flight, the U.S.S. Sandpiper, seaplane tender, left San Diego yesterday, southward bound for stationing in the Gulf of California for plane guard duty. The seaplane tender Lapwing is en route from the Canal Zone to the Gulf of Fonseca for similar duty.

Ready For History's Longest Mass Hop

SUN — JUNE 20, 1937



Across more than 3000 miles southward from San Diego, the Navy's wings will whirr tomorrow in the longest non-stop mass flight of United States aviation history—to the Fleet Air Base, Coco Solo, Canal Zone. At the controls of 12 new Consolidated-built patrol bombers will be the 16 officers pictured at top. They are, left to right: front row, Lieuts. J. Eldridge, Jr., T. O. Dahl, T. T. Dietrich, G. J. Dufek, operations officer; Robert W. Morse, commanding officer of the squadron; W. V. Saunders, executive officer; W. E. Gladding, and G. G. Mead. Rear row, Aviation Cadets O. B. Whitmore and P. G. Holt; and Lieutenants (jg) J. D. Black, W. G. Corliss, J. Hulme, Massey; and Aviation Cadets E. C. Hodson and P. E. Kohler. Behind the officers is one of the twin-motored airboats of the Canal Zone's Squadron VP-3, bearing the insignia "E" for gunnery efficiency; and below, pictured above Point Loma, are two of the graceful giant "birds" in a practice flight. Delivery of the planes to Panama, though considered by the Navy a "routine" operation, will be one of the most spectacular mass hops ever undertaken. Seventy-two officers and men will comprise the crew.

RECORD PLANE HOP SET FOR NAVY MONDAY

12 S. D. Craft To Fly Non-Stop To Base In Panama

Undertaking the longest non-stop mass flight in United States naval history, 72 officers and men of Patrol Squadron Three will take off from San Diego harbor at 11 a. m. Monday in 12 Consolidated-built patrol bombers for Coco Solo, Canal Zone.

The airboats will fly 3057 statute miles in a route which will follow the steamer lane to Acapulco, Mex., thence to the Gulf of Fonseca, which touches the shores of Honduras, Salvador and Nicaragua. From this point, the planes will fly over land to eastern Nicaragua and follow the coast to Panama.

Tender on Way

The San Diego aircraft tende Sandpiper left yesterday for i "plane guard" station off Ca San Lucas, at the lower extren ity of Baja California. The sea plane tender Lapwing, based at the Canal Zone, will be stationed in the Gulf of Fonseca to watch for any mishaps. On the east coast of Nicaragua, another Navy vessel will stand by during the flight.

Should bad weather or any other contingency cause a forced landing of the planes, they will attempt to reach the Gulf of Fonseca, which provides the only suitable protected area in the entire route.

Weather Watched

The exact take-off time from San Diego depends on weather conditions, Aircraft Base Force officers said.

The 12 airboats will be under command of Lieut. R. L. Morse. Mission of the flight is to deliver the new planes, built in San Diego, to the Coco solo Air Base, where

Turn to Page 2, Col. 7. OVER

S. D. PLANES TO HOP MONDAY FOR CANAL; LIST PERSONNEL

UNION — JUNE 19, 1937

On a 3000-mile flight which will take them to Coco Solo, C. Z., via Nicaragua, 12 airboats, comprising VP-3 suadron, Lt. R. W. Morse, in command, will take off from San Diego bay at 11 Monday morning.

From San Diego the planes will fly direct to Acapulco on the west Mexican coast, thence to the Gulf of Fonseca, across Nicaragua to the east coast of Central America and then down the Caribbean to the eastern entrance of the Panama canal.

The squadron comprises 12 officers and 60 men. The seaplane tender Sandpiper will act as plane guard in the area between Cape San Lucas at the tip end of Lower California and Acapulco. Similar duties will be carried out by the tender Lapwing between Acapulco and the Gulf of Fonseca.

Flight personnel, announced yesterday:

3-P-1—Lt. R. W. Morse, Av. Cdt. P. G. Holt, L. Cross, ACMM (NAP); W. B. McLendon, ACMM; C. S. Whittler, AMM2c; R. M. Taylor, RM2c, and W. L. Hicks, CRM.

3-P-2—Lt. H. T. Dietrich, A. A. Sproule, AOM1c (NAP); E. L. Collins, AMM2c (NAP); V. L. Griswold, ACMM; N. Houle, AMM3c; Comdr. E. L. Gunther, and J. D. Odom, RM2c.

3-P-3—Lt. J. Ellridge, E. A. Cook, ACMM (NAP); L. I. Larson, ACMM; E. Christiansen, AMM2c; C. F. Mertz, AMM1c; E. B. Lloyd, ACMM, and L. L. Hunt, RM1c.

3-P-4—Lt. G. J. Dufek, Av. Cdt O. B. Whitmore, L. L. Hughes ACMM (NAP); C. Treadway AMM1c; C. M. Gail, AMM2c; R. F Dickeson, S2c, and H. S. Nobbs RM1c.

3-P-5—Lt. (jg) W. G. Corliss, F P. Shelby, ACMM (NAP); H. Pitts ACCM; J. M. Romero, AMM1c; F L. Bockwinkel, AMM2c; P. T. Rehberg, RM8c, and L. L. Severn, RM3c (NAP).

3-P-6—Lt. (jg) F. Massey, F. P. Singer, AMM2c (NAP); H. R. Cavanah, AMM2c (NAP); S. Susman, ACMM; E. L. Tesreau, AMM1c; L. E. Scott, ACOM, and T. Young, RM1c.

R-P-7—Lt. W. V. Saunders, Av. Cdt. P. E. Kohler, J. J. Noel, AMM2c (NAP); E. E. Self, AMM1c; T. H. Morse, AMM2c; B. L. Trager, RM1c, and R. A. McCoy, RM2c.

3-P-8—Lt. T. O. Dahl, E. C. McWatty, RM3c (NAP); J. R. Shaw, AMM2c (NAP); T. V. Grimes, AMMlc; J. F. Churchill, AMM2c; J. C. Klotzbach, AOM2c and G. H. Durand, S2c.

3-P-9—Lt. (jg) J. Hulme; E. Bankston, AMM2c (NAP); L. Wood, AMMlc; J. L. Mathis, AMM3c; F. L. Bowersox, ACMM; C. E. Kinney, Consolidated Aircraft representative and J. R.Lister, S2c.

3-P-10—Lt. W. E. Gladding, Av. Cdt. E. C. Hodson; J. W. West, AMMlc (NAP); A. Doren, ACMM; J. H. Bird, AMM2c; J. F. Olson, RM3c, and G. O Gardiner, RMlc.

3-P-11—Lt. G. G. Mead; J. E. Koeber, ACMM (NAP); L. Segal, RM3c (NAP); W. P. Cadenhead, ACMM; M. S. Pattsner, AMMlc; F. M. Tierney, ACMM, and L. W. Davis, RM3c.

3-P-12—Lt. (jg) J. D. Black, J. P. Bigler, AMMlc; E. M. Prather, RM2c (NAP); W. H. Hart, AMMlc; J. D. Bradford, AMMlc; J. H. Johnson, AMM2c, and H. R. Hebb, RM3c.

UNION — JUNE 21

12 NAVY PLANES TO BEGIN NON-STOP FLIGHT TO CANAL

Twelve giant two-motored navy patrol planes, carrying 16 officers and 56 enlisted men, will roar over the bay at 11 this morning and turn their gray noses south to the fleet air base at Coco Solo, C. Z., on a 3000-mile non-stop flight.

Termed a routine delivery of the planes constructed at the San Diego Consolidated Aircraft Corp. plant, the flight will be the longest mass non-stop flight in naval history. In previous flights between San Diego and the Canal Zone, the planes have halted at Acapulco, Mex.

Lt. Robert W. Morse will command the squadron on its historical flight. Other officers will be Lts. J. Eldridge jr., T. O. Dahl, H. T. Dietrich, G. J. Dufek, W. V. Saunders, W. E. Gladding, G. G. Mead. J. D. Black, W. G. Corliss, L. E. Massey; aviation cadets O. B. Whitmore, P. G. Holt, E. C. Hodson and P. E. Kohler.

Course Over Water

The flight marks the third mass delivery hop of the year. Two squadrons of 12 planes each were flown from the Pearl Harbor air base at Honolulu in flights earlier this year. On one flight the squadron was delayed by the terrific storm that later struck southern California and caused damaging floods.

Course of the flight will take the planes down the coast of Mexico

(Continued on Page 3, Col. 7)

and Central America with practically all of the hop being made over water. The flight probably will be completed in well under 30 hours.

Personnel of VP-3 squadron have been engaging in daily maneuvers, including gunnery and other practices to make each pilot, mechanic, and radioman thoroughly prepared for his role in the spectacular flight.

104-Foot Wing Spread

The planes were constructed at the San Diego Consolidated Aircraft Corp. plant. Sister ships are being built at the plant and delivered to the North Island air base as a part of the navy's plane-building program.

Each of the planes has 104 feet of wing spread. Details of construction, armament and speed have been guarded with extreme secrecy by naval authorities.

The squadron is under command of Rear Adm. E. J. King, commander aircraft, base force, who will give the final word for the flight this morning.

NAVY PLANES ROAR SOUTH ON RECORD MASS FLIGHT

12 AIRBOATS LEAVE S. D. ON PANAMA DASH

Big Ships Take Off Without Mishap, Start 3087-Mile Trip

Twelve giant Navy airboats today were droning over the Pacific, 10,000 feet aloft, on the longest non-stop mass filght ever attempted—3087 miles to the Panama Canal Zone.

With characteristic Navy Efficiency, the seapianes, under command of Lieut. Robert W. Morse, took off effortlessly from the harbor channel entrance just before noon today, rose gracefully over Point Loma and headed south.

Rapid Take-off

Lieut. Morse's lead plane was launched from the North Island seaplane ramp at 1110 a. m. and 20 minutes later had taken to the air. Following it in swift procession were the 11 other airboats of Patrol Squadron Three, all of which were out of sight over sea at 11:45 a. m.

The dozen planes first taxied to the municipal piers with intentions to head westward down the bay toward Point Loma, the direction of the take-offs on the two previous mass flights to Hawaii.

Wind Erratic

Slight and erratic wind and congestion in the channel caused by anchoring a few minutes previous to the seaplane launchings of the Army transport Ludington, forced Lieut. Morse to maneuver for a more favorable take-off spot.

He led the squadron, single file, toward the entrance channel, which was clear of surface craft and where a stiffer headwind, needed to help lift the planes from the water, was blowing.

Fade Into Haze

One by one the heavily-laden planes roared down the channel, took off easily and disappeared from view in the haze beyond Point Loma.

En route south, after all the planes had climbed to a 10,000-foot altitude, the squadron made a rendezvous and the flight personnel of 12 officers, four aviation cadets, 67 enlisted men and one civilian, representing Consolidated Aircraft Corp., settled down for the gruelling non-stop flight, which will require approximately 24 hours.

The airboats this afternoon were following the steamer lane to Acapulco, Mexico, thence to the Gulf of Fonseca in Central America, at which point they were to cut diagonally across Nicaragua and head down the east coast of that country toward Panama.

Just 'Routine'

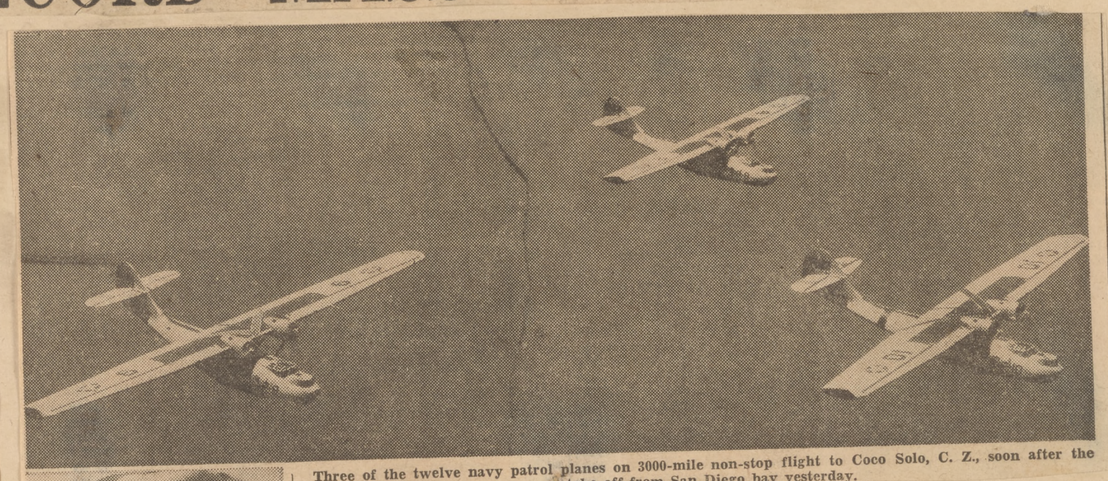
The flight was characterized by Rear Adm. Ernest J. King as a "routine" transfer of planes from San Diego to their base at Coco Solo, Canal Zone. The airboats are of the PBY-1 type, manufactured by Consolidated Aircraft Corp., whose representative, C. E. Kinney, was in plane No. 9.

Weather along the route was fair, Lieut. Morse said just before the take-off, although he feared possible sudden "chubascoes"—dreaded tropical storms which often trap tuna fishermen off the coast of Central America.

The planes will pass through he storm zone, Lieut. Morse said.

To guard against any mishaps, the San Diego seaplane tender Sandpiper was stationed at Acapuco and the Canal Zone tender Lapwing was at Gulf of Fonseca. Another Navy vessel was anchored off the east coast of Nicaragua.

Should no trouble arise during the flight, the planes will be at the Canal Zone at approximately noon tomorrow, Navy officials estimated.



Three of the twelve navy patrol planes on 3000-mile non-stop flight to Coco Solo, C. Z., soon after the take-off from San Diego bay yesterday.

Lt. Robert W. Morse, who is commanding squadron VP-3F on its historic flight.

S.D. UNION — JUNE 22

1500 MILES OUT, S.D. PLANES RADIO ON HOP TO CANAL

Squadron Due to Land at Noon; Speed Increasing as Gas Used; Weather Ideal.

BULLETIN

Traveling at 106 miles an hour, the squadron of San Diego planes en route to the Canal Zone reported by radio at 1 a. m. local time today that it was 1500 miles southeast of here and 50 miles north of Acapulco, the half-way mark.

Twelve giant navy two-motored patrol planes winged their way south under a tropical moon last night on a 3000-mile non-stop flight to Coco Solo C. Z., and reported their position at 11 o'clock (P.S.T.) as 1265 nautical miles south of San Diego.

A 10-knot headwind held the speed of the 104-foot wingspread planes to 102 knots (117.3 statute miles).

Weather conditions were ideal. A silver moon shone on the hulls of the great gray geese, performing the navy's greatest non-stop mass flight with military precision.

For most of the 12 hours after squadron VP-3F left San Diego soon before noon yesterday, the V formation was flown at an altitude of between 9000 and 10,000 feet.

Speed was increasing as the motors ate up the 1700 gallons of gas in each plane.

Those 1700 gallons weighed heavy and the tremendous hulls lay deep in the water after leaving the Naval Air station ramp. The planes are numbered from 3-P-1 to 3-P-12.

With Lt. Robert W. Morse, squadron commander, at the controls, plane 1 went into the water at 11:10. Plane 12 was in the water 16 and one-half minutes later.

Morse in Command

Turning its nose south down the bay, cleared by navy motor launches flaunting red warning flags, Plane 1 roared into the air at 11:20. The other planes followed in precise parade and Plane 12 soared into the air at 11:45. Take-off speed was estimated at 70 knots because of the heavy load and lack of headwind.

Gaining altitude swiftly, Plane 1 slowed to five knots less than the standard speed for the other 11 planes. A V-formation was completed 90 miles south of San Diego.

The planes, carrying 13 officers, four aviation cadets, an observer from the Consolidated Aircraft Corp. and 67 enlisted men, roared southward. The squadron followed the steamer lane down the coast of Mexico. Early today the planes planned to roar across a string of lakes and jungles in Nicaragua to the Atlantic coast, then down the coast of Nicaragua and Panama to Coco Solo.

Passes Tender

Soon after 7 last night the squadron roared high above the Lapwing, seaplane tender, 875 miles south of San Diego. Early today the planes were expected to pass over the Sandpiper, tender standing by 1630 miles south of the Lapwing.

One of the officers aboard is Comdr. E. L. Gunther, formerly in command of the U. S. S. Wright, base force aircraft tender. He is being transferred to command of base force aircraft squadrons at Coco Solo.

Reporting every two hours by radio to the Naval Air station, the squadron was expected to land at Coco Solo about noon today, completing the flight in about 24 hours.

Positions Listed

The radioed positions report follows:

1 p. m., 140 nautical miles south of San Diego at Pt. San Quentin, 10,000 feet altitude, slight headwind.

3 p. m., 310 nautical miles south of San Diego at San Engenio point, 9000 feet altitude, slight headwind.

5 p. m., 513 nautical miles south of San Diego, 45 miles northwest of Cape San Lazaro, 10,000 feet altitude, 10-knot headwind.

7 p. m., 715 nautical miles south of San Diego, 15 miles southwest of Cape Falso, tip of Lower California; 10,000 feet altitude, 10-knot headwind.

8:30 p. m., 530 miles northwest of Acapulco, halfway across the Gulf of Lower California; altitude between 9000 and 10,000 feet; 10-knot headwind; speed last hour and a half, 102 knots (117.3 statute miles).

11 p. m., (midnight aboard the planes) 1265 miles south of San Diego, 1822 miles from Coco Solo, 9000 feet altitude.

S.D. PLANES FIGHT STORMS, REACH GOAL ON RECORD 3085-MILE NON-STOP HOP

S.D. UNION — JUNE 23, 1937

Twelve giant navy patrol planes flew over the Pacific, the Atlantic and Central American jungles to land at Coco Solo, C. Z., at 3:28 p. m. (P.S.T.) yesterday, 27 hours and 58 minutes after their take-off from San Diego bay on the navy's longest non-stop mass flight.

Demonstrating effectively the potency of the newest addition to the navy's flying forces, the two-motored Consolidated Aircraft Corp.-built planes battled through thunderstorms the last part of the flight.

Average speed of the planes was estimated unofficially at 110 miles an hour. The 12 ships flew 3085 miles under commander of Lt. Robert W. Morse.

Comdr. Ernest L. Gunther, a passenger reporting to take command of the Coco Solo fleet air base, said the planes functioned perfectly and that the VP-3F squadron will be stationed there permanently. Eighty-four officers and enlisted men comprised the flying force.

The planes flew along the west coast of Mexico, Guatemala and Salvador, turning inland over the Nicaraguan coast to Corinto. They roared over Managua lake, Nicaragua lake and Nicaraugan jungle yesterday morning to the Atlantic and down the east coasts of Nicaragua, Costa Rica and Panama to Coco Solo.

The squadron flew in V formation at an altitude of about 10,000 feet for most of the flight.

It was the navy's fourth long-distance flight with the patrol planes. Six of the planes made the first flight of that kind Jan. 29 and 30, 1934, when they flew 2400 miles from San Francisco bay to Honolulu.

Last January, 12 of the new Consolidated planes flew from San Diego to Honolulu under command of Lt. Comdr. William Dade. The third transfer took place last April 12 and 13, 12 naval cruisers flying 2553 miles from San Diego to Honolulu.

S.D.-CANAL

S. D. TRIBUNE 6/21/37

12 SHIPS OFF WITH 72 ON BOARD

Twelve giant navy patrol planes took off from San Diego bay shortly before noon today on a 3000-mile non-stop flight to Coco Solo, C. Z.—the longest such hop ever attempted by the navy.

Visibility was good over the bay for the take-off. However, it was hazy at sea and the planes soon disappeared into the fog to the southward.

The first plane left the water at 11:27, according to an observer at Broadway pier. The second and third planes climbed into the air at two-minte intervals thereafter. Take-off of the 12 planes was delayed nearly an hour as the result of the arrival in port of the transport Ludington from the Canal Zone.

Observers reported that all 12 planes were in the air by 11:44 a.m. Official departure time was not announced.

Approximately 100 persons were gathered at the end of Broadway pier for the take-off. Relatives and close friends of the fliers stood on the beach at North Island as the planes were placed in the water.

The planes headed westward across the bay and, after a run of a mile and a half, rose into the air anad sped southward to a rendezvous before going into formaton for the long journey.

Led by Morse

Aboard were 72 officers and men, led by Lt. Robert Morse.

Rear Adm. Ernest J. King, commander aircraft base force, said it is hoped the mass flight—the longest attempted by the navy—will be completed within 24 hours.

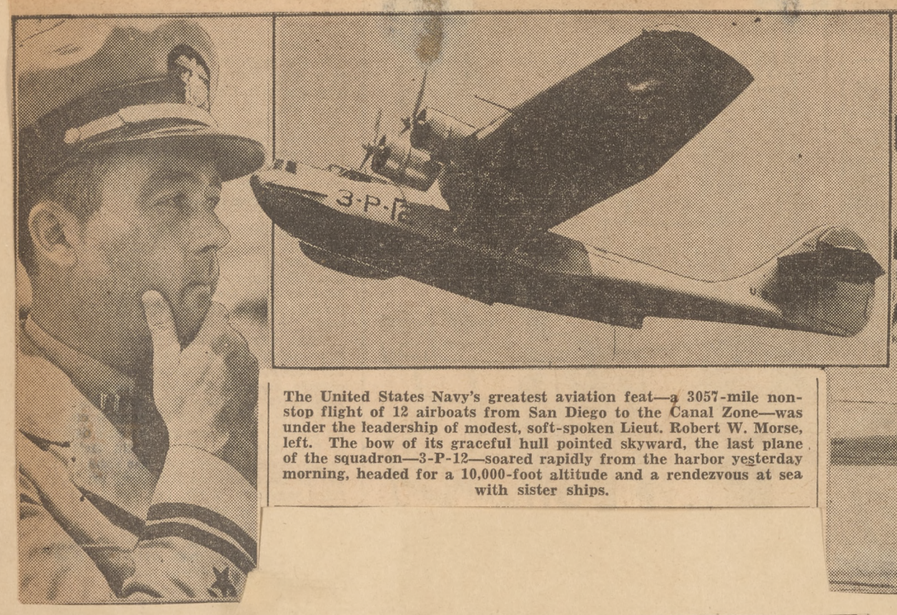
The route leads from San Diego to Acapulco, Mex., and thence along the coast to Nicaragua, where the planes will fly overland to the east coast of the Central American country and thence to Coco Solo.

The flight is the third attempted this year, two flights of 12 patrol planes each having been made from San Diego to Honolulu without incident in January and April. The present flight, like its predecessors, is described by base force aircraft authorities as being a routine delivery of planes.

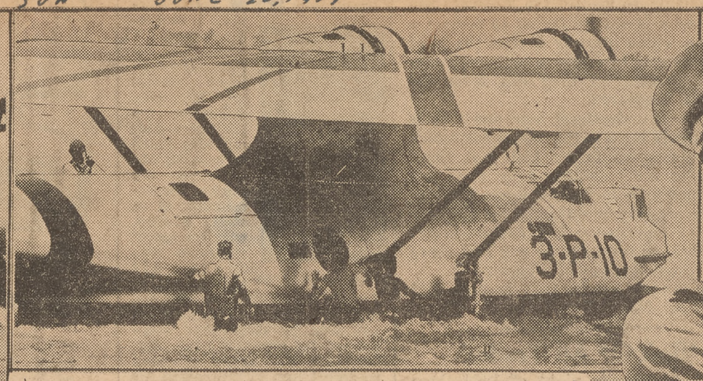
Among the officers in the flight is Comdr. E. L. Gunther, who has been in command of the U.S.S. Wright, base force aircraft tender and King's flagship. Gunther is being transferred to duty at Coco is described by base force aircraft squadrons and attending craft at the fleet air base there, relieving Capt. John S. McCain, who recently reported for duty here as commanding officer of the airplane carrier Ranger. Relieving Gunther in command of the Wright is Comdr. Mark A. Mitscher.

Scenes at North Island as Patrol Planes Hopped on Navy's Longest Mass Flight

S.D. SUN JUNE 22, 1937



The United States Navy's greatest aviation feat—a 3057-mile nonstop flight of 12 airboats from San Diego to the Canal Zone—was under the leadership of modest, soft-spoken Lieut. Robert W. Morse, left. The bow of its graceful hull pointed skyward, the last plane of the squadron—3-P-12—soared rapidly from the harbor yesterday morning, headed for a 10,000-foot altitude and a rendezvous at sea with sister ships.



Final instructions to pilots of the Canal Zone's Patrol Squadron Three were dispatched at North Island yesterday by Rear Adm. Ernest J. King, left, taciturn commander of Aircraft Base Force. Speedy launchings from the Naval Air Station seaplane ramp characterized yesterday's takeoff. Tenth of the dozen planes which made the flight is shown, above, just as it slid into the bay waters. Three thousand miles today separates officers and men who bid farewell to families at North Island yesterday. Shown at right, is Lieut. (jg) J. D. Black, spending a few last moments ashore with his daughter, Cheron Jane, 2.

NAVY PLANES NEARING GOAL; REDUCE SPEED

12 Big Ships Fly Over Nicaragua On Hop To Panama

S.D. SUN JUNE 22, '37

Nearing the goal of the longest non-stop mass flight in Navy history, 12 giant airboats bound for the Canal Zone from San Diego winged across the jungles and lakes of Nicaragua this afternoon, reporting their position as 500 miles from the Coco Solo Air Base.

2629 Miles Away

Their position at 11 a.m. (PST)) was 2629 statute miles south of San Diego, 30 miles southeast of Corinto on the west coast near the Gulf of Fonesca.

The planes were averaging 112 miles per hour, and Base Force officers reported they had slowed down during the night and turned out to sea for an unexplained reason.

The report at 11 a.m. was the first received in more than five hours. The planes are expected to arrive at their base between 3:30 and 4 p.m., later than had been expected.

Moon-lit Night

Bright tropical moonlight shone on the V-shaped squadron as it roared down the Mexican coast through the night.

Reports which came from Lieut.

Take-off pictures on Page 11.

Robert W. Morse, squadron commander indicated, however, that the planes were functioning flawlessly and the weather in the tropical storm zone through which they were flying was good.

Flying High

The Consolidated-built seaplanes, carrying a crew of 13 officers, four aviation cadets, a civilian observer representing the manufacturer, and 67 enlisted men, were maintaining an altitude of approximately 9000 to 10,000 feet.

Trouble-Free Hop

From the time the big planes began rising from San Diego bay with their 10,000 pound fuel loads and seven-man crews at 11:30 a.m. yesterday, they have performed without untoward incident, the Aircraft Base Force office at North Island reported today.

The total distance from San Diego to Coco Solo is 3057 statute miles.

TWELVE HUGE NAVY PLANES COMPLETE PANAMA FLIGHT

L.A. Times 23 June

SAN DIEGO, June 22. (AP) Twelve giant Navy planes which took off from San Diego Bay at 11:30 a.m. yesterday, arrived at Coco Solo, Canal Zone, at 3:30 p.m. (P.S.T.) today, completing the longest nonstop massed flight in United States naval history. The planes were in the air twenty-eight hours. They arrived at Coco Solo at 6:30 p.m., Canal Zone time. This was the official report received by radio at Base Force Aircraft Headquarters here.

SAN DIEGO, June 22. (AP)—A dozen long-range fighting planes, bucking thunderstorms, today neared the end of the Navy's 3105-mile "routine transfer" from San Diego to the Panama Canal Zone — longest nonstop mass flight the Navy ever attempted.

They were 145 miles from their goal when the last radio report was received from them late this afternoon.

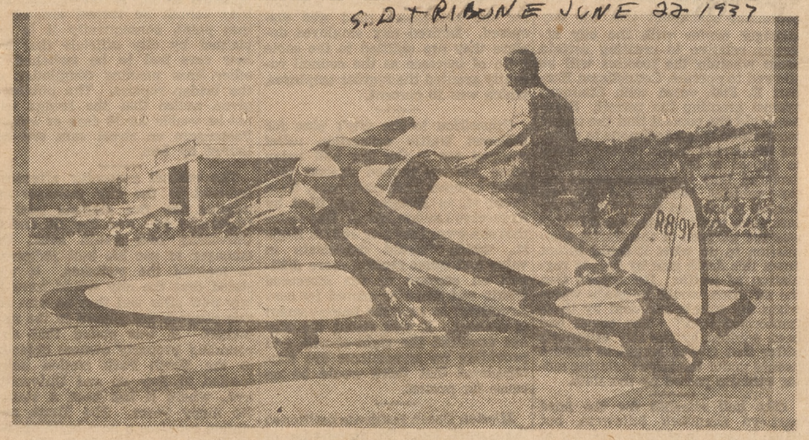
They passed Acajutla, San Salvador, at 9 a.m. (P.S.T.,) at a 112-mile-an-hour clip. At that point they were 2410 miles out of San Diego and 695 miles from their goal. They left the American city yesterday at 11:30 a.m. (P.S.T.)

They encountered storms off the Nicaraguan coast, said Coco Solo reports. The flyers themselves made no report of bad weather conditions at the time.

Twelve officers and sixty enlisted men took part in the flight, the purpose of which was the delivery of newly manufactured planes from the factory direct to their station of duty.

TINY S. D. PLANE ENTERED IN AIR RACES

S.D. TRIBUNE JUNE 22 1937



One of the smallest planes in the world, 12 feet long with a wing spread of 14 feet, has been constructed in spare time by a group of employes of the Consolidated Aircraft Corp. plant here for entry in the national air races at Cleveland. A top speed of 225 miles is claimed for the craft, powered with a 90-horsepower motor and weighing but 404 pounds. Though it carries only 12 gallons of gasoline, its cruising radius is 525 miles. Shown with the plane is Tony Levier, pilot and co-constructor.—(Associated Press photo).

9 NEW MASS HOPS SET FOR NAVAL FLIERS

S.D. SUN — JUNE 23

Replacement Of Obsolete Planes Planned On Distant Bases

Nine more non-stop mass flights probably will be undertaken by the Navy to equip its far-flung bases with new duo-motored patrol planes, The Sun learned today.

The mass flights already accomplished, and the others scheduled, indicate how the Navy has extended its "first line" of defense along a huge semi-circle from Seattle and sweeping out into the Pacific ocean and then down to Panama.

Long Range Radius

The Panama flight showed that these huge patrol planes can operate in this semi-circle with non-stop flights of many hundreds of miles.

The 3085-mile flight of 12 Consolidated-built planes to Coco Solo, Panama, completed late yesterday afternoon, will be followed by a second, and perhaps third, delivery of planes to replace obsolete equipment there.

The 12 planes which left San Diego shortly before noon Monday arrived at the Coco Solo Air Base at 3:28 p. m. yesterday, after a non-stop flight of little less than 28 hours.

To Train for Hop

En route to San Diego aboard the Army transport Chateau Thierry is the advance guard of the Canal Zone's Patrol Squadron Two, which will take delivery on 12 PBY-2 planes. They will undergo training similar to that of Squadron VP-3, which served at North Island for several months before starting its mass flight to Coco Solo.

Three more transpacific mass flights to Hawaii from San Diego are said to be scheduled. Two Seattle patrol squadrons, eventually to be equipped with modern airboats, probably will require another pair of mass flights.

And Norfolk, Va., has two seaplane squadrons which ultimately must be provided with new airboats as present planes become obsolete.

All Face Re-equipping

Modern seaplanes, presumably the Consolidated PBY- type bombers eventually will be furnished all 16 Navy patrol squadrons.

Of Hawaii's five such squadrons, three remain unequipped with the new two-motored airboats. Two non-stop flights to Honolulu preceded the mass flight to Panama.

Of the 12 squadrons based at Hawaii, the Canal Zone, Seattle and Norfolk, only three have received their new equipment. Three patrol squadrons are based at San Diego.

The non-stop mass flight of 3085 miles to Coco Solo, Canal Zone, was the longest aerial adventure ever undertaken by a Navy squadron.

27 Hours, 58 Minutes

The planes, commanded by Lieut. Robert W. Morse, landed at the Coco Solo Air Base at 3:28 p. m., 27 hours, 58 minutes after the first ship rose from San Diego Bay Monday morning.

The squadron flew down the Mexican and Central American coast to the Gulf of Fonseca, cut diagonally across Nicaragua over Lakes Managua and Nicaragua to the Atlantic Coast, thence down the east coast of Nicaragua, Costa Rica and Panama to the Canal Zone.

A five-hour radio silence, between 5 a. m. and 10 a. m. yesterday, was the only period in which contact with the squadron was lost.

On landing at Coco Solo, the crew of 84 officers and men were reported in good spirits. They said that the planes were comfortable and easy to manage, and many had even taken time out to shave.

The squadron, labelled VP-3, will use its new planes for routine duty in the Canal Zone. One of the passengers on the flight, Comdr. Ernest L. Gunther, former commanding officer of the USS Wright, will assume command of Aircraft Base Force squadrons at Coco Solo.

They'll Fly Seaplane Across U. S.

S.D. SUN — JUNE 24, 1937

They will attempt what no one has ever accomplished—fly a seaplane non-stop across the United States. Pictured above is the crew of the $250,000 Consolidated-built airboat which has been prepared for a takeoff from San Diego bay for a 2700-mile flight to New York City this afternoon. Left to right, William Wheatley, Consolidated chief test pilot, who will act as observer and relief pilot; Harold Ramm, radioman; Gerald Brown, engineering officer; Lieut. Comdr. L. R. Gray, ret., navigator; Richard Archbold, 30-year-old research associate of the American Museum of Natural History, who purchased the plane for use in a two-year expedition into the jungle country of Dutch New Guinea, and Russell Rogers, pilot.

AIRBOAT POISED FOR HOP EAST

Flight Time Is Advanced To Beat Storm

S.D. SUN — JUNE 24

A surprise take-off for New York City in his $250,000 Consolidated-built airboat at 4:30 p. m. today was being planned by Richard Archbold, 30-year-old explorer, officials at the plant reported at noon.

Originally scheduled for Saturday afternoon, the start of the cross-country flight was advanced because of bad weather conditions expected this week-end over the eastern seaboard.

At the Lindbergh Field weather bureau it was reported a storm area already has formed over the great plains section, and is rapidly moving eastward.

If Archbold flies the southern route, as planned yesterday, he will encounter thunderstorms through Arizona, New Mexico and over the Mississippi valley. Once past the Mississippi, the big airboat will be able to outrace the eastbound storm and complete the flight in fair weather, according to the weather bureau.

Barographs Checked

Consolidated officials at noon requested William Van Dusen, San Diego representative of the National Aeronautic Association, to inspect and install barographs in the flying boat in order that the flight performance might be validated on arrival at North Beach airport, New York City.

Official N.A.A. observers of the takeoff this afternoon will be Van Dusen, Jack Hicklin, and T. Claude Ryan.

The plane will carry a load of 27,000 pounds at the takeoff, including 1750 gallons of gasoline weighing 10,500 pounds. Archbold's crew will include Russell Rogers, pilot; Gerald Brown, engineering officer; Lieut.-Comdr. L. R. Gray, U.S.N. ret., navigator; Harold Ramm, radioman; and William Wheatley, Consolidated chief test pilot, who will act as observer and relief pilot.

Archbold, who has approximately 600 solo hours to his credit, will be at the controls through a portion of the flight, which is expected to require about 18 hours.

To Aid Explorers

The plane will be used in exploration work in Dutch New Guinea starting late this year, and the transcontinental flight will be a "shakedown" hop to test its endurance, according to Archbold.

This flight will be the first in aviation history of a seaboat nonstop across the United States. There are few water bodies in which the plane might land should it encounter trouble.

Picture of crew on Page 13

'LAST WORD' IN RADIO TO AID ARCHBOLD HOP

Voice Transmission More Than 500 Miles Claimed For Equipment

S.D. SUN — JUNE 24

Radio equipment in the $250,000 Consolidated-built airboat purchased by Richard Archbold, 30-year-old explorer, for use in a two-years' expedition to Dutch New Guinea, is more powerful than that installed in similar PBY planes being operated by the Navy, it was claimed at the San Diego plant today.

The main radio transmitter is 10 per cent stronger than that in the patrol bombers and the auxiliary transmitter has four to five times the strength of similar apparatus in the PBYs which flew non-stop to Hawaii and Panama in three mass hops this year, according to engineers of Bendix Radio Corp., who are in San Diego to install the sets.

Few Spots To Land

The radio equipment will be given its big test in the contemplated cross-country flight of Archbold today. Aviation history will be made if this largest privately owned plane in the world successfully spans the continent, as no other seaplane has yet been piloted across the United States.

The entire communication apparatus will include, in addition to the main and auxiliary transmitters, two complete receivers, a radio direction finder and an intercommunication system which extends throughout the ship.

Voice For 500 Miles

Reliable radio telephone communication in excess of 500 miles with the main transmitter, and up to 150 miles with the auxiliary transmitter was reported on Archbold's recent inland flights to Lake Mead, at Boulder Dam, and to Lake Tahoe.

Throughout his transcontinental flight, Archbold intends to keep in constant touch with his private 500-watt radio telephone and telegraph station in La Mesa. The station signs W2BVB and is licensed for operation on three amateur bands, normally using 3992, 7206, or 14206 kilocycles.

Frequencies Given

Transmissions from the plane during the San Diego-New York flight will be on the following frequencies: 3105, 6210 and 12420 kilocycles. Telephone communication on half-hourly schedules will be maintained until the distance becomes too great, after which teleraphy will be used on hourly schedules, according to Radio Operator Harold Ramm. San Diego amateurs today were requested by Ramm to attempt to tune in on his messages to New York and La Mesa.

New Records Aim of Non-Stop Hop by Privately Owned Craft; Luncheon In N. Y. Today, Is Hope.

BULLETIN

Flying without incident, the big Consolidated PBY airship of Richard Archbold was over Oklahoma City, Okla., at 1 a. m., about half way along on its non-stop flight to New York, according to a radio report.

S.D. UNION — JUNE 25

Lifting its silver wings off San Diego bay at 4:50:30 yesterday afternoon, a giant Consolidated flying boat took off for New York on a non-stop cross-country flight that promises to add the most glamorous page to San Diego's aviation history since Lindbergh.

The largest privately owned airship in the country, the $250,000 craft, is owned by Richard Archbold, research associate of the American Museum of Natural History, who has announced plans for an exploration trip to New Guinea next winter.

Flight Log

4:51 p. m. — Took off from San Diego bay.

6:30 p. m.—Reported over Gila Bend, Ariz., speed 125 miles an hour.

8 p. m.—Reported over St. Thomas, Ariz., "all well."

9 p. m.—Ship's radio operator attempting to raise El Paso radio stations, no contact made from San Diego.

10:30 p. m.—Reported near Carlsbad, N. M., "everything working O. K."

11 p. m.—Reported over Lubbock, Tex.

Objective of the long eastward flight will be assault on several aviation records. It is the first nonstop transcontinental flight ever attempted by a large airboat. Also sought is the record for transcontinental speed for an airship of its weight, 27,000 pounds.

Take-off of the ship was observed officially for the National Aeronautics association by William Van Dusen, timer, and T. Claude Ryan and Ray Booth, observers. Sealed barographs were placed aboard the plane just before it took off to record the flight for association records.

"I'm going to have an early lunch in New York," commented Archbold just before the take-off. He estimated the time required for the flight at from 17 to 18 hours and said he would land at North Beach airport in New York.

"We expect no storm trouble as reports show that we are following a weather condition that should give us beneficial tail winds. Our take-off originally was scheduled for Monday, but anticipated storm conditions led to the decision to leave today while air routes are ideal."

Members of the crew of the big ship include Archbold, who will be at the controls for a part of the trip; Russell Rogers, pilot; William Wheatley, Consolidated chief test pilot; Gerald Brown, engineer; Lt. Comdr. L. R. Gray, U. S. N., ret., navigator; and Harold Ramm, radio operator.

Will Follow Beacons

The proposed route of the flight leads eastward from here to Amarillo, northeast to Cincinnati, Pittsburgh and Scranton and thence to New York. He said he planned to follow T.W.A. beacons from Winslow, Ariz., in the night.

Identical with PBY boats built for long-range patrol work of the navy, Archbold's big ship has a wingspread [illegible] feet. It is powered with [illegible] power engines. Arch[illegible] other test [illegible]

Black, spending a few last moments ashore with his daughter, Cheron Jane, 2.

NAVY PLANES NEARING GOAL; REDUCE SPEED

12 Big Ships Fly Over Nicaragua On Hop To Panama

S.D. SUN JUNE 22, '37

Nearing the goal of the longest non-stop mass flight in Navy history, 12 giant airboats bound for the Canal Zone from San Diego winged across the jungles and lakes of Nicaragua this afternoon, reporting their position as 500 miles from the Coco Solo Air Base.

2629 Miles Away

Their position at 11 a.m. (PST)) was 2629 statute miles south of San Diego, 30 miles southeast of Corinto on the west coast near the Gulf of Fonesca.

The planes were averaging 112 miles per hour, and Base Force officers reported they had slowed down during the night and turned out to sea for an unexplained reason.

The report at 11 a.m. was the first received in more than five hours. The planes are expected to arrive at their base between 3:30 and 4 p.m., later than had been expected.

Moon-lit Night

Bright tropical moonlight shone on the V-shaped squadron as it roared down the Mexican coast through the night.

Reports which came from Lieut.

Take-off pictures on Page 11.

Robert W. Morse, squadron commander indicated, however, that the planes were functioning flawlessly and the weather in the tropical storm zone through which they were flying was good.

Flying High

The Consolidated-built seaplanes, carrying a crew of 13 officers, four aviation cadets, a civilian observer representing the manufacturer, and 67 enlisted men, were maintaining an altitude of approximately 9000 to 10,000 feet.

Trouble-Free Hop

From the time the big planes began rising from San Diego bay with their 10,000 pound fuel loads and seven-man crews at 11:30 a.m. yesterday, they have performed without untoward incident, the Aircraft Base Force office at North Island reported today.

The total distance from San Diego to Coco Solo is 3057 statute miles.

TWELVE HUGE NAVY PLANES COMPLETE PANAMA FLIGHT

L.A. Times 23 June

SAN DIEGO, June 22. (AP) Twelve giant Navy planes which took off from San Diego Bay at 11:30 a.m. yesterday, arrived at Coco Solo, Canal Zone, at 3:30 p.m. (P.S.T.) today, completing the longest non-stop massed flight in United States naval history. The planes were in the air twenty-eight hours. They arrived at Coco Solo at 6:30 p.m., Canal Zone time. This was the official report received by radio at Base Force Aircraft Headquarters here.

SAN DIEGO, June 22. (AP)—A dozen long-range fighting planes, bucking thunderstorms, today neared the end of the Navy's 3105-mile "routine transfer" from San Diego to the Panama Canal Zone—longest nonstop mass flight the Navy ever attempted.

They were 145 miles from their goal when the last radio report was received from them late this afternoon.

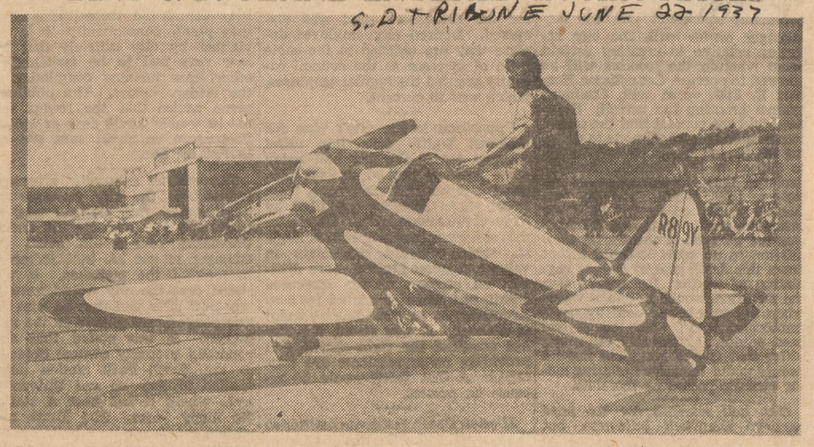
They passed Acajutla, San Salvador, at 9 a.m. (P.S.T.,) at a 112-mile-an-hour clip. At that point they were 2410 miles out of San Diego and 695 miles from their goal. They left the American city yesterday at 11:30 a.m. (P.S.T.)

They encountered storms off the Nicaraguan coast, said Coco Solo reports. The flyers themselves made no report of bad weather conditions at the time.

Twelve officers and sixty enlisted men took part in the flight, the purpose of which was the delivery of newly manufactured planes from the factory direct to their station of duty.

TINY S. D. PLANE ENTERED IN AIR RACES

S.D. TRIBUNE JUNE 22 1937



One of the smallest planes in the world, 12 feet long with a wing spread of 14 feet, has been constructed in spare time by a group of employes of the Consolidated Aircraft Corp. plant here for entry in the national air races at Cleveland. A top speed of 225 miles is claimed for the craft, powered with a 90-horsepower motor and weighing but 404 pounds. Though it carries only 12 gallons of gasoline, its cruising radius is 525 miles. 9 NEW MASS HOPS SET FOR NAVAL FLIERS

S.D. SUN — JUNE 23

Replacement Of Obsolete Planes Planned On Distant Bases

Nine more non-stop mass flights probably will be undertaken by the Navy to equip its far-flung bases with new duo-motored patrol planes, The Sun learned today.

The mass flights already accomplished, and the others scheduled, indicate how the Navy has extended its "first line" of defense along a huge semi-circle from Seattle and sweeping out into the Pacific ocean and then down to Panama.

Long Range Radius

The Panama flight showed that these huge patrol planes can operate in this semi-circle with non-stop flights of many hundreds of miles.

The 3085-mile flight of 12 Consolidated-built planes to Coco Solo, Panama, completed late yesterday afternoon, will be followed by a second, and perhaps third, delivery of planes to replace obsolete equipment there.

The 12 planes which left San Diego shortly before noon Monday arrived at the Coco Solo Air Base at 3:28 p. m. yesterday, after a non-stop flight of little less than 28 hours.

To Train for Hop

En route to San Diego aboard the Army transport Chateau Thierry is the advance guard of the Canal Zone's Patrol Squadron Two, which will take delivery on 12 PBY-2 planes. They will undergo training similar to that of Squadron VP-3, which served at North Island for several months before starting its mass flight to Coco Solo.

Three more transpacific mass flights to Hawaii from San Diego are said to be scheduled. Two Seattle patrol squadrons, eventually to be equipped with modern airboats, probably will require another pair of mass flights.

And Norfolk, Va., has two seaplane squadrons which ultimately must be provided with new airboats as present planes become obsolete.

All Face Re-equipping

Modern seaplanes, presumably the Consolidated PBY-type bombers eventually will be furnished all 16 Navy patrol squadrons.

Of Hawaii's five such squadrons, three remain unequipped with the new two-motored airboats. Two non-stop flights to Honolulu preceded the mass flight to Panama.

Of the 12 squadrons based at Hawaii, the Canal Zone, Seattle and Norfolk, only three have received their new equipment. Three patrol squadrons are based at San Diego.

The non-stop mass flight of 3085 miles to Coco Solo, Canal Zone, was the longest aerial adventure ever undertaken by a Navy squadron.

27 Hours, 58 Minutes

The planes, commanded by Lieut. Robert W. Morse, landed at the Coco Solo Air Base at 3:28 p. m., 27 hours, 58 minutes after the first ship rose from San Diego Bay Monday morning.

The squadron flew down the Mexican and Central American coast to the Gulf of Fonseca, cut diagonally across Nicaragua over Lakes Managua and Nicaragua to the Atlantic Coast, thence down the east coast of Nicaragua, Costa Rica and Panama to the Canal Zone.

A five-hour radio silence, between 5 a. m. and 10 a. m. yesterday, was the only period in which contact with the squadron was lost.

On landing at Coco Solo, the crew of 84 officers and men were reported in good spirits. They said that the planes were comfortable and easy to manage, and many had even taken time out to shave.

The squadron, labelled VP-3, will use its new planes for routine duty in the Canal Zone. One of the passengers on the flight, Comdr. Ernest L. Gunther, former commanding officer of the USS Wright, will assume command of Aircraft Base Force squadrons at Coco Solo.

They'll Fly Seaplane Across U. S.

S.D. SUN — JUNE 24, 1937

They will attempt what no one has ever accomplished—fly a seaplane non-stop across the United States. Pictured above is the crew of the $250,000 Consolidated-built airboat which has been prepared for a takeoff from San Diego bay for a 2700-mile flight to New York City this afternoon. Left to right, William Wheatley, Consolidated chief test pilot, who will act as observer and relief pilot; Harold Ramm, radioman; Gerald Brown, engineering officer; Lieut. Comdr. L. R. Gray, ret., navigator; Richard Archbold, 30-year-old research associate of the American Museum of Natural History, who purchased the plane for use in a two-year expedition into the jungle country of Dutch New Guinea, and Russell Rogers, pilot.

AIRBOAT POISED FOR HOP EAST

Flight Time Is Advanced To Beat Storm

S.D. SUN — JUNE 24

A surprise take-off for New York City in his $250,000 Consolidated-built airboat at 4:30 p. m. today was being planned by Richard Archbold, 30-year-old explorer, officials at the plant reported at noon.

Originally scheduled for Saturday afternoon, the start of the cross-country flight was advanced because of bad weather conditions expected this week-end over the eastern seaboard.

At the Lindbergh Field weather bureau it was reported a storm area already has formed over the great plains section, and is rapidly moving eastward.

If Archbold flies the southern route, as planned yesterday, he will encounter thunderstorms through Arizona, New Mexico and over the Mississippi valley. Once past the Mississippi, the big airboat will be able to outrace the eastbound storm and complete the flight in fair weather, according to the weather bureau.

Barographs Checked

Consolidated officials at noon requested William Van Dusen, San Diego representative of the National Aeronautic Association, to inspect and install barographs in the flying boat in order that the flight performance might be validated on arrival at North Beach airport, New York City.

Official N.A.A. observers of the takeoff this afternoon will be Van Dusen, Jack Hicklin, and T. Claude Ryan.

The plane will carry a load of 27,000 pounds at the takeoff, including 1750 gallons of gasoline weighing 10,500 pounds. Archbold's crew will include Russell Rogers, pilot; Gerald Brown, engineering officer; Lieut.-Comdr. L. R. Gray, U.S.N. ret., navigator; Harold Ramm, radioman; and William Wheatley, Consolidated chief test pilot, who will act as observer and relief pilot.

Archbold, who has approximately 600 solo hours to his credit, will be at the controls through a portion of the flight, which is expected to require about 18 hours.

To Aid Explorers

The plane will be used in exploration work in Dutch New Guinea starting late this year, and the transcontinental flight will be a "shakedown" hop to test its endurance, according to Archbold.

This flight will be the first in aviation history of a seaboat nonstop across the United States. There are few water bodies in which the plane might land should it encounter trouble.

Picture of crew on Page 13

'LAST WORD' IN RADIO TO AID ARCHBOLD HOP

Voice Transmission More Than 500 Miles Claimed For Equipment

S.D. SUN — JUNE 24

Radio equipment in the $250,000 Consolidated-built airboat purchased by Richard Archbold, 30-year-old explorer, for use in a two-years' expedition to Dutch New Guinea, is more powerful than that installed in similar PBY planes being operated by the Navy, it was claimed at the San Diego plant today.

The main radio transmitter is 10 per cent stronger than that in the patrol bombers and the auxiliary transmitter has four to five times the strength of similar apparatus in the PBYs which flew non-stop to Hawaii and Panama in three mass hops this year, according to engineers of Bendix Radio Corp., who are in San Diego to install the sets.

Few Spots To Land

The radio equipment will be given its big test in the contemplated cross-country flight of Archbold today. Aviation history will be made if this largest privately owned plane in the world successfully spans the continent, as no other seaplane has yet been piloted across the United States.

The entire communication apparatus will include, in addition to the main and auxiliary transmitters, two complete receivers, a radio direction finder and an intercommunication system which extends throughout the ship.

Voice For 500 Miles

Reliable radio telephone communication in excess of 500 miles with the main transmitter, and up to 150 miles with the auxiliary transmitter was reported on Archbold's recent inland flights to Lake Mead, at Boulder Dam, and to Lake Tahoe.

Throughout his transcontinental flight, Archbold intends to keep in constant touch with his private 500-watt radio telephone and telegraph station in La Mesa. The station signs W2BVB and is licensed for operation on three amateur bands, normally using 3992, 7206, or 14206 kilocycles.

Frequencies Given

Transmissions from the plane during the San Diego-New York flight will be on the following frequencies: 3105, 6210 and 12420 kilocycles. Telephone communication on half-hourly schedules will be maintained until the distance becomes too great, after which teleraphy will be used on hourly schedules, according to Radio Operator Harold Ramm. San Diego amateurs today were requested by Ramm to attempt to tune in on his messages to New York and La Mesa.

New Records Aim of Non-Stop Hop by Privately Owned Craft; Luncheon In N. Y. Today, Is Hope.

BULLETIN

Flying without incident, the big Consolidated PBY airship of Richard Archbold was over Oklahoma City, Okla., at 1 a. m., about half way along on its non-stop flight to New York, according to a radio report.

S.D. UNION — JUNE 25

Lifting its silver wings off San Diego bay at 4:50:30 yesterday afternoon, a giant Consolidated flying boat took off for New York on a non-stop cross-country flight that promises to add the most glamorous page to San Diego's aviation history since Lindbergh.

The largest privately owned airship in the country, the $250,000 craft, is owned by Richard Archbold, research associate of the American Museum of Natural History, who has announced plans for an exploration trip to New Guinea next winter.

Flight Log

4:51 p. m. — Took off from San Diego bay.

6:30 p. m.—Reported over Gila Bend, Ariz., speed 125 miles an hour.

8 p. m.—Reported over St. Thomas, Ariz., "all well."

9 p. m.—Ship's radio operator attempting to raise El Paso radio stations, no contact made from San Diego.

10:30 p. m.—Reported near Carlsbad, N. M., "everything working O. K."

11 p. m.—Reported over Lubbock, Tex.

Objective of the long eastward flight will be assault on several aviation records. It is the first nonstop transcontinental flight ever attempted by a large airboat. Also sought is the record for transcontinental speed for an airship of its weight, 27,000 pounds.

Take-off of the ship was observed officially for the National Aeronautics association by William Van Dusen, timer, and T. Claude Ryan and Ray Booth, observers. Sealed barographs were placed aboard the plane just before it took off to record the flight for association records.

"I'm going to have an early lunch in New York," commented Archbold just before the take-off. He estimated the time required for the flight at from 17 to 18 hours and said he would land at North Beach airport in New York.

"We expect no storm trouble as reports show that we are following a weather condition that should give us beneficial tail winds. Our take-off originally was scheduled for Monday, but anticipated storm conditions led to the decision to leave today while air routes are ideal."

Members of the crew of the big ship include Archbold, who will be at the controls for a part of the trip; Russell Rogers, pilot; William Wheatley, Consolidated chief test pilot; Gerald Brown, engineer; Lt. Comdr. L. R. Gray, U. S. N., ret., navigator; and Harold Ramm, radio operator.

Will Follow Beacons

The proposed route of the flight leads eastward from here to Amarillo, northeast to Cincinnati, Pittsburgh and Scranton and thence to New York. He said he planned to follow T.W.A. beacons from Winslow, Ariz., in the night.

Identical with PBY boats built for long-range patrol work of the navy, Archbold's big ship has a wingspread of 104 feet. It is powered with two 850-horsepower engines. Archbold recently made two other test flights to western lakes.

Known by Consolidated aircraft workers for his sharp wit and modesty, Archbold came here several months ago to supervise the construction of the ship. He remained constantly by as the work progressed. The flight that began yesterday is one of the last important tests the big ship will be put to.

Only comparable flight, aviation authorities said, was that of Col. Francesco de Pinedo, Italian four-continent flier, in 1927. De Pinedo flew across the southern part of the United States in a series of hops in the Santa Maria, a seaplane, but did not finish the transcontinental flight.

Confers By Phone

Archbold's plane was rolled from the hangar soon after 3 yesterday afternoon. Archbold made last-minute arrangements in New York by telephone and accompanied by aviation enthusiasts and company officials, walked to the new seaplane ramp near the coast guard air base.

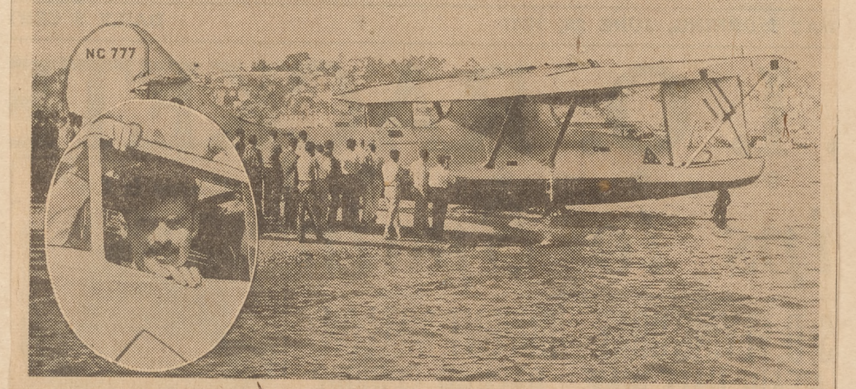
After a delay of almost an hour, the big ship took to the water, taxied westward. The pilot "gunned the motor" for the take-off, but had to abandon the first attempt to get into the air when a small boat got in the way. Turning around, the pilot took the ship back to the same starting point, took it into the air after a short run and headed over Pt. Loma, scene of the start of many historic flights.

The big ship circled over the top of the point and flew back over North Island and the city, then disappeared eastward, its silver wings glistening in the late afternoon sun.

At Archbold's home in La Mesa, friends and members of his family were gathered throughout the night listening to reports of the ship's position by radio.

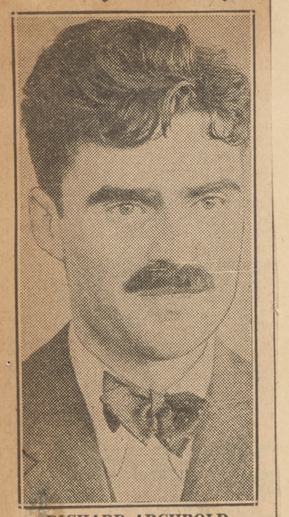
SLIDING DOWN RAMP JUST BEFORE TAKE-OFF

UNION — JUNE 25, 1937



Sliding down the ramp and into the water, Richard Archbold's big flying ship, now on the first transcontinental hop of a seaplane, is shown above just a few minutes before the take-off from here yesterday. The big plane, which is to be used in scientific exploration, was built at Consolidated Aircraft Corp. plant here.

Ready To Fly



RICHARD ARCHBOLD
Five will accompany him

S.D. SUN & JUNE 23

ARCHBOLD SETS SEAPLANE TEST

Cross-Country Flight To Start Saturday

In the first non-stop flight of a seaplane across the United States in aviation history, a Consolidated-built airboat will take off from San Diego Saturday afternoon for New York City.

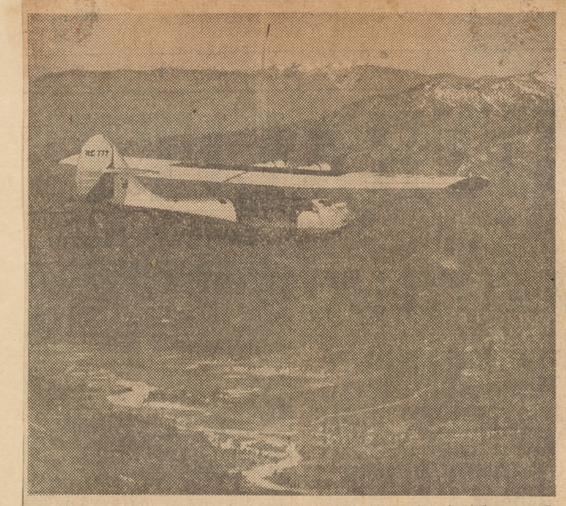
Leader of the 2700-mile hop will be Richard Archbold, 30-year-old explorer and research associate of the American Museum of Natural History. He will be accompanied by a crew of [illegible].

Purpose of t[illegible] trip will be to demonstrate the plane's endurance in preparation for its use in exploration work, beginning late this year in Dutch New Guinea.

"Success of such a flight will demonstrate practicability of moving large forces of flying boats from coast to coast in emergency," C. A. Van Dusen, vice president of Consolidated, said today.

Should any contingency arise on the flight, the airboat crew would have few favorable landing places.

GIANT PLANE MAY MAKE HISTORY



This giant two-motored plane, the world's largest privately owned flying boat and the property of the American Museum of Natural History, will take off from San Diego bay Saturday afternoon at 4:30 on the first transcontinental flight to be attempted by a flying boat.

S.D. UNION JUNE 24, 1937

FLYING BOAT TO LEAVE HERE ON NON-STOP FLIGHT TO N.Y.

In the first transcontinental non-stop flight to be attempted by a flying boat, a giant two-motored plane, owned by the American Museum of Natural History, is scheduled to take off from San Diego bay at 4:30 Saturday afternoon and land within 18 hours at North Beach airport, New York City, 2700 miles away.

Richard Archbold, research associate of the American Museum of Natural History, announced plans for the flight less than 24 hours after 12 navy patrol planes of the same type as the museum's plane completed a record 3085-mile non-stop mass flight from San Diego to Coco Solo, C. Z. Twenty-four navy planes of the PBY-1 type, built by the San Diego Consolidated Aircraft Corp. plant, earlier this year made two flights to Honolulu.

Boulder Flight Made

In the last week, the plane, the largest privately owned plane in the world, has flown successfully to Lake Meade, Boulder dam, and to Lake Tahoe for high altitude landing and take-off tests.

After government restrictions on the plane are lifted next winter, Archbold, who has more than 600 hours' flying time, plans to take the plane to New Guinea on an expedition for the museum.

With Archbold in the plane on the transcontinental flight will be Russell Rogers, pilot; Gerald Brown, engineer; Lt. Comdr. L. R. Gray, U. S. N., ret.; Harold Ramm, radio operator, and probably William Wheatley, Consolidated's chief test pilot.

Archbold plans to fly the plane from New York to Schuyler lake, near Cooperstown, N. Y., the home of his mother, Mrs. John F. Archbold. He will return west next month, flying to Yellowstone park for high altitude landing and take-off tests on lakes in Wyoming, including Yellowstone lake at an altitude of 7500 feet.

Few Landing Places

On his eastward flight Archbold will cross the Salton sea in Imperial valley; Roosevelt reservoir in Arizona, and the Mississippi river, the only bodies of water large enough for the plane to land.

The most modern radio equipment will be used on the plane. Communication between the plane and Archbold's privately constructed 500-watt radio telephone and telegraph station at La Mesa will be maintained on the flight.

Two barographs to observe the take-off and timing of the flight will be sealed and placed in the plane by a committee appointed by the National Aeronautics association. The committee is composed of William Van Dusen, chairman, T. Claude Ryan and Jackson L. Hicklin.

1st Transcontinental Trip By Flying Boat Is Begun

Richard Archbold Due at 2 P. M. at Queens Airport

SAN DIEGO, Calif., June 24 (AP).—Lifting his 27,000-pound ship gracefully off the waters of the bay here Richard Archbold started the first transcontinental flight of a flying boat at 4:51 p. m., today. He expected to land at North Beach Airport, New York City, within seventeen or eighteen hours.

Expected Here at 2 P. M.

O. J. Whitney, operator of a charter flying service at North Beach Airport, Queens, and New York representative of Archbold and his chief pilot, Russell Rogers, said last night everything was in readiness to receive the transcontinental flying boat here. He added that the flight should be completed in about eighteen hours and that he expected the plane to arrive at North Beach about 2 p. m. today. Mr. Whiting continued:

"The ship is a Consolidated PBY-1 flying boat with two Pratt & Whitney Twin Wasp engines developing 1,100 horsepower each. It is a commercial counterpart of the Navy patrol boats which recently flew non-stop in formation from San Diego to Coco Solo, C. Z., and is the first that the government has allowed to fall into private hands."

The ship has a wing spread of 104 feet, Mr. Whitney said, and a gross weight, fully loaded, of 27,500 pounds, its empty weight being only 13,000 pounds. It has fuel capacity of 1,750 gallons.

"Archbold said they were going to head for the Gulf of Mexico and follow its shore line to Pensacola, cutting notheastward there to following the Atlantic seaboard to New York," Mr. Whitney said.

Tribune 6/25/37

Archbold Flight Points Way For Navy Deliveries

That delivery of new PBY, "or later type," planes may be made to Norfolk, Va., by transcontinental mass flights similar to that completed yesterday by Richard Archbold, was indicated at the Naval Air Station today.

"It has been perfectly obvious to us that such a flight was possible," Rear Adm. Ernest J. King, Aircraft Base Force commander, said today. "It doesn't matter whether land or sea is beneath a plane of the PBY type, with a proven cruising range." Adm. King supervised the three mass hops of 36 planes to Hawaii and Panama during the past few months.

Mass Flight

The two patrol squadrons at Norfolk eventually will be equipped with modern airboats, Adm. King said. "We didn't need a demonstration to show that the PBY can be flown across country," he declared.

Adm. King yesterday left for Seattle aboard the aircraft tender Langley to supervise summer flight operations of three San Diego airboat squadrons in the Puget Sound-Alaska sector.

Patrol Squadrons 7, 9 and 12 will stage a non-stop mass flight from San Diego to Seattle July 1. They will perform tactical maneuvers with warships now bound to that region, and are scheduled to return here in mid-August.

600 Gallons Left

Meanwhile, Archbold and the five members of his crew rested in New York today from their strenuous cross-country dash.

A check of the remaining gasoline supply at the end of the flight showed that more than 600 of the original 1750 gallons were left and that the big airboat could have continued to Puerto Rico without stopping, if Archbold had so desired.

S.D. SUN JUNE 26

ADM. KING SAILS FOR NORTH; LOCAL PLANES WILL HOP

To supervise flight operations of Squadrons VP-7, 9 and 12, in the Alaska-Puget Sound sector, Rear Adm. Ernest J. King, commander, fleet patrol wing, sailed for Seattle aboard the aircraft tender Langley at 4 yesterday afternoon.

The three air squadrons will leave San Diego Thursday on a non-stop flight to Seattle. In July they will make flights to Alaska and the Aleutian islands. They will return to San Diego Aug. 14. Also returning on that day will be the aircraft tender Wright, now undergoing overhaul at Mare island, the Langley and Sandpiper.

Comdr. Alva Bernhard, formerly on duty in the bureau of aeronautics, navy department, has relieved Comdr. A. C. Pownall as chief of staff to Adm. King. In 1929-30, Comdr. Bernhard was in command of the naval air base at Coco Solo, C. Z., and prior to that was attached to battle force air units stationed at North island.

Fleet patrol wing officers said that following completion of the remaining airboats being built for the navy by Consolidated, the planes will be attached to squadrons based at San Diego, Coco Solo, Pearl Harbor and later at the new Alameda air base. This will necessitate ferrying the squadrons to Hawaii and Panama before the end of the year, repeating the flights made to these bases in January, April and June.

S.D. UNION JUNE 26

ARCHBOLD IN N. Y. AFTER 17-HOUR FLIGHT FROM S. D.

New Records Loom in First Transcontinental Hop Ever Made By Flying Boat.

With 600 gallons of gasoline still left in the 1750-gallon tanks, Richard Archbold, explorer, landed his huge flying boat Guba on the waters of Flushing bay in New York yesterday just 17 hours and 3½ minutes after he took off from San Diego bay.

Behind him was the first transcontinental non-stop flight of a 17-ton flying boat and a bid for a number of aviation records. Determination of the records will be announced after National Aeronautical association officials examine their recording instruments.

Last night the huge flying boat rested at anchor while Archbold and five other members of his crew rested up from the flight, The Associated Press reported. Archbold said the flight was "made without incident."

Flight "Followed"

Friends and relatives of the fliers followed the course of their flight through direct radio reports from the big ship to a station in Archbold's home in La Mesa from the time the ship took off until it crossed the Mississippi river at dawn yesterday morning.

As Archbold and his crew flew into the rising sun, static interference became so great that they lost touch with their home station.

Completion of the flight added one of the most important chapters of San Diego aviation history since Lindbergh. The airship, with a wingspread of 104 feet, was designed and built in the Consolidated Aircraft plant for Archbold at a reported cost of $250,000. It is the largest privately owned airship in the country.

S. D. Instruments Used

Navigation instruments used to plot the course of the ship were constructed in the J. Jessop & Sons workshop here at the request of Lt. Comdr. L. R. Gray, U. S. N., retired, navigator. One of the instruments consisted of a combination watch and compass, designed by Comdr. Gray and the other a peculiarly made watch used as a part of the Weems navigation system.

Archbold announced in New York that he intended to remain there for several weeks, making other test flights over mountain ranges and similar jaunts that will submit the ship to conditions similar to those expected in exploration work.

In about two months, Archbold said he plans to leave New York in the flying boat bound for New Guinea to do research work. He will fly via the Hawaiian islands, Midway island and Guam, following the route of the Pan-American airways clipper ships.

—Photo by Wide World

This pigmy plane, reported to be the smallest in the world, can develop a top speed of 225 miles an hour. Five employes of Consolidated Aircraft Co. at San Diego who built the ship in their spare time will enter it in the National Air Races at Cleveland. Only a dozen feet long and with a wing spread of 14 feet, it weighs 404 pounds. Tony Levier, one of the builders, stands by the plane.

U. S. MAY BUILD S. D. BEACONS, FAGG REVEALS

Air Commerce Chief Arrives For Talk With Consair Chief

Fred Fagg, Jr., the San Diegan who rose to the highest post in civil aeronautics—director of the Bureau of Air Commerce—was a hasty visitor to his former home town Saturday.

Accompanied by B. H. Griffin, pilot, and Byron Jacobs, chief of the division of inspection and regulation of the Bureau of Air Commerce, Fagg flew here from Los Angeles in a government Lockheed transport.

To Visit Maj. Fleet

He told Chamber of Commerce officials that he was on a visit to the Pacific Coast and had come to San Diego to interview Maj. Reuben H. Fleet, president of Consolidated Aircraft Corp.

Tom Bomar, manager of the Chamber of Commerce aviation department, urged upon Fagg the necessity of installing weather stations and radio beacons along the San Diego-Tucson airway for the benefit of private and Navy aviators.

"Mr. Fagg said the Bureau already has these facilities under consideration," Bomar declared yesterday.

Sought By Navy

Navy fliers especially have been clamoring for these aviation aids, according to Bomar. The airway between San Diego and Tucson is used extensively for practice flights by the service men.

Fagg was graduated from the San Diego Army and Navy Academy and specialized in study of international aviation law after leaving here. Before succeeding Eugene Vidal as director of the Bureau of Air Commerce, he was a professor at Northwestern University.

S.D. SUN 6/28/37

FIRM DELIVERS FIFTY AIRBOATS

Consolidated Aircraft Corp. officials announced yesterday 50 airboats have been delivered to the navy under the terms of the first contract with the navy department. The last of these ships was turned over to the Naval Air station authorities Monday.

Work has started on the second contract of 60 airboats and as soon as this is completed late this fall contruction will start on the third contract for 66 seaplanes. The last of these will be delivered prior to July 1, 1938.

Six planes under construction for the Argentine government will be shipped to Buenos Aires within the next 60 days.

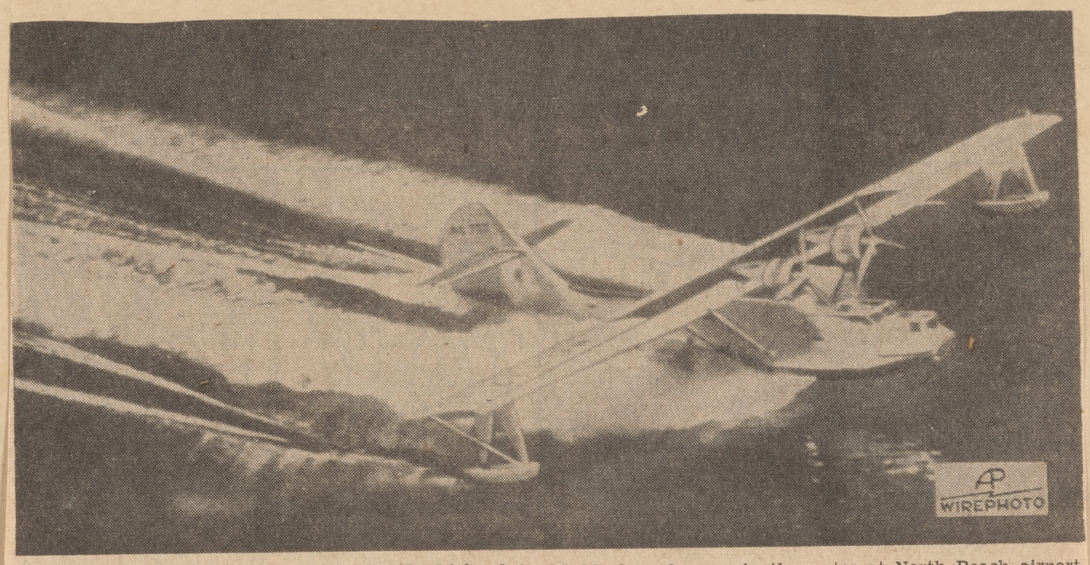
ARCHBOLD MAIL RECEIVED BY 18

Eighteen persons today were possessors of the only mail carried aboard Richard Archbold's Consolidated-built airboat in its non-stop overland flight from San Diego to New York City last week.

Mailed shortly after landing at the North Beach Airport, New York, the special cachets were addressed to the following:

President Roosevelt, Reuben H. Fleet, president of Consolidated; C. A. Van Dusen, vice-president; I. M. Laddon, chief engineer; David G. Fleet and Frank Learman, Jr., assistants to the manager; Rear Adm. Arthur B. Cook, chief of the Bureau of Aeronautics; William Van Dusen of the Chamber of Commerce; Dr. Austin G. Rand, Archbold's associate in his projected expedition to Dutch New Guinea this winter; O. J. Whitney, New York airline operator; the American Museum of Natural History; Maj. T. C. Macaulay of the Chamber of Commerce; and the six crew members.

S. D. SUN 6/30/37



HOPS FLYING BOAT ACROSS NATION.—Richard Archbold plows furrows in the water at North Beach airport, after piloting his 17-ton flying boat across country from San Diego, Cal., non-stop. "It just about had to be non-stop, said Mr. Archbold, an American Museum of Natural History research associate, "for it was almost out of the question to land one of these ships in a handy pasture along the way."

Buffalo Eve News 6/24/37 Scrapbook

NAVY GETS 60th PBY PLANE FROM CONSAIR

San Diego Sun 6/30/37.

WORK RUSHED TO FILL ORDER FOR AIRBOATS

Aircraft Corporation Has 116 Seaplanes Yet To Finish

The 60th Navy PBY bombers was delivered yesterday to Patrol Squadron 11 to complete Consolidated Aircraft Corp.'s first of three contracts in a $19,000,000 order.

Full Speed Ahead

Full speed production was ordered on the 50 airboats of the PBY-2 type in the second Consolidated contract. Minor alterations have been recommended by the Navy trial board which inspected the plane during its recent test flight at North Island, and the changes are being made at the plant.

Squadron VP-11, which delivered 12 PBY-1 airboats to Hawaii from San Diego in a non-stop mass flight recently, will be assigned the first PBY-2 craft off the assembly line.

Bids Made

With a total of 116 seaplanes yet to be constructed for the Navy, it was estimated at the plant today that normal factory activity is guaranteed at least until midsummer of 1938. The firm, meanwhile, is bidding on approximately 60 PBY-4 planes.

S. D. UNION 7/1/37

Congratulations

IN DELIVERING the sixtieth and last of the big flying boats on its first navy contract to be fulfilled locally the Consolidated Aircraft company earns San Diego's hearty congratulations. The boats are a success. They already have written several new chapters in the history of naval aviation. In equipping the navy with five dozen of them Consolidated plays a prominent part in the pioneering work which already has won this country a dominant position in an important new naval field. The two large contracts still waiting to be filled will mark further stages in the development of flying ships capable of spanning any ocean and equipped to operate in weather that would seriously trouble some of the smaller types of surface vessels.

San Diego has added cause for gratification in the fact that Consolidated represents one type of industry to which this location offers great advantages. The Union wishes the company every success in carrying on with an assignment even more important to the nation than to San Diego.

Western Flying June 1937

Three contracts granted

Navy opens engine bids, but no engine orders are awarded

Three aircraft manufacturers were awarded contracts for airplanes by the Navy during the last thirty days and bids on four additional contracts were opened during the period without contracts being let. This last group of openings included bids on engines and airplane design data and drawings as well as on aircraft.

Bids awarded included Navy 900-644 to Grumman Aircraft Engineering Corporation for fifteen VJ (amphibians for general utility purposes) airplanes at $571,923; Navy 500-18 to Curtiss Aeroplane Division, Curtiss-Wright Corporation for 83 VSO (scouting type) airplanes at $2,119,687.20; and Navy 500-11 to the Sikorsky Division of the United Aircraft Corporation for VJR airplanes (quantity not released) at $1,960,790.

Bids opened without contracts being awarded included Navy 500-17 for aircraft engines with United Aircraft Corporation the only bidder at $584,444.88; Navy 500-13 for aircraft engines with United Aircraft bidding $2,230,523.54 on lot 2 and Wright Aeronautical Corporation $2,003,054 on lot 1; Navy 500-25 for aircraft engines with Wright Aeronautical Corporation, the only bidder at $177,935; and Navy 500-9 for airplane design data and drawings. Both Consolidated Aircraft Corporation and the Glenn L. Martin Company offered bids on this last contract which was split up in 26 items. The total amount of the Consolidated bids was $4,636,613 and Martin, $5,185,003.

S.D. Sun 7/1/37

SHIPS TAKE OFF FROM S. D. IN HOUR'S TIME

Bombers Expect To Reach Goal Early For Fleet Operations

In the fifth long-distance non-stop mass flight of Consolidated-built patrol bombers originating in San Diego this year, 24 giant airboats took off for Seattle at 5:49 a. m. today.

At noon the leading planes were reported 123 miles north of San Francisco, half the distance to Seattle from San Diego.

The planes, of Patrol Squadrons 7, 9, and 12, were commanded by Lt.-Comdr. Robert L. Fuller, acting commander of Fleet Patrol Wing, and contained flight crews of 35 officers and 120 enlisted men.

The 1428-mile hop will require approximately 8 to 10 hours, Navy authorities estimated.

With departures of the two dozen planes from San Diego today, only two patrol squadrons, VP-11 and the Canal Zone's VP-2, remain at North Island. The Seattle-bound airboats will operate with warships in the Puget Sound area until mid-August.

Only six PBY-1 planes were at North Island today—last in the 60-plane order just completed by Consolidated Aircraft Corp. Delivery will be started soon on the PBY-2 contract for 50 airboats.

Approximately 150 members of Squadrons VP-7, 9 and 12 today had already established headquarters in Seattle.

ARCHBOLD PLANS S. D.-HAWAII HOP

A non-stop flight from San Diego to Honolulu will be made by Richard Archbold of the American museum of natural history early in October, according to word received here yesterday from New York.

Archbold, who flew his Consolidated flying boat non-stop from San Diego to New York last week, is scheduled to return here in September. From Honolulu he will fly to Midway and Wake islands, thence southward on a 2000-mile flight to New Guinea where he will conduct a year's research investigation for the museum of natural history.

S. D. Sun 6/30/37

Ending Seaplane Flight Across U. S.

Land planes have flown across the continent many times, and land planes have flown across the sea, but it was the first time a seaplane had ever made a transcontinental nonstop flight when Richard Archbold's $250,000 flying boat dropped out of the skies and skimmed to a stop at North Beach Airport, New York, as this picture was taken. The flight from San Diego took 17 hours and three minutes. The plane will be used for a scientific expedition to New Guinea.

U. S. PLANE ORDERS REACH RECORD HIGH

S.D. SUN 7/1/37

By United Press

LOS ANGELES, July 1.—An all-time peak of $135,000,000 in American aviation orders was reported today by the Magazine Western Flying.

Southern California led with Douglas, $38,000,000; Consolidated, $14,000,000; North American, $9,000,000; Lockheed, $3,000,000; Vultee, $4,000,000. Large backlogs of building elsewhere included: Boeing at Seattle, $1,000,000; Martin at Baltimore, $12,500,000.

WASHINGTON NEWS 6/25/37

Seaplane Over Land on Non-Stop Flight

By United Press

SAN DIEGO, Calif.—A seaplane, manned by a crew of five, sped eastward today on a projected non-stop, transcontinental flight.

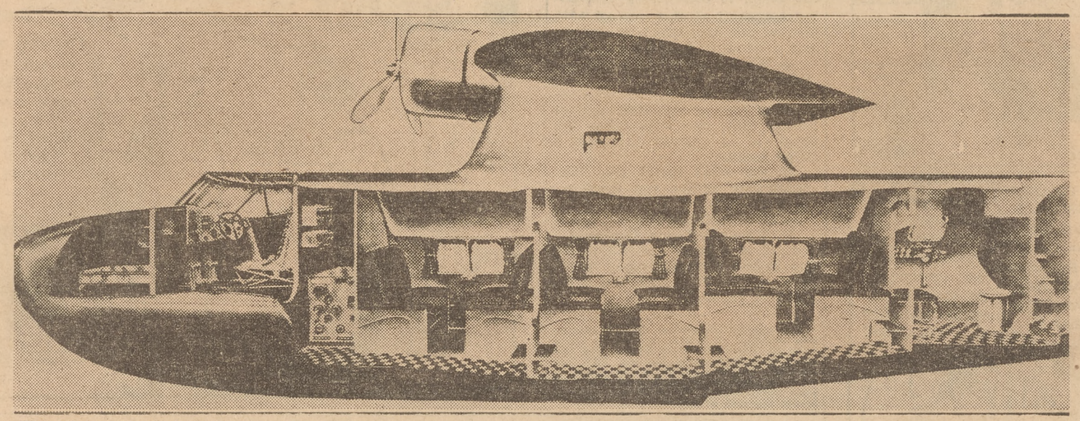
Richard Archbold, 30, grandson of a Standard Oil Co. executive, was at the controls. He and his four companions left San Diego at 7:55 p. m. (E. S. T.) and at 1:20 a. m. today they reported their position as 100 miles past Carlsbad, N. M. They were flying at an elevation of 10,000 feet and averaging 109 m. p. h.

The only safe landing places ahead were the Mississippi and Ohio Rivers, since the plane is not amphibian.

Archbold planned to travel by way of Dallas and Atlanta, then up the eastern coast line to New York. He bought the plane for $250,000 and plans to use it on an exploration trip in New Guinea next winter. It is a large flying boat of the type used by the Navy, and carried 1750 gallons of gasoline.

S.D. Sun 7/1/37

Consolidated Airboat, As Planned For Private Use



This picture shows how the Consolidated PBY-1 airboats now be ing used by the Navy, could be converted for private airline use.

CONSAIR PLANS BIG SKYLINERS

Built to protect the shores of the United States and its possessions, Consolidated Aircraft Corporation's big patrol bombers now being operated by the Navy may in the future serve another mission—the transportation of travelers across long over-water distances.

24 Passengers

Conversion of the deadly bomb-carriers into luxurious, 24-passenger transport planes is under consideration by Consolidated officials, it was revealed today.

Difficulty in negotiating for commercial contracts is being experienced, how[illegible] because of Navy restrictions publishing specifications. Not until May, 1938, can specific info mation regarding the planes be released.

Foreigners Interested

Pan American Airways and several foreign lines have shown interest in the commercial adaptation of the Navy's famous PBY's, 36 of which already have established records in non-stop flights to Hawaii and Panama. It is claimed that the PBY as a passenger plane will exceed in speed the Clipper airboats now used by Pan American on their San Francisco-Honolulu run.

Commander Gray said the big flying boat—it has a wing spread of 104 feet and a gross weight, fully loaded, of 27,500 pounds—had flown direct from San Diego to a point just north of Dallas, then set a new course for New York. This "dog-leg" route was followed in order to keep in good weather all the way, although it added about 150 miles to the bee-line distance from San Diego here.

"Things couldn't have been more favorable," Mr. Wheatley said. "The weather was practically perfect, we made the flight at a time when we would get the shortest night of the year, besides gaining three hours of daylight by flying toward the rising sun. An hour after it got dark we had the advantage of a full moon."

Tests Planned

Mr. Archibold said he expected to keep the flying boat at North Beach about a month, conducting a series of tests of load-carrying, fuel-consumption and radio and other equipment preliminary to the trans-Pacific and New Guinea expeditions. When this phase of their preparations has been completed, he and Mr. Rogers plan to fly the ship to Yellowstone Lake, in Wyoming, and test its take-off performance at this altitude of 7,740 feet above sea level.

S.D. Sun 7/2/37

AIRBOAT CREWS 'WAY UP NORTH PLAN ROUTINE

Patrol Squadron 9, Last To Leave S. D., First To Land In Seattle

Officers and men of three Navy patrol squadrons today prepared to put their 24 planes through the "paces" of routine maneuvers in the Puget Sound-Alaska region after completing the fifth successful non-stop mass flight of patrol bombers from San Diego this year.

The planes, in loose flying formation, were led into Seattle by Patrol Squadron Nine, whose six airboats splashed into Lake Washington near the Sand Point Naval Air Station at 3:30 p. m. yesterday, nine hours after they had taken off from San Diego Bay.

Consolidated Built

Squadron VP-9, which completed the flight first, was last to leave the water here. Its Consolidated-built airboats averaged approximately 120 miles per hour for the northern trip.

Following VP-9 were the 12 planes of VP-12 and bringing up the rear were the six P2Y3 seaplanes of Patrol Squadron Seven. The P2Y3's are predecessors of the modern PBY bombers and are not capable of the latter's sustained speed.

Other Flights

Navy mass flights which have won San Diego world-wide attention this year include the following:

Squadron VP-6, to Honolulu Jan. 28-29, in 21 hours and 43 minutes for the distance of more than 2600 miles.

Squadron VP-11, to Honolulu on April 12-13, in 21 hours and 40 minutes.

Thirty-six airboats to San Francisco in May to participate in the Golden Gate Bridge Fiesta.

Down To Tropics

Squadron VP-3, to Coco Solo, Canal Zone on June 21-22, a distance of 3292 miles.

The airboats, now in Seattle, will return to San Diego in mid-August. While in the north, they will operate with the local aircraft tenders Langley and Sandpiper.

S.D. Union 7/3/37

AIRCRAFT PLANT HIT BY WHELAN RULING ON TAXES

All materials, partly completed planes and all completed planes at the plant of Consolidated Aircraft Corp. on the first Monday in March, and not actually delivered to or accepted by the federal government, or other purchasers, were ruled yesterday to be personal property upon which the company must pay state and county taxes.

The opinion, written by Thomas Whelan, district attorney, for Assessor Crowell D. Eddy, stated that the property was taxable regardless of whether progress payments had been made upon the planes or materials by the federal government.

The company, it was stated, had contended that many of the planes and much of the material and equipment in its plant on the first Monday in March belonged to the federal government, for which a large order was being filled.

If the contention is sustained, the company will avoid taxation of property worth several hundred thousand dollars.

Whelan, in his opinion, pointed out that officials in Los Angeles county follow the procedure he has recommended, and suggests that if the company prefers, it may bring suit to determine ownership of the disputed property.

JUNE San Diego Club Life

Navy Mass Flights Entirely San Diego's Glory; Planes Made Here, Fliers Trained at Air Station

The third of the Navy's recent "routine transfer" mass flights, last week, again reflected glory upon San Diego not only as the starting point of the flights, but as the place where the big Consolidated flying boats are manufactured and where the fliers received most of their training.

Hence, San Diego can be more than ordinarily glad that the third Navy "transfer" was successfully accomplished in less than 28 hours time to cover an airline distance of 3,087 miles to Coco Solo—longest mass flight yet undertaken by the Navy.

What is the "secret" of the Navy's success in shooting her big flying boats in mass formation to distant points?

There's little "secret" about it, really. In the first place, the Consolidated boats are big, powerful and reliable. The motors and equipment simply don't falter in any way. The Naval Air Station ground crews are capable and experienced—they see to it that motors and ships are well groomed and thoroughly checked.

GOOD MEN

Capable officers and men fly the ships. Lt. Robert Morse, quiet and taciturn, commanded the last squadron. A senior lieutenant, he is like all the other officers insofar as ability is concerned. From Pensacola on up, they all learn to fly well—or they must revert to other branches of duty.

Rear Adm. Ernest J. King, commanding base force aircraft, is one of the most brilliant and capable flag officers in the Navy. One-time chief of the bureau of aeronautics, he knows aircraft thoroughly, and he knows more about patrol and scouting tactics—the immediate concern of this branch of the Naval aviation—than any other officer.

Despite that the Navy describes these mass flights as merely "routine transfer," officers and men involved don't regard them that lightly in planning for them. Exercises and training for several weeks prior to the "transfer" are slanted at getting the officers and men in condition for the particular flight.

When they take off on the day set, the weather is "right" or they don't go until it is. While Adm. King likes to do things "when promised," he will postpone a flight because of unfavorable weather.

GET TO WORK

But once into the air, the 80 officers and crew involved "dig in" to their course without any monkey-business. The only detours are for squalls or thunderstorms. They don't "race," and they don't turn it into a pleasure hop. The planes are capable of speeds of more than 150 mph., but on these long hops they throttle 'em down to around 120 mph. This, of course, conserves energy and strain on the craft.

They maintain constant two-way radio communication with their shore and ship stations. At intervals of 600 miles or more tenders or assisting surface craft stand by ready to help if it should be needed.

As yet none has been needed—but if for any reason one or more of the big ships should come down, they could ride out a pretty heavy sea—so staunchly are they constructed. Consolidated makes them seaworthy, capable of beating along against 12-foot seas.

The ships are equipped with life rafts, provisions, water and necessaries so that, in a dire emergency, they could survive a considerable time if lost at sea.

S.D. Union 7/8/37

2000 AIRCRAFT EMPLOYES, 500 CLERKS GO C. I. O.

Representing 2000 San Diego aircraft workers, the Aircrafters union voted to seek C.I.O. affiliation last night by a ratio of 6½ to 1, John Orr, financial secretary, announced at a meeting of San Diego C.I.O. union representatives at Eagle hall preparing for formation of a local C.I.O. council.

Orr said the C.I.O. affiliation will be voted on by a general referendum ballot before any action is taken. "This action is done as an emergency measure to maintain complete unity and to allow the membership to decide questions affecting aircraft workers," Orr said. "It follows threats of A. F. of L. officials to revoke our A. F. of L. international association of machinists' charter because we decided to send delegates to a C.I.O. unity conference of aircraft workers." The Aircrafters would affiliate temporarily with the United Automobile Workers of America.

W. H. Palmer, president of the San Diego Retail Clerks union, said the union's 500 members had voted "overwhelmingly" to affiliate with the United Retail Employes of America, a C.I.O. affiliate. Palmer said the vote was taken "because of lack of cooperation from the San Diego Federated Trades and Central Labor council and our A. F. of L. international organization."

AT END OF COAST-TO-COAST FLIGHT—Richard Archbold, research associate of the American Museum of Natural History, accompanied by five others, last week piloted his seventeen-ton flying boat across the country from San Diego to New York in a non-stop flight. He is shown at the left with, left to right, Russell Rogers, co-pilot; William Wheatley, L. Gray, navigator; J. Brown, mechanic, and Harold Ramm, radio operator.

Gray, United States Navy, retired, the navigator; William Wheatley, test pilot, and, in back, Gerald Brown, flight mechanic, and Harold Ramm, radio operator.

FLYING BOAT ENDS NON-STOP FLIGHT

First Transcontinental Hop Completed in 17 Hours 3 Minutes 30 Seconds

TAKE-OFF AT SAN DIEGO

Richard Archbold, Scientist, Will Use Plane for Expedition Into New Guinea

The first non-stop tri pacross the continent by flying

The plane, which has been named Zuba, is of the type with which the navy has made recent long non-stop mass flights in the Pacific. It has a wing span of 106 feet and is equipped with folding wing-tip pontoons of a new type which form, when raised, the ends of the wings themselves. It carries two-way radio, Sperry gyropilot and full blind-flying instruments. A laboratory for the scientific work of Mr. Archbold's expedition, of which Dr. Austin L. Rand will be the collecting head, and eight bunks take the cabin.

Coming in over the municipal airport, Mr. Archbold's crossing of the imaginary field boundary was set by official observers of the National Aeronautic Association at 1:46:30 P. M. (D. S. T.). These observers, Kenneth Behr, manager of Floyd Bennett Field; James M. Clark of the Manufacturers Aircraft Association, Charles G. Cleveland, news editor of Aviation Magazine, and George McLoughlin, editor of Aero Digest, announced the landing time as 1:54:30 P. M. (D. S. T.). The plane had left San Diego at 8:51 P. M. on Thursday.

After the plane had be moored about 200 yards off shore, the Police Department tug Marine 3, in command of Sergeant Vance Parkinson, took off a boarding party which included the official observers, who took charge of the two barographs carried on the trip; Mrs. John F. Archbold, the pilot's mother; his brother, Adrian; his brother-in-law, Page Hufty, O. J. Whitney, head of the charter service at North Beach, and presentatives of the museum.

Mr. Archbold said he had flown at 14,000 feet during the first part of the journey, but after crossing the Mississippi had come down to altitudes between 7,000 and 9,000 feet for the remainder of the trip. His average speed was about 135 miles an hour. There was enough fuel left, he said, for six hours' more flying.

During the time the plane remains here several radio aids for the New Guinea expedition will be tested, the pilot declared. He said the exact route he will follow across the Pacific has not been determined, but that he would probably go from San Diego to Honolulu; Wake Island, Midway Island and Guam and then turn south for the 2,000-mile hop to New Guinea, where he expects to remain for a year or more.

Herald Tribune Pattern Service,
230 West 41st Street, N. Y. C.

☐ Inclosed find 15 cents in stamps for piece dress that will help you to feel cool and collected even on the hottest days. The cunning little round neck, the fitted waist and the tucked sleeves make this modest little costume always dainty and fresh-looking. The skirt could be solid color or a print on a navy blue, wine color or black ground—the blouse would be smart in frosty white trimmed with contrasting buttons.

Pattern 727-X is cut in sizes 14 to 20; 32 to 42. Size 36 requires 1¾ yards of 39-inch material for the short-sleeved blouse and 2 yards for the long-sleeved version. 2⅛ yards of 39-inch fabric are required for the skirt.

Pattern No..... Size.....

Fashion and Needlework Book. ☐ 10 cents additional if ordered with pattern. ☐ 15 cents if ordered separately.

(Residents of New York City must include 2 additional on each order in payment of City Sales Tax for Unemployment Relief).

100 Men Owe Lives To Consolidated Employe

S.D. Sun 7/4/37

Heroism In Navy Disaster Nets Frank Moon Gold Medal

Because Frank M. Moon was as good a swimmer as a mechanic, more than a hundred men today owe their lives to him.

But Mr. Moon isn't overwhelmed by the importance of such a debt, and he goes right on performing his modest functions as chief janitor at Consolidated Aircraft Corp., just as though he never wore a thick, solid gold medal on his Navy uniform.

He hasn't had official use for that uniform in the 11 years since his retirement from the Navy, so Mr. Moon doesn't get much chance to display his medal any more. Instead, he has a small round button pinned to his shirt, an identification worn by all the 2800 factory workers.

The big event in Moon's life, the one which netted him a letter of commendation from the Secretary of the Navy, and a gold lifesaving medal of honor from the Secretary of the Treasury, was one of the Navy's greatest disasters—the piling up of six destroyers on the rocks at Point Conception the stormy evening of September 8, 1923.

Oblivious To Fate

In the engine room of the USS Fuller, Moon was attending to his tasks as chief machinist's mate, oblivious to the vessel's tragic destiny as it probed through a heavy fog and plunged in the rough seas.

On the bridge, Comdr. Seed dimly saw the destroyer USS Young, already overturned on the jagged shore, water pouring into her smashed hull. He ordered his own vessel to sheer away. The Young was cleared but dead ahead loomed the Farragut, and a collision was unavoidable. After the impact, the Fuller backed away, became cradled on the Point Conception Rocks, and started to break up.

Driven To Deck

Moon and his mates in the engineroom remained at their posts until the inrushing water drove them to the deck. The vessel was listing dangerously; with each surge of surf, she seemed to turn farther on her side, and it appeared that the crew must be removed immediately, if their lives were to be saved.

Moon volunteered to explore among the rocks along shore to determine whether they could hold safely any of the Fuller's

FRANK M. MOON
Cheated Davy Jones of 100 Victims

people. With unerring accuracy he lassoed a small rock 15 feet from the vessel, crossed hand over hand on the rope, and continued to a larger rock which was capable of holding 20 men.

Comdr. Seed considered this an unsafe perch and ordered Moon to return.

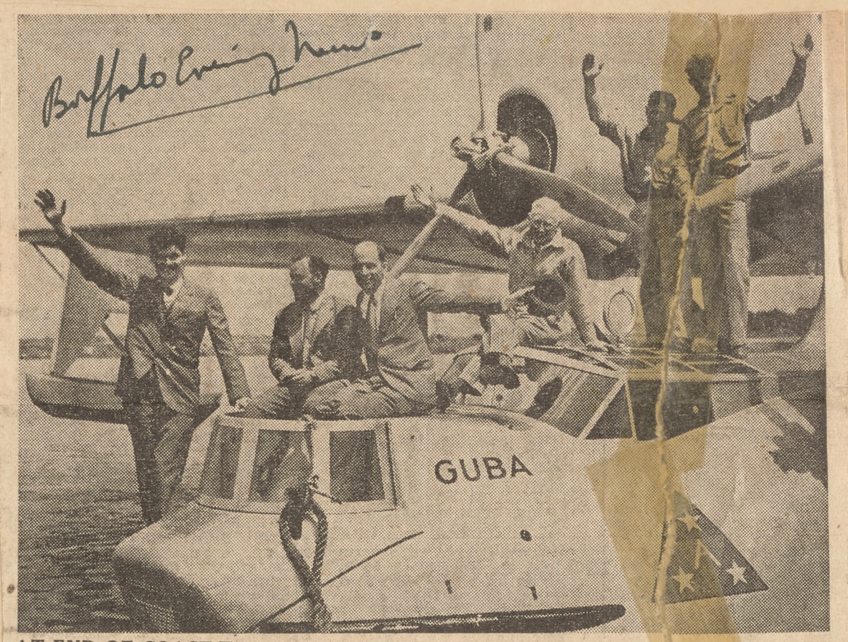
Clings To Vessel

He worked his way back through the turbulent sea and clung, with the remainder of the 106 men in the crew to the port side of the Fuller, which rested at a precarious 40-degree angle throughout the night.

At daylight, Comdr. Seed plunged into the water and swam to a large rock he believed would hold the entire crew. "If I fail to make it," he told his men, "remain aboard the ship, but if I get there, follow me with a line."

When he had succeeded, Moon, with a small signal halyard about his waist, followed. On reaching the outcropping, he secured to it a heavy rope attached to his signal halyard, and the Fuller, now hopelessly wrecked, was abandoned to its fate by the crew, which crawled to safety along the line.

It was a spectacular job well-done, but Mr. Moon was in the Navy so long that despite the fact he's been a civilian for the past 11 years, it's just as difficult to get him to talk about the event as if his tongue were still tied by characteristic Navy reticence.



AT END OF COAST-TO-COAST FLIGHT—Richard Archbold, research associate of the American Museum of Natural History, accompanied by five others, last week piloted his seventeen-ton flying boat across the country from San Diego to New York in a non-stop flight. He is shown at the left with, left to right, Russell Rogers, co-pilot; William Wheatley, L. Gray, navigator; J. Brown, mechanic, and Harold Ramm, radio operator.

FLYING BOAT ENDS NON-STOP FLIGHT

First Transcontinental Hop Completed in 17 Hours 3 Minutes 30 Seconds

TAKE-OFF AT SAN DIEGO

Richard Archbold, Scientist, Will Use Plane for Expedition Into New Guinea

The first non-stop tri pacross the continent by flying boat ended in Bowery Bay, at North Beach Airport, yesterday when Richard Archbold, research associate of the American Museum of Natural History, landed a 34,000-pound Consolidated PBY-1 which he had taken off at San Diego 17 hours 3 minutes 30 seconds before. Flying between storm areas to the north and south of his course, he came by way of Dallas, Cincinnati and Pittsburgh. Conditions were good most of the way, he said, save for thunderstorms over the Rockies and the Alleghanies.

With the scientist, who will leave in about a month for his fourth expedition to New Guinea to collect and study mammals and birds, were his co-pilot, Russell Rogers, who will accompany him on the expedition; Gerald Brown, mechanic; William Wheatley, chief test pilot of the Consolidated Aircraft Corporation; Harold Rann, radio man, and Commander L. R. Gray (retired) of the United States Navy, navigator. The flight was made as a sort of shakedown trip for the big plane, which, on its two 1,000-horsepower twin-row Wasp engines, has a range of about 4,000 miles.

The plane, which has been named Zuba, is of the type with which the navy has made recent long non-stop mass flights in the Pacific. It has a wing span of 106 feet and is equipped with folding wing-tip pontoons of a new type which form, when raised, the ends of the wings themselves. It carries two-way radio, Sperry gyropilot and full blind-flying instruments. A laboratory for the scientific work of Mr. Archbold's expedition, of which Dr. Austin L. Rand will be the collecting head, and eight bunks take the cabin.

Coming in over the municipal airport, Mr. Archbold's crossing of the imaginary field boundary was set by official observers of the National Aeronautic Association at 1:46:30 P. M. (D. S. T.). These observers, Kenneth Behr, manager of Floyd Bennett Field; James M. Clark of the Manufacturers Aircraft Association, Charles G. Cleveland, news editor of Aviation Magazine, and George McLoughlin, editor of Aero Digest, announced the landing time as 1:54:30 P. M. (D. S. T.). The plane had left San Diego at 8:51 P. M. on Thursday.

After the plane had be moored about 200 yards off shore, the Police Department tug Marine 3, in command of Sergeant Vance Parkinson, took off a boarding party which included the official observers, who took charge of the two barographs carried on the trip; Mrs. John F. Archbold, the pilot's mother; his brother, Adrian; his brother-in-law, Page Hufty, O. J. Whitney, head of the charter service at North Beach, and presentatives of the museum.

Mr. Archbold said he had flown at 14,000 feet during the first part of the journey, but after crossing the Mississippi had come down to altitudes between 7,000 and 9,000 feet for the remainder of the trip. His average speed was about 135 miles an hour. There was enough fuel left, he said, for six hours' more flying.

During the time the plane remains here several radio aids for the New Guinea expedition w be tested, the pilot declared. He said the exact route he will follow across the Pacific has not been determined, but that he would probably go from San Diego to Honolulu; Wake Island, Midway Island and Guam and then turn south f the 2,000-mile hop to New Guinea, where he expects to remain for a year or more.

This is in anticipation of projected landings on a lake in the interior of New Guinea which Mr. Archbold said is at an altitude of 11,000 feet. The flying scientist said that no plane ever had taken off from the water farther above sea level than Lake Tahoe, which has an altitude of 6,225 feet and that he was eager to check his craft's performance in the rarefied air of Wyoming before landing it on a lake in the wilds of New Guinea from which it might not be able to rise again.

The leader of the scientific members of the New Guinea expedition will be Dr. Austin L. Rand, who has accompanied Mr. Archbold on three previous trips to this island. The plane will be used both for survey purposes and to establish advance bases for the ground party by dropping food and other supplies. A smaller amphibian plane which Mr. Archbold and Mr. Rogers took to New Guinea last year overturned in a squall and sank at Port Moresboy after they had used it for some time.

As a result of this mishap, Mr. Archbold has named his new ship "Guba," a native word meaning a "sudden squall."

Heroism In Navy Disaster Nets Frank Moon Gold Medal

FRANK M. MOON
Cheated Davy Jones of 100 Victims

Because Frank M. Moon was as good a swimmer as a mechanic, more than a hundred men today owe their lives to him.

But Mr. Moon isn't overwhelmed by the importance of such a debt, and he goes right on performing his modest functions as chief janitor at Consolidated Aircraft Corp., just as though he never wore a thick, solid gold medal on his Navy uniform.

He hasn't had official use for that uniform in the 11 years since his retirement from the Navy, so Mr. Moon doesn't get much chance to display his medal any more. Instead, he has a small round button pinned to his shirt, an identification worn by all the 2800 factory workers.

The big event in Moon's life, the one which netted him a letter of commendation from the Secretary of the Navy, and a gold lifesaving medal of honor from the Secretary of the Treasury, was one of the Navy's greatest disasters—the piling up of six destroyers on the rocks at Point Conception the stormy evening of September 8, 1923.

Oblivious To Fate

In the engine room of the USS Fuller, Moon was attending to his tasks as chief machinist's mate, oblivious to the vessel's tragic destiny as it probed through a heavy fog and plunged in the rough seas.

On the bridge, Comdr. Seed dimly saw the destroyer USS Young, already overturned on the jagged shore, water pouring into her smashed hull. He ordered his own vessel to sheer away. The Young was cleared but dead ahead loomed the Farragut, and a collision was unavoidable. After the impact, the Fuller backed away, became cradled on the Point Conception Rocks, and started to break up.

Driven To Deck

Moon and his mates in the engineroom remained at their posts until the inrushing water drove them to the deck. The vessel was listing dangerously; with each surge of surf, she seemed to turn farther on her side, and it appeared that the crew must be removed immediately, if their lives were to be saved.

Moon volunteered to explore among the rocks along shore to determine whether they could hold safely any of the Fuller's people. With unerring accuracy he lassoed a small rock 15 feet from the vessel, crossed hand over hand on the rope, and continued to a larger rock which was capable of holding 20 men.

Comdr. Seed considered this an unsafe perch and ordered Moon to return.

Clings To Vessel

He worked his way back through the turbulent sea and clung, with the remainder of the 106 men in the crew to the port side of the Fuller, which rested at a precarious 40-degree angle throughout the night.

At daylight, Comdr. Seed plunged into the water and swam to a large rock he believed would hold the entire crew. "If I fail to make it," he told his men, "remain aboard the ship, but if I get there, follow me with a line."

When he had succeeded, Moon, with a small signal halyard about his waist, followed. On reaching the outcropping, he secured to it a heavy rope attached to his signal halyard, and the Fuller, now hopelessly wrecked, was abandoned to its fate by the crew, which crawled to safety along the line.

It was a spectacular job well-done, but Mr. Moon was in the Navy so long that despite the fact he's been a civilian for the past 11 years, it's just as difficult to get him to talk about the event as if his tongue were still tied by characteristic Navy reticence.

CONSAIR FIGHTS COUNTY TAX ON $500,000 STOCK

Materials Owned By U. S., Claim; Whelan Holds Levy By S. D. Legal

S. D. SUN 7/9/37

A $500,000 bone of contention arose today between the county and the Consolidated Aircraft Corp., based on the claim of aircraft officials that a large percentage of their personal property is government-owned and thus exempt from county taxation.

The county-aircraft firm battle was disclosed by Dist. Atty. Thomas Whelan, who prepared an opinion for County Assessor Crowell D. Eddy regarding the county's theory of taxing the company.

Subject To Tax

In his opinion Whelan contended all materials in the firm's storehouses are subject to county tax assessments.

"Consolidated Aircraft claims that certain of its airplane parts and materials are being purchased by the government by progressive payments and therefore are technically the property of the government," Whelan said. "I believe the government carries a lien on planes and materials which they expect to purchase, for protection in case of unforseen contingencies at the time the contract with the aircraft company was made."

The airplane manufacturing firm actually is in the business of making planes for the Government and for foreign governments at a profit, and operates like any other similar concern, Whelan declared in his opinion. He advised Eddy to assess all properties of the corporation including tools, supplies and stored materials.

Whole Value Incomplete

Eddy said the disputed property amounts to more than $500,000. The concern's assessed valuation is not completed, he said.

Los Angeles county, Whelan pointed out to the assessor, follows the method prescribed by the district attorney.

Aircraft company officials claimed that their contract with the Navy showed that certain properties and materials in the firm's storehouses were being purchased by progressive payment and therefore in actuality were Navy property, therefore exempt from county taxes.

NINE S. D. UNIONS FORM C. I. O. BODY, REQUEST CHARTER

S. D. UNION 7/8/37

The San Diego Industrial Council, composed of San Diego affiliates of the Committee for Industrial Organization, organized last night and applied for a C. I. O. charter.

Composed of nine C. I. O. unions, the council represents approximately half of San Diego's organized workers. Unions included are aircrafters, retail clerks, tailors, laundry workers, bakery workers, International Longshoremen's association, warehouse men, American Radio Telegraphers association and the Newspaper Guild. Membership in these groups totals about 3600.

Officers elected pending arrival of the charter were William Adair, Newspaper Guild, president; W. H. Palmer, retail clerks, vice president; George Smith, aircrafters, recording secretary, and Morrie Smolan, laundry workers, organizer.

To the executive committee were named C. L. Stock, G. W. Sleeper, P. J. Johnson, and A. C. Rogers, and to the administration committee Melvin C. Mayne, P. J. Clark and L. A. Stevens.

"The industrial council stands for unity and democracy in the labor movement and for organizing the unorganized," Adair announced last night.

AIRCRAFT UNION RETAINS CHARTER OFFICER ASSERTS

S. D. UNION 7/9/37

Charter of Aircraft Local 1125, International Association of Machinists, consisting mostly of Consolidated Aircraft Corp. employes, will not be lifted as a result of CIO activities, Walter Nash, general representative of the International association, announced here yesterday.

Nash issued the following statement:

"Rumor being spread in the plant of Consolidated that the charter has been lifted is declared false and utterly without foundation. There is not the least intention on the part of the international to revoke the charter, though action may be taken against certain officers of the local because of their actions which are violations of the constitution of the association.

"The rumor that the charter has been lifted is being spread in an effort to persuade the employes of the Consolidated that they now have no labor organization to represent them before management in pending wage negotiations and therefore, that they should vote to affiliate themselves with the C.I.O. organization on a so-called ballot that has allegedly been mailed to each employe in the plant.

"The ballot is illegal because there is no means of checking whether the member credited with voting actually received and voted the ballot or whether it was marked by individuals who do not want a fair election conducted.

"Any election to determine whether present affiliations will be discontinued will be taken whenever a majority of those involved so decide but it will be conducted in a manner that will assure to each employee the right to vote as he desires and have his vote counted in accordance with his desire."

S. D.-BUILT PLANES FOR OTHER NAVIES NEAR COMPLETION

Consolidated Aircraft Corp. officers announced yesterday the McCormick line freighter West Nilus will arrive here July 18 to take aboard three seaplanes consigned to the Argentine naval air station at Puerto Belgrano. Three other planes, nearing completion for the Argentine government, will be shipped next month.

A freighter of the Inter-Ocean S. S. Co. will call here in October to load two Consolidated-built planes to be delivered to the Russian government. These planes are to be transported either to Hamburg or Havre and there transshipped to a Black sea port.

The seaplanes built for the two foreign governments are of the BY-1 type on which U. S. government restrictions were removed several months ago. The October shipment will complete present foreign contracts for seaplanes by Consolidated.

S. D. UNION 7/9/37

CIO COUNCIL FORMED IN S. D.

2000 Aircrafters, 500 Clerks Quit A. F. Of L.

7/8/37—S. D. SUN

San Diego labor ranks split wide open last night, as the San Diego Industrial Council, composed of affiliates of the Committee for Industrial Organization, formally applied for a CIO charter, and members of the Aircrafters' Union and the Retail Clerks' Union voted in favor of CIO affiliation.

Approximately half of organized workers in the city were affected by the actions, taken at meetings in Eagles' hall.

Overwhelming Vote

Two thousand aircraft workers, voting 6 to 1, left the Federated Trades Council, an American Federation of Labor body, to join CIO. Approximately 500 workers were affected by the Retail Clerks' Union action.

These developments followed on the heels of last week's "purge" of the local Central Labor Council when delegates from 15 unions were refused admittance on the grounds they had "Communistic tendencies," or were "seeking to disrupt the labor movement." The "purge" was ordered by A. F. of L. President William Green.

A. F. L. Threats Charged

John Orr, financial secretary of the aircraft union, said, in commenting on the vote:

"This action is done as an emergency measure to maintain complete unity and allow the membership to decide questions affecting aircraft workers. It follows threats of Federation officials to revoke our A. F. of L. International Association of Machinists' charter because we decided to send delegates to a CIO unity conference of aircraft workers."

The union, he said, probably will affiliate temporarily with the United Automobile Workers of America.

'Lack of Co-operation'

President W. H. Palmer of the clerks' union said the clerks' decision in favor of CIO affiliation was made "because of lack of co-operation from the San Diego Federated Trades and Central Labor Council, and our A. F. of L. international organization."

Nine San Diego unions comprise membership of the new council. Included are Aircrafters, Retail Clerks, Tailors, Laundry Workers, Bakery Workers, Longshoremen, Warehousemen, Radio Telegraphers and membership of the Newspaper Guild. Membership totals more than 3500.

Adair Named President

Officers elected pending arrival of the charter were William Adair of the Newspaper Guild, president; Palmer, vice president; George Smith, Aircrafters, recording secretary, and Morrie Smolan, Laundry Workers, organizer.

To the executive committee were named C. L. Stock, G. W. Sleeper, P. J. Johnson and A. C. Rogers. Members of the administration committee will be Melvin C. Mayne, P. J. Clark and L. A. Stevens.

Representatives of CIO and AFL were to debate the respective merits of the two groups today before a meeting of the San Diego Democratic Women's club in U. S. Grant hotel at noon.

ALUMINUM STRIKE SLOWS S. D. PLANT

S. D. UNION 7/9/37

The seven-week strike at the huge Aluminum Co. of America plant at Alcoa, Tenn., resulting in a riot Wednesday that killed two men and injured 21 others, is seriously affecting construction work at aircraft factories, including Consolidated plant at Lindberg field.

So serious has been the delay, due to failure to obtain urgently needed material, there is a possibility delivery of airboats now being built by Consolidated for the navy will be delayed far beyond the contract time. A similar situation confronts the Boeing, Douglas, Martin and other aircraft plants.

CONSOLIDATED AIRCRAFT CORP. made delivery of a commercial version of their PBY-1 to Richard Archbold of the American Museum of Natural History who immediately proceeded to make a transcontinental dash in the sea-going plane—more about it in the News Review section of this issue. The Senate Claims Committee favorably reported the bill to pay Consolidated $92,993 representing the increased cost to the manufacturer in fulfilling a government contract for airplanes after passage of the N.R.A.

WESTERN FLYING JULY 1937

WESTERN FLYING JULY 1937

Archbold's new flying boat

Ship to be used to explore jungles of New Guinea.

Richard Archbold of the American Museum of Natural History took delivery of a commercial version of the Consolidated PBY boat at the San Diego plant late in June. The plane is to be used for the continuation of exploratory work Archbold has already started in Papua, New Guinea.

It is understood that due to export limitations, the boat cannot leave this country until November and, in the meantime, will be thoroughly tested in this country. Tests will consist chiefly of landings and take-offs in lakes at high altitudes. In this respect, soon after Archbold obtained the plane, a test flight was made to Lake Tahoe, where the plane was landed and then flown-off the surface of the lake, the altitude of which is over 6,000 ft. Lakes in the vicinity of New Guinea to be explored by the expedition are found at elevations of nearly 12,000 feet.

After accepting the plane, the young explorer flew the plane non-stop across the continent to New York, establishing a record flight for water craft over land.

According to information received from Archbold while on the coast, he expects to fly the craft to New Guinea via the Pan American route as far as Guam and then drop south to Guinea.

CONSAIR SHIPS AIRBOATS TO ARGENTINE NAVY JULY 24

S. D. SUN 7/9/37

Three Planes Okehed By South American Officers; Freighter Delayed

Three Consolidated-built airboats, constructed for the Argentine navy, will be shipped to the South American republic from San Diego about July 24 or 25, officials of the aircraft concern announced today.

The McCormick freighter West Nilus, which originally was due to pick up the planes here July 17, has been delayed.

The cargo will have a ship's measurement weight of 1200 tons, and each plane will be divided into five units, placed in specially-built boxes reinforced to withstand buffeting during a stormy voyage.

Six seaplanes, of the P2Y3 type, predecessor to the U. S. Navy's PBY1 bombers, of which 60 have just been completed by Consolidated, were ordered by the Argentine government.

They were accepted recently by high ranking Argentine naval officers who observed official tests in San Diego.

The three remaining planes will be shipped about the middle of August. A freighter has not yet been obtained for this cargo.

200 DISCHARGED AT CONSOLIDATED; UNION PROTESTS

S.D. UNION 7/10/37

Lay-offs at the Consolidated Aircraft Corp. plant yesterday afternoon, in what company announcements said was a retrenchment move, last night drew charges from the executive board of Aircraft Local 1125, International Association of Machinists, that the management was "trying to break up the existing union organization."

The union officers said 200 had been laid off.

The board members, in an official statement, said they had appealed to Dr. Towne Nylander, regional labor board director, and that he is to come here this afternoon to hold a conference with union representatives and company officials.

A "notice to all employes," made public by the aircraft company's executive late in the afternoon, stated:

"Because of shortages of material due to strikes in the east, other delays beyond our control, and lack of new business, it is necessary to reduce personnel materially. In the hope of overcoming these difficulties, the company has delayed action as long as possible."

Shift Discontinued

The announcement also carried an outline of new set-ups of shifts and schedules in which the "third shift" was discontinued, "the remaining night shift" discontinued in part; Saturday work and all overtime schedules discontinued, and the regular 40-hour work-week allowed to stand.

"Partially to make up for loss of overtime pay, there will be added to present rates 5 cents an hour to all hourly employes, plus 5 cents an hour when employed on the night shift and 5 percent to the five-day base pay of all salary employes (except those on executive payroll)," the announcement concluded.

Following is the statement released last night by the executive board of the union:

"Members of Aircraft Local 1125, International Association of Machinists, in emergency council tonight received reports from more than 200 persons, many of whom were union officers and leaders, and others who were known to have expressed opinions favorable to union labor and the Committee for Industrial Organization, that they were discharged from the plant of Consolidated Aircraft Corp. today.

Discrimination Charged

"Our reports indicate definitely that these men have been discriminated against because of their union activities and affiliations.

"We have definite evidence that it is the stated desire of the aircraft management to sway the result of a referendum election now under way and to break up the existing union organization.

"They want us to strike!

"We prefer the democratic legal method of solving our problem by appealing to the regional labor board to protetc our members from discriminatory action and have communicated with Dr. Towne Nylander, regional director. Dr. Nylander will arrive here tomorrow (Saturday) afternoon to confer with union representatives and the management and if no agreement is reached we will file charges of violation of the Wagner labor relations act.

"We are a law-abiding group, ruled by the will of our majority in our own problems and with those having to do with managerial relations."

The statement was signed by John M. Orr, secretary, "for the executive board."

The election referred to is a referendum vote under way by mail among members of the union on the question of switching the affiliation of the Aircraft local from the American Federation of Labor to the C. I. O., Orr said.

Maj. Fleet's Statement

After a Union reporter read the Aircraft union's statement to him over the telephone, Maj. R. H. Fleet, Consolidated Aircraft Corp. president, said:

"We let some 200 odd men go today. We hated to do it but shortage of material due to strikes in the east and other causes beyond our control, including lack of new business, made material reduction necessary and by cutting out all Saturday work and all overtime we were able to refrain from discharging 650 more men.

"We hate like all the world to discharge men whom we have trained and may need if and when these conditions change but we had no alternative and to keep from discharging so many men we decided it best to cut out all overtime work.

"Membership in the union had absolutely no bearing on the discharges. We don't know who are and who aren't members of the union.

"I discussed with many of the foremen whether they would prefer larger discharges of men or cutting out overtime shifts and they favored the latter so that more men might be retained.

"We are doing our utmost to retain trained men."

Jungle Food Delivery by Air, Phone Call, Archbold Plan

S.D. UNION 7/11/37

S. D.-to-N. Y. Boat Flier To Establish Base on New Guinea Coast; Will Start Ocean Flight in December.

By EDWARD R. WALLACE
Associated Press Staff Writer

NEW YORK, July 10—Deep in the steaming jungles of New Guinea, the whine of a dynamo will rise, a dial will be twisted and out into the wilderness will go a telephone call.

Miles away, a listener will signal and an alert plane crew will leap to deliever—groceries.

Roughly, this is the picture of activity next year, when Richard Archbold, young New York explorer; establishes his "flying base" of food and supplies for a scientific expedition now being prepared to penetrate into the mountainous interior of the jungles.

Archbold, who recently flew here from San Diego, is 30 years old, and has been associated with the American Museum of Natural History for 10 of them.

It will be his third expedition into the Guinea interior in search of rare birds, animals and plants, and his second try at establishment of communication with an exploration party by plane from the sea coast.

A year ago, his first effort came to grief when his plane overturned.

To Be $100,000 Expedition

Tall, stooping slightly, young Archbold looks out intently—almost fiercely—from heavy, bushy eyebrows, as he describes what he expects to find in his latest expedition—which will cost $100,000.

A party of four scientists, headed by Dr. Austin L. Rand of the museum, will go to New Guinea first—by ship in September.

Late in December, the Guba—Motouan for "big wind"—as the seventon, San Diego-built flying boat is called, will take off from New York for the west coast.

The Consolidated Aircraft Corp. plane is the same one in which Archbold and his party recently crossed the continent non-stop from San Diego in 17 hours 3½ minutes, the first time such a flight has been accomplished by a flying boat.

Will Follow Clipper Route

From the west coast, the flying boat, loaded with scientific instruments, will begin the 10,000-mile flight to New Guinea.

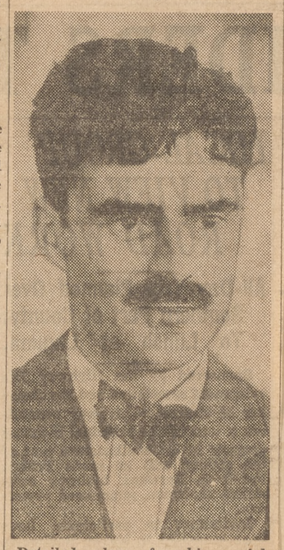
The plane will follow the China Clipper route to Honolulu, Wake island, Midway island and Guam, then turn south to New Guinea. It will rest at Holandia, New Guinea, awaiting calls from the interior. A special monorail system has been built into the craft, enabling food, and supplies to be dropped by parachute.

The two-way radio telephone, with a radius of more than 1500 miles, will be used for communication between the party in the interior and the coast base.

Archbold hopes to bring back, a rare flying Pnalanger, a tiny, gray-brown animal, three to four inches long, which has a long tail covered with substance like feathers. It is a marsupial—nurturing its young in a pouch like the kangaroo.

Another curious mammal he hopes will be obtained is the black and white-stripped Dactyl Opsila, which exists on bugs and insects, and has a long, extended fore finger, used to scoop its food from beneath rocks and logs.

Pilots 'Big Wind'



Detailed plans for his aerial operations in an exploration expedition to New Guinea this fall were disclosed in New York yesterday by Richard Archbold, who recently flew a Consolidated Aircraft flying boat non-stop overland from San Diego to New York.

U.S. AGENT PROBES AIRCRAFT LAY-OFF

S.D. UNION 7/11/37

More than 30 "laid off" employes of Consolidated Aircraft Corp., were questioned yesterday by David Persinger, attorney for the regional labor relations board, in preparing to represent the government in a hearing in which members of the International Association of Machinists, Aircraft Local 1125, have charged they were discriminated against by the aircraft management.

Persinger, sent here by Dr. Towne Nylander, regional director of the national labor relations board, said no date for the hearing has been set.

Members of the union will count ballots tonight in a mass meeting at Eagles' hall, on the question of whether the A. F. L. affiliated union shall join the C. I. O., officers said last night.

AIRCRAFT GAINS CITED BY PRICE

S. D. SUN/7/10/37

Describing the increased business of American aircraft manufacturers in foreign countries, E. T. Price, president of Solar Aircraft Co., yesterday addressed members of the Chamber of Commerce aviation committee. He has recently returned from a 6000-mile tour of the nation during which he visited the country's major aircraft manufacturing plants.

Contracts for domestic as well as foreign planes have resulted in the Glenn Martin factory of Baltimore doubling its floor space, he said.

Guest at the luncheon was Lieut. H. J. McRoberts, assistant Naval aircraft inspector at the Consolidated plant, who has just completed a post graduate course at Annapolis.

REPLY GIVEN TO MACHINISTS BY AIRCRAFT CHIEF

S.D. SUN 7/10/37

Referendum Vote Taken On Members' Demand, Says Orr

Charges by Walter Nash, general representative of the International Association of Machinists, that actions of certain officers of local Aircraft Lodge 1125 are "violations of the constitution," and that some action might be taken against them, were answered yesterday by John Orr, executive secretary of the local, who replied to the allegations.

On Members Demand

"The aircraft local's recent vote for a referendum of the members to determine whether the union should move toward affiliation with the CIO or remain with the A. F. of L. came about through recent actions and insistent demands of the members themselves," Orr said.

"The aircraft workers officers have no desire other than to see carried out the will of the majority of the members with due regard to rules of democratic procedure which apparently have been abandoned by the A. F. of L. officials.

Precautions Cited

Orr said that all precautions possible have been taken to insure a true expression of union sentiment, and to prevent "stuffing of the ballot by any minority element." He said all action has been taken under advice of legal counsel.

The trouble was precipitated, Orr said, when the local labor council "virtually disfranchised" the aircraft local by excluding regularly chosen delegates of the union under order of A. F. of L. president, William Green.

Consair Lays Off 200; Discrimination Denied

Materials Delayed By Eastern Strikes, Lack Of New Business Forced Move, Says Fleet

S. D. Sun — 7/10/37

With more than 200 factory workers discharged in an economy move at Consolidated Aircraft Corp. yesterday, Maj. Reuben H. Fleet, president, today declared that further layoffs will occur as long as the company remains a "victim of strikes in the East."

The third shift was discontinued entirely at the plant, and the night shift was curtailed except for the machine and paint shop workers and necessary janitors, watchmen and maintenance men.

Discrimination Charged

Dr. Towne Nylander, regional director of the National Labor Relations Board, was due in San Diego today to confer with company and aircraft union officials on charges by the latter that discrimination was shown by the management in the layoffs.

A statement issued last night by the executive board of Aircraft Lodge 1125, International Association of Machinists, after an emergency meeting, declared:

"We have definite evidence that it is the stated desire of the aircraft management to break up the existing union organization."

Fleet Denies Accusation

Maj. Fleet today said that affiliation with any organization was not considered in making the layoffs. "We merely discharged those who were least valuable to the company," he stated.

To compensate partially for the discontinuance of the shifts and the cancelling of Saturday work (for which employes were paid overtime wages of time and a half), remaining workers will receive 5 cents per hour more on the day shift and 10 cents per hour more will be paid to the few on the night shift. Salaried employes will be given a 5 per cent increase on the five-day base pay.

'Save Jobs For 650'

"By cutting out overtime, the third shift and part of the night shift, we were enabled to keep 650 men we would otherwise have had to discharge," Major Fleet said.

The layoffs are caused by the "shortages of material due to the strikes in the East, other delays beyond our control, and lack of new business," according to a bulletin board announcement posted in the plant late yesterday.

Re-employment of those laid off will depend entirely on whether Consolidated is successful in securing a contract for the PBY-4 Navy patrol bomber, on which its initial bid was too high, according to the Bureau of Aeronautics.

U. S. Economy Move

"Because of a governmental economy move, the Navy may not buy any more large seaplanes for some time to come," Major Fleet said.

Production of the PBY-2 and PBY-3 planes, for which Consolidated has contracts to construct 116, will be slowed down considerably as a result of the delay in obtaining material and the smaller personnel, according to Major Fleet. A total of 650 have been discharged by the concern since the employment peak several months ago of approximately 3280 factory workers.

NYLANDER IN CONSAIR PROBE

S. D. Sun 7/11/37

U. S. Official Gets Charges On Layoffs

Dr. E. Towne Nylander, regional director, National Labor Relations Board ,today carried in his brief case a formal charge of violation of the Wagner Act, signed by Aircrafters' Union members against the Consolidated Aircraft Corp.

The complaint charged discrimination in this week's mass layoff of factory workers.

Discrimination Charged

Dr. Nylander was called here late yesterday to investigate charges of workers that the aviation concern had "discriminated against union members in the layoff." He said he would stay in the city over the weekend to question union members and company officials.

Meanwhile Maj. Reuben H. Fleet, president of Consolidated, issued a statement to The Sun denying the union charges.

Least Valuable Men

"The men we were forced to dismiss were the least valuable to the concern," he said. "We hadn't the slightest idea how many union men were let go, nor how many non-union men.

'At Consolidated, every man is free to believe whichever way he may choose in religion and unionism. I have issued strict orders that these two subjects should not enter a man's qualifications."

AIRCRAFT UNION BATTLE CARRIED BEFORE COURT

AFL Group Seeks To Prevent Affiliation With CIO

S. D. Sun 7/12/37

Echoes of a public announcement that 2000 Consolidated Aircraft Corp. employes intend to affiliate with John L. Lewis' Committee for Industrial Organization reached superior court here today when the International Association of Machinists and C. L. Bentley, its representative, filed a petition for injunction designed to prevent the affiliation.

The action was directed against Aircraft Lodge No. 1125, local subsidiary of the international association. Attorneys for the international machinists' groupofS ternational machinists' group sought to enjoin the local lodge from dissolving its present affiliation with the American Federation of Labor on grounds that:

1—The meeting held July 7, at which aircraft employes indicated they intended to join the CIO was illegal because it was a secret gathering, in violation of the association's charter.

2—Officials of the local lodge neglected to obtain a written request from 10 per cent of its members before calling the meeting. Therefore, under the association's charter, any action taken at the July 7 meeting is void.

3—The local lodge cannot dissolve its association with the international machinists group because it has an outstanding contract with the aircraft corporation. Under provisions of the international group, the action to dissolve therefore is prohibited.

The petition probably will be heard by Superior Judge L. N. Turrentine next Monday at 10 a. m., attorneys for the international group said.

Meanwhile, charges by former Consolidated Aircraft Corp. employes that they were discriminated against in last week's layoff were being considered today by David Persinger, regional attorney for the National Labor Relations Board.

Persinger returned to Los Angeles early today after rounding up testimony from members of Aircraft local 1125, who claim that their union affiliations reacted to their disadvantage in the discharges. Dr. Towne Nylander, regional director of the board, started investigation of the charges Saturday preparatory to a government hearing.

Ballots distributed among the aircraft members July 7, designed to obtain a formal vote regarding the local machinists group's intention to become a CIO affiliate, were to be collected at the postoffice tonight, it was learned.

Named defendants with the local group were James Burney, Louis Tournie and Fred Hallengren, alleged to have formed the committee which assertedly distributed ballots to aircraft workers.

AIRCRAFTERS UNION VOTES TO JOIN CIO

7/13/37

Affiliation With UAW Decided; Election Retains Officers

The United Automobile Workers of America, a CIO union, has invaded the San Diego labor field.

By an "overwhelming" majority, members of the former Aircraft Local 1125, affiliated with the A. F. L. International Association of Machinists, today had indicated their desire to withdraw from the older labor camp.

Mail referendum ballots to aircraft workers, when counted in Eagles' Hall last night, revealed, according to a union statement, that the "members voted overwhelmingly to affiliate with the Committee for Industrial Organization.

Charter Received

Officers of the former A. F. of L. lodge were re-elected and a charter was presented the group by a CIO representative.

"Almost everyone present signed applications for membership in the CIO," the union statement said.

Earlier in the day, C. L. Bentley, grand lodge representative of the International Association of Machinists, petitioned for an injunction to prevent the Aircraft local from dissolving its affiliation with the A. F. of L.

Court Action Fought

An alternative writ of prohibition, directing the local and its officials to desist from counting the ballots pending the injunction hearing before Superior Judge L. N. Turrentine next Monday at 10 a. m., was served on several union officers after being signed by Judge Clarence Harden.

The officers thus restrained were, however, unable to prevent the general membership from conducting the election, according to the union statement, which declared:

"Counting of the ballots was ordered and carried on by members of the lodge who had received no notice of a court injunction such as was issued to a few of the officers of the lodge. The members took the matter into their own hands by a vote on the floor of the meeting.

"Unable to stay the action, the restrained officers withdrew from the meeting."

Last night's proceedings were "purely illegal," John T. Holt, attorney for the International Association of Machinists, commented today. "The membership ran away with the meeting, in defiance of writs of prohibition," he said.

"It seems to me that last night's action was in contempt of court," Bentley said. He was awaiting orders from his Washington headquarters as to the next step to be taken.

Meanwhile investigation of charges by the aricraft local that a large number of its members had been discriminated against in last week's layoff by Consolidated Aircraft Corp. was continued in Los Angeles today by Dr. Towne Nylander, regional director of the National Labor Relations Board.

Hotel Workers To Hold 'CIO Meeting'

Harry Silver, American Federation of Labor organizer, today planned to hold an organization meeting of all hotel workers in San Diego at 8:30 p. m. today, designed to form a union similar to the Committee for Industrial Organization's vertical union plan.

The meeting will be held in the Bartenders' and Waiters' Union headquarters, 813 Fifth-av. Silver said that already nearly 500 hotel workers have signed membership application blanks.

LOCAL AIRCRAFT UNIONISTS VOTE TO JOIN C. I. O.

S. D. UNION 7/13/37

Ballot Said 'Overwhelming;' Court Order Is Avoided In Counting of Tallies.

Members of the A. F. of L.-affiliated Aircraft Local 1125, American Association of Machinists, voted "overwhelmingly" to join the rival C. I. O., it was announced last night after a mail referendum ballot was counted.

Officers of the A. F. of L. lodge were re-elected and a charter presented at a meeting in Eagles' hall, giving the organization title of Local 506, International Union, United Automobile Workers of America, R. N. Marr, vice president, announced.

Counting of the ballot and presentation of the charter brought new complications in San Diego's A. F. of L.-C. I. O. controversy which was taken into court yesterday when C. L Bentley, member of the International Association of Machinists from San Francisco, sought to enjoin the aircraft group and various of its officers and members from conducting the vote on the question of affiliation and from counting the ballots

Hearing Monday

The attorney for the international obtained an alternative writ of prohibition, directing the local and its officials to desist in plans for an election and counting the ballots pending a hearing set for 10 Monday morning in Department 5, superior court.

After the meeting last night the following statement was issued by Marr, for the executive board of the new C. I. O. union:

"Returns of a mail election were counted tonight by members of Aircraft Local 1125 at a regular meeting in Eagles hall and the members voted overwhelmingly to affiliate with the Committee for Industrial Organization.

"Counting of the ballots was ordered and carried on by members of the lodge who had received no notice of a court injunction such as was issued to a few of the officers of the lodge. The members took the matter into their own hands by a vote on the floor of the meeting.

Officers Withdraw

"Unable to stay the action, the restrained officers withdrew from the meeting.

"Immediately after the count of the ballot, lodge officers were re-elected to head the C. I. O. organization and a C. I. O. representative was called into the meeting to present a new charter. Almost everyone present signed applications for membership in the C. I. O."

Door guards at the hall refused admission to a man who identified himself as Bentley, as well as other persons who, they said, were members of other lodges. Final tally of the ballots was not disclosed.

Later in after the meeting members of the executive board met to map out an extensive organization campaign, Marr said.

Meanwhile, Dr. Towne Nylander, regional director of the National Labor Relations board, announced in Los Angeles yesterday that members of his staff still are investigating charges that members of the union were discriminated against in recent "layoffs" at the aircraft plant and that no date had been set for a hearing.

S.D. Union 7/15/37

CONSAIR LETTER CHARGES DENIED

George R. Smith, recording secretary of Local 506, United Automobile Workers of America, yesterday denied that he was author of a letter, copies of which were circulated among employes of Consolidated Aircraft Corp.

The letter, bearing Smith's signature and exposing alleged defects in construction of planes at the aircraft factory, was mailed recently to Rear Adm. Ernest J. King, former bureau of aeronautics chief. Smith said the letter was a forgery.

"It is bad faith against the air corporation by reason of publicizing the original letter without my opportunity of denial," he said.

Local 506, U. A. W. A., recently transferred its affiliation with the American Federation of Labor to the Committee for Industrial Organization.

RUSS FLIERS' PALS, S. D. PUBLIC TO SEE HEROES; FOG FORGIVEN

S. D. Union 7/15/37

By EDWARD T. AUSTIN

Disappointment of San Diegans who had expected to get a glimpse of the Russian transpolar fliers yesterday morning, was nothing compared to that of three army comrades of the men, who have been here since last Feburary.

The three—A. K. Belenkov, J. S. Katouraev and M. E. Berlin—are Russian engineers, sent here from Moscow to observe the construction of two huge planes for their government in the Consolidated Aircraft plant. The planes, of the PBY1 type, will be ready for delivery in September. They were contracted for by Russia following the lifting of export restrictions upon this type of craft.

When definite word was received that the polar fliers intended to land in San Diego, their three comrades were drafted as a welcoming committee. They waited until reports of the San Jacinto landing had been received before abandoning their vigil.

Maj. Savavge Praises Skill

Maj. H. M. Savage, adjutant of Rockwell field, flew to the landing place yesterday morning and returned later in the day. He praised the keen eyes of the Russian fliers in picking an ideal spot on which to bring down their big craft. It [illegible] to it as to ny ter [illegible] been spread.

San Diego officials will have the privilege of entertaining the fliers. The chamber of commerce and the city officials yesterday afternoon sent a message to the Russian ambassador at Washington, asking him to bring the fliers to San Diego for a day as guests of the city. They arrived last night and will be honored at a reception today.

Considerable speculation was current as to whether the fliers actually were over San Diego. One report was that their destination, at the time they left Moscow, was San Diego and that they had intended to land on North Island. It later was pointed out that permission is necessary from Washington to land there and this never was obtained. So the other alternative, should a landing here have been in their plans, would have been to land on Lindbergh field.

'Climate Club' in Shadow

Hour by hour schedules, however, are conflicting and some observers pointed out that it is doubtful if the plane actually flew over San Diego. It was reported heard over Glendale at 5:58 and over the foothills there at 6:10. If these reports are correct, it would not have had time to reach San Diego and return to San Jacinto by 6:27, when it landed. Owing to the fog and their unfamiliarity with this area, it was pointed out that the fliers may have mistaken Los Angeles for San Diego.

That wasn't nearly as important, however, to climate enthusiasts as the fact that these enthusiasts were being kidded yesterday by friends who pointed out that here were three tourists who had traveled nearly 6500 miles to come to San Diego and couldn't come in because of the fog. Officials of the new climate club were reported bearing up well late yesterday. Restoratives and a day of brilliant sunshine had quieted several bad cases of nerves.

BOMBERS ROAR NORTHWARD IN NON-STOP TRIP

Six Ships Head For Kodiak; 11 Point Noses Toward Sitka

By United Press

SEATTLE, July 15.—Twenty-three U. S. Navy patrol bombing planes roared away from Sand Point Naval Air Station today on non-stop flights to Sitka and Kodiak, Alaska.

Last of the giant 13-ton two-motored planes rose from Lake Washington and got into formation in the air at 8:30 a. m.

The planes started taking the air at 7:15 a. m.

Six Head For Kodiak

Six ships of patrol squadron 7, under Lieut.-Comdr. R. L. Fullen, and six planes of VP-9 headed directly for Kodiak, across the treacherous Gulf of Alaska. Lieut.-Comdr. W. G. Tomlinson got Patrol Squadron 9 in "V" formation at 7:50 a. m.

The 12 planes expected to reach Kodiak in 10 hours.

Eleven new Consolidated flying boats of Patrol Squadron 12, led by Lieut.-Comdr. T. A. Gray, headed directly for Sitka, in southeastern Alaska, seven hours distant.

Due For Maneuvers

All the planes flew here two weeks ago non-stop from San Diego for a month and a half of maneuvers.

One plane of VP-12 was forced to stay behind because of a damaged pontoon. Necessary parts for repairs did not come here in time from San Diego.

CONSAIR WORKER 'FRAMED', CLAIM

S.D. Sun 7/15/37

George R. Smith, recording secretary of San Diego's new C.I.O. Aircraft Union, today charged that a letter purportedly written by him to Rear Adm. Ernest J. King, criticizing production methods of Consolidated Aircraft Corp., was "a forged document, an attempted frameup, designed to discredit myself and the new union."

Mimeograph copies of the letter appeared on bulletin boards of the aircraft corporation today. Smith asked Major Reuben H. Fleet, president of Consair, to produce the original letter, to determine whether or not the signature was authentic.

Fleet telegraphed I. M. Laddon, vice president and chief engineer of the concern, now in Washington, asking him to secure a photostatic copy of the letters from the Bureau of Aeronautics.

Copies of Smith's communication repudiating authorship of the letter also were posted on company bulletin boards.

"I hope that the photostatic copy does show the letter to be a forgery," Maj. Fleet said. "Then both the union and the company will be cleared."

ON UP AND UP!

S.D. Sun 7/15/37

But Still Most Round-About Man

By HAROLD KEEN

IT'S pretty hard for Jack Frost, secretary to Major Reuben H. Fleet, president of Consolidated Aircraft Corp. to conceive that there still are civilians who have never "gone up."

Perhaps that's because Jack himself has spent such a great part of his adult life in planes. His record of travel by aircraft, as a passenger, is almost without parallel in the United States.

One hundred and ninety times he has flown across the continent—475,000 miles, or 19 times around the world at the equator. And today he was "winging" again, east to Detroit with his wife on a vacation trip.

Much of Frost's unique travel statistics were compiled when he served as secretary to the former president of Transcontinental & Western Air, Dick Robbins. Shuttling back and forth between the airlines' terminals during the five years of his service enabled him to stay in the air longer than almost any non-aviator in the United States today.

Frost, while east, will inspect aircraft factories in Canada, among them being Fleet Aircraft of Canada, a concern in which Consolidated owns a large portion of stock.

And just for variation, Mr. and Mrs. Frost will drive back to San Diego, in a new auto acquired at the factory.

3 Feet, 10 Inches High, Tiny Plane Does 200 MPH

SAN DIEGO, Calif. — The "mighty midget" would be an appropriate description to give the new little racing plane recently completed by employes of Consolidated Aircraft Corp., for entry in the national air races at Cleveland next September. The craft was constructed by Young McClure, Lionel Machado, Herbert Jewel, Joe McCannon and Joe Sturgess at the aircraft plant, under direction of C. C. Flagg, final assembly inspector

Hugh Nicholson, Jr., also of the final essembly department, took the midget ship up on its first flight. Tony LaVerre will have the job of piloting the plane at the Cleveland races.

The plane, only three feet 10 inches high, is powered by an English Pabjoy Niagara engine of 90 horsepower, and has a top speed of 200 miles an hour. It was designed by Flagg and was built for entry in contests in which planes of the fourth category (440 pounds, or less) may participate.

The fuselage is welded crome moley steel tubing, faired with spruce formers, screen wire and fabric covering. The wings are single-piece cantilever type, having two spruce spars and plywood skin. Control surfaces are steel tube construction, fabric covered.

Other general characteristics of the plane include wing area, 35 square feet; span, 14 feet, 6 inches; length, 12 feet, 8 inches; height, three feet, 10 inches; weight (empty), 408 pounds; gas capacity, 12 gallons; oil capacity, two gallons; propellor, 62 inches diameter; speed, 200 miles an hour; landing speed, with flaps, 58 miles an hour; landing speed, without flaps, 70 miles an hour.

Consair Lays Off 200; Discrimination Denied

Materials Delayed By Eastern Strikes, Lack Of New Business Forced Move, Says Fleet

S. D. Sun — 7/10/37

With more than 200 factory workers discharged in an economy move at Consolidated Aircraft Corp. yesterday, Maj. Reuben H. Fleet, president, today declared that further layoffs will occur as long as the company remains a "victim of strikes in the East."

The third shift was discontinued entirely at the plant, and the night shift was curtailed except for the machine and paint shop workers and necessary janitors, watchmen and maintenance men.

Discrimination Charged

Dr. Towne Nylander, regional director of the National Labor Relations Board, was due in San Diego today to confer with company and aircraft union officials on charges by the latter that discrimination was shown by the management in the layoffs.

A statement issued last night by the executive board of Aircraft Lodge 1125, International Association of Machinists, after an emergency meeting, declared:

"We have definite evidence that it is the stated desire of the aircraft management to break up the existing union organization."

Fleet Denies Accusation

Maj. Fleet today said that affiliation with any organization was not considered in making the layoffs. "We merely discharged those who were least valuable to the company," he stated.

To compensate partially for the discontinuance of the shifts and the cancelling of Saturday work (for which employes were paid overtime wages of time and a half), remaining workers will receive 5 cents per hour more on the day shift and 10 cents per hour more will be paid to the few on the night shift. Salaried employes will be given a 5 per cent increase on the five-day base pay.

'Save Jobs For 650'

"By cutting out overtime, the third shift and part of the night shift, we were enabled to keep 650 men we would otherwise have had to discharge," Major Fleet said.

The layoffs are caused by the "shortages of material due to the strikes in the East, other delays beyond our control, and lack of new business," according to a bulletin board announcement posted in the plant late yesterday.

Re-employment of those laid off will depend entirely on whether Consolidated is successful in securing a contract for the PBY-4 Navy patrol bomber, on which its initial bid was too high, according to the Bureau of Aeronautics.

U. S. Economy Move

"Because of a governmental economy move, the Navy may not buy any more large seaplanes for some time to come," Major Fleet said.

Production of the PBY-2 and PBY-3 planes, for which Consolidated has contracts to construct 116, will be slowed down considerably as a result of the delay in obtaining material and the smaller personnel, according to Major Fleet. A total of 650 have been discharged by the concern since the employment peak several months ago of approximately 3280 factory workers.

NYLANDER IN CONSAIR PROBE

S. D. Sun 7/11/37

U. S. Official Gets Charges On Layoffs

Dr. E. Towne Nylander, regional director, National Labor Relations Board ,today carried in his brief case a formal charge of violation of the Wagner Act, signed by Aircrafters' Union members against the Consolidated Aircraft Corp.

The complaint charged discrimination in this week's mass layoff of factory workers.

Discrimination Charged

Dr. Nylander was called here late yesterday to investigate charges of workers that the aviation concern had "discriminated against union members in the layoff." He said he would stay in the city over the weekend to question union members and company officials.

Meanwhile Maj. Reuben H. Fleet, president of Consolidated, issued a statement to The Sun denying the union charges.

Least Valuable Men

"The men we were forced to dismiss were the least valuable to the concern," he said. "We hadn't the slightest idea how many union men were let go, nor how many non-union men.

'At Consolidated, every man is free to believe whichever way he may choose in religion and unionism. I have issued strict orders that these two subjects should not enter a man's qualifications."

AIRCRAFT UNION BATTLE CARRIED BEFORE COURT

AFL Group Seeks To Prevent Affiliation With CIO

S. D. Sun 7/12/37

Echoes of a public announcement that 2000 Consolidated Aircraft Corp. employes intend to affiliate with John L. Lewis' Committee for Industrial Organization reached superior court here today when the International Association of Machinists and C. L. Bentley, its representative, filed a petition for injunction designed to prevent the affiliation.

The action was directed against Aircraft Lodge No. 1125, local subsidiary of the international association. Attorneys for the international machinists' groupofS ternational machinists' group sought to enjoin the local lodge from dissolving its present affiliation with the American Federation of Labor on grounds that:

1—The meeting held July 7, at which aircraft employes indicated they intended to join the CIO was illegal because it was a secret gathering, in violation of the association's charter.

2—Officials of the local lodge neglected to obtain a written request from 10 per cent of its members before calling the meeting. Therefore, under the association's charter, any action taken at the July 7 meeting is void.

3—The local lodge cannot dissolve its association with the international machinists group because it has an outstanding contract with the aircraft corporation. Under provisions of the international group, the action to dissolve therefore is prohibited.

The petition probably will be heard by Superior Judge L. N. Turrentine next Monday at 10 a. m., attorneys for the international group said.

Meanwhile, charges by former Consolidated Aircraft Corp. employes that they were discriminated against in last week's layoff were being considered today by David Persinger, regional attorney for the National Labor Relations Board.

Persinger returned to Los Angeles early today after rounding up testimony from members of Aircraft local 1125, who claim that their union affiliations reacted to their disadvantage in the discharges. Dr. Towne Nylander, regional director of the board, started investigation of the charges Saturday preparatory to a government hearing.

Ballots distributed among the aircraft members July 7, designed to obtain a formal vote regarding the local machinists group's intention to become a CIO affiliate, were to be collected at the postoffice tonight, it was learned.

Named defendants with the local group were James Burney, Louis Tournie and Fred Hallengren, alleged to have formed the committee which assertedly distributed ballots to aircraft workers.

AIRCRAFTERS UNION VOTES TO JOIN CIO

7/13/37

Affiliation With UAW Decided; Election Retains Officers

The United Automobile Workers of America, a CIO union, has invaded the San Diego labor field.

By an "overwhelming" majority, members of the former Aircraft Local 1125, affiliated with the A. F. L. International Association of Machinists, today had indicated their desire to withdraw from the older labor camp.

Mail referendum ballots to aircraft workers, when counted in Eagles' Hall last night, revealed, according to a union statement, that the "members voted overwhelmingly to affiliate with the Committee for Industrial Organization.

Charter Received

Officers of the former A. F. of L. lodge were re-elected and a charter was presented the group by a CIO representative.

"Almost everyone present signed applications for membership in the CIO," the union statement said.

Earlier in the day, C. L. Bentley, grand lodge representative of the International Association of Machinists, petitioned for an injunction to prevent the Aircraft local from dissolving its affiliation with the A. F. of L.

Court Action Fought

An alternative writ of prohibition, directing the local and its officials to desist from counting the ballots pending the injunction hearing before Superior Judge L. N. Turrentine next Monday at 10 a. m., was served on several union officers after being signed by Judge Clarence Harden.

The officers thus restrained were, however, unable to prevent the general membership from conducting the election, according to the union statement, which declared:

"Counting of the ballots was ordered and carried on by members of the lodge who had received no notice of a court injunction such as was issued to a few of the officers of the lodge. The members took the matter into their own hands by a vote on the floor of the meeting.

"Unable to stay the action, the restrained officers withdrew from the meeting."

Last night's proceedings were "purely illegal," John T. Holt, attorney for the International Association of Machinists, commented today. "The membership ran away with the meeting, in defiance of writs of prohibition," he said.

"It seems to me that last night's action was in contempt of court," Bentley said. He was awaiting orders from his Washington headquarters as to the next step to be taken.

Meanwhile investigation of charges by the aricraft local that a large number of its members had been discriminated against in last week's layoff by Consolidated Aircraft Corp. was continued in Los Angeles today by Dr. Towne Nylander, regional director of the National Labor Relations Board.

Hotel Workers To Hold 'CIO Meeting'

Harry Silver, American Federation of Labor organizer, today planned to hold an organization meeting of all hotel workers in San Diego at 8:30 p. m. today, designed to form a union similar to the Committee for Industrial Organization's vertical union plan.

The meeting will be held in the Bartenders' and Waiters' Union headquarters, 813 Fifth-av. Silver said that already nearly 500 hotel workers have signed membership application blanks.

LOCAL AIRCRAFT UNIONISTS VOTE TO JOIN C. I. O.

S. D. UNION 7/13/37

Ballot Said 'Overwhelming;' Court Order Is Avoided In Counting of Tallies.

Members of the A. F. of L.-affiliated Aircraft Local 1125, American Association of Machinists, voted "overwhelmingly" to join the rival C. I. O., it was announced last night after a mail referendum ballot was counted.

Officers of the A. F. of L. lodge were re-elected and a charter presented at a meeting in Eagles' hall, giving the organization title of Local 506, International Union, United Automobile Workers of America, R. N. Marr, vice president, announced.

Counting of the ballot and presentation of the charter brought new complications in San Diego's A. F. of L.-C. I. O. controversy which was taken into court yesterday when C. L Bentley, member of the International Association of Machinists from San Francisco, sought to enjoin the aircraft group and various of its officers and members from conducting the vote on the question of affiliation and from counting the ballots

Hearing Monday

The attorney for the international obtained an alternative writ of prohibition, directing the local and its officials to desist in plans for an election and counting the ballots pending a hearing set for 10 Monday morning in Department 5, superior court.

After the meeting last night the following statement was issued by Marr, for the executive board of the new C. I. O. union:

"Returns of a mail election were counted tonight by members of Aircraft Local 1125 at a regular meeting in Eagles hall and the members voted overwhelmingly to affiliate with the Committee for Industrial Organization.

"Counting of the ballots was ordered and carried on by members of the lodge who had received no notice of a court injunction such as was issued to a few of the officers of the lodge. The members took the matter into their own hands by a vote on the floor of the meeting.

Officers Withdraw

"Unable to stay the action, the restrained officers withdrew from the meeting.

"Immediately after the count of the ballot, lodge officers were re-elected to head the C. I. O. organization and a C. I. O. representative was called into the meeting to present a new charter. Almost everyone present signed applications for membership in the C. I. O."

Door guards at the hall refused admission to a man who identified himself as Bentley, as well as other persons who, they said, were members of other lodges. Final tally of the ballots was not disclosed.

Later in after the meeting members of the executive board met to map out an extensive organization campaign, Marr said.

Meanwhile, Dr. Towne Nylander, regional director of the National Labor Relations board, announced in Los Angeles yesterday that members of his staff still are investigating charges that members of the union were discriminated against in recent "layoffs" at the aircraft plant and that no date had been set for a hearing.

S.D. Union 7/15/37

CONSAIR LETTER CHARGES DENIED

George R. Smith, recording secretary of Local 506, United Automobile Workers of America, yesterday denied that he was author of a letter, copies of which were circulated among employes of Consolidated Aircraft Corp.

The letter, bearing Smith's signature and exposing alleged defects in construction of planes at the aircraft factory, was mailed recently to Rear Adm. Ernest J. King, former bureau of aeronautics chief. Smith said the letter was a forgery.

"It is bad faith against the air corporation by reason of publicizing the original letter without my opportunity of denial," he said.

Local 506, U. A. W. A., recently transferred its affiliation with the American Federation of Labor to the Committee for Industrial Organization.

RUSS FLIERS' PALS, S. D. PUBLIC TO SEE HEROES; FOG FORGIVEN

S. D. Union 7/15/37

By EDWARD T. AUSTIN

Disappointment of San Diegans who had expected to get a glimpse of the Russian transpolar fliers yesterday morning, was nothing compared to that of three army comrades of the men, who have been here since last Feburary.

The three—A. K. Belenkov, J. S. Katouraev and M. E. Berlin—are Russian engineers, sent here from Moscow to observe the construction of two huge planes for their government in the Consolidated Aircraft plant. The planes, of the PBY1 type, will be ready for delivery in September. They were contracted for by Russia following the lifting of export restrictions upon this type of craft.

When definite word was received that the polar fliers intended to land in San Diego, their three comrades were drafted as a welcoming committee. They waited until reports of the San Jacinto landing had been received before abandoning their vigil.

Maj. Savavge Praises Skill

Maj. H. M. Savage, adjutant of Rockwell field, flew to the landing place yesterday morning and returned later in the day. He praised the keen eyes of the Russian fliers in picking an ideal spot on which to bring down their big craft. It [illegible] spread.

San Diego officials will have the privilege of entertaining the fliers. The chamber of commerce and the city officials yesterday afternoon sent a message to the Russian ambassador at Washington, asking him to bring the fliers to San Diego for a day as guests of the city. They arrived last night and will be honored at a reception today.

Considerable speculation was current as to whether the fliers actually were over San Diego. One report was that their destination, at the time they left Moscow, was San Diego and that they had intended to land on North Island. It later was pointed out that permission is necessary from Washington to land there and this never was obtained. So the other alternative, should a landing here have been in their plans, would have been to land on Lindbergh field.

'Climate Club' in Shadow

Hour by hour schedules, however, are conflicting and some observers pointed out that it is doubtful if the plane actually flew over San Diego. It was reported heard over Glendale at 5:58 and over the foothills there at 6:10. If these reports are correct, it would not have had time to reach San Diego and return to San Jacinto by 6:27, when it landed. Owing to the fog and their unfamiliarity with this area, it was pointed out that the fliers may have mistaken Los Angeles for San Diego.

[illegible] to come to San Diego and couldn't come in because of the fog. Officials of the new climate club were reported bearing up well late yesterday. Restoratives and a day of brilliant sunshine had quieted several bad cases of nerves.

Soviet Fliers On Visit To San Diego

Navy, Civic Leaders Attend Banquet For Polar Fliers; Trio Fresh Despite Lack Of Sleep

By HAROLD KEEN
The Sun's Navy Editor

San Diego—a city used to great aviation feats—today demonstrated its admiration for the three Russian fliers who performed one of the greatest aeronautical achievements in history, a non-stop flight of 6700 miles from Moscow to a small pasture near San Jacinto.

Civic and military leaders honored the airmen at a Chamber of Commerce luncheon in the Plata Real, U. S. Grant Hotel, at noon.

Gannon, Mayor Speak

Jack Hicklin, chairman of the Chamber's aviation committee, presided. Speakers were Rear Adm. Sinclair Gannon, 11th Naval District commandant; Mayor Percy J. Benbough; Chairman of the Board of Supervisors Walter Bellon; Grigori Kokham, acting U. C. consul-general for Russia, who introduced the three aviators—Col. Mikhail Gromov, pilot; Maj. Andrei Yumeshef, co-pilot, and Capt. Sergei Danilin, navigator.

In their native tongue the fliers described the highlights of their perilous flight over the top of the world.

Arrive At Midnight

At 12:35 p. m. radio stations KGB and KFSD carried nation-wide broadcasts of the event.

The three coatless, clean-shaven youngish-looking me

Navy And Civic Leaders Speak At Luncheon For Polar Fliers

(Continued from Page 1)

stepped out of an automobile a the entrance of the Grant Hote shortly before midnight last night

Broadway was dark and de serted; only a few persons in th hotel lobby were sleepy observer of the entrance into San Dieg of the Soviet heroes.

From their nonchalant appear ance and dress, they might hav been vacationers who had just returned from a fishing trip.

Gokham Interprets

Grigori Gokham acted as in terpreter.

"Give us just a moment o privacy, gentlemen," he pleaded with newspapermen in the lobby.

We were invited into their room as soon as they had settled themselves.

All three leaped up from their seats at our entrance. Yumesheff the handsome blond co-pilot smiled broadly, so did the stock navigator Danilin. Col. Gromov holder of every Soviet military decoration, was the most serious and reserved of the three.

Strain Not Apparent

None appeared fatigued, de spite the fact they had only three to four hours sleep at March Field since their arrival. All looked

Division Ordered Sent To China Front

By United Press

TOKIO, Friday, July 16.—Em peror Hirohito today approved steps taken by the government which have placed the empire on a war footing and sanctioned the sending of the 12th division of the imperial army from Kurume, in southwestern Japan proper, to the North China fighting area.

One report was that the 12th division had landed in Datien and was moving toward Peiping.

This news, emphasizing the extreme gravity with which the Peiping crisis is regarded, came soon after an order to 3,000,000 army reservists to be ready for a call to duty.

It followed also a meeting of provincial governors with the cabinet at which Vice Adm. Mitsumasa Yonai, navy minister, announced that warships were being sent to the China coast.

Japan already is pouring thousands upon thousands of troops

NEW FLIGHT SOON

S. D. UNION 7/16/37

Fliers Contrast S. D. Climate With Polar Cold; Describe Long Training for Trip.

LOS ANGELES, July 15 (A.P.)—Russia's three latest conquerors of the North Pole airway arrived tonight from San Diego and were met at the train by civic representatives and many other well-wishers.

How the Soviet government prepared for 18 months for the flight from Moscow over the North Pole to California was revealed yesterday by Col. Mikhail Gromoff, pilot of the Russian plane that landed at San Jacinto at dawn Wednesday after a 62-hour nonstop flight from the land of the steppes.

Speaking at a city-chamber of commerce luncheon in honor of the Russian airmen, Gromoff, whose address was interpreted by Grigori Gokham, acting Soviet consul general, related that the two flights of Russian airmen over the North Pole to the U. S. were the outcome of careful planning and training.

He declared it was a distinct surprise to the fliers and the Soviet government that the plane flew so far although he previously had admitted San Diego was their destination following the take-off from Moscow. It also was learned yesterday that a third flight is projected from Moscow to San Diego July 23.

"The reason we chose San Diego," said Gromoff, speaking rapidly in Russian, "was that this section of the United States, so warm, beautiful and hospitable, is in striking contrast to conditions at the North Pole." He expressed a wish that American aviators would reverse the flight, starting from San Diego

and bettering the world record of 6220 miles which he hoped would officially be recognized by the Federation Aeronautique Internationale.

Cooperation Praised

Gromoff voiced appreciation at the cooperation extended to himself and his brother airmen by the U. S. army and navy, aviation organizations and for the good wishes of the American people. He said he hoped the flight would strengthen ties of friendship between the United States and the Soviet Union.

In introducing Gromoff, the acting Russian consul said the flier flew 72 hours nonstop, covering 12,411 kilometers, in 1934 in preparation for the California flight.

Co-pilot Andrei Yumosheff is the holder of 12 world records for distance and duration flying and like Gromoff has had years of experience in the Soviet flying corps. He, too, voiced his thanks and appreciation

ham during his stay in San Diego. The London Daily Express talked for 30 minutes with Gokham to learn complete details of the world record air voyage and the plans for the flight to be made July 23.

Prior to the luncheon the Soviet consul, accompanied by the fliers, went to the Lion Clothing Co., where they made extensive purchases of suits, socks and other wearing apparel. In the afternoon they inspected the Consolidated Aircraft Corp. plant and at 7 last night left for Los Angeles.

The plane, which landed in a field near San Jacinto, is to be dismantled immediately and shipped back to Russia.

TO BOULDER

TRIBUNE June 19

After landing on Lake Meade at Boulder dam, through the courtesy of the department of interior, a PBY-1-type flying boat built at the Consolidated Aircraft Corp. plant on Lindbergh field for Richard Archbold, research associate of the department of mammals of the American Museum of Natural History, returned to San Diego late yesterday afternoon. An official of Consolidated said today the craft has been officially accepted by Archbold, who plans to make a flight next winter from the United States to New Guinea for scientific purposes.

"GUBA" ("Sudden Storm") is the name appearing on the flying boat, and the craft carries license number NC-777, a number formerly used by Archbold, which the department of commerce reserved for him. While Archbold does not plan to leave the United States for New Guinea in the plane until next winter, he contemplates a flight from San Diego to the east coast, starting a week from today.

Five On Trip

A pilot and four passengers were in the "Guba" on the flight to Boulder dam and return. Those in the craft on the flight from here to Lake Meade were Archbold, William Wheatley, pilot; Russell Rogers, Gerald Brown and Harold Ram. Accompanying the flying boat from here was a Fleetster plane from Consolidated, carrying George Newman, Otto Menge, Roy Kluver and Frank Learman. For the return trip Wheatley transferred to the Fleetster, while Kluver transferred to the flying boat. Rogers was pilot of the Guba on the return flight.

The Fleetster accompanied the larger plane to get pictures of it while in flight. The two planes circled over Lake Meade for about 45 minutes before landing yesterday morning. General arrangements at Boulder dam were made by E. Campbell of the Grand Canyon Air Lines, while the department of interior arrangements for landing on the lake were made through Guy D. Edwards, supervisor of the Boulder dam recreational area.

PACE FAST IN 12-SHIP FLIGHT

TRIBUNE June 22

Bulletin—At 11 a.m. the 12 navy patrol planes from San Diego were 30 miles southeast of Corinto, Nicaragua, crossing the Central American country. They had 500 miles yet to go, and had flown 2629 miles, base force aircraft authorities here report.

Expected to arrive at Coco Solo, C. Z., between 1 and 3 p.m. (P.S.T.), 12 giant navy patrol planes which left here at 11:30 a.m. yesterday were making good time on their flight over the Central America area today.

Speed 112 Miles

By 9 a.m. the fliers were off the west coast of Salvador, passing Acajutla, Salvador, and speeding on towards the Gulf of Fonseca, from where they were to swing inland and cross Nicaragua to the east coast. Their speed at that hour was reported to be 112 miles per hour, with 695 miles remaining yet to be covered. Acajutla is 2410 miles from San Diego.

While no reports on the weather were receieved at 9 a.m., good flight weather conditions were reported during the night, when the planes were kept at an average altitude of 10,000 feet, flying against a 10-knot wind. The fliers crossed the Gulf of Tehuantepec on the southwestern coast of Mexico at 5 a.m., when they were 2107 miles from San Diego and 980 nautical miles from Coco Solo.

The Associated Press, in a dispatch from Colon, Panama, said the planes were expected to arrive at Coco Solo at 4 p.m. (EST), if the weather over Nicaragua and off the Central American coast did not slow them.

Aboard the planes, which are being delivered from here to Coco Solo for duty there, are 13 officers and 60 enlisted men, led by Lt. Robert W. Morse, squadron commander. The log of the flight as received in radio reports from the planes is as follows:

1 p.m., 140 nautical miles south of San Diego at Pt. San Quentin; 10,000 feet altitude, slight headwind.

3 p.m., 310 nautical miles south of San Diego at San Engenio point; 9000 feet altitude, slight headwind.

5 p.m., 513 nautical miles south of San Diego, 45 miles northwest of Cape San Lazaro; 10,000 feet altitude, 10-knot headwind.

7 p.m., 715 nautical miles south of San Diego, 15 miles southwest of Cape Falso, tip of Lower California; 10,000 feet altitude, 10-knot headwind.

8:30 p.m., 530 miles northwest of Acapulco, halfway across the Gulf of Lower California; altitude between 9000 and 10,000 feet; 10-knot headwind; speed last hour and a half, 102 knots (117.3 statute miles.)

11 p.m., (midnight aboard the planes), 1265 miles south of San Diego, 1822 miles from Coco Solo; 9000 feet altitude.

3 a.m., 1755 miles south of San Diego.

5 a.m., 65 miles south of Salina Cruz, Mex., making then approximately 2107 miles south of San Diego with 980 nautical miles to go.

9 a.m., 2410 miles from San Diego, and 695 miles from Coco Solo, passing Acajutla on the coast of Salvador. Speed: 112 miles an hour.

ment, and that one should not wait

Verdict

MAKING TRIP TO N. Y. IN 18 HOURS, PLAN

A transcontinental 2700-mile non-stop flight from San Diego to New York is planned for this week-end by Richard Archbold, research associate of the American Museum of Natural History, in the $250,000 Consolidated Aircraft Corp.-built PBY-1 type flying boat he has purchased for eventual use on a scientific expedition from the United States to New Guinea. Weather conditions permitting, Archbold hopes to lift his huge plane from the waters of San Diego bay at 4:30 p.m. Saturday and land within 18 hours at North Beach airport, New York City.

The flight attempt is the first by a flying boat, and it is believed that Archbold's plane, which last week made aviation history in the Pacific southwest when it was flown from San Diego to Lake Meade, Boulder dam, and from here to Lake Tahoe for landing and take-off tests, will be the largest ever flown across the continent non-stop. The flight will be watched with unusual interest by military and naval interests because of the demonstration of the practicability of moving huge patrol planes from coast to coast across country.

Archbold announced the plans for his transcontinental flight attempt less than 24 hours after the navy successfully completed a record 3085-mile non-stop flight of 12 PBY-1 patrol planes from San Diego to Coco Solo, C. Z. Twenty-four planes of this type, all built at the Consclidated plant here, were flown earlier this year from San Diego to Hawaii.

Returning in July

With Archbold in the plane will be Russell Rogers, pilot; Gerald Brown, engineer; Lt. Comdr. L. R. Gray, U.S.N., ret., who operates a marine and aircraft navigation school here, navigator; Harold Ramm, radio operator, and possibly William Wheatley, Consolidated chief test pilot, as relief pilot. Archbold, who has 600 hours' flying time, expects to be at the controls much of the way.

From New York, Archbold plans to take the plane to Schuyler lake, near Cooperstown, N. Y., where his mother, Mrs. John F. Archbold, lives. He is to start back westward with the plane next month, flying to Yellowstone park for high altitude landing and take-off tests on lakes in Wyoming, notably at Yellowstone lake, which has an altitude

Washington, D. C., one of the most complete radio and interior-communication systems ever provided in any plane. It was designed especially for his particular service and manufactured to the same rigid specifications met by Bendix in constructing much of the radio equipment for similar Consolidated PBY-1 planes purchased by the navy and used in the recent rec-odd-breaking formation flights from San Diego to Hawaii and Panama.

The installation just has been completed under supervision of Bendix engineers and consists of a main transmitter, auxiliary transmitter, two complete receivers, a radio direction finder and an intercommunication system which extends throughout the ship and also permits both pilots to use the radio facilities directly when necessary. Tests made during recent flights of the plane, which carries the license number NC-777, from San Diego to Lake Meade and Lake Tahoe, gave reliable radio phone communication in excess of 500 miles with the main transmitter, while over distance up to 150 miles the auxiliary transmitter provided equally reliable communication.

Navy-Type Radio

The radio direction finding equipment is of a type similar to that designed and manufactured by The Bendix Radio Corp. for installation on all Consolidated planes purchased by the navy, and recently adopted by various airlines for direction-finding and the elimination of "rain-static" effects on their

...vy Officers and Men Rest at Coco Solo After Record 3085-Mile Flight From S. D.

...irs Fought Last Part of Journey

The navy today had demonstrated for the third time this year in long-distance over-water flights the stamina of its fliers and the quality of Consolidated Aircraft Corp.-built giant patrol boats, as 73 officers and men rested at Coco Solo, C. Z., after a 3085-mile non-stop flight from San Diego, which ended at 2:58 p.m. (PST) yesterday, 27 hours and 58 minutes after the fliers took off from San Diego bay. The flight was more than 500 miles longer than the Hawaiian flights of Consolidated Aircraft Corp.-built naval patrol planes made from here in January and April.

Under the command of Lt. Robert W. Morse, the planes made the flight to the Canal Zone without unusual incident, except for encountering thunder storms over the last part of the flight. They left San Diego at 11:30 a.m. Monday. Most of the flight, which was made over water from here to Nicaragua and thence overland to the Caribbean coast, was made at an altitude of 10,000 feet, the planes flying in V formation.

As the flight was in progress base force aircraft authorities here made available reports on the progress of the planes as they were received, cooperating to the fullest extent with the press in enabling the public to learn the features of the flight. Rear Adm. Ernest J. King commands the base force aircraft, and this is the third lengthy flight of patrol planes made during his tour of duty here in that capacity.

Consolidated Aircraft Corp. officials expressed gratification at having "played a part" in making the flight completed yesterday and the flights earlier this year successful, and voiced tribute to the ability of the navy's airmen.

The officers and men who made the "routine delivery" flight of 12 navy planes from San Diego to Coco Solo, C. Z., which ended yesterday are shown above. This was made at North Island shortly before the planes left. The fliers lifted the planes from the waters of San Diego bay at 11:30 a.m. Monday, and at 2:58 p.m. yesterday completed the record nonstop flight.

Will Hop Today

OFF TODAY FOR N. Y. IN S.D. PLANE

S.D. TRIBUNE JUNE 24

With his departure time definitely set at 4 p.m. today, Richard Archbold, research associate of the American Museum of Natural History, and the five men who will accompany him on a non-stop flight attempt from San Diego to New York in his $250,000 Consolidated Aircraft Corp.-built PBY-type flying boat, busied themselves with last minute preparations this afternoon. Decision to leave today instead of Saturday, as originally planned, was made when C. R. Guern, meteorologist in charge of the Lindbergh field airport weather bureau station, said weather conditions for the flight would be better today than Saturday.

Archbold hopes to set the flying boat down on the water at North Beach, New York City, within 18 hours after taking off from San Diego bay. His plane, the Guba, has a gross weight of 27,000 pounds. The 1750 gallons of gasoline it carries weighs 10,500 pounds. Archbold, who plans to use the plane on a scientific flight to New Guinea next winter, said he will keep the craft at an altitude of around 10,000 feet for the San Diego-New York flight.

S. D. AIRBOAT SPANS NATION IN 17 HOURS

Archbold Makes First Seaplane Flight Overland, Lands In New York

S.D.SUN JUNE 25, 37

The conquest of land by a San Diego-built seaplane, which spanned 2700 miles of desert wastes, rugged mountains and dry plains, where a forced landing would have been disastrous, was accomplished today for the first time in aviation history.

Busy New Yorkers rushing back to offices at the close of their lunch hours witnessed the huge, silver-winged Consolidated airboat of Richard Archbold swoop over the city as it descended from a 10,000-foot height in a long, steady glide toward the Atlantic.

Sudden Departure

The flight which started in San Diego at 4:50:30 p. m. yesterday ended in New York at 9:54:30 a. m. (P.S.T.) today in 17 hours, 4 minutes.

The plane was timed unofficially when it crossed the southern boundary of the airport. It circled in the vicinity of the port, came down close to the water on Flushing bay, went into the air, circled again and finally landed.

The flight was timed by official timers of the National Aeronautical Association. Archbold and his crew were welcomed by representatives of the American Museum of Natural History.

To avoid expected heavy storms along the flight route over the weekend, Archbold suddenly decided yesterday afternoon to leave for the east immediately.

Hurried Preparations

His $250,000 plane was prepared in a hectic last few hours, and entered the bay from the municipal seaplane ramp near the Coast

Soviet Air Heroes Feted On Visit To San Diego

Navy, Civic Leaders Attend Banquet For Polar Fliers; Trio Fresh Despite Lack Of Sleep

By HAROLD KEEN
The Sun's Navy Editor

San Diego—a city used to great aviation feats—today demonstrated its admiration for the three Russian fliers who performed one of the greatest aeronautical achievements in history, a non-stop flight of 6700 miles from Moscow to a small pasture near San Jacinto.

Civic and military leaders honored the airmen at a Chamber of Commerce luncheon in the Plata Real, U. S. Grant Hotel, at noon.

Gannon, Mayor Speak

Jack Hicklin, chairman of the Chamber's aviation committee, presided. Speakers were Rear Adm. Sinclair Gannon, 11th Naval District commandant; Mayor Percy J. Benbough; Chairman of the Board of Supervisors Walter Bellon; Grigori Kokham, acting U. C. consul-general for Russia, who introduced the three aviators—Col. Mikhail Gromov, pilot; Maj. Andrei Yumeshef, co-pilot, and Capt. Sergei Danilin, navigator.

In their native tongue the fliers described the highlights of their perilous flight over the top of the world.

Arrive At Midnight

At 12:35 p. m. radio stations KGB and KFSD carried nation-wide broadcasts of the event.

The three coatless, clean-shaven youngish-looking men

Navy And Civic Leaders Speak At Luncheon For Polar Fliers

(Continued from Page 1)

stepped out of an automobile a the entrance of the Grant Hote shortly before midnight last night

Broadway was dark and de serted; only a few persons in th hotel lobby were sleepy observer of the entrance into San Dieg of the Soviet heroes.

From their nonchalant appear ance and dress, they might hav been vacationers who had jus returned from a fishing trip.

Gokham Interprets

Grigori Gokham acted as in terpreter.

"Give us just a moment o privacy, gentlemen," he pleade with newspapermen in the lobby.

We were invited into their room as soon as they had settled themselves.

All three leaped up from their seats at our entrance. Yumesheff the handsome blond co-pilot smiled broadly, so did the stocky navigator Danilin. Col. Gromov holder of every Soviet military decoration, was the most serious and reserved of the three.

Strain Not Apparent

None appeared fatigued, despite the fact they had only three to four hours sleep at March Field since their arrival. All looked

Dr. William E. Roberts, chairman of the committee on English-speak-

A total of $279,500 worth of realty sales has been made by the George L. Barney Co. within the last 60 days, it was announced today. According to Wilbur J. Brown, sales manager, all these sales were made by himself and associates, G. B. Parkinson, H. G. Bailey and Archibald Clarke.

"It is our opinion," said Brown, "that well-selected San Diego real estate is by far the safest investment, and that one should not wait

72 Navy Officers and Men Rest at Coco Solo After Record 3085-Mile Flight From S. D.

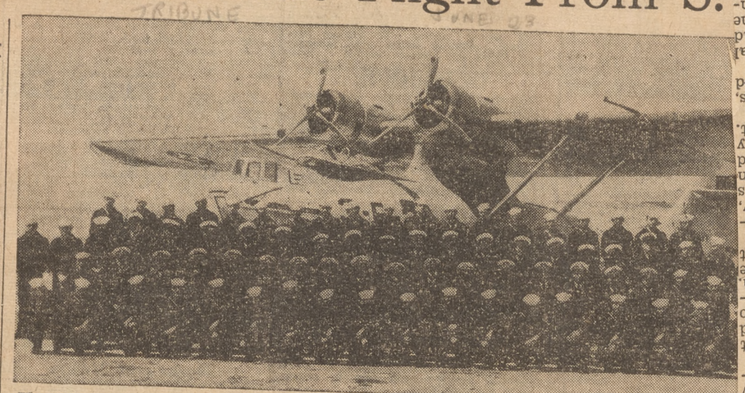
ight of Journey

The navy today had demonstrated for the third time this year in long-distance over-water flights the stamina of its fliers and the quality of Consolidated Aircraft Corp.-built giant patrol boats, as 73 officers and men rested at Coco Solo, C. Z., after a 3085-mile non-stop flight from San Diego, which ended at 2:58 p.m. (PST) yesterday, 27 hours and 58 minutes after the fliers took off from San Diego bay. The flight was more than 500 miles longer than the Hawaiian flights of Consolidated Aircraft Corp.-built naval patrol planes made from here in January and April.

Under the command of Lt. Robert W. Morse, the planes made the flight to the Canal Zone without unusual incident, except for encountering thunder storms over the last part of the flight. They left San Diego at 11:30 a.m. Monday. Most of the flight, which was made over water from here to Nicaragua and thence overland to the Caribbean coast, was made at an altitude of 10,000 feet, the planes flying in V formation.

As the flight was in progress base force aircraft authorities here made available reports on the progress of the planes as they were received, cooperating to the fullest extent with the press in enabling the public to learn the features of the flight. Rear Adm. Ernest J. King commands the base force aircraft, and this is the third lengthy flight of patrol planes made during his tour of duty here in that capacity.

Consolidated Aircraft Corp. officials expressed gratification at having "played a part" in making the flight completed yesterday and the flights earlier this year successful, and voiced tribute to the ability of the navy's airmen.



The officers and men who made the "routine delivery" flight of 12 navy planes from San Diego to Solo, C. Z., which ended yesterday are shown above. This was made at North Island shortly be planes left. The fliers lifted the planes from the waters of San Diego bay at 11:30 a.m. Monday 2:58 p.m. yesterday completed the record nonstop flight.

Verdict

MAKING TRIP TO N. Y. IN 18 HOURS, PLAN

A transcontinental 2700-mile non-stop flight from San Diego to New York is planned for this weekend by Richard Archbold, research associate of the American Museum of Natural History, in the $250,000 Consolidated Aircraft Corp.-built PBY-1 type flying boat he has purchased for eventual use on a scientific expedition from the United States to New Guinea. Weather conditions permitting, Archbold hopes to lift his huge plane from the waters of San Diego bay at 4:30 p.m. Saturday and land within 18 hours at North Beach airport, New York City.

The flight attempt is the first by a flying boat, and it is believed that Archbold's plane, which last week made aviation history in the Pacific southwest when it was flown from San Diego to Lake Meade, Boulder dam, and from here to Lake Tahoe for landing and take-off tests, will be the largest ever flown across the continent non-stop. The flight will be watched with unusual interest by military and naval interests because of the demonstration of the practicability of moving huge patrol planes from coast to coast across country.

Archbold announced the plans for his transcontinental flight attempt less than 24 hours after the navy successfully completed a record 3085-mile non-stop flight of 12 PBY-1 patrol planes from San Diego to Coco Solo, C. Z. Twenty-four planes of this type, all built at the Consolidated plant here, were flown earlier this year from San Diego to Hawaii.

Returning in July

With Archbold in the plane will be Russell Rogers, pilot; Gerald Brown, engineer; Lt. Comdr. L. R. Gray, U.S.N., ret., who operates a marine and aircraft navigation school here, navigator; Harold Ramm, radio operator, and possibly William Wheatley, Consolidated chief test pilot, as relief pilot. Archbold, who has 600 hours' flying time, expects to be at the controls much of the way.

From New York, Archbold plans to take the plane to Schuyler lake, near Cooperstown, N. Y., where his mother, Mrs. John F. Archbold, lives. He is to start back westward with the plane next month, flying to Yellowstone park for high altitude landing and take-off tests on lakes in Wyoming, notably at Yellowstone lake, which has an altitude

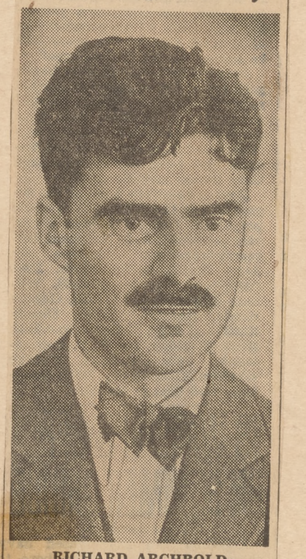
Washington, D. C., one of the most complete radio and interior-communication systems ever provided in any plane. It was designed especially for his particular service and manufactured to the same rigid specifications met by Bendix in constructing much of the radio equipment for similar Consolidated PBY-1 planes purchased by the navy and used in the recent record-breaking formation flights from San Diego to Hawaii and Panama.

The installation just has been completed under supervision of Bendix engineers and consists of a main transmitter, auxiliary transmitter, two complete receivers, a radio direction finder and an intercommunication system which extends throughout the ship and also permits both pilots to use the radio facilities directly when necessary. Tests made during recent flights of the plane, which carries the license number NC-777, from San Diego to Lake Meade and Lake Tahoe, gave reliable radio phone communication in excess of 500 miles with the main transmitter, while over distance up to 150 miles the auxiliary transmitter provided equally reliable communication.

Navy-Type Radio

The radio direction finding equipment is of a type similar to that designed and manufactured by The Bendix Radio Corp. for installation on all Consolidated planes purchased by the navy, and recently adopted by various airlines for direction-finding and the elimination of "rain-static" effects on their

Will Hop Today



RICHARD ARCHBOLD

TRIBUNE — JUNE 24

Plans for Richard Archbold's attempt to be the first flier to span the continent in a flying boat were speeded up today as a result of the possibility of unfavorable flight weather conditions over the route between San Diego and New York by Saturday, the day he originally expected to leave here. The report this noon was that the 30-year-old research associate of the American Museum of Natural History, who has purchased a $250,000 PBY-type flying boat built here at the Consolidated Aircraft Corp. plant, would take off from San Diego bay at 4 p.m. today.

Archbold said he hopes to land at North Beach airport, New York City, within 17 or 18 hours after leaving San Diego. He will be at the controls for part of the flight.

With him in the plane will be Russell Rogers, pilot; William Wheatley, Consolidated chief test pilot; Gerald Brown, engineer; Lt. Comdr. L. R. Gray, U.S.N., ret., navigator, and Harold Ramm, radio operator.

C. R. Guern, meteorologist in charge of the San Diego municipal airport weather bureau station, reported that by taking off today Archbold and his companions could expect the best flight weather conditions for a possible period of five days. Guern was preparing a special weather map at noon, and said that while thunder storms are indicated in the great plains region north of Kansas and also in the lower Mississippi valley, the outlook was that the Guba, Archbold's plane, could fly between the two storms.

"Conditions don't look entirely too favorable for a flight, but today is the best time if he wants to get to New York before Monday," said Guern. "By the end of the week the outlook is for the storm to be over the New York area." Guern said a forecast would be received here before the takeoff from the district airways forecaster at Burbank. He said thunderstorms could be expected over Arizona and New Mexico this afternoon, but said they apparently were not severe.

Archbold's route leads each from here to Amarillo, Tex., and thence northeast to Cincinnati, Pittsburgh and Scranton, and on to New York. He said that during the night he planned to follow TWA beacons from Winslow, Ariz., to Amarillo. The only sizeable bodies of water he passes over are the Salton Sea, Roosevelt reservoir and the Mississippi and Ohio rivers.

William Van Dusen of the chamber of commerce, T. Claude Ryan and Jackson Hicklin, members of local contest committee to install and seal two barographs for National Aeronautical association record purposes, and to observe and time the takeoff for the N.A.A., were busy early this afternoon installing the barographs, which arrived here from N.A.A. headquarters at Washington, D. C., by air express.

Archbold's flight attempt is the first non-stop transcontinental attempt in a flying boat, and is part of a series of tests he is making preparatory to taking the plane on a scientific expedition next winter to New Guinea.

In 1927 Col. Francesco de Pinedo, Italian four-continent flier, flew across the southern part of the United States in a series of hops in the Santa Maria, a seaplane, but didn't complete the transcontinental flight. While en route to San Diego his plane was burned while riding at anchor at Roosevelt dam, Arizona. The blaze was caused when a burning match was tossed by a cigarette smoker on oil coated waters surrounding the craft. A new plane was sent him from Italy, and he flew in it from New York to Florida, thence to Chicago and on to Newfoundland before starting a flight over the Atlantic.

OFF TODAY FOR N.Y. IN S.D. PLANE

S.D. TRIBUNE — JUNE 24

With his departure time definitely set at 4 p.m. today, Richard Archbold, research associate of the American Museum of Natural History, and the five men who will accompany him on a non-stop flight attempt from San Diego to New York in his $250,000 Consolidated Aircraft Corp.-built PBY-type flying boat, busied themselves with last minute preparations this afternoon. Decision to leave today instead of Saturday, as originally planned, was made when C. R. Guern, meteorologist in charge of the Lindbergh field airport weather bureau station, said weather conditions for the flight would be better today than Saturday.

Archbold hopes to set the flying boat down on the water at North Beach, New York City, within 18 hours after taking off from San Diego bay. His plane, the Guba, has a gross weight of 27,000 pounds. The 1750 gallons of gasoline it carries weighs 10,500 pounds. Archbold, who plans to use the plane on a scientific flight to New Guinea next winter, said he will keep the craft at an altitude of around 10,000 feet for the San Diego-New York flight.

Guard air base at 4:41 p. m. At 4:50:30 p. m., with William Wheatley, Consolidated chief test pilot, at the controls, the big airboat roared down the takeoff lane toward Point Loma with its heavy fuel load, took off easily and then wheeled about after crossing the headland.

Farewell Salute

As the plane headed east over San Diego, Wheatley dipped its wings in farewell, and the crew settled down for the cross-country dash.

A storm area over the Great Plains region which Archbold had expected he would be required to outrace, changed its course during the night and veered north, instead of east, according to the government weather bureau at Lindbergh Field.

This unexpected "break" enabled Lieut. Comdr. L. R. Gray, navigator, to change the airboat's original course over southern states through Dallas, Tex., and Atlanta, Ga., to a northeasterly route across Oklahoma City, St. Louis and Pittsburgh.

Except for local thunderstorms, the airboat encountered fairly good weather on the entire trip.

At 2 a. m., when the original gasoline load of 10,500 pounds had been appreciably diminished, the plane picked up speed, and maintained a rate of 150 miles per hour the remainder of the trip. The total time elapsed was slightly faster than Archbold's expectations.

With the plane's arrival in New York today, another chapter in San Diego's colorful aviation history ended. Archbold, who will use the airboat in exploration in Dutch New Guinea, beginning this winter, ordered all his radio equipment at his La Mesa home crated up and shipped east immediately.

His base station at La Mesa was to be dismantled today.

Dr. Austin Rand, who will assist Archbold in the New Guinea expedition, will supervise the closing of local headquarters, maintained while the plane was under construction at Consolidated.

Oil Magnate's Scion

Archbold, who is personally financing the expedition to the tropics next December or January, when a year's intensive study of New Guinea mammal life will be started for the American Museum of Natural History, is the wealthy grandson of the late John D. Archbold, partner of John D. Rockefeller in the spectacular growth of the Standard Oil Co.

He is an enthusiastic "amateur" scientist and aviator. Although only 30, Archbold already has completed several expeditions to the tropics, during the course of which he became afflicted with malaria, an ailment which still troubles him. He is slightly handicapped by a speech impediment.

After a short stay at Lake Schuyler, Cooperstown, N. Y., where his mother lives, Archbold will fly the airboat west to Yosemite National Park, basing at Lake Yosemite for load takeoff tests at high altitude.

High Operating Base . .

In New Guinea, one of the lakes from whence his plane will operate is 11,000 feet above sea level, and the rarefied atmosphere makes takeoffs more difficult than at sea level.

He will return to New York in July, making another transcontinental hop in December to prepare for a flight across the Pacific from either San Francisco or San Deigo. His route to New Guinea will be via Hawaii, Midway Island, Wake Island and Guam.

The crew of Archbold's airboat on this trip included William Wheatley, Lieut.-Comdr. Gray, Russell Rogers, pilot; Harold Ramm, radio operator; and Gerald Brown, engineer.

S. D. FLIERS LAND IN NEW YORK

S.D. TRIBUNE JUNE 25, 1937

REACH GOAL IN FAST HOP ACROSS U.S.

The Archbold flying boat landed at North Beach airport, New York City, at 9:52 a.m. today (P.S.T.), according to word received by Consolidated officials.

Richard Archbold and five flight companions, who left here in a 13½-ton flying boat at 4:51 p.m. yesterday on a nonstop flight attempt from San Diego to New York, were over Pittsburgh at 7:30 a.m. (P.S.T.), according to advices received here at the Consolidated Aircraft Corp. plant, builders of the craft.

Over St. Louis at 3:30

No word of the plane's whereabouts since that time was received up to a late hour, although Consolidated officials said he was due to land at North Beach, New York City, in mid-morning.

In the Guba ("Sudden Storm") Archbold's $250,000 Consolidated Aircraft Corp.-built plane are six men—Archbold, who has as co-pilots Russel Rogers and William Wheatley; Gerald Brown, engineer; Lt. Comdr. L. R. Gray, U.S.N. ret., navigator, and Harold Ramm, radio operator.

Last radio report received here from Archbold was at 3:30 a.m., when he was over St. Louis.

Archbold and five flight companions lifted the plane from the waters of San Diego bay at 4:51 p.m. yesterday. Decision to leave yesterday was not made until shortly after noon, and at 3 p.m. the $250,000 flying boat, which Archbold purchased from the Consolidated Aircraft Corp. for use in a scientific expedition to New Guinea starting next winer, was rolled from the hangar. The first attempt to take off was frustrated when a small harbor craft got in the way. The airboat was turned back and after another take-off run rose into the air and soared over Pt. Loma before turning east.

As Archbold and his flight companions left San Diego he said, "We're going to have an early lunch in New York. We expect no storm trouble, as we plan to follow a weather condition that will give us tail winds."

Archbold's first radio message received at his La Mesa home was that he was averaging about 125 miles an hour. At 6:30 p.m. he was over Gila Bend, Ariz., and at 8 p.m. he reported "all well" over St. Thomas, Ariz. By 10:30 p.m. he reported "everything working O.K." as he neared Carlsbad, N. M. Thirty mintues later he was over Lubbock, Tex. A radio message received here from him at 3:30 a.m. said the plane

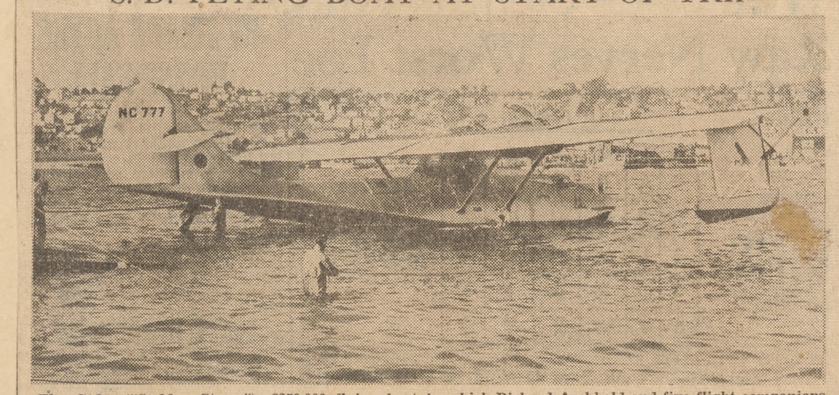
S. D. FLYING BOAT AT START OF TRIP

TRIBUNE JUNE 25, 1937



The Guba ("Sudden Storm"), $250,000 flying boat in which Richard Archbold and five flight companions left here yesterday afternoon for New York City, is shown here entering the waters of San Diego bay from Lindbergh field preparatory to the takeoff. The plane left at 4:51 p.m.

Archbold is a native of New York City. His manner is quiet, and he has a slow, almost drawling speech, which belies his exciting vocation. He is 30 years old, and traveled a great deal with his family, receiving his education, as he puts it, "any and everywhere." His final schooling was at Tucson, Ariz.

In 1928, when he was 21 and deeply engrossed in photography, his father got him a place as photographer in an expedition to Madagascar, sponsored by the American, British and French Museums of Natural History. Archbold recalled that while preparing for the expedition he became so engrossed in the study of mammals, that he decided to go along, not only as a photographer, but as an animal collector. The expedition, which consisted of eight members, started out from Paris and spent two years in Madagascar, making a complete collection and study of the birds and mammals of the territory. Archbold states that this trip was the deciding point in his life, as the work proved to be so fascinating that he decided to make exploration his career.

Month on High Mountain

Shortly after the conclusion of this expedition, Archbold went on [illegible] time as leader, to [illegible] says that,

was speeding at 150 miles an hour over St. Louis, Mo. He was reported over Pittsburgh at 7:30 a.m.

Similar to PBY-1

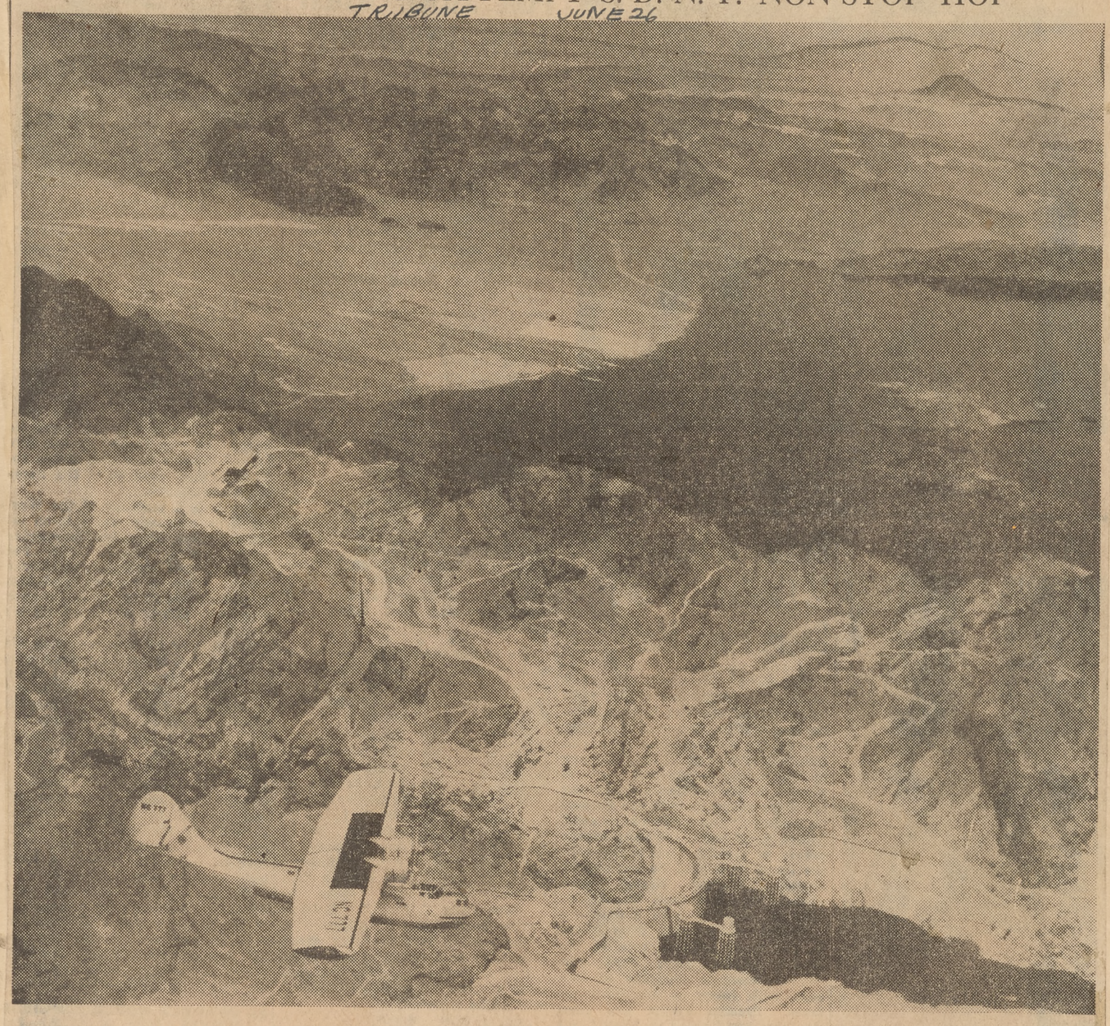
Except for armament, not carried in Archbold's plane, the Guba is similar to the PBY-1 naval patrol planes flown in two 12-plane mass flights from San Diego to Honolulu this year and in this week's 12-plane mass flight from here to Coco Solo. The Consolidated Aircraft Corp. has been awarded three contracts by the navy department for PBY-type planes, making a total of 176 ships and spare parts equivalent to 35 airplanes on order for approximately $19,000,000.

In a general description of the PBY-1 type plane Consolidated officials state it is an all-metal, semi-cantilever monoplane flying boat, designed for military use as a long range patrol bomber, and for commercial use as a long range transport or cargo plane. It is powered with two engines, using either the Wright Cyclone or Pratt & Whitney twin row Wasp. A readily detachable beaching gear is provided for handling the craft in and out of the [illegible] facilitate movements [illegible] entire air- [illegible] ll, ur- loy as a has ients for ower craft nd by The gation signal s as are

From New York Archbold plans to take the plane to Schuyler lake, near Cooperstown, N. Y., where his mother, Mrs. John F. Archbold, lives. After a visit with her he plans to start westward again next month, flying to Wyoming to make landing and take-off load tests on Yellowstone lake and other lakes in the Rocky mountains. This is in preparation for the work in New Guinea, where the plane will operate to lakes lying at elevations up to 11,000 feet. He expects to return to San Diego in the fall. The exact take-off place for his flight to New Guinea has not been determined, although Archbold has indicated it will be either San Diego or San Francisco. En route to New Guinea he plans stops at Honolulu, Midway island, Wake island and Guam.

FLYING BOAT TO ATTEMPT S. D.-N. Y. NON-STOP HOP

TRIBUNE JUNE 26



The world's largest privately owned airplane, a 13½-ton commercial PBY-1, manufactured by Consolidated Aircraft Corp. at San Diego for Richard Archbold, research associate of the American Museum of Natural History, is to be flown this week-end on a nonstop flight attempt from San Diego to New York. The plane is shown here above Lake Meade, 107-mile lake formed by Boulder dam, which it visited last week, being the first flying boat to land on the lake. The plane, number NC777, powered with two 1000-horsepower Twin Row Wasp engines, is similar to the 176 PBY-type airplanes ordered by the United States navy from Consolidated. Twenty-four of the 104-foot wing patrol planes were flown by the navy from San Diego to Pearl Harbor, Honolulu, earlier this year, and on June 21-22 12 more of these patrol planes set a new world's record in a non-stop formation flight from San Diego to Coco Solo, C. Z., a distance of 3087 miles, which they covered in 27 hours, 58 minutes. Archbold hopes to fly the 2700 miles from here to New York within 18 hours. He plans to use the flying boat in a scientific expedition to New Guinea which starts next winter.

S. D. AIRBOAT SPANU. S.

The Guba ("Sudden Storm"), $250,000 flying boat in which Richard Archbold and five flight companions left here yesterday afternoon for New York City, is shown here entering the waters of San Diego bay from Lindbergh field preparatory to the takeoff. The plane left at 4:51 p.m.

CONTINUED FROM PAGE ONE

a scientific expedition to New Guinea.

The flight was made two days after the navy successfully flew 12 PBY-1 planes from San Diego to Coco Solo, C. Z., and the 2700-mile transcontinental flight was of special interest to military and naval air authorities because it demonstrated that the heavy planes of this type are capable of coast-to-coast flights for national defense purposes. The navy patrol planes flew considerably further than Archbold and his companions, covering 3087 miles in 27 hours and 58 minutes. Their flight also was non-stop, as were two 12-plane navy patrol plane flights from San Diego to Hawaii earlier this year.

Observed Offcially

Archbold found no occasion to land on a lake or river en route. When he left he said he planned to keep the plane at about 10,000 feet altitude.

The take-off from San Diego was observed officially for the N.A.A. by William Van Dusen, timer, and T. Claude Ryan and Ray Booth, observers. So that the flight could be recorded officially for the N.A.A., sealed barographs were placed in the plane just before it left.

In the "Guba" ("Sudden Storm") Archbold's $250,000 Consolidated Aircraft Corp.-built plane were six men—Archbold, who has as co-pilots Russel Rogers and William Wheatley; Gerald Brown, engineer; Lt. Comdr. L. R. Gray, U.S.N. ret., navigator, and Harold Ramm, radio operator.

Last radio report received here from Archbold was at 3:30 a.m., when he was over St. Louis.

Archbold and five flight companions lifted the plane from the waters of San Diego bay at 4:51 p.m. yesterday. Decision to leave yesterday was not made until shortly after noon, and at 3 p.m. the $250,000 flying boat, which Archbold purchased from the Consolidated Aircraft Corp. for use in a scientific expedition to New Guinea starting next winer, was rolled from the hangar. The first attempt to take off was frustrated when a small harbor craft got in the way. The airboat was turned back and after another take-off run rose into the air and soared over Pt. Loma before turning east.

Tail Winds Expected

As Archbold and his flight companions left San Diego he said, "We're going to have an early lunch in New York. We expect no storm trouble, as we plan to follow a weather condition that will give us tail winds."

Archbold's first radio message received at his La Mesa home was that he was averaging about 125 miles an hour. At 6:30 p.m. he was PBY-1 type plane Consolidated officials state it is an all-metal, semi-cantilever monoplane flying boat, designed for military use as a long range patrol bomber, and for commercial use as a long range transport or cargo plane. It is powered with two engines, using either the Wright Cyclone or Pratt & Whitney twin row Wasp. A readily detachable beaching gear is provided for handling the craft in and out of the water, and to facilitate movements

Consolidated officials reported at noon they had talked with Archbold by phone following his arrival at New York. Archbold said weather conditions throughout were good, except over the Rockies, where the air was a "bit rough" and there was some sheet lightning. From there on, he said, it was "clear sailing." On the question of fuel consumption, Archbold reported that the Guba used less than two-thirds of the 1700 gallons of gasoline which the plane carried when it left here. Archbold and the two other pilots in the craft spelled each other off during the flight. For food they carried an assortment of sandwiches, fruit, coffee and tea. The fliers were welcomed by a large crowd when they landed, and got out of the plane to face a battery of newsreel men. As for Consolidated officials, the word from the plant was "We're jubilant. We knew they'd make it, and they did."

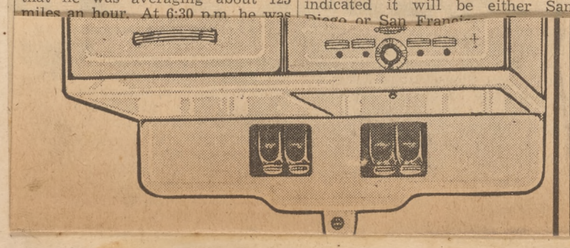
ashore. In general, the entire airplane structure, including the hull, auxiliary floats, wings and tail surfaces, is riveted aluminum alloy monocoque type construction. As a commercial airplane, the plane has cargo and passenger compartments arranged with proper respect for center of gravity location. Power for the electric system in the craft is supplied by two batteries and by two engine-driven generators. The electric system includes navigation lights, interior hull lighting, a signal system and such other devices as are required in large airboats.

From New York Archbold plans to take the plane to Schuyler lake, near Cooperstown, N. Y., where his mother, Mrs. John F. Archbold, lives. After a visit with her he plans to start westward again next month, flying to Wyoming to make landing and take-off load tests on Yellowstone lake and other lakes in the Rocky mountains. This is in preparation for the work in New Guinea, where the plane will operate to lakes lying at elevations up to 11,000 feet. He expects to return to San Diego in the fall. The exact take-off place for his flight to New Guinea has not been determined, although Archbold has indicated it will be either San Diego or San Francisco.

sisted of eight members, started out from Paris and spent two years in Madagascar, making a complete collection and study of the birds and mammals of the territory. Archbold states that this trip was the deciding point in his life, as the work proved to be so fascinating that he decided to make exploration his career.

Month on High Mountain

Shortly after the conclusion of this expedition, Archbold went on another, this time as leader, to Papua (New Guinea). He says that, as he remembers it, the worst part of the whole trip was the difficulty of transportation. For instance, the expedition succeeded in spending a month on a mountain 12,000 feet high. This, in itself, was a great achievement which had never before been accomplished in New Guinea. However, they experienced great difficulty in attaining their goal, being forced to use a road which was "navigable" for mules for about 10 days' travel and only passable by the use of carriers for the next 4½ days. This road had been built by the Mission of Our Lady of the Sacred Heart and was the only way the expedition could reach its objective. Archbold says that this expedition made him realize that they could have made the trip much easier and more quickly with a plane. Therefore, when the group returned to New York in 1934, he purchased an amphibian and took flying lessons, obtaining a private license.



Tom Mooney, California's most talked of convict, has been promoted from peeling potatoes to growing them. Captain of the Yard Ralph New assigned Mooney a job as gardener.

A recent census enumerated 582,365,725 rubber trees in the Netherland Indies.

'GUBA' LANDS ON BAY IN NEW YORK

Aviation - minded America thrilled today to the latest air conquest—spanning of the continent by an airboat—accomplished when Richard Archbold and five flight companions set their 13½-ton Consolidated Aircraft Corp. - built PBY - type plane down on the waters of Flushing bay, New York, at 9:54 a.m. (P.S.T.), 17 hours and 3 minutes after taking off from San Diego bay.

"Practically Perfect"

The flight was non-stop. Archbold, who left San Diego at 4:51 p.m. yesterday, told The Associated Press upon his landing that the trip was "practically perfect." Whether he broke any records for his type of aircraft remained to be determined by officials of the National Aeronautic association, who checked him in.

The 30-year-old research associate of the American Museum of Natural History, will confer with museum officials and make test flights in the east and over the Rocky mountain area before leaving the United States next winter in the plane on

(Continued on Page 6-A, Col. 3)

S. D. AIRBOATS GO INTO ACTION

23 Take Part In Alaskan Maneuvers

The two units of San Diego based and built Navy patrol bombing planes, which flew non-stop to Seattle July 1, yesterday went into action in tactical maneuvers in Alaska, as they exchanged bases, the United Press reported to The Sun.

The detachment of 23 planes was split into two units—one composed of 12 planes from Squadrons VP-7 and VP-9, and the other 11 planes of Squadron VP-12 — because of inadequate bases in Kodiak, Alaska.

All 23 planes, bringing Rear Adm. E. J. King, commander of Base Force Aircraft, arrived in Juneau Thursday. Late yesterday Squadron 12 left Sitka for Kodiak, where it was to be based, while the other 11 planes flew back to Sitka from Kodiak.

The planes, built by Consolidated Aircraft Corp., will remain in Alaska until late August, then return to San Diego.

COME ON, U. S.!

Russian Proposes Air Olympics

By HAROLD KEEN

AVIATION has provided the world with its most deadly implements of destruction, but flights like that of the Russian fliers who were feted in San Diego yesterday can serve only to improve the relationship between great powers.

This was the tenor of remarks made by local civil leaders, and by Army and Navy officers who paid tribute to the courage of the modest Soviet airmen.

Said Jack Hicklin, chairman of the Chamber of Commerce, aviation committee, who presided at yesterday's memorable luncheon in Hotel San Diego:

"Aviation is tying the peoples of the world together better than any other factor of modern life."

This statement summed up the sentiments expressed by Rear Adm. Sinclair Gannon, 11th Naval District commandant; Vice Adm. Frederick J. Horne, Aircraft Battle Force commander; Lieut. Col. Edward L. Kelly, Ft. Rosecrans commander; Mayor Percy Benbough, Supervisor Walter Bellon, Howard Worth, chairman of the Chamber's Army and Navy committee; and Maj. Reuben H. Fleet, president of Consolidated Aircraft Corp.

And it was the idea which the fliers themselves most wanted to get across.

◇ ◇ ◇

CHIEF PILOT MIKHAIL Gromov, who has the perfect "poker face" — muscles etched in granite—made a proposition.

"I would like to see," he said, "American pilots reply with the same kind of a flight over the North Pole and into Moscow. I would like to have them beat our record, so that we could try again and beat theirs." An aviation Olympics, as it were.

Gromov rarely smiles. When he does, he seems to force himself. Yet he gives an impression of utmost sincerity. Still more, he gives you an idea that he is a man of determination, with an unflexible will.

Co-Pilot Andrei Yumosheff and Navigator Sergei Danilin are different types. The former, with his perpetual smile, his gleaming white teeth, his wavy blond hair, looks like a college student, despite the fact that he is 35 years old. Danilin is another jolly sort.

◇ ◇ ◇

THEY reason in an enigmatic Russian manner, at least when they're in the air. While the world was beginning to fear they had become lost in the six hours after they were last seen above Oakland early Wednesday, they neglected to send radio messages. Why?

"Why should we?" asked Danilin. "We decided to reach San Diego and we knew we were flying on a straight line, down the 120th meridian, so we didn't think it would be necessary to give position reports."

All three, and Acting Consul-General Gokhman were overwhelmed by San Diego hospitality. The warm reception they received here, they repeated again and again, made the fliers forget that not long ago they were fighting through cyclones over the North Pole.

CONSAIR UNION TO KEEP PACT

CIO Affiliation Not To Change Contract

Although its affiliation has been switched from the A. F. of L. to the C. I. O., San Diego's union of aircraft workers is ready to abide by the contract signed last April by its officials and Maj. Reuben H. Fleet of Consolidated Aircraft Corp.

Such was the message sent this week to Maj. Fleet, George Smith, temporary president of the union, announced today.

Court Battle

"Maj. Fleet replied stating that he could not commit himself until litigation in regard to jurisdictional right presumably to carry out the contract, is settled," Smith said.

The only litigation pending, according to Smith, is a hearing on an injunction to prevent the union from affiliating with the C. I. O.

A. F. L. Gets Properties

Transfer of certain union property to the A. F. of L., which claims ownership, will cause the injunction proceedings to be called off, Smith said.

"The contract on working conditions and wages," he added, "was with the employes, and although their affiliation today is different, the company is still dealing with the same employes. We are ready to stand by the contract."

Tonight Smith will preside over a mass meeting in Broadway pier auditorium sponsored by the union. Speakers will include George Roberts, Southern California organizer for the United Rubber Workers of America; Dick Coleman and Charles Rogers, representatives of the United Automobile Workers of America, and San Diego Aircraft union officials.

S. D. FLIERS LAND IN NEW YORK

S.D. TRIBUNE JUNE 25, 1937

REACH GOAL IN FAST HOP ACROSS U. S.

The Archbold flying boat landed at North Beach airport, New York City, at 9:52 a.m. today (P.S.T.), according to word received by Consolidated officials.

Richard Archbold and five flight companions, who left here in a 13½-ton flying boat at 4:51 p.m. yesterday on a nonstop flight attempt from San Diego to New York, were over Pittsburgh at 7:30 a.m. (P.S.T.), according to advices received here at the Consolidated Aircraft Corp. plant, builders of the craft.

Over St. Louis at 3:30

No word of the plane's whereabouts since that time was received up to a late hour, although Consolidated officials said he was due to land at North Beach, New York City, in mid-morning.

In the Guba ("Sudden Storm") Archbold's $250,000 Consolidated Aircraft Corp.-built plane are six men—Archbold, who has as co-pilots Russel Rogers and William Wheatley; Gerald Brown, engineer; Lt. Comdr. L. R. Gray, U.S.N. ret., navigator, and Harold Ramm, radio operator.

Last radio report received here from Archbold was at 3:30 a.m., when he was over St. Louis.

Archbold and five flight companions lifted the plane from the waters of San Diego bay at 4:51 p.m. yesterday. Decision to leave yesterday was not made until shortly after noon, and at 3 p.m. the $250,000 flying boat, which Archbold purchased from the Consolidated Aircraft Corp. for use in a scientific expedition to New Guinea starting next winer, was rolled from the hangar. The first attempt to take off was frustrated when a small harbor craft got in the way. The airboat was turned back and after another take-off run rose into the air and soared over Pt. Loma before turning east.

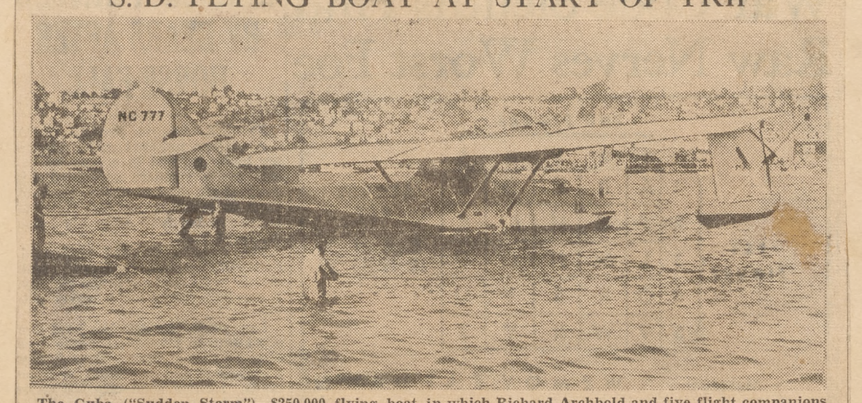
As Archbold and his flight companions left San Diego he said, "We're going to have an early lunch in New York. We expect no storm trouble, as we plan to follow a weather condition that will give us tail winds."

Archbold's first radio message received at his La Mesa home was that he was averaging about 125 miles an hour. At 6:30 p.m. he was over Gila Bend, Ariz., and at 8 p.m. he reported "all well" over St. Thomas, Ariz. By 10:30 p.m. he reported "everything working O.K." as he neared Carlsbad, N. M. Thirty mintues later he was over Lubbock, Tex. A radio message received here from him at 3:30 a.m. said the plane

(Continued on Page 6-A, Col. 6)

S. D. FLYING BOAT AT START OF TRIP

TRIBUNE JUNE 25, 1937



The Guba ("Sudden Storm"), $250,000 flying boat in which Richard Archbold and five flight companions left here yesterday afternoon for New York City, is shown here entering the waters of San Diego bay from Lindbergh field preparatory to the takeoff. The plane left at 4:51 p.m.

Archbold is a native of New York City. His manner is quiet, and he has a slow, almost drawling speech, which belies his exciting vocation. He is 30 years old, and traveled a great deal with his family, receiving his education, as he puts it, "any and everywhere." His final schooling was at Tucson, Ariz.

In 1928, when he was 21 and deeply engrossed in photography, his father got him a place as photographer in an expedition to Madagascar, sponsored by the American, British and French Museums of Natural History. Archbold recalled that while preparing for the expedition he became so engrossed in the study of mammals, that he decided to go along, not only as a photographer, but as an animal collector. The expedition, which consisted of eight members, started out from Paris and spent two years in Madagascar, making a complete collection and study of the birds and mammals of the territory. Archbold states that this trip was the deciding point in his life, as the work proved to be so fascinating that he decided to make exploration his career.

Month on High Mountain

Shortly after the conclusion of this expedition, Archbold went on another, this time as leader, to Papua (New Guinea). He says that, as he remembers it, the worst part of the whole trip was the difficulty of transportation. For instance, the expedition succeeded in spending a month on a mountain 12,000 feet high. This, in itself, was a great achievement which had never before been accomplished in New Guinea. However, they experienced great difficulty in attaining their goal, being forced to use a road which was "navigable" for mules for about 10 days' travel and only passable by the use of carriers for the next 4½ days. This road had been built by the Mission of Our Lady of the Sacred Heart and was the only way the expedition could reach its objective. Archbold says that this expedition made him realize that they could have made the trip much easier and more quickly with a plane. Therefore, when the group returned to New York in 1934, he purchased an amphibian and took flying lessons, obtaining a private license.

The next expedition the now dyed-in-the-wool scientist-explorer led was to Mt. Fain, Australia. He says that on this trip they used a combination of plane, boat and ground transportation, which proved to be much more satisfactory than the previous method of ground travel. In Archbold's opinion, the plane was, by far, the most important asset of the expedition. An advance party, consisting of a patrol officer, a transport man, three scientists, a native policeman, and about 65 natives, went 325 miles up the Fly river. Previously, and during this time, the plane was used to locate suitable camp sites and to make reconnaissance flights over the area in which they proposed to carry on operations. It was estimated that the advance party, at the end of two weeks time, would be at the "610-mile mark," a spot suitable for dropping supplies. Therefore, at the end of this time, the plane, with a two weeks' supply of food on board, flew up to this point and was unable to locate the party and, in returning to the base camp to see if there had been any word from them, Archbold and his co-pilot, Rogers, saw them about one-third of the way.

River Narrow, Fast

The river, at that point, was narrow and quite fast. After some circling, they decided they would have to land in order to be able to deliver supplies to the party. Upon landing, while they only had about 150 ft. wing clearance, they found it entirely feasible to operate out of this spot and decided to move the whole base camp to the site in order to save two weeks of walking. Approximately 30,000 lbs. of supplies and equipment were moved in 12 trips. If mule and carrier labor had been used to accomplish this, the move would have entailed days of heart-breaking hardship and labor.

Parachutes were used to deliver the equipment and supplies from plane to ground. Archbold reminisces that rice, for instance, was packed in 50-pound sacks and these, in turn, were placed in larger, looser bags and dropped five at a time. When the inner sack burst open because of the impact of the fall, the rice was retained in the outer sacks. Flour, sugar and salt, which had to be sealed in tins because of the dampness, were also dropped by parachute in 100-pound loads.

Sayer of Time and Labor

This proved a very satisfactory method of delivery and saved a great deal of time and labor. The plane was also useful in delivering supplies of food to caches for use in emergency. The desirability of this practice was proven by actual experience when, a week after starting the practice, the ship turned over and was lost. Without the supplies, the other members of the expedition would have been in a very serious situation. Archbold says that this expedition strengthened his belief that the plane is of immeasurable value for successful exploration in New Guinea.

Archobld believes that his new plane will be of vast aid to him. It will enable him to carry larger loads and increase his range of exploration. He will be able, because of increased cruising speed, to deviate from his course more often to take pictures, etc. He took 1500 pictures on his last expedition and expects to take even more on this next one.

S. D. PLANE LANDS AT GOAL IN NEW YORK

CONTINUED FROM PAGE ONE

was speeding at 150 miles an hour over St. Louis, Mo. He was reported over Pittsburgh at 7:30 a.m.

Similar to PBY-1

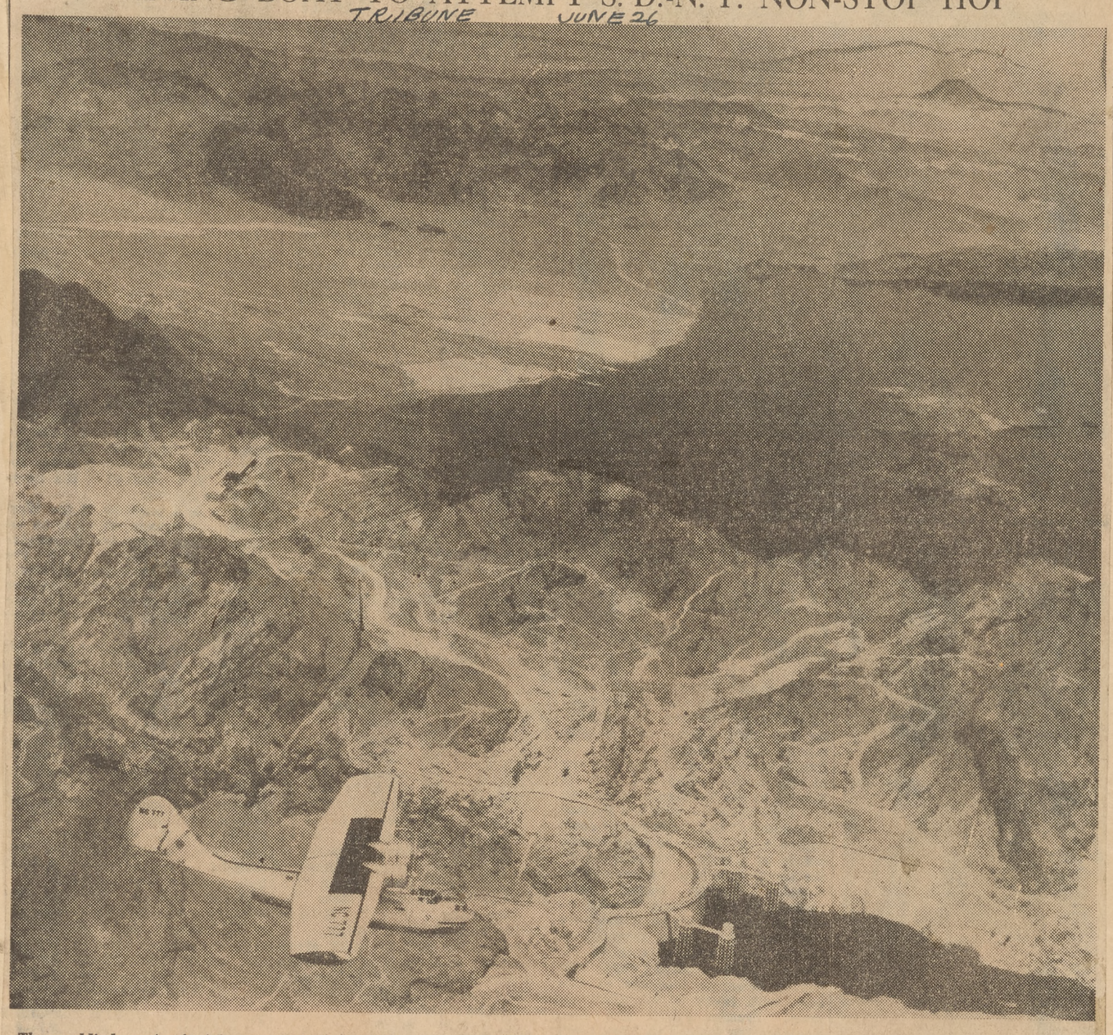
Except for armament, not carried in Archbold's plane, the Guba is similar to the PBY-1 naval patrol planes flown in two 12-plane mass flights from San Diego to Honolulu this year and in this week's 12-plane mass flight from here to Coco Solo. The Consolidated Aircraft Corp. has been awarded three contracts by the navy department for PBY-type planes, making a total of 176 ships and spare parts equivalent to 35 airplanes on order for approximately $19,000,000.

In a general description of the PBY-1 type plane Consolidated officials state it is an all-metal, semi-cantilever monoplane flying boat, designed for military use as a long range patrol bomber, and for commercial use as a long range transport or cargo plane. It is powered with two engines, using either the Wright Cyclone or Pratt & Whitney twin row Wasp. A readily detachable beaching gear is provided for handling the craft in and out of the water, and to facilitate movements ashore. In general, the entire airplane structure, including the hull, auxiliary floats, wings and tail surfaces, is riveted aluminum alloy monocoque type construction. As a commercial airplane, the plane has cargo and passenger compartments arranged with proper respect for center of gravity location. Power for the electric system in the craft is supplied by two batteries and by two engine-driven generators. The electric system includes navigation lights, interior hull lighting, a signal system and such other devices as are required in large airboats.

From New York Archbold plans to take the plane to Schuyler lake, near Cooperstown, N. Y., where his mother, Mrs. John F. Archbold, lives. After a visit with her he plans to start westward again next month, flying to Wyoming to make landing and take-off load tests on Yellowstone lake and other lakes in the Rocky mountains. This is in preparation for the work in New Guinea, where the plane will operate to lakes lying at elevations up to 11,000 feet. He expects to return to San Diego in the fall. The exact take-off place for his flight to New Guinea has not been determined, although Archbold has indicated it will be either San Diego or San Francisco. En route to New Guinea he plans stops at Honolulu, Midway island, Wake island and Guam.

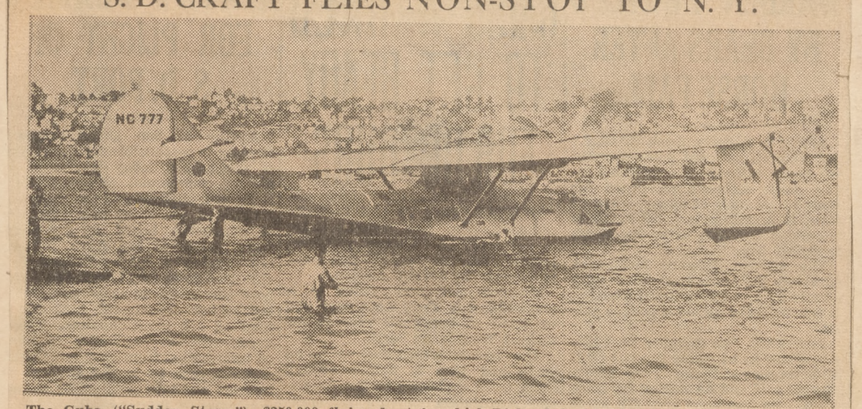
FLYING BOAT TO ATTEMPT S. D.-N. Y. NON-STOP HOP

TRIBUNE JUNE 26



The world's largest privately owned airplane, a 13½-ton commercial PBY-1, manufactured by Consolidated Aircraft Corp. at San Diego for Richard Archbold, research associate of the American Museum of Natural History, is to be flown this week-end on a nonstop flight attempt from San Diego to New York. The plane is shown here above Lake Meade, 107-mile lake formed by Boulder dam, which it visited last week, being the first flying boat to land on the lake. The plane, number NC777, powered with two 1000-horsepower Twin Row Wasp engines, is similar to the 176 PBY-type airplanes ordered by the United States navy from Consolidated. Twenty-four of the 104-foot wing patrol planes were flown by the navy from San Diego to Pearl Harbor, Honolulu, earlier this year, and on June 21-22 12 more of these patrol planes set a new world's record in a non-stop formation flight from San Diego to Coco Solo, C. Z., a distance of 3087 miles, which they covered in 27 hours, 58 minutes. Archbold hopes to fly the 2700 miles from here to New York within 18 hours. He plans to use the flying boat in a scientific expedition to New Guinea which starts next winter.

S. D. CRAFT FLIES NON-STOP TO N. Y.



The Guba ("Sudden Storm"), $250,000 flying boat in which Richard Archbold and five flight companions left here yesterday afternoon for New York City, is shown here entering the waters of San Diego bay from Lindbergh field preparatory to the takeoff. The plane left at 4:51 p.m.

CONTINUED FROM PAGE ONE

a scientific expedition to New Guinea.

The flight was made two days after the navy successfully flew 12 PBY-1 planes from San Diego to Coco Solo, C. Z., and the 2700-mile transcontinental flight was of special interest to military and naval air authorities because it demonstrated that the heavy planes of this type are capable of coast-to-coast flights for national defense purposes. The navy patrol planes flew considerably further than Archbold and his companions, covering 3087 miles in 27 hours and 58 minutes. Their flight also was non-stop, as were two 12-plane navy patrol plane flights from San Diego to Hawaii earlier this year.

Observed Offcially

Archbold found no occasion to land on a lake or river en route. When he left he said he planned to keep the plane at about 10,000 feet altitude.

The take-off from San Diego was observed officially for the N.A.A. by William Van Dusen, timer, and T. Claude Ryan and Ray Booth, observers. So that the flight could be recorded officially for the N.A.A., sealed barographs were placed in the plane just before it left.

In the "Guba" ("Sudden Storm") Archbold's $250,000 Consolidated Aircraft Corp.-built plane were six men—Archbold, who has as co-pilots Russel Rogers and William Wheatley; Gerald Brown, engineer; Lt. Comdr. L. R. Gray, U.S.N. ret., navigator, and Harold Ramm, radio operator.

Last radio report received here from Archbold was at 3:30 a.m., when he was over St. Louis.

Archbold and five flight companions lifted the plane from the waters of San Diego bay at 4:51 p.m. yesterday. Decision to leave yesterday was not made until shortly after noon, and at 3 p.m. the $250,000 flying boat, which Archbold purchased from the Consolidated Aircraft Corp. for use in a scientific expedition to New Guinea starting next winer, was rolled from the hangar. The first attempt to take off was frustrated when a small harbor craft got in the way. The airboat was turned back and after another take-off run rose into the air and soared over Pt. Loma before turning east.

Tail Winds Expected

As Archbold and his flight companions left San Diego he said, "We're going to have an early lunch in New York. We expect no storm trouble, as we plan to follow a weather condition that will give us tail winds."

Archbold's first radio message received at his La Mesa home was that he was averaging about 125 miles an hour. At 6:30 p.m. he was over Gila Bend, Ariz., and at 8 p.m. he reported "all well" over St. Thomas, Ariz. By 10:30 p.m. he reported "everything working O.K." as he neared Carlsbad, N. M. Thirty mintues later he was over Lubbock, Tex. A radio message received here from him at 3:30 a.m. said the plane was speeding at 150 miles an hour over St. Louis, Mo. He was reported over Pittsburgh at 7:30 a.m.

Similar to PBY-1

Except for armament, not carried in Archbold's plane, the Guba is similar to the PBY-1 naval patrol planes flown in two 12-plane mass flights from San Diego to Honolulu this year and in this week's 12-plane mass flight from here to Coco Solo. The Consolidated Aircraft Corp. has been awarded three contracts by the navy department for PBY-type planes, making a total of 176 ships and spare parts equivalent to 35 airplanes on order for approximately $19,000,000.

In a general description of the PBY-1 type plane Consolidated officials state it is an all-metal, semi-cantilever monoplane flying boat, designed for military use as a long range patrol bomber, and for commercial use as a long range transport or cargo plane. It is powered with two engines, using either the Wright Cyclone or Pratt & Whitney twin row Wasp. A readily detachable beaching gear is provided for handling the craft in and out of the water, and to facilitate movements ashore. In general, the entire airplane structure, including the hull, auxiliary floats, wings and tail surfaces, is riveted aluminum alloy monocoque type construction. As a commercial airplane, the plane has cargo and passenger compartments arranged with proper respect for center of gravity location. Power for the electric system in the craft is supplied by two batteries and by two engine-driven generators. The electric system includes navigation lights, interior hull lighting, a signal system and such other devices as are required in large airboats.

Consolidated officials reported at noon they had talked with Archbold by phone following his arrival at New York. Archbold said weather conditions throughout were good, except over the Rockies, where the air was a "bit rough" and there was some sheet lightning. From there on, he said, it was "clear sailing." On the question of fuel consumption, Archbold reported that the Guba used less than two-thirds of the 1700 gallons of gasoline which the plane carried when it left here. Archbold and the two other pilots in the craft spelled each other off during the flight. For food they carried an assortment of sandwiches, fruit, coffee and tea. The fliers were welcomed by a large crowd when they landed, and got out of the plane to face a battery of newsreel men. As for Consolidated officials, the word from the plant was "We're jubilant. We knew they'd make it, and they did."

From New York Archbold plans to take the plane to Schuyler lake, near Cooperstown, N. Y., where his mother, Mrs. John F. Archbold, lives. After a visit with her he plans to start westward again next month, flying to Wyoming to make landing and take-off load tests on Yellowstone lake and other lakes in the Rocky mountains. This is in preparation for the work in New Guinea, where the plane will operate to lakes lying at elevations up to 11,000 feet. He expects to return to San Diego in the fall. The exact take-off place for his flight to New Guinea has not been determined, although Archbold has indicated it will be either San Diego or San Francisco. En route to New Guinea he plans stops at Honolulu, Midway island, Wake island and Guam.

Native of Gotham

Archbold is a native of New York City. His manner is quiet, and he has a slow, almost drawling speech, which belies his exciting vocation. He is 30 years old, and traveled a great deal with his family, receiving his education, as he puts it, "any and everywhere." His final schooling was at Tucson, Ariz.

In 1928, when he was 21 and deeply engrossed in photography, his father got him a place as photographer in an expedition to Madagascar, sponsored by the American, British and French Museums of Natural History. Archbold recalled that while preparing for the expedition he became so engrossed in the study of mammals, that he decided to go along, not only as a photographer, but as an animal collector. The expedition, which consisted of eight members, started out from Paris and spent two years in Madagascar, making a complete collection and study of the birds and mammals of the territory. Archbold states that this trip was the deciding point in his life, as the work proved to be so fascinating that he decided to make exploration his career.

Month on High Mountain

Shortly after the conclusion of this expedition, Archbold went on another, this time as leader, to Papua (New Guinea). He says that, as he remembers it, the worst part of the whole trip was the difficulty of transportation. For instance, the expedition succeeded in spending a month on a mountain 12,000 feet high. This, in itself, was a great achievement which had never before been accomplished in New Guinea. However, they experienced great difficulty in attaining their goal, being forced to use a road which was "navigable" for mules for about 10 days' travel and only passable by the use of carriers for the next 4½ days. This road had been built by the Mission of Our Lady of the Sacred Heart and was the only way the expedition could reach its objective. Archbold says that this expedition made him realize that they could have made the trip much easier and more quickly with a plane. Therefore, when the group returned to New York in 1934, he purchased an amphibian and took flying lessons, obtaining a private license.

The next expedition the now dyed-in-the-wool scientist-explorer led was to Mt. Fain, Australia. He says that on this trip they used a combination of plane, boat and ground transportation, which proved to be much more satisfactory than the previous method of ground travel. In Archbold's opinion, the plane was, by far, the most important asset of the expedition. An advance party, consisting of a patrol officer, a transport man, three scientists, a native policeman, and about 65 natives, went 325 miles up the Fly river. Previously, and during this time, the plane was used to locate suitable camp sites and to make reconnaissance flights over the area in which they proposed to carry on operations. It was estimated that the advance party, at the end of two weeks time, would be at the "610-mile mark," a spot suitable for dropping supplies. Therefore, at the end of this time, the plane, with a two weeks' supply of food on board, flew up to this point and was unable to locate the party and, in returning to the base camp to see if there had been any word from them, Archbold and his co-pilot, Rogers, saw them about one-third of the way.

River Narrow, Fast

The river, at that point, was narrow and quite fast. After some circling, they decided they would have to land in order to be able to deliver supplies to the party. Upon landing, while they only had about 150 ft. wing clearance, they found it entirely feasible to operate out of this spot and decided to move the whole base camp to the site in order to save two weeks of walking. Approximately 30,000 lbs. of supplies and equipment were moved in 12 trips. If mule and carrier labor had been used to accomplish this, the move would have entailed days of heart-breaking hardship and labor.

Parachutes were used to deliver the equipment and supplies from plane to ground. Archbold reminisces that rice, for instance, was packed in 50-pound sacks and these, in turn, were placed in larger, looser bags and dropped five at a time. 'GUBA' LANDS ON BAY IN NEW YORK

Aviation - minded America thrilled today to the latest air conquest—spanning of the continent by an airboat—accomplished when Richard Archbold and five flight companions set their 13½-ton Consolidated Aircraft Corp. - built PBY - type plane down on the waters of Flushing bay, New York, at 9:54 a.m. (P.S.T.), 17 hours and 3 minutes after taking off from San Diego bay.

"Practically Perfect"

The flight was non-stop. Archbold, who left San Diego at 4:51 p.m. yesterday, told The Associated Press upon his landing that the trip was "practically perfect." Whether he broke any records for his type of aircraft remained to be determined by officials of the National Aeronautic association, who checked him in.

The 30-year-old research associate of the American Museum of Natural History, will confer with museum officials and make test flights in the east and over the Rocky mountain area before leaving the United States next winter in the plane on

S. D. AIRBOATS GO INTO ACTION

S. D. Sun 7/18/37

23 Take Part In Alaskan Maneuvers

The two units of San Diego based and built Navy patrol bombing planes, which flew non-stop to Seattle July 1, yesterday went into action in tactical maneuvers in Alaska, as they exchanged bases, the United Press reported to The Sun.

The detachment of 23 planes was split into two units—one composed of 12 planes from Squadrons VP-7 and VP-9, and the other 11 planes of Squadron VP-12 — because of inadequate bases in Kodiak, Alaska.

All 23 planes, bringing Rear Adm. E. J. King, commander of Base Force Aircraft, arrived in Juneau Thursday. Late yesterday Squadron 12 left Sitka for Kodiak, where it was to be based, while the other 11 planes flew back to Sitka from Kodiak.

The planes, built by Consolidated Aircraft Corp., will remain in Alaska until late August, then return to San Diego.

COME ON, U. S.!

Russian Proposes Air Olympics

By HAROLD KEEN

AVIATION has provided the world with its most deadly implements of destruction, but flights like that of the Russian fliers who were feted in San Diego yesterday can serve only to improve the relationship between great powers.

This was the tenor of remarks made by local civil leaders, and by Army and Navy officers who paid tribute to the courage of the modest Soviet airmen.

Said Jack Hicklin, chairman of the Chamber of Commerce, aviation committee, who presided at yesterday's memorable luncheon in Hotel San Diego:

"Aviation is tying the peoples of the world together better than any other factor of modern life."

This statement summed up the sentiments expressed by Rear Adm. Sinclair Gannon, 11th Naval District commandant; Vice Adm. Frederick J. Horne, Aircraft Battle Force commander; Lieut. Col. Edward L. Kelly, Ft. Rosecrans commander; Mayor Percy Benbough, Supervisor Walter Bellon, Howard Worth, chairman of the Chamber's Army and Navy committee; and Maj. Reuben H. Fleet, president of Consolidated Aircraft Corp.

And it was the idea which the fliers themselves most wanted to get across.

◇ ◇ ◇

CHIEF PILOT MIKHAIL Gromov, who has the perfect "poker face" — muscles etched in granite—made a proposition.

"I would like to see," he said, "American pilots reply with the same kind of a flight over the North Pole and into Moscow. I would like to have them beat our record, so that we could try again and beat theirs." An aviation Olympics, as it were.

Gromov rarely smiles. When he does, he seems to force himself. Yet he gives an impression of utmost sincerity. Still more, he gives you an idea that he is a man of determination, with an unflexible will.

Co-Pilot Andrei Yumosheff and Navigator Sergei Danilin are different types. The former, with his perpetual smile, his gleaming white teeth, his wavy blond hair, looks like a college student, despite the fact that he is 35 years old. Danilin is another jolly sort.

◇ ◇ ◇

THEY reason in an enigmatic Russian manner, at least when they're in the air. While the world was beginning to fear they had become lost in the six hours after they were last seen above Oakland early Wednesday, they neglected to send radio messages. Why?

"Why should we?" asked Danilin. "We decided to reach San Diego and we knew we were flying on a straight line, down the 120th meridian, so we didn't think it would be necessary to give position reports."

All three, and Acting Consul-General Gokhman were overwhelmed by San Diego hospitality. The warm reception they received here, they repeated again and again, made the fliers forget that not long ago they were fighting through cyclones over the North Pole.

CONSAIR UNION TO KEEP PACT

CIO Affiliation Not To Change Contract

S. D. Sun 7/16/37

Although its affiliation has been switched from the A. F. of L. to the C. I. O., San Diego's union of aircraft workers is ready to abide by the contract signed last April by its officials and Maj. Reuben H. Fleet of Consolidated Aircraft Corp.

Such was the message sent this week to Maj. Fleet, George Smith, temporary president of the union, announced today.

Court Battle

"Maj. Fleet replied stating that he could not commit himself until litigation in regard to jurisdictional right presumably to carry out the contract, is settled," Smith said.

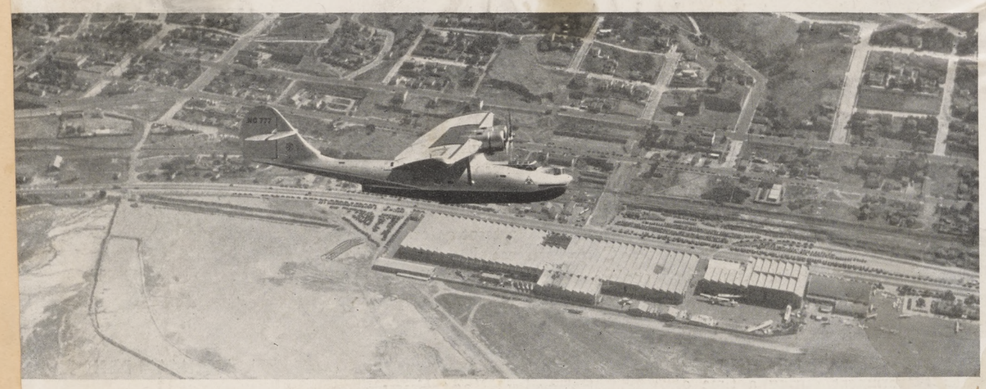
The only litigation pending, according to Smith, is a hearing on an injunction to prevent the union from affiliating with the C. I. O.

A. F. L. Gets Properties

Transfer of certain union property to the A. F. of L., which claims ownership, will cause the injunction proceedings to be called off, Smith said.

"The contract on working conditions and wages," he added, "was with the employes, and although their affiliation today is different, the company is still dealing with the same employes. We are ready to stand by the contract."

Tonight Smith will preside over a mass meeting in Broadway pier auditorium sponsored by the union. Speakers will include George Roberts, Southern California organizer for the United Rubber Workers of America; Dick Coleman and Charles Rogers, representatives of the United Automobile Workers of America, and San Diego Aircraft union officials.



ARCHBOLD COMPLETES FIRST NONSTOP TRANSCONTINENTAL FLIGHT BY FLYING BOAT

Richard Archbold, Research Associate of the American Museum of Natural History, New York, Completed, on June 25, a Nonstop Flight from San Diego, Calif., to North Beach Airport, New York, in 17 Hours, 2 Minutes. He Used a Commercial Version of the Consolidated PBY-1 Patrol Boat Operated by the Navy and Already Well Known for Several Long-Distance Flights, Latest Being the Mass Flight of 3,292 Miles by 12 Airplanes from San Diego to Coco Solo, Canal Zone. The Airplane which Carried Two-Way Radio, Sperry Gyropilot and Blind-Flying Instruments, is Powered with Two Pratt & Whitney Twin Wasp Engines, Developing 1,000 h-p. for Takeoff and Fitted wth Hamilton Standard Constant Speed Propellers. It Has a Cruising Range of 4,000 Miles. Mr. Archbold Has Announced Plans for a Two-Year Scientific Expedition to Dutch New Guinea for the Museum Sometime Later This Year

Official photograph, U. S. Navy

THEY MADE RECORD NONSTOP FLIGHT IN FORMATION TO DELIVER 12 NEW AIRPLANES TO COCO SOLO

A Dozen New Consolidated Airplanes (PBY-1's), Powered by Twin Wasp (SBG) Engines and Equipped with Hamilton Standard Constant Speed Propellers, Flew 3,292 Miles from San Diego, Calif., to the Canal Zone, Arriving on July 22. The Squadron is Known as Patrol Squadron 3 and was Commanded by Lieut. Robert W. Morse. Officer Personnel Who Made This Flight, Shown in This Photograph, Reading from Left: Lieuts. J. P. & W. Motor Used in First Flight of Its Kind

6/26/37

New York—(AP)—Richard Archbold's 17-ton flying boat in which he intends to explore the interior of New Guinea rested at anchor at North Beach Airport today after a non-stop flight across the United States.

The trip from San Diego was completed in 17 hours, 3½ minutes and was the first transcontinental trip of a flying boat.

With Archbold, who is a research associate of the American Museum of Natural History, were Russell Rogers, pilot; Lieut. Commander Lloyd R. Gray, navigator; William Wheatley, test pilot for the Consolidated Aircraft Corporation, builder of the flying boat; Gerald Brown, flight mechanic; and Harold Ramm, radio operator.

Archbold's New Guinea trip, to be taken in about two months, is to be over the Pan-American clipper ship route via the Hawaiian Islands, Midway Island, and Guam.

Had P. & W. Motor

Archbold's plane was powered by a Pratt & Whitney motor.

S. D. Sun 6/25/37

GORDON E. MOUNCE former assistant to the Manager and Demonstration pilot at Consolidated Aircraft Corp., has answered the call of far places again.

In the course of his flying career, he has seen service in Europe, Mexico and South America. It was hard to tie him down to a desk in a factory.

He leaped at the opportunity for foreign duty when it was offered him recently by United Aircraft Exports Corp. Result: one less able executive at Consolidated.

Pacific Coast Edt. Wall Street Journal 7/9/37

AIRCRAFT SALES AT NEW RECORD

Second Quarter Deliveries at $27,000,000; Backlog of Orders Maintained

BETTER PROFITS LIKELY

NEW YORK — Aircraft and engine deliveries in the second quarter reached a record total for any three months' period, being estimated at $27,000,000. This would be an increase nearly as sharp percentage-wise over the first quarter as over the second quarter of 1936.

Earnings reports of the leading airplane builders and engine makers are expected, therefore, to make much better reading for the period just ended than in the first quarter.

Total deliveries in the second quarter as estimated would be an increase of 32.8% over the $20,496,517 deliveries of the March quarter, and 37.1% over the $19,676,853 deliveries in the second quarter of last year. The latter figure understates deliveries somewhat because in 1936 a few manufacturers did not report to the Aeronautical Chamber of Commerce except at the year-end, thus adding in a lump sum $9,108,381, which actually should have been included piecemeal in the monthly compilations. The 1937 figures reflect actual monthly shipments. If any year-end adjustments do become necessary, it is expected they will be of minor nature.

Unfilled Orders Show Little Decline

One reason for the sharp jump in sales this year is the heavy export demand. This business is mostly in military planes which are partially outmoded and, therefore, released for export. The profits of this type of business are naturally greater because the development and tooling expenses have been already charged off, but on the other hand it is not a too reliable source of demand.

Perhaps even more important than current sales or earnings, is the clear indication that unfilled orders on June 30 showed little, if any, decline from January 1, despite the jump in deliveries.

Rough estimates indicate the June 30 backlog of the entire industry was well above the $100,000,000 mark, which would compare with a backlog of perhaps $50,000,000 a year earlier. At current rate of delivery, about $9,000,000 monthly, this backlog should carry the industry along at or near capacity operations until the summer of 1938 without receipt of further orders.

The Question of Profits

There is therefore little likelihood of declining volume in the aircraft industry for at least a year irrespective of the trend of general business. As a matter of fact, the probabilities are that no important recession in production could occur until sometime in 1939 at the earliest, inasmuch as the Army and Navy alone will place some $75,000,000 in new business between now and June 30, 1938.

On the other hand, there is the question of profits. To date, a combination of governmental

Continued on Third Page

AIRCRAFT SALES AT NEW RECORD

Continued from First Page

restrictions, small volume which prevents adaption of mass production technique, and the demands of research and experimental programs, have kept average net profit margins below 10% on sales.

While the expanded volume, together with the advancing stage of development which the builders are entering, gives hope that profit margins can be bettered, it is questioned by some whether this will be possible on some business already booked.

Not only are material costs advancing, but labor costs, which bulk very large anyway in an aircraft manufacturer's expense sheet, threaten to rise materially in the next six months or so. If the product sold could be turned out within a short time after taking of orders, costs would not get too much out of line with prices. But with aircraft, there is often a lag of from six to twelve months before

It will be noticed that the 1937 estimated deliveries of the aircraft builders, if achieved, would be an aggregate increase of about 120% over 1936 sales, whereas sales of engine makers are expected to increase only 10%. Among several reasons for this variance are the fact that demand for engines is less elastic. They wear out after a certain number of flying hours and have to be replaced, but the life of planes can be prolonged almost indefinitely. Sales of new planes therefore tend to drop precipitously in depression periods, and rise again just as sharply with returning prosperity.

While Curtiss-Wright and United Aircraft are tabulated as engine makers, they also build planes. But chief sales reliance is placed on the Wright Cyclones by the former, the Pratt & Whitney double-row Wasps by the latter.

The better volume which the aircraft makers are achieving this year was made possible by plant expansion programs embarked upon last year when the industry found itself suddenly confronted with a rapidly expanding backlog of unfilled orders. Most companies by April 1 were beginning to reap the full benefits of enlarged plant facilities.

Current Operating Data of Aircraft Industry

Aircraft makers:	Estimates of 1937 sales	1936 sales	1936 Net income	1936 Net profit margin	Unfilled orders

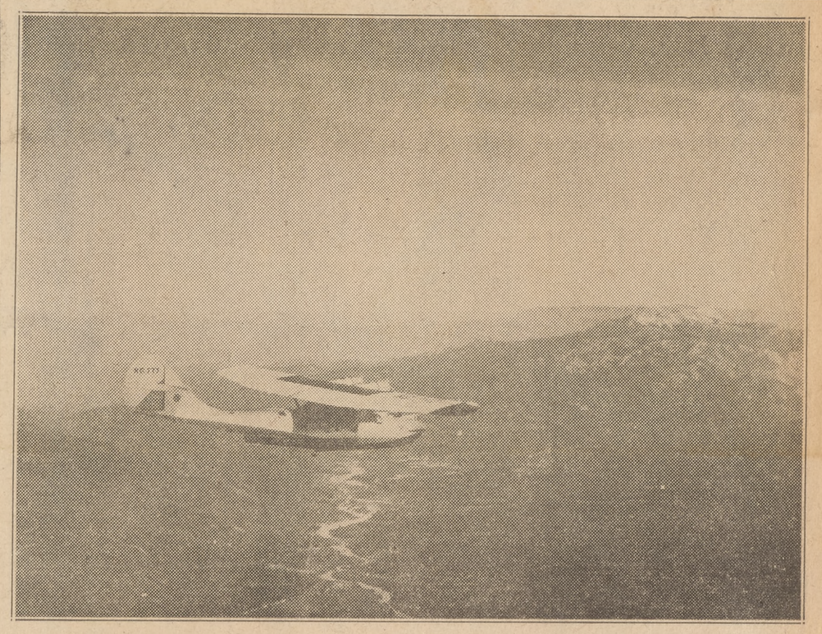
Non-Stop Transcontinental Trip Completed By Flying Boat



New York, June 26.—(AP.)—Richard Archbold, research associate of the American Museum of Natural History, dropped down on the waters of Flushing Bay yesterday with a 17-ton flying boat, shown above, to inaugurate something new in transcontinental travel.

With five other men he had flown non-stop from San Diego, Calif., in 17 hours and 3½ minutes, found no occasion to land on a lake or river en route and described the trip as "practically perfect."

Archbold came to New York to confer with museum officials and to have new instruments put in his prior to his departure, in about two months, for New Guinea to do research work. He will fly via the Ha Islands, Midway Island and Guam on the route of Pan American Airways Clipper ships.

Archbold used a commercial version of the Consolidated PBY-1 patrol airplane used by the Unit Navy and already well known for several long distance flights, the latest being a mass flight of 3000 miles by 12 airplanes from San Diego to Coco Solo, Canal Zone. The airplane is powered wit & Whitney Twin Wasp engines, developing 1000 horsepower each for take-off, and fitted wit Standard constant speed propellers.

S. D. PLANES TO ARGENTINA

S.D. Sun 7/27/37

Containing sections of three Consolidated P2Y3 patrol bombers, nine giant crates and six engine boxes were lifted aboard the McCormick freighter West Nilus today for delivery to Argentina.

Total weight of the unique cargo is more than 80 tons. The plane parts were hoisted by the Harbor Department's big steam crane, aided by the West Nilus' own boom.

A shipment of three more Consolidated flying boats to the Argentine Naval Base at Puerto Belgrano will leave San Diego Harbor about Aug. 15 aboard the McCormick freighter West Ivis.

BUNCH OF CRATES?

☼ ☼ ☼

Planes Get $5000 Overcoats

By HAROLD KEEN

ENVISION three fairly large residences, each consisting of three bedrooms, two bathrooms, a living-room, dining-room and kitchen.

Multiply by three and you will get an idea of the amount of lumber needed to encase the trio of Consolidated patrol bombers being shipped from San Diego tomorrow aboard the McCormick freighter West Nilus for Puerto Belgrano, Bahia Blanca, Argentina.

For the past few weeks a crew of 100 men has been employed by Consolidated Aircraft Corp. to build unique crates. On their strength depend the arrival in good condition at the Argentine Naval base of the six P2Y3 planes completed by Consolidated. The first three in this order leave tomorrow.

Here's how a huge airplane is shipped a long distance by water:

The craft is disassembled into three separate divisions. In one crate go the hull, propellors, engine mounts, beaching gear, struts and wires, and miscellaneous odds and ends that hold an airplane together.

In Crate No. 2 is placed the upper wing, including the pontoons. The center section, tail surfaces, and lower wing panels go into the third crate. Add two engine boxes and you have all the packages necessary to make an airplane fit for water shipment.

The hull box is secured on deck and boxes 2 and 3 and the motor crates go below.

As far as the steamship line is concerned, the boxes represent a more important item than the objects they contain. At least, they make up most of the tonnage.

Total weight of the three crates and two engine boxes per plane is 163,908 pounds. Of this, only about 54,000 pounds, or approximately one-third, consist of airplane parts and engines.

Shipping planes by water is an expensive proposition. Cost of constructing the crates for each plane alone is $5000.

But the Argentine government reasons that it can be reasonably sure of receiving its planes intact, whereas the hazards of a mass flight from here to South America are quite numerous.

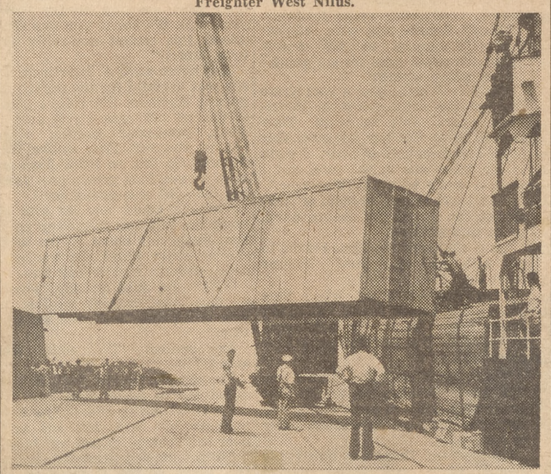
Delivery of the planes to Argentina will be one of the most delicate transportation jobs ever attempted by water, officials of the McCormick Steamship Line and the aircraft corporation agree.

Arrangements have been made for a second McCormick freighter, the West Ivis, to call next month for the remaining three bombers. Later in the fall, a complete PBY-1 bomber and spare parts for a second craft will be shipped still farther, from San Diego to Soviet Russia, completing the current orders of foreign business on Consolidated's books.

A LOAD OF RECORD VALUE

S.D. UNION 7/28/37

Part of the shipment of planes at Pier 1 yesterday for loading in the Freighter West Nilus.



Sixty feet long and weighing 12½ tons, this box is being lifted by the harbor department crane.

Capt. John Strom, veteran McCormick skipper, whose job is to get the planes to Argentina.

CARGO OF PLANES LEAVES PORT FOR ARGENTINE BASE

By JERRY MacMULLEN

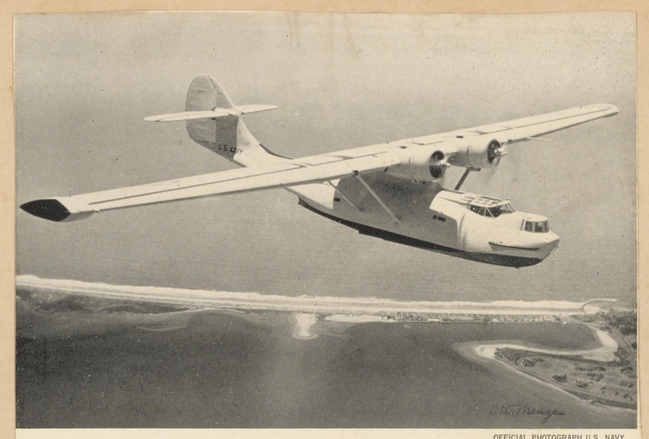
Eighty tons of cargo—and worth $400,000.

Such was the load which McCormick's freighter West Nilus lifted at Pier 1 yesterday, a shipment of patrol planes from the Consolidated Aircraft Corp. here, consigned to the Argentine navy. With her holds filled with California products and a high deckload of lumber from Pacific Northwest points, the West Nilus was drawing 27 feet of water when she came into port. The three big planes, taken down and packed into eight big boxes, were stowed on top of the lumber cargo, under the watchful eye of steamship and insurance officials. Largest of the boxes are 60 feet long and weigh 12½ tons each The crates are of unusually strong construction, topped with composition roofing, and fitted with their own individual slings of heavy wire cable.

The West Nilus, in addition to cargo, carries 12 passengers. Among those aboard yesterday were Capt. and Mrs. K. Anderson of the Salvation Army, newlyweds, who are on their way from San Francisco to Rio de Janeiro. The West Nilus will go from here directly to Puerto Belgrano, via the Straits of Magellan, and from there to Montevideo, Buenos Aires, Rio and Trinidad.

Here to confer with R. A. Wheeler, local McCormick agent, were Capt. Thomas White of the Board of Marine Underwriters of San Francisco; R. W. Bybee, McCormick's foreign freight agent at San Francisco; J. L. Hook, district manager of the line, and M. A. Richley, terminal agent at Wilmington.

Capt. John Strom, master of the West Nilus, formerly had the McCormick freighter Silverado, which brought thousands of tons of cement here in the pre-depression days.



OFFICIAL PHOTOGRAPH U.S. NAVY

Trim as a sea gull, this is one of 110 Consolidated twin-engined Patrol Boats being built for patrol duty for the U. S. Navy. The entire skin covering is aluminum, with the exception of the control surfaces. Capable of more than twenty-four hours continuous flight, these ships require no hangars, sheltered docks, nor launching equipment.

ALUMINUM NEWS LETTER JUL 4, 1937

NEWLYWEDS AND—

S. S. West Nilus Carries 'Em All

S.D. Sun 7/28/37 By HAROLD KEEN

"WHAT have we aboard?"

Capt. John Strom of the McCormick freighter West Nilus looked over his ship as she lay at Pier One yesterday.

"Well, now, we're right down to the plimsoll mark with 3,800,000 feet of lumber, 1000 tons of general merchandise, and by the time we get out of here tonight, we'll have 80 more tons of airplanes.

"Oh yes, we have some passengers too—there's a honeymooning couple among 'em."

A young man and woman stepped out on deck. "That's them," Capt. Strom nodded. "He's Capt. Kenneth Anderson—of the Salvation Army."

Bound For Brazil

Capt. Anderson and his bride were launching on an adventure to Brazil that will engage them for seven years. Mrs. Anderson also is a Salvation Army captain, whose departure from the Coast is depriving San Francisco of its "angel" of the Bowery, where for the past six months she had been conducting services nightly and all day Sunday for the toughest men in town.

When the West Nilus steamed out of San Diego last night, the Andersons had 35 days of uninterrupted sailing ahead of them—no ports until Puerto Belgrano, the Argentine Naval Base. And they will do some high-powered studying during that time, they said. Study of the Portuguese language, which they must master before the Salvation Army will send them to its outpost missions in the Brazil jungle country.

Then On To Rio

At Buenos Aires, "end of the line" for the West Nilus, the Andersons transfer to a vessel bound for Rio de Janeiro.

Throughout the day yesterday, the Harbor Department's big steam crane puffed at its job of lifting the huge crates into which had been carefully placed sections of P2Y3 airplanes manufactured by Consolidated Aircraft Corp. for the Argentine Navy. The work was complicated by the tall load of lumber already on deck, necessitating a great deal more lifting power than would normally be required, as the crates were placed directly on top of the timber.

"Long Way Around"

Capt. Strom will have to use all the seamanship at his command should his heavily loaded vessel strike rough weather on the long journey, waterfront observers agreed. The West Nilus will go the "long way" around, passing through the Magellan Straits to save the expense involved in transiting the Panama Canal.

There was no question over the destination of the plane parts. The address, one of the most elaborate ever seen on crates at the waterfront, read as follows:

"Republica Argentina, Ministerio de Marina, Commandancia de Aviacion, Puerto Belgrano, Bahia Blanca, Argentina, South America."

2980 AT WORK IN CONSAIR PLANT

S.D. Union 7/29/37

Officials of Consolidated Aircraft Corp. announced yesterday a total of 2980 employes is working at the municipal-airport plant.

Consolidated is completing 116 airboats for the navy, the last plane being scheduled for delivery prior to June 1, 1938. Officials say they hope before that time to obtain additional contracts.

Three planes for the Russian government of the PBY-1 type are completed, but owing to governmental restrictions cannot be shipped from San Diego to the Soviet union before Nov. 1.

Young Engineer Designs New Type Plane

Preparing to Fly Tailless Glider Soon

If Charles Lewis Freel doesn't turn the aviation world upside down with a revolutionary design some day, it won't be because he didn't start right. At 20, he's designed, built and is ready to fly a new-type tailless glider!

His home is in San Diego, Calif., in the heart of a section lush with aircraft factories, so Charles began building models when in the eighth grade, planning a future aeronautical career.

Starts With Models.

He forged ahead in his first year at San Diego High School. The school gives courses in airplane rigging and model building. Charles went in for these, was taught to pilot a glider by the school's aviation instructor, Letain T. Kitterege, ex-naval airman.

After graduation Charles got a job with Consolidated Aircraft Corporation, builder of the U. S. Navy's giant patrol planes. He now bears the hard-won title "Junior Engineer." But while still in school he had started his "flying wing" glider.

"It is a development of several models I constructed and experimented with," he writes from 2214 Julian avenue. "It is an all-wing glider with no projecting tail surfaces."

Two Sets of Ailerons.

Since the craft has no tail to hold the usual rudder and elevators, Charles put two sets of ailerons on each wing of the glider. These are outlined by black lines on the model he's holding in photo (right). The smaller, outer pair acts as rudders. The larger and smaller pairs work independently of each other. To swing the glider right, the right "rudder" is raised.

That may sound pretty ingenious, but you haven't heard anything yet. Naturally, dealing with something new, Charles ran across new problems. One was to make his trick control surfaces work in proper sequence. For instance, the larger ailerons have to act as elevators at the same time they're performing their usual duty of banking the ship.

To make this possible, the young engineer invented a devious mechanical "brain" which, through various gears, allows one movement of the control stick to operate several ailerons.

Year and Half to Build.

Before Charles left high school an actual size wood model of the glider, with its 52-foot wing span, had been constructed. Then work lagged as he set himself to making good at the plane factory.

"My engineering work at Consolidated has consumed practically all my time," he explains, "as I have to keep up with men 15 to 20 years my senior. Hence the work has been slowed up extremely during the last two years, although the actual time required to construct the major part of the wing was approximately one and one-half years."

But it's just about finished now and shortly will be flight-tested by Mr. Kitterege. Charles sees no reason why it shouldn't work. His models have flown excellently and led him to expect a minimum flying speed of about 40 miles per hour.

School Plans Complete.

The plane pioneer confesses the flying wing has meant more to him than anything else he's ever tackled. But whether it works out as he planned or not, Charles is going on.

Already he's figured out a plan whereby Consolidated will send him to California Institute of Technology, one of the world's best training grounds for aeronautical engineers.

AERO DIGEST 8/37

Record Mass Flight

Routine transfer of 12 P & W-powered Consolidated twin-engined flying boats from San Diego to the Fleet Air Base, Coco Solo, Canal Zone, resulted in completion of the longest non-stop mass flight in naval history. Under command of Lieut. Robert W. Morse, Patrol Squadron 3 flew PBY-1's 3292 miles in 27 hrs. 58 min. to set the new record.

S. D. UNION 8/3/37

AVIATION WEEK OBSERVED LOCALLY

In commemoration of the recent New York to Bermuda Clipper ship flight, San Diego merchants and manufacturers are cooperating to make this an unofficial Aviation week. On display at Sears-Roebuck store is this midget ship, San Diego built, which will be entered in the Cleveland National Air races. Other merchants are cooperating with similar displays.

SOVIET FIRM BUYS PLANE FROM CONSAIR

S. D. Men To Teach Assembly Production In Moscow

One giant seaplane, a large quantity of spare parts, and 13 expert engineers and mechanics —all from San Diego's Consolidated Aircraft Corp.—will go into service in Soviet Russia.

Sale of the plane, similar to the giant patrol bombers being built for the U. S. Navy by Consolidated, was announced last night by David Fleet, son of Maj. Reuben Fleet, president of the concern.

He spoke at a meeting of Consolidated mechanics in El Cortez Hotel.

Near Azov Sea

The plane and spare parts will be shipped to an aircraft plant situated near the Azov Sea, in the southeastern part of the Soviet Union, according to Mr. Fleet.

The first group of mechanics and engineers will leave the United States for the U.S.S.R. within the next 60 days, Mr. Fleet said, and will reorganize the Soviet plant with a view to efficient production of the planes.

The huge craft, as well as plans for its construction, were sold by Consolidated to the Amtorg Trading Corp., a Soviet export concern operating in the United States.

The U. S. S. R. will use Consolidated's airboat for commercial purposes, Mr. Fleet said. No armaments will be built into the craft.

Act As Instructors

Russian aircraft workers will be taught production principles and methods of assembling the planes, after which it is expected the Soviets will start manufacture of the airboats themselves. Whether the Soviet built replicas of Consolidated's bomber would be put into military or commercial use is not known, according to Mr. Fleet.

Two Consolidated workers and one ex-employe already have been assigned to this foreign duty. They are Cass Gurney, general superintendent of Consolidated's sheet metal shop, who will have charge of mechanics; Etienne Dormoy, who will supervise engineer-

(Turn to Page 6-A, Col. 4)

AMTORG BUYS CONSAIR PLANE

(Continued from Page 1)

ing; and A. E. Petzon, now in Buffalo, N. Y., who will be placed in charge of tool designing.

The Soviet government will pay all living expenses of the 13 men. Consolidated will guarantee them at least one year's employment abroad, and salary paid them by the concern will be reimbursed by Soviet Russia, Mr. Fleet said.

The airboat, similar to the PBY-1 planes which made the successful trans-Pacific crossing from San Diego to Honolulu last month, is known as a "cargo mail flying boat." The Russians will use Wright engines instead of the Pratt & Whitney motors used now, according to Mr. Fleet.

S.D. Sun 7/19/37

Flying Fish Takes Shore Leave In S. D.; 'Didn't Use Own Power,' Experts Insist

He Made Forced Landing In Heart Of City; Scientists Scoff

The unsettled argument of whether a flying fish actually flies, was revived today, with O. F. Caldwell claiming the upper hand over science.

He exhibited a flying fish, still living, which he declared evidently had flown a mile and a half and smacked into the side of a building at Union and Redwood-sts.

"Five men were sitting there eating our lunches when, bingo, what dropped into their laps but a flying fish!"

Over Consair Factory

Caldwell, sub-contractor on a construction job, said he could furnish substantiating evidence from the five workers—carpenters, plasterers and tile-setters.

"We figured it must have flown all the way from the bay, over the Consolidated Aircraft Corp. plant. If you want to see, I'll show you a mark it made in the side of the house, when it hit and fell into our laps."

He admitted, though, that wind was blowing up from the bay, and that maybe it carried it up there.

Bosh! Say Scientists

Fish biologists at Scripps Institution of Oceanography at La Jolla scoffed.

"Humph," said Dr. F. B. Sumner. "I'll bet a thousand to one—make it ten thousand to one—that that fish didn't fly from the bay. Flying fish don't fly, they glide or plane along the water.

"They swim at a tremendous speed and shoot into the air. They don't flap their wings. The farthest they've been known to travel is about 100 yards, though they do get as high as 10 or 12 feet when they ride an air current."

Dr. Sumner said he would explain the fish's presence by the theory that some large bird snatched it up from the sea, dumped it on the building.

"Flying fish never fly over land. I doubt if they even enter San Diego's bay. It's ridiculous."

"Here's the proof, still alive, declares O. F. Caldwell, exhibiting a flying fish which he said smacked into the side of a building a mile and a half from water. Science, however, scoffs at any claim it flew that distance.

SPORTSMAN PILOT
JULY 15, 1937

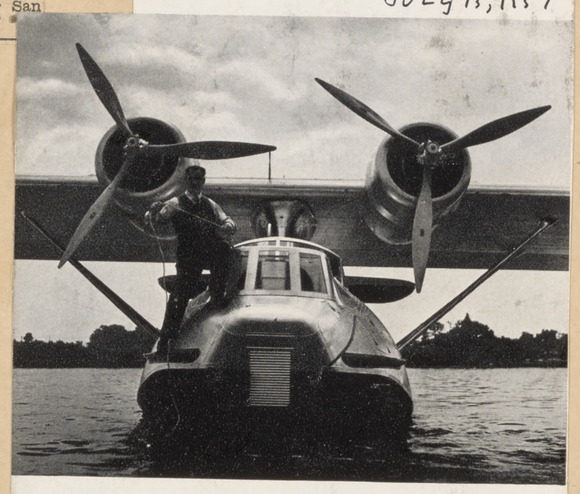
SPORTSMAN PILOT 7/15/37

Boat Over the U. S.

Richard Archbold's non-stop flight from San Diego to North Beach, New York City, on June 24-25 was accomplished in a Consolidated PBY-1 flying boat of the type used by the Navy in a number of outstanding long over-water hops. His plane, the first released to a private owner, will be used for research work in New Guinea by Mr. Archbold, Russell Rogers, his pilot, and others operating under the auspices of the American Museum of Natural History.

The Archbold Consolidated aerial yacht is powered by two 1000-horsepower Pratt & Whitney Twin Row Wasps. The ship is an all-metal, semi-cantilever monoplane; the wing is attached by a streamlined superstructure and is braced by four streamlined struts to the hull.

The hull superstructure houses the engineer and the instruments and controls for proper handling of the power plant. The cockpit is fitted with dual controls. A feature of the Consolidated PBY-1 boats is the retractable wing tip floats. The float struts fold into the outer section of the wings in flight so that the floats form the wing tips.



"Guba", the Consolidated flying boat being operated by Richard Archbold

JULY 15, 1937
SPORTSMAN PILOT

CONSOLIDATED AIRCRAFT CORPORATION
San Diego, Calif.

WHILE this company has not been in the private aviation picture as much formerly, when it was in volume production on the well-known Fleets, it still contributes to private aviation's advancement. For instance, Consolidated recently delivered to Richard Archbold a counterpart of the Navy's PBY-1 flying boats. He has purchased this interesting ship for personal use by himself and members of an expedition he will head to New Guinea. The plane is noted for its sturdy construction and long range, high performance characteristics. It takes its place with other flying boats as an excellent aerial yacht. Because of military restrictions it is not possible to give actual performance data, but it is known that the ship averaged better than 135 miles per hour on its recent non-stop flight from San Diego, Calif., to New York City.

The officers of the company are: president and manager, R. H. Fleet; vice-president and works manager, C. A. Van Dusen; vice-president and chief engineer, I. M. Laddon; vice-president and material supervisor, C. T. Leigh; secretary and treasurer, R. S. Madison.

GIANT PLANE MAY MAKE HISTORY

This giant two-motored plane, the world's largest privately owned flying boat and the property of the American Museum of Natural History, will take off from San Diego bay Saturday afternoon at 4:30 on the first transcontinental flight to be attempted by a flying boat.

FLYING BOAT TO LEAVE HERE ON NON-STOP FLIGHT TO N.Y.

June 23

In the first transcontinental non-stop flight to be attempted by a flying boat, a giant two-motored plane, owned by the American Museum of Natural History, is scheduled to take off from San Diego bay at 4:30 Saturday afternoon and land within 18 hours at North Beach airport, New York City, 2700 miles away.

Richard Archbold, research associate of the American Museum of Natural History, announced plans for the flight less than 24 hours after 12 navy patrol planes of the same type as the museum's plane completed a record 3085-mile non-stop mass flight from San Diego to Coco Solo, C. Z. Twenty-four hours' flying time, plans to take the

(Continued on Page 4, Col. 1)

Guard rifles and machine guns.

The guardsmen were ordered into the Mahoning valley by Gov. Martin L. Davey yesterday.

Camera Smashed

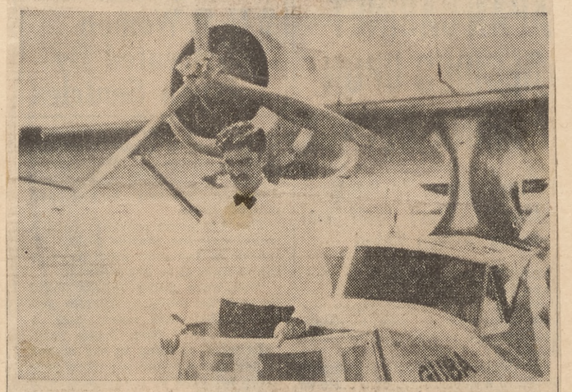
With rifles lowered, they came running toward a crowd of several hundred C. I. O. strikers who had surrounded a Chicago newspaper photographer, seized his camera and smashed it.

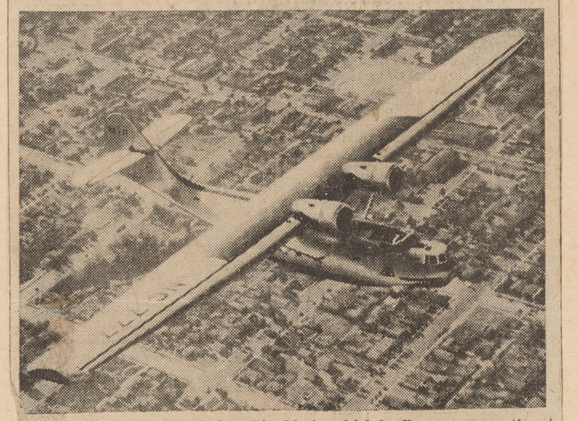
The crowd retreated, booing and shouting.

Coupled with the C. I. O.-announced general strike, a statement by John McKeown, C. I. O. organizer, that "a march by 50,000 union men from other cities might be called to protest alleged discrimina-

STAR(?)
Honolulu Paper, July 20, 1937

Flying 'Grocery Store' Is Coming Here In December





Mr. Archbold above, and below, his ship in which he flew across continent.

Late next December, if present plans materialize, a seven ton flying boat will sweep out of eastern skies, rest briefly at Pearl Harbor, and then disappear into the west to set several all time records for delivering groceries.

The plane will be the same in which Richard Archbold, 30 year old associate of the American Museum of Natural History, recently crossed the continent nonstop from the west coast in 17 hours and 31½ minutes. It was piloted by William B. (Bill) Wheatley, Consolidated test pilot, who in January flew to Pearl Harbor from San Diego with the first batch of new navy patrol airboats.

Mr. Archbold, according to Associated Press dispatches, is planning to use his big flying boat to parachute food supplies to an expedition in New Guinea.

He plans to fly the aerial grocery wagon across the Pacific, following the Pan American route from the coast to Honolulu, Midway, Wake and Guam.

Is Third Expedition

From Guam he will swing southward into New Guinea for his third expedition into the interior in search of rare birds, animals and plants.

This will be his second attempt at establishing communication with an exploration party by airplane from the seacoast. A similar attempt last year ended disastrously when his plane overturned in a 60 m.p.h. gale in Port Moresby, Papua harbor. Such a sudden gale locally is called a guba, and Mr. Archbold has chosen that as the name of his new plane.

Mr. Archbold's arrival in New Guinea will be preceded by a party of four scientists headed by Dr. Austin L. Rand of the museum. Dr. Rand and his associates will go to New Guinea next September by regular steamship routes.

Mr. Archbold's plane is a seven ton flying boat built by the Consolidated Aircraft Co. and is a sister ship of the new navy patrol airboats, the type having been released for export. It is powered by two Pratt and Whitney 1,000 horsepower motors and resembles the patrol planes recently flown from the coast to Hawaii by the navy.

Plane Specially Equipped

To enable Mr. Archbold to drop food and supplies by parachute a special system has been built into the craft. The plane is equipped with a two way radio telephone with a radius of more than 1,500 miles. This will be used for communication between the scientific party in the interior and the base on the coast.

The country in which the Archbold party will work is in the Fly river area, which is wild but well known. There are at least three amphibian planes based in the same area now. They belong to gold prospecting companies who aided Mr. Archbold when he met with misfortune last year.

Cost of the expedition will approximate $100,000.

Mr. Archbold will consider the venture profitable if he is able t capture a rare flying phalanger, a tiny gray brown animal three to four inches long, which has a long tail covered with substance like feathers.

Another curious mammal he hopes to snare is the black and white striped dactyl opsila which subsists on bugs and insects and has a long extended forefinger used to scoop food from beneath rocks and logs.

Mr. Archbold has tentatively set late September as date of his take-off from the west coast for Hawaii.

Flying Fish Takes Shore Leave In S. D.; 'Didn't Use Own Power,' Experts Insist

S.D. Sun 7/19/37

He Made Forced Landing In Heart Of City; Scientists Scoff

The unsettled argument of whether a flying fish actually flies, was revived today, with O. F. Caldwell claiming the upper hand over science.

He exhibited a flying fish, still living, which he declared evidently had flown a mile and a half and smacked into the side of a building at Union and Redwood-sts.

"Five men were sitting there eating our lunches when, bingo, what dropped into their laps but a flying fish!"

Over Consair Factory

Caldwell, sub-contractor on a construction job, said he could furnish substantiating evidence from the five workers—carpenters, plasterers and tile-setters.

"We figured it must have flown all the way from the bay, over the Consolidated Aircraft Corp. plant. If you want to see, I'll show you a mark it made in the side of the house, when it hit and fell into our laps."

He admitted, though, that wind was blowing up from the bay, and that maybe it carried it up there.

Bosh! Say Scientists

Fish biologists at Scripps Institution of Oceanography at La Jolla scoffed.

"Humph," said Dr. F. B. Sumner. "I'll bet a thousand to one—make it ten thousand to one—that that fish didn't fly from the bay. Flying fish don't fly, they glide or plane along the water.

"They swim at a tremendous speed and shoot into the air. They don't flap their wings. The farthest they've been known to travel is about 100 yards, though they do get as high as 10 or 12 feet when they ride an air current."

Dr. Sumner said he would explain the fish's presence by the theory that some large bird snatched it up from the sea, dumped it on the building.

"Flying fish never fly over land. I doubt if they even enter San Diego's bay. It's ridiculous."

"Here's the proof, still alive, declares O. F. Caldwell, exhibiting a flying fish which he said smacked into the side of a building a mile and a half from water. Science, however, scoffs at any claim it flew that distance.

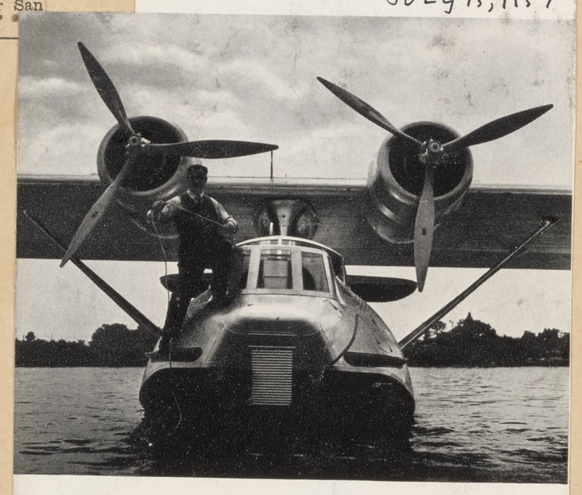
SPORTSMAN PILOT 7/15/37

Boat Over the U. S.

Richard Archbold's non-stop flight from San Diego to North Beach, New York City, on June 24-25 was accomplished in a Consolidated PBY-1 flying boat of the type used by the Navy in a number of outstanding long over-water hops. His plane, the first released to a private owner, will be used for research work in New Guinea by Mr. Archbold, Russell Rogers, his pilot, and others operating under the auspices of the American Museum of Natural History.

The Archbold Consolidated aerial yacht is powered by two 1000-horsepower Pratt & Whitney Twin Row Wasps. The ship is an all-metal, semi-cantilever monoplane; the wing is attached by a streamlined superstructure and is braced by four streamlined struts to the hull.

The hull superstructure houses the engineer and the instruments and controls for proper handling of the power plant. The cockpit is fitted with dual controls. A feature of the Consolidated PBY-1 boats is the retractable wing tip floats. The float struts fold into the outer section of the wings in flight so that the floats form the wing tips.



"Guba", the Consolidated flying boat being operated by Richard Archbold

JULY 15, 1937
SPORTSMAN PILOT

CONSOLIDATED AIRCRAFT CORPORATION

San Diego, Calif.

WHILE this company has not been in the private aviation picture as much formerly, when it was in volume production on the well-known Fleets, it still contributes to private aviation's advancement. For instance, Consolidated recently delivered to Richard Archbold a counterpart of the Navy's PBY-1 flying boats. He has purchased this interesting ship for personal use by himself and members of an expedition he will head to New Guinea. The plane is noted for its sturdy construction and long range, high performance characteristics. It takes its place with other flying boats as an excellent aerial yacht. Because of military restrictions it is not possible to give actual performance data, but it is known that the ship averaged better than 135 miles per hour on its recent non-stop flight from San Diego, Calif., to New York City.

The officers of the company are: president and manager, R. H. Fleet; vice-president and works manager, C. A. Van Dusen; vice-president and chief engineer, I. M. Laddon; vice-president and material supervisor, C. T. Leigh; secretary and treasurer, R. S. Madison.

GIANT PLANE MAY MAKE HISTORY

This giant two-motored plane, the world's largest privately owned flying boat and the property of the American Museum of Natural History, will take off from San Diego bay Saturday afternoon at 4:30 on the first transcontinental flight to be attempted by a flying boat.

FLYING BOAT TO LEAVE HERE ON NON-STOP FLIGHT TO N.Y.

June 23

In the first transcontinental nonstop flight to be attempted by a flying boat, a giant two-motored plane, owned by the American Museum of Natural History, is scheduled to take off from San Diego bay at 4:30 Saturday afternoon and land within 18 hours at North Beach airport, New York City, 2700 miles away.

Richard Archbold, research associate of the American Museum of Natural History, announced plans for the flight less than 24 hours after 12 navy patrol planes of the same type as the museum's plane completed a record 3085-mile nonstop mass flight from San Diego to Coco Solo, C. Z. Twenty-four navy planes of the PBY-1 type, built by the San Diego Consolidated Aircraft Corp. plant, earlier this year made two flights to Honolulu.

Boulder Flight Made

In the last week, the plane, the largest privately owned plane in the world, has flown successfully to Lake Meade, Boulder dam, and to Lake Tahoe for high altitude landing and take-off tests.

After government restrictions on the plane are lifted next winter, Archbold, who has more than 600 hours' flying time, plans to take the plane to New Guinea on an expedition for the museum.

With Archbold in the plane on the transcontinental flight will be Russell Rogers, pilot; Gerald Brown, engineer; Lt. Comdr. L. R. Gray, U. S. N., ret.; Harold Ramm, radio operator, and probably William Wheatley, Consolidated's chief test pilot.

Archbold plans to fly the plane from New York to Schuyler lake, near Cooperstown, N. Y., the home of his mother, Mrs. John F. Archbold. He will return west next month, flying to Yellowstone park for high altitude landing and take-off tests on lakes in Wyoming, including Yellowstone lake at an altitude of 7500 feet.

Few Landing Places

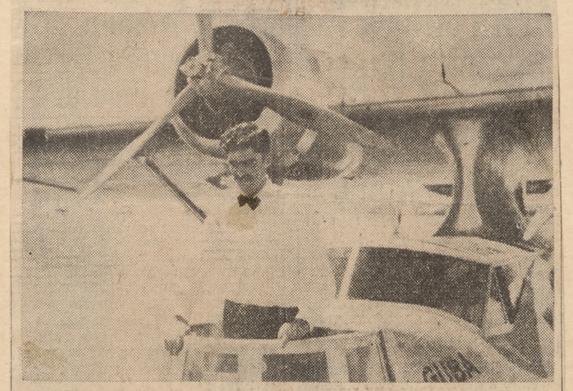
On his eastward flight Archbold will cross the Salton sea in Imperial valley; Roosevelt reservoir in Arizona, and the Mississippi river, the only bodies of water large enough for the plane to land.

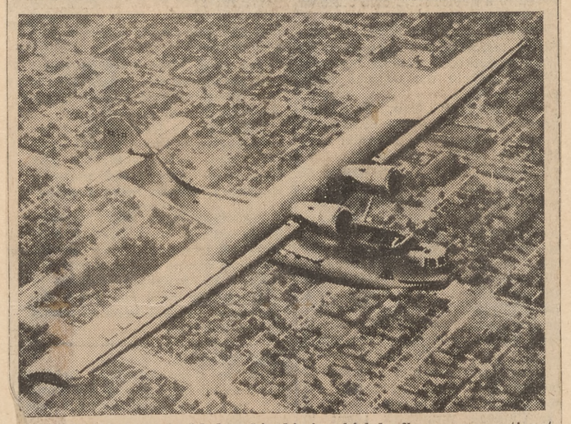
The most modern radio equipment will be used on the plane. Communication between the plane and Archbold's privately constructed 500-watt radio telephone and telegraph station at La Mesa will be maintained on the flight.

Two barographs to observe the take-off and timing of the flight will be sealed and placed in the plane by a committee appointed by the National Aeronautics association. The committee is composed of William Van Dusen, chairman, T. Claude Ryan and Jackson L. Hicklin.

STAR(?)
Honolulu Paper, July 20, 1937

Flying 'Grocery Store' Is Coming Here In December





.r. Archbold above, and below, his ship in which he flew across continent.

Late next December, if present plans materialize, a seven ton flying boat will sweep out of eastern skies, rest briefly at Pearl Harbor, and then disappear into the west to set several all time records for delivering groceries.

The plane will be the same in which Richard Archbold, 30 year old associate of the American Museum of Natural History, recently crossed the continent nonstop from the west coast in 17 hours and 3½ minutes. It was piloted by William B. (Bill) Wheatley, Consolidated test pilot, who in January flew to Pearl Harbor from San Diego with the first batch of new navy patrol airboats.

Mr. Archbold, according to Associated Press dispatches, is planning to use his big flying boat to parachute food supplies to an expedition in New Guinea.

He plans to fly the aerial grocery wagon across the Pacific, following the Pan American route from the coast to Honolulu, Midway, Wake and Guam.

Is Third Expedition

From Guam he will swing southward into New Guinea for his third expedition into the interior in search of rare birds, animals and plants.

This will be his second attempt at establishing communication with an exploration party by airplane from the seacoast. A similar attempt last year ended disastrously when his plane overturned in a 60 m.p.h. gale in Port Moresby, Papua harbor. Such a sudden gale locally is called a guba, and Mr. Archbold has chosen that as the name of his new plane.

Mr. Archbold's arrival in New Guinea will be preceded by a party of four scientists headed by Dr. Austin L. Rand of the museum. Dr. Rand and his associates will go to New Guinea next September by regular steamship routes.

Mr. Archbold's plane is a seven ton flying boat built by the Consolidated Aircraft Co. and is a sister ship of the new navy patrol airboats, the type having been released for export. It is powered by two Pratt and Whitney 1,000 horsepower motors and resembles the patrol planes recently flown from the coast to Hawaii by the navy.

Plane Specially Equipped

To enable Mr. Archbold to drop food and supplies by parachute a special system has been built into the craft. The plane is equipped with a two way radio telephone with a radius of more than 1,500 miles. This will be used for communication between the scientific party in the interior and the base on the coast.

The country in which the Archbold party will work is in the Fly river area, which is wild but well known. There are at least three amphibian planes based in the same area now. They belong to gold prospecting companies who aided Mr. Archbold when he met with misfortune last year.

Cost of the expedition will approximate $100,000.

Mr. Archbold will consider the venture profitable if he is able to capture a rare flying phalanger, a tiny gray brown animal three to four inches long, which has a long tail covered with substance like feathers.

Another curious mammal he hopes to snare is the black and white striped dactyl opsila which subsists on bugs and insects and has a long extended forefinger used to scoop food from beneath rocks and logs.

Mr. Archbold has tentatively set late September as date of his take-off from the west coast for Hawaii.

10:30 p. m.—Reported near Carlsbad, N. M., "everything working O. K."
11 p. m.—Reported over Lubbock, Tex.

American Museum of Natural History, who has announced plans for an exploration trip to New Guinea next winter.

Objective of the long eastward flight will be assault on several aviation records. It is the first non-stop transcontinental flight ever attempted by a large airboat. Also sought is the record for transcontinental speed for an airship of its weight, 27,000 pounds.

Take-off of the ship was observed officially for the National Aeronautics association by William Van Dusen, timer, and T. Claude Ryan and Ray Booth, observers. Sealed barographs were placed aboard the plane just before it took off to record the flight for association records.

Weather Ideal

"I'm going to have an early lunch in New York," commented Archbold just before the take-off. He estimated the time required for the flight at from 17 to 18 hours and said he would land at North Beach airport in New York.

"We expect no storm trouble as reports show that we are following a weather condition that should give us beneficial tail winds. Our take-off originally was scheduled for Monday, but anticipated storm

$165,000 CENTER FUND INCLUDED IN CITY ORDINANCE

Providing for possible expenditure of $165,000 on the Civic Center completion job during the year, the 1937-38 city appropriation ordinance was drafted yesterday and is scheduled for filing with the city clerk in time for the opening of public hearings scheduled before the council Monday afternoon at 2.

The ordinance as drafted would require a tax levy of $2,747,251.14 which would necessitate an estimated tax rate of $2.15 on each $100 assessed valuation. The 1936-37 tax requirement was $2,679,407.14 and the rate was $2.10.

Tucked away in the unappropriated balance section of the ordinance is $115,000 earmarked for general appropriations. In the Civic Center completion. In the item for completion of the police headquarters project, which has not reached the construction stage as yet. It is reported from reliable sources that the $50,000 could be made available for the Civic Center

tee; Andrew W. Mellon, former secretary of the treasury; Pierre DuPont and six other members of the DuPont family were listed.

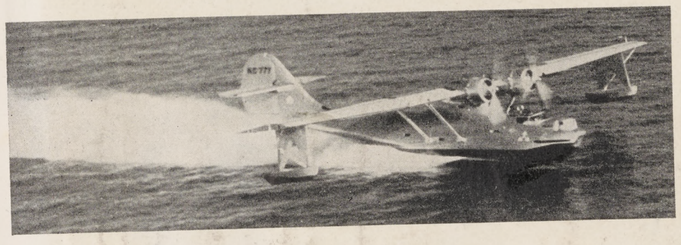
President Roosevelt's message to congress urging that tax loopholes be closed precipitated the congressional inquiry into alleged evasion and avoidance.

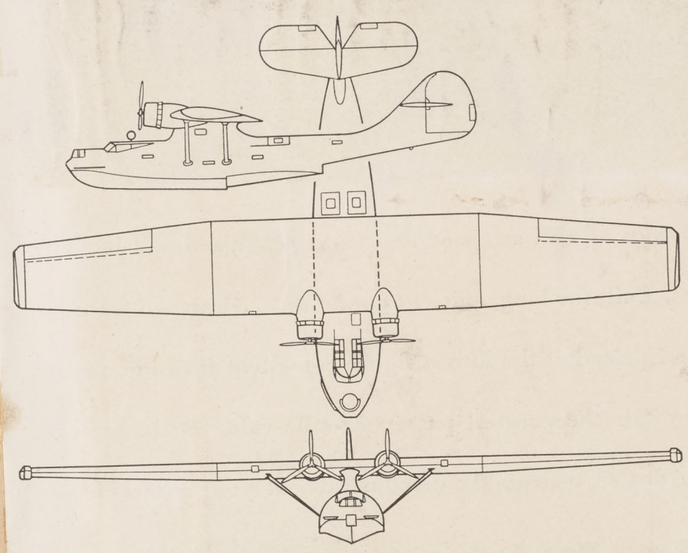
Consolidated Long-Range Commercial Flying Boat

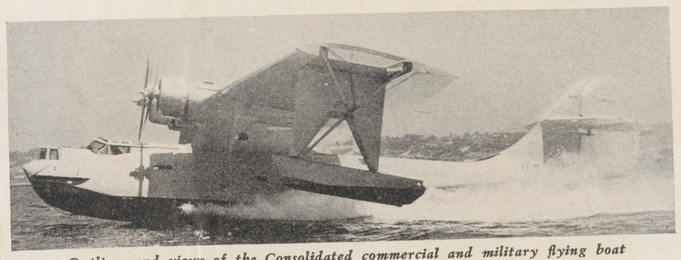
AERO DIGEST AUGUST '37

● Initial commercial conversion of the Consolidated PBY-1 flying boat was delivered to Richard Archbold, research associate of the American Museum of Natural History. On June 25, Archbold and a crew of 5 flew this largest privately-owned airplane non-stop from the factory in San Diego to North Beach Municipal Airport, New York, in 17 hours 2 minutes, marking the first time that the U. S. was spanned by a craft of this type. Archbold plans to fly his plane to Dutch New Guinea late this year, following Pan American Airways' route from Alameda to Hawaii, Midway, Wake and Guam, thence to New Guinea where he will conduct a one-year scientific expedition for the museum.

The flying boat, christened the *Guba* ("Sudden Squall"), is basically similar to the patrol boats Consolidated Aircraft Corp. has been manufacturing for the U. S. Navy. More than 175 of these patrol-bombers have been ordered for the Navy and several squadrons, in planes of this type, have distinguished themselves in a series of long flights across the Pacific Ocean and more recently by a 3087-mile non-stop trip from San Diego to Coco Solo, Canal Zone.







Outlines and views of the Consolidated commercial and military flying boat

The PBY-1, a twin-engined all-metal semi-cantilever monoplane designed for military use as a long-range patrol bomber and for commercial use as a long-range transport or cargo plane, is powered either by Wright Cyclone or Pratt & Whitney Twin Wasp engines, Archbold's plane having the 1000 hp version of the latter, with Hamilton Standard constant speed propellers.

Structure, including hull, auxiliary floats, wings and tail surfaces, is riveted aluminum alloy monocoque type construction, made up of sheet and extruded Z and angle stiffeners. All aluminum alloy parts are protected from corrosion by anodic treatment immediately prior to the application of the priming coat.

A system of walkways permits access through and on top of the hull and on the wing surfaces, to the fuel tank filler units, the engine nacelles, wing tip floats, tail surface hinges and entrance hatches.

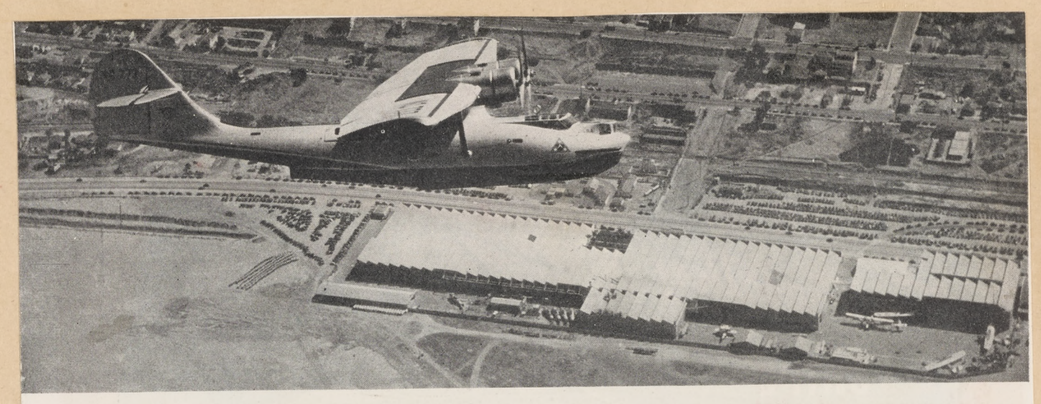
For military use, the two-step hull is arranged with the usual equipment in patrol bomber type airplanes. As a commercial airplane, cargo and passenger compartments are arranged with proper respect for cg location. With either arrangement an enclosed compartment with [illegible] seats for pilot and co-pilot, and an engineer's station in the hull superstructure, with instruments and controls for proper engine functioning, are provided.

Wing consists of two outer panels and a center section, the engines and nacelles being carried on the latter in which an integral fuel tank is built. The wing is attached by a streamlined superstructure, rising from the center of the hull and braced by 4 streamlined struts to the hull. Bolts for wing attachment are accessible through doors at the top of the hull turret. Auxiliary floats, forming the tips of the outer wing panels, are retractable, their struts folding inside the wing and their bracing structure being recessed flush with the lower surface of the wing.

Wing structure is of the beam bulkhead and stressed skin type, the skin being reinforced with Z section extruded stiffeners. The after portion of the wing is of aluminum alloy rib type construction, fabric-covered. Ailerons are aerodynamically and statically balanced, of aluminum alloy with fabric covering and have an adjustable camber device on their upper surfaces to correct for wing heaviness.

Wing tip floats may be retracted and extended by means of an electrically- or

(*Continued from page* 38)



The "Guba" in flight above the Consolidated factory in which it was built

AERO DIGEST AUG. '37

(*Continued from page* 36)

mechanically-operated screw mechanism. The float supporting structure is so arranged as to recess flush with the bottom of the wing when floats are completely retracted. Automatic locks and warning lights for the electrical mechanism make the system simple to operate. Wing tip floats of this type offer a variety of features. Because they are near the wing tip, they are small, thus light in weight. In the retracted position, they have less drag and decrease wing tip losses, thereby increasing speed and lift. In maneuvering in restricted waterways, they may be raised to clear obstacles. Their use also allows greater access for bringing boats alongside the hull.

Vertical and horizontal fixed tail surfaces are full cantilever monoplane structures, attaching to a fin structure built integral with the hull. Stabilizer and upper section of the fin are covered with smooth aluminum alloy sheet, reinforced with extruded sections; elevators and rudder are aluminum alloy structures, fabric-covered. The stabilizer is fixed, longitudinal trim being obtained by tabs on the elevator trailing edge, controlled from the cockpit. A pilot-controlled tab is also provided on the trailing edge of the rudder. Two retractable tubular steel steps set in the fin provide means for reaching the stabilizer and rudder for inspection or necessary repairs.

Hull structure, including bulkhead, framing stringers and skin, is of aluminum alloy construction. The underside has a pronounced concave section forward of the steps. It is divided into compartments separated by solid web-type bulkheads, to which water-tight doors are attached to close the passageway and prevent flooding in an emergency. A retractable snub post socket is set in the hull at the bow. Hatches are provided in the bow compartment for handling anchor gear and a rubber-protected mooring cable, in the pilot's compartment for entrance and exit, and in the aft part of both sides of the hull for entrance and exit of passengers, cargo or military equipment, as required. A trap door about 4 ft. aft of the rear step and well above the water line permits the use of an outboard motor for navigation on narrow waterways, etc. At the nose of the hull is an observation hatch forward, and above it a drum-shaped observation turret. Behind it is the pilots' compartment, aft of which is the navigation compartment (on the port side) and the radio equipment (starboard side).

The next two compartments have sleeping bunks and equipment on either side of the central aisle. Above the forward of these compartments is space for the flight engineer whose bucket seat is set above the aisle. He has a complete set of engine instruments and windows at either side of his station. Rearward in the hull is a large compartment for stowage of supplies and equipment including a folding plywood row-boat; in this compartment is the toilet. A light portable dural scaling ladder may be hooked on either side of the hull to permit entrance to the rear hatches. Another ladder is provided on the inside of the hull. Walkways inside the hull are of corrugated dural. Small ventilating hatches are along the top of the hull. All windows are Libbey-Owens-Ford *Safety Glass*.

Elevators and ailerons are controlled by a single yoke, mounting two control wheels, one for each pilot. Rudder control is by a non-adjustable dual pedal arrangement, with the range of adjustment of the pilot's seat being sufficient to accommodate the pilot's feet to the pedals. A cable type system is used for elevators and rudders, and a rod-cable type control for ailerons to provide positive independent control for each unit in both directions. Cables are run on the underside of the top of the hull, exposed to allow easy inspection.

Instruments in the pilots' compartment include 2 airspeed, turn and bank and rate-of-climb indicators, altimeters, compasses, tachometers and manifold pressure gauges, and 1 clock. The engineer's station is provided with 2 engine gauge units (oil temperature, oil and fuel pressure), carburetor air temperature indicators, tachometers, and fuel flowmeters, and 1 thermocouple, lateral inclinometer, exhaust gas analyzer and a set of fuel quantity gauges. An airspeed indicator, clock and altimeter are provided for the radio-navigator.

The electrical system includes navigation lights, switch for which is accessible from the exterior of the hull, interior hull lighting, landing lights, a signal system and other devices necessary in a craft of this size and type. Power is supplied by 2 batteries and by 2 engine-driven generators.

Engines are mounted on a welded chrome molybdenum steel tubing structure and the arrangement of the engine ring and nacelle cowling facilitates access to the engine and accessory compartments for inspection and adjustment.

A readily-detachable beaching gear is provided for handling the airplane in and out of the water and to facilitate movement ashore. Each forward truck of the gear is of the 2-wheel swivel type, capable of being steered and of being locked in 3 positions. The tail wheel, carried on a tripod set just ahead of the rear mooring ring, is of the 2-wheel free swiveling type steered by a detachable arm.

For use on Archbold's record-making transcontinental flight, and throughout his projected expedition, a Bendix radio and interior communication system is installed. The installation consists of a main transmitter, auxiliary transmitter, 2 complete receivers, a direction finder, and an intercommunication system which extends throughout the ship and also permits both pilots to use the radio facilities directly when necessary. Tests made during recent flights from San Diego to Lake Mead and Lake Tahoe gave reliable radio telephone communication in excess of 500

(*Continued on page* 83)

Archbold, 1st to Land on Mead Lake, Returns to S. D.; Plans Explorations

S.D. UNION 6/19/37

Lifting easily over the coast range of mountains to settle gently on Lake Mead, Richard Archbold's exploration air cruiser, product of Consolidated Aircraft Corp., here, yesterday became the first flying boat to land on the lake created by Boulder dam.

The "first" established by Archbold in the big ship, is one of many it expected to accomplish. It was designed to penetrate the interior of New Guinea as the "eyes" of a scientific expedition planned by Archbold who is a research associate of the American Museum of Natural History.

Taking off from here early yesterday, the big ship was accompanied by a smaller Fleetster in which Frank Learman jr., assistant to the manager of the aircraft company, test pilots and a newsreel cameraman flew. The big air boat, wingspread 104 feet, was photographed against snow capped mountains, with Boulder dam and with Lake Mead in the background.

It was landed on the man-made lake at 10:42 a. m. Members of its crew, including Archbold and William Wheatley, Consolidated chief test pilot, and the men aboard the Fleetster went to lunch in Boulder City.

The return flight started in the afternoon, with the newsreel cameraman shifting to the big ship. The planes landed here in the afternoon between 4:30 and 5.

Archbold is expected to fly the big ship to the east next week. Two routes are under consideration for the flight, one a non-stop cross country flight from San Diego to New York and the other over the gulf to Pensacola, Fla., and thence along the east coast.

If Archbold attempts the cross country flight, it will be one of the first times that a big airship, equipped to land on water only, has made such a trip. Archbold, 29, is internationally known as an explorer. He will leave from San Francisco some time this winter on the projected exploration flight, proceeding via Hawaii, Midway and Wake islands and Guam, then to New Guinea.

CONSOLIDATED

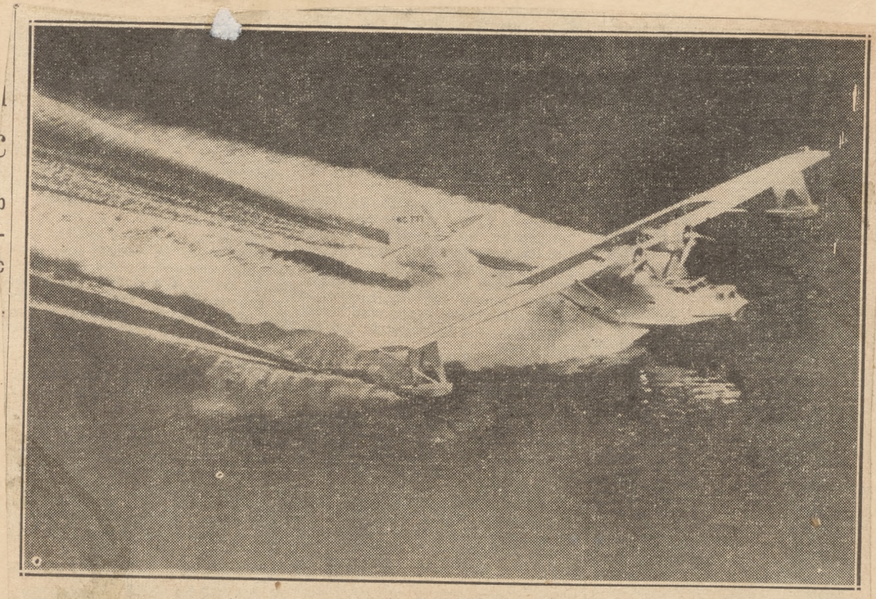
(*Continued from page* 38)

miles with the main transmitter, while over distances of up to 150 miles the auxiliary transmitter provided equally reliable communication.

The radio direction finding equipment is similar to that designed and manufactured by Bendix for the Consolidated airplanes purchased by the Navy, and recently adopted by various airlines for direction finding and the elimination of "rain static." Power for the radio when the ship is not in flight is supplied by a small auxiliary air-cooled engine set in the wing turret behind the flight engineer's compartment.

Archbold's plane has a span of 104 ft., an overall length of 62 ft. 6.5 in., and an overall height of 18 ft. 5.87 in. Cruising speed is 145 mph and range approximately 4000 miles, but the Navy Department does not permit publication of weight data and other performance figures of the PBY-1 airplanes.

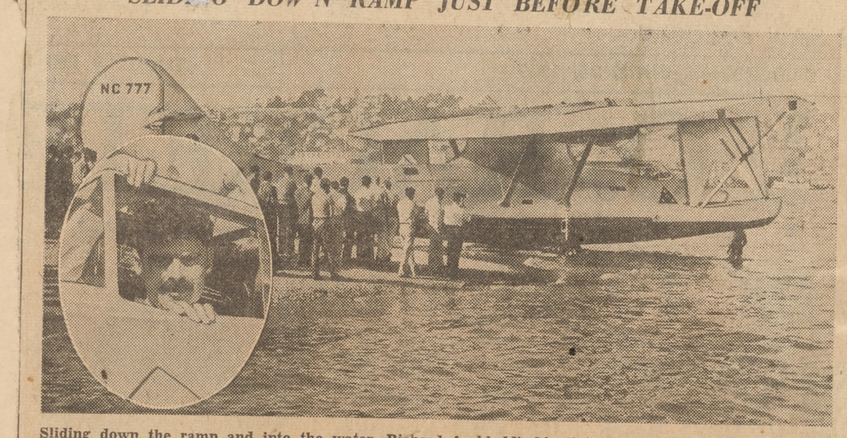
Richard Archbold's Consolidated Flying Boat powered with two 1000 hp P & W Twin Wasps, first commercial version of the U. S. Navy's PBY-1 Long-Range Patrol Bomber shown below it



News-Acme.

STREAMING WHITE BREAKERS—Richard Archbold, sportsman pilot, sets his $125,000 flying boat down at North Beach Airport, New York City, at the end of a non-stop transcontinental flight from San Diego, Calif. It was the first such flight attempted by a seaplane. Archbold completed the hop in 17 hours, 3 minutes, 30 seconds.

SLIDING DOWN RAMP JUST BEFORE TAKE-OFF



Sliding down the ramp and into the water, Richard Archbold's big flying ship, now on the first transcontinental hop of a seaplane, is shown above just a few minutes before the take-off from here yesterday. The big plane, which is to be used in scientific exploration, was built at Consolidated Aircraft Corp. plant here.

NEAR HALF-WAY MARK, REPORT OF S. D. FLYING BOAT

(Continued from Page 1)

conditions led to the decision to leave today while air routes are ideal."

Members of the crew of the big ship include Archbold, who will be at the controls for a part of the trip; Russell Rogers, pilot; William Wheatley, Consolidated chief test pilot; Gerald Brown, engineer; Lt. Comdr. L. R. Gray, U. S. N., ret., navigator; and Harold Ramm, radio operator.

Will Follow Beacons

The proposed route of the flight leads eastward from here to Amarillo, northeast to Cincinnati, Pittsburgh and Scranton and thence to New York. He said he planned to follow T.W.A. beacons from Winslow, Ariz., in the night.

Identical with PBY boats built for long-range patrol work of the navy, Archbold's big ship has a wingspread of 104 feet. It is powered with two 850-horsepower engines. Archbold recently made two other test flights to western lakes.

Known by Consolidated aircraft workers for his sharp wit and modesty, Archbold came here several months ago to supervise the construction of the ship. He remained constantly by as the work progressed. The flight that began yesterday is one of the last important tests the big ship will be put to.

Only comparable flight, aviation authorities said, was that of Col. Francesco de Pinedo, Italian four-continent flier, in 1927. De Pinedo flew across the southern part of the United States in a series of hops in the Santa Maria, a seaplane, but did not finish the transcontinental flight.

Confers By Phone

Archbold's plane was rolled from the hangar soon after 3 yesterday afternoon. Archbold made last-minute arrangements in New York by telephone and accompanied by aviation enthusiasts and company officials, walked to the new seaplane ramp near the coast guard air base.

After a delay of almost an hour, the big ship took to the water, taxied westward. The pilot "gunned the motor" for the take-off, but had to abandon the first attempt to get into the air when a small boat got in the way. Turning around, the pilot took the ship back to the same starting point, took it into the air after a short run and headed over Pt. Loma, scene of the start of many historic flights.

The big ship circled over the top of the point and flew back over North Island and the city, then disappeared eastward, its silver wings glistening in the late afternoon sun.

At Archbold's home in La Mesa, friends and members of his family were gathered throughout the night listening to reports of the ship's position by radio.

$165,000 CENTER FUND INCLUDED IN CITY ORDINANCE

(Continued from Page 1)

job if required, bringing the total for that purpose to $165,000. The entire municipal cost of completion is estimated at about $243,000, but it is planned to raise the remainder of the cost in the 1938-39 fiscal year.

The appropriation ordinance carries an aggregate of $5,154,571.14 for 1937-38 expenditures. Revenues outside general taxation bring the amount required from a general levy to $2,747,251.14.

Manager Flack's original estimates filed May 1 called for an aggregate expenditure by all city agencies of $5,218,595.14. The revised estimates show a smaller total expenditure because approximately $160,000 of police expense was lifted out of the budget total and is to be defrayed from proceeds of the tax collected by the state motor vehicle department in lieu of city personal property taxes on automobiles. This tax money is available for highway protection expense only.

The money will be used to support police traffic efforts.

The appropriation ordinance shows that the carryover from departmental savings will be $26,000 greater than was estimated May 1.

The Civic Center allotments were placed in the unappropriated balance account because of a possibility that federal aid may be obtained for completion of the structure. In such an event they can be withdrawn for use as a sponsor's contribution to a federal project.

'CRIME TOURIST' DEATH DECREED

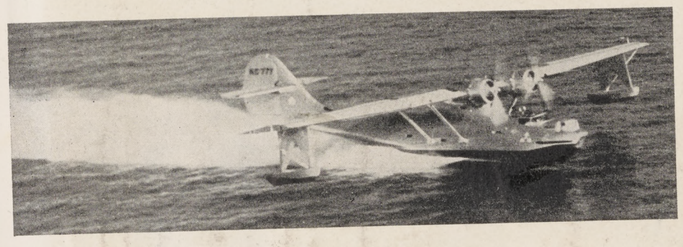
LONOKE, Ark., June 24 (A.P.)—A circuit court jury convicted Lester Brockelhurst, 23, "crime tourist," of first degree murder and fixed his punishment at death in the electric chair today for the May 6 hitch-hike slaying of Victor A. Gaines. Brockelhurst collapsed moaning. His mother, Mrs. L. W. Brockelhurst sr., gathered him into her arms, screaming: "Oh my boy, my boy."

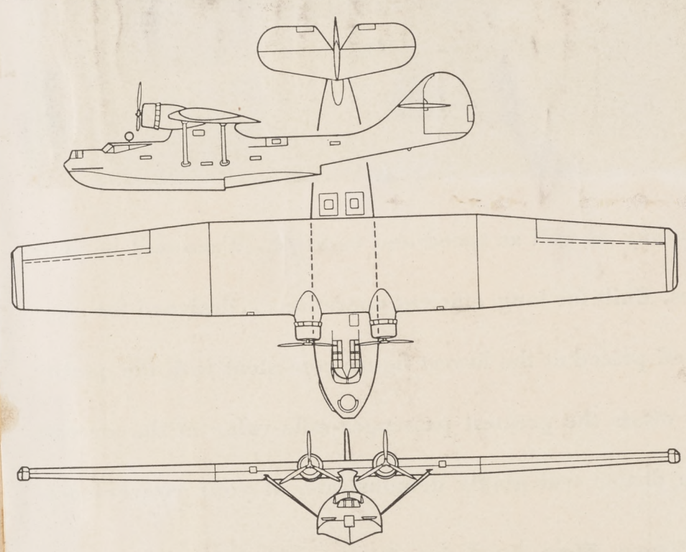
Consolidated Long-Range Commercial Flying Boat

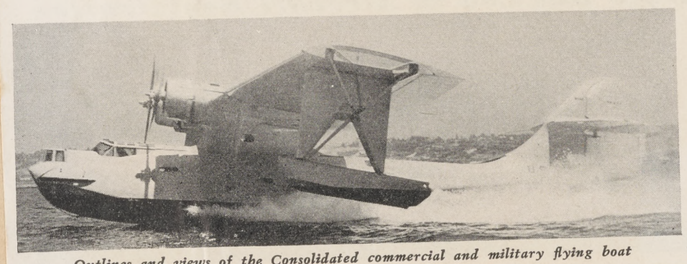
AERO DIGEST AUGUST '37

● Initial commercial conversion of the Consolidated PBY-1 flying boat was delivered to Richard Archbold, research associate of the American Museum of Natural History. On June 25, Archbold and a crew of 5 flew this largest privately-owned airplane non-stop from the factory in San Diego to North Beach Municipal Airport, New York, in 17 hours 2 minutes, marking the first time that the U. Archbold plans to fly his plane to Dutch New Guinea late this year, following Pan American Airways' route from Alameda to Hawaii, Midway, Wake and Guam, thence to New Guinea where he will conduct a one-year scientific expedition for the museum.

The flying boat, christened the *Guba* ("Sudden Squall"), is basically similar to the patrol boats Consolidated Aircraft Corp. has been manufacturing for the U. S. Navy. More than 175 of these patrol-bombers have been ordered for the Navy and several squadrons, in planes of this type, have distinguished themselves in a series of long flights across the Pacific Ocean and more recently by a 3087-mile non-stop trip from San Diego to Coco Solo, Canal Zone.







Outlines and views of the Consolidated commercial and military flying boat

The PBY-1, a twin-engined all-metal semi-cantilever monoplane designed for military use as a long-range patrol bomber and for commercial use as a long-range transport or cargo plane, is powered either by Wright Cyclone or Pratt & Whitney Twin Wasp engines, Archbold's plane having the 1000 hp version of the latter, with Hamilton Standard constant speed propellers.

Structure, including hull, auxiliary floats, wings and tail surfaces, is riveted aluminum alloy monocoque type construction, made up of sheet and extruded Z and angle stiffeners. All aluminum alloy parts are protected from corrosion by anodic treatment immediately prior to the application of the priming coat.

A system of walkways permits access through and on top of the hull and on the wing surfaces, to the fuel tank filler units, the engine nacelles, wing tip floats, tail surface hinges and entrance hatches.

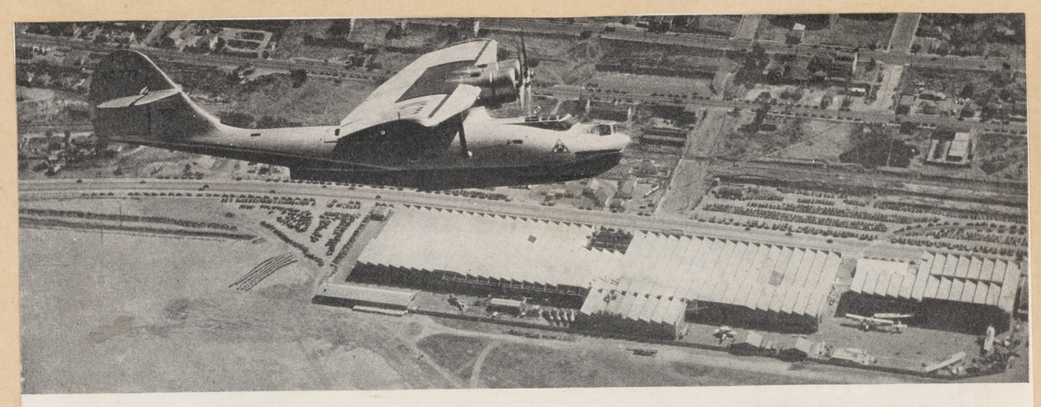
For military use, the two-step hull is arranged with the usual equipment in patrol bomber type airplanes. As a commercial airplane, cargo and passenger compartments are arranged with proper respect for cg location. With either arrangement, an enclosed compartment with [illegible] seats for pilot and co-pilot, and an engineer's station in the hull superstructure, with instruments and controls for proper engine functioning, are provided.

Wing consists of two outer panels and a center section, the engines and nacelles being carried on the latter in which an integral fuel tank is built. The wing is attached by a streamlined superstructure, rising from the center of the hull and braced by 4 streamlined struts to the hull. Bolts for wing attachment are accessible through doors at the top of the hull turret. Auxiliary floats, forming the tips of the outer wing panels, are retractable, their struts folding inside the wing and their bracing structure being recessed flush with the lower surface of the wing.

Wing structure is of the beam bulkhead and stressed skin type, the skin being reinforced with Z section extruded stiffeners. The after portion of the wing is of aluminum alloy rib type construction, fabric-covered. Ailerons are aerodynamically and statically balanced, of aluminum alloy with fabric covering and have an adjustable camber device on their upper surfaces to correct for wing heaviness.

Wing tip floats may be retracted and extended by means of an electrically- or

(*Continued on page* 38)



The "Guba" in flight above the Consolidated factory in which it was built

(*Continued from page* 36)

mechanically-operated screw mechanism. The float supporting structure is so arranged as to recess flush with the bottom of the wing when floats are completely retracted. Automatic locks and warning lights for the electrical mechanism make the system simple to operate. Wing tip floats of this type offer a variety of features. Because they are near the wing tip, they are small, thus light in weight. In the retracted position, they have less drag and decrease wing tip losses, thereby increasing speed and lift. In maneuvering in restricted waterways, they may be raised to clear obstacles. Their use also allows greater access for bringing boats alongside the hull.

Vertical and horizontal fixed tail surfaces are full cantilever monoplane structures, attaching to a fin structure built integral with the hull. Stabilizer and upper section of the fin are covered with smooth aluminum alloy sheet, reinforced with extruded sections; elevators and rudder are aluminum alloy structures, fabric-covered. The stabilizer is fixed, longitudinal trim being obtained by tabs on the elevator trailing edge, controlled from the cockpit. A pilot-controlled tab is also provided on the trailing edge of the rudder. Two retractable tubular steel steps set in the fin provide means for reaching the stabilizer and rudder for inspection or necessary repairs.

Hull structure, including bulkhead, framing stringers and skin, is of aluminum alloy construction. The underside has a pronounced concave section forward of the steps. It is divided into compartments separated by solid web-type bulkheads, to which water-tight doors are attached to close the passageway and prevent flooding in an emergency. A retractable snub post socket is set in the hull at the bow. Hatches are provided in the bow compartment for handling anchor gear and a rubber-protected mooring cable, in the pilot's compartment for entrance and exit, and in the aft part of both sides of the hull for entrance and exit of passengers, cargo or military equipment, as required. A trap door about 4 ft. aft of the rear step and well above the water line permits the use of an outboard motor for navigation on narrow waterways, etc. At the nose of the hull is an observation hatch forward, and above it a drum-shaped observation turret. Behind it is the pilots' compartment, aft of which is the navigation compartment (on the port side) and the radio equipment (starboard side).

The next two compartments have sleeping bunks and equipment on either side of the central aisle. Above the forward of these compartments is space for the flight engineer whose bucket seat is set above the aisle. He has a complete set of engine instruments and windows at either side of his station. Rearward in the hull is a large compartment for stowage of supplies and equipment including a folding plywood row-boat; in this compartment is the toilet. A light portable dural scaling ladder may be hooked on either side of the hull to permit entrance to the rear hatches. Another ladder is provided on the inside of the hull. Walkways inside the hull are of corrugated dural. Small ventilating hatches are along the top of the hull. All windows are Libbey-Owens-Ford *Safety Glass*.

Elevators and ailerons are controlled by a single yoke, mounting two control wheels, one for each pilot. Rudder control is by a non-adjustable dual pedal arrangement, with the range of adjustment of the pilot's seat being sufficient to accommodate the pilot's feet to the pedals. A cable type system is used for elevators and rudders, and a rod-cable type control for ailerons to provide positive independent control for each unit in both directions. Cables are run on the underside of the top of the hull, exposed to allow easy inspection.

Instruments in the pilots' compartment include 2 airspeed, turn and bank and rate-of-climb indicators, altimeters, compasses, tachometers and manifold pressure gauges, and 1 clock. The engineer's station is provided with 2 engine gauge units (oil temperature, oil and fuel pressure), carburetor air temperature indicators, tachometers, and fuel flowmeters, and 1 thermocouple, lateral inclinometer, exhaust gas analyzer and a set of fuel quantity gauges. An airspeed indicator, clock and altimeter are provided for the radio-navigator.

The electrical system includes navigation lights, switch for which is accessible from the exterior of the hull, interior hull lighting, landing lights, a signal system and other devices necessary in a craft of this size and type. Power is supplied by 2 batteries and by 2 engine-driven generators.

Engines are mounted on a welded chrome molybdenum steel tubing structure and the arrangement of the engine ring and nacelle cowling facilitates access to the engine and accessory compartments for inspection and adjustment.

A readily-detachable beaching gear is provided for handling the airplane in and out of the water and to facilitate movement ashore. Each forward truck of the gear is of the 2-wheel swivel type, capable of being steered and of being locked in 3 positions. The tail wheel, carried on a tripod set just ahead of the rear mooring ring, is of the 2-wheel free swiveling type steered by a detachable arm.

For use on Archbold's record-making transcontinental flight, and throughout his projected expedition, a Bendix radio and interior communication system is installed. The installation consists of a main transmitter, auxiliary transmitter, 2 complete receivers, a direction finder, and an intercommunication system which extends throughout the ship and also permits both pilots to use the radio facilities directly when necessary. Tests made during recent flights from San Diego to Lake Mead and Lake Tahoe gave reliable radio telephone communication in excess of 500

(*Continued on page* 83)

Archbold, 1st to Land on Mead Lake, Returns to S. D.; Plans Explorations

S.D. UNION 6/19/37

Lifting easily over the coast range of mountains to settle gently on Lake Mead, Richard Archbold's exploration air cruiser, product of Consolidated Aircraft Corp., here, yesterday became the first flying boat to land on the lake created by Boulder dam.

The "first" established by Archbold in the big ship, is one of many it expected to accomplish. It was designed to penetrate the interior of New Guinea as the "eyes" of a scientific expedition planned by Archbold who is a research associate of the American Museum of Natural History.

Taking off from here early yesterday, the big ship was accompanied by a smaller Fleetster in which Frank Learman jr., assistant to the manager of the aircraft company, test pilots and a newsreel cameraman flew. The big air boat, wingspread 104 feet, was photographed against snow capped mountains, with Boulder dam and with Lake Mead in the background.

It was landed on the man-made lake at 10:42 a. m. Members of its crew, including Archbold and William Wheatley, Consolidated chief test pilot, and the men aboard the Fleetster went to lunch in Boulder City.

The return flight started in the afternoon, with the newsreel cameraman shifting to the big ship. The planes landed here in the afternoon between 4:30 and 5.

Archbold is expected to fly the big ship to the east next week. Two routes are under consideration for the flight, one a non-stop cross country flight from San Diego to New York and the other over the gulf to Pensacola, Fla., and thence along the east coast.

If Archbold attempts the cross country flight, it will be one of the first times that a big airship, equipped to land on water only, has made such a trip. Archbold, 29, is internationally known as an explorer. He will leave from San Francisco some time this winter on the projected exploration flight, proceeding via Hawaii, Midway and Wake islands and Guam, then to New Guinea.

CONSOLIDATED

(*Continued from page* 38)

miles with the main transmitter, while over distances of up to 150 miles the auxiliary transmitter provided equally reliable communication.

The radio direction finding equipment is similar to that designed and manufactured by Bendix for the Consolidated airplanes purchased by the Navy, and recently adopted by various airlines for direction finding and the elimination of "rain static." Power for the radio when the ship is not in flight is supplied by a small auxiliary air-cooled engine set in the wing turret behind the flight engineer's compartment.

Archbold's plane has a span of 104 ft., an overall length of 62 ft. 6.5 in., and an overall height of 18 ft. 5.87 in. Cruising speed is 145 mph and range approximately 4000 miles, but the Navy Department does not permit publication of weight data and other performance figures of the PBY-1 airplanes.

TWIN WASPS FOR THE SOUTH SEAS

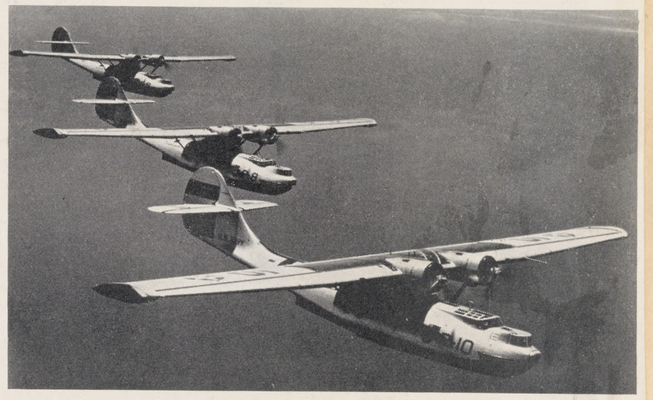
The Consolidated flying boat in which Richard Archbold will make a scientific expedition to the South Seas

Long Flights "Routine" for Consolidated PBY-1 Boat

COMPLETING a non-stop flight of approximately 2,500 miles from San Diego to New York in 17 hours 3½ minutes, a Twin Wasp-powered Consolidated PBY-1 flying boat on June 25th added one more brilliant achievement to the already impressive list of long distance flights credited to this latest product of the Consolidated Aircraft Corporation. The plane was under command of Richard Archbold, research associate of the American Museum of Natural History, who is the owner and pilot, and carried five additional members of the crew, including Russell Rogers, co-pilot; Gerald Brown, flight mechanic; Harold Ramm, radio operator; Comdr. Lloyd R. Gray, U. S. N. (retired), navigator; and William Wheatley, Consolidated test pilot.

Mr. Archbold expects to use the airplane on an exploring mission to Dutch New Guinea in the South Seas some time later this year. The exact route to be followed has not yet been determined, but he will probably follow the Pacific route of Pan American Airways to Guam, and thence head south for New Guinea. The object of the expedition is to collect mammals, birds and plants, and to study the life history of birds and animals in the region to be explored.

Mr. Archbold's airplane, the first of the type to be released for commercial sale, has a cruising range of approximately 4,000 miles. The long flight from San Diego to New York was made without incident of any kind, at an average speed of nearly 150 miles per hour, and with an average fuel consumption per engine of only 31½ gallons per hour, a tribute to the efficient powerplant combination of Twin Wasp engines, automatic mixture and power control, and Hamilton Standard constant speed propellers.



Official Photo U. S. Navy

Three of the Navy Consolidated patrol boats enroute to Coco Solo.

Only three days earlier a fleet of twelve similar PBY-1 flying boats of the U. S. Navy safely completed an even longer flight, from San Diego to Coco Solo, Panama Canal Zone. Casually dismissed by Navy officials as just a "routine transfer" of airplanes to their permanent operating bases, this flight was actually the longest over-water mass flight of military airplanes ever made. The 12 airplanes, carrying 84 officers and enlisted men under command of Lieutenant Robert W. Morse, flew the 3,087-mile distance in 27 hours 58 minutes without trouble of any kind.

The flight was the third "routine" transfer of Twin Wasp-powered PBY-1's to be made by the Navy this year. In January, 12 airplanes under command of Comdr. William Dade flew the 2,550 mile distance from San Diego to Hawaii in 21¾ hours. In April, another group of 12 similar airplanes under the leadership of Lieut. Comdr. L. A. Pope duplicated the feat in 21½ hours. All of these were non-stop flights and all were accomplished without trouble of any kind. All of these PBY-1 boats for the Navy, of which 176 are on order, are equipped with Twin Wasp engines and Hamilton Standard constant speed propellers.

Richard Archbold and his crew upon their arrival at New York.

2 IN MISSING SAIL BOAT SAFE

Larry W. Van Dusen, 21, and Kimberley Scott Roberts, 22, both of San Diego, were found safe early today at La Jolla cove where they had anchored their 26-foot sail boat, "Lady Betty," late last night.

A Coast Guard plane with a crew of five men piloted by Lieut. R. L. Grantham took off at 8 a. m. here in search of the two boys who had sailed from Los Angeles at 3 p. m. Saturday and were due in San Diego late last night.

C. A. Van Dusen, of 3211 Freeman-st, Consolidated Aircraft vice president, father of Larry Van Dusen, reported the missing craft.

The youths telephoned this morning and reported they had anchored at La Jolla when rough weather and darkness prevented them from making port here, Mrs. Van Dusen said.

Western Flying 8/37

CONSOLIDATED AIRCRAFT CORPORATION completed delivery of their Navy PBY-1 order for 110 PBY's late in June with the exception of a couple of planes that were held up due to the slow delivery of parts by outside manufacturers. The first plane of the PBY-2 order was completed and test flown during July — PBY-3 series will probably be ready for test in November. Three P2Y-3A boats were loaded on a steamer headed for Bahia Blanca, Puerto Belgrano in Argentina during July. The remaining three boats included in the order will be shipped the middle of August.

Jimmie Mattern still hopes to make that flight to Moscow, leaving San Francisco early this month. Has busied himself making all the necessary arrangements along the line and looks for no BAC ban . . . On the other hand, Dick Merrill and Jack Lambie, here to make a short-reeler, *Atlantic Flight*, are fearful of thumbs-down policy with regard to their proposed Nooyawk-Rome jaunt in their same low-wing landplane . . . Maj. Fleet's Consolidated Aircraft has its brains department working out a giant sea-flyer of unbelievable size. Quite hush-hush and all but its existence is generally known . . . An Aussie caused quite a stir. Has plans for a 20 million-dollar floating seadrome. Wants to spot it in the mid-Pacific somewhere, now seeking an "angel" for the project. Has lots of approval from high-rankers but to us it smacks of a picture we saw on the cover of "Amazing Stories" not so very long ago . . .

NAVY BOMBERS DUE BACK FROM TEST HOP TO ALASKA

S.D. SUN 8/12/37.

30 Planes Built By Consair Expected At North Island, 24 From Far North

Thirty Consolidated-built Navy patrol bombers, 24 of which survived the test of frigid Alaskan flight conditions last month, will return to their North Island base tomorrow or Saturday, it was reported at Naval Air Station today.

The returning squadrons are VP7, VP9, VP11 and VP12.

All but the six planes of Patrol Squadron 11 have engaged in tactical exercises with the fleet at Puget Sound and Alaska since July 1.

From July 10-26, Squadrons Nine and Eleven, composed of new PBY-1 bombers, and Squadron Seven, which consists of older and slower P2Y3 seaplanes, operated at Sitka, in southeastern Alaska and Kodiak, across the Gulf of Alaska.

This was the first test in Uncle Sam's northernmost outpost of the PBY planes, and they performed satisfactorily in the low temperatures experienced in Alaska, according to reports received here today.

Thus, the Consolidated bombers have completed successful flights to all three of the United States' most outlying territories — the Canal Zone, Hawaii and Alaska.

While in Alaska, they were serviced by the aircraft tenders Langley, Wright, and Sandpiper.

After a week's stay in San Francisco, the planes and the Wright and Langley left last Tuesday for offshore maneuvers en route to San Diego. The Sandpiper is scheduled to leave the Golden Gate Saturday, being due here Aug. 17.

Patrol Squadron Eleven, composed of six PBY planes, joined the other three squadrons at San Francisco last week, flying in mass formation from San Diego.

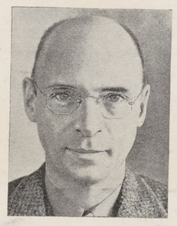
Big men head big school

Robert E. Gross

John K. Northrop



C. A. Van Dusen

NEXT month a new $400,000 aviation training school, the Aero Industries Technical Institute, Inc., will open its doors for business in the Los Angeles area. This new training center, with headquarters in Glendale, is a project of Robert E. Gross, president, Lockheed Aircraft Corporation; John K. Northrop, president, The Northrop Corporation and C. A. Van Dusen, vice-president and works manager, The Consolidated Aircraft Corporation. These three men form the executive board of the institute. This board has been actively engaged during the last year in the planning, organizing and equipping of the school.

Assisting the work of the executive board, has been an advisory council consisting of D. L. Brown, president, United Aircraft Corporation; Donald W. Douglas, president, Douglas Aircraft Company; Major Reuben H. Fleet, president, The Consolidated Aircraft Corporation; Jack Frye, president, Transcontinental & Western Air Inc.; J. L. Kindelberger, president, North American Aviation, Inc.; J. E. Schaefer, president, The Stearman Aircraft Company; I. I. Sikorsky, president, Sikorsky Aircraft Division of United Aircraft Corporation and E. E. Wilson, president, Chance Vought Aircraft, Division of United Aircraft Corporation.

Courses have already been especially compiled for the institute by a staff of experts and the faculty is nearly complete. Four buildings are rapidly nearing completion on the five acre tract that is to be the institute's campus. Two of the five acres are being reserved for recreational purposes.

One of the buildings of the institute is originally to be leased to the Northill Co., Inc., for use in the manufacture of their patented anchor and accessory pumps. The institute proper will initially consist of an administration building that will contain the offices and engineering division, a building containing classrooms and a lecture hall, and a shop building.

A total of 100,000 square feet will be included in the floor space occupied by the school. The shop contains 20,000 square feet and has been built with special foundations for drop hammers and heavy presses.

Electrical spot-welding equipment and heat treating ovens are included in the large variety of special equipment that has been personally chosen by the executive board. The investment being made in this shop equipment will total about $125,000.

The present development of the Aero Institute is the result of the personal efforts of the executive board, who, being executives in the aviation manufacturing industry, were faced with the problem of a shortage of trained personnel and took this means of solving their problem.

James L. McKinley, vocational school director in Southern California, will be manager of the school.

S.D. UNION 8/13/37

ARGENTINE PLANE JOB AT S. D. ENDS

Announcement that Consolidated Aircraft Corp. has completed its six-plane contract with the Argentine government and that the Argentine office maintained at the Lindbergh field plant will be closed Saturday, was made yesterday.

Lt. Julio Bachini of the Argentine aviation corps, who has been supervising construction of the six planes, will leave here Saturday for Burbank where he will inspect a plane being built for the Argentine government by the Lockheed factory.

Last of the six Consolidated planes left the plant yesterday for shipment to Bahia Blanca, the Argentine naval air station near Buenos Aires.

Gyropilots Saw Their Duty And Did It

THE twelve Consolidated Navy *PBY-1's* which arrived at the Zone on July 22nd, after flying in formation nonstop from San Diego, Calif., were all equipped with the Sperry gyropilot, as are the Navy airplanes which will be making additional outstanding flights soon. There have been some gratifying reports from the officers who made the flight to Coco Solo as to the manner in which the gyropilots handled the planes for practically the entire 3,292 miles, thus keeping the operating personnel refreshed and alert for other duties.

AUG-1937 U.S. AIR SERVICES

$500,000 Worth Of Planes To Embark For Argentine

S.D. SUN 8/16/37

Sixteen huge crates lay on the north side of Pier One today, awaiting arrival Friday of the McCormick freighter West Ivis.

The boxes contain sections of one of the most valuable cargoes ever to leave San Diego—three Consolidated Aircraft Corp. seaplanes and engines valued at approximately $500,000.

The planes are the second half of the six ordered by the Argentine Navy from the local aircraft concern. Last month, the first three were shipped to Buenos Aires aboard a sister ship of the West Ivis, the West Nilus.

The West Ivis will follow the same course to the Argentine naval base as that of the West Nilus, through the Straits of Magellan, a journey requiring 30 to 40 days from San Diego.

DAY'S VICTOR IN UNION'S TOURNEY

S. D. UNION 8/19/37

Two hard-fighting teams already marked as the ones to beat in The Union's elimination softball tournament will steal the sports spotlight tonight when Jacobson's Signs clash with Consolidated Aircrafters at Central Playground at 8:15.

Another second-round game of equal importance, although not quite so apt to provide the fireworks of the other, will be played at Golden Hill at 8:15, with Van Camps slated to oppose A. G. Spaldings.

Realizing that the winner of the clash which brings together Consolidated and Jacobson's is virtually certain to be a finalist, both teams are prepared to shoot the works in desperate bids for victory.

Meyers, McCleary Hurl

Eddie Meyers, recognized as one of the finest softball hurlers in southern California, has been nominated for the mound assignment by the Aircrafters, while McCleary is booked to handle the receiving. Stanley Gonzales, who has won his last 11 starts, will pitch for the Jacobson Signs, and Jimmy Fournier will catch.

ARGENTINA TO CLOSE OFFICE

S.D. Sun — 8/18/37

With the job of constructing six P2Y3 patrol bombers for the Argentine Navy completed by Consolidated Aircraft Corp., the office maintained at the San Diego plant by the South American republic will be closed Saturday, it was announced today.

Lieut. Julio Bachini, Argentine Naval aviator, who has been official inspector of the six planes, will leave for Burbank Saturday to note progress in construction of another type plane ordered by Argentina from Lockheed Aircraft Corp.

Huge crates, in which the last three P2Y3 planes to be shipped to Argentina, are packed, today lay on the north side of Pier One, awaiting arrival Friday of the McCormick freighter West Ivis, which will transport the aircraft to the Argentine Naval base.

WILKINS TO SEEK RUSS FLIERS IN S. D. PLANE

S.D. UNION 8/20/37

S. D. RESCUE PLANE FLIES NORTHWARD

Wilkins, 4 Aids Land at Port Arthur, Ont.; Will Continue Today; Mattern Plans Two Polar Bases.

PORT ARTHUR, Ontario, Aug. 19 (Canadian Press)—The plane bearing Sir Hubert Wilkins and four companions en route from New York to Canada's Arctic coast to assist in the search for six missing Soviet fliers, landed here tonight less than five hours after taking off from Toronto.

Sir Hubert and his pilot, Herbert Hollick-Kenyon, noted Canadian airman, were accompanied by Gerald Brown, engineer, Raymond Booth, radio operator, and Russell Rogers.

Plans Morning Start

Rogers will fly with the party as far as Coppermine, N. W. T., to teach Hollick-Kenyon "the peculiarities" of the huge silver flying boat Guba, purchased for the expedition by the Russian government.

Sir Hubert planned to take off at 8 a. m., E. S. T., tomorrow on a non-stop flight to Ft. Smith, N. W. T., 1200 miles distant.

Supplies of toboggans, pumps, heaters, eiderdown and winter clothing will be taken on her as equipment for an extended Arctic search.

From Ft. Smith the rescue plane will fly north to join other aviators in the search for Sigismund Levaneffsky and his five companions who were believed forced down on an ice floe in a projected transpolar flight from Moscow to the United States by way of Fairbanks, Alaska.

Al Cheesman, Port Arthur alderman and Sir Hubert's pilot in 1930 on an Antarctic expedition, was to be picked up here as co-pilot of Sir Hubert's craft.

Speed Stressed

During a stop in Toronto for refueling on the dash from New York here, Sir Hubert said the party was bound for the scene of search "as fast as we can get there."

He said the Russian fliers "have

Wilkins Hops For Arctic In San Diego Airboat

S.D. SUN 8/14/37

Soviet Buys Archbold's Plane; Noted Explorer Heads Group Seeking Lost Russian Fliers

By United Press

TORONTO, Ont., Aug. 19.—Sir Hubert Wilkins and a crew of four landed the flying boat Guba in Toronto harbor late today after a fast flight from New York, en route to search for six Russian fliers missing in the Arctic.

Sir Hubert Wilkins, noted Polar explorer, and a crew of four took off in a San Diego-built airboat at 8:42 a. m. (P. S. T.), from North Beach airport, N. Y., to aid in the search for six Russian fliers missing in the Arctic, the United Press reported from New York.

The ship, built by Consolidated Aircraft Corp. for Richard Archbold, was the first seaplane to fly non-stop across the United States, accomplishing this feat June 24-25 from San Diego to New York.

The $250,000 craft was sold to the Soviet government this week. Its 4000-mile cruising range was the prime consideration in the sale, it was reported.

The search party consists of Wilkins, a veteran of Arctic expeditions; Air Commodore Herbert Hollick-Kenyon of Canada, first pilot; Raymond Booth, radio operator, and Gerald Brown, mechanic. They will fly across Canada to Aklavik, Northwest

Turn to Page 2, Col. 3.

WILKINS HOPS FOR ARCTIC IN S.D. RESCUE SHIP

(Continued from Page One)

every chance of being alive," adding that he believed they could exist for "six or eight weeks" at least.

It was estimated that the Soviet fliers, who were attempting a flight from Moscow to California, came down on an ice floe 500 miles north of Alaska.

The Guba was purchased from Richard Archbold of the American Museum of Natural History, who had planned to use it for a scientific expedition into New Guinea. It was built by the Consolidated Aircraft Corp. at San Diego, Calif.

By United Press

LONDON, Aug. 19.—Shipment of enough anti-cholera vaccine to inoculate 25,000 persons to Hongkong by airplane from Bandoeng, was reported in an Exchange Telegraph dispatch today.

The disease was reported on the increase and fears were felt for further spread in view of the influx of refugees.

WPA'S BACKER OPPOSES MARCH

Rep. Allen Sees Harm To Jobless Cause

Scripps-Howard Newspaper Alliance

WASHINGTON, Aug. 19.—Rep. Robert G. Allen (D., Pa.) said today that the "march on Washington" planned for next Monday by the Workers Alliance would be likely to harm rather than help the chances of further Federal aid to the jobless.

Rep. Allen is co-author with Sen. Schwellenbach (D., Wash.) of a resolution requiring that WPA hire all of the unemployed. It is this resolution which the "march" is intended to promote.

"I have tried to discourage this demonstration," Allen said.

Sen. Schwellenbach said he was neither encouraging nor discouraging it. He planned to seek Senate consideration of the resolution today.

SHIRLEY HOSTESS TO OFFICERS IN HAWAII

HONOLULU, T. H., Aug. 19.—Shirley Temple, diminutive screen star, was hostess last night at her first formal dinner party since she arrived here for a vacation.

Her guests included Henry A

'SUDDEN STORM' DESTINED FOR NORTHERN SEARCH

ba ("Sudden Storm"), $250,000 flying boat built at Consolidated Aircraft Corp. for Richard Archsearch associate of the American Museum of Natural Research, in which Sir Hubert Wilkins, rctic explorer, will search for the six missing Russian polar fliers. The ship Tuesday was purchased by the Russian government from Archbold.

SAN DIEGO-BUILT FLYING BOAT SOLD FOR ARCTIC HUNT

(Continued from Page One)

from an aircraft because no ships were in sight.

Their story raised the possibility that the missing fliers, headed by the Soviet ace Sigismund Levaneffsky, actually reached the North American continent instead of coming down in the ice-covered Arctic ocean, as Moscow officials believed.

The Soviet embassy in Washington said three Canadian planes were assembling supplies from Arctic Red river, Good Hope and Norman, in far northwestern Alaska, and planning to concentrate at Aklavik for the hunt.

Mattern Grounded

Jimmy Mattern, ace American flier who is "repaying a debt" to Levaneffsky for his own rescue by the Russian flier several years ago, chafed at the cloud banks and rain which enveloped northern Alaska yesterday, forcing him to keep his big long-range cruising plane on the ground at Fairbanks. He flew to Fairbanks from southern California to join the hunt.

Nearly half an inch of rain has fallen the last 24 hours and the skies were again murky yesterday, with a south wind blowing.

Mattern sent a reassuring message to his wife, Mrs. Dorothy Mattern, and his mother at Pittsburgh, saying:

"Have not been flying due to weather. Have very safe plans worked out."

The Soviet north pole camp radioed Moscow that a drizzling rain was falling yesterday, despite subfreezing temperatures, which would add to the fliers' difficulties if down within that area.

S.D. UNION 8/19/37

SOVIETS BUY FLYING BOAT BUILT HERE

Craft to Hop From New York Today to Base on Arctic Shore; Mattern Hampered By Fog; Clue Is Pressed.

A San Diego-built flying boat, the Guba ("Sudden Storm"), will carry Sir Hubert Wilkins, noted Arctic explorer, in a search for the six Russian transpolar fliers, The Associated Press reported last night.

Carrying Wilkins, Air Commodore Herbert Hollick-Kenyon, first pilot; Raymond Booth, radio operator; and Gerald Brown, mechanic; the huge flying boat is expected to get under way at 9 this morning from North Beach airport, N. Y., fly across Canada to Aklavik, Northwest territories, and base there for the search. The plane will land at Port Arthur, Ontario, to take on Al Cheeseman, Antarctic veteran, who will be second pilot.

Rogers to Make Trip

Russell Rogers, who piloted the Guba from San Diego to New York in 17 hours, 3½ minutes June 25, setting a transcontinental non-stop record for that type of craft, will accompany Hollick-Kenyon to Aklavik to familiarize him with the ship's operation.

The plane, a $250,000 flying boat, was built at Consolidated Aircraft Corp. for Richard Archbold, research associate of the American Museum of Natural Research. Archbold sold the plane to the Soviet government Tuesday for an unannounced sum.

The Guba, a PBY-1 boat similar to the navy's new long-range patrol bombers which recently made record mass flights from San Diego to Hawaii and the Panama Canal Zone, has a wing spread of 104 feet. It is powered by two 1000-h.p. engines and has a cruising range of approximately 4000 miles. It originally was purchased by Archbold for scientific expeditions. (Consolidated officials said last night another plane was being built for Archbold.)

Rescuers Follow Clue

While arrangements were being made for the Buba's take-off from New York, rescue airmen at Fairbanks, Alaska, looked for an opening to follow up a seemingly promising clue to the whereabouts of the Soviet airmen.

Bob Randall, Canadian flier, reported he planned to take off from Pt. Barrow today to check up on the story of natives in the Barter island area that they had heard what might have been an airplane motor "four or five days ago."

Barter island is about 300 miles east of Fairbanks and 175 miles east of the route which the Russians supposedly were following when they vanished last Friday on a projected 4000-mile flight from Moscow to Fairbanks.

Randall heard the natives' story yesterday on flying along the coast from Aklavik, Northwest territory, to Barrow in a plane chartered by Russian officials.

Although the Eskimos said they did not see any plane, they concluded the sound must have come

(Continued on Page 2, Col. 7)

S. D. SHIP BOUGHT FOR AIR SEARCH BY RUSSIA

Arctic - bound, the Guba ("Sudden Storm"), $250,000 Consolidated Aircraft Corp.-built plane, which Richard Archbold, owner, turned over to the Soviet government to search for six missing polar fliers, landed at Toronto today, after flying from New York, The Canadian Press reports. Archbold, meanwhile, prepared to come to San Diego to supervise construction of another plane for a flight he plans to make to New Guinea.

"It won't be exactly a rescue flight," said Raymond Booth, radio operator. "Our purpose is to locate the six Russians in the Arctic, if possible, and then drop them radio supplies, food, guns and ammunition. Every day or so we will make survey flights over the Arctic to see if we can find the missing men."

Soviet Hires Wilkins

The new rescue expedition is headed by Sir Hubert Wilkins, veteran arctic and antarctic explorer. Herbert Hollick-Kenyon, Canadian flier, who accompanied Wilkins on the Lincoln Ellsworth Antarctic expedition, directed mechanics who labored hurriedly to equip the 17-ton flying boat for the first lap of its long journey, an overland flight to Toronto harbor, on Lake Ontario.

Although he has sold the Guba, Archbold, research associate of the American Museum of Natural History, apparently does not mean to give up his plan to lead an aerial expedition from California to New Guinea, for which purpose he bought the $250,000 Consolidated plane. Consolidated officials report that another plane is being built here for him.

The story of the decision to sell the Guba to the Russian government is interesting in that it involved a sudden "three-cornered" conference the width of the continent between representatives of

(Continued on Next Page, Col. 3)

Armtog, Consolidated and Archbold. The deal was completed early this week, after a week-end of transcontinental phone calls between the three parties, some of whom were at San Diego and Los Angeles and others in New York and Washington. The navy also was brought in, it being necessary to get a navy release on the "Guba," since it was built for Archbold with the understanding it could not leave the continental limits of the United States until November. The release was granted to permit use of the plane in the polar search.

New Plane Ready Nov. 1

Archbold's new Consolidated plane is under construction and is to be delivered about Nov. 1, it was reported at the plant today. Archbold is due in San Diego next week. On accepting the new plane he is expected to carry out his original plans for the New Guinea flight. The craft will be of the PBY-type, similar to the Guba.

The Guba proved its worth as a flying boat not only by the record transcontinental flight in June, but by special flights from here to landings on Lake Meade, at Boulder dam, and Lake Tahoe. It is similar in design to navy patrol planes flown this year from San Diego to Hawaii and from here to Panama.

Working swiftly in a race against arrival of the long arctic winter, Wilkins and his men installed deicers to free the giant flying boat from the danger of a crash from ice-weighted wings — gravest menace of northern flying.

Wilkins said he had been hired by the Soviet government to direct the search. He declared flight operations would continue for several months if necessary to locate Pilot Sigismund Levaneffsky, the "Lindbergh of Russia," and his five comrades. The Soviet fliers were last heard from Friday soon after passing the north pole on their flight from Moscow to the United States.

Cruising Range 4000 Miles

The Guba has a cruising range of approximately 4000 miles and can remain in the air 20 hours without refueling. The ship's regular pilot, Russell Rogers, planned to accompany the Wilkins group as far as Aklavik, Northwest Territory, to familiarize Chief Pilot Hollick-Kenyon with its operation. Pilot Al Cheeseman, another antarctic veteran, was scheduled to join the expedition during a stopover at Port Arthur, Ont. Others engaged for the flight are Raymond Booth, radio man, and Gerald Brown, flight mechanic.

SEARCHERS STILL GROUNDED

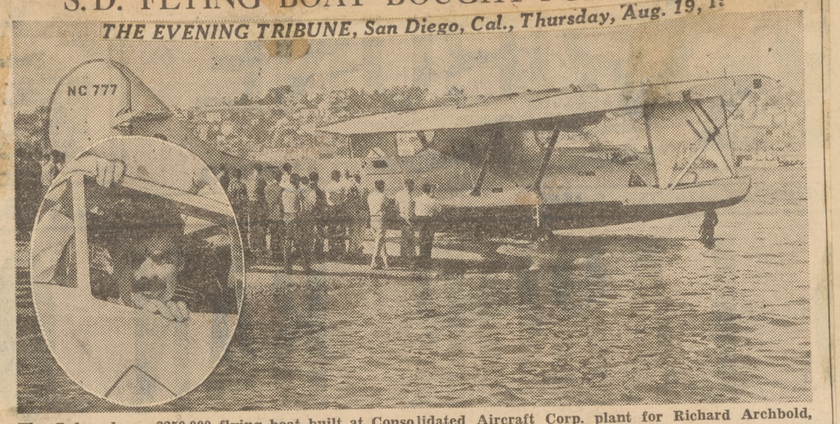
FAIRBANKS, Aug. 19 (A.P.)—Airmen of three nations watched today for a favorable turn in the weather that would allow them to launch a search for six Soviet transpolar fliers missing since last Friday. Veteran Arctic aviators of the United States, Canada and Russia were ready to take to the air as soon as rains and clouds, that have kept them grounded for days, are dispelled.

Rescue airmen planned to comb the area around Barter Island, 300 miles east of here and 175 miles east of the route which the Russians supposedly were following. Eskimos there told Bob Randall, Canadian flier who stopped there en route from Aklavik, Northwest Territory, to Pt. Barrow, Alaska, that they had heard what might have been a plane motor about the time the Russian plane vanished. They did not see the plane.

While Randall waited at Pt. Barrow for orders to resume the search, Jimmy Mattern, who fled here from California to join the hunt, Art Crosson, noted Alaskan pilot, and other United States fliers were ready to scour the country. Soviet fliers planned to hop from Russia over Levaneffsky's route in hopes of finding a trace of the missing aviators.

S. D. FLYING BOAT BOUGHT FOR SEARCH

THE EVENING TRIBUNE, San Diego, Cal., Thursday, Aug. 19, 1



The Guba, above, $250,000 flying boat built at Consolidated Aircraft Corp. plant for Richard Archbold, has been sold to the Soviet government. Inset, Archbold.

Consolidated Employes Eat, Play at Beach

S. D. Union 8/23/37

Several thousand Consolidated Aircraft Corp. employes, and their families and friends, attended a basket picnic Saturday at Mission Beach.

The afternoon program included band concerts directed by Charles Sproul, athletic events, swimming and tug-of-war between department teams. Boxing and wrestling matches were presented on the band stand.

Consolidated employes presented a floor show with L. L. Crawford as master of ceremonies. The entertainers were C. R. Brady and his Hillbilly band, E. Jackson, Miss Bernardine Roese, Nicholas Tuevesky, Scotty Doig, Miss Adelle Trushinski, Jimmy Eaton, Bill Milton, Jimmy McCoy, Clara Tuevesky, Gwendolyn Harvey, Ernie Hodgeson, Catharine Phipps, C. V. Sheppard, Kelo Aiken, Viola May Clutinger and Diana Boone. Bill Stutzky led community singing.

CONSAIR HOLDS ANNUAL PICNIC

S. D. Sun 8/22/37

Approximately 7000 Consolidated Aircraft Corp. employes and their families spent a full day in revelry at the concern's third annual picnic at Mission Beach yesterday.

Considered one of the largest events of its kind ever to be staged in this vicinity, the picnic featured barrels of free beer, orange juice and coffee, and a small mountain of ice cream.

The program included dancing at Mission Beach ballroom, swimming in the bath house, sports events, wrestling and boxing, band concert, 17-act amateur show in Mission Beach Ballroom and a community sing.

PLANE SHIPMENT ARGENTINE-BOUND IN BIG FREIGHTER

S. D. Union 8-22-37

With a 31-day run to her next port ahead of her, McCormick's big South American freighter West Ivis got away from Pier 1 at noon yesterday for the Argentine.

Aboard the West Ivis were 16 crates of planes and engines—the last of the Argentine navy's contract from the Consolidated factory here. The steamer will pass through the Straits of Magellan and up the east coast of South America to Puerto Belgrano, the Argentine air base at Bahia Blanca, south of the River Plate. Then she will go on to Buenos Aires, Montevideo and Trinidad, coming home via the Panama Canal.

Due to the reversal of seasons incident to passing from the northern to the southern hemisphere, it will be just the beginning of spring when the West Ivis reaches Bahia Blanca. Their winter now is ending.

S. D. Union Aug 24-37

ARCHBOLD HERE TO SEE WORK ON NEW FLYING BOAT

His $250,000 flying boat Guba now the property of the Russian government, which is using it in the search for the six missing Soviet polar fliers, Richard Archbold, research associate of the American Museum of Natural History, yesterday arrived in San Diego to supervise construction of another flying boat.

Archbold, who arrived here by plane, accompained by O. J. Whitney, head of a flying service of North Beach, N. Y., said he expects delivery of his new plane by Nov. 1 and hopes to lead an aerial expedition into New Guinea sometime after Jan. 1.

The Guba, which Archbold flew nonstop across the continent in 17 hours, 3 minutes on June 25, was turned over to the Consolidated Aircraft Corp. three days ago and was purchased by the Russian government. Archbold expects to spend most of his time here supervising construction of his new flying boat, which will be built along the lines of the Guba, with several minor variations.

Before leaving for New Guinea, the flying scientist probably will make several test flights to Boulder dam and Lake Tahoe, but does not expect to try another nonstop flight to the east. The new flying boat will be powered by two Pratt & Whitney twin-row Wasp engines, having 1000 horsepower each.

Consolidated's GUBA *Coast-to-Coast*

Navigation of the First Commercial PBY-1 Brings Out Advantages of Celestial Navigation on Long, Transcontinental Trips. Dead Reckoning Antiquated

By Lieutenant Commander P. V. H. Weems

Largest Ship, Only Boat

The highly successful flight of the Guba from San Diego to New York with a crew of six, brings out several important lessons. In the first place this is the first time a flying boat has made a transcontinental non-stop flight across the United States. The flying boat is a 34,000 pound consolidated PBY-1 similar to the latest type used by the navy.

The navigation equipment included the latest two-way radio, dead reckoning and celestial navigation equipment. The navigator on this historic flight was Lieutenant Commander L. R. Gray, U.S.N. (Retired) who has had considerable experience in air navigation.

For observing drift Commander Gray used a navy type pelorus or bearing instrument. He also used the usual type panel instruments which included a compass graduated to degrees. He stresses the importance of the Mark VII Aircraft Navigational Computer for working dead reckoning problems. He had a separate radio operator and made some use of the weather report and radio bearings, but did not get the benefit expected from this source. He had with him a Bureau of Standards type aircraft sextant, two second-setting watches, the Line of Position Book, and special forms and data prepared by himself.

While the flight demonstrated the need and feasibility of celestial navigation methods, they unfortunately were not available because of the rush in taking off at two hours' notice. It was found that the sextant index lock nut had slipped, causing the observations to be hopelessly in error. This purely mechanical difficulty can be overcome but stresses the necessity of ample preparation before take off.

One new technique developed by Commander Gray was the use of a second-setting watch graduated in arc and rated to Sidereal time so that the Greenwich Sidereal time in arc could be read direct from the watch face. In addition to this he prepared a special table giving the right ascension of the principle stars in arc so that when this last value was subtracted from the watch face, it gave immediately the Greenwich hour angle in arc. This method will be preferred by a certain group of navigators who prefer to reduce to the minimum tedious additions in flight.

Two magnetic compasses graduated in degrees were used and for celestial navigation purposes, Commander Gray used two second-setting watches, one graduated to read Greenwich Sidereal Time in arc.

One thrilling experience emphasizes the difficulties of high altitude and high speed flying under all conditions. We quote Commander Gray's own words giving his experience in an electrical storm:

"As the Rockies were approached our ship climbed to 14,000 to 15,000

With a crew of six, this 34,000 pound Consolidated boat flew from San Diego to New York, non-stop, in 17 hours.

S. D. PLANE LEG NEARER POLAR GOAL

Wilkins Reaches Fort Smith In Northwest Territory; Soviet and Canadian Rescue Pilots in Alaska.

BULLETIN

BARROW, Alaska, Aug. 20 (A.P.)—Jimmy Mattern, American pilot searching for the missing Soviet transpolar plane, landed near here late today after several fruitless hours of flying over the fog-shrouded Arctic ocean. Mattern and two companions, Co-pilot Frank Jones and Radioman John A. Stump, landed three miles north of this village late today after battling fog which forced them to fly blind for long intervals.

BARROW, Alaska, Aug. 20 (A.P.)—The hunt for six Soviet airmen, airmen, missing for a week in the Arctic, got under way in earnest today with fliers of three nations converging on the area to be covered.

Eager to repay the lost Pilot Sigismund Levaneffsky for a rescue in Siberia four years ago, the Texas flier, Jimmy Mattern, soared out of Fairbanks toward the Arctic coast in his distance plane.

The Soviet ice breaker Krassin, reputedly carrying planes, stood somewhere off Pt. Barrow.

Wilkins at Fort Smith

In a great flying boat, Sir George Hubert Wilkins, British explorer, and four fliers raced across far northwestern Canada to establish a rescue base near the Alaska border, preparatory to going into the hunt.

The party landed at Fort Smith, N. W. T., this afternoon after a 1200-mile non-stop flight from Port Arthur, Ontario.

The Russian flier Zadkoff reached Point Barrow last night, joining Bob Randall, Canadian flier, who had been shuttling along the Arctic coast for three days.

Mattern went into the hunt without his refueling plane, but the latter craft left White Horse, Y. T., for a 700-mile hop to Fairbanks, where it planned to pick up fuel and supplies and follow the Texan into the Arctic wastes.

Just before Mattern left Fairbanks, A. Vartanian, Soviet flight representative there, gave him a letter to deliver to the missing Russian flight leader, Levaneffsky. Ar-

The Guba lifts from North Beach airport, N. Y., for the first leg of its journey to far northern regions, where the Russian plane has been missing since Aug. 14.

MATTERN SCANS ARCTIC IN HUNT FOR RUSS FLIERS

(Continued from Page One)

rangements were also made for Mattern to message his position and flying conditions hourly.

At Fairbanks, S. A. Smirnov, Russian radio engineer, also planned to leave today to fly to Aklavik, N. W. T., to establish radio communications there to aid the search.

A dense fog, with broken clouds, lay over Barrow in midforenoon.

With clearing weather at Fairbanks, Mattern decided he would not wait for his refueling plane which left southern California early in the week and was delayed by bad weather at White Horse.

Mattern planned to fly 800 to 1000 miles over the Arctic ocean today and return to Fairbanks tonight. His plane was loaded with 600 gallons of fuel and carried emergency food, clothing and Arctic equipment. Frank Jones, who flew north with him from Oakland, and John A. Stump, radio operator, composed Mattern's crew.

Zadkoff and Randall expected to go to Aklavik.

S. D. SHIP BOUGHT FOR AIR SEARCH BY RUSSIA

Arctic - bound, the Guba ("Sudden Storm"), $250,000 Consolidated Aircraft Corp.-built plane, which Richard Archbold, owner, turned over to the Soviet government to search for six missing polar fliers, landed at Toronto today, after flying from New York, The Canadian Press reports. ARCHBOLD HERE TO SEE WORK ON NEW FLYING BOAT

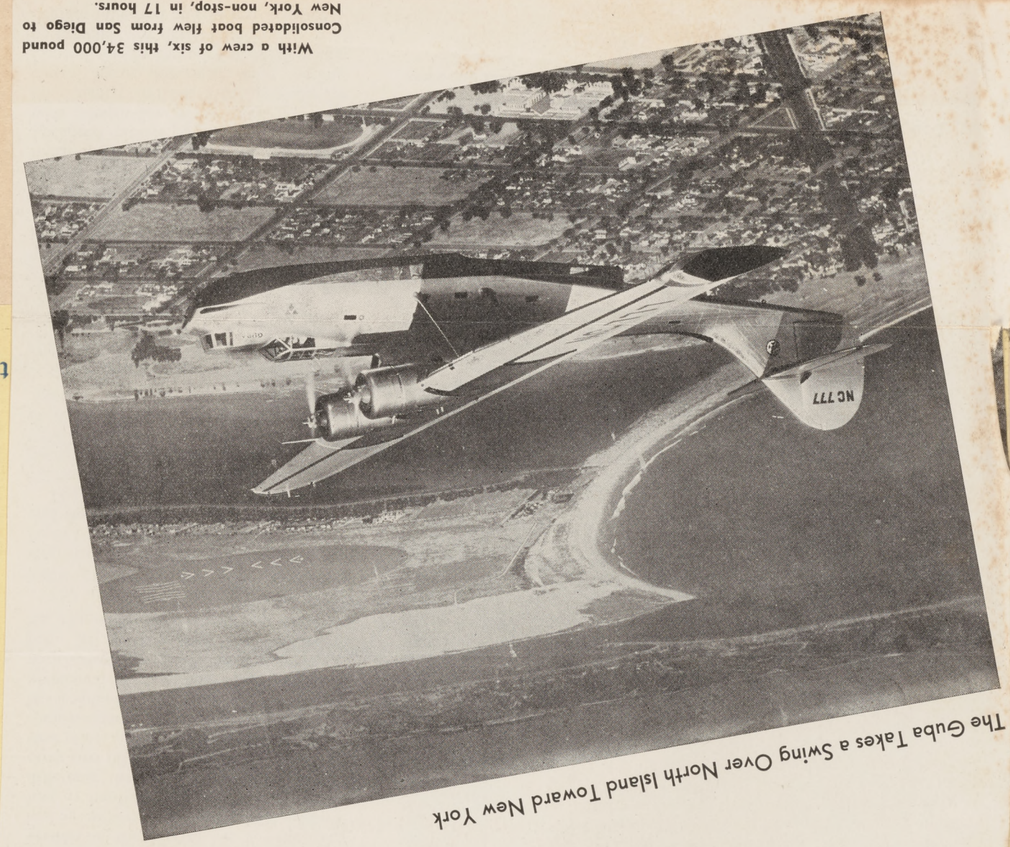
His $250,000 flying boat Guba now the property of the Russian government, which is using it in the search for the six missing Soviet polar fliers, Richard Archbold, research associate of the American Museum of Natural History, yesterday arrived in San Diego to supervise construction of another flying boat.

Archbold, who arrived here by plane, accompained by O. J. Whitney, head of a flying service of North Beach, N. Y., said he expects delivery of his new plane by Nov. 1 and hopes to lead an aerial expedition into New Guinea sometime after Jan. 1.

The Guba, which Archbold flew nonstop across the continent in 17 hours, 3 minutes on June 25, was turned over to the Consolidated Aircraft Corp. three days ago and was purchased by the Russian government. Archbold expects to spend most of his time here supervising construction of his new flying boat, which will be built along the lines of the Guba, with several minor variations.

Before leaving for New Guinea, the flying scientist probably will make several test flights to Boulder dam and Lake Tahoe, but does not expect to try another nonstop flight to the east. The new flying boat will be powered by two Pratt & Whitney twin-row Wasp engines, having 1000 horsepower each.



The Guba Takes a Swing Over North Island Toward New York

With a crew of six, this 34,000 pound Consolidated boat flew from San Diego to New York, non-stop, in 17 hours.

feet in order to clear peaks towering better than 13,000 feet. It was during this stage of the flight that our greatest anxiety was experienced due to a combination of circumstances. Our position was somewhat in doubt due to a lack of recognizable land-marks and atmospheric conditions favorable to the formation of ice and due to the existence of electrical storms which were visible.

"We were passing through broken clouds and mild lightning discharges could be seen in the distance. Our trailing wire antenna was out. Suddenly the pilots noted the nose of the ship and wing tips to glow and finally to light up so brightly as to blind them temporarily for a period of perhaps half a minute. In the navigation and radio compartment where Wheatley, Rann and I were at the time a high voltage crash of electrical discharge occurred, lighting up the space. Odors of burning rubber were present. A rapid survey disclosed that none was hurt, not even the radio operator at his post. With apprehensions we waited for further developments but none occurred. Examination on landing disclosed burned antenna insulations. All equipment functioned satisfactorily. To a fabric ship or a less sturdy one the situation might have been fatal but we rode safely on."

The important lesson gained on this flight is the necessity of careful preparation and a thorough test of the equipment before take-off. Also, it shows the feasibility of celestial navigation and radio, and the relative importance of these methods for high altitude flying where it is difficult to get the drift observations.

Commander Weems does not enlarge on the phenomena met by the *Guba's* crew over the Rockies. Whatever it may have happened to be, an interesting little squib, more or less apropos, has just been printed in the German *Junkers-Nachrichten*, house organ for Junkers Flugzeug und Motorwerke A. G.

"Frequently the question has been raised" we quote, "how an aircraft behaves in a thunderstorm and whether for the passengers there is any danger of being struck by lightnings. Up to now it was rather difficult to impart an answer, because lightnings in an aircraft very rarely occur, and above all can never be exactly observed.

"Our wireless operator sends us an exact report about a lightning that struck a Junkers Ju 89 powered with heavy oil engines.

"During the delivery flight from Hay to Melbourne the aircraft at about 1,200 meter height got into a *huge* bank of clouds, without that a thunderstorm was expected. Suddenly, at the nose of the fuselage an about 60

those

Attention: Engineering

at Meet

ike the situation in aviation's first heyday, when pilots outnumbered airplanes because they had no use for the airplanes, the situation in the glider field is brought about by the fact that most pilots have no way to obtain gliders at any price unless they build them themselves. And many glider pilots do not have the time to do this.

In spite of the fact that many glider pilots flew to Elmira in powered equipment, and that many more have several to several hundred hours of power time under their belts, there were many on the field who had never flown a powered ship. Significant in their case was the recommendation by both glider experts and Department observers that power time be made a requirement for a glider license. It was pointed out that in order to perform to best advantage in the *ultra* of soaring methods, cloud flying, pilots must acquaint themselves with the technique of instrument flight, best learned under the hood in a powered ship.

Such a development would be of particular interest to commercial airplane operators. It has been pointed out many times that the glider is an excellent stepping stone into aviation proper. If a minimum of power time were required for glider licenses, the enthusiast's introduction to power would be made certain.

Fears that American built sailplanes could not compete with European products were allayed, to some extent, by the 1937 meet. For while the highest ranking pilot happened to be a German, a lot of the points which he scored were due to flying ability and experience. It is quite probable that the American design contest winners compare favorably in every way with anything that Germany, with her years of experience, can send over here. Harvey Stephens, of film fame, came out of the West with as fine a little ship as can be obtained anywhere. It was designed and built by Harland Ross, who flew it in the contest.

The ABC ship from Detroit, first place winner, was *certainly* entitled to this place. It is made interesting by its club connection. More than in any other aeronautical phase, clubs are the soaring rule. And besides winning first in the design contest, clubs were most prominent in tales of soaring success. From the University of Michigan and Massachusetts Institute of Technology, where glider clubs are going strong, came reports of economy of operation and low cost to members that seemed to bear out the contentions of many that the club idea is the best method of getting the glider into general use.

In spite of the weather, the threat that foreign competition might run off with all the glory, Elmira's new soaring plant proved itself this year. For the first time, it turned out an exhibition of equipment and piloting worthy of the Wasserkuppe. Next year's should better. Next year, gliding should be well toward the front as a national sport.

Fly 54 Ships

foreign competition and, more than anything else, the pure sport of it all, 152 pilots and 54 ships showed up this year to soar from the crest of Harris Hill, Elmira, New York, in the Eighth Annual National Soaring Contest.

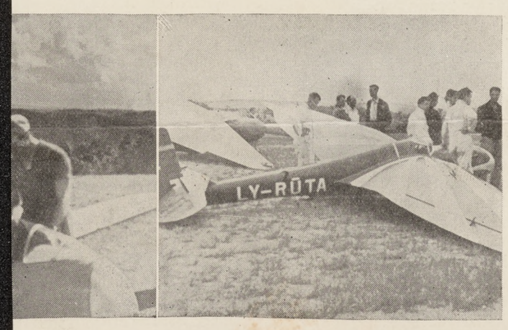
Lured by some other thing more transcendental, the wind went bounding off to other parts of the world for the nonce, either totally ignorant of or totally indifferent to the fact that the suppliant soarers below were sending out fervent incantations because they liked wind. Except for an occasional snort, in which many an entry did some right smart flying, the Eighth contest was marked by almost complete absence of really good soaring weather.

When the meet ended, or subsided, if you will, a new national champion had been crowned and an amazing amount of flying had been done, weather considered. Out in front of American pilots, but ineligible for the Edward S. Evans trophy or the championship was Peter Reidel, a German citizen. Next below him, and first American on the list was Dick DuPont, perennial championship winner who held the trophy for two years before.

In the distribution of $1,800 in cash awards for new gliders of American design, the ABC Glider Club of Detroit copped first prize, $1,000. The second award went to Ross-Stephens Aircraft Co., Hollywood. Paul and Ernest Sweitzer of Peekskill, N. Y., took third place and the rest of the money.

There were plenty of other prizes and lots of trophies, but more important to the glider industry was the fact that the meet piled up definite proof of several hallowed glider-fan tenets. As a national sport, it hit some sort of a par with Europe for the first time this year, and the relatively few pilots and ships that did manage to get to Harris Hill, instead of representing the entire glider industry, were merely the cream of it.

Enthusiasts pointed to the fact that while there were twice as many ships entered this year, there were three times as many



Opposite page, Dick DuPont's Minimoa. Left, Harvey Stephens and his Ross-Stephens, which won second place in the design contest. Left, Bronsius Oskinis' Lithuanian stunt job, which he designed himself.

It's 'Eat, Play 'n Be Happy' As Consair Force Picnic

S.D. SUN 8/23/37

"Eat, play and be happy," was the theme song of several thousand Consolidated Aircraft Corp. employes, and their families and friends, at a basket picnic Saturday at Mission Beach.

Besides swimming, boxing, wrestling and tug-of-war events, the employes were entertained by a band concert program directed by Charles Sproul.

L. L. Crawford was master of ceremonies of a floor show put on by the employes. Entertainers were C. R. Brady and his Hillbilly band, E. Jackson, Miss Bernardine Roese, Nicholas Tuevesky, Scotty Doig, Miss Adelle Trushinski, Jimmy Eaton, Miss Milton, Jimmy McCoy, Clara Tuevesky, Gwendolyn Harvey, Ernie Hodgeson, Catharine Phipps, C. V. Sheppard, Kelo Aiken, Viola May Clutinger and Diana Boone. Bill Stutsky led community singing.

Wilkins Soars Over Pole in Flier Hunt; Ice Keeps Supply Ships From Barrow

S.D. TRIBUNE 8/23/37

FAIRBANKS, Alaska, Aug. 23 (A.P.)—A message intercepted by the Pacific Alaska Airways radio station here today reports Sir George Hubert Wilkins, explorer, has flown over the north pole in his search for the missing Russian transpolar fliers, who vanished a week ago on a flight from Moscow to the United States.

Wilkins' message gave no details. He left Coppermine, N.W.T., in the Canadian arctic, yesterday and was expected to base at Aklavik, a trading post at the mouth of the MacKanzie river.

(Wilkins is flying a plane built in San Diego by the Consolidated Aircraft Corp.)

SITKA BECOMES ALASKAN DEFENSE KEY AS AIR BASE

S.D. SUN 8/23/37

Six Planes, 85 Men Ordered To Northern Station; U. S. To Keep Sandpiper In Alaska

Plans to establish a permanent air base at Sitka, Alaska, as reported to The Sun by the United Press from Seattle, indicate the growing strategic importance of this country's northernmost territory, it was pointed out in local Navy circles today.

Six seaplanes of Patrol Squadron 16, commanded by Lieut.-Comdr. Carleton C. Champion, who was formerly stationed in San Diego, have been assigned to the Sitka base, and a total of 85 men will man this station, it was reported from Seattle.

Six Ships At Seattle

Sitka thus will have a force of seaplanes equal to that based at the Sand Point Air Station, Seattle. Only six airboats of Squadron VP-17 remain in Washington.

Rehabilitation of Navy property at Sitka, on the southeastern shore of the Gulf of Alaska, has been going on during the summer, and that site was used as a base of operations during maneuvers of 30 Consolidated-built patrol bombers in Alaska waters last month.

A bill introduced into the House of Representatives recently by Delegate A. J. Dimond of Alaska authorizes appropriation of $100,000,000 for construction of an operating base, to be located in Alaska or the Aleutian Islands.

Sandpiper Remains

In presenting his bill, Mr. Dimond pointed out that the farthest of the Aleutian Islands is little more than 600 miles from the Japanese archipelago and represents the "most logical point of attack from that source."

The San Diego-based aircraft tender USS Sandpiper, which was originally scheduled to return here from its northwest maneuvers last Tuesday, is instead serving as base ship at Sitka for the present.

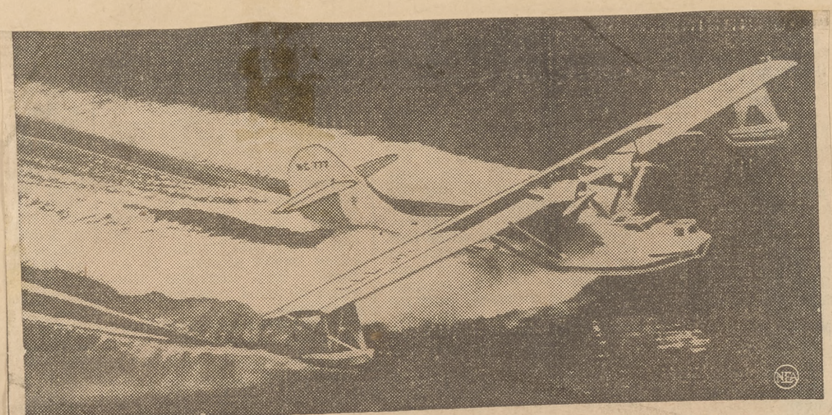
Rear Adm. Ernest J. King, com-

S.D. UNION 8/24/37

S. D. FLYING BOATS GOING TO PANAMA BASE IN JANUARY

Fifteen Consolidated airboats will fly from San Diego to Panama in January for basing at the naval air station at Coco Solo, fleet patrol wing officers announced yesterday. Exact date of departure will be determined by delivery of the seaplanes from the Lindbergh field factory and weather conditions along the 2000-mile air route.

Offshore tactical operations which were scheduled to be held by squadrons of the fleet patrol wing basing at San Luis Obispo next month, have been canceled. The Wright and Langley were to have sailed for the northern port Sept. 10.

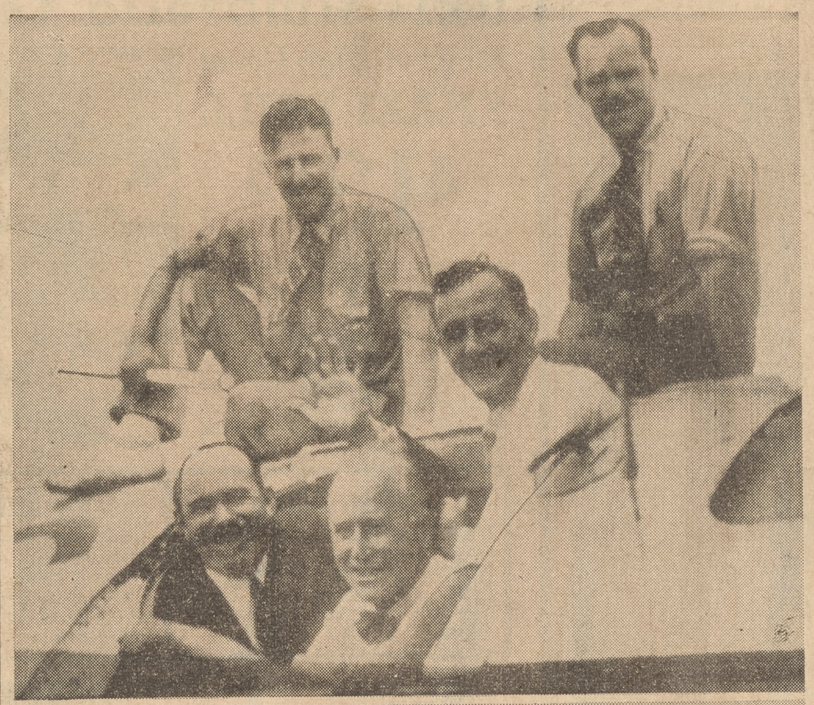


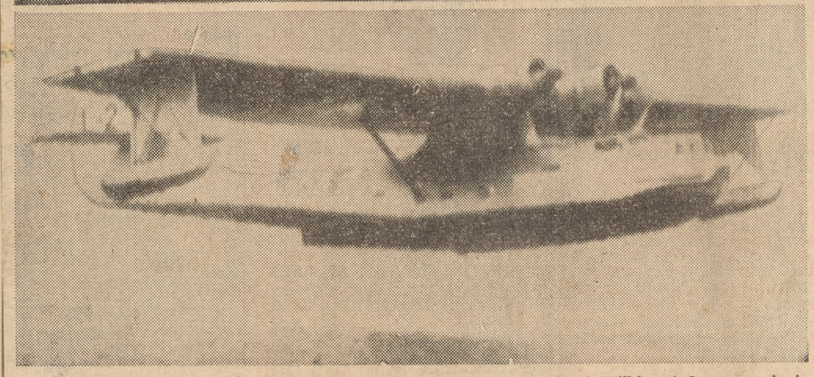
San Diego aviators and a huge San Diego-built seaplane are in the vanguard of the intensive search for five Russian fliers missing in the Arctic. At top is the plane of James Mattern, who learned to fly in San Diego more than a decade ago, just before its takeoff from Oakland. Mattern is shown below the plane, with his co-pilot, J. S. U. Jones, at right. In picture at upper right is Joe Crosson, San Diego aviator who is the far north's most famed "mercy flier," and directly below him are Clyde Armistead, left, and S. E. Robbins, right, other daring airmen in the hunt. Below is the Consolidated PBY-1 airboat which is being piloted over the Arctic tundra by Sir Hubert Wilkins and a crew of four. This is the craft which made the first non-stop flight of a seaplane across the U. S., from San Diego to New York, last June.

S.D. SUN 8/21/37

S.D. SUN 8/30/37

S. D. Airboat Joins Arctic Search





A San Diego-built airboat, shown above, and its crew, led by Sir Hubert Wilkins, today was winging toward the frozen tundra of the Arctic to search for five Soviet fliers missing on a flight from Moscow to Fairbanks, Alaska. The plane was built by Consolidated Aircraft Corp. for Richard Archbold, New York explorer, who disposed of the airboat to the Russian government this week. In cockpit just before leaving a Long Island airport on their perilous flight are, left to right, Sir Wilkins, Hollick-Kenyon, pilot; Raymond Booth, radioman. Standing, left to right, are Jerry Brown, machinist, and Russell Rogers, pilot.

Explorer Archbold In S. D. For New Consair Airboat

Richard Archbold, 30-year-old tropical explorer, whose $250,000 Consolidated-built airboat was sold this week to the Russian government, arrived here by plane from New York this morning to supervise construction of a more advanced type seaplane he will use in an expedition to Dutch New Guinea next winter.

The Soviet government commissioned Sir Hubert Wilkins and a crew of four to use Archbold's former plane to search for six Russian fliers missing in the Arctic.

Archbold, who flew his airboat non-stop from San Diego to New York last June, will receive his new plane November 1. It will be similar to the powerful PBY-2 patrol bombers now under construction for the Navy, according to Consolidated officials.

A telegram from Russell Rogers, who is helping Wilkins pilot the rescue plane to Aklavik, Northwest Territory, notified Consolidated officials today that the noted polar explorer is "more than satisfied with the airboat's performance."

6 DIE IN S. D. NAVY AIRBOAT CRASH

S. D. PLANE SKIRTS POLE IN VAIN HUNT

Wilkins Covers 1500 Miles Without Finding Trace of Russians; More Airmen Join Widespread Search.

BARROW, Alaska, Aug. 23 (A.P.) — Sir George Hubert Wilkins, noted Australian Arctic explorer, flew over the bleak polar regions today without sighting Russia's six missing aviators, objects of a widening search at the top of the world.

In the huge flying boat Guba, built at the Consolidated aircraft factory at San Diego, Sir George made a perilous flight from Coppermine, N. W. T., along the 148th meridian as far as the 78th parallel, close by the North Pole, before fog forced him to return, he advised the Soviet embassy in Washington.

Three Ships Tuned Up

It was estimated he flew nearly 1500 miles in vain search for the airmen, who disappeared Aug. 13 on a 4000 mile Moscow-Fairbanks flight which would have taken them along the 148th Meridian after crossing the pole.

In Moscow, Soviet airmen tuned up three huge searching planes to hunt Sigismund Levaneffsky and his companions before the approaching arctic winter throws darkness over the frozen polar cap. Provisions for months were placed aboard the craft.

In Barrow, American pilot Jimmy Mattern, grounded by bad weather, considered the advice of his backer, M. L. Benedum, Pittsburgh oil operator, to use his "own judgment" in obtaining another refueling plane. Mattern's refueler cracked up Saturday in a swamp south of Fairbanks.

Canadian Awaits Orders

Canadian pilot Bob Randall of Edmonton, Alta., awaited orders from his employers before continuing his search of the north Atlantic coast in a plane chartered by the Soviets.

The Soviet pilot Sadkoff and his hydroplane crew were grounded here with Mattern and Randall. The Soviet icebreaker Krassin, bearing three planes, was hidden in fog off the Barrow coast.

The Moscow searchers, veterans of Arctic flying, were Mihail Vodapyanoff, Vasily Molokoff and Anatolii Alexieff. They planned to fly about 15 miles apart from Fudolf island, far northern Soviet air station, across the pole to Alaska.

Pilot King Baird, flying a huge amphibian plane with radio equipment for the Russians, left Juneau for Fairbanks via Whitehorse, Y. T., late today.

SIX DIE AS NAVY AIRBOAT STRIKES WRECK IN LANDING

(Continued from Page One)

second class, attached to the Rigel, and two other sailors clambered on to the plane.

Their way lighted by searchlights, the three sailors sought for living men or bodies. They saw a man's head and shoulders above the water inside the plane.

At that instant a spark flashed gasoline on the water into an inferno about the sailors, the plane and rescue craft. The three sailors dived from the plane.

A navy tug's crew put out the flames with fire extinguishers and pulled aboard the three sailors, who returned to rescue work a few minutes later.

Body Sighted, Lost

One of the Rigel's launches put grappling hooks on the crumpled starboard wingtip, floating about 15 yards from the plane which was about 60 feet from the Narwhal's hulk.

Efforts to bring the wingtip out of the water became frantic when a sailor said he saw a man's legs entangled in the wreckage. When the wingtip was hoisted aboard the Mary Ann, salvage craft from the naval air station, no body was found.

The wingtip was the only damaged part of the plane visible to the rescue party. The Mary Ann and the navy tug YMP3 had lines on the fuselage early today.

Capt. McCandless said efforts were being made to raise the forward part of the fuselage so rescuers might reach the four missing bodies.

A naval board of inquiry composed of high ranking officers in this area was scheduled to meet today to investigate the crash and report to the navy department at Washington, D. C.

There was no loud shouting of orders among the boats clustered about the great black hull, turned coffin-like to the night sky.

Covered with blood, muck and oil, Capt. Candless spoke quietly, calmly. His men obeyed each order with dispatch and precision.

Forced Landing Indicated

Fliers from North Island arrived in boats. They joined the rescue parties. Their faces were white, taut, solemn under the lights' glare.

Members of the rescue party said it was unusual for such a large plane to make a landing so near shore in shallow water. Fliers said the plane probably was not making a practice landing.

"Forced landing," was the unofficial comment of fliers.

A statement issued by naval officials before recovery of Purdy's body follows:

"At about 7:40 p. m. PBY-1 airplane, assigned to patrol squadron 2, crashed in lower San Diego bay south of destroyer base, shallow water near eastern shore. Cause of crash unknown. Airplane was engaged in local routine practice flight.

"Blackman, J. W., aviation ordnanceman second class, and Dougherty, T. P., aviation machinist's mate third class, were taken to Naval hospital. One unidentified body recovered and taken to Naval hospital at same time.

"Other members of the crew are unaccounted for at the present time. Rescue party from U. S. S. Rigel, destroyer base and naval air station are at the scene of the crash. Names of remainder of crew are:

"Lt. Walter C. Dey jr., Lt. (jg) Ford L. Wallace, Lt. (jg) William M. Freshour, R. Fall, aviation chief machinist's mate; R. M. Purdy, radioman second class; H. K. Bryan, radioman third class, naval aviation pilot."

PLANE HITS SUBMERGED HULL IN BAY

Big Ship Carrying 8 Plunges To Bottom With 4 Bodies; 2 Survivors Are Injured, Third Expires at Hospital.

Six navy fliers died and two were injured when a giant new patrol flying boat crashed in the lower San Diego bay south of the destroyer base at 7:40 o'clock last night.

Dead or unaccounted for:

Lt. Walter C. Dey jr.

Lt. (jg) Ford L. Wallace.

Lt. (jg) William M. Freshour.

R. Fall, aviation chief machinist's mate.

R. M. Purdy, radioman second class.

H. K. Bryan, radioman third class, naval aviation pilot.

Injured:

T. P. Dougherty, aviation machinist's mate third class, severe shock, multiple lacerations.

J. W. Blackman, aviation ordnanceman second class, slight injuries.

Craft Noses Over

In the first major accident of the new Consolidated flying boats, plane 3 of VP-2 squadron, attached to North Island, was landing and apparently struck the partly submerged hull of the Narwhal, abandoned whaling ship, and nosed over in about eight feet of water 250 yards from the foot of Ninth st., National City.

Blackman, Dougherty and a third flier were taken from the plane by rescue parties and transported to naval hospital by ambulance. The third flier was pronounced dead at the hospital. His body was unidentified.

Purdy's body was recovered soon before midnight and taken to Benbough's mortuary. Rescuers were attempting to reach the bodies of two other fliers visible in the wreckage.

Mystery surrounded the cause of the crash. Naval officials said the plane was engaged in "local routine night practice flight."

When the first rescue boats arrived with Capt. Byron McCandless, destroyer base commander, an unidentified pleasure boat was near the fuselage and had one of the three rescued men aboard. The man was placed in one of the Rigel's launches.

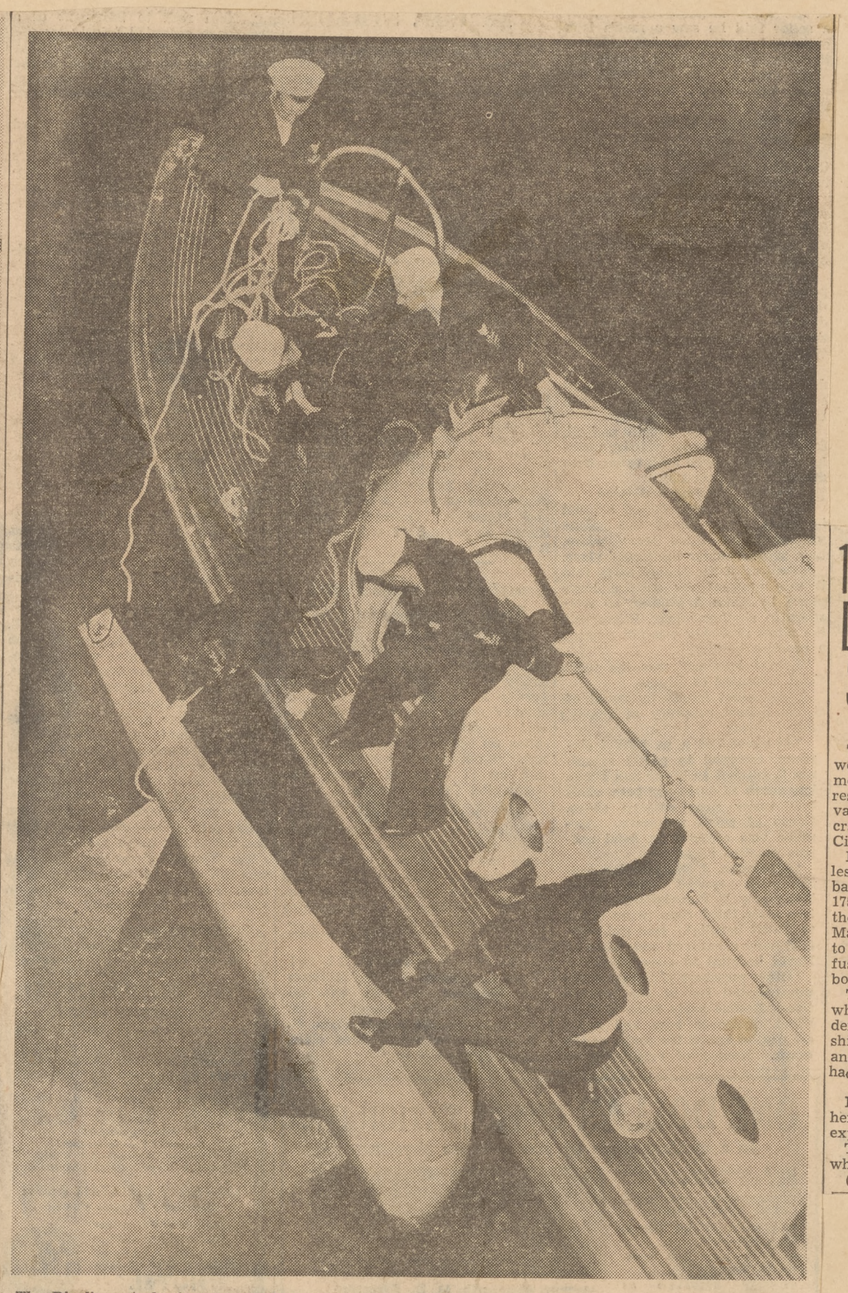
Frees Self From Wreck

Capt. McCandless ordered his boat alongside the fuselage. One of the plane's crew was sighted in the dark water, his head bobbing back and forth like a float. He was pulled aboard. Another flier suddenly shot up from the water after he had apparently freed himself. He was taken aboard. The three rescued men were sped by motor boat to the destroyer base and from there to the naval hospital.

The fuselage was still afloat when Jules Levendahl, musician

(Continued on Page 2, Col. 2)

Jules Levendahl, musician second class and navy sprinter, attached to the Rigel, who with two shipmates narrowly escaped death in a rescue effort.



The Rigel's motorboat crew puts a line on the crumpled starboard wingtip, apparently torn loose in the crash.

175 HEROES RISK DEATH IN FRANTIC SEARCH OF WRECK

By JOE KNEFLER

The sullen, gray waters of the bay were lighted last night by a timid moon and powerful lights of navy rescue vessels as the work of salvaging the giant navy plane, which crashed in shoal waters off National City, got under way.

Directed by Capt. Byron McCandless, commander of the destroyer base, a rescue crew of approximately 175 men worked feverishly aboard the naval air station crash barge Mary Ann and the navy tug YMT 3 to raise the smashed and overturned fuselage which held the battered bodies of four of their comrades.

Three men, thrown from the plane when it crashed into the rotting, derelict hull of an ancient whaling ship on landing, had been picked up and rushed to the hospital. One had died of his injuries on arrival.

Flames Peril Men

Desperate chances were taken by heroic seamen and fellow fliers to expedite the gruesome salvage.

Three men narrowly escaped death when sparks from grinding metal

(Continued on Page 2, Col. 8)

175 HEROES RISK DEATH IN FRANTIC SEARCH OF WRECK

(Continued from Page One)

set fire to gasoline in the fuselage and on the surface of the water near by. They had been combing the wreckage for bodies when the flames flared.

Jules Levendahl, musician 2cl, attached to the U.S.S. Rigel, and two fellow searchers jumped into the bay. They were rescued after fire exinguishers had been employed by their companions to subdue the fire.

The plane, lying almost submerged in the shallow water, was overturned. Only the bottom of the fuselage, which held the bodies, and the two wing pontoons, were above water.

Rescuers said they found only one body in their search of the wreckage, interrupted by the fire. They reported the man was clear of the water from his waist up, but that his legs were inextricably tangled in the crumpled metal of the cabin. They found no bodies in the tail of the fuselage, they reported.

Gaunt Skeleton Looms

Close by—almost directly over—the half-submerged plane wreckage, stood the rescue vessels. About 20 yards away, looming starkly black and looking like the gaunt skeleton of some primeval sea beast, was the hull of the Narwahl, derelict vessel into which the plane is believed to have crashed.

Capt. McCandless, aided by officers of the Naval Air station in their brown flying uniforms, directed every angle of the salvage operations. Volunteer seamen, grim-faced and determined, rushed the hazardous work of securing grappling hooks and tackle to parts of the wreckage. A wing pontoon, appearing much larger at close quarters than in the air, was the first piece brought aboard the Mary Ann.

Although at first glance the scene was one of utter confusion, a closer study revealed the orderly procedure in which the men went about their heartbreaking task. Each man stuck to his appointed job, alert and efficient.

Pontoon Torn Off

Throughout the entire crew ran a grim curiosity regarding the cause of the tragedy. Although there were no lights near the partly submerged derelict, it was believed it should have been visible to the pilot of the plane in the moonlight.

Judging from the direction in which the plane landed, it must have come down cross-wind instead of into it, opposite to the usual procedure, officers said. This led to speculation that the landing may have been forced, or perhaps the plane was out of control entirely and crashed. That it hit the derelict at high speed was evidenced by the condition of the fuselage which, in the fore part, was badly smashed. The tail and wing pontoons were damaged. The right pontoon was torn free of the wing.

It was believed that many persons saw the plane fall or heard the crash, as the shoreline in the vicinity was dotted with the lights of many automobiles.

HUGE FLYING BOATS of Patrol Squadron Twelve anchored at Kodiak after flight from Seattle non-stop to Sitka, proposed new patrol plane base, and Kodiak. The return also was non-stop. Twenty-three planes of Patrol Squadrons Seven, Nine and Twelve made the flight.

Five Feared Dead in Navy Plane Crash

One Body Recovered and Four Believed in Submerged Ship

SAN DIEGO, Aug. 23. (Exclusive) — At least five men are feared dead and two injured when a giant Navy flying boat crashed tonight in San Diego Bay.

The seaplane was submerged in ten feet of water in the southeastern section of the bay, 400 yards off the destroyer base.

Naval hospital attaches said that four men are believed trapped in the sunken plane. An unidentified body was recovered.

TWO RESCUED

Two who fought their way from the bombing and patrol plane were taken to the hospital.

They were J. W. Blackman, aviation ordnanceman, second class, with minor body lacerations, and T. P. Dougherty, aviation machinist's mate, suffering from shock.

The PBY-1 craft, built by the Consolidated Aircraft Corporation of San Diego, was a two-motored monoplane which had been engaged in night maneuvers after taking off from the North Island Naval Air Station.

SUBMERGED CRAFT

It was attempting to land and is believed to have struck the hulk of a submerged sea craft.

The U.S.S. Riegel picked up the survivors and one body. Navy crash boats began attempts to recover bodies of those believed inside the cabin.

The plane, which had a 105-foot wingspread, was one of the 100 purchased by the Navy this year, sixty of which have been delivered.

Twelve of the PBY planes made a nonstop flight to Honolulu in January and another twelve in March. More of the $1,250,000 flying boats recently flew to the Canal Zone.

Wilkins Begins Hunt Today for 6 Soviet Fliers

Explorer to Meet Noted Canadian Pilot in Washington

AUG 25 1937

Toronto, Aug. 17 (Canadian Press) Canadian Pilot Herbert Hollick-Kenyon announced late today all arrangements had been made for himself and Sir Hubert Wilkins, Arctic explorer, to take off tomorrow on a flight to Aklavik to search for six Russian fliers missing on a transpolar flight from Moscow.

Hollick-Kenyon will leave Toronto tonight for Washington to meet Sir Hubert. The Russian Embassy, he said, had arranged for a twin-engined plane with a cruising range of 2,500 miles to be used in the search.

The pilot, famed for his exploits with the Lincoln Ellsworth Antarctic expedition in 1934, will fly from the United States Capital with the explorer to a refueling point "somewhere" in northwestern Ontario. Then the route will be to God's Lake, Man., from which base Hollick-Kenyon will fly nonstop to Aklavik, far up in the subarctic.

Ocean Rim Searched.

Fairbanks, Alaska, Aug. 17 (AP).—A lone Canadian pilot, Bob Randall, dared frowning northern skies today to search the Arctic Ocean rim for the lost Soviet transpolar plane of Sigismund Levaneffsky and five comrades.

While low-hanging clouds, fog and rain below the Arctic Circle stymied impatient rescue fliers here, Randall was reported to have left Aklavik, Northwest Territory, and landed at Demarcation Point, on the Alaska-Canada border, to inaugurate his phase of the hunt.

The rescue fliers still were without definite word from the missing plane, which left Moscow Friday for a 4,000-mile nonstop flight to Fairbanks and last reported its exact position early Saturday morning when it was over the North Pole.

AUG 25 1937

10

Wilkins Hops Off To Hunt Red Fliers

New York, Aug. 19 (AP).—A 17-ton flying boat bearing Sir Hubert Wilkins, veterans Arctic explorer, headed into the Northwest today on the first leg of an expedition to search for six Russian transpolar fliers who have been missing since Friday.

The flying boat, the Guba, purchased by the Soviet government yesterday and equipped hurridly, took off from Long Island Sound today, paused to refuel at Toronto, then took off again for Port Arthur, Ontario.

DIVERS RECOVER BODIES OF SEAPLANE CRASH VICTIMS

SAN DIEGO, Aug. 24. (Exclusive)—Delving in the murky waters of Southern San Diego Bay, divers this afternoon brought up bodies of two of the six flyers who died when a $150,000 PBY-1 navy seaplane smashed into the half-submerged whaler Narwhal last night.

They were not immediately able to remove a third, that of Ralph Malcolm Purdy, radioman, San Diego. Those extricated from the sunken aircraft were Lieut. Walter Chester Dey, Jr., Coronado, and Lieut. William McKee Freshour, Piqua, O.

TWO CHEAT DEATH

Three other naval airmen also were killed. Two escaped death when the monster patrol boat sank after the crash.

In a morgue lay the bodies of Junior Lieutenant Ford L. Wallace, Coronado; Harry K. Brown, radioman, Bellwood, Ala., and Robert Fall, aviation machinist's mate.

Both T. P. Dougherty, machinist's mate, and J. W. Blackman, second-class ordnanceman, are in a local hospital, where authorities said they will recover.

INQUIRY ORDERED

Naval officials last night prepared for an extensive investigation of the tragedy which occurred shortly after sundown, apparently when the large plane—built by Consolidated Aircraft of San Diego—was forced down with engine trouble. Landing in water usually considered too shallow for PBY-1's, the ship ripped headlong into the abandoned whaler, overturned and sank.

Findings of the naval board of inquiry will be secret, and will be forwarded to the Navy Department at Washington.

While divers started the task of cutting the last three bodies from the twisted wreckage, navy men pointed out that yesterday's disaster was the first to overtake the service's patrol boats. Sixty have been delivered to the government.

More than thirty-six planes of this type have been ferried in mass nonstop flights to Honolulu and the Canal Zone. The ship which crashed was undergoing tests preparatory to flying to Panama in another massed delivery trip.

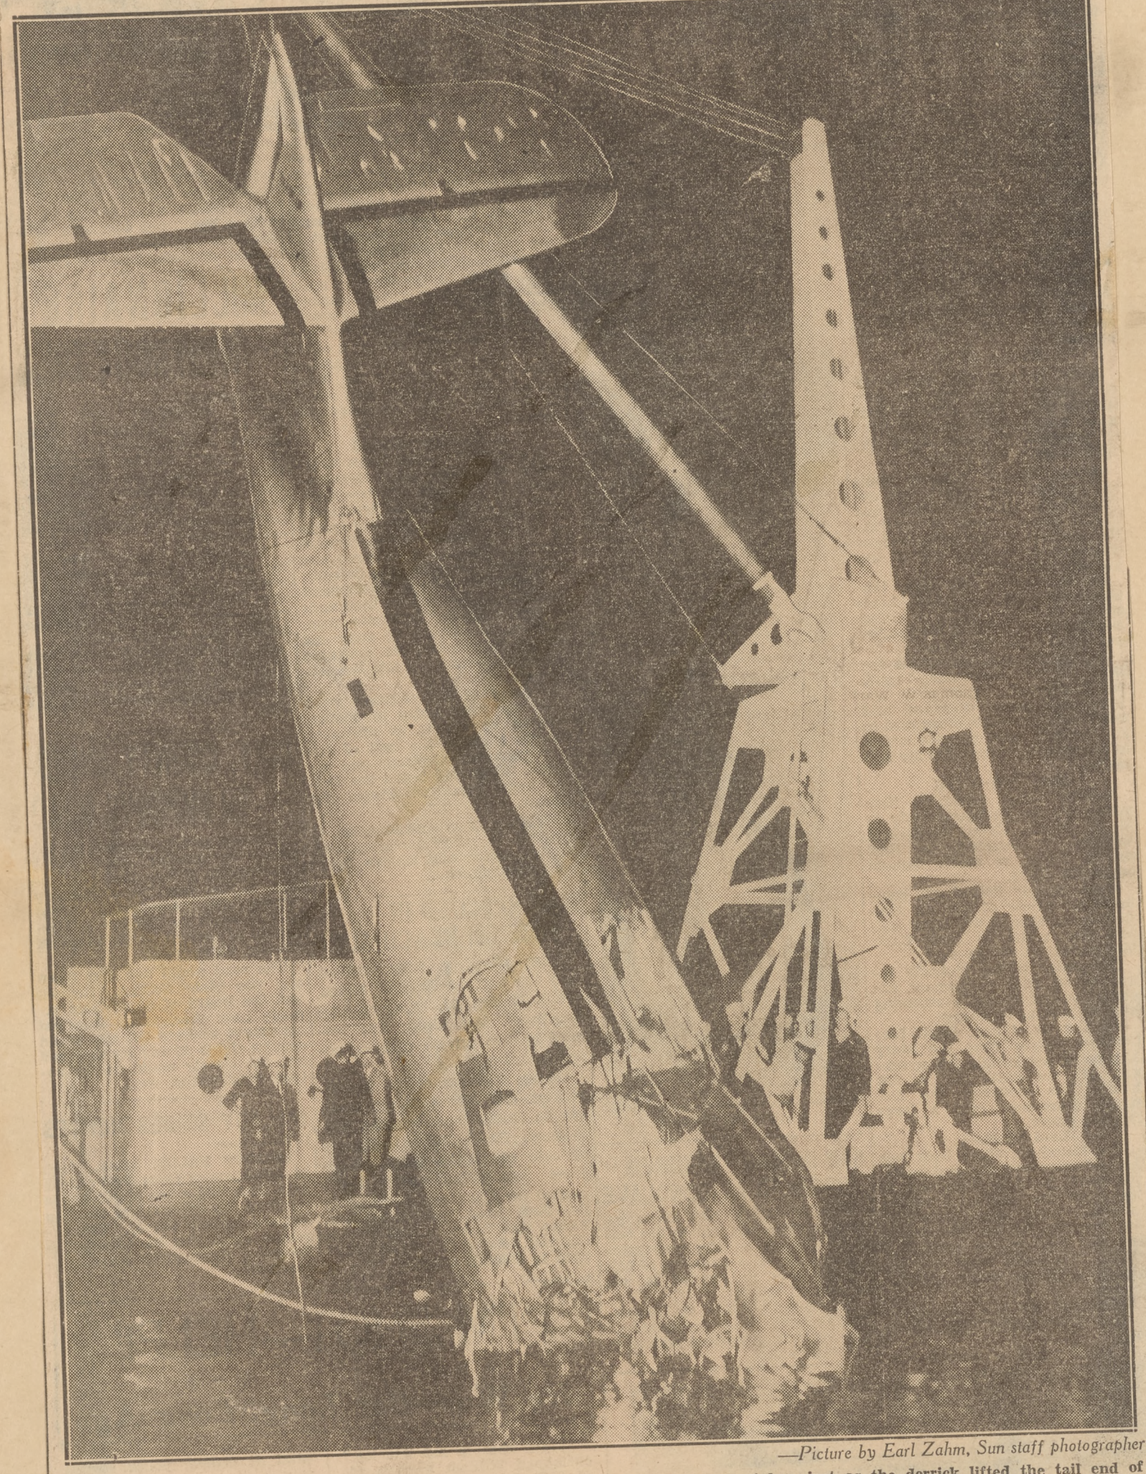
Panama Plane Crash Investigators Return

NEW YORK, Aug. 24. (AP)—The Department of Commerce aviation committee which investigated the crash of the Pan American-Grace amphibian August 2 off Cristobal returned today en route to Washington.

Miller C. Foster, assistant Secretary of the department and head of the committee, said the report will be turned in directly to Secretary Roper. He refused to comment on any findings.

S.D. Sun 8/24/37

Wreckage Of S. D. Airboat In Which Six Died



—Picture by Earl Zahm, Sun staff photographer

At midnight last night, the Navy tug Mary Ann succeeded in lifting up from the bay the fuselage of the giant Navy airboat which crashed at 7:40 p. m. and carried six men to their deaths. This photograph was taken just as the derrick lifted the tail end of the plane from the water. Inside, held fast in the wreckage, were the bodies of four Navy men. Two bodies were removed, and the body of one of the four was recovered this morning.

NAVY HUNTS 2 BODIES IN CRASH; 6 DIE

S.D. Sun 8/24/37

Bay Dragged At Scene Of San Diego Airboat Disaster; Hull Split In Two

The body of Lieut. William McKee Freshour was recovered from the waters of San Diego bay near the spot where the huge Navy flying boat crashed last night. Navy men found the body at 1:10 p. m. today.

While high-ranking Navy officials today launched an investigation into the crash of a Consolidated patrol bomber south of the Destroyer Base last night, resulting in death to six men and serious injuries to two, more than a score of sailors were dragging the bay today for the bodies of three of the victims.

The smashed hull of the 13-ton airboat, split in two, was lifted aboard the "wreck barge" Mary Ann and a floating crane dispatched from the Destroyer Base to help hoist the heavy wreckage this morning.

As the forward part of the fuselage, containing the control room, was lifted from the water, the bodies of four aviators, trapped in the splintered mass of metal, dropped into the water. Only one, that of Lieut. (jg) Ford Llewellyn Wallace, was recovered. The others disappeared.

Two Officers

Still missing are the bodies of

Pictures of victims on Page 2

Lieut. Walter Chester Dey Jr., chief pilot; Lieut. (jg) William McKee Freshour and Ralph Malcolm Purdy, radioman, 2c.

Recovered last night were the bodies of Robert Fall, aviation machinist's mate, and H. K. Bryan, radioman third class, Naval aviation pilot.

Pair In Hospital

Two other members of the crew were in Naval Hospital today, suffering serious injuries. They are T. P. Dougherty, aviation machinist's mate third class, and J. W. Blackman, aviation ordnanceman, second class.

First Airboat Tragedy

Navy officers were appalled by the sudden tragedy. It was the first fatal crash of one of the new Consolidated-built patrol bombers. The airboat was attached to Patrol Squadron Two, in training at North Island for a non-stop mass flight to Coco Solo, Canal Zone, its base.

Officers on the quarterdeck of the receiving ship USS Rigel, moored at the Destroyer Base dock last night heard the huge

Turn to Page 2, Col. 2.

S. D. SUN 8/24/37

Navy Drags Bay For Body Of 2 Fliers Killed In San Diego Airboat Disaster

(Continued from Page 1)

plane droning overhead at about 7:30 o'clock.

"The motors were not sputtering," one of them said today. "The plane was at the usual altitude of airboats performing practice flights over the bay. It did not seem to be in trouble.

Deafening Roar

Destroyer Base personnel suddenly heard a splintering roar. The airboat had turned west for landing, and in touching the water apparently had struck the almost completely submerged rotting hulk of an ancient whaling boat, the Narwhal, in about eight feet of water, 400 yards south of the decommissioned "red-lead" ships at the Destroyer Base, and about a quarter-mile offshore.

Navy officials conjectured that those at the plane's controls had not seen the obstruction until too late. The bottom of the airboat's hull smashed into the submerged "ghost ship" and nosed over into the water, eventually capsizing.

Fuselage Shattered

The entire lower part of the fuselage was ripped into ribbons. The control room was a confused, unrecognizable mass of metal.

Immediately after the crash, motor launches sped to the scene from the Destroyer Base. Thrown clear of the wreckage was one body and two other members of the

LIEUT. W. C. DEY JR.

crew, gasping for life in the murky bay waters.

The dead man was Fall. The injured were Dougherty, suffering severe shock and multiple lacerations, and Blackman, with numerous body bruises.

Rescuers Assemble

Motor launches, whaleboats, two Navy barges, the YMT-3 and YMT-54, and the "wreck barge," the Mary Ann, plowed through the

ROBERT FALL

darkness to reach the smashed plane.

Capt. Byron McCandless, commanding officer of the Destroyer Base, assumed charge of the rescue work.

The plane lay upside down and sank more and more out of sight as high tide enveloped it. Powerful searchlights from the Mary Ann disclosed only a wingtip above water.

Mute evidence of what probably caused the disaster, the jagged, submerged hulk of the Narwhal, was barely seen above water, about 50 feet from the crash.

About 75 sailors from the Naval Air Station and Destroyer Base worked feverishly attempting to secure grappling hooks to the airboat.

Danger Of Fire

A few sections after rescue operations got under way the grim spectre of an even worse disaster arose momentarily when a patch of gasoline, floating above the sunken craft, was ignited.

Sailors aboard salvage boats sprang into action with fire extinguishers and the blaze was quelled before it could do any further damage to the twisted plane wreckage, or damage any of the growing rescue fleet.

At midnight, with the tide slowly receding, the Mary Ann's crane strained with its huge burden, and the tail of the bomber was lifted from the water.

The weight was more than the Mary Ann's equipment could stand, however. With each upward pull, metal crumpled and sailors in small boats attempted to rip the hull open to gain access to the interior, where still lay five bodies.

Body Taken Out

Shortly before midnight, they pulled out the disfigured body of H. K. Bryan. Grim bluejackets handled it tenderly as they placed it in a motor launch bound for shore.

Capt. Arthur Bristol Jr., commanding officer of the Air Station, came aboard the Mary Ann late last night to help Capt. McCandless in rescue work.

The latter officer stoically remained on duty throughout the night, fatigue almost overcoming him on several occasions.

At 4 a. m. today, Capt. McCandless, noting that the Mary Ann could not handle the wreckage, left the scene for a few hours. This morning, the Destroyer Base sent over a large floating crane.

Used In Movie

The Narwhal, whose hulk was the probable cause of the disaster, was built in San Francisco in 1883, and was used as a whaler for many years, operating out of San Francisco to the Bering Sea. She was used in the filming of "Moby Dick" and later sold for use as a fishing barge off Ensenada.

Eventually, the craft was towed to San Diego harbor and left to rot.

A naval board of inquiry was to convene today to determine officially the cause of the disaster.

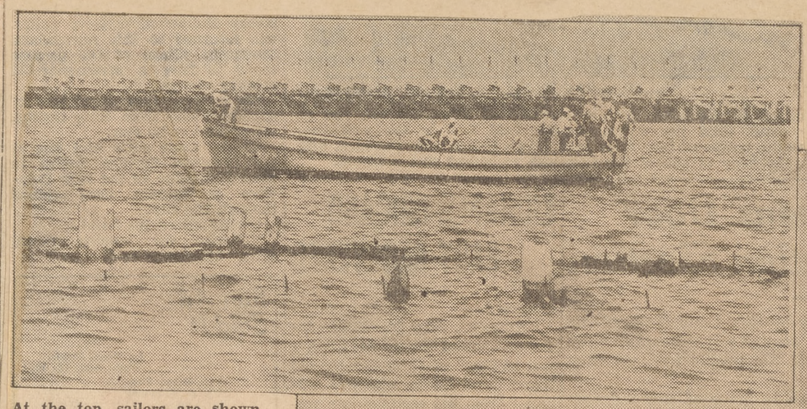
Widow Remains Up

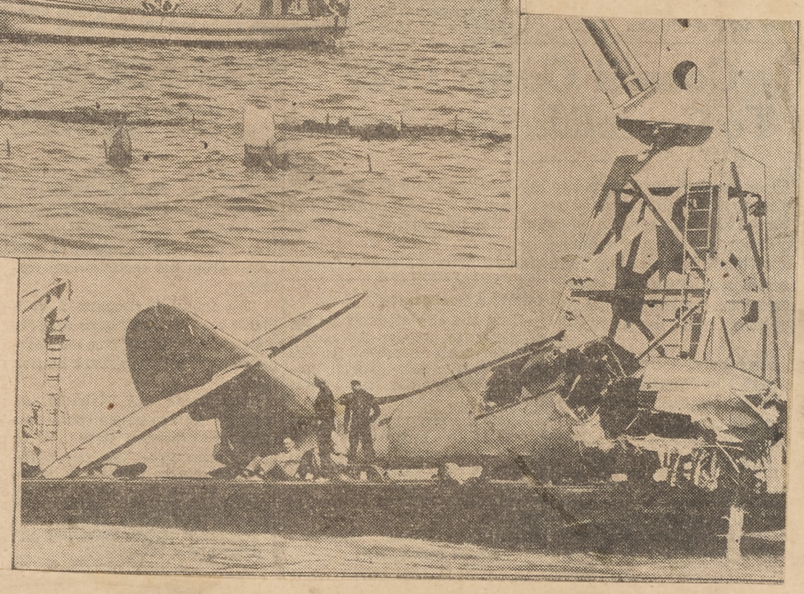
Mrs. Fall, surrounded by relatives and a few friends, remained up all night.

Her children—Bobby, 6; Richard, 5, and Raymond, nearly 3—were sent to a friend's house, unaware of their father's fate.

At 9:30 a. m. today, the Navy had not yet sent Mrs. Fall official notification of the tragedy.

Similarly uninformed was the pretty wife of Ralph Purdy, who anxiously awaited news at 1257 Eighth-av. She is the mother of a year-old baby.





At the top, sailors are shown dragging the bay for the bodies of Navy men still missing in the fatal crash of a Navy patrol plane, only a few yards from the protruding, rotted hulk of an old sailing ship which the plane evidently struck and flopped over into the bay. Below, at right, the tail end of the wrecked plane is shown after it was hoisted aboard a Navy tug.

L.A. TIMES 8/25/37

NEW AIRPLANE FACTORY PLANNED FOR LOS ANGELES

Los Angeles shortly will have another aircraft factory, according to a statement made yesterday by Josef S. J. Hlobil, president of the Lobil Aircraft Corporation.

Hlobil, an aircraft engineer formerly with Consolidated Aircraft Corporation in San Diego, said his company will specialize in military planes.

Actual construction of the first experimental plane is expected to begin within the next few weeks, with production scheduled to start in six months.

Directors of the new company are Charles T. Leigh, vice-president of Consolidated Aircraft Corporation; E. J. Rivers of North American Aviation Corporation, Gregory M. Creutz and E. J. Dickinson.

S.D. SUN 8/24/37

WILKINS OVER ARCTIC BORDER

By United Press

FAIRBANKS, Alaska, Aug. 24.—Sir Hubert Wilkins, Arctic explorer, scoured the northern coast of Canada, three other famed aviators waited here for clearing weather today before undertaking a search for six Soviet fliers missing 10 days.

Wilkins was expected to return to Aklavik, a native village at the mouth of the MacKenzie River. He left Coppermine, in the Canadian Arctic, yesterday. Wilkins' plane, an airboat built in San Diego, has a cruising range of 4000 miles.

Jimmy Mattern, American pilot, Bob Randall, veteran Canadian aviator, and Soviet Pilot Zadkoff remained at remote Point Barrow as fog shrounded the area and rain was reported to the north.

King Baird, piloting a Sikorsky amphibian plane, planned to take off from Juneau today for Fairbanks. His plane will be used to refuel Mattern's in mid-air.

S.D. UNION 8/26/37

WILKINS OVER POLE

COOPER MINE, N. W. T., Aug. 25 (I.N.S.)—Sir Herbert Wilkins headed his band of mercy fliers over the North Pole today in his Soviet-owned plane piloted by Herbert Hollick-Kenyon, noted Canadian Arctic explorer. The huge boat was loaded with 720 gallons of gas. The weather was hazy and flying conditions were poor. Sir Herbert intends to land at Aklavik for refueling.

EX-CONSAIR EXPERT PLANS PLANE PLANT

Josef S. J. Hlobil, former engineer with Consolidated Aircraft Corp. here, today announced in Los Angeles that his aircraft company, the Lobil Aircraft Corp., will build a plant in Los Angeles to specialize on military planes, the United Press reported to The Sun.

Hlobil formerly was in charge of an engineering unit at the San Diego aircraft concern. His plan to build a Los Angeles plant was believed to have been caused by the large demand for military aircraft, brought on by world-wide war scares. S.D. SUN 8/25/37

Four Bay Crash Victims Drowned, Coroner View

S.D. Union 8/25/37

NAVY COURT OF INQUIRY CONTINUES

Lt. Freshour's Skull Shattered; All Six Bodies Recovered; Wreck Hoisted From Water, Under Guard.

Twisted wreckage of a giant naval patrol plane and the split-second impressions of two survivors of Monday night's plane crash in which six naval fliers died will be examined minutely by a court of inquiry this morning as high ranking naval officers probe into the cause of the first fatal accident involving locally manufactured Consolidated Aircraft Corp. flying boats—longest arm of the national air defense.

Bodies of the six victims were recovered from the bay yesterday afternoon as the court held its first session in an effort to pierce the mystery of the tragedy that occurred when the giant plane apparently raked her bottom off when she struck the almost submerged hulk of the one-time whaling ship Narwhal, rotting in the bay off National City.

Aviators Trapped

Developments yesterday included discovery that four of the victims, apparently knocked unconscious by the impact or unable to extricate themselves from the wreckage, drowned after the ship crashed.

At Naval hospital condition of two survivors, J. W. Blackman, aviation ordnanceman, 2c; and T. P. Dougherty, aviation machinist's

(Continued on Page 2, Col. 6)

S.D. UNION 8/25/37

NAVY CONTINUES INQUIRY COURT IN BAY TRAGEDY

(Continued from Page One)

mate, 3c, was reported improved last night and doctors said if they are strong enough today, they would be allowed to testify before the inquiry court. The doctors said they were suffering from shock, bruises and exposure, but had no serious injuries. They were not allowed to give out any details of the crash.

Under glaring floodlights, naval rescuers aboard the crash boat, Mary Ann, and other small craft, worked all night Monday in a vain effort to recover bodies of five of the victims. The body of Robert Fall, aviation chief machinist's mate, 1c, was recovered at the time of the crash, and he was hurried to Naval hospital where he was pronounced dead.

First Flier Reached

Just before midnight, rescuers hacked through the wreckage to reach Harry K. Bryan, radioman 3c, At dawn, efforts to reach the other four men still were unavailing and a huge floating crane was sent from the destroyer base. Wreckage of the plane, broken and crumpled, was hoisted aboard the Mary Ann, and as it lifted from the water three of the four bodies slipped into the water.

While the wreckage was taken to Naval Air station where it was placed under guard, boat crews operated grappling hooks in an effort to recover the bodies. Soon after 1 in the afternoon bodies of Lt. Walter Chester Dey jr., 352 A ave., Coronado; Lt. (jg) Ford L. Wallace, 717 Eighth st., Coronado, and Lt. (jg) William McKee Freshour, 247 Alameda ave., Coronado, were lifted from the water within a few minutes of each other.

It was not until almost 5:30 in the afternoon that the remaining victim, Ralph M. Purdy, radioman 2c, was brought to the surface by the grapplers. Due to an error in identification, naval officials announced Monday night that Purdy's body was the first recovered.

Insignia Misread

Investigation yesterday disclosed that a mistake had been made in reading the insignia, as both he and Bryan were radiomen.

Conjecture as to cause of the crash was voiced by many yesterday. Naval officials said the part of the bay in which the ship crashed was used often for night landing and take-off practice, though the ships never landed close in where the hulk of the "haunted" whaling ship lay.

Several experts who refused to be quoted said in their opinion the ship was landing in routine practice and that the pilots became confused and tried their landing too close to shore. Apparently the 14-ton flying boat, traveling at almost 100 miles an hour, struck the jagged edges of the submerged hulk just as it settled on the water.

Officers who examined the wreckage said the ship was a mass of twisted metal, but apparently it had been operating all right up to the time of the crash. After striking the hulk, it nosed over into the bay in about 8 feet of water. When rescue ships arrived from destroyer base, the plane was only partly visible.

A. E. Gallagher, deputy coroner, who examined the bodies, said all of the victims except Lt. Freshour and Bryan had drowned. He said Lt. Freshour apparently had died from a severe blow on his head which had removed the top of his skull. The body of Bryan was burned severely, Gallagher said.

Court Listed

The inquiry court conducting the naval investigation of the crash, which took the heaviest toll of lives of any crash here in the last five years, was headed by Comdr. M. A. Mitscher, senior officer. Comdr. Elliott Buckmaster, Lt. Comdr. J. K. Gordon, medical corps, and Lt. Comdr. B. L. Braun, judge advocate, completed the court.

Wreckage of the $150,000 plane was taken to a hangar at Naval Air station where it was placed under guard until members of the court have time to examine it.

The ship was delivered to the navy several months ago, naval officials said, by Consolidated Aircraft Corp. It had been put through rigorous tests and had shown no defects. It was identical with long range patrol boats which recently made flights from here to Hawaii and to the Canal Zone, officers reported.

Lt. B. E. Grow, who said he had been designated to act for the navy, announced last night that plans were being made for a mass funeral for the six victims which probably will be held at Benbough's mortuary, where the bodies were taken yesterday, some time tomorrow. He said bodies of all the men but one would be sent to home states for burial, according to preliminary plans.

Gallagher said civil authorities would make no further investigation of the crash and that the coroner's office would not conduct an inquest.

DRIPPING WING, BROKEN FUSELAGE LIFTED BY CRANE

Twisted steel, wooden splinters and rags were all that were left of the giant $150,000 naval flying boat which carried six men to death Monday night in the shallow water of the bay off National City. A naval wreck crew is hoisting a dripping wing and part of the plane's fuselage by crane to the deck of a barge. An official probe of the crash got under way yesterday and is to be continued by high ranking naval officers today.

S. D. Union 8/25/37

"Guba" in Hunt For Lost Russian Fliers

Sold to Sir Hubert Wilkins, noted Arctic explorer, the Consolidated flying boat "Guba" of Richard Archbold's, this week presumably was cruising around in the polar area in the hunt for the lost Russian fliers attempting a hop from Moscow to this country over the pole.

Archbold's sale of the $250 000 craft in which he had intended explorations for the American Museum of Natural Research came as a surprise to local observers, but Consolidated officials quickly announced another, and similar, craft is being built for him now, at the local factory.

The "Guba," a PBY type of boat used by the Navy for its long-range operations, made aviation history when it was piloted across the continent in slightly more than 17 hours, recently. That was the first flight across land of a flying boat.

S.D. Club Life 8/25/37

You don't hear much ballyhoo any more about Consolidated filling big contracts for the Navy, but Maj. R. H. Fleet's concern will continue to make those big boats for the service for some time. There's a good reason: Consolidated is the only firm in the country having the thousands and thousands of dollars worth of dies and patterns for that type of craft. No other firm can bid under them, with a head start like that.

S.D. Club Life 8/25/37

U. S. BOMBERS HOP FOR ALASKA BASE

S.D. Sun 8/26/37

By United Press

SEATTLE, Wash., Aug. 26.—Six Consolidated-built U. S. Navy patrol planes of Squadron 16 took off from Lake Washington at 7 a. m. today for a nonstop flight to Sitka, Alaska.

The planes were under command of Lieut. Comdr. C. C. Champion. Weather was good and the ships expected to make the flight in about nine hours.

It was the Navy's second movement of planes to Alaska this year, 23 patrol bombing planes that flew here from San Diego went to Sitka and Kodiak.

S.D. UNION 8/25/37

NAVY BAY CRASH PROBE CONTINUES AS RITES PLANNED

Activities of the naval court of inquiry probing the crash of a giant PBY flying boat in the harbor Monday night were shrouded in secrecy yesterday while plans went forward for funerals for the six victims.

The two survivors, T. P. Dougherty, chief machinist's mate, and J. W. Blackman, aviation ordnanceman 2c, who escaped with minor injuries when the landing airboat crashed into the hulk of an abandoned whaling ship, were not questioned by the inquiry court yesterday. Wreckage of the flying boat still was being held under guard at North island last night.

It was understood through unofficial sources that the inquiry court would continue today and probably tomorrow.

Meanwhile, funeral arrangements for Lt. (jg) Ford L. Wallace, Youngstown, O., were completed. Services are to be held at 2 this afternoon in Benbough Mortuary chapel, Chaplain Thornton Miller officiating. Full military services will be conducted with a military guard at the graveside at Pt. Loma National cemetery.

Flags of all ships in the harbor will be lowered to half-staff for an hour in the afternoon, in honor of the six victims.

Plans for holding a mass funeral for the six apparently were abandoned by naval officials yesterday afternoon and the body of Lt. (jg) William M. Freshour was sent to Piqua, O., where funeral services will be held. Plans for funerals of Harry K. Bryan, radioman; Lt. W. C. Dey jr.; Robert Fall, chief machinist's mate, and Ralph M. Purdy, radioman, were being made but were not complete, officials of Benbough's mortuary, where the bodies were taken after the crash, said.

Finding of the inquiry court, naval officials said, will be secret, and will be forwarded to the navy department in Washington. Reasons for the fatal crash and the exact manner in which the accident occurred have not been disclosed as yet, though some officers said they believed the plane crashed into the rotting hulk while practicing landings and take-offs in night flying.

BOARD VIEWS PLANE WRECK

S.D. Sun 8/25/37

Navy Probes Cause Of Crash Fatal To Six

The twisted, crumpled wreckage of a giant Navy patrol bomber was under guard in a hangar at the North Island Naval Air Station today while a board of inquiry continued an investigation of the crash which killed six naval fliers and injured two.

Findings to Be Secret

The board of inquiry, headed by Comdr. M. A. Mitsher, captain of the U.S.S. Wright, flagship of Rear Adm. E. J. King, commander of Aircraft Base Force, was to examine the wreckage today.

Findings of the board will be secret and will forwarded to Washington as soon as the officers reach a decision.

Four of the six victims died of drowning, apparently after being knocked unconscious and trapped inside the hull.

Survivors Improving

The two survivors of the crash—worst in the history of Naval aviation at this largest of all U. S. Navy flying centers—were improving at the Naval hospital. It was indicated the board of inquiry would question them as soon as attending physicians indicate the men are sufficiently recovered to stand the ordeal.

From these two, J. W. Blackmen, aviation ordnanceman, 2nd class, and T. P. Dougherty, aviation machinist's mate, 3rd class, the board of inquiry hopes to be able to ascertain with a reasonable

Turn to Page 2, Col. 7.

Bomber Wreckage Viewed By Board; Findings Secret

(Continued from Page 1)

degree of certainty the cause of the fatal crash.

Those who died when the plane raked the rotting hull of the old whaling ship Norwhal, were Lieut. Walter C. Dey Jr.; Lieut. (jg) Ford L. Wallace; Lieut. (jg) William M. Freshour; Ralph Purdy, radioman, 2nd class; Harry K. Bryan, radioman, 3rd class, and Robert Fall, aviation machinist's mate, 1st class.

It was estimated by officers the plane was traveling at approximately 100 miles per hour when it hit the wreckage.

Four of the six bodies were recovered yesterday morning and afternoon, after they had slipped back into the bay when the wreckage of the plane, split in two, was hauled out of the water.

Last body to be recovered was that of Purdy, about 5:30 p. m.

The body of Lieut. Freshour was to be shipped at 3 p. m. today to the home of his mother, Mrs. W. M. Freshour, of Piqua, O. The body will be escorted east by his sister, Mrs. Arthur Jessop of San Diego.

Plans were completed today at Benbough funeral parlors for shipment of the body of Bryan to Bellwood, Ala., home of his father, Aaron Bryan; of Purdy, to Keyport, N. J., and of Fall, to Milton, Fla.

Funeral services for Lieut. Wallace will be held at 2 p. m. tomorrow in Benbough funeral parlors, with Chaplain Thornton Miller officiating. Interment will take place at Ft. Rosecrans national cemetery. Arrangements were being made today on the funeral of Lieut. Dey Jr.

Though the coroner's office took charge of the bodies, no further civil investigation will be conducted, Coroner Chester D. Gunn said. A civilian inquest will not be held.

DIVERS RECOVER BODIES OF SEAPLANE CRASH VICTIMS

L.A. Times 8/25/37

Illustrated on Page 20, Part I

SAN DIEGO, Aug. 24. (Exclusive)—Delving in the murky waters of Southern San Diego Bay, divers this afternoon and tonight brought up bodies of two of the six flyers who died when a $150,000 PBY-1 navy seaplane smashed into the half-submerged whaler Narwhal last night.

Those extricated from the sunken aircraft were Lieut. Walter Chester Dey, Jr., Coronado; Lieut. William McKee Freshour, Piqua, O., and Ralph M. Purdy, radioman, second class, of San Diego.

TWO CHEAT DEATH

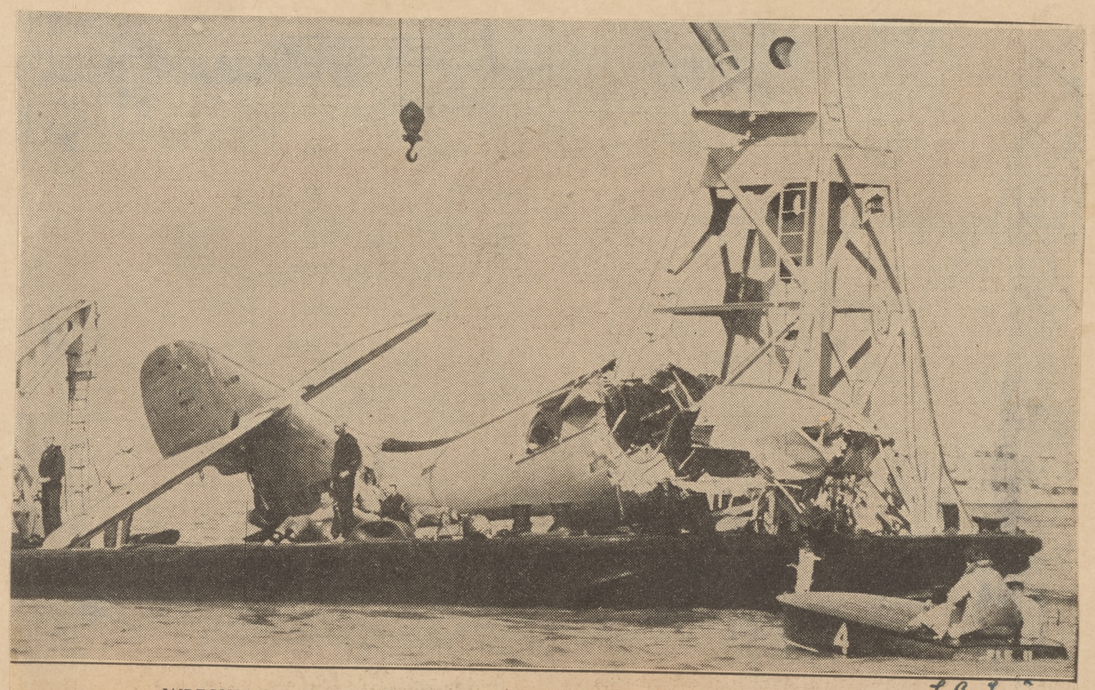
Three other naval airmen also were killed. Two escaped death when the monster patrol boat sank after the crash.

In a morgue lay the bodies of Junior Lieutenant Ford L. Wallace, Coronado; Harry K. Brown, radioman, Bellwood, Ala., and Robert Fall, aviation machinist's mate.

Both T. P. Dougherty, aviation machinist's mate, third class, and J. W. Blackman, second-class ordnance man, are in a local hospital, where authorities said they will recover.

INQUIRY ORDERED

Naval officials last night prepared for an extensive investigation of the tragedy which occurred shortly after sundown.



WRECKED NAVY PLANE TAKEN FROM SAN DIEGO BAY AFTER FATAL PLUNGE L.A. Times 8/25/37

From the waters of southern San Diego Bay the Navy yesterday raised the twisted wreckage of a new Navy seaplane which carried six men to their death Monday night when it plummeted into the water after striking the half-submerged whaler Narwhal. Two other members of the ship's personnel were injured but will recover.

S.D. UNION 8/27/37

RUSS PLANE DOWN IN 'BLIND SPOT,' WILKINS' BELIEF

FAIRBANKS, Alaska, Aug. 26 (A.P.)—Sir George Hubert Wilkins, explorer, today refueled his big flying boat for a third and deeper thrust into the Arctic in quest of six missing Soviet transpolar fliers.

The explorer said he had concluded that Sigismund Levaneffsky and five comrades had been forced down about 500 miles from the pole, between latitudes 80 and 82 and longitudes 130 and 150.

This would indicate the Russian airmen, who vanished Aug. 13 on a 4000-mile flight from Moscow to Fairbanks, were somewhere in the east central part of the 1000-mile square "blind spot" virtually unknown to civilized man.

A flight into that area would take Wilkins farther westward than he has gone thus far in the search.

Far North Searched

Wilkins landed on Prince Patrick island, in far northern Canada, last night after making a 1500-mile hop over the Arctic wastes and going as far north as longitude 82. He then flew 600 miles back to his base at Coppermine, N. W. T., for a refueling.

The great "blind spot" never has been explored, and has been seen only by the few adventurous men

(Continued on Page 3, Col. 1)

RUSS PLANE DOWN IN 'BLIND SPOT,' WILKINS' BELIEF

(Continued from Page One)

who have made distance flights over the great polar region.

King Baird, who flew here with an amphibian plane to join the hunt, said he expected to leave for Point Barrow within a few days after having his ship thoroughly checked. He came from Anacortes, Wash.

Messages received at Barrow said Soviet Pilot Zadkoff had landed about 300 miles east of there to await better weather. Pilot Bob Randall, Canadian aviator, sent word he had flown over the grounded Zadkoff plane on his way to Aklavik, N. W. T. Randall carried a message to searchers operating out of Aklavik.

Russians in Hunt

Three Russian fliers, north bound from Moscow to carry on the search from that side of the globe, were last reported at Archangel. They intended to make a transpolar flight to Alaska along Levaneffsky's route.

Jimmie Mattern, American flier who withdrew from the search because his refueling plane was wrecked and landing facilities were inadequate for his own great craft, arrived at Juneau from Fairbanks late today and said he would "not leave Alaska until the search for the Russians is successful or proved hopeless."

"I have done all I can with my type of plane, and the search now is up to the flying boats and ski-equipped planes," he said.

In case other searchers learn the general whereabouts of the lost plane, Mattern said he would hold his long-range ship in readiness should it be needed.

"Wheeled planes (like his own) are no good along the Arctic shores or on ice," Mattern commented. "My equipment is not adapted to farther search, since I cannot take off with a full load of gasoline or refuel from the air."

Going south with Mattern were his co-pilot, Hank Jones, and the crew of the refueling plane—Garland Lincoln, pilot; Frank Tomick and Charles Marshall.

Routine Delivery

FRANK A. LEARMAN*

HAWAII FLIERS SET RECORD

Beating its own record for the 2,553 mile flight from San Diego to Honolulu established in January, the Navy today had twelve giant patrol planes over the mid-Pacific Island City at 12:10 p.m. (P.S.T.), 21 hours, 21 minutes after the takeoff from here. A similar flight January 28-29 was made in 21 hours, 48 minutes.

BY the above condensation of a long article which appeared in the San Diego Tribune of April 13 and by others similar in content, the world was informed that the Navy—and Consolidated Aircraft Corporation—had done it again. Consolidated feels more than a little justifiable pride in the accomplishment because the ships which made the gallant journey are products of their factory, PBY-1 patrol bomber airboats. Together, the efficient, courageous Navy personnel and the dependable, sturdy PBY-1's, have added another vivid chapter to the engrossing history of modern aviation.

The rapidity and ease with which the twelve huge boats took off and landed on the water was a revelation of coordination between well-trained men and properly functioning machinery. The first boat was launched, with Lieut. Claude W. Haman at the controls, at 2:14 p.m. on April 12. Within the incredibly short time of thirteen minutes, Lieut. Comdr. L. A. Pope, commanding officer of the squadron and the last one to leave, was taxiing his plane into the water. Despite the fact that each of the ships was loaded with five tons of fuel and carried crews of six and seven men, they rose gracefully and easily. Every plane was in the air at 2:49, thirty-five minutes after the beginning of operations—surely a speedy takeoff!

The squadron assembled 40 miles off Point Loma, formed a long V and, as a group, soared majestically westward toward the Gem of the Pacific.

Despite the fact that the fliers encountered bad squalls when several hundred miles out from Hawaii which delayed them approximately an hour and a half, they remained in formation the entire way, maintaining a distance of about 300 feet between each ship. Reaching Honolulu at 12:10 p.m. April 13 the twelve boats, with their weary but jubilant navigators, flew in formation above the city and then settled down gently on the placid waters of Pearl Harbor.

The personnel of the ships consisted of eighty officers and men of Patrol Squadron 11. They turned the airboats over to Pearl Harbor's Patrol Squadron 8 as replacements for obsolete craft.

*Assistant to the Manager, Consolidated Aircraft Corporation.

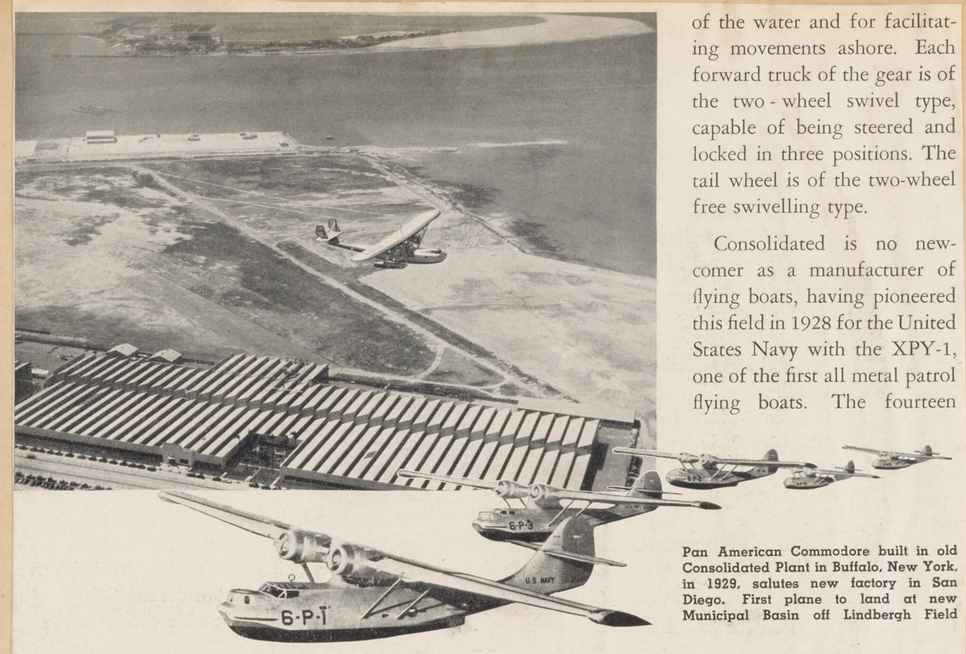
Lower: One of the new Sperry equipped flying boats on test flight over Point Loma



Pan American Commodore built in old Consolidated Plant in Buffalo, New York, in 1929, salutes new factory in San Diego. First plane to land at new Municipal Basin off Lindbergh Field

The world has recorded another epoch-making flight, and Consolidated can bask in the reflected glow of the Navy's achievement, secure in the knowledge that they too have contributed something to the advancement of aviation.

In January, 1934, with six Consolidated P2Y-1 patrol boats, Lieut. Comdr. Knefler McGinnis made what was then the first successful seaplane flight between San Francisco and Pearl Harbor. This journey of 2,414.8 miles, which was completed in 24 hours, 45 minutes, was the longest mass formation flight in aviation history at that time.

The PBY-1 is an all metal, semi-cantilever monoplane flying boat, designed for military use as a long range patrol bomber and for commercial use as a long range transport or cargo plane. It is powered with two engines, either Wright Cyclone or Pratt and Whitney twin row Wasp. The monoplane wing is attached by a streamlined superstructure rising from the center of the hull and is braced by four streamlined struts to the hull. A readily detachable beaching gear is provided for handling the airplane in and out of the water and for facilitating movements ashore. Each forward truck of the gear is of the two-wheel swivel type, capable of being steered and locked in three positions. The tail wheel is of the two-wheel free swivelling type.

Consolidated is no newcomer as a manufacturer of flying boats, having pioneered this field in 1928 for the United States Navy with the XPY-1, one of the first all metal patrol flying boats. The fourteen Commodores, the commercial version of the XPY-1, which were built and delivered to Pan American late in 1929 and 1930, have proved to be the backbone of its system. These ships, each with approximately sixteen thousand hours of service, still are carrying passengers and freight over Pan American's widespread system.

At the present time, in addition to the 176 PBY-1's which Consolidated is building for the Navy, they are engaged in the manufacture of a commercial version of these boats for Mr. Richard Archbold, Research Associate of the American Museum of Natural History. Manned by a party of scientists led by Mr. Archbold, it will be flown to New Guinea where it will be used for taking photographs, for aerial survey work and as a supply ship. Instead of bombs this ship will drop food supplies and instead of shooting guns Mr. Archbold will shoot pictures!

Just as Pan American's routine crossings of the Pacific have changed from world news to notices of "departures and arrivals", so will the Navy's mass formation flights with PBY-1's become accepted and standard practice. The progress of aviation is studded with the gems of spectacular flights which mark the beginning of everyday operations.

S.D. UNION 8/27/37

FIRST NEW TYPE AIRBOAT FINISHED

Consolidated Aircraft officials announced yesterday the launching of the first of 50 PBY-2 airboats to be delivered to the fleet patrol wing within the next few months.

Fifteen of these seaplanes are to be flown to Panama in January to supplement the air squadrons based at Coco Solo.

Under existing contracts with the navy department, Consolidated still has to build 60 additional seaplanes, all of which are to be delivered prior to July 1, 1938.

Within the near future the fleet patrol wing will number 18 squadrons of 216 multi-motored air boats.

CANADIAN AIRMAN PILOTS GIANT RESCUE AEROPLANE ON TO AKLAVIK

After a successful flight through exceptionally bad weather, the giant clipper machine, bought by the Soviet government to aid in the search for six airmen lost in the Arctic, arrived in Port Arthur from Toronto late yesterday. Leader of the expedition is Sir Hubert Wilkins (1), who said here yesterday he expects to find the lost airmen. Pilot of the flight into the far north will be Toronto's Herbert Hollick-Kenyon, who will be assisted by Flight-Engineer Jerry Brown and Pilot Russell Rogers (LEFT to RIGHT), all experienced fliers (2). The big Guba clipper (3) sailed down to Toronto bay yesterday afternoon after making a non-stop flight from New York. After picking up Al Cheeseman, veteran pilot of the north at Port Arthur, the ship was due to fly, non-stop, to Aklavik, from where the search proper will begin.

TORONTO TELEGRAM

Noted Flyers Of 3 Nations Seek Russians

8/21/37

Costly Planes Working From Rim of Arctic Ready for Epochal Rescue Dash

Fairbanks, Alaska, Aug. 21—Rescue planes of three nations moved toward the Arctic Circle in clearing weather to-day to search for six Russians who were lost eight days ago on a flight from Moscow to the United States.

Jimmy Mattern, U.S. 'round-the-world flyer, moved up to Point Barrow, Alaska, from Fairbanks where he was grounded five days by bad weather. Mattern is eager to repay the leader of the lost Russians, Levaneffsky, for rescuing him in Siberia four years ago.

The flying boat, carrying Sir Hubert Wilkins and five companions to the Arctic, left Fort Smith, N.W.T., to-day for the Arctic coast.

The Russian ice-breaker Krassin was reported to have reached Point Barrow, carrying two planes, 14 flyer, 78 tons of aviation furs and skis, dogs, sleds and warm clothing.

Bob Randall, flyer for Canada's MacKenzie Airways, was conducting a search in the vicinity of Aklavik, a settlement within the Arctic Circle. He carried a mechanic and an Eskimo for interpreter to question natives for news of the lost plane.

A Russian plane, piloted by Vasili Zadukov, arrived at Point Barrow from Siberia to join the search.

At Barrow to-day Mattern reported he found impossible landing conditions on a 400-mile flight over the Arctic Ocean. He landed near Barrow with empty gasoline tanks.

RESCUERS HOP OVER ARCTIC SEA TO AID SEARCH

TORONTO STAR 8/30/37

Arrive From Siberia as Hollick-Kenyon Speed North

ICEBREAKER ON JOB

Barrow, Alaska, Aug. 20.—A Russian hydroplane carrying four men arrived here during the night from northern Siberia to aid in the search for the lost Soviet transpolar fliers. The aeroplane, flown by Pilot Zadkoff, Navigator Padalko, and two companions, was refueled to-day and serviced to proceed eastward to Aklavik, N.W.T.

Bob Randall, Canadian flier, who came here from Aklavik earlier in the week, was still here. The Soviet ice-breaker Krassin, carrying four aeroplanes to be used in the search, lay off Barrow to-day.

Mistaken for Lost 'Plane

Edmonton, Alta., Aug. 20.—A Russian aeroplane, which landed at Point Barrow, Aslaka, at first believed that of Pilot Sigismund Levanevsky, and his five companions, was instead a search aeroplane dispatched by the Russian government to hunt the fliers, the Canadian Signal Corps reported to-day.

The government agency at first flashed the report from Aklavik, Northwest Territories, that the aeroplane was the one missing in the Arctic for the past week.

Wilkins To Land at 6 p.m.

Winnipeg, Aug. 20. — The flying boat piloted by Herbert Hollick-Kenyon and carrying Sir Hubert Wilkins and four other airmen to

RESCUERS HOP OVER ARCTIC SEA IN SEARCH

(Continued from Page One)

the Arctic in search of the missing Russian fliers, passed over the Manitoba-Saskatchewan border in the Lake Pukkatawagan area at 2.55 p.m. E.D.T. to-day, Canadian Airways Limited radio officials here reported.

Pukkatawagan Lake is on the Churchill river, north of the Flin Flon mining area.

Sir Hubert said earlier they were bucking a headwind and were flying through uncertain weather. The aeroplane is headed for Fort Smith, N.W.T., next stopping place on the flight to Aklavik, N.W.T., after taking off from Port Arthur at 9.30 a.m. E.D.T. Air Commodore Herbert Hollick-Kenyon, Toronto, former resident of Winnipeg, sent a message to friends at the airport here. "Hello. Best regards to the gang at the field there."

Headwinds had decreased and visibility was good, Sir Hubert said in his 2.55 message.

The fliers advised Canada Airways to have emergency radio equipment sent from Edmonton to Fort Smith.

It was estimated they were flying around 140 miles an hour and would take about nine hours to reach Fort Smith, arriving there possibly around 6.30 p.m. E.D.T.

Icebreaker Joins Search

Washington, Aug. 20—The U.S. war department announced to-day it had received advices that four Russian fliers landed at Point Barrow, Alaska, during the night on a flight from Siberia in search of the missing transpolar fliers. The report also said the Russian icebreaker Krassin had been sighted off Alaska, presumably participating in the search.

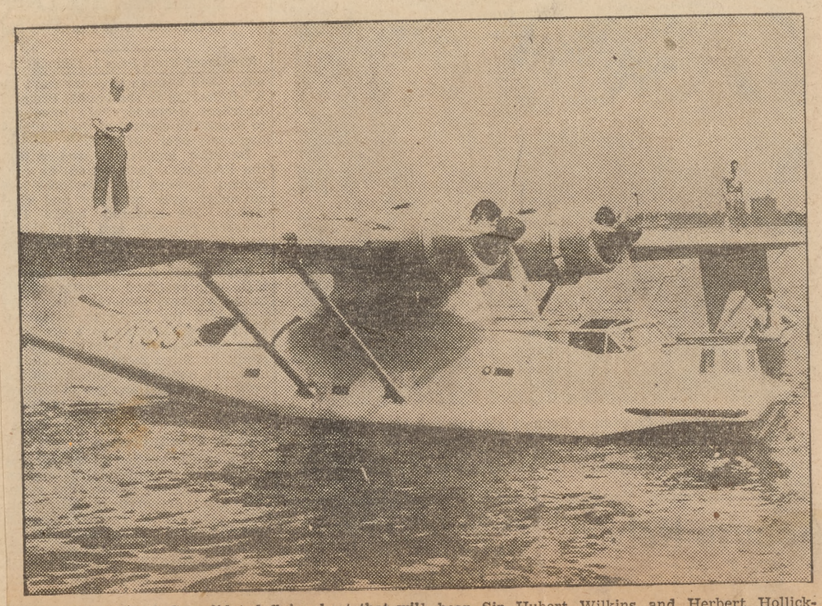
Giant Rescue Ship



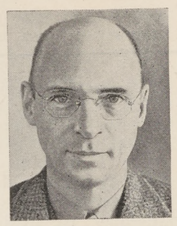
The $180,000 Consolidated flying boat that will bear Sir Hubert Wilkins and Herbert Hollick-Kenyon on their flight across the Arctic wastes in search of the Russian airman Levanevsky and his five companions is shown above as it lay moored in Toronto Harbor yesterday afternoon while it took on fuel. It landed at 3.30 o'clock after a fast hop from New York. Hollick-Kenyon may be seen standing on the left wing. His co-pilot stands on the other wing.—Staff Photo.

Western Flying aug—1937

Big men head big school

Robert E. Gross

John K. Northrop



C. A. Van Dusen

NEXT month a new $400,000 aviation training school, the Aero Industries Technical Institute, Inc., will open its doors for business in the Los Angeles area. This new training center, with headquarters in Glendale, is a project of Robert E. Gross, president, Lockheed Aircraft Corporation; John K. Northrop, president, The Northrop Corporation and C. A. Van Dusen, vice-president and works manager, The Consolidated Aircraft Corporation. These three men form the executive board of the institute. This board has been actively engaged during the last year in the planning, organizing and equipping of the school.

Assisting the work of the executive board, has been an advisory council consisting of D. L. Brown, president, United Aircraft Corporation; Donald W. Douglas, president, Douglas Aircraft Company; Major Reuben H. Fleet, president, The Consolidated Aircraft Corporation; Jack Frye, president, Transcontinental & Western Air Inc.; J. L. Kindelberger, president, North American Aviation, Inc.; J. E. Schaefer, president, The Stearman Aircraft Company; I. I. Sikorsky, president, Sikorsky Aircraft Division of United Aircraft Corporation and E. E. Wilson, president, Chance Vought Aircraft, Division of United Aircraft Corporation.

Courses have already been especially compiled for the institute by a staff of experts and the faculty is nearly complete. Four buildings are

CONSOLIDATED AIRCRAFT CORP. made delivery of a commercial version of their PBY-1 to Richard Archbold of the American Museum of Natural History who immediately proceeded to make a transcontinental dash in the sea-going plane—more about it in the News Review section of this issue. The Senate Claims Committee favorably reported the bill to pay Consolidated $92,-993 representing the increased cost to the manufacturer in fulfilling a government contract for airplanes after passage of the N.R.A.

Archbold's new flying boat

Ship to be used to explore jungles of New Guinea.

Richard Archbold of the American Museum of Natural History took delivery of a commercial version of the Consolidated PBY boat at the San Diego plant late in June. The plane is to be used for the continuation of exploratory work Archbold has already started in Papua, New Guinea.

It is understood that due to export limitations, the boat cannot leave this country until November and, in the meantime, will be thoroughly tested in this country. Tests will consist chiefly of landings and take-offs in lakes at high altitudes. In this respect, soon after Archbold obtained the plane, a test flight was made to Lake Tahoe, where the plane was landed and then flown-off the surface of the lake, the altitude of which is over 6,000 ft. Lakes in the vicinity of New Guinea to be explored by the expedition are found at elevations of nearly 12,000 feet.

After accepting the plane, the young explorer flew the plane non-stop across the continent to New York, establishing a record flight for water craft over land.

According to information received from Archbold while on the coast, he expects to fly the craft to New Guinea via the Pan American route as far as Guam and then drop south to Guinea.

CONSOLIDATED AIRCRAFT CORPORATION completed delivery of their Navy PBY-1 order for 110 PBY's late in June with the exception of a couple of planes that were held up due to the slow delivery of parts by outside manufacturers. The first plane of the PBY-2 order was completed and test flown during July — PBY-3 series will probably be ready for test in November. Three P2Y-3A boats were loaded on a steamer headed for Bahia Blanca, Puerto Belgrano in Argentina during July. The remaining three boats included in the order will be shipped the middle of August.

Tony LaVere has been chosen to fly a miniature racer built by a group of employees at the Consolidated Aircraft plant in San Diego.

Powered by the English Pobjoy engine, the plane will fall in the 200 cu. in. class. It is reported to have a speed of about 210 m.p.h.

'FULL SPEED AHEAD,' SIGNAL AS PLANE ORDERS FILLED

S. D. Sun 8/21/37

Consolidated Aircraft Launches Seaplane Bomber; Work Near Completion On 66 Airboats

The "full speed ahead" signal was given at Consolidated Aircraft Corp. today as prodution, on a large-quantity basis, began on the Navy contract for 50 PBY-2 type patrol bombers.

First in the order was launched from the municipal seaplane ramp yesterday and ferried to North Island, where the craft joined Patrol Squadron 11.

This plane was given intensive tests before a Navy trial board two months ago, and was returned to the factory for the installation of certain innovations suggested by aviation officials.

These have since been placed on the bomber, which was accepted by the trial board in recent tests.

Consolidated workmen are completing the first plane in the PBY-3 contract for 66 airboats. This craft will be ready for Navy inspection within the coming month, it was estimated by Consolidated officials today.

Meanwhile, no further developments are reported on the San Diego aircraft concern's efforts to obtain a contract for approximately 60 PBY-4 planes, a more advanced type of flying boat than any now in use by the Navy.

The Bureau of Aeronautics recently announced that all bids for the PBY-4 job, including that of Consolidated, were too high.

War Plans Rushed

PREPARATION for war is costing America's taxpayers a pretty penny and netting the manufacturers of war equipment a tidy profit.

Whom America is going to fight is uncertain. That she is going to fight seems certain, otherwise the millions being spent for bombing planes and other paraphernalia of war seems a sheer waste.

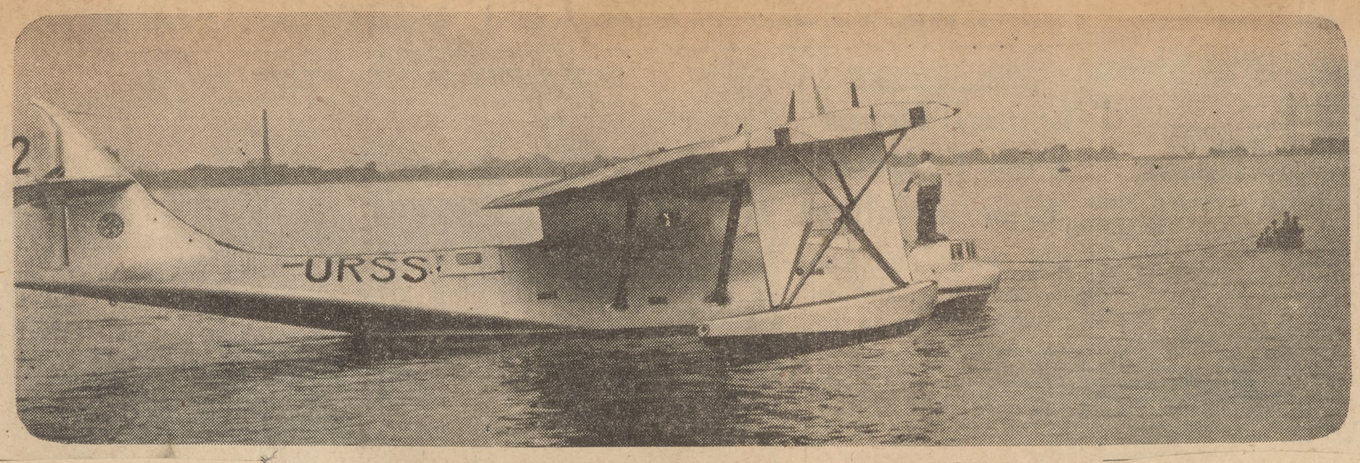
Prominent in the list of those who are being treated handsomely by Uncle Sam is our own Consolidated Aircraft corporation, the concern which our Chamber of Commerce wangled away from Buffalo, N. Y., and which, so it is said, is so opposed to the unionization of its employees.

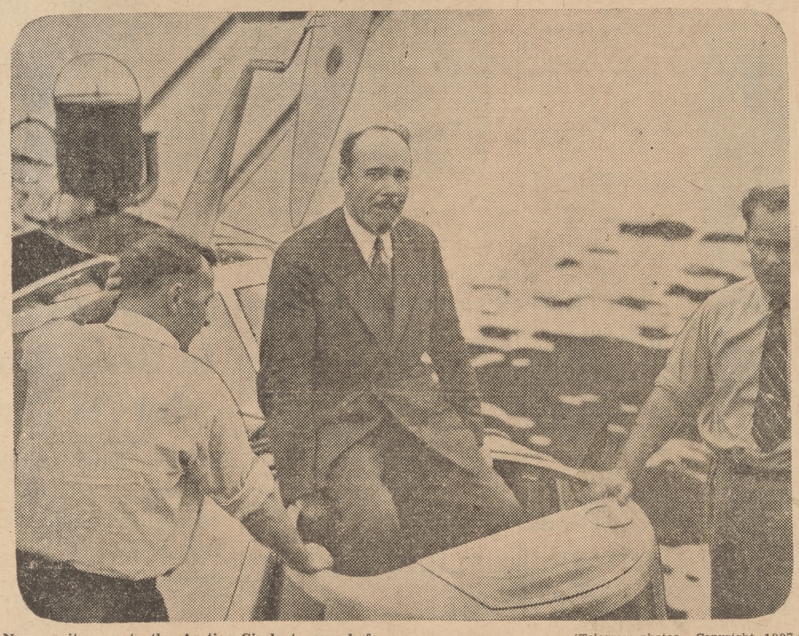
According to "Economic Notes," published by the Labor Research association, 80 east Eleventh Street, New York, Consolidated made a net profit of more than $322,731 last year. In December it had unfilled orders for $19,000,000 worth of planes as against $8,983,259 last March which indicates business is going up. This includes a Navy order for 66 bombers on top of a $4,898,000 navy order received last July.

The combined net profits of the eight principal aircraft manufacturers in 1936 are estimated in Wall Street at $8,000,000 for 1936 as compared with $3,013,000 for 1935. Still larger profits are expected for 1937. Boeing, Stearman, Curtis-Wright, Douglas and United in addition to Consolidated are included in the eight concerns reaping a harvest.

Another sign pointing toward war is the increase in the amount of copper being used. The Wall Street Journal predicts that world consumption of copper in 1937 will exceed the previous high record of 2,076,000 tons in 1929.

ARCTIC SEARCH PLANE ON TORONTO VISIT





Now on its way to the Arctice Circle to search for the six Russian flyers missing since last Friday, the huge flying boat pictured above stopped in Toronto air harbor for refuelling Thursday and proceeded to Port Arthur to pick up Co-Pilot Al Cheesman. Of all the boats available, the little outboard craft with four children aboard, shown at the right, was chosen to tow the big plane to its starting point. In the lower picture are, left to right, Radio Operator R. E. Booth, Sir Hubert Wilkins, noted polar explorer who is making the search for the Russian Government, and R. R. Rogers, who was co-pilot as far as Port Arthur.

—(Telegram photos. Copyright, 1937.)

Huge Plane Starts North To Seek Russian Flyers

Expedition Expects To Make Non-Stop Flight From Port Arthur to Fort Smith

By PERCY T. COLE
Telegram Aviation Editor

Some time to-night the still tundra up around Aklavik will echo to the thunder of two powerful Wasp engines, and a huge flying boat will glide into the west channel of the Mackenzie River for a smooth landing. That landing will mark the end of a flight from Port Arthur to within the Arctic Circle—a mater of some 2,500 miles.

Torontonians, hundreds of them, got a glimpse of the big Continental flying boat as it rested on the waters of Toronto Bay yesterday afternoon. It was here for only an hour and a half, stopping to take on a load of gasoline before setting out for Port Arthur, where another Canadian Arctic veteran was picked up. That man, Al Cheesman, who flew through the Arctic in 1930 with Sir Hubert Wilkins, will be co-pilot for Herbert Hollick-Kenyon, chief pilot on the expedition. With Sir Hubert Wilkins and a crew of two others, R. E. Booth, radio operator, and Jerry Brown, mechanic, the avowed intention is to find six Russian aviators who have been missing since last Friday, one week ago to-day, on a projected flight from Moscow to somewhere in the United States.

The flying boat, which is about half the size of the Imperial Airways Caledonia and Cambria, trans-Atlantic planes, was purchased by the Soviet Government from Richard Archbold, of the American Museum of Natural History. It was to have gone to New Guinea within a month on a scientific expedition, but another machine will now make this latter trip about the first of November.

"AL" CHEESMAN

A PEEK INSIDE

As it was being refueled, a Telegram reporter was permitted aboard. Through the hatch at the front, where are stored the anchor and anchor cables, one steps under a low arch into the pilot room. There, on raised platforms, and side by side, are the pilot's and co-pilot's seats. Scores of instruments dot the board, the floor and the sides of this compartment, each one with its own definite purpose, and each one telling the experienced flyer some message. The pilots sit ahead of the huge Wasp engines, which are set in the wings over their heads and to the rear in streamlined nascelles, and visibility, both front and rear, is excellent, much more so than in the ordinary flying boat. The answer there, apparently, is that this type of flying boat was built primarily as a military machine, with heavy guns to be placed in turrets fore and aft, able to fire in any direction.

Immediately aft of the pilot's control room is the radio operator's quarters. Here R. E. Booth, who will be going on the New Guinea expedition as soon as he returns from the Arctic, will sit at his transmitter and keep in constant touch with both the Department of National Defense radio stations throughout the country, Canadian Airways stations, and the Skylines Express station here in Toronto. There are three radio-sending sets aboard, one a 100-watt C-W transmitter, another a 20-watt telephone transmitter, and the third a small emergency set that looks like a suitcase when it is all packed up. Radio messages can be sent and received whether the plane is in the air or on the water, it doesn't matter which.

PLENTY OF ROOM

The second and third compartments have bunks in which four men sleep with plenty of room, and into which six could sleep quite comfortably. At the moment these compartments are piled high with luggage—cans of oil and gasoline, sleeping bags, flares, gasoline strainers, life preservers—even a case of a well known soft drink.

In compartment No. 4 is a collapsible boat, guns and gun racks and ammunition. And over in one corner is a wash basin, with running water, of all things. So far, we were informed, there has been no provision made to keep that water running when the mercy flyers get up into the Arctic, where even in summer the nights get pretty cold.

Back in the fifth compartment, and also in the extreme end of the tail, there is space for luggage, but all this one contained yesterday were a few flares. That just about takes care of the inside of the big boat. Now let us take a look at her personnel for this epic flight.

Heading the expedition, of course, is Sir Hubert Wilkins, the man who has made several Arctic and Antarctic expeditions, several by air, and who still cherishes the idea of travelling to the North Pole by submarine. That idea hasn't been in the news much lately, but it popped up again yesterday while he conversed with newsmen on the refueling barge. "Next year I'm quite sure I shall make a trip by submarine," he stated. But to this observer, it seemed that there was a distinctly humorous twinkle in his eye when he said it.

ANXIOUS TO START

How long it would take to find the missing Russians he couldn't say, and he wouldn't guess. As a matter of fact, he was more interested in getting away than in talking about what he was going to do. Handed a telegram from a big news service in the United States which offered him $500 for his exclusive stories even if the flight was not successful, and a thousand dollars if they were found, he regretfully explained that as he was working for the Soviet Government he could not do any writing. Then, taking a quick look at the part where the thousand dollars was offered, he remarked sadly, "My, my, this is most distressing!"

But the success of the rescue expedition will depend for the most part on Herbert Hollick-Kenyon, operations manager of Skylines Express of Toronto, who is chief pilot on this flight. His record is well known. He has flown the Arctic as a commercial operator. He found Col. C. D. MacAlpine when he and his party were lost in the Far North. He found Andy Taylor, a prospector lost for 45 days in Northern Ontario. His record of flying achievements has no parallel in this country, where great flyers are not a rarity. A better man could not have been chosen, Canadian flyers agree with one voice.

ALL EXPERIENCED MEN

S. Alward Cheesman, of Port Arthur, is no stranger to Sir Hubert Wilkins, for it was in 1930 that he flew Sir Hubert into the Arctic. He has been flying all through Northern Canada ever since. Jerry Brown, the mechanic, and R. E. Booth, the radio operator, who will stay with the plane until it returns, were members of the crew who were to go to New Guinea on a scientific expedition for the American Museum of Natural History. They'll both be going to New Guinea when they get back from the Arctic Ocean.

On the trip from New York to Toronto to the North, Russell Rogers, pilot for the scientific expedition, is assisting Hollick-Kenyon and Cheesman while they become familiar with its operation. On reaching Aklavik, Rogers will fly back to civilization and thence to New York, where another plane similar to the mercy plane is being prepared for the New Guinea expedition.

One of the questions asked by many of the thousands who lined the dock, the seawall and all the higher Toronto downtown buildings was, "What do the letter U R S S, painted on the sides, mean?" We were curious, too, thinking it should have read U S S R—Union of Soviet Socialist Republic—but it wasn't just a mistake of some Yankee sign painter. The Soviets don't call their county Union of Soviet Socialist Republic, as we do here and in the U.S.A. They call it Union Republic Socialist Soviet, so the U R S S letters on the plane are all right.

S. D. RACING PILOT CRASHES

S. D. Sun 8/31/37

Anthony Levier Escapes Death In East

By United Press

CLEVELAND, Aug. 31. — Anthony Levier of San Diego, here for the National Air Races starting Friday, escaped injury today when his plane, the smallest expected to enter, cracked up in a test flight at Cleveland airport.

Levier was "test hopping" the ship for the first time since having the wing area reduced by 10 square feet to increase its speed. The plane weighs 410 pounds, measures 12 feet from wing-tip to wing-tip.

Its wheels had just left the ground when Levier discovered the right aileron was not functioning properly. The right wing dipped and Levier gunned the motor. It stalled and the ship fell.

Levier climbed out. One wing of the ship was torn off, the propellor was smashed, undercarriage and fuselage damaged.

Levier said he doubted he could get the ship repaired in time for the Thompson and Greve trophy races.

Plane Built By Six Consair Workers

The tiny San Diego plane which cracked up in preparing for the Cleveland National Air Races today was built here last fall by six young Consolidated Aircraft workers.

It was designed by C. C. Flagg and built in a vacant garage in Mission Hills by young McClure, Lionel Machado, Herbert Jewel, Joe McCannon and Joe Sturgess.

Tested first on Camp Kearny Mesa early this year, the midget ship recently created great interest on display in a downtown store window.

SAN DIEGO RACE FLIER CRASHES

(Continued from Page 1)

S. D. FLIER UNHURT IN OHIO ACCIDENT

S. D. Union 9/1/37

Anthony Le Vier of San Diego, flying a miniature "Popjoy Special" plane, crashed from a height of 25 feet yesterday at Cleveland airport, The Associated Press reports. Built here, the plane was taken east for the national air races. The craft was wrecked, but Le Vier escaped injury.

Maj. John Berry, airport superintendent, said La Vier was testing the 410-pound racer after reducing its wing area by 10 square feet to increase its speed. The ship's wing spread was only 12 feet. Berry said the plane would not participate in the races which open Friday.

To Be Replaced

The Flying Newsroom Is Destroyed by Fire At Base in Toronto

Chance Spark Sets Gasoline Ablaze During Refuelling Operations on The Globe and Mail's Aeroplane

NO ONE IS INJURED

Purchased less than four months ago, The Globe and Mail's "Flying Newsroom" was a blackened mass of twisted framework Saturday night after a spark ignited 120 gallons of gasoline while the ship was being refuelled at the Air Harbor base.

Twenty minutes after the first puff of flame shot through the gas tank intake, blowing Don Murray, plane engineer, into the water, the twin-motor de Havilland Dragon Rapide was nothing but a skeleton of struts and stays hanging grotesquely to the undamaged pontoons.

Murray was on the cabin of the plane feeding gas into the tank when spectators on shore heard the first faint explosion and saw the sheet of flame shoot through the intake. Apparently dazed by the flames, Murray fell into the water and swam ashore. He was unhurt.

Will Replace Ship.

Looking at the wreckage of the first news-gathering airplane purchased by a newspaper in Canada, C. George McCullagh, Publisher of The Globe and Mail, announced the machine would be replaced immediately.

Unable to find fire extinguishers on the dock, to which The Flying Newsroom was moored, Pilot Crang spent several valuable minutes securing one from another plane.

By this time the flames were eating at the twin motors. The gay orange-colored exterior of the machine was turning grey and black. Three extinguishers were finally located, but had no effect on the gasoline-fed flames.

Aware of the danger to the hundreds watching the spectacular sight from shore if the gas exploded, Pilot Crang tied a long line to the fiercely blazing airplane and let it drift forty feet from shore.

Firemen under Deputy Chief Duncan McLean towed the white-hot mass of metal back into the dock when they arrived.

Spectators fortunate enough to be out of range of the fire hoses

"FLYING NEWSROOM."
(Continued on Page 3, Column 8.)

"Flying Newsroom" Destroyed by Fire

Canada's only news-gathering airplane went up in smoke Saturday night at the air harbor when a spark ignited 120 gallons of gasoline while the ship was being refuelled. When the top picture was taken, the flames had eaten through all the fabric and the gleaming orange-colored cabin. Smoke can be seen pouring from one of the twin motors. Below is a picture taken several weeks ago, showing the same machine and a group of newsboys. An hour before the disaster the machine was soaring over downtown Toronto. C. George McCullagh, Publisher of The Globe and Mail, announced the machine would be replaced.

'FLYING NEWSROOM' IS PREY TO FLAMES

(Continued From Page 1, Column 3.)

had quite a laugh when the men handling one line tripped over heavy guy ropes, lost control of one twisting pipe line, which bowled over several and drenched a dozen.

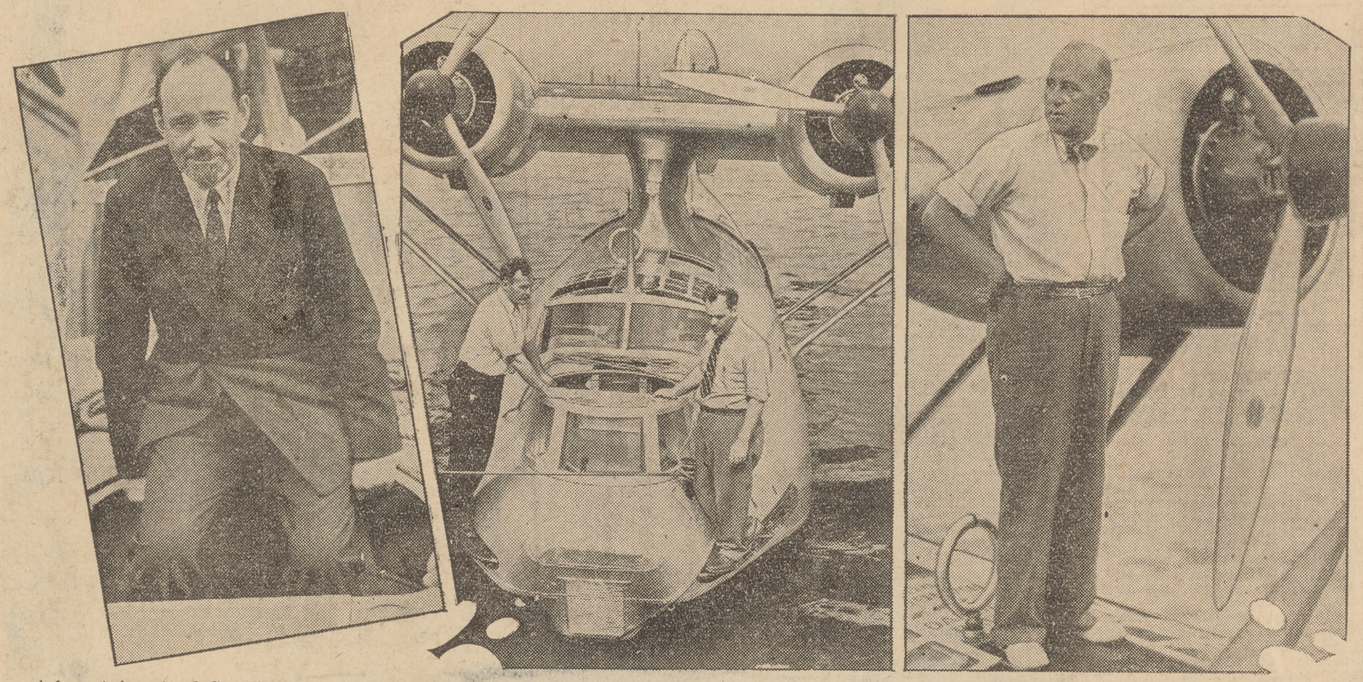
Deputy Chief McLean and Pilot Crang were inclined to believe that a static spark was responsible for the blaze. The deputy explained a static was created between the hose nozzle and the steel gas tank by agitation from the rushing gasoline.

An hour before the fire, the plane taxied across the Bay after an extensive trip through the mining areas of Northern Ontario. The ship was being checked for a similar trip scheduled to start yesterday morning, when she went up in smoke.

Lost with the machine were a complete medical unit, a silver typewriter and a camping outfit. Complete, the loss was estimated at close to $25,000.

ARCTIC RESCUE PLANE SOARS FROM TORONTO

Off on Arctic Search for Fliers



A huge twin-motored Consolidated flying boat skimmed to a landing on Toronto Bay yesterday afternoon bearing Sir Hubert Wilkins and Herbert Hollick-Kenyon on their quest for the Russian flier Levanevsky and five companions, lost for several days in the ice fields north of the Arctic Circle. The big boat refueled at Toronto after a hop from New York. It will take off again from Port Arthur today, where it will pause to pick up Al Cheesman, another veteran North Country pilot.

Shown above, at left, is Sir Hubert Wilkins as he emerged from the cockpit of the big machine. In the centre is a view of the craft, with Ray A. Booth, wireless operator (left), and R. R. Rodgers, co-pilot, who accompanied the expedition as far as Port Arthur. At right is Hollick-Kenyon, veteran Arctic flier, who left Toronto for New York three days ago to take over the controls of the plane on its northward journey.—Staff Photos.

WILKINS FLIES WITH CANADIAN AVIATION ACE

Hollick-Kenyon Pilots Ship in Search for Russian Airmen

FLYING-BOAT REFUELS

Sir Hubert, Famed Northern Explorer, Confident Fliers Alive

(By BRUCE WEST.)
(Staff Writer, The Globe and Mail.)

A stocky, bronzed man shoved his head up through the rear cockpit opening in the sleek and shiny hull of a giant flying boat moored in Toronto Bay yesterday afternoon and tooted a small brass fog horn.

"Hey! Wilk!", he shouted with a grin. "How about it?"

Herbert Hollick-Kenyon, veteran Canadian flier, leaned against the edge of the cockpit and waited. "Wilk," who happened to be Sir Hubert Wilkins, hero of a score of adventures in the cold wastes of the Arctic and elsewhere, scooped up a handful of maps from the running-board of an oil truck parked on the refueling barge and crawled down deep into the belly of the gently rocking sky giant with a wave of his hand.

Thus commenced an adventure to stir the pulse of any man.

Flies Into Storm.

Bound for somewhere north of the Arctic Circle in search of the Russian airman Levaneffsky and his five companions, the big boat bounced down the bay and rose into the air, her two 1,000 horsepower motors roaring a throaty song of power, her nose pointed toward the swiftly scudding storm clouds on the western horizon.

The flying boat skimmed to a landing on the bay at approximately 3.30 o'clock on her first stop since leaving New York shortly after noon. Emblazoned in black on the under-surfaces of her wings and along the fuselage were the letters "U.R.S.S.", signifying that she was the property of the Soviet Russian Government. She was purchased from Richard Archibald, United States millionaire and a director of the American Museum of Natural History, especially for the search.

Representing an investment of $180,000, the machine was 90 feet long and had a wing spread of 104 feet. In her interior were bunks and stoves and wireless equipment.

Thinks Aviators Live.

"I have not much doubt but what Levaneffsky and his crew are still alive," said Sir Hubert as he stood watching the gasolene tanks of the machine swallow nearly 500 gallons of fuel, bringing them to their capacity of 2,000 gallons. "They may be no more lost than I was on one occasion up there. It took me three weeks to reach help, but I wasn't lost by a long shot."

Admitting that it was the worst time of the year for Arctic flying and that this fact might hamper rescue operations, Sir Hubert remarked that there was plenty of game in the country where the Russians are supposedly down.

"You must remember," he said, "that these Russians are not only skilled fliers, but skilled Arctic men as well. They have plenty of equipment to keep them alive for months."

Polar bears and seals, he said, were abundant in the region, and the Russians carried rifles and ammunition on their flight.

To Pick up Cheeseman.

Sir Hubert said that the search would centre in a section lying roughly 900 miles north of Aklavik, where the fliers are believed to be located. Rescuers base this belief on the reception of weak wireless signals.

"It has been established beyond much doubt," said Sir Hubert, "that the signals have been coming from the missing fliers."

At Port Arthur, the party will pick up Al Cheeseman, another veteran North-country pilot. Accompanying the plane to Port Arthur as a co-pilot for Hollick-Kenyon was R. R. Rodgers, who will return to the United States as soon as Cheeseman joins the expedition. The ship also carries Ray A. Booth, wireless operator, and Jerry Brown, mechanic.

(Melbourne, Australia)

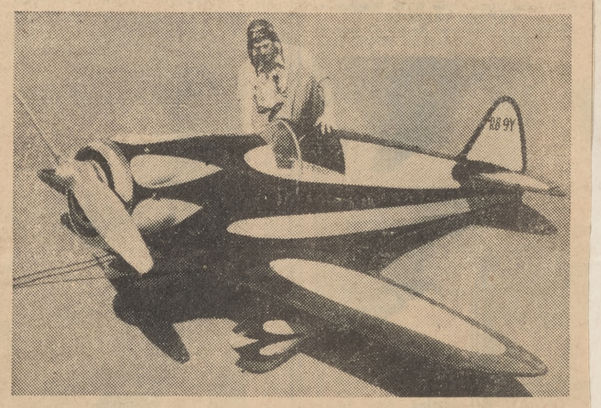
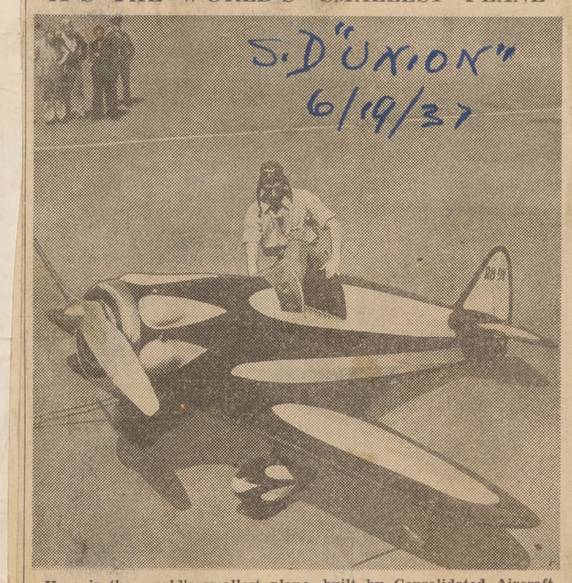
Smallest Plane In The World



THE SMALLEST PLANE IN THE WORLD photographed during preliminary tests with its pilot and co-constructor, Tony Levier. The little machine was built by five young members of the Consolidated Aircraft Company at San Diego, California, in their spare time. They will enter it in the National Air Races at Cleveland this year. It is powered with a 90 horse-power Pobjoy motor, weighs only 404 lb., and is capable of 225 miles an hour. It is 12ft. long, has a wing spread of 14ft. and a range of 525 miles.

IT'S THE WORLD'S SMALLEST PLANE

S.D. "UNION" 6/19/37



Here is the world's smallest plane, built by Consolidated Aircraft Corp. employes, which will be towed across the country in a trailer to Cleveland for participation in the National Air races. The plane weighs 408 pounds, has a wing spread of 14 feet, is 12 feet long, carries 12 gallons of gas and two gallons of oil, and can fly 225 miles an hour. Tony Levier piloted it on a trial flight recently for the benefit of newsreel cameramen.

San Diego News

Among San Diego's Business Leaders

MAJ. E. N. GOTT

assistant to the president of Consolidated Aircraft Corp., and a veteran aircraft executive, who now serves as liason officer in the San Diego plane company, as well as handling other duties.

Since 1915 Maj. Gott, one-time Army officer, has been identified with the aviation industry. He formerly was president of the Boeing Airplane Co., of Seattle, and former president of the old Keystone Aircraft Corp. of Bristol, Pa., and more recently served as liason officer in Washington, D.C., where he was the personal representative of Maj. Reuben H. Fleet, president of Consolidated.

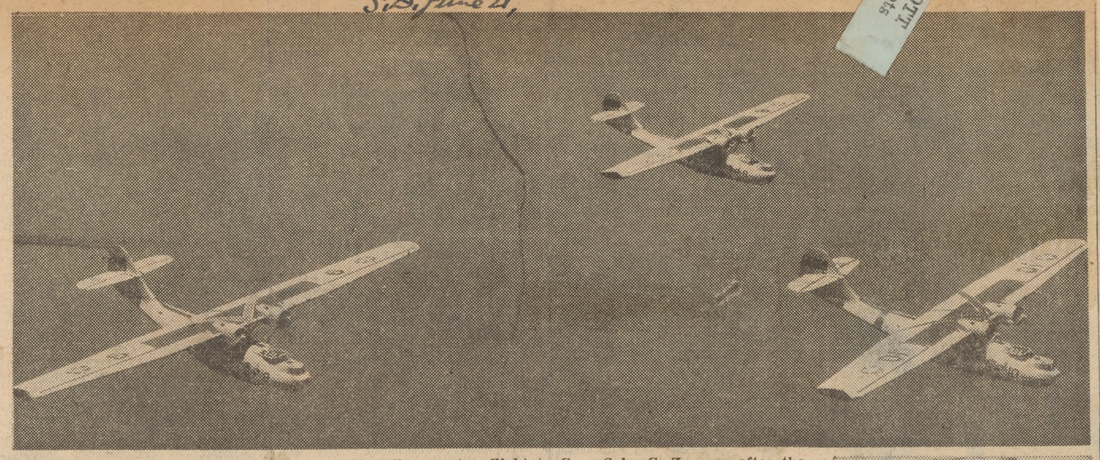
His service for Maj. Fleet was so well liked that the latter engaged him last year to be his full-time representative. It is no small job, either. His knowledge of aircraft construction and operation, and the management of factories, is so extensive that he capably assists Maj. Fleet in directing this organization which is second largest in the country.

He also serves as liason and public relations officer, arranging contacts of the press and similar duties.

One-third of the Indian Empire consists of 708 states of varying size and character, governed by separate Indian princes.

BOUND FOR COCO SOLO ON NON-STOP FLIGHT

S.D. June 21,



Three of the twelve navy patrol planes on 3000-mile non-stop flight to Coco Solo, C. Z., soon after the take-off from San Diego bay yesterday.

1265 MILES OUT, S.D. PLANES RADIO ON HOP TO CANAL

Squadron Due to Land at Noon; Speed Increasing as Gas Used; Weather Ideal.

Twelve giant navy two-motored patrol planes winged their way south under a tropical moon last night on a 3000-mile non-stop flight to Coco Solo C. Z., and reported their position at 11 o'clock (P.S.T.) as 1265 nautical miles south of San Diego.

A 10-knot headwind held the speed of the 104-foot wingspread planes to 102 knots (117.3 statute miles).

Weather conditions were ideal. A silver moon shone on the hulls of the great gray geese, performing the navy's greatest non-stop mass flight with military precision.

For most of the 12 hours after squadron VP-3F left San Diego soon before noon yesterday, the V formation was flown at an altitude of between 9000 and 10,000 feet.

Speed was increasing as the motors ate up the 1700 gallons of gas in each plane.

Those 1700 gallons weighed heavy and the tremendous hulls lay deep in the water after leaving the Naval Air station ramp. The planes are

(Continued on Page 2, Col. 2)

1265 MILES OUT, S.D. PLANES RADIO ON HOP TO CANAL

S.D. June 21

(Continued from Page 1)

numbered from 3-P-1 to 3-P-12.

With Lt. Robert W. Morse, squadron commander, at the controls, plane 1 went into the water at 11:10. Plane 12 was in the water 16 and one-half minutes later.

Morse in Command

Turning its nose south down the bay, cleared by navy motor launches flaunting red warning flags, Plane 1 roared into the air at 11:20. The other planes followed in precise parade and Plane 12 soared into the air at 11:45. Take-off speed was estimated at 70 knots because of the heavy load and lack of headwind.

Gaining altitude swiftly, Plane 1 slowed to five knots less than the standard speed for the other 11 planes. A V-formation was completed 90 miles south of San Diego.

The planes, carrying 13 officers, four aviation cadets, an observer from the Consolidated Aircraft Corp. and 67 enlisted men, roared southward. The squadron followed the steamer lane down the coast of Mexico. Early today the planes planned to roar across a string of lakes and jungles in Nicaragua to the Atlantic coast, then down the coast of Nicaragua and Panama to Coco Solo.

Passes Tender

Soon after 7 last night the squadron roared high above the Lapwing, seaplane tender, 875 miles south of San Diego. Early today the planes were expected to pass over the Sandpiper, tender standing by 1630 miles south of the Lapwing.

One of the officers aboard is Comdr. E. L. Gunther, formerly in command of the U. S. S. Wright, base force aircraft tender. He is being transferred to command of base force aircraft squadrons at Coco Solo.

Reporting every two hours by radio to the Naval Air station, the squadron was expected to land at Coco Solo about noon today, completing the flight in about 24 hours.

Positions Listed

The radioed positions report follows:

1 p. m., 140 nautical miles south of San Diego at Pt. San Quentin,

Lt. Robert W. Morse, who is commanding squadron VP-3F on its historic flight.

LIPSTICKS RARE

Nude Bathing Now Frowned On In Russia, Webb Miller Finds; Consair Men Still On Job

Uncensored!

This is the fourth of six dispatches by Webb Miller, European News Manager of the United Press, on Russia as it is today.—The Editor.

By WEBB MILLER
United Press Staff Correspondent
(Copyright, 1937, by United Press)

MOSCOW, via London (uncensored), Sept. 2.—Never in the 20 years' history of the Bolshevik regime has there been such a bitter and determined drive against foreigners living in the Soviet Union as during the present purge.

The campaign, ostensibly based on the spy mania, is directed primarily against citizens of countries which are overtly hostile to the Soviets, particularly Germans and Japanese, but appears generally to be aimed at clearing the country of all foreigners except legitimate tourists, diplomatic missions, newspaper correspondents, and a few specialists. Residence permits of some of the foreign correspondents are issued for only three months at a time.

WEBB MILLER

Of the hundreds of foreign engineers who aided in the industrialization of the country, only a few remain. Most of them who have worked here for years are being sent away as fast as their contracts expire. Only a handful of American specialists remain, including those who are installing aircraft factories and advising on

television and radio work, notably representatives of the Vultee and Consolidated Aircraft companies and the Radio Corporation of America.

The few remaining British residents, except diplomats and correspondents, are under instructions to leave.

LARGEST NAVAL AIR CRUISER BEING BUILT AT SAN DIEGO

9/6/37 L.A. Times

A giant air cruiser, which will dwarf into virtual obsolescence all existing military flying boats, is being secretly rushed to completion for the Navy at the San Diego plant of the Consolidated Aircraft Corporation.

Although fleet officials decline to discuss the monster patrol and bombing plane, it is reliably reported that its four twin-row radial engines will deliver a total of 5200 horsepower and that the craft will possess a cruising radius of 5000 miles.

RESEMBLES CLIPPERS

In contour it is said to resemble Pan American Airways' Martin Clippers, although nearly 20 per cent larger than these twenty-six-ton trans-Pacific commercial giants.

Like the Sikorsky "XPBS-1," it is an all-metal high-wing monoplane with an entirely new type boat hull expected to possess such inherent strength that it can either land or take off rough water or remain on the surface under most adverse weather stress.

FACILITIES TOLD

In addition to bow, rear and center machine-gun turrets, it will possess both comfortable living quarters and full cooking and messing facilities for a crew of from ten to fourteen.

If tests of the large flying boat are successful it is expected that several score others will be built to supplement the Navy's fast-growing long-range patrol wing. The Consolidated factory is now at work on the last sixty of 176 two-motored "PBY" flying boats for the Navy's oceanic patrol fleet.

BARGAINING DATE WITH GROUP SET BY CONSOLIDATED

3-26-37

Bulletin board notices that a collective bargaining meeting of executives of the company and representatives of Consolidators' association has been set for Tuesday afternoon at 3, were posted in the Consolidated Aircraft Corp. plant here last night, C. A. Van Dusen, vice president, announced.

"As a result of a request from the Consolidators' association to meet with their representatives, this company has arranged for a meeting and invites representatives of organized groups of our employes to attend under certain conditions," the announcement stated.

At recent hearings before a regional labor board examiner, members of Aircraft Local 1125, International Association of Machinists, charged that the Consolidators comprised "a company union." A finding of the labor board is now pending.

"We announced at the close of hearings in Los Angeles that we were ready to meet with any groups of our employes," said Van Dusen. "We have not taken the initiative in setting this meeting, but are merely complying with a written request by officers of the Consolidators. We thought it only fair that any other organizations be allowed to send delegates."

The conditions imposed in the announcement were that representatives should appear in the plant lobby before 3 on the afternoon of the meeting, should carry a notarized statement of proper selection and membership strength of their organizations, copies of which were ordered forwarded to company officials in advance of the meeting.

FOG SLOWS HUNT FOR RUSS FLIERS AS WILKINS HOPS TO 84 DEGREES

S. D. Union 8/9/37

Search Takes Aviators 1000 Miles North of Barter Island; Ocean Ice to Make Flying Boat Useless Soon.

NEW YORK, Sept. 8 (A.P.)—The Explorers' club announced tonight the completion of the most widespread flight Sir Hubert Wilkins has yet made for the six missing Russian transpolar fliers in the ice wastes of the Arctic ocean.

Details of the flight by Wilkins and his crew of four by flying boat were sent by him directly to the club via Royal Canadian Signal corps and revealed that they flew more than 1000 north of Barter island, which lies off the Alaskan coast about 80 miles west of the Alaska-Canada boundary.

The last message from Wilkins said he arrived at Aklavik, Northwest Territories, at 13:30 Greenwich mean time (8:30 a.m. E.S.T.). He had flown as far north as 84 degrees 45 minutes on the 148th meridian west and then eastward from that point to the 142nd meridian.

The Russians were last heard from on Friday, Aug. 13, at 88 degrees north latitude, flying southward on the 148th meridian. At that place, where they reported failure of an engine, they were 200 miles north of the area covered by Wilkins. His next search, which will be his fifth, is expected to take him to that place.

Wilkins described in detail the

(Continued on Page 2, Col. 5)

WILKINS SKIRTS POLE IN SEARCH

(Continued from Page One)

criss-cross movements of the searching plane and finally reported, before turning back to Aklavik:

"The haze was so thick we decided we had done about all that can be done today. We spent about six hours north of 82 north latitude, which means we flew about 750 miles back and forth over an area 175 miles north to south and 100 miles east to west. Some of this area was covered with small patches of fog but visibility was generally good."

CONSAIR WINS $750,000 JOB FROM RUSSIA

Contract For Tools To Make Flying Boats Aids Employment

S.D. Sun 9/9/37

A $750,000 contract for the manufacture of one set of special tools to be used in the mass production of flying boats by the Soviet government has been granted to Consolidated Aircraft Corp., it was announced today.

The contract will enable the San Diego concern to keep in its employ a large number of mechanics who otherwise would have been laid off, according to Consolidated officials.

Like U. S. Navy Ships

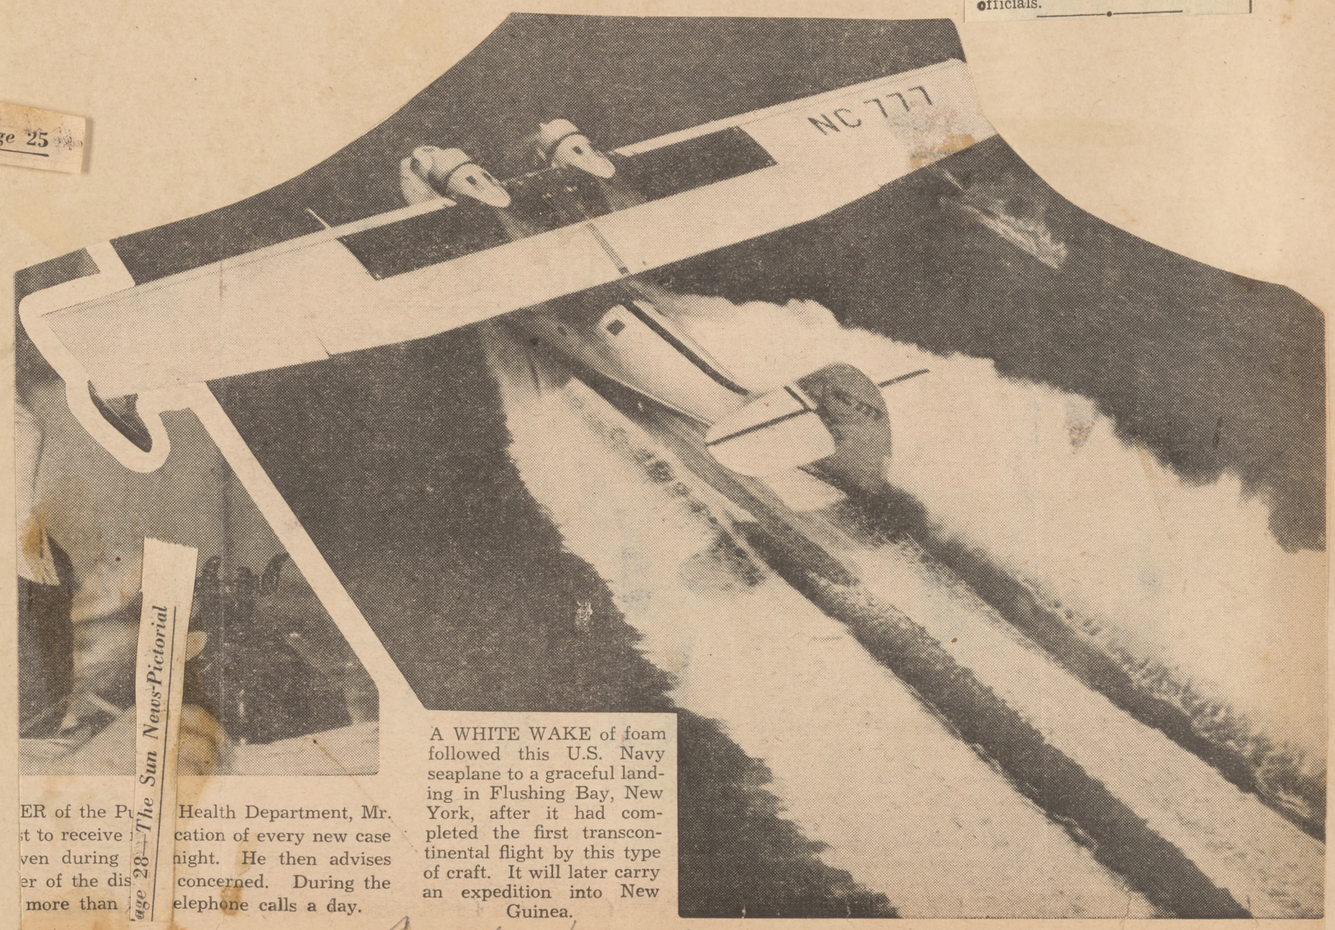
The tools will be used in the manufacturer of planes similar to the PBY-1 type airboat, of which 60 have already been delivered to the United States Navy.

A group of 11 Consolidated engineers have been consulting with Russian aeronautical officials at a huge factory near the Sea of Azov in the Soviet Union, in preparation for large quantity production of the airboats.

Reds Buy Planes

Nearing completion at the Consolidated plant is a PBY-1 plane and parts for a second flying boat to be delivered, by ship, to Russia, late this fall, it was reported today. Navy restrictions forbid export of the plane and parts until after November 1, which will be one year after the first PBY bomber was delivered to the North Island.

The Russian government expects to use the completed airboat as an "example" on which to base its mass production of similar craft for commercial use. Possibility that the Soviet Union will utilize these planes for military purposes is denied by Consolidated officials.



A WHITE WAKE of foam followed this U.S. Navy seaplane to a graceful landing in Flushing Bay, New York, after it had completed the first transcontinental flight by this type of craft. It will later carry an expedition into New Guinea.

AUG- 15, 1937

THE FLIGHT OF THE GUBA

BY LIEUT. COMDR. L. R. GRAY, RET.

MY participation in the non-stop flight of Richard Archbold's private flying boat *Guba*, a 34,000-pound Navy PBY-1 type ship, from San Diego to New York June 24-25 was assured only two days previous to take-off. I was not totally unprepared, however, inasmuch as I had been collaborating with Mr. Archbold in navigational preparations for his coming trans-Pacific flight to New Guinea in December or January.

The transcontinental flight of the *Guba* was in the nature of a long range test hop. Plans called for a departure on Saturday, June 26, at 4:30 p.m. Sectional maps of the entire United States had been assembled, and a study of proposed routes was made. I suggested that the flight to New York be made by two legs, first to Canal Zone, thence to New York, both legs being within the ship's flying range. The *Guba* is practically a sister ship of the Navy flying boats which only the week before had made a non-stop mass flight from San Diego to Panama.

My proposal for a flight via Panama was declared impossible inasmuch as the State Department would not permit the ship to leave the United States until the end of the year for military reasons.

Other proposed routes were as follows: (1) a flight over the northern states where water areas are more frequently found, which would, of course, give most favorable landing conditions in case of necessity; (2) a flight following the southern limits of the United States and along the Gulf of Mexico to Pensacola and thence north; (3) a direct flight from San Diego to New York.

One naturally thinks twice when the possibility of landing a flying boat on other than water is mentioned. However, it has been demonstrated that flying boats with the bull strength necessary to make rough water landings can and have landed in plowed fields with but slight damage. It has even been claimed that they can take off again from the ground. Therefore, my objections were quickly scouted when the direct flights were proposed.

A preliminary practice flight for testing equipment was planned for Thursday or Friday. However, the weather situation quickly upset these plans. The Weather Bureau predicted that weather over the United States for Saturday would delay a take-off until the following week. Therefore, at noon on Thursday it was decided to take off as soon as the plane could be made ready. Preparations were rushed, equipment loaded on board, gasoline tanks filled, the ship hauled out to the ramp, radio compass calibration made, and a new, direct track was laid out to Atlanta and thence north to avoid expected storm areas.

At 4:50 p.m. the engines were roaring in the take-off; my navigational equipment was strewn about the navigation and radio room in utter confusion. Once we were off the water, the navigation equipment was arranged for convenient handling and the compass heading was set, making due allowance for predicted winds aloft.

The equipment included two Navy type magnetic compasses, graduated in degrees; directional gyro and Gyropilot; sensitive altimeters for the pilot and navigator, graduated in meters; airspeed meters for the pilot and navigator, graduated in kilometers; Navy type pelorus, or bearing instrument, with mountings at the machine gun hatch forward, at the navigator's hatch opening over the chart table and at a hatch through the bottom of the ship in the after-end of the hull.

In the navigation and radio room, located abaft the pilot's compartment, was a full-sized chart table with a universal drafting machine above and a chart drawer below.

Completing the dead reckoning equipment was the invaluable Dalton Mark VII Aircraft Navigational Computer, Weems Aircraft Plotter, parallel rulers, dividers and logsheets of my own design.

Celestial navigation equipment consisted of Bureau of Standards type aircraft bubble sextant, two special Greenwich Civil Time and Greenwich Sidereal Time second-setting watches, each graduated and reading in arc direct; Nautical Almanac with specially prepared table, Weems Line of Position Book, Rude Star Finder and Star Altitude Curves.

Radio navigation equipment consisted of duplicate intermediate and low frequency receivers, direction finder of the latest type, voice and CW telegraph transmitter and interphone communication system with eight outlets for pilots, navigator, radio operator and others. The installation permits the radio receiver to be switched on to the pilot's interphone for use in riding the radio beam.

I obtained drift readings by means of the pelorus through a hatch in the bottom of the hull. This hatch is approximately 24 inches wide and about four feet long. The pelorus was mounted in the forward end of the opening and may be swung in azimuth over a graduated arc and tilted from horizontal to vertical as well according to need.

The process of taking the drift is the established one of sighting on an object that has passed directly underneath the ship and watching its apparent motion astern, noting whether or not it passes directly astern while the ship is maintained on the prescribed heading. The pelorus sight is moved to right or left of the fore-and-aft line of the ship in order to follow the object below, and the angle noted is that of the ship's drift. The accuracy of this determination depends upon the accuracy by which the ship is steered and the establishment of the pelorus zero in the fore-and-aft line of the ship.

This type of drift determination is available whenever the ground or sea is visible. In the case of overseas flights, an aluminum powder or dye bomb by day or flare at night is dropped from the ship to provide a point of sight. Drift readings were taken frequently during the day and proved quite satisfactory, except (*Continued on page* 41)

"It was this way." Richard Archbold explains the non-stop flight of his flying boat across the continent to newspaper men. On opposite page, the ship the natives of New Guinea will see about the first of 1938 when the expedition returns to its work of collecting data for the American Museum of Natural History in N. Y. C.

The Flight of the Guba

(*Continued from page* 10)

for the inconvenience of having to lie down during the observation. Once the drift readings were obtained, the allowing of sufficient offset was simple.

The Gatty Drift Meter was one of the many items that went by the board in the haste of premature departure. A more suitable installation for overland use than that used on this flight would be a drift meter of the Gatty type installed for operation at the chart table. For those not familiar with the Gatty type, it may be described as a periscopic arrangement with a grid that can be oriented into a line parallel to the apparent motion of the ground below, as viewed through the periscope.

The sectional maps, of which 87 covering the entire United States are published, provide the best and most up-to-date maps available. When the regional maps, each covering the area of approximately six sectional maps, are available, they may be found more convenient for the longer flights where radio and bearings are to be plotted, particularly at night. Only two of these have been published to date. The complete set will consist of 17 maps. In order to coordinate the numerous sectional maps on a long flight, it is necessary to resort to the U.S.C. & G.S. Aeronautical Planning Chart, which is overprinted in blue with the limits and names of the sectional maps.

Once the straight tack has been laid down, it is divided into increments of distance for ready reference, starting at departure. The intended track or course is measured at intervals in order that changes of heading can be made frequently to take care of changing variation and changes of track direction because of the Lambert Conformal Projections characteristics.

During the early stages of the flight, daylight made piloting and drift and ground speed determinations easy. However, the sun did not last long and our ship, although heavy and at cruising speed, was logging about 146 miles per hour. The moon was not of much assistance in the navigation.

As we approached the Rockies, we climbed to 15,000 feet in order to clear the peaks. It was during this stage of the flight that our greatest anxiety was experienced. Our position was somewhat in doubt because of a lack of recognizable land marks. Atmospheric conditions were favorable to the formation of ice and electrical storms were visible.

We were passing through broken clouds; mild lightning discharges could be seen in the distance. Our trailing wire antenna was out. Suddenly the pilots noted that the nose of the ship and wing tips were aglow and finally so bright that they were blinded for perhaps half a minute.

In the navigation and radio compartment, where Wheatly, Rann and I were at the time, a high voltage crash of electrical discharge occurred, lighting up the space. The odor of burning rubber was present. A rapid survey disclosed that no one was hurt, not even the radio operator at his post.

With apprehension we waited for further developments, but none occurred. Examination on landing disclosed burned antenna insulations. All equipment functioned satisfactorily. Our track was changed to the south to avoid this area. Once well clear of it, we sought lower altitudes and again headed east.

I endeavored to fix our position by celestial navigation. A few minutes with the Rude Star Finder determined appropriate stars for celestial position finding. Then I proceeded to break out our new sextant for its initial use aloft. Set for the approximate altitude and pointed on the proper bearing for the selected star, I strained my eyes to pick it out, but none appeared. Something was wrong. Checking over my rough calculation again, I found all was correct, but again the altitude as recorded by the sextant failed to give the proper altitude by about twenty degrees. It was not until some time later and after additional attempts that it was found that the error was the result of the slippage of the clutch locking the counter to the index mirror drive. In the hurried departure, time did not permit the checking of this important item. Similar experiences by others point to a defect that should be remedied. The clutch should be positive and should not depend on friction alone.

The doubt in position did not last long, however, as visibility improved and we were soon over the Texas oil region, which is marked by a display of flaming oil wells. Once more we logged good speed under more favorable wind conditions. Our cruising speed gave us better than 150 miles per hour.

Invaluable aid was furnished by the Dalton Mark VII Aircraft Navigational Computer. Every fifteen minutes during the flight the computer was resorted to once or more. It is invaluable in speed, time, distance problems, compass conversions, airspeed meter calibration data, corrections of airspeed for altitude and temperature, etc. In fact, its application is universal to dead reckoning navigation and of considerable help in celestial work.

After we had passed through the Texas oil fields the course was altered to the northward on account of the improved weather conditions and in order to establish a more direct track to destination.

Radio navigation was used but little. Radio bearings were taken only when the ship's position was

accurately known and then merely for the purpose of exercising the radio operator. Radio range beams were used occasionally during the night as a check on the distance along the track. At no time was an attempt made to ride the beam. Courses were laid without regard to beams.

A complete weather report was furnished prior to departure. Only one report of winds of the upper air was received during the entire flight, although repeated efforts were made to obtain these during the night.

During the period between darkness and daylight it was most difficult to identify objects on the ground. All of this was made more difficult because of our altitude, patchy fog and a haze lying close to the ground.

It becomes increasingly evident that, as planes seek greater altitudes because of higher speeds attainable in those regions, celestial navigation and radio navigation will become the sole reliance of the navigator, except under the best of visibility conditions. At high altitudes the plane is over the top in an atmosphere where stars are at their brightest. This is a disadvantage at times. It makes star identification more difficult because of the profusion of stars. However, a good azimuth and the recorded altitude will suffice to identify quickly any of the brighter stars.

Once past the rain of the Alleghanies, our path was clear. We set our boat down in the welcome waters of Long Island Sound off North Beach Airport exactly 17 hours 3 minutes 30 seconds after the departure from San Diego over a straight-line distance of 2,450 miles, or approximately 2,600 miles flown.

On landing we were amused to hear of the report of a pilot over an inland city who, it was said, saw our boat and could not believe his eyes; so he looked over the side of his landplane to see if he was over the ocean, then landed quickly, as he could not further trust his senses.

In addition to the owner and pilot, Mr. Richard Archbold, research associate of the American Museum of Natural History of New York, the crew consisted of Pilot Russell Rogers, who has flown through the jungles of New Guinea with Archbold; William Wheatley, chief test pilot for the builders, the Consolidated Aircraft Corporation; Jerald Brown, flight engineer; Harold Rann, radio operator; and myself.

Details of the Guba

THE hull of this unique private aircraft is specially fitted out for maximum efficiency in exploration, the owner's profession. It carries a complete set of standard instruments and miscellaneous equipment, and has a number of fittings that have been prepared specially for the work which the big flying boat is designed to perform.

In the nose compartment—naturally the smallest of the seven—is to be installed a Fairchild aerial camera for shooting obliques through an aperture on the left side of the hull. It will be aimed by a sight in the pilot's cockpit. In other words, the pilot will aim the camera by aiming the plane, and will trip the shutter by remote control.

This forward compartment may be used for navigational observations as well as for handling the ship on the water. To aid the observer, a Kollsman sensitive altimeter and Pioneer air speed indicator are installed on the walls.

Back of this compartment is the "bridge," with a complete set of instruments and controls for each pilot. There is a Sperry Gyropilot and a row of switches that operate visual signals to the flight engineer, suggestive of the conventional marine signaling system. This supplements the interphone service.

The radio operator has a swivel-ing seat that faces a battery of radio equipment located on the right side of the hull in the compartment behind the cockpit. He has a main transmitter which operates on 500, 3,105, 6,210, and 12,420 kilocycles; an emergency transmitter that operates on 500 and 6,210 kilocycles; two receivers, a radio compass, and interphone system—all manufactured by Bendix. Handling all this equipment calls for a sort of radio gymnast. On the flight from San Diego to New York in June, the radio operator proved to be the busiest member of the crew.

The left side of the hull is fixed up as a work shop for the navigator. A large flat table, under which is a chart drawer for the largest maps, extends from the wall; a sensitive altimeter, air speed indicator and clock are at the back edge of the table. There is, also, a light overhead, an interphone set, and the universal drafting machine.

As one goes through the door into the next compartment to the rear, one has to duck under the seat for the flight engineer. His head and shoulders extend up into the cabane section, which has openings on each side to give excellent range of vision. In front and beside him are all of the engine instruments and controls, except the throttles and propeller controls. He, also, is a busy man, for he has to make something like 30 readings every hour as well as the necessary adjustments.

Back of the flight engineer is a 4 horsepower gasoline engine which serves as a bilge pump or as a generator for the radio equipment when the ship is on the water. Two wide bunks covered by inflated mattresses have been built into the bottom of the compartment.

Two more wide bunks have been built into the large compartment behind the engineer's quarters. These bunks have been used, too. On recent week-end shake-down flights it has been the custom for at least three to live aboard the ship. Incidentally, the normal crew consists of two pilots, flight engineer, radio operator and, on long flights, a navigator.

The rearmost compartment is distinguished by a trap door in the floor, through which food and supplies may be dropped to the ground division of the Archbold exploration party. Breakable items are dropped by parachute; the others are packed in large bags, which are in turn placed in a bag twice the size of the other. When, for instance, a 50-pound bag of rice is dropped from the ship, the inside bag bursts with contact with the ground, but the contents are spilled only in the large bag. Of the fifteen or so tons of material dropped in this fashion, only about ten pounds have ever been lost. This system enables the flying section of the party to maintain the ground force easily in the deepest jungles, and permits the ground forces to travel without the usual encumbrances of food and equipment.

There are eight phones in the interphone system so that all sections of the boat are in touch with the others at all times. The phones can be switched directly onto the radio system when desired.

Before the expedition leaves for New Guinea by air late this year or early next year, there will have been installed an overhead track and trolley for handling heavy supplies through the hatches and into the various compartments. This will also facilitate the delivery of supplies to the trap door in the stern. A davit is carried for installation in brackets on the top of the wing for handling supplies between plane and shore. Provision is to be made also for using the davit to handle the engines in overhauls.

Obviously, this ship is an extremely self-sufficient affair. It even carries a collapsible boat of canvas and veneer which can be assembled in a few seconds and which may carry as many as four.

The 1,750 gallons of gasoline to feed the two Pratt & Whitney twin-row Wasp engines of 960 horsepower each are carried in a huge tank that is an integral part of the wing. This tank is so large that Russell Rogers, chief pilot, has crawled inside through the manholes for inspections. Incidentally, when the plane reached New York after its solo non-stop flight from San Diego, there were 650 gallons of gasoline still in the tanks.

2 Consair Groups Present Sides in Bargaining Dispute

APR 9 -
SD UNION Apr 8 - 37

Campaigning, as spirited and heated as in the "political days of yore," swept through Consolidated Aircraft plant yesterday as time for a regional labor board election to determine the collective bargaining agency for employes neared.

Ballots will be cast tomorrow afternoon and names of Aircraft Lodge 1125, International Association of Machinists, an affiliate of the American Federation of Labor, and of the Consolidators' association, will appear on them. Both sides of the "debate" were set forth in statements issued to The San Diego Union by officers of the two associations yesterday.

C. L. R. Smeltzer, president of Consolidators, released this statement:

"The national labor relations board has decided that an election must be held to determine who shall be the bargaining agency for the employes of Consolidated Aircraft Corp.

"We feel confident that the intelligence of aircraft workers will be demonstrated in the results of this vote. It is not a vote for the purpose of determining rights or demands of the employes of Consolidated Aircraft Corp., but to determine whether or not an outside organization shall govern the policies of the working men at this plant.

Agitators Hit

"Insofar as the interests of the men are concerned, we have no differences with the Association of Machinists. However, we do feel that the interests of employes will be much better served by an organization comprised entirely of employes of the company. We have seen too many cases of late where professional agitators and organizers have duped men into labor troubles and have even taken over plants, not with employes, but with men employed by the organization for this purpose.

"We feel that men should organize and should have a representation in dealing with employers. However, with the number of employes at Consolidated, a nominal fee such as ours, of 25 cents a month, provides a goodly income for carrying on this work. In marked contrast, the union demands a $3 initiation fee and $2 a month dues. This would provide a start of some $9000 and a steady income of $6000 a month, a good part of which is sidetracked and used for propaganda purposes in other parts of the country. We believe this is excessive.

No Paid Officers

"It is admitted that union organizers work on commission and their main purpose, naturally enough, is to increase membership. There is no one in our organization being paid for their services at this time and the dues are collected merely for the purpose of having a reserve should some expenses be necessary.

"The union's object is to form a closed shop and compel men to become members or lose their jobs. We do not believe this to be American, nor is it one of our objects.

"Insofar as dealing with our employers is concerned, they have already demonstrated a willingness to sit down and talk over our troubles peaceably. We have demanded a 15 percent increase for the entire organization and our demands are receiving consideration at this time.

Membership Not Required

"As employes, engaged in the business of building aircraft, we feel we are in a much better position to judge the qualifications and demands of men engaged in this business, than paid organizers whose original business has been everything from mining to garment manufacturing.

"No man has to vote and in order to vote for Consolidators, he does not have to be a member of our organization, regularly paying dues. In voting for us to represent him, he is merely voting for a committee of Consolidated employes, not for an outside union."

For the Machinists' executive board, George D. Dayton, executive secretary issued this statement:

"Our government, through the national labor relations board, has decided to hold an election of Consolidated Aircraft Corp. employes to determine which is to be the sole bargaining agency.

"This opportunity to determine democratically this agency is granted by a democratic government and we hope that the employes will take advantage of it, which they can do without intimidation or coercion.

200,000 Members

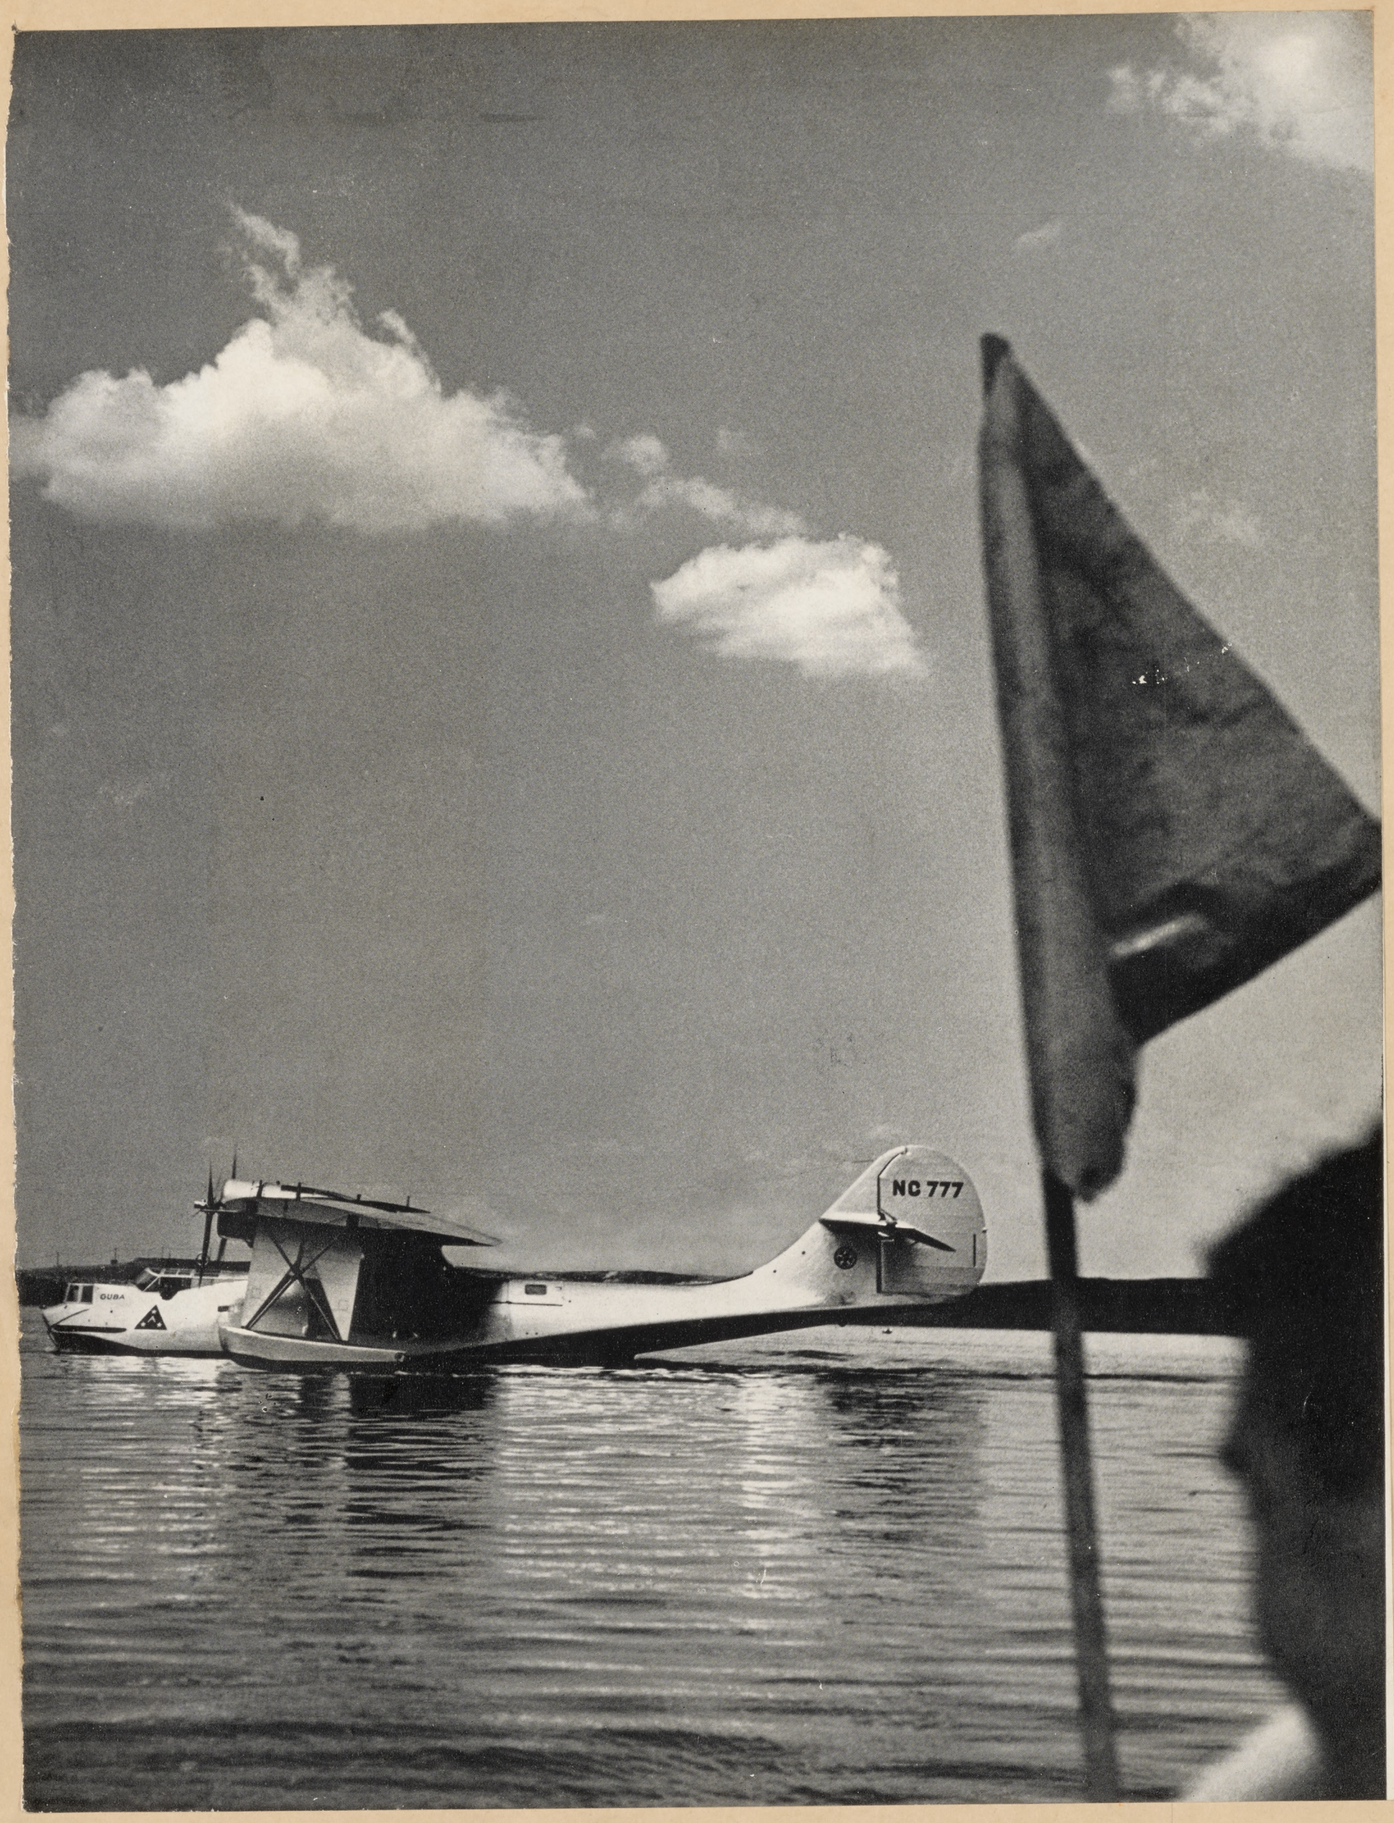
"This union is a part of an organization with more than 200,000 members, spread all over this country and which organization has been in existence for nearly 50 years. It is the policy of the International Association of Machinists, of which Aircraft Lodge 1125 is an affiliate, to obtain higher wages and better working conditions for the workers in a democratic peaceful and orderly manner, and these policies will be continued. Aircraft Lodge 1125 was formed by the workers in this factory to do these very things.

"The policy of the corporation, on the other hand, has been one of low wages and long hours. To perpetuate this practice the company has sponsored a company union, by which they are trying to dominate their employes in order to defeat the true aims of collective bargaining. This can only result in generally lowering the standard of living of workers in San Diego.

Company Union, Charge

"We have charged in open hearing that the Consolidators' association is a company union and this we still contend. If the Consolidators are not a company-dominated union, then why was it first brought into existence after we had requested that an election be held?

"To the workers of Consolidated Aircraft, we say that the day of individual bargaining is past, and to accomplish anything in collective bargaining it must be done through a legitimate, independent trade union and not through an organization that is subservient to the company and designed only to do their bidding. We urge the employes of the corporation carefully to consider these facts and cast their ballot for Aircraft Local 1125, the only union that can truly represent your interests."



LOCAL AIRCRAFT FIRM OPENS WAY TO LABOR PARLEY

After a statement of labor policy that Consolidated Aircraft Corp. is ready to discuss collective bargaining with representatives of "any group or groups for their own members," had been read into the record, a regional labor board hearing of employe complaints in chamber of commerce auditorium, adjourned last night.

Examiner George O. Pratt announced that the hearing would be resumed in the federal building in Los Angeles, at 10 Tuesday morning when Maj. Reuben H. Fleet, president of the corporation, will appear before the trial board.

C. A. Van Dusen, vice president of Consolidated, presented the written statement of policy at a special night session.

Company's Statement

"The time has come for this company to make a statement in regard to its policy in dealing with the employes," he read. "First, however, we want to state that the testimony presented today in regard to our branding union representatives as Communists is entirely and absolutely incorrect. In my conversation with Dr. (Towne) Nylander (regional labor board director), I told him that we had been informed that the leadership of union labor in San Diego included individuals who had displayed communistic tendencies. Naturally as a unit of the national defense, we are concerned about communistic activities.

"The company does not wish to advise its employes as to how they should act in the matter of securing collective bargaining. Pending a determination of our status under the Wagner act, we do not wish to deny our employes the right to consult with the management in matters affecting rates of pay, hours of labor and other working conditions. On the contrary, the management always has been and is now ready to discuss with representatives of any group or groups for their own members, or with any individual, these various matters.

"This includes the American Federation of Labor, the C.I.O., the Consolidators' association or others. We have endeavored to conduct ourselves in such a fashion that our people will have confidence in our policies. We believe that our organization will continue to display the good judgment that has resulted in the avoidance of labor disputes and that we can look forward to continuing pleasant relations."

Workers Testify

The statement was entered at the end of the second day of the hearing, during which testimony was taken from William A. Rasp, sheet metal worker; George D. Dayton, sheet metal worker and a union officer, and James S. Burney, lead man, by counsel for Aircraft local 1125, International Association of Machinists, affiliated with the American Federation of Labor, and W. C. Bowlen, lead man, by counsel for the Consolidators' association. Union members have charged during the hearing that the latter organization is "company dominated."

Testimony will be completed in Los Angeles and a transcript, together with an informal report by Pratt will be submitted to the national labor relations board in Washington, D. C. The board's decision as to whether an election of employes shall be held to decide upon a collective bargaining committee or group, and what organizations shall appear on the ballot and what employes shall be eligible to vote, can be expected in from 15 to 30 days after the end of the hearing, Pratt said.

3/18/37

MAJ. FLEET BACK AT CONSOLIDATED AFTER U. S. TOUR

Maj. Reuben H. Fleet, Consolidated Aircraft Corp. president, returned yesterday after a nationwide business trip and testifying Tuesday before the national labor relations board trial examiner at Los Angeles.

Maj. R. H. Fleet

The findings of George Pratt, trial examiner, on a request to the national labor relations board for an employes' election at the Consolidated Aircraft Corp. plant here were prepared yesterday at Los Angeles for forwarding to Washington, D. C., The Associated Press reported.

Request for the election was made by the International Association of Machinists, American Federation of Labor affiliate. The Consolidators' association, factory organization, intervened.

Testimony began a week ago and was completed Tuesday with Maj. Fleet's appearance. Ralph Seward of the labor board quoted Fleet as saying that Consolidated is willing to bargain with the representatives of any group of employes for its own membership, but will not accept one group as representing all of the plant's 3600 workers.

Consolidated Aircraft Contract

A $750,000 contract for construction of special tools for the Soviet government has been awarded Consolidated Aircraft Corp. of San Diego.

The tools will be used for manufacture of airplanes similar to the PBY-1 airboats now being built for the United States Navy. It was stressed that the planes to be built by the USSR are strictly for commercial use.

Under Consolidated's contract with the Navy, export of any of the PBY-1 type planes or parts for them is forbidden until after November 1.

Sales AERO DIGEST 9/37

Twin-engined Beechcraft to Starratt Airways & Transportation, Ltd., Hudson, Ont., Canada.

Fairchild "24", Warner-powered to Cecil W. Kenyon, Huntington, L. I., New York.

Cessna C37 to John Reinauer, Oklahoma City, Okla., by Carl Winstead, Oklahoma City distributor.

Consolidated PBY-1 Flying Boat to the Russian government; delivery scheduled for November, 1937.

Ryan ST (4) to Haller Aviation, Ltd., East London, Union of South Africa.

Ryan ST to Landsborough-Findlay, Germiston, South Africa by Haller Aviation, Ltd., distributor.

Ryan ST to Airflite Ltd., Sydney, Australia.

Menasco 150 hp engine to Focke-Wulf, Germany.

Menasco C6S-4 engine, 250 hp to Rudy Kling.

Howard DGA-9, Jacobs-powered to Oliver Wallop, Big Horn, Wyo.

ANTHONY FOKKER
He's leery of autographs

◇ ◇ ◇

Ryan Planes Lure Fokker In S. D. Visit

Production Methods Draw Study Of Dutch Air Leader

Shy of the spotlight and particularly leery of autograph hunters, Anthony Fokker, world-famed airplane builder, arrived in San Diego last week for a series of conferences with executives of the Consolidated Aircraft Corp., and the Ryan Aeronautical Co.

Fokker was extremely reticent about the purpose of his trip, but admitted he was interested in the S-T sports planes being constructed at the Ryan factory.

To Study Production

He said he would remain in San Diego for several days this week, during which time he will make a thorough examination of production methods of the Ryan planes.

The Fokker plant in Amsterdam, Holland, is engaged in production of military planes for the Dutch government. Fokker himself is, in addition, a distributor of Douglas planes in Europe. He makes periodic trips to the United States to maintain contacts with American manufacturers and to remain apprised of latest production methods.

Visits Van Dusen

The plane magnate was particularly attracted to the adaptability of the Ryan planes to quantity production, it was reported yesterday.

In addition to his conference with Ryan yesterday, Fokker spent some time with C. A. Van Dusen,

(Turn to Page 5-A, Col. 2.)

Ryan Planes Lure Fokker In S. D. Visit

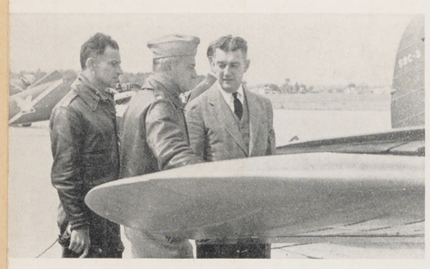
(Continued from Page 1)

vice-president of Consolidated Aircraft Corp.

The Dutch manufacturer gained fame during the World War, when as the head of several important aircraft factories in Germany, he supervised the output of the deadly Fokker fighting planes. He came to the United States in 1922, and entered the transport aviation field, withdrawing several years ago to return to Europe.

"I don't want everybody to know I am here," Fokker said with a marked Dutch accent last night. "So many autograph hunters would pester me."

PURSUIT GROUPS VISIT BUFFALO



Aubis Fly Dept July 1837

TOP: Arriving in Buffalo, Lt. Colonel A. Howard Gilkeson is greeted by Burdette S. Wright

LEFT: Major Edwin J. House and Major Harlan T. McCormick leave their planes after the flight from Selfridge Field.

Major McCormick and Major House show interest in Burdette Wright's explanation of one of the Navy SBCs.

Boeing pursuits lined in military file at Buffalo airport.

BOTTOM: Lt. Colonel Gilkeson bids adieu to Buffalo

RIGHT: Consolidated PB2-A pursuit planes seem to stretch in an endless line.

Flying togs removed, Lt. Colonel Gilkeson discusses the attributes of the new Curtiss pursuit airplanes. The Northrup A-17s warm up for the trip to Wright Field.

On Monday, June 28, and Tuesday, June 29, respectively, two Pursuit Squadrons of the U. S. Army Air Corps visited Buffalo and turned the local airport into a veritable Air Base of war-time aspect.

The Eighth Pursuit Squadron, commanded by Lieut. Col. A. Howard Gilkeson with Capt. Ned Schramm second in command, dropped out of the clouds over Buffalo about six o'clock Monday afternoon after a flight from Virginia Beach, Va. Flying twelve Consolidates PB2A airplanes and six Northrup A-17s, the group consisted of 36 men, half being officers and half enlisted personnel. An overnight stay was made in Buffalo during which all were guests of Curtiss. The entire group visited the factory on Tuesday morning.

On Tuesday also the First Pursuit Squadron, in the command of Major Edwin J. House, arrived from Selfridge Field. Flying Boeing P-26 airplanes, the second

WHOLESALE SWITCH OF PLANE TENDERS PLANNED BY KING

Teal, Now At Canal, To Be Shifted To Seattle; Thrush To Head South

A wholesale transfer of Navy patrol plane tenders is contemplated by Rear Adm. Ernest J. King, Aircraft Base Force commander, it was revealed today.

The San Diego based U. S. S. Sandpiper is acting as temporary base ship for Seattle's Patrol Squadron 16, now on duty in Sitka, Alaska. The planes are expected to return to Seattle when flying becomes impracticable with the return of extremely cold weather and its accompanying storm conditions affording low visibility. The Sandpiper then will resume her San Diego station, it was reported.

Gannet In Coco Solo

The USS Gannet, former sister ship of the Sandpiper when she was based in San Diego, has begun her new service in Coco Solo, Canal Zone, where she arrived Aug. 29. The Lapwing, which was sent to Southern California to relieve the Gannet, at present is in San Pedro and is scheduled for a temporary Seattle assignment.

The Teal, now at the Canal Zone, will be the permanent tender operating with Patrol Squadrons 16 and 17 in Seattle, with the Lapwing eventually due in San Diego to occupy the vacancy left by the Gannet.

To Augment Wing

To complete the somewhat complicated switches of patrol plane tenders, the Thrush, formerly of Seattle, will be stationed in the Canal Zone.

The gradually expanding Fleet Patrol Wing will be augmented by another new squadron, VP-19, scheduled to join VP-16 and VP-17 in Seattle late this fall.

Meanwhile, Patrol Squadron 11 is receieving the first group of PBY-2 bombers being delivered to North Island. Next in line for these advanced type airboats, of which 50 are under construction at Consolidated Aircraft Corp., is Patrol Squadron Two, slated for a non-stop mass flight to the Canal Zone in December.

CONSAIR DENIES RUMORS ABOUT JOB INCREASES

Employment To Remain At Present Level, Says Edgar Gott

S.D. Sun 9/16/37

Rumors that Consolidated Aircraft Corp. is planning to re-hire personnel on a large scale were squelched today by Edgar Gott, vice-president of the concern.

"The number of men to be employed at Consolidated for some time to come will remain at a stationary level, as far as we know now," Mr. Gott said. "The turnover in jobs at the plant today is normal and we do not expect any immediate re-hiring in large quantities.

False Rumors

"The spreading of false rumors regarding employment at Consolidated works a hardship on men who believe that jobs are for the asking at the plant."

Consolidated officials have been unofficially notified by Washington observers that the Bureau of Aeronautics is planning to re-advertise for bids on approximately 60 PBY-4 bombers, an advancement over the large airboats now under construction for the Navy at the San Diego factory.

The original bids by Consolidated and Glenn Martin were considered too high by Rear Adm. A. B. Cook, chief of the bureau.

See Replacements

Although a blanket 10 per cent reduction in government expenditures has put a crimp into the letting of Navy plane contracts, Consolidated officials believe the Navy will remain committed to a policy of replacing its older type seaplanes with the new higher-powered airboats.

"The patrol bombers such as Consolidated is building for the Navy at present are, after all, the backbone of the Fleet's aviation forces," an official of the local concern remarked today.

S.D. Union 9/14/37

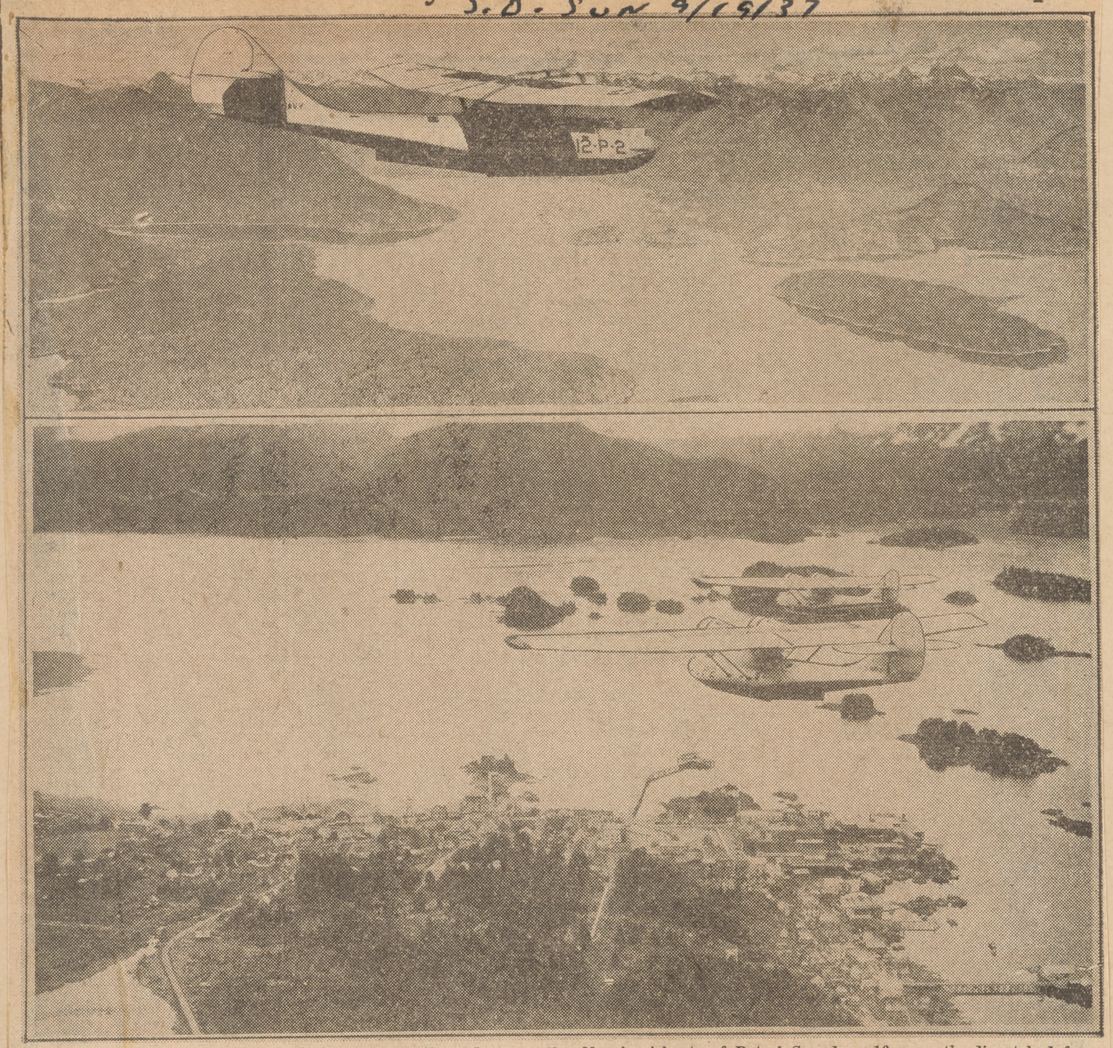
WILKINS STARTS NEW POLAR HOP

NEW YORK, Sept. 18 (A.P.)—Sir Hubert Wilkins left Barter island, Alaska, in his San Diego-built Consolidated flying boat today for the fifth and probably the last of his flights in search of Sigismund Levaneffsky, Russian flier, and his companions, lost since Aug. 13 in the Arctic wastes, according to word received here.

A twin-motored amphibian stationed at Pt. Barrow and piloted by the Soviet aviator Grazianski may continue the search, Explorers' club officials said.

S. D. Planes Blaze Way For Uncle Sam's Northern Outpost

S.D. Sun 9/19/37



Etched against the grandeur of Alaskan scenery these days are the Navy's airboats of Patrol Squadron 16, recently dispatched from Seattle to Sitka to establish an air base in Uncle Sam's northernmost possession. Lofty peaks glistening with snow caps, winding waterways studded with islands—these are the scenes unfolded daily to the Navy' pioneering airmen. Shown at top is a San Diego-built patrol bomber of Squadron VP-12, photographed in recent Alaskan flight maneuvers that formed the basis for serious military development of far northern airways. Soaring above the land-locked harbor of Sitka in lower photo are two more Consolidated airboats, flying in typically adverse Alaskan weather conditions—fog, rain, high wind, low "ceiling." Twenty-four seaplanes based at North Island performed tactics for ten days this summer in the Gulf of Alaska, between Sitka and Kodiak, last habitat of one of the most feared animals in the world—the Kodiak bear.

'FLYING JUGGERNAUT' TO BID FOR ARGENTINE PLANE ORDER

S. D. Sun 9/20/37

Seversky 'Convoy Fighter' To Be Inspected By Officials Who Visited Consair

Argentine naval officials, some of whom recently visited Consolidated Aircraft Corp. to inspect six P2Y3 patrol bombers constructed for the South American republic, today awaited arrival in Buenos Aires of what is claimed by its builders, the Seversky Aircraft Corp., to be the most versatile and least vulnerable military plane ever built in the United States.

Due Sept. 29

Known as the "Convoy Fighter," the craft today was en route to South America aboard the Munson Liner American Legion, due at Buenos Aires Sept. 29.

The six Consolidated planes already have been delivered to the Argentine government.

Included in the group of high-ranking Argentine military officials who will observe demonstrations of the "Convoy Fighter" will be Capt. Zar, chief of Naval Aviation, who headed the Naval experts in their San Diego visit two months ago. Frank Sinclair, Seversky test pilot, and Judson Hopla, mechanic, are accompanying the plane to Buenos Aires.

Flying 'Juggernaut'

The "Convoy Fighter" is a veritable flying "Juggernaut," armed with five high-powered machine guns and carrying under its wings two bomb racks each equipped with 300 pounds of aerial demolition bombs. It is capable of a top speed of approximately 300 miles per hour and is powered with an 1100-horsepower Pratt & Whitney twin-row "Wasp" engine.

Manufacturers of the "Convoy Fighter" claim it is almost indestructible in the air from machine-gun fire of other aircraft. The all-metal construction has been so designed that no single beam in the wing carries a critical load. The wings therefore may be literally riddled with bullets and the ship still can maintain level flight, it is said.

Many Uses Possible

Seversky officials today pointed out that this latest "flying fortress" can be used as a light bomber, an observation plane, a pursuit plane, an attack plane, or as an advanced trainer.

Maj. Alexander P. de Seversky will pilot the "Convoy Fighter" in demonstration flights at Rio de Janeiro, Brazil; Lima, Peru; Chile, Bolivia, Paraguay, Columbia and other South American countries. The plane then will proceed to Mexico City for a series of exhaustive tests before returning to New York.

Final decision on the Argentine order for 70 planes, for which several foreign concerns are competing against Seversky, will be made after demonstrations of the "Convoy Fighter."

FLARES REVIVE HOPE FOR FLIERS

S.D. Sun 9/21/37

By United Press

POINT BARROW, Alaska, Sept. 21.—A crew of five Soviet aviators will take off today in a giant Ukorsky flying boat to investigate reports from the icebreaker Krassin that she sighted flares which may have come from Sigismund Levanevsky and five flier-companions, lost on a trans-polar flight from Moscow.

The plane is capable of covering approximately 2000 miles with one load of gasoline.

Eskimos told Point Barrow officials today they had seen flares north of here about 10 days ago.

From **Fairbanks**, it was reported that Sir Hubert Wilkins, famed explorer, who with his crew were unreported for 33 hours on a flight over Polar wastes in a search for the six Soviet airmen, today radioed his party was safe on a lake near Aklavik.

Wilkins' plane, a large San Diego-built flying boat, was forced down on the lake by bad weather last Sunday. Wilkins radioed that when the ship was brought down on the lake he and his crew were so fatigued they went to sleep without reporting their whereabouts.

SKY-HIGH 'VITTLES'

S. D. Sun 9/17/37

Thats What Navy Fliers Found At Sitka

By HAROLD KEEN

THE slow, steady penetration by the Navy into the northern fog-shrouded seas of this continent has reached a new climax with the establishment of an air base at Sitka, Alaska, where six seaplanes and a San Diego-based aircraft tender, the Sandpiper, have been pioneering during the last few weeks.

And the blazing of Alaskan airways is no easy job, officers of patrol bomber squadrons based at North Island will tell you. They had their fill of it this summer, when Squadrons VP-7, 9 and 12 performed maneuvers between Seattle, Sitka and Kodiak, Alaska.

The personnel of Squadron VP-12, which operates 12 Consolidated PBY-1 planes, ran into especially difficult navigation conditions during their recent tactics in Alaska.

"Just about the only time we saw the sun was after the maneuvers were completed, and we were on our way back to Seattle," he remarked. "It either rained, or sleet fell or the fog was so thick we would have to land outside the harbor of Sitka and actually taxi into it on a radio beam."

Familiarization with flight conditions in Alaska was not the only practical value gained from the maneuvers at Sitka and Kodiak. It was the first demonstration of PBY performance under severe icing conditions, and the big planes functioned almost without a flaw.

◇ ◇ ◇

HOW would it be to live that far north for any length of time? With the establishment of a base at Sitka, to which Aircraft Base Force personnel probably will receive routine assignments in the future, North Island seaplane crews are naturally interested in this question.

The hunting and fishing possibilities are unlimited, but there are other drawbacks. For example, the parting with $1.35 for one pound of bacon and two loaves of bread would become a painful process, if it had to be repeated indefinitely. "And the bread was hard as a rock by the time it got into our hands from the nearest bakery—at Seward," one of the victims complained today.

There is a movie at Kodiak once a week, and a dance in the Town Hall on all the other nights. The dancing partners for Navy or Coast Guard men during their infrequent visits there are big, muscular women in overalls, who come to the amusement center at 10 or 11 p. m., directly from the fish cannery, with the nautical smell still lingering. Yes, Kodiak is quite an interesting town, at that, the men of VP-12 have agreed.

NOW AIR-YACHT!

S. D. Sun 9/20/37

Presto! Consair Works Magic

By HAROLD KEEN

AND now—the air-yacht!

An offshoot of the United State's Navy's most powerful patrol bombers, the latest contribution to the field of private aeronautics was unveiled today in blue-prints and drawings, at the Consolidated Aircraft Corp. plant.

Imagine a destroyer converted into a palatial private cruiser for a wealthy sportsman.

A Luxury Ship

This, translated to aeronautical terms, is what is being accomplished at the Consolidated plant, it was learned today.

A steel-gray, twin-motored monoplane, whose lethal capacity is greater than that of any other Navy plane in existence, has been stripped of her death-dealing armaments, the interior has been re-designed and re-decorated, and presto!

A bomber has been transformed into a luxurious, beautiful craft that could take a wealthy New York sportsman and a party of 24 to Bermuda for a weekend holiday, or to a fisherman's paradise in some isolated Canadian lake, or to Miami, Charleston, New Orleans, Chicago—literally anywhere in the country without an in-between stop.

◇ ◇ ◇

THE idea germinated in the minds of Consolidated's engineers shortly after Richard Archbold, 30-year-old research associate of the American Museum of National History, last June made his flight from San Diego to New York in a Consolidated airboat—the first non-stop hop of a seaplane across the United States.

Archbold's trip demonstrated the practicability of flying a seaplane across vast stretches of land. The PBY-1's 4000-mile cruising range and the dependability of its two 1000-horsepower engines reduced, to a great extent, the element of risk.

Hull Transformed

Originally designed as a military bomber, recently altered to fit the needs of a flying laboratory, the PBY-1 now is being prepared for its third usuage—that of the air-yacht.

The plain hull, used for military purposes to house a bombing crew, has been transformed to contain sleeping quarters, complete galley and cocktail lounge, lavatories with hot and cold running water, stowage space for hunting and fishing equipment.

Ample room for 20 persons, besides a four-man crew, is provided for daytime flights, and at night accommodations are available for six passengers, crew of four and steward. There are comfortable overstuffed divans which may easily be changed into berths.

S. D. Union 1/31/37

HUBERT WILKINS REPORTED SAFE

NEW YORK, Sept. 21 (Tuesday) (A.P.)—The Explorers' club today said Sir Hubert Wilkins, unreported for 36 hours while searching for the missing Russian fliers in the arctic, again was in radio communication and apparently not in trouble.

By telephone, Capt. W. R. May, Canadian Airways superintendent at Edmonton, Alta., told the club Wilkins reported landing his huge flying boat on a small lake in the Mackenzie delta.

Am. Aviation 9/1/37

Wood to Purdue

San Diego, August 24—K. D. Wood, aeronautical engineer for Consolidated Aircraft Corp., left the company on July 1 to become Professor of Aeronautical Engineering at Purdue University. He will service Consolidated as consulting engineer.

Friedman

CONTACT 9/1/37

OFF FOR THE ARCTIC, to search for the Soviet airmen, who were forced down while attempting another hop from Moscow to the United States, Sir Hubert Wilkens is taken out to the Consolidated Flying Boat "Guba", at North Beach, New York. In the boat are the crew, Gerald Braein, Sir Hubert, and Pilots, Capt. Hollick-Kenyon and Russell Rogers.

SEPTEMBER 1937 SPERRY gyroscope

Left: Flying over Boulder Dam—the Consolidated Flying Boat in which Richard Archbold recently completed a non-stop overland flight from San Diego to North Beach Airport, New York, purchased by Amtorg Trading Corporation will be used in an attempt to rescue the lost Soviet air men. 4 San Diegans To Attend Coast Aviation Conference

S.D. SUN

Four San Diegans will leave tonight to attend conferences on aviation sponsored by Gov. Frank Merriam, to be held in Sacramento tomorrow, Friday, and Saturday.

They are Tom Bomar, Chamber of Commerce; Jack Hicklin, of the Chamber's aviation committee; Edgar Gott, of Consolidated Aircraft, and Ray Booth, of the Junior Chamber of Commerce aviation committee.

Conference speakers will include Rear Adm. Arthur Cook, chief of the Navy's bureau of aeronautics; Maj. Gen. Oscar Westover, chief of army aviation; Comdr. Charles E. Rosendahl, naval lighter-than-air craft expert; Col. Clarence Young, Pan-American Airways, and Gov. J. B. Poindexter, of Hawaii.

DEATH FROM THE AIR

S.D. SUN 9/22/37

Adm. Cook Describes Air Tactics

By HAROLD KEEN

BOMBING of heavily populated civilian centers, such as has occurred in China during the past few weeks, is no new military tactic, Rear Adm. A. B. Cook, chief of the Bureau of Aeronautics, who arrived in San Diego yesterday for conferences with high-ranking aviation officials, pointed out today.

The Germans, who had already peppered London from the air during the World War, found added inducement to sign an armistice when it became generally known that the Allied air force was seriously contemplating bombing Berlin.

Few authorities, according to Adm. Cook, believe that Japanese air attacks have been for the purpose of demoralizing the non-combatant populace.

Have Military Objective

Most of the bombings in densely populated sections have occurred for a definite military objective to hinder troop movements or destroy fortifications and supplies, it was stressed. He said the fact that a large number of non-combatants happened to be in the vicinity was unfortunate.

Where heavy damage on lives and property was inflicted for no apparent reason, the cause in most cases was inaccuracy of the plane crews' lethal aim, Adm. Cook indicated.

The Bureau of Aeronautics chief arrived here by Navy transport plane from Anacostia, D. C., at 1 p. m. yesterday, and after making it known to reporters that his visit was to be purely unofficial, he went into a series of lengthy conferences with Vice Adm. Frederick J. Horne and Rear Adm. Ernest J. King, conferences expected to be continued today.

Navy Seeks Larger Airboat

Tomorrow afternoon he will leave North Island for Sacramento, where he is scheduled to deliver one of the principal addresses of an Aviation Planning Conference Friday.

Adm. Cook verified the fact that the Navy Department has readvertised for bids on a contract for PBY-4 planes, on which the original estimates by Consolidated Aircraft Corp. and Glenn Martin were far too high, he said.

"A lot of other factors have crept in now in the awarding of the PBY-4 contract which never would have arisen had the original bids been low enough," Adm. Cook declared. He was secretive about the exact nature of these "factors."

Consolidated May Get Contract

When the Navy enters the field of four-motored patrol bombers to succeed the present PBY's as the most advanced seaplane in the service, either Consolidated Aircraft Corp. of San Diego, or Sikorsky Aircraft Corp. will be given the production order, he revealed.

Sikorsky's four-motored craft will be ready for flight tests shortly. Consolidated's "flying fortress" is still under construction in the closely guarded experimental building at the San Diego plant, and will be available for competition with Sikorsky before Navy inspection boards by December or January, Adm. Cook has been notified.

And the "winner" of this competition is in line for an important production contract.

GOLDEN WEDDING COUPLE DRAWN TO S. D. BY CONSAIR

S.D. UNION 9/22/37

Mr. and Mrs. Jacob R. Kern, 3928 Littlefield st., who will observe their golden wedding anniversary today, are busy every minute of the day, and when the sun goes down, they wish the days were longer.

"We are so much in love with San Diego, our home and flowers we feel as if we were newlyweds just starting out in life," said Mr. Kern.

Son Aircraft Inspector

Mr. and Mrs. Kern have the Consolidated Aircraft Corp. and their son, Russell, to thank for their present state of happiness. The son, an inspector at the aircraft firm, was employed by the concern in Buffalo. He was brought to San Diego with the company. It wasn't long until the son mused to himself, "Gee, I'll bet Dad and Mom would like it out here."

Russell began looking around for a home. He bought the one now occupied by the parents on Littlefield st., adjacent to the beautiful Bay Park Village section. So on Easter Sunday, 1936, on a train from Buffalo, N. Y., came Mr. and Mrs. Jacob R. Kern. And they're here "for keeps," they declare.

The Kerns were married Sept. 22, 1887, in New Columbia, Pa. Their parents resided on adjoiniing farms, so it wasn't difficult for the couple to fall in love. The couple heard the call of the city. They quit the farm and went to Milton, Pa., where he got a job in the frame department of a car shop. His pay was 12½ cents an hour for 10 hours a day.

Better Job Won

In 1901 Mr. Kern got a better job with a big gas produciing company in the tube mill.

The job that Mr. Kern liked best and in which his loyalty won him retirement pay was with the Otis Elevator Co. He was with this company 25 years, retiring iin 1933.

Their bachelor son, Russell, bought 40 acres of land near Montou Falls, N. Y., and his parents spent three seasons on the land doing reforesting. They set out 25,000 trees.

The Kerns have three other children — Ruth Klingenschmitt, Sanborn, N. Y.; Sarah Hayler, Buffalo, and Jeanette Bartlett, Hamburg, N. Y.—F. W.

At San Diego, Consolidated doesn't know where it stands. It had a contract with the AF of L, but the union officers went CIO. The AF of L suspended them, and now no one knows what the score may be. West. Flying 9/37

S. D. Union 9/23/37

WILKINS LEAVES ARCTIC FOR N. Y.

BARROW, Alaska, Sept. 22 (A.P.)—Sir George Hubert Wilkins, explorer, today abandoned, at least temporarily, his Arctic search for six lost Russian transpolar fliers.

In the powerful plane which had taken him on five long scouting flights over the ice-flecked Arctic ocean, Wilkins hopped off from Aklavik for Ft. Smith, 1150 miles southward in northwest Canada, en route to New York.

Information at Edmonton was that Wilkins planned to obtain in New York a plane more suitable for northern winter flying and to return to the search for Sigismund Levaneffsky and his five companions, last heard from Aug. 13, soon after they had reported passing the North Pole on their attempted Moscow-Fairbanks flight.

S. D. UNION 9/24/37

CONSAIR OFFICIALS TO FLY TO PARLEY

Bound for Sacramento to attend sessions of the western aviation conference sponsored by Gov. Frank Merriam, four officials of Consolidated Aircraft Corp. will leave by plane at 10 today. They will include R. H. Fleet, president; Ed Gott, assistant to the president; William Wheatley, chief test pilot, and Harry Sutton, assistant chief engineer.

Flying from San Pedro today for Sacramento will be Rear Adm. A. B. Cook, chief of bureau of aeronautics, and Capt. Arthur Bristol, commander of Naval Air station. Adm. Cook is to address the convention tomorrow on naval aviation.

The chamber of commerce will be represented at the conference by Tom Bomar, aviation and industrial department manager.

NAVY TO HAVE 2000 AIRCRAFT

Rear Adm. Cook Announces Expansion Program

S. D. Sun 9/24/37

Plans for a 2000-plane Navy air force were announced in San Pedro yesterday by Rear Adm. Arthur B. Cook, chief of the Bureau of Aeronautics, after a conference with Adm. Claude C. Bloch, commander of the Battle Force.

Powerful Fleet Seen

Completion of the Navy's aviation expansion program will give the United States one of the most powerul fleet aerial forces in the world, Adm. Cook said.

By 1939, this development will be well on its way, Adm. Cook indicated. Of the combat squadrons, 39 will be ship-based, and 24 will be attached to the six aircraft carriers Ranger, Langley, Saratoga, Yorktown, Enterprise and Wasp. Five squadrons will be based aboard battleships and 10 aboard cruisers.

22 Squadrons

Backbone of the Fleet's scouting force will be 22 12-plane patrol bombing squadrons with the Consolidated-built PBY aircraft acting as nucleus for this group of planes.

Adm. Cook left San Diego yesterday with Capt. Arthur L. Bristol Jr., commander of the Naval Air Station.

WILKINS FORCED DOWN BY SMOKE

S. D. Union 9/24/37

NEW YORK, Sept. 23 (A.P.)—Sir Hubert Wilkins' big, navy-type flying boat, which has been engaged in an Arctic search for six missing Russian fliers, was forced down by thick forest fire smoke in Manitoba, Canada, today en route to New York.

Forced by the winter freeze to abandon his flights over the area where Sigismund Levaneffsky and his companions are believed lost, Sir Hubert had been expected to arrive here tomorrow night.

CONFIDENT RUSS FLIERS SAFE, WILKINS SAYS ON S. D. VISIT

S. D. Sun UNION 10/3/37

Still confident that Sigismund Levaneffsky and his five companions are alive somewhere in the Arctic wastes, Sir Hubert Wilkins, world-famed explorer, was a visitor in San Diego yesterday, conferring with aviation officials and seeking data on additional navigational equipment.

Sir Hubert Wilkins

Wilkins, in a Consolidated plane borrowed from Richard Archbold of the American Museum of Natural History, spent a month in the polar regions, covering 19,000 miles of flight in search of the Russian fliers. Of that distance, 12,000 miles were flown over the Arctic wastes and much of the flying was under the worst possible weather conditions. Performance of the San Diego-built plane was such that Wilkins found it difficult to express fully his enthusiasm for the big flying boat, which he termed "an explorer's paradise."

With him on the flight were two pilots—Herbert Hollick-Kenyon, a veteran of Lincoln Ellsworth's Arctic flight, and Al Cheesman, who flew in the Arctic with Wilkins on his 1929 discovery expedition. Jerry Brown, engineer, and Ray Booth, radio operator, made up the rest of the plane's personnel.

After conferring with Archbold and with Maj. Reuben H. Fleet, president of Consolidated, Wilkins spent some time with Lt. Comdr. L. H. Grey, retired, navigation instructor at Ryan's, in an effort to locate a drift and ground-speed meter for

(Continued on Page 3, Col. 4)

WILKINS LAUDS S. D. FLYING BOAT

(Continued from Page One)

use in his coming continuance of the search. He left last night for New York, where Grey has arranged a meeting with Lt. Comdr. P. V. H. Weems, retired, noted aerial navigator. Wilkins is continuing his surveys voluntarily, while the Russian government still is pressing the search for the six missing men. Wilkins said yesterday that the men had food for six weeks, which by careful rationing could be extended to almost twice that time. In addition, he says that if they got their big plane down safely they should find added sustenance by killing seals or polar bears, as the party carried rifles and ammunition.

RADICAL CHANGE MAKES AIRCRAFT NAVY 'FIRST LINE'

S. D. Sun 9/22/37

New U. S. Patrol Bombers To Speed Up Contact With Enemy In Battle; Planes' Taking Over Surface Craft Duties Sets Precedent

By HAROLD KEEN
The Sun's Navy Editor

The Navy's new patrol bombers have replaced destroyer as the first line of war craft to contact the enemy.

This radical change in Navy battle tactics was revealed today by high-ranking officers at Naval Air Station.

First inkling of the new role to be played by the giant air boats, of which 176 are being produced at Consolidated Aircraft Corp., was contained in an official Navy order yesterday to Adm. Arthur J. Hepburn, Fleet commander-in-chief, directing him to make the following reorganization, effective Oct. 1:

1—Transfer all destroyers now in the Scouting Force to the Battle Force.

2—Transfer all patrol plane squadrons, minus the Utility Wing, to the Scouting Force from the Aircraft Base Force.

3—Transfer administration of the Utility Wing from the USS Wright to the USS Rigel, receiving ship at the Destroyer Base, thus making this plane unit an integral part of the Base Force.

Not Emergency Move

No emergency situation has caused this drastic change, it was pointed out. The Navy Department for several months has been considering the most effective use to which the Consolidated-built planes might be put, has been keeping close watch on their performances to determine their possible role in actual battle.

"The patrol planes have been proved the best scouting instruments in the Navy," an officer on the staff of Rear Adm. Ernest J. King, Aircraft Base Force commander, said today.

Fleet's 'Eyes' In Sky

"They will replace the Scouting Force Destroyers as the first line of war craft to contact the enemy.

"The Scouting Force destroyers will, after Oct. 1, be available to the Battle Force, which thus will be immeasurably strengthened.

"Before two opposing fleets actually clash, information is sought on the other's position and movements. Because of the long range of the PBY bombers (4000 miles), they are far more effective in obtaining this information than comparatively slow moving surface craft.

Scouting Speeded Up

"A squadron of patrol bombers, for instance, could take off from its base and 'spot' the advance units of the opposing fleet many hours before the speediest Scouting Force destroyer. In addition, a squadron of bombers could disable the vanguard of a Fleet with its load of bombs. Thus, the PBY combine both Scouting and Battle effectiveness."

The patrol bombers being built in San Diego have, as a result, changed the entire picture of Fleet operations, it was revealed. In effect, they are replacing the Scouting Force destroyers in function, without sacrificing their destructive strength.

King Heads Scouting

Rear Adm. Ernest J. King will be placed in command of the Aircraft Scouting Force, according to the Navy Department. The tenders Wright, Langley, Thrush and Owl, and attending craft at the Fleet Air Bases at Coco Solo, Canal Zone and Pearl Harbor, will be shifted to the Scouting force from the Aircraft Base Force.

Comdr. Allan I. Price will continue in command of the Utility Wing Base Force, whose two squadrons will be attached to the U. S. S. Rigel.

Rear Adm. Walton R. Sexton, present commander of Battle Force destroyers, will stay in command of the amplified force and also will be at the helm of Destroyer Flotilla One. Rear Adm. William S. Pye, now commander of Destroyers, Scouting Force, will be placed in command of Flotilla Two of the Battle Force.

CONSOLIDATED'S TALENT TO GIVE SHOW AT BOWL

S. D. Union 9/27/37

An amateur show of 30 acts, ranging from hula dancing to grand opera, will be presented in Ford bowl, Balboa park, Friday evening at 7:30. The announcement made by Donald Frye, personnel director of Consolidated Aircraft Corp., who said that only Consolidated talent will be used in the show. It is free to the public.

"Someone suggested several weeks ago," Fry said, "that our private amateur show given by and for employes at the recent company picnic, would be a fitting gesture to express our wholehearted accord with the coming Community Chest campaign. The idea won the immediate approval of Maj. Reuben Fleet, Consolidated president. Since then we have uncovered an amazing number of first quality entertainers and these have now been worked into a gala show under the direction of Les Crawford, master of ceremonies.

"Many persons are unacquainted with the fact that Consolidated for some time had a 30-piece band, as well as a hill-billy band, a former Russian grand opera singer, several experienced radio and stage performers, together with a Swedish choir, Scotch bagpipes, dances and soloists of both voice and instrument as well as other performers.

"While this free show is an expression of co-operation with the Community Chest campaign on behalf of Consolidated employes, it was the expressed wish of all those giving of their time and talent that non solicitation of funds be made at the show. Therefore it was decided to hold the show Friday night preceding the official opening of the campaign and the show will be free in every respect. Through the courtesy of Walter Church a public address system will be installed for the occasion so that the record crowd expected can hear all the numbers."

Planes Become Fleet's First Line Of Battle

(Continued from Page 1)

SEAPLANE UNIT ASSIGNED TO SEATTLE BASE

Six Consolidated Planes To Leave For North October 10

S. D. Sun 10/3/37

To the Navy's rapidly expanding force of patrol bombers today had been added another squadron, Aircraft Base Force headquarters at North Island announced.

Squadron VP-19, commanded by Lieut.Comdr. D. C. Allen, was commissioned at the Sand Point Naval Air Station, Seattle, Friday, boosting to three the number of patrol plane units based in the Pacific Northwest.

Mass Flight Due

VP-19 will be equipped with six P2Y3 Consolidated-built seaplanes, predecessors to the present PBY-type aircraft. Now in active use with Patrol Squadron 7, based at North Island, the ships will be flown non-stop to Seattle Oct. 10, according to Capt. Alva D. Bernhard, chief of staff to Rear Adm. Ernest J. King, Aircraft Base Force commander.

Lieut.-Comdr. Robert L. Fuller will lead the mass flight to Seattle over a route which is not unfamiliar to the VP-7 aviators, who piloted these same planes from San Diego to Seattle last summer for tactical exercises.

The VP-7 personnel will return to San Diego to accept delivery of 12 new PBY-2 bombers under production at the Consolidated plant.

Lieut.-Comdr. Allen, commander of the Navy's newest patrol squadron, was transferred from VP-17, a sister unit at Seattle, which will be led by Lieut-Comdr. John Perry, formerly on duty in Washington, D. C.

Eventually, all three patrol squadrons at Seattle will be provided with 12 new PBY planes each, it was reported at North Island yesterday.

Defense Developed

Expansion of the Pacific Northwest base is in line with the Navy's policy to develop defense facilities in the Puget Sound-Alaska region, long neglected. At Sitka, Alaska, a half-dozen Martin-built bombers of VP-16 have just completed six weeks duty during the establishment of the Navy's northernmost seaplane base. They will be relieved during the fall by another squadron, presumably from Seattle.

Meanwhile, plans are under way to form another patrol plane squadron at Pearl Harbor in the near future. Designated as VP-18, the squadron probably will be supplied with Consolidated-built bombers to be flown to Hawaii on another in the series of trans-Pacific mass hops.

With production on the Navy's order for 50 PBY-2 type seaplanes progressing at Consolidated Aircraft Corp., San Diego's Patrol Squadron 11 soon will be fully equipped with 12 of these craft, and the Canal Zone's VP-2 then will obtain its dozen planes to be delivered in December to the Fleet Air Base, Coco Solo.

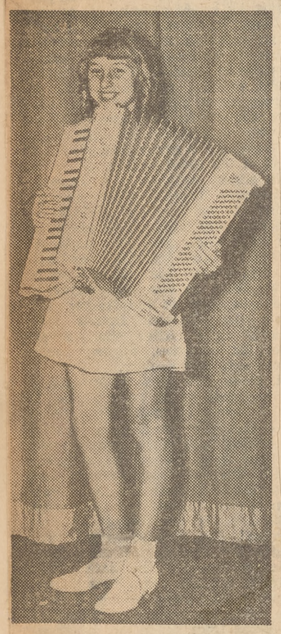
TO ENTERTAIN CONSOLIDATED EMPLOYES TOMORROW NIGHT

C. Z., Lavina, and Chester Sheppherd, whose lively music will be a feature of the big free Consolidated employes' show tomorrow night in the Ford bowl, Balboa park.



Mary Adele Trushinski, accordionist and singer, who will entertain.

AMATEUR TALENT TO BE HEADLINED AT BOWL SHOW

Consolidated employes' big free show tomorrow night at 7:30 in the Ford bowl, Balboa park, promises to be one of the most surprising demonstrations of amateur talent ever seen in San Diego, Donald Frye, Consair personnel director, said yesterday.

The show, which is a pre-Community Chest campaign gesture, will include 27 unusual acts. Each act is a tribute to the untiring work of Les Crawford and his committee, Frye said.

A one-string violin solo with the violinist wearing boxing gloves, an acrobatic dance by a young woman who, balanced on her elbows, drinks from a glass held in her feet, a solo by a former Russian opera singer, as well as several surprise acts are planned, Frye added.

PUBLIC INVITED TO PARK SHOW OF AIR FIRM

S. D. TRIBUNE 9/29/37

Donald Frye, personnel director of Consolidated Aircraft Corp., today announced a big free amateur show of Consolidated talent totaling approximately 30 acts to be given for the public Friday at 7:30 p. m. in the Ford bowl in Balboa park.

"It was suggested several weeks ago," Frye stated, "that our private amateur show recently staged for employes only, would be a fitting gesture on behalf of Consolidated employes to express our accord with the coming Community Chest campaign and the idea won the approval of Maj. Fleet. Since then we have uncovered a large number of good entertainers within our ranks and these have been marshaled into one gala show under the direction of Les Crawford, who will be master of ceremonies. Many persons are unacquainted with the fact that Consolidated for some time has boasted a 30-piece band, a full hillbilly band, a former Russian grand opera singer, several experienced radio and stage performers, together with a Swedish choir, Scotch bagpipes, dancers and soloists of both voice and instruments and many other performers.

"While this show is an expression of cooperation with the Community Chest campaign on behalf of Consolidated employes, it was the expressed wish of those contributing their time and talents to the free show that no solicitation of funds be made. Therefore it was decided to hold the show Friday night preceding the official opening of the chest campaign and the show will be free in every respect. Through the courtesy of Walter Church, a loudspeaker system will be installed.

SOVIET BUILDS WAR AIRCRAFT OF U. S. DESIGN

Mass Production Of Big Bombers And Scouts To Start Soon

S. D. Sun 9/29/37

By NORMAN B. DEUEL

MOSCOW, Sept. 28. — Should the Soviet Union ever be forced to go to war, American designing and American technique in manufacturing will play a large part in the performance of the vast red air fleet.

While producing excellent types of pursuit and bombing planes, largely using American type motors such as the Wright Whirlwind, built under license, within a year it is expected mass production will begin on Soviet production of the American Vultee bomber.

This single-motored, high speed ship will be manufactured in a huge plant near Moscow, expected far to exceed the capacity of the Vultee plant at Santa Monica, Calif.

Vultee engineers are supervising construction of the plant under a reported $1,000,000 contract.

To Build Flying Boats

Similarly, near the Azev Sea, 15 American engineers of the Consolidated Aircraft Corporation of San Diego, are arranging construction of a plant to manufacture flying boats.

Estimates of present Soviet military planes in use range from 3000 to 5000. Probably both figures are more or less correct, depending upon whether obsolete types are included.

These figures may be obsolete even now, since mass production of airplanes as organized under the Commissariat of Defense Industry has at least potentially the capability of enormous production.

Corps Commander V. V. Khripin, second in command of the Soviet air fleet, boasted last January that "by its numbers, quality of equipment and military training of personnel, by its unity and readiness for self-sacrifice, is the most powerful in comparison with any air fleet of any capitalist country."

1936 First Big Year

He declared that during the first 10 months of 1936, in comparison with the same months of 1935, the production of Soviet airplane factories "almost doubled."

Production of airplane motors, according to Khirpin, increased 46 per cent during the same period.

As to personnel, Khirpin said: "If in Germany, Goering announced a slogan of training 70,000 pilots, then we must have more than 100,000 pilots. This is not a fantastic figure, but is supported by realistic possibilities. We are going to fulfill this program as successfully as we have dealt with training of personnel up to now."

Bombers Of Latest Type

Comparison of the types of ships with May 1, 1936, revealed a concentration on bombers of a modern type. In 1936, out of a total of 755 planes, there were 30 very fast, highly maneuverable two-motored bombers.

In 1937, out of 801 planes, these fast bombers numbered 136. Fast pursuit planes exhibited, however, decreased from 375 to 260, the difference and any built during the year apparently having been diverted to other celebrations or kept on the ground.

The Soviet air force numbers probably 200 huge four-motored bombers, vulnerable to attack by faster planes, but of the type used to land 1200 men, 150 machine guns and 18 light field guns behind "enemy lines" during maneuvers last fall.

The fast pursuit planes have not been seen close at hand by foreigners in Russia. Apparently of this type, however, Soviet planes seen in Spain caused astonishment by their performance and armament. They are equipped with two machine guns firing from the wings, operated by the pilot touching a button, a machine gun firing from the tail and a two-inch cannon firing through the plane's propeller.

AIR YACHT IS PLANNED

S.D. TIMES 9/19/37

Consolidated to Convert Navy Bombing Plane For Private Use

SAN DIEGO.

FOLLOWING experience gained from numerous successful long-distance flights over water and land, the Consolidated Aircraft Corporation has completed plans to modify one of its most formidable military planes for private and commercial use as an aerial yacht, according to C. A. Van Dusen, vice president of the corporation.

The original consolidated design, known as the Navy PBY 1, has a range of 4,000 miles when outfitted especially for long distances. The military merits of the flying boat were first demonstrated in squadron formation flights from San Diego, Calif., to Hawaii, about 2,400 miles. Other noteworthy demonstrations followed.

Application of the design to commercial use was decided shortly after Richard Archbold, 30-year-old research associate of the American Museum of Natural History, last June made his epochal flight from San Diego to New York in a Consolidated "airboat"—the first nonstop hop of a flying boat across the United States.

"Airboat" Practical Over Land

Archbold's trip demonstrated the practicability of flying an "airboat" across vast stretches of land. The cruising range of the boat and the dependability of its two 1,000-horsepower Pratt & Whitney engines reduced to a great extent the element of risk.

The young explorer, who is personally financing an expedition to New Guinea, has, since his transcontinental flight, permitted the Russian Government to acquire the boat for the use of a party headed by Sir Hubert Wilkins to search for the Russian fliers lost in the Arctic. Consolidated is now building a new boat for Archbold which will be used by him this Winter in his expedition to New Guinea.

Originallly designed as a military bomber, recently altered to fit Archbold's needs of a flying laboratory, a further design developed from the PBY now is being prepared for its third usage—that of the air yacht, to cruise at sea or over land to remote lakes and rivers.

Will Carry Twenty Passengers

The heretofore plain hull, used for military purposes to house a bombing crew, is to be transformed to contain sleeping quarters, complete galley and cocktail lounge, lavatories with hot and cold running water, stowage space for hunting, fishing and other sports equipment.

Ample room for twenty persons, besides a four-man crew, is to be provided for daytime flights, and at night accommodations are available for six passengers, crew of four and steward. There are comfortable overstuffed divans which may easily be changed into berths and an interplane telephone.

The original military purpose of the PBY-1 has caused to be built into it not only seaworthiness but the ability to make high speed. The "airboat's" top cruising speed is to be 150 miles an hour with full load. Climb and take-off ability is such that the plane can be used in small harbors and rivers as well as at scheduled airway terminals. And at the end of a flight the yacht may be anchored in a lake or bay and used as living quarters.

AIRCRAFT TALENT TO HELP CHARITY IN SHOW TONIGHT

Everything is in readiness for the Consolidated Aircraft employes' free amateur show in the Balboa park Ford bowl starting at 7:30 tonight, according to Les Crawford, master of ceremonies for the gala event.

"Never before to our knowledge," Crawford said, "has a show of this kind been staged anywhere else equalling either the magnitude or the talent which it is our good fortune to be able to present free to the public as a send-off gesture on the part of Consolidated Aircraft for the coming Community Chest and Red Cross campaign.

From our Nicholas Tuevensky, who formerly was a singer with the Russian Grand Opera company to the diminutive 5-year-old tap dancer, Donna Sweeting, and from the hula dancer to the boxing-gloved violin player, we have an exceptional array of talent, and we believe those attending will agree.

"While this is a gesture of cooperation with the coming Community Chest campaign on the part of Consolidated Aircraft employes, it is to be clearly understood," Crawford continued, "that the entertainment presented is absoluately free and that there will be no direct solicitation of contributions. This is in accordance with the expressed wish of the entertainers who have so generously contributed their time and talent."

Selections played by the 30-piece Consolidated band will open the program.

Featured artists include: Bernardine Roese, Noble Crawford, Norman Robertson, Al Tyler, Cottie Doig, Archibald MacKellar, Mrs. Doig, Jeannette MacKellar, Kelman Aiken, Lavina Sheppherd, Donna Sweeting, Catherine and Margaret Phipps, Earnie Hodgson, Marie Luppke, Charlie Tailer, Al Nelson, Gus Granstedt, Bill Maloney, Gus Johnson, Petrus Carlson, A. Vinje, Ed Reese, Nicholas Tuevensky, C. R. Brady and his hill-billy band, Louise Richards, the Sheppherd trio, Mr. and Mrs. Roese, Mr. and Mrs. Woodhead, Bill Stutzke and his male chorus, Mary Adelle Trushinski, Helen Pali and Les Crawford, Lillian Greibner and Bill Ogden, Elinor Gibbs, Dick Bartlett, and John Holloway.

Members of the band, under the direction of Charles Sproull, include, John Curtis, secretary-treasurer, and Chester Sheppherd, John Woodhead, Leroy Buerger, John Hammet, Charles Spear, Andrew Wade, Albert Duncan, Gordon Seely, Hugh Watkins, Nicholas Maisheff, Adrian Kimble, Howard Kraft, John Hodgson, Talley B. Hill, Roy Harshbarger, Emmett W. Clark, Thomas Sutton, Gerald Morey, Douglas B. Clark, Louis Brown, Ed Wade, Ross Plumb, Donald Eby, Alfred Woener, Harold Hastings, DeWitt Etchings, Fred Brady, Joseph Bell, Randolf Woods, W. J. Liddicoat and Alvin Licht.

AMATEURS PRIMED FOR BIG NIGHT IN FORD BOWL

Makes Friendly Call On S. D.

Sir Hubert Wilkins, Arctic explorer, shown at left on his arrival in San Diego this morning, being greeted by Richard Archbold, whose Consolidated-built plane Wilkins used in his recent futile search for five missing Russian aviators in the far north.

☼ ☼ ☼

Sir Hubert Wilkins In S. D.; Visits Consair Officials

(Continued from Page 1)

Lockheed Electra, the one flown round trip across the Atlantic recently," he said. "My trip to San Diego is merely to renew acquaintances with Consolidated officials and to see my friend Mr. Archbold.

"In about two to three weeks, the ice in the far north will be packed solidly enough to enable use of a ski-equipped plane. We have not given up hope that the Russian fliers are alive.

"We flew the Consolidated airboat purchased by the Soviet government from Mr. Archbold for 20,000 miles over the Arctic, and it performed splendidly. It is now in New York in possession of Russian officials. I have no idea what they are planning to do with it."

Wilkins recalled that when he used Fokker planes in his Arctic exploration 10 to 12 years ago, he first met Consolidated's Edgar Gott, then an aide of Anthony Fokker.

The Arctic explorer will return to Los Angeles tonight, he said.

Sir Hubert Pays Visit To Consair

Explorer Plans Return To Arctic Hunt For Soviet Fliers

S.D. Sun 10/4/37

"Just to pay a friendly visit" to Consolidated Aircraft Co. officials, Sir Hubert Wilkins, the noted Arctic explorer, arrived in San Diego from Los Angeles today by plane.

At Lindbergh Field to greet him this morning were Richard Archbold, research associate of the American Museum of Natural History, whose Consolidated-built airboat Wilkins piloted over northern ice fields in search of five missing Russian aviators; Edgar Gott and Frank Learman Jr., assistants to the president at Consolidated Aircraft Corp., and I. M. Laddon, Consolidated chief engineer.

Wilkins is planning to return to the Arctic tundra to continue his hunt for the Soviet airmen in a plane equipped with skis for landing on ice.

"I have in mind Dick Merrill's

CONSOLIDATED OFFERS CHEST SHOW TONIGHT

Sproull Directs Band For Goodwill Program By Aircraft Corp.

The complete Consolidated band, composed of employes of Consolidated Aircraft Corp., will open the outdoor amateur show in the Ford Bowl, Balboa Park, at 7:30 p. m. today, in a goodwill gesture by the employes toward the coming Community Chest-Red Cross drive.

The program will be free to the public.

After the band opens the program, there will be a wide range of specialty numbers presented by employes. Donna Sweeting, five-year-old tap dancer, and Nicholas Tuevensky, former Russian Grand Opera singer, will be two of the performers.

Sproull Directs

Charles Sproull will direct the band, composed of the following Consair employes: John Curtis, secretary-treasurer, and Chester Sheppherd, John Woodhead, Leroy Buerger, John Hammet, Charles Spear, Andrew Wade, Albert Duncan, Gordon Seely, Hugh Watkins, Nicholas Maisheff, Adrain Kimble, Howard Kraft, John Hodgson, Talley B. Hill, Roy Harshbarger, Emmett W. Clark, Thomas Sutton, Gerald Morey, Douglas B. Clark, Louis Brown, Ed Wade, Ross Plumb, Donald Eby, Alfred Woener, Harold Hastings, DeWitt Etchings, Fred Brady, Joseph Bell, Randolf Woods, W. J. Liddicoat and Alvin Licht.

Featured Artists

The featured artists include: Bernardine Roese, Noble Crawford, Norman Robertson, Al Tyler, Scottie Doig, Archabold MacKellar, Mrs. Doig, Jeanette MacKellar, Kelman Aiken, Lavina Sheppherd, Donna Sweeting, Catherine and Margaret Phipps, Earnie Hodgson, Marie Luppke, Charlie Tailer, Al Nelson, Gus Granstedt, Bill Maloney, Gus Johnson, Petrus Carlson, A. Vinje, Ed Reese, Nicholas Tuevesky, C. R. Brady and his Hillbilly Band, Louise Richards, the Sheppherd trio, Mr. and Mrs. Roese, Mr. and Mrs. Woodhead, Bill Stutzke and his male chorus, Mary Adelle Trushinski Helen Pali and Les Crawford, Lillian Greibner and Bill Ogden, Elinor Gibbs, Dick Bartlett and John Holloway.

Am. Aviation 9/1/37

Consolidated Lays Off 200 Workers

Shortage of Materials and Lack of New Business Blamed; Union Officials Suspended

San Diego, Aug. 20.—Consolidated Aircraft Corp. has laid off some 200 employees with the prospect that more will be let out shortly. In a notice to employees, Reuben H. Fleet, president, said, "Because of shortages of material due to strikes in the east, other delays beyond our control, and lack of new business, it is necesary to reduce personnel materially."

To lessen lay-offs and distribute work, Mr. Fleet said the company had decided to reduce hours and schedules as follows: The third shift will be discontinued; the remaining night shift will be discontinued except for the machine and paint shops and necessary janitors, watchmen and maintenance men; regular 40-hour work week will be followed on both remaining shifts; Saturday work and all overtime schedules (salary and hourly) will be discontinued; partially to make up for loss of overtime pay, there will be added to present rates 5¢ per hour to all hourly employees, plus 5¢ per hour when employed on the night shift, and 5% to the five day base pay of all salary employees (except those on executive payroll).

Previous to the notice, Aircraft Lodge No. 1125, International Association of Machinists, had asked for a 10% increase in wages, a 48-hour week, seniority rights as applicable to layoffs, a shop steward system, closed shop, and no minors or students hired during layoff periods.

Following posting of the lay-off notice, the lodge filed a protest with the company, stating that it was the union's undertanding that it was to be given advance notice of changes and to cooperate with the company in such matters. The union also protested against the company's delay in answering its first letter.

In reply, Mr. Fleet said he had received a letter from C. L. Bentley, Grand Lodge Representative of the International Association of Machinists giving notice that the officers of Lodge 1125 had been suspended under provisions of the constitution of the organization and that the management could henceforth "govern itself in accordance." Mr. Fleet also added the following:

"Would it be in order for us to inquire whether your letter was June 23, 1937 to Admiral King making certain charges against us (unfortunately right at a time when our bid for PBY-4's is under consideration) was directed by your Lodge, or by some committee or written upon your own initiative?" Mr. Fleet's reply was addressed to George R. Smith, recording secretary of the lodge. No other mention of the "letter to Admiral King" has been made.

Western Flying 9/37

PBY-1 adapted for commerce

Consolidated plans commercial version of long range patrol boat.

In anticipation of the export release on the PBY-1 series flying boats, Consolidated Aircraft Corporation is preparing plans for the commercial conversion of the long distance Navy patrol boat. The boat was released by the Navy for domestic commercial use in January this year, but, even for commercial use, the boat is restricted from export until November 1, this year. The release of the military version of the boat will not be made until after the completion of all the PBY types now on order, which will be about May 1, 1938.

The commercial version of the PBY-1 will be a 24-passenger boat similar to the Commodore, but greatly improved in performance characteristics. Because of present restrictions, neither performance data nor weight data can be released on any version of the PBY series.

New factory in Los Angeles

Hlobil heads new concern for building of military aircraft.

Announcement was made near the end of August of plans for the construction of an aircraft factory near Los Angeles by the newly formed Lobil Aircraft Corporation. Joseph S. J. Hlobil, formerly of the Consolidated engineering staff, heads the new organization with directors listed as Charles T. Leigh, vice-president of Consolidated Aircraft Corporation; E. J. Rivers of North American Aviation Corp.; Gregory M. Creutz and E. J. Dickson.

Data as to location of the plant and other details has been withheld until plans have been completed. Hlobil stated, however, that the firm will concentrate on military craft and that work on the first experimental plane would start within the next several weeks. Production is scheduled to start in six months.

Six Alive, Belief

SIR HUBERT WILKINS

Sigismund Levaneffsky, "the Russian Lindbergh, and his five transpolar flying companions probably still live somewhere on the Arctic wastes, if they brought their big transport plane to a safe landing, Sir Hubert Wilkins, the explorer, said here today.

Wilkins, returning to New York after a month's daring search by air for the missing Russian fliers, stopped in San Diego today to confer with Consolidated Aircraft Corp. officials and Richard Archbold, American Museum of Natural

(Continued on Page 6-A, Col. 2)

'SIX STILL ALIVE,' IS WILKINS' BELIEF

CONTINUED FROM PAGE ONE

History scientist, whose Consolidated-built plane he used in the Arctic hunt.

Interrupting himself with repeated praises for the San Diego plane, a commercial version of Consolidated's big navy patrol planes, Wilkins told of the dramatic search for the Russians, still going on, and of the strong possibility that the six missing men are still alive.

Enough for 10 Weeks

"They carried a six-weeks food supply," the explorer recounted. "By conserving this, as they surely would under the circumstances, it could be stretched to cover 10 weeks. That would carry them until now, and at this season they should be able to live indefinitely upon the seals and polar bears they could take."

The Russian government, he said, still is continuing the search. Although it is uncertain whether it will be conducted from the Russian or American side of the pole later, Wilkins added, he voluntarily is making a survey here and elsewhere to see what flying equipment is available in this country for the search and will turn the information over to the Russian embassy for use in event American equipment is desired.

The one-month search by Wilkins and his companions itself added an epic to aviation annals.

Obviously speaking in praise of his plane and his companions rather than in boast, although he personally handled the difficult job of navigating on the search, Wilkins revealed that the San Diego-built plane roared through arctic fog and storm for an equivalent of six transpolar flights last month. He and his companions flew 19,000 miles, 12,000 of them over the arctic ice and water. Prior to that time, only three transpolar flights had been made—two by Russians just prior to Levaneffsky's attempt, and Wilkins' own in 1928.

"That," the explorer said, "is a tribute to our plane and my companions."

Explorer's Paradise

"That plane," he said, "is the finest job I've ever flown. It's an explorer's paradise. Neither motors nor plane faltered once. We flew under the worst possible conditions, through fog and storm, through what the forecasters called 'frozen drizzle,' a sleet that creates hazardous iceing conditions. Fifty percent of our flying was in weather which would have brought orders to ground a plane on any commercial air line.

"We carried tremendous loads—six weeks' food supply, tackles and fathoms of rope for handling the plane in event we had to land on water aand haul it onto the ice, rifles, tents, sleds, all in addition to heavy gasoline and oil loads.

"Yes, an explorer's paradise, that plane. Why, for all but seven of the 36 days we spent on the trip after leaving New York, we even slept, cooked and ate in the plane.

"I came down here," he said, "particularly to tell Maj. Fleet and the others how we felt about that plane."

Traveling by commercial airline, Wilkins expected to leave for New York this evening.

With him on the arctic search were two pilots, Herbert Hollick-Kenyon, who was with Lincoln Ellsworth on his antarctic flight; Al Cheesman, who was with Wilkins on his 1929 antarctic flight of discovery; Jerry Brown, engineer, and Ray Booth, radio operator, the latter two loaned for the search by Archbold. They took the plane on to New York ahead of Wilkins.

Wilkins conferred here with Maj. Rueben H. Fleet, president-manager of Consolidated; Archbold; I. M. Laddon, vice president and chief engineer of Consolidated, and Edgar N. Gott, assistant to Fleet.

Flying Radio Base to Follow Explorers in Wilds of New Guinea

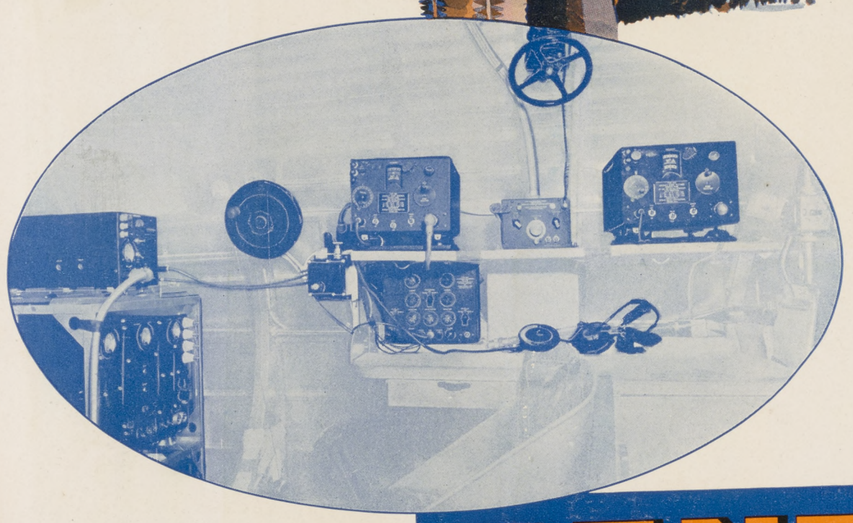
AERO Digest 9/37

Richard Archbold—American Museum of Natural History Expedition is Equipped With BENDIX Radio Apparatus

Into the interior of unexplored New Guinea, Richard Archbold goes equipped with modern science's latest devices. Bendix has installed complete radio transmitting, receiving, direction finding and interior communication equipment in the large Consolidated PBY-1 Plane to be used on this flight, as well as two portable sets used by the ground parties. The plane will transport the exploring parties to this Malay island, and there act as an air base while the expedition heads into the interior. The party is expected to start some time this year.

Bendix Radio Aids Plane in Locating Parties to Drop Supplies

Each of the two ground parties will have portable Bendix Radio equipment consisting of a small transmitter, a small receiver and a gasoline motor-driven generator to furnish transmitting power. The parties will thus keep in constant contact with the plane. By use of Bendix radio equipment the plane will be able to locate the position of the parties and drop supplies as needed.



Interior View of Bendix Radio Equipment in the Archbold Consolidated PBY-1 Plane

BIG SHIPS

Five of the big planes which American factories are building for foreign trade. From top to bottom: The PBY-1 patrol and bomber, built by Consolidated Aircraft Corporation at San Diego; next, BT-32-A bomber built by Curtiss-Wright, at St. Louis, Mo.; next the S-42-D clipper, transport, built by Sikorsky at Bridgeport, Conn.; next, the Sikorsky S-43 amphibion, now in use by the U. S. Navy, and at bottom the bomber built by Martin at Baltimore. All of these planes are available for export.

EXPLORER PRAISES SAN DIEGO-MADE PLANE

S.D. Ut Reb Bune 10/5/37

They talked about planes, said Sir Hubert Wilkins. The explorer, left, told Maj. Reuben H. Fleet, president-manager of San Diego's Consolidated Aircraft Corp.: "That one is the finest job I have ever flown." Back from his search for the missing Russian transpolar fliers, who he believes may be alive yet in the arctic wastes, Wilkins conferred here yesterday with Consolidated officials and Lt. Comdr. Lloyd R. Gray, U. S. N., retired, operator of a navigation school here, returning to New York last night. On his search Wilkins used a Consolidated flying boat of the type soaring above San Diego in the photograph on the wall.

DOCKWEILER PLEDGES HELP FOR LOCAL HARBOR PROJECTS

S.D. Union 10/8/37

A promise that as a member of the naval appropriations committee he would lend every assistance in obtaining sufficient funds to complete San Diego's ambitious $4,185,000 dredging program at the coming session of congress was made to chamber of commerce board of directors yesterday by Rep. John F. Dockweiler of the 16th congressional district.

"I want to assure you I will use my influence as a ranking member of this committee to have the army engineers set aside the $4,000,000 harbor dredging appropriation out of the $170,000,000 that congress annually appropriates for rivers and harbors improvements," said Dockweiler.

Declaring that during his five years in congress he has been a staunch advocate of adequate national defense, Dockweiler said the war department appropriation of $3,800,000 for improving defenses of the Pacific coast in the current fiscal year will apply in part to strengthening the present equipment at Ft. Rosecrans. Over a period of five years, Dockweiler explained, a total of $15,000,000 will be made available for improving the defenses of various Pacific coast ports, including San Diego.

He asserted the Consolidated Aircraft Corp. plant at Lindbergh field was one of the finest in the U. S. He said 80 percent of all military and naval aircraft is manufactured on the Pacific coast, that $30,000,000 is set aside annually for military and naval aircraft replacement and

(Continued on Page 3, Col. 4)

DOCKWEILER AIDS HARBOR PROJECTS

(Continued from Page One)

assured San Diegans Consolidated need not worry about sufficient contracts to keep it operating.

Dockweiler declared that although congress passed legislation authorizing a six percent differential in favor of Pacific coast shipbuilders, thus placing them on a parity with eastern yards, not a single coast firm has thus far exhibited any interest in seeking contracts for the 35 new liners, freighters and tankers to be built for the merchant marine next year. He said he has consulted with officials of the New York Shipbuilding & Drydock Co., and the plant at Newport News with the object of inducing them to establish branch plants in California.

Dockweiler further pledged his aid in getting appropriations for proposed additions to San Diego's naval shore establishments, including a naval armory. "Completion of these improvements will solidify San Diego's position as a great naval operating port with the authorities in Washington," he said.

The chamber directors voiced their appreciation to Dockweiler for the unqualified support he has given San Diego's congressional representatives in Washington and on all local projects connected with national defense.

SAN DIEGO FIRMS GET LARGE SHARE OF PLANE ORDERS

S. D. Union 10/7/37

Southland Production at Peak; Unfilled Contracts Here Total $13,400,000.

Unfilled plane orders of two San Diego airplane manufacturers totaling $13,450,000 yesterday was a large part of the $63,000,000 "boom" in aviation production in southern California.

Manufacture of airplanes and spare parts is at the highest level of the industry's history in southern California, The Associated Press reported.

Consolidated Aircraft Corp. reported unfilled orders totaled $13,000,000, principally for navy patrol planes.

T. Claude Ryan, Ryan Aeronautical Co. president, announced closing of a contract for an unnamed number of Ryan military training planes for the Mexican government. The order is for planes and spare parts

(Continued on Page 2, Col. 7)

SAN DIEGO SHARES IN AIRCRAFT BOOM

(Continued from Page One)

and is in excess of $50,000, he said. Unfilled orders at the Ryan factory total more than $350,000, highest figure in its history, Ryan reported.

Half the total of southern California's aviation business is for army and navy planes. Some factories are working three shifts a day.

Douglas Aircraft company, Santa Monica, has $35,000,000 in orders and North American Aviation, Inglewood, $9,200,000, including a war department order for 34 basic training planes costing $411,500.

Lockheed Aircraft Corp., Burbank, has just filled a $115,000 order for two transport planes for Venezuela and is working on orders for 15 other commercial planes.

Three million dollars of unfilled orders are on the program of the Vultee Aircraft company at Downey.

Menasco Manufacturing company, Burbank, producer of plane engines, has just signed a contract to supply motors for a new type amphibian plane to be marketed in New York.

OPENED by a record breaking transcontinental race in the Bendix and climaxed by a thrilling camera finish on the last day in the Thompson Trophy, the National Air Races held the spotlight in national sport events September 3, 4, 5 and 6 and offered the spectators at Cleveland the biggest show in the history of the national air classic.

The Bendix, Greve and Thompson Trophy races all recorded the most competitive entry list experienced by these events although, as usual, falling a bit short of previous expectation. The program was well run with excellent balance in aerobatic events and the usual outstanding contributions from the military services.

Eminently successful from the point of box-office attraction for the general public, it was just another Henderson show to the more sophisticated follower of aeronautical events, run a little more smoothly in several departments, containing a couple of new events among a number of old, but good acts, and displaying new equipment and surprises in a number of feature races.

The 1937 National Air Races were officially opened early Friday morning when the first of the contestants entered in the grueling Bendix transcontinental were flagged out of Union Air Terminal in Burbank, California. Jacqueline Cochran, in her Beechcraft, was the first to arrive in Cleveland. She took third in the elapsed time of 10:29:08.70, averaging 194.74 m.p.h., and won first place money for women entrants. Frank Fuller, in his Seversky sport plane, was the next contestant to arrive from the coast. He crossed the finish line for first place in the record time of 7:54:26.31, averaging 258.242 m.p.h., and then continued to Bendix, N. J. to establish a new Bendix transcontinental record of 9:35, an average speed of 255.631 m.p.h.

A REPORT received from the National Air Race management just prior to going to press gives the attendance figures for 1937 as 170,717. Net ticket sales were $262,548.16, and other income $70,396.88, for a total of $332,945.04. Total expenses were $272,257.90, leaving a net for 1937 of $60,684.14.

Eiler Sundorph, in his Sundorph Special, was the next to roar in from the west but placed sixth in elapsed time. Sonny brought the crowd to its feet as his wing displayed remarkable flexibility in a terrific wing flutter that set up immediately in front of the stands. Ten minutes later Milo Burcham crossed the finish line in a Lockheed to place fifth in elapsed time. Less than 19 minutes before the arrival deadline of six o'clock, Frank Sinclair arrived in his Seversky to beat Burcham out of fourth place by less than two minutes.

With less than 11 minutes to go until deadline, Earl Ortman squeezed in to take second place. Ortman flew his modified Keith Rider at an average speed of 224.833, making the flight in 9:49:21.75. It is understood that during the last leg of the flight into Cleveland, Ortman ran into tough weather and while attempting to get around it

picked-up by the excitement of the with a probability of further in- September 1 and September 2.

No. 5 DERDE JAARGANG VRIJDAG 17 SEPTEMBER 1937

Richard Mock (Fokker's representative at Douglas) has been informed of the feature story on PBY-1s in this issue. Jeee

third place, sneaked-up on Ortman and outfoxed him. Both pilots thought that Roscoe and Wittman were still leading them.

The Amelia Earhart Memorial Race, the women's A. T. C. handicap race, was won by Gladys O'Donnell in a Ryan and Art Chester won the Consolation Race. The C. G. Taylor Light Plane Derby, a new feature held the first day of the races, was won by E. H. Spiller, flying a Taylor-Young.

Count Otto's act

Star performer among the group of excellent aerobatic acts was the German, Count Otto Von Hagenburg. Von Hagenburg's act was a grandstand act superb, frightening the cash customers to their complete enjoyment. Inverted antics at an altitude above the ground measured in inches terminated in a spectacular crash the first day of the races. At the end of one of his dashes across the field in an inverted position, Hagenburg pushed forward on his controls to climb and was so close to the ground that his tail scraped. It bounced, bringing his nose down, and the plane was on the ground, skidding to an abrupt stop in the inverted position. The incomplete failure of the upper center section of the little biplane was evidently responsible for the saving of the stunt pilot's life, for he emerged with nothing but a few severe scratches.

Papana's flying was at its best, Tex Rankin was good, but has done better, Dick Granere staged his old, but still popular, act of crazy flying

Who won the money. (For race results, see Page 14.)

Summary of Prize Money Won by Contestants

Rudy A. Kling	$14,400.00
Frank Fuller	13,300.00
Earl Ortman	10,900.00
S. J. Wittman	10,175.00
Jacqueline Cochran	5,500.00
William Zeiger (P. Sinclair)	5,375.00
Air Industries Inc. (R. D. Hall)	4,900.00
Roscoe Turner	3,800.00
Art Chester	2,525.00
Wm. Schoenfeldt (C. H. Gotch)	2,350.00
Marion McKeen	1,250.00
P. C. Hall (Milo Burchum)	1,000.00
C. W. Whittenbeck	1,050.00
Gladys O'Donnell	450.00
R. A. Armstrong (C. McArthur)	300.00
Joe Jacobson (Betty Browning)	250.00
McKeen-Haines (Frank Haines)	200.00
Edna Gardner	150.00
Amelia Gipson	100.00
Dorothy Munro	50.00
	$76,425.00

C. G. Taylor Light Plane Derby Prizes

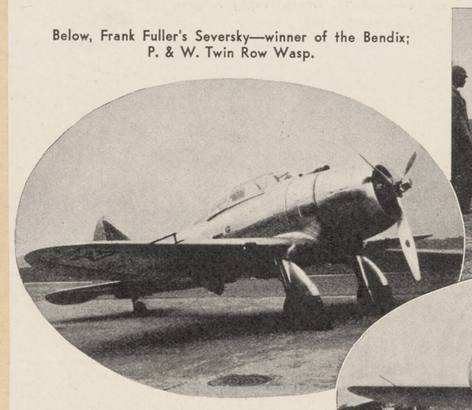
H. H. Spiller	$ 150.00
W. Graham	100.00
H. Carl McQuire	75.00
R. H. Bell	60.00
Jack Marchand	55.00

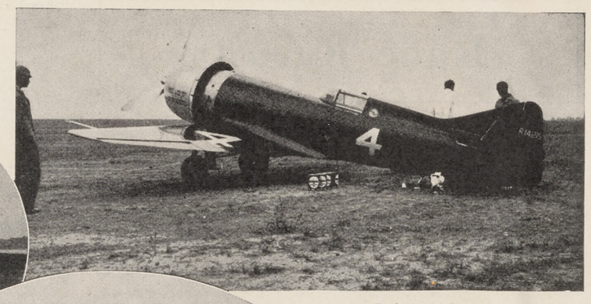
Parachute Jumpers

Shirley Rauner	$ 170.00
Irvin Davis	110.00
Henry Langer	100.00
Leonard Moore	90.00
Earl Stein	90.00
Paul Glinzak	60.00
George DeGrange	50.00
Louis Barr	40.00
Buddy Batzel	30.00
Bob O'Dell	30.00
Al Griffin	20.00
Verne Stewart	20.00
M. J. Burson	10.00
Harry Rafferberger	10.00
E. C. Kelley	10.00
	$ 800.00

TOTAL PRIZE MONEY PAID	$77,885.00
Adele Dill	60.00
J. R. McLester	45.00
L. R. Burlong	25.00
D. D. Fryo	40.00
W. Kenyon	10.00
C. A. Dixon	10.00
Ione Coppedge	10.00
R. L. Stout	10.00
Ario Mahler	10.00
John Jones	10.00
	$ 660.00

Below, Frank Fuller's Seversky—winner of the Bendix; P. & W. Twin Row Wasp.





Earl Ortman's Keith-Rider, P. & W. Twin Row Wasp, Jr.

Right, Roscoe Turner's racer, holder of the American record for 100 kilometers, 289.9 m.p.h.; P. & W. Twin Row Wasp.

mation. In the past the Marines have bombed targets singly in column. This year they dropped out of the sky to the attack in groups of three.

The Army's mass flight consisted of a squadron of eighteen softly purring, two-place Consolidated fighters. During most of the time in the air, the squadron was winding back and forth across the sky in a column of three flights, each flight in column and the three flights flying abreast. As the leader swung back and forth in wide turns, the wing columns crossed over in column.

As a show, the 1937 National Air Races were a success, and financially the gate should show dividends. Dimmed during the early hours of the races by the fatal crack-up of popular Lee Miles during a test flight Thursday, the races were picked-up by the excitement of the Bendix and carried through four days of interesting entertainment without further fatality. The first two days were poor from the standpoint of paid customers with rain adding to the discomfort of those who did attend on Saturday. Sunday saw a big gate and Monday, attendance records were broken. An estimate brought the total paid, unpaid and outside "looker-oners" to a total of over 200,000 persons on the final day. The show offered a fit ceremony with which to initiate Jack Berry's new plant, America's number one airport.

Over $85,000 was available in prize money this year, $77,885 of which was actually paid out. This compares with $63,000 paid out in 1936, a sizable boost, but the 1938 races will see a still greater purse. Already the sum for next year's show has been raised to $102,750 with a probability of further increases, according to reports.

With the announcement of an increase in prize money, the management also announced changes in the 1937 racing plans. Most important of these was a ruling that no plane competing in the Bendix Transcontinental dash would be allowed to compete in the closed course speed events as well. This rule, however, does not apply to pilots, but pilots flying the Bendix must designate an alternate to qualify any additional plane or planes as qualifying trials will be held before Bendix finishers reach Cleveland.

Other important changes in the general program include: reduction to a three day meet instead of four, elimination of racing events for planes in the 397 cu. in. class, elimination of qualifying races and substitution for them of qualifying trials to be held on three days, August 31, September 1 and September 2.

DOCKWEILER PLEDGES HELP FOR LOCAL HARBOR PROJECTS

S.D. Union 10/8/37

A promise that as a member of the naval appropriations committee he would lend every assistance in obtaining sufficient funds to complete San Diego's ambitious $4,185,000 dredging program at the coming session of congress was made to chamber of commerce board of directors yesterday by Rep. John F. Dockweiler of the 16th congressional district.

"I want to assure you I will use my influence as a ranking member of this committee to have the army engineers set aside the $4,000,000 harbor dredging appropriation out of the $170,000,000 that congress annually appropriates for rivers and harbors improvements," said Dockweiler.

Declaring that during his five years in congress he has been a staunch advocate of adequate national defense, Dockweiler said the war department appropriation of $3,800,000 for improving defenses of the Pacific coast in the current fiscal year will apply in part to strengthening the present equipment at Ft. Rosecrans. Over a period of five years, Dockweiler explained, a total of $15,000,000 will be made available for improving the defenses of various Pacific coast ports, including San Diego.

He asserted the Consolidated Aircraft Corp. plant at Lindbergh field was one of the finest in the U. S. He said 80 percent of all military and naval aircraft is manufactured on the Pacific coast, that $30,000,000 is set aside annually for military and naval aircraft replacement and

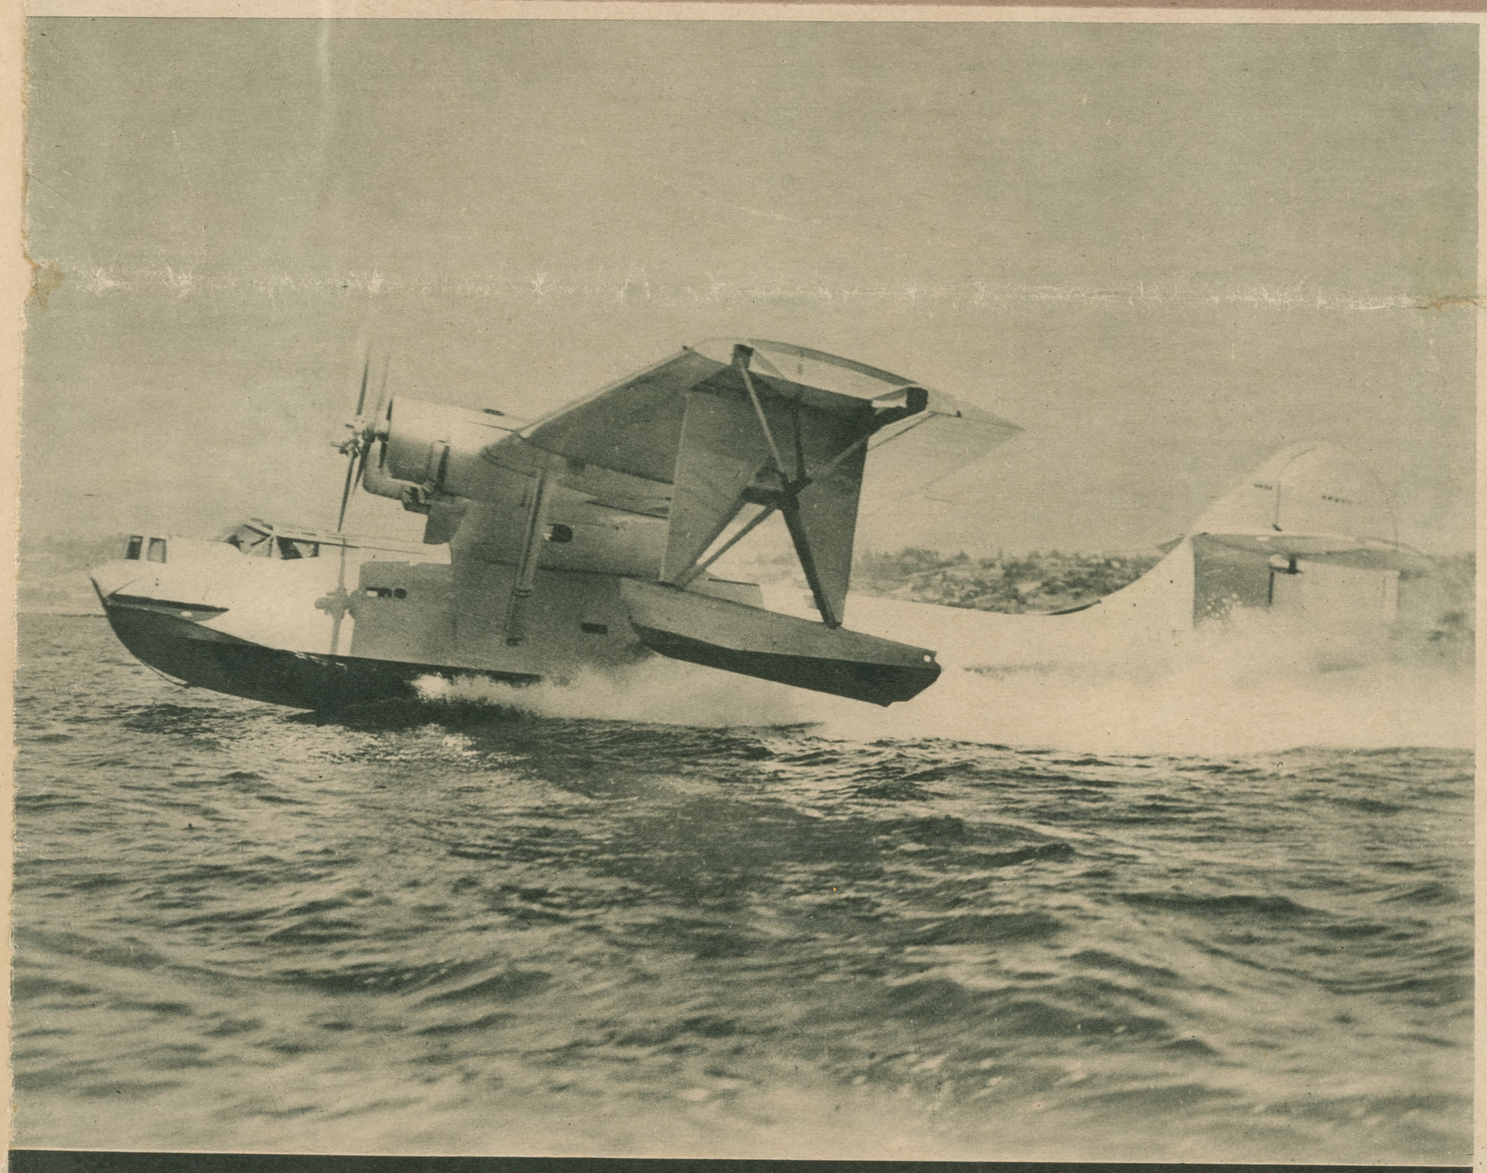
8 CENT

UITGEVERS-MAATSCHAPPIJ „C. MISSET" N.V. DOETINCHEM.



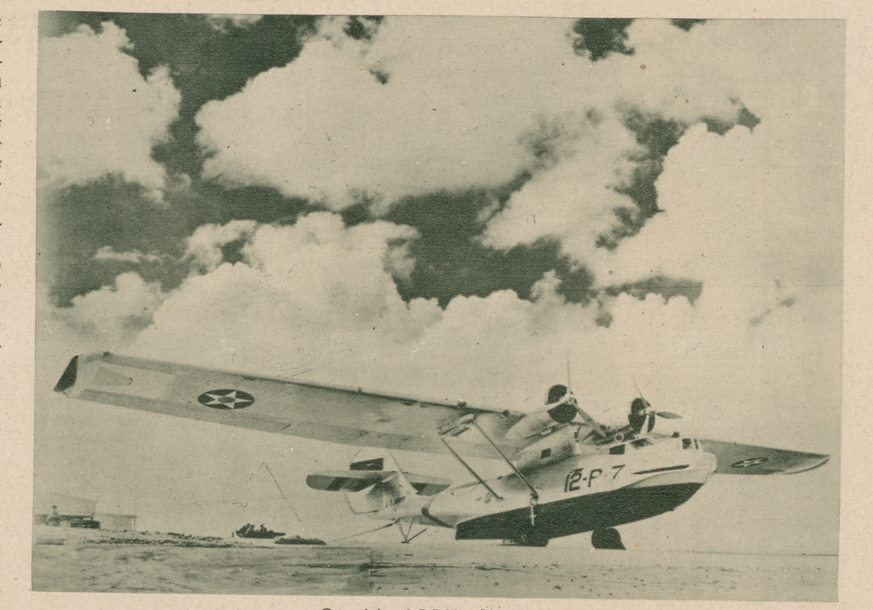
De Consolidated PBY-1 in de start.

De Consolidated PBY-1 marine-vliegboot.

De Consolidated XPBY—I, het prototype der huidige serie, werd gebouwd naar aanleiding van een specificatie der Amerikaansche Marine voor patrouille-vliegbooten en bommenwerpers. De machine werd laat in het voorjaar van 1935 voorgevlogen en de daarop volgende proefvluchten bewezen dermate definitief de goede kwaliteiten van deze boot, dat de Consolidated Aircraft Corporation een order kreeg voor 60 stuks.

Kort daarna verhuisde de fabriek van Buffalo (N.Y.) naar San Diego in Californië, waar een moderne fabriek was gebouwd op het Lindbergh vliegveld aan de San Diego Baai. Niet alleen beschikt men hier over betere faciliteiten dan in de oude fabriek, de nabijheid van het detachement van den Marine Luchtvaartdienst op North Island maakt, dat men uit de eerste hand alle inlichtingen krijgt inzake de verschillende problemen, welke zich voordoen bij het dagelijksch omgaan met groote vliegbooten.

De XPBY—I, welke door de Marine was overgenomen, werd per gewone dienstvlucht van Norfolk (Virginia) naar San Diego gevlogen via het Panama Kanaal. En passant werd een wereldrecord gevestigd door de vlucht van Coco Solo, Panama Kanaal zone, naar Alameda, San Francisco Baai, een afstand van 5541 km, welke de goede kwaliteiten van het type bevestigde. Een tweede en een derde bestelling volgden, waardoor het totaal werd gebracht op niet minder dan 176 PBY—I vliegbooten plus onderdeelen ter waarde van 35 machines, waarmede een totaal bedrag van ruim 19 millioen dollar was gemoeid.



Consolidated P B Y-1 ¾ front.

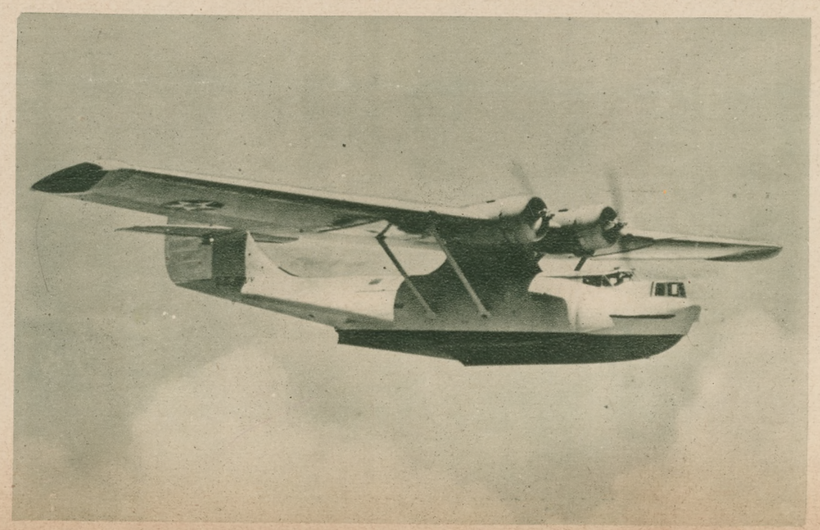
Consolidated P B Y-1 ¾ voor-aanzicht met neergelaten hulpdrijvers, welke in de vlucht de vleugelpunten vormen.

Intusschen is Consolidated geen nieuweling op het gebied van vliegbooten. Reeds in 1928 bouwde men voor de Amerikaansche Marine de XPY—I, de eerste geheel metalen vliegboot. Een commercieele versie hiervan, de „Commodore", werd voor Pan American Airways gebouwd en in de loop van 1929 en 1930 afgeleverd. In totaal kocht Panair 14 stuks dezer booten, welke, hoewel nu zoo langzamerhand verouderd, nog steeds dienst doen op de Zuid-Amerikaansche lijnen. In 1932 bouwde Consolidated 23 P2Y—I patrouille-vliegbooten voor de Marine; dit type was een verdere ontwikkeling van de PY—I en bleek zeer goed te voldoen. De laatste bestelling voor de groote order op de PBY—I was voor 23 stuks P2Y—3 vliegbooten, wederom voor de Amerikaansche Marine. Dit type is meer bekend onder de benaming Consolidated „Ranger" en de Argentijnsche Marine kocht een serie van zes stuks dezer booten.

Na te zijn afgeleverd aan de basis van den Marine Luchtvaartdienst op North Island, wordt iedere PBY—I vliegboot aan een proefvlucht van 24 uur non-stop onderworpen. Het pleit voor het fabrikaat, dat deze proefvluchten tot nu toe alle zonder haperen verliepen. Den 28sten Januari van dit jaar vlogen 12 PBY—I booten, bemand met 80 officieren en minderen, van San Diego naar Pearl Harbor (Honoloeloe) onder commando van den overste William McDade, een vlucht, welke reeds in 1934 was gemaakt door zes P2Y—I vliegbooten onder het commando van majoor McGinnis. Men deed er ditmaal echter vier uur korter over.

Den 13en April werd een tweede escadrille van 12 PBY—I booten van San Diego naar Honoloeloe gezonden, deze keer onder het commando van den overste L. A. Pope en wederom verliep de non-stop-vlucht zonder eenig incident. Een derde dienstvlucht van San Diego naar Coco Solo werd ondernomen door een escadrille van twaalf dezer booten op den 21sten en 22sten Juni van dit jaar, onder het commando van den luitenant ter zee Robert W. Morse, waarbij een nieuw wereldrecord werd gevestigd voor het vliegen in gesloten formatie over een afstand van 4968 km. En op den 24sten Juni j.l. vloog een commercieele versie van de PBY—I, toebehoorende aan Richard Archbold, die verbonden is aan het American Museum of Natural History te New York, non-stop van San Diego Baai naar New York in 17 uur. Bij de landing had men voldoende benzine aan boord voor een vlucht naar St. Johns op New Foundland, naar Puerto Rico in West-Indië of naar de Bermuda-eilanden en terug.

Waar de PBY—I nog steeds op de geheime lijst staat, kunnen gegevens inzake gewichten en prestaties niet worden gepubliceerd en zijn deze slechts beschikbaar voor



Consolidated P B Y-1 ¾ voor-aanzicht in de vlucht.

TRIAL BOARD TO CONDUCT PBY-3 TESTS

70 Airboats Delivered To Navy Squadrons By Consolidated

S.D.-Sun 10/17/37

Consolidated Aircraft Corp. mechanics are preparing the first of 66 PBY-3 type patrol bombers for inspection by a Navy Trial Board, due at North Island within a week, it was revealed at the plant.

The big airboat, most advanced of the three types for which Consolidated has received contracts to construct 176 aircraft, was given its preliminary tests just after it left the final assembly division last week.

Inspect Sikorsky Plane

The Navy Trial Board has been witnessing flights of the big four-motored Sikorsky XPBS at Hampton Roads, Va., during the past week, and will leave for San Diego at the conclusion of these tests.

When the PBY-3 contract for 66 planes is completed next year, Consolidated will have liquidated its entire present backlog of business.

70 Delivered

Of the 176 planes ordered by the Navy from the San Diego aircraft concern, 70 have been delivered to the patrol squadrons. Sixty of these are PBY-1 and 10 are PBY-2 type bombers. The latter group now wear the insignia of Patrol Squadron 11, based at North Island.

PBY-2 type planes will be delivered during the next three months to Squadron VP-2, which will fly 12 on a non-stop hop to the Canal Zone in December, and to Squadron VP-10 of Hawaii, which will "ferry" a similar number of planes across the Pacific early in 1938.

A second group of bids on a PBY-4 type airboat will be opened by the Bureau of Aeronautics late this month, according to reports received here yesterday. Initial estimates submitted by Consolidated and Glenn Martin were considered too steep by the Bureau, which re-advertised for bids. The contract when let will amount to approximately $10,000,000, it is believed.

Western Flying

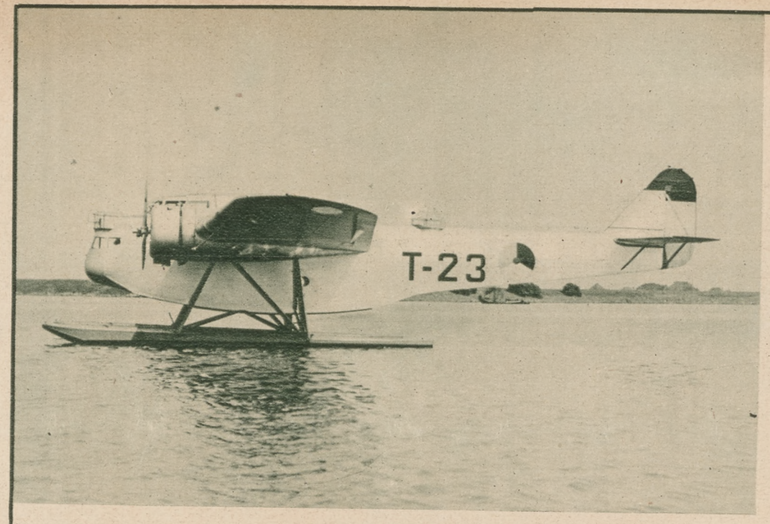
CONSOLIDATED Aircraft Corporation was given permission to contract for the export sale of its military version of the PBY-1 on March 8. This is the first model of the current production flying boat that has received considerable attention because of its use by the Navy in recent mass flights from the mainland to Pearl Harbor. Release of the commercial version of the plane was made December 21, last. 6/37

Archbold to Leave S. D. In January on Air Trip

S.D. Union 10/15

Officials of the American Museum of Natural History yesterday tentatively set January as the take-off date for Richard Archbold's exploration flight from San Diego to New Guinea, The Associated Press reported from Los Angeles. Russell R. Rogers, senior pilot for the museum, arrived there yesterday en route here to inspect the exploration plane, which is under construction at Consolidated Aircraft Corp.'s plant.

FOKKER T. 4

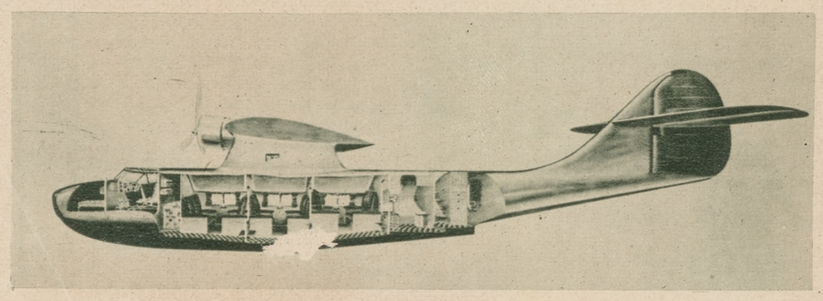


Tweemotorige bommenwerper en lange afstandzeeverkenner op drijvers.

De Fokker T. 4 is in verschillende series geleverd ten behoeve van de Koninklijke Marine voor den dienst in Nederlandsch Indië.

N.V. NEDERLANDSCHE VLIEGTUIGENFABRIEK FOKKER

(Adv.).



Consolidated P B Y-1, uitgevoerd als verkeersvliegtuig voor 24 passagiers en een bemanning van 5 koppen (2 piloten, een marconist, een boordwerktuigkundige en een steward).

serieuze koopers, op voorwaarde, dat zij zich verbinden ze niet openbaar te maken.

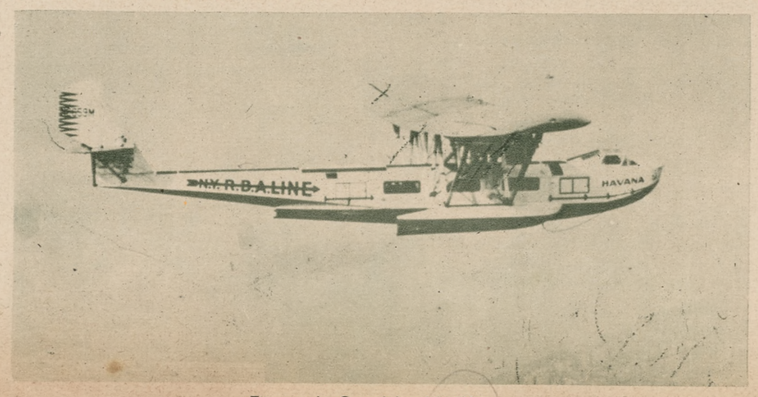
De PBY—I is een geheel metalen hoogdekker-vliegboot met half-vrijdragenden vleugel, gebouwd als lange-afstand zee-verkenner, resp. ook te leveren als lange-afstand verkeersvliegtuig. Twee motoren zijn gemonteerd, n.l. Wright „Cyclone" ofwel Pratt & Whitney „Twin Wasp". Beide types zijn luchtgekoeld en hebben een startvermogen van ruim 1100 pk. De vleugel is bevestigd aan een gestroomlijnde bovenbouw van den romp en tegen den onderkant van den romp afgevangen door vier stijlen. Iedere machine wordt geleverd met een stel losse wielen voor het manoeuvreeren op de steiger en het land.

In het algemeen gesproken is de monocoque constructie voor alle samenstellende deelen, zooals de romp, de hulpdrijvers, de vleugel en de staartvlakken, toegepast, waarbij gebruik gemaakt is van metaalplaat en van getrokken Z en L profielen. Alle lichtmetalen deelen zijn tegen corrosie behandeld voordat de verflaag wordt opgebracht. De uitrusting der machine voor militaire, resp. voor verkeersdoeleinden is zoo geplaatst, dat het zwaartepunt der leege machine op vrijwel dezelfde plaats ligt als dat der geheel geladen machine. In beide gevallen is de stuurhut gesloten en biedt plaats aan twee piloten, naast elkander gezeten, terwijl in den bovenbouw van den romp, waaraan de vleugel is bevestigd, een kleine cabine voor den boord-werktuigkundige is gemaakt.

De vleugel is in drie deelen en de motoren zijn ondergebracht in het middenpaneel, waarin zich ook de benzinetanks bevinden. De hulpdrijvers zijn bevestigd aan de vleugeluiteinden; zij kunnen worden opgetrokken en vormen dan de vleugelpunten. In opgetrokken stand verdwijnen de stijlen in openingen in den onderkant van den vleugel. Tot en met den achtersten ligger is de vleugel bekleed met een dragende lichtmetalen huid, versterkt door getrokken Z-profielen. De vleugel-achterrand wordt gevormd door dural-ribben, met doek bekleed. De ailerons zijn uitgebalanceerd en hebben een licht-metalen geraamte met doek bekleed.

De staartvlakken zijn geheel vrijdragend en bevestigd aan de staartvin, welke één geheel met den romp vormt. Het stabilo- en het kielvlak hebben een licht-metalen geraamte, dat bekleed is met een gladde lichtmetalen huid, versterkt door getrokken profielen. De roervlakken hebben eveneens een licht-metalen geraamte, doch zijn met doek bekleed. Het stabilo is niet verstelbaar, doch zoowel het hoogteroer als het richtingsroer zijn voorzien van in de vlucht verstelbare trimvlakjes.

De romp heeft een geraamte van lichtmetalen getrokken profielen en is bekleed met een licht-metalen dragende huid. Hij is



Zij-aanzicht Consolidated P 2 Y-3.

10/11/37
EVENING TRIBUNE, San D

Club Speaker

The epoch-making flight of 12 Consair flying boats to Honolulu recently will be described by Lt. Comdr. Loverne A. Pope, U.S.N., flight commander, to members of the Kiwanis club tomorrow noon in the Don room, El Cortez hotel. Pope, speaking on 'Wings Over The Pacific," will review highlights of the non-stop flight from San Diego to Honolulu. He will be introduced by Roy French Kidd, chairman of the day. Emery Sherwin, club president, will preside.

PACIFIC MIRAGES HINTED AS CAUSE OF AIR MISHAPS

A perfect mirage seen by officers and crew members on an epoch-making flight of 12 giant flying boats from San Diego to Honolulu last April may account for some of the unsuccessful flights over the Pacific, Lt. Comdr. Laverne A. Pope, flight commander, told Kiwanis club members yesterday in an address at the El Cortez hotel.

"Some of the men pointed to what they thought was land," Lt. Comdr. Pope said. "We were still 400 miles from Honolulu. The mirage was perfect. One could 'see' the shore line, the land in the distance. Fliers who were certain of their directions, perhaus would go to investigate, get off their course and use up their fuel. This may be one of the reasons for certain flight failures over the Pacific."

Comdr. Pope recalled that the 12 planes flew south of their course in much of the flight and for that reason failed to see any of the six navy ships assigned to the course to be available in case of mishap and to aid, if necessary, in keeping the planes on course. The commander explained, however, that flying south of the course did not hamper the flight in any way."

Performance of the flying boats, manufactured by Consolidated Aircraft Corp. in San Diego, was praised by the speaker.

Lt. Comdr. Pope was introduced by Roy French Kidd, chairman. Emery Sherwin, club president, presided.

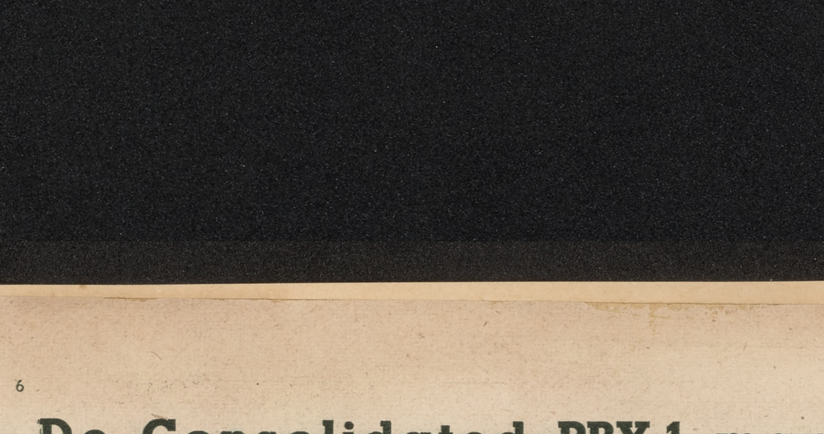
De Consolidated PBY-1 marine-vliegboot.

De Consolidated XPBY—I, het prototype der huidige serie, werd gebouwd naar aanleiding van een specificatie der Amerikaansche Marine voor patrouille-vliegbooten en bommenwerpers. De machine werd laat in het voorjaar van 1935 voorgevlogen en de daarop volgende proefvluchten bewezen dermate definitief de goede kwaliteiten van deze boot, dat de Consolidated Aircraft Corporation een order kreeg voor 60 stuks.

Kort daarna verhuisde de fabriek van Buffalo (N.Y.) naar San Diego in Californië, waar een moderne fabriek was gebouwd op het Lindbergh vliegveld aan de San Diego Baai. Niet alleen beschikt men hier over betere faciliteiten dan in de oude fabriek, de nabijheid van het detachement van den Marine Luchtvaartdienst op North Island maakt, dat men uit de eerste hand alle inlichtingen krijgt inzake de verschillende problemen, welke zich voordoen bij het dagelijksch omgaan met groote vliegbooten.

De XPBY—I, welke door de Marine was overgenomen, werd per gewone dienstvlucht van Norfolk (Virginia) naar San Diego gevlogen via het Panama Kanaal. En passant werd een wereldrecord gevestigd door de vlucht van Coco Solo, Panama Kanaal zone, naar Alameda, San Francisco Baai, een afstand van 5541 km, welke de goede kwaliteiten van het type bevestigde. Een tweede en een derde bestelling volgden, waardoor het totaal werd gebracht op niet minder dan 176 PBY—I vliegbooten plus onderdeelen ter waarde van 35 machines, waarmede een totaal bedrag van ruim 19 millioen dollar was gemoeid.

Consolidated P B Y-1 ¾ front.



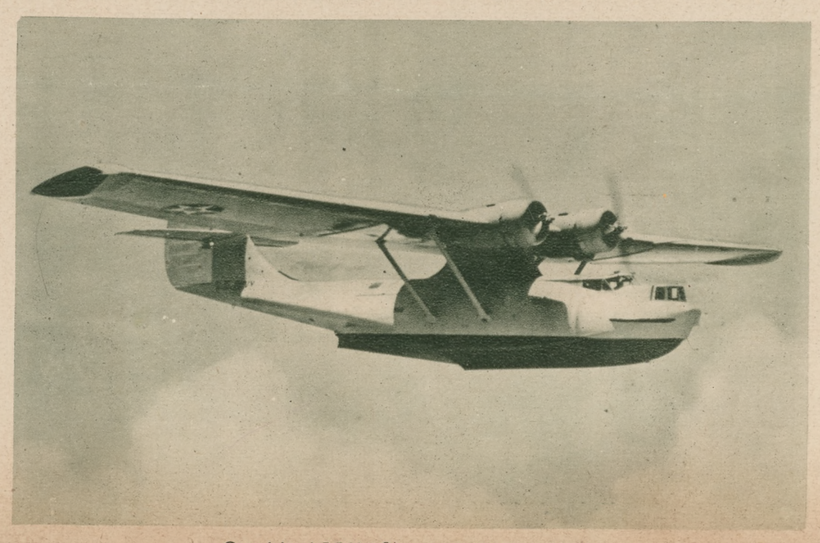
Consolidated P B Y-1 ¾ voor-aanzicht met neergelaten hulpdrijvers, welke in de vlucht de vleugelpunten vormen.

Intusschen is Consolidated geen nieuweling op het gebied van vliegbooten. Reeds in 1928 bouwde men voor de Amerikaansche Marine de XPY—I, de eerste geheel metalen vliegboot. Een commercieele versie hiervan, de „Commodore", werd voor Pan American Airways gebouwd en in de loop van 1929 en 1930 afgeleverd. In totaal kocht Panair 14 stuks dezer booten, welke, hoewel nu zoo langzamerhand verouderd, nog steeds dienst doen op de Zuid-Amerikaansche lijnen. In 1932 bouwde Consolidated 23 P2Y—I patrouille-vliegbooten voor de Marine; dit type was een verdere ontwikkeling van de PY—I en bleek zeer goed te voldoen. De laatste bestelling voor de groote order op de PBY—I was voor 23 stuks P2Y—3 vliegbooten, wederom voor de Amerikaansche Marine. Dit type is meer bekend onder de benaming Consolidated „Ranger" en de Argentijnsche Marine kocht een serie van zes stuks dezer booten.

Na te zijn afgeleverd aan de basis van den Marine Luchtvaartdienst op North Island, wordt iedere PBY—I vliegboot aan een proefvlucht van 24 uur non-stop onderworpen. Het pleit voor het fabrikaat, dat deze proefvluchten tot nu toe alle zonder haperen verliepen. Den 28sten Januari van dit jaar vlogen 12 PBY—I booten, bemand met 80 officieren en minderen, van San Diego naar Pearl Harbor (Honoloeloe) onder commando van den overste William McDade, een vlucht, welke reeds in 1934 was gemaakt door zes P2Y—I vliegbooten onder het commando van majoor McGinnis. Men deed er ditmaal echter vier uur korter over.

Den 13en April werd een tweede escadrille van 12 PBY—I booten van San Diego naar Honoloeloe gezonden, deze keer onder het commando van den overste L. A. Pope en wederom verliep de non-stop-vlucht zonder eenig incident. Een derde dienstvlucht van San Diego naar Coco Solo werd ondernomen door een escadrille van twaalf dezer booten op den 21sten en 22sten Juni van dit jaar, onder het commando van den luitenant ter zee Robert W. Morse, waarbij een nieuw wereldrecord werd gevestigd voor het vliegen in gesloten formatie over een afstand van 4968 km. En op den 24sten Juni j.l. vloog een commercieele versie van de PBY—I, toebehoorende aan Richard Archbold, die verbonden is aan het American Museum of Natural History te New York, non-stop van San Diego Baai naar New York in 17 uur. Bij de landing had men voldoende benzine aan boord voor een vlucht naar St. Johns op New Foundland, naar Puerto Rico in West-Indië of naar de Bermuda-eilanden en terug.

Waar de PBY—I nog steeds op de geheime lijst staat, kunnen gegevens inzake gewichten en prestaties niet worden gepubliceerd en zijn deze slechts beschikbaar voor



Consolidated P B Y-1 ¾ voor-aanzicht in de vlucht.

TRIAL BOARD TO CONDUCT PBY-3 TESTS

70 Airboats Delivered To Navy Squadrons By Consolidated

S.D.-Sun 10/17/37

Consolidated Aircraft Corp. mechanics are preparing the first of 66 PBY-3 type patrol bombers for inspection by a Navy Trial Board, due at North Island within a week, it was revealed at the plant.

The big airboat, most advanced of the three types for which Consolidated has received contracts to construct 176 aircraft, was given its preliminary tests just after it left the final assembly division last week.

Inspect Sikorsky Plane

The Navy Trial Board has been witnessing flights of the big four-motored Sikorsky XPBS at Hampton Roads, Va., during the past week, and will leave for San Diego at the conclusion of these tests.

When the PBY-3 contract for 66 planes is completed next year, Consolidated will have liquidated its entire present backlog of business.

70 Delivered

Of the 176 planes ordered by the Navy from the San Diego aircraft concern, 70 have been delivered to the patrol squadrons. Sixty of these are PBY-1 and 10 are PBY-2 type bombers. The latter group now wear the insignia of Patrol Squadron 11, based at North Island.

PBY-2 type planes will be delivered during the next three months to Squadron VP-2, which will fly 12 on a non-stop hop to the Canal Zone in December, and to Squadron VP-10 of Hawaii, which will "ferry" a similar number of planes across the Pacific early in 1938.

A second group of bids on a PBY-4 type airboat will be opened by the Bureau of Aeronautics late this month, according to reports received here yesterday. Initial estimates submitted by Consolidated and Glenn Martin were considered too steep by the Bureau, which re-advertised for bids. The contract when let will amount to approximately $10,000,000, it is believed.

Western Flying

CONSOLIDATED Aircraft Corporation was given permission to contract for the export sale of its military version of the PBY-1 on March 8. This is the first model of the current production flying boat that has received considerable attention because of its use by the Navy in recent mass flights from the mainland to Pearl Harbor. Release of the commercial version of the plane was made December 21, last. 6/37

Archbold to Leave S. D. In January on Air Trip

S.D. Sun 1/2/38

Officials of the American Museum of Natural History yesterday tentatively set January as the take-off date for Richard Archbold's exploration flight from San Diego to New Guinea, The Associated Press reported from Los Angeles. Russell R. Rogers, senior pilot for the museum, arrived there yesterday en route here to inspect the exploration plane, which is under construction at Consolidated Aircraft Corp.'s plant.

PACIFIC MIRAGES HINTED AS CAUSE OF AIR MISHAPS

A perfect mirage seen by officers and crew members on an epoch-making flight of 12 giant flying boats from San Diego to Honolulu last April may account for some of the unsuccessful flights over the Pacific, Lt. Comdr. Laverne A. Pope, flight commander, told Kiwanis club members yesterday in an address at the El Cortez hotel.

"Some of the men pointed to what they thought was land," Lt. Comdr. Pope said. "We were still 400 miles from Honolulu. The mirage was perfect. One could 'see' the shore line, the land in the distance. Fliers who were certain of their directions, perhaps would go to investigate, get off their course and use up their fuel. This may be one of the reasons for certain flight failures over the Pacific."

Comdr. Pope recalled that the 12 planes flew south of their course in much of the flight and for that reason failed to see any of the six navy ships assigned to the course to be available in case of mishap and to aid, if necessary, in keeping the planes on course. The commander explained, however, that flying south of the course did not hamper the flight in any way."

Performance of the flying boats, manufactured by Consolidated Aircraft Corp. in San Diego, was praised by the speaker.

Lt. Comdr. Pope was introduced by Roy French Kidd, chairman, Emery Sherwin, club president, presided.

Club Speaker

The epoch-making flight of 12 Consair flying boats to Honolulu recently will be described by Lt. Comdr. Laverne A. Pope, U.S.N., flight commander, to members of the Kiwanis club tomorrow noon in the Don room, El Cortez hotel. The Pacific," will review highlights of the non-stop flight from San Diego to Honolulu. He will be introduced by Roy French Kidd, chairman of the day. Emery Sherwin, club president, will preside.

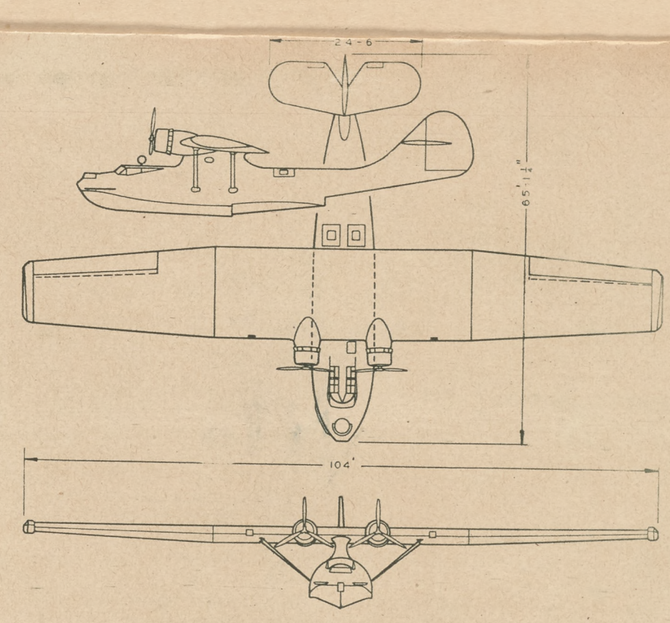
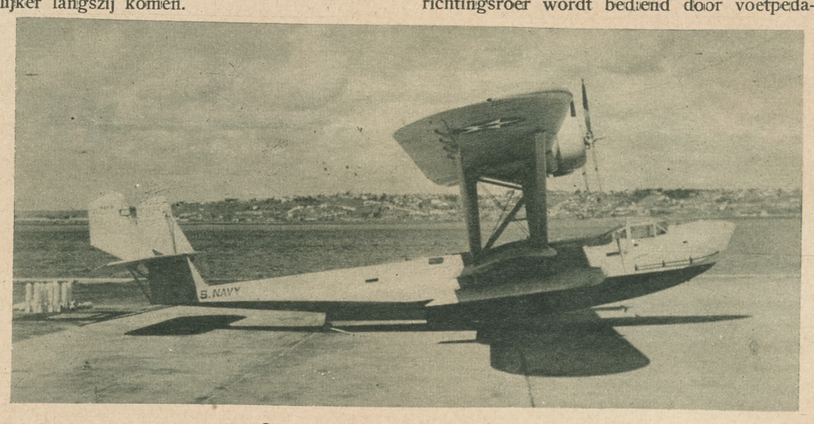
DOETINCHEM.

verdeeld in een aantal waterdichte compartimenten. Geheel voor in den neus is een ruim voor het bergen van tuig. De stuurhut heeft een eigen ingang, terwijl in den staart een luik is aangebracht voor toegang tot de cabine.

De hulpdrijvers worden door een schroef zonder einde, welke electrisch wordt gedreven, opgetrokken. De vorm dezer drijvers is zoo gekozen, dat zij in opgetrokken stand gelijk liggen met den onderkant van den vleugel. Zij worden in dezen stand automatisch vastgezet, terwijl een rood lichtje den piloot waarschuwt. Deze intrekbare hulpdrijvers vormen een patent van Consolidated. Waar zij zich aan de vleugelpunten bevinden, kunnen zij vrij klein worden gehouden, hetgeen een gewichtsbesparing beteekent. In opgetrokken stand bieden zij slechts weinig weerstand, terwijl bij het manoeuvreeren in smalle kanalen, zij eventueel gedeeltelijk kunnen worden opgehaald bij het passeeren van obstakels. Ook kunnen booten nu gemakkelijker langszij komen.



Maatschets van de Consolidated P B Y-1.



Consolidated „Commodore" vliegboot.

De motoren zijn in het vleugel-middenpaneel gemonteerd op bokken van gelaschte molybdenum stalen buizen. De motorkappen en de beplating der gondels zijn gemakkelijk afneembaar voor inspectie en reparaties. Voor de besturing beschikt men over een enkele kolom met twee wielen voor de bediening voor het hoogteroer en de ailerons. Het richtingsroer wordt bediend door voetpedalen, welke niet verstelbaar zijn. Daarentegen zijn de zitplaatsen wèl verstelbaar. Kabels loopen naar het hoogte- en het richtingsroer; kabels en stangen naar de ailerons. Deze laatsten zijn zoo gearrangeerd, dat iedere aileron onafhankelijk van den anderen bestuurd wordt, zoodat, mocht één aileronbesturing defect geraken, de andere te gebruiken blijft.

De electrische installatie omvat twee batterijen met twee, door de motoren aangedreven dynamo's. Het instrumentarium is zeer compleet en bestaat uit:

Voor de piloten: Twee snelheidsmeters, twee hoogtemeters, een klok, twee kompassen, twee bochtaanwijzers met dwarshellingmeters, twee toerentellers, twee inlaatdrukmeters en twee stijgsnelheidsmeters

Voor den navigator: Een snelheidsmeter, een klok en een hoogtemeter.

Voor den boord-werktuigkundige: Een thermo-koppel voor het meten der cylinderkop-temperaturen, een dwarshellingmeter, twee gecombineerde meters voor het aflezen van den olie-temperatuur, van den oliedruk en den benzinedruk, een stel benzinemeters, twee carburator-lucht-thermometers, twee benzine-doorstroommeters en een uitlaat-analysator.

C. VAN STEENDEREN Jr.

Duitsche sterktevoorschriften voor zweefvliegtuigen

door H. BUS, Beemster.

DAAR er in ons land nog geen sterktevoorschriften voor zweefvliegtuigen bestaan, is het misschien wel gewenscht de Duitsche voorschriften eens onder de aandacht van de Nederlandsche zweefvliegers te brengen. De Duitsche voorschriften zijn tamelijk eenvoudig; dit is een voordeel, daar ze natuurlijk veel door amateurs gebruikt worden.

In Duitschland verdeelt men de motorlooze vliegtuigen in drie categorieën, n.l.:

Cat. 1. Glijvliegtuigen.

Onder glijvliegtuigen worden verstaan alle motorlooze vliegtuigen, waarvan de spanwijdte kleiner is dan 11 m en de vleugelslankheid (b^2/F) kleiner is dan 9.

Hiertoe behooren dus de verschillende lestoestellen, als Zögling, E. S. G., enz.

b = de spanwijdte van den vleugel.
F = het vleugeloppervlak van het toestel.

Cat. 2. Zweefvliegtuigen.

Tot deze groep worden gerekend alle motorlooze vliegtuigen, die boven de voor categorie 1 geldende grenzen liggen.

Hiertoe behooren alle prestatie-typen.

Cat. 3. Motorlooze experimenteele vliegtuigen.

De voorschriften voor deze groep zijn voor ons van weinig belang.

Aan de tot Cat. 1 behoorende vliegtuigen worden, wat betreft de sterkte in de vlucht, minder hooge eischen gesteld dan aan Cat. 2. Daarentegen moeten zij bij de landing grootere krachten kunnen opnemen, daar bij deze toestellen, die hoofdzakelijk voor lessen gebruikt worden, harde landingen eerder verwacht kunnen worden.

I. Berekening van den vleugel.

Voor de berekening van motorlooze vliegtuigen worden verschillende belastinggevallen aangenomen. Die voor de vleugelberekening zijn aangegeven in onderstaande tabel. Er wordt onderscheid gemaakt tusschen een vijftal gevallen: afvangen (plotselinge vergrooting van den invalshoek na een duikvlucht); steile glijvlucht gecombi-

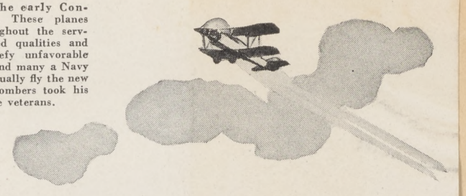
N Y-1, one of the early Consolidated Trainers. These planes were revered throughout the service for their rugged qualities and their ability to defy unfavorable flying conditions. And many a Navy pilot who will eventually fly the new P B Y-1 Patrol Bombers took his first lesson on these veterans.



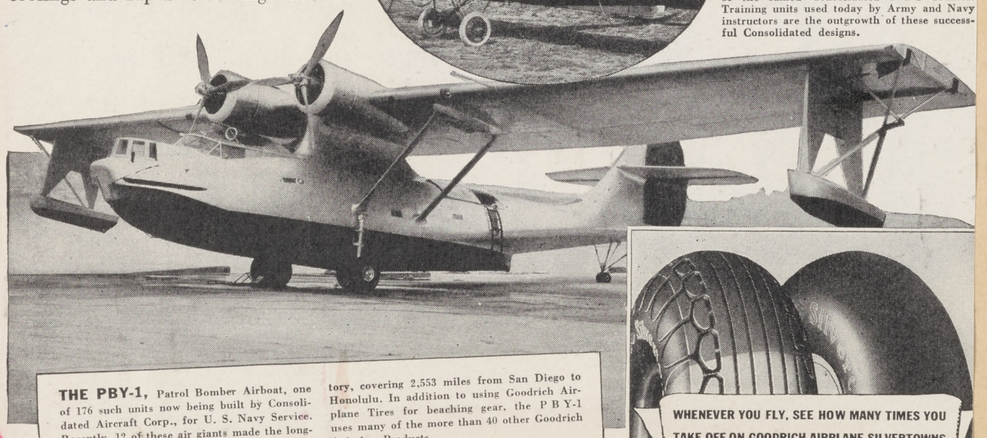
Since its earliest days CONSOLIDATED HAS PLAYED SAFE WITH GOODRICH

CONSOLIDATED—builder of military planes that are famous for dependability and ruggedness—began using Goodrich equipment early in its successful career. From the days when service fledglings learned to fly on the veteran Consolidated "P T" Trainers, Goodrich Tires and other products have been time-tested by Consolidated in many types of Army and Navy service.

And no proof of the dependability of Goodrich Airplane Silvertown Tires is more striking than their use today on the beaching gear of the giant Consolidated Patrol Bombers. Supporting more than 10 tons, these tires are exposed to scorching tropical suns and quick plunges into cold water, a series of instantaneous coolings and rapid re-heatings that are a test of stamina unknown to tires on land planes.

Because Goodrich builds equipment for the leading pilots, plane makers and air lines, Goodrich builds for every aviation need. No plane is too small, no job too unimportant to be without the extra margin of safety and efficiency that Goodrich Aviation Products will give. See your nearest Goodrich dealer or write to Dept. 633, Aeronautical Division of The B. F. Goodrich Co., Akron, Ohio, for complete information about Goodrich Airplane Silvertowns and over 40 other Goodrich Aviation Products.

P T-1, A FAMOUS "OLD-TIMER"
Many a flyer whose name is celebrated today got his first taste of flying from the cockpit of the famed Consolidated P T-1 Trainer. Training units used today by Army and Navy instructors are the outgrowth of these successful Consolidated designs.



THE PBY-1, Patrol Bomber Airboat, one of 176 such units now being built by Consolidated Aircraft Corp., for U. S. Navy Service. Recently, 12 of these air giants made the longest non-stop formation flight in aviation history, covering 2,553 miles from San Diego to Honolulu. In addition to using Goodrich Airplane Tires for beaching gear, the P B Y-1 uses many of the more than 40 other Goodrich Aviation Products.

Western Flying MAY 1937

The Navy flies to Hawaii

Twelve ships make flight in "routine delivery"

The Navy took in stride another "routine" delivery of aircraft to Hawaii on April 12-13, making the flight from San Diego to Pearl Harbor in 21 hours and 25 minutes and establishing a new record. **Lieutenant Commander L. A. Pope** led the 12 plane formation of the VP-11 squadron on the 2600 mile flight.

The flight is the third delivery flight of new Consolidated PBY type boats to the Islands, the second from San Diego. The first flight was made in 1934. At that time, six boats spanned the 2400 mile distance from San Francisco Bay to Pearl Harbor in 24 hours and 45 minutes.

"Just another routine flight," an excellent example of efficient operations and a credit to the training system of the United States Navy.

AIR INSPECTORS DUE HERE TODAY

S. D. Union 2-23-37

After an inspection of four airports in the Los Angeles area, a group of air commerce officials, aeronautical authorities and WPA executives are expected here this afternoon at 2:30 by plane.

The experts, who are inspecting airports upon which WPA funds have been spent, are led by Carrington Gill, assistant WPA administrator. The party also included Sumpter Smith, principal aeronautics engineer, WPA; Howard Rough, assistant director, bureau of air commerce; George W. Lewis, director of aeronautical research for national advisory committee on aeronautics; Lester D. Gardner, secretary for the institute of aeronautic sciences; Gill Robb W. Elson, president of the National Aeronautical association, and William R. Lawson, state WPA director.

The inspection group will be guests of George White, district WPA director, and chamber of commerce officials at a dinner tonight at U. S. Grant hotel, attended by Maj. R. H. Fleet, Consolidated Aircraft Corp. president; Mayor Benbough, City Manager Flack, Walter Bellon, chairman of the board of supervisors, and civic and aviation leaders here.

Western Flying MAY

CONSOLIDATED Aircraft Corp., according to rumors from San Diego, is constructing a boat for the Navy of nearly 35 tons. It is said that it will be powered by four engines totaling about 5200 h.p., have a cruising range of 5,000 miles and will have a new type of boat hull possessing enough strength to land or take-off in rough water and withstand the most adverse weather stress.

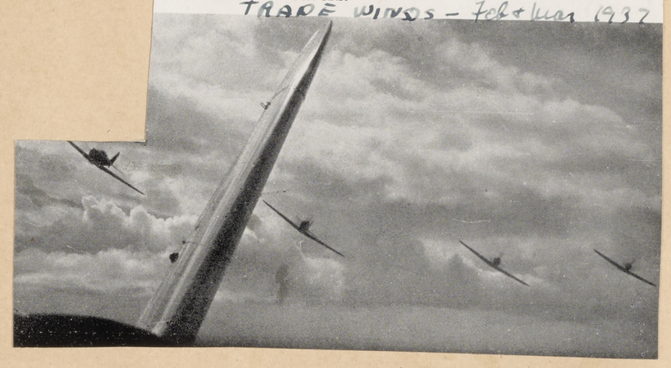
●Rhythm in the Air. A squadron of Conqueror-powered Consolidated PB-2A Army pursuits swinging through the skies in perfect formation during recent maneuvers.

TRADE WINDS - Feb+Mar 1937



Aviation aug-37

AT THE Consolidated Aircraft Corporation plant in San Diego work has been proceeding for months in a screened experimental department which is in itself as large as many complete airplane factories. Yet it is rumored that the plane under construction there will have to be moved out into the open before final assembly. Unfortunately this is a military development for the U. S. Navy and no official information is available from any source. However, it may be surmised that the general features of the ship under construction are those of a four engine flying boat on which Consolidated was recently granted a design patent. Such a boat would closely follow conventional design except to incorporate the retractable wing tip floats such as are on the PBY-1 flying boats. Powered with four engines, probably of the new 1,500 hp. class, the Consolidated military boat will perhaps approximate the size, weight, and range of the Boeing 314.

Although Consolidated has not built any equipment for commercial operators recently it is easy to appreciate that, with such a military background, they are prepared to do so. Further evidence of Consolidated interest in the commercial field is given by a study recently made by I. M. Laddon, Consolidated Chief Engineer, as to the optimum size of such a flying boat as could be built at the present stage of the industry. The study showed it feasible to produce a twin-hull flying boat monoplane with a gross weight of 300,000 lb. to carry 150 passengers, cruise at 230 m.p.h., with a range of 4,000 miles. Twelve engines in the wing with a total of 18,000 hp. would drive six tractor propellers. Such a plane would provide individual staterooms for first class passengers, recreational facilities, and the utmost luxury throughout. A wing loading of 46 lb. per sq.ft. would promote passenger comfort in rough air. In connection with the trend toward higher wind loadings Consolidated engineers have made studies of auxiliary launching devices. Tests have shown it entirely feasible to launch such a large plane from a special rail car-locomotive unit which would serve as a booster catapult. Diminution of fuel supply before reaching the destination would provide for landing with a wing loading of about 30 lb. per sq.ft., which is entirely practicable.

Early Balloon Days Described At Plant

S.D. SUN 10/25/37

Daredevils Of 1906-07 Were Paid Per Thrill; Light Duck Bags Rose On Heated Air

By HAROLD KEEN

Men have ascended to unbelievable heights in balloons, but none of the modern daredevils has been required to show more courage than the youths of 30 years ago in the pre-parachute era.

That, at least, is the opinion of George E. Irvin, inspector at Consolidated Aircraft Corp. and president of the local Irvin Aircraft Mechanics' Association, who knows whereof he speaks because he was one of those who entrusted his life to a balloon, filled with hot air, swaying uncertainly at an altitude of 1200 feet.

Dollars For Thrills

In 1906 and 1907, the inhabitants of San Bernardino, like those of any other city in the United States at that time, thought that persons who wanted to get off the ground deserved to be classified with circus freaks, and on that basis the burghers were willing to pay a fee to witness their performances.

"We got paid by the thrill we gave the customers," Mr. Irvin recalled today, "and the bigger the thrill they received, the more we performers were to expect a broken limb or two."

Bag Sometimes Singed

The balloon received its buoyancy from hot air crudely forced into the bag, made of light duck which occasionally was singed when the air became too hot.

A 20-foot tunnel was dug, and at one end a three-foot stack would be constructed. The bag would be placed over this flue. Meanwhile, a fire would be started from kindling wood in the open end of the tunnel, and men and boys would energetically dash cans of coil oil on the blaze, causing blasts of hot air to shoot into the bag through the stack.

Shouts Orders

Inside the balloon, an alert and sweating youth would call out the height of the flame, and on his information the manipulators of the coal oil could judge whether to add any more fuel to the embers.

When the bag was sufficiently inflated, a warning cry was raised, and the youth would scurry from inside the balloon. The center of attraction would then move to the performer himself, who in Irvin's case, was a youth 17 years old, nattily attired in a trunk suit.

"The performer clung to a trapeze at the end of a 25-foot piece of rope stretched on the ground," Mr. Irvin explained. "As the balloon rose, the performer would run along the ground, 15 or 20 feet, then hop into the trapeze at just the right time and clear the ground.

"If atmospheric conditions were right and the day fairly warm, the hot air in the bag would remain at the necessary temperature long enough to enable the balloon to rise as high as 1500 feet sometimes.

Aimed for Water

"If for some reason the air in the balloon cooled too quickly, the descent would be sudden and disastrous. Riding the bag down was a bigger thrill for the crowd than the ascension, because they never knew whether the performer would land in a treetop, somebody's roof, or come near drowning in the lake. We got paid more if we did the latter, so we aimed for the water every time."

When parachutes came into use, the more extreme daredevils rode them down instead of the balloon, by casting loose from the bag, releasing the 'chute and dropping to earth. How these persons managed to live through those days and the pioneering age of rattle-trap airplanes that followed is more than even Mr. Irvin, who is one of the survivors, can figure out.

It is said that it will be powered by four engines totaling about 5200 h.p., have a cruising range of 5,000 miles and will have a new type of boat hull possessing enough strength to land or take-off in rough water and withstand the most adverse weather stress.

AIR INSPECTORS DUE HERE TODAY

S. D. Union 3/25/37

After an inspection of four airports in the Los Angeles area, a group of air commerce officials, aeronautical authorities and WPA executives are expected here this afternoon at 2:30 by plane.

The experts, who are inspecting airports upon which WPA funds have been spent, are led by Carrington Gill, assistant WPA administrator. The party also included Sumpter Smith, principal aeronautics engineer, WPA; Howard Rough, assistant director, bureau of air commerce; George W. Lewis, director of aeronautical research for national advisory committee on aeronautics; Lester D. Gardner, secretary for the institute of aeronautic sciences; Gill Robb W. Elson, president of the National Aeronautical association, and William R. Lawson, state WPA director.

The inspection group will be guests of George White, district WPA director, and chamber of commerce officials at a dinner tonight at U. S. Grant hotel, attended by Maj. R. H. Fleet, Consolidated Aircraft Corp. president; Mayor Bencough, City Manager Flack, Walter Bellon, chairman of the board of supervisors, and civic and aviation leaders here.

TWIN WASPS IN ALASKA

Twenty-three Twin Wasp-powered Consolidated Patrol boats of the United States Navy recently added another long non-stop flight to their impressive record when they flew from Seattle to Sitka, Alaska, and Kodiak, where they are shown at anchor. The return trip was also made as a non-stop flight.

The Bee-Hive Sept. '37

— — *Official Photo, U. S. Navy*

Le *P.B.Y.* 1 est mû par deux moteurs Wright « *Cyclone* » ou *Pratt and Whitney* « *Twin Wasp* », actionnant des hélices tripales *Hamilton-Standard*. Les anneaux *N.A.C.A.*, du type allongé, sont équipés de collerettes réglables de sortie d'air.

Ces bombardiers furent essayés par le département de la Marine américaine au printemps 1935; les essais dépassèrent si largement les conditions exigées et les performances des concurrents qu'un marché de 60 appareils fut aussitôt conclu.

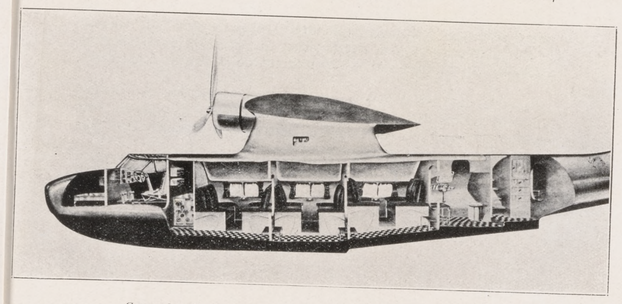
C'est peu après que la *Consolidated Aircraft Corporation*, dont les usines se trouvaient à Buffalo, vint se réorganiser à San-Diego, où sa proximité de la Base aérienne de l'*U.S. Navy*, à North Island, permit avec cet organisme une collaboration étroite et fructueuse.

A titre d'essai, l'Aéronautique navale fit voler le *X.P.B.Y.* 1 depuis le Centre d'expériences tactiques de Norfolk (Virginie) jusqu'à San-Diego. C'est durant ce périple qu'un vol sans escale de Coco Solo (zone du canal de Panama) à Alameda (Californie), ramena aux États-Unis les records énumérés plus haut et que détenaient auparavant les équipages Stoppani-Babbi (record en ligne droite) et Hébrard-Daillière (record en ligne brisée). Ces performances furent aussitôt suivies d'un second et d'un troisième marché passé par l'Aéronautique navale américaine et concernant 176 appareils (1).

(1) Le marché portait non seulement sur les 176 appareils, mais sur des pièces de rechanges équivalant à 35 planeurs, pour la somme totale de 19 millions de dollars, soit 494 millions de francs au cours de 26fr le dollar.

Le prix de revient unitaire du *P. B. Y.* 1 ressortirait ainsi à 2 340 000fr, mais nous ne savons s'il s'agit d'appareils complets, en particulier équipés de leurs moteurs, ou simplement des cellules.

Les officiers de l'Escadrille V. P. 6, *avant leur vol du* 3 *janvier* 1937.
Debout, en cinquième position, le *lieutenant-commander* William H. Mc Dade.



Coupe longitudinale de la version commerciale du P. B. Y. 1, montrant les aménagements qui permettent le transport de 24 passagers, le jour, et 12 passagers, en couchettes, la nuit. Cet appareil est construit en U. R. S. S. sous licence.

Consolidated, néanmoins, n'est pas un nouveau venu parmi les fournisseurs d'hydravions. Son premier contrat avec la Marine américaine date de 1928, avec le *X.P.Y.* 1, l'un des premiers hydravions de patrouille entièrement métalliques. Les 14 « *Commodore* », versions commerciales des *X.P.Y.* 1 qui furent construits pour les *Pan-American Airways*, ont confirmé la valeur du prototype; les « *Commodore* », qui ont des milliers d'heures de service, transportent encore, à l'heure actuelle, des passagers et du fret sur le réseau pan-américain.

En 1932, *Consolidated* construisit 23 *P.2 Y.* 1 de patrouille pour l'*U.S. Navy*; ces machines étaient une amélioration des *X.P.Y.* 1 et des « *Commodore* » et bénéficièrent de gros progrès de fabrication. La dernière commande antérieure aux séries *X.P.B.Y.* 1 et *P.B.Y.* 1 fut de 23 appareils *P. 2 Y.* 3 de patrouille, toujours pour la Marine. En plus des ventes faites aux *Pan-American Airways* et à la Marine, *Consolidated* a construit ou construit 10 grands hydravions pour d'autres destinataires (compagnies commerciales ou gouvernements étrangers).

Après livraison à la Base aéronavale de North Island, chaque

I. M. "Mac" Laddon, vice president of engineering for Consolidated Aircraft, of San Diego, caught in a moment of relaxation of which he has few these days due to the pressure of getting out the big boat designs. TRADE WINDS 7/37

» Now that Messrs Wheatly, Rogers, Archbold, et al have demonstrated that a Consolidated flying boat can be flown 2,600 miles across land without difficulty we suppose the company will be fitting out other models of that boat for forestry patrol, or for mapping the "dust bowl."

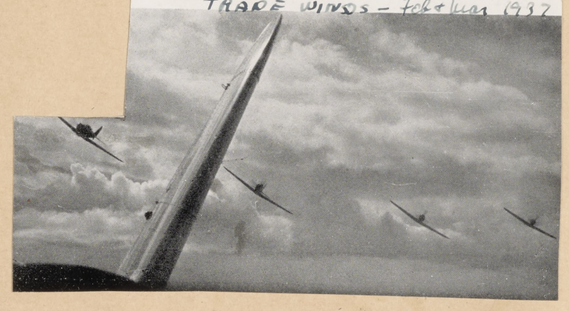
TRADE WINDS – February 1937



Aviation aug-37

At the Consolidated Aircraft Corporation plant in San Diego work has been proceeding for months in a screened experimental department which is in itself as large as many complete airplane factories. Yet it is rumored that the plane under construction there will have to be moved out into the open before final assembly. Unfortunately this is a military development for the U. S. Navy and no official information is available from any source. However, it may be surmised that the general features of the ship under construction are those of a four engine flying boat on which Consolidated was recently granted a design patent. Such a boat would closely follow conventional design except to incorporate the retractable wing tip floats such as are on the PBY-1 flying boats. Powered with four engines, probably of the new 1,500 hp. class, the Consolidated military boat will perhaps approximate the size, weight, and range of the Boeing 314.

Although Consolidated has not built any equipment for commercial operators recently it is easy to appreciate that, with such a military background, they are prepared to do so. Further evidence of Consolidated interest in the commercial field is given by a study recently made by I. M. Laddon, Consolidated Chief Engineer, as to the optimum size of such a flying boat as could be built at the present stage of the industry. The study showed it feasible to produce a twin-hull flying boat monoplane with a gross weight of 300,000 lb. to carry 150 passengers, cruise at 230 m.p.h., with a range of 4,000 miles. Twelve engines in the wing with a total of 18,000 hp. would drive six tractor propellers. Such a plane would provide individual staterooms for first class passengers, recreational facilities, and the utmost luxury throughout. A wing loading of 46 lb. per sq.ft. would promote passenger comfort in rough air. In connection with the trend toward higher wind loadings Consolidated engineers have made studies of auxiliary launching devices. Tests have shown it entirely feasible to launch such a large plane from a special rail car-locomotive unit which would serve as a booster catapult. Diminution of fuel supply before reaching the destination would provide for landing with a wing loading of about 30 lb. per sq.ft., which is entirely practicable.

Early Balloon Days Described At Plant
S.D. SUN 10/25/37

Daredevils Of 1906-07 Were Paid Per Thrill; Light Duck Bags Rose On Heated Air

By HAROLD KEEN

Men have ascended to unbelievable heights in balloons, but none of the modern daredevils has been required to show more courage than the youths of 30 years ago in the pre-parachute era.

That, at least, is the opinion of George E. Irvin, inspector at Consolidated Aircraft Corp. and president of the local Irvin Aircraft Mechanics' Association, who knows whereof he speaks because he was one of those who entrusted his life to a balloon, filled with hot air, swaying uncertainly at an altitude of 1200 feet.

Dollars For Thrills

In 1906 and 1907, the inhabitants of San Bernardino, like those of any other city in the United States at that time, thought that persons who wanted to get off the ground deserved to be classified with circus freaks, and on that basis the burghers were willing to pay a fee to witness their performances.

"We got paid by the thrill we gave the customers," Mr. Irvin recalled today, "and the bigger the thrill they received, the more we performers were to expect a broken limb or two."

Bag Sometimes Singed

The balloon received its buoyancy from hot air crudely forced into the bag, made of light duck which occasionally was singed when the air became too hot.

A 20-foot tunnel was dug, and at one end a three-foot stack would be constructed. The bag would be placed over this flue. Meanwhile, a fire would be started from kindling wood in the open end of the tunnel, and men and boys would energetically dash cans of coil oil on the blaze, causing blasts of hot air to shoot into the bag through the stack.

Shouts Orders

Inside the balloon, an alert and sweating youth would call out the height of the flame, and on his information the manipulators of the coal oil could judge whether to add any more fuel to the embers.

When the bag was sufficiently inflated, a warning cry was raised, and the youth would scurry from inside the balloon. The center of attraction would then move to the performer himself, who in Irvin's case, was a youth 17 years old, nattily attired in a trunk suit.

"The performer clung to a trapeze at the end of a 25-foot piece of rope stretched on the ground," Mr. Irvin explained. "As the balloon rose, the performer would run along the ground, 15 or 20 feet, then hop into the trapeze at just the right time and clear the ground.

"If atmospheric conditions were right and the day fairly warm, the hot air in the bag would remain at the necessary temperature long enough to enable the balloon to rise as high as 1500 feet sometimes.

Aimed for Water

"If for some reason the air in the balloon cooled too quickly, the descent would be sudden and disastrous. Riding the bag down was a bigger thrill for the crowd than the ascension, because they never knew whether the performer would land in a treetop, somebody's roof, or come near drowning in the lake. We got paid more if we did the latter, so we aimed for the water every time."

When parachutes came into use, the more extreme daredevils rode them down instead of the balloon, by casting loose from the bag, releasing the 'chute and dropping to earth. How these persons managed to live through those days and the pioneering age of rattle-trap airplanes that followed is more than even Mr. Irvin, who is one of the survivors, can figure out.

Dec. 8 Tentative Date For Zone Mass Flight

S.D.-Sun 10/22/37

By HAROLD KEEN

As personnel of the Canal Zone's Patrol Squadron Two today started "shakedown" tests of the first patrol bomber delivered to that unit, Navy officials at North Island disclosed that Dec. 8 has been set as the tentative takeoff date for the squadron's non-stop mass flight to Coco Solo.

This hop may furnish another record to the Navy's bulging book of aviation accomplishments, inasmuch as 14 planes, the largest number in history to make a non-stop flight of this distance, are scheduled to take off from San Diego, it was indicated.

Two 'Spares' Included

In addition to the 12 Consolidated-built patrol bombers of Squadron VP-2 will probably be two airboats assigned to Squadron VP-3 of the Canal Zone as "spares." Flight personnel for these two planes, of the PBY-1 type, are enroute to San Diego aboard the Navy transport Vega, due here Oct. 30.

The 13th patrol bomber of Consolidated's PBY-2 contract was delivered yesterday to Lieut.-Comdr. B. E. Grow, commanding officer of Patrol Squadron Two. First 12 of this order have just been completed for Patrol Squadron 11, permanently based at North Island.

'Orphan' Status Ends

With VP-2 finally in possession of a plane of its own, the squadron will be able to discard the "orphan" status it has assumed since its personnel arrived in San Diego last June. During the four months they awaited delivery of a bomber they could "call their own," the VP-2 aviators have been accustoming themselves to the operation of the big airboats in craft belonging to other squadrons.

The December date for the southern flight was chosen, officers indicated, in order to coincide with the sailing schedule of the aircraft tender Langley, now functioning with patrol squadrons at Pearl Harbor. The Langley will serve as floating base for the Coco Solo seaplanes after the Hawaii tactics are completed, and about Dec. 8, the vessel will be steaming toward San Diego.

The Langley thus will be in a position to serve as one of the guard ships on the flight route between San Diego and the Canal Zone. Other vessels will be sent out for this duty from the Canal Zone and San Diego, and among the latter probably will be the Sandpiper, which recently returned from several months' duty in Alaskan waters.

Lieut.-Comdr. Grow today anticipated that better flight conditions will be enjoyed by his squadron than those through which Patrol Squadron Two made its non-stop flight from San Diego to Coco Solo last summer.

"The season of severe tropical thunderstorms will be just about over at that time," Lieut. Comdr. Grow said, "and if we're lucky we may not have to go off our course at all to dodge bad weather."

Careful Weather Check

Patrol Squadron Two not only fought through storms, or headed seaward to skirt storm areas, but also experienced serious obstacles to course-finding, such as a thin layer of clouds that obscured the heavens and made celestial navigation impossible.

"On a flight of such a great distance, we can't afford to go very far off our course," Lieut.-Comdr. Grow commented. For this reason, weather conditions along the entire coast of Mexico and Central America will be carefully scrutinized before the exact time of takeoff is established.

LANGLEY SAILS ON WEDNESDAY

S. D. Sun 4 Nov. 37

To transport 85 officers and men of Hawaii's Patrol Squadron 10 to San Diego, the aircraft tender Langley will sail from Pearl Harbor next Wednesday, Aircraft Scouting Force headquarters at North Island reported today.

The Langley just completed service as base ship for Pearl Harbor patrol bomber squadrons in secret tactical maneuvers at French Frigate Shoals, 550 miles from Honolulu.

Personnel of VP-10 will be trained in the new Consolidated PBY airboats for a non-stop mass flight to Hawaii early in 1938. Twelve planes will be delivered to Squadron VP-10.

The Langley, due here Nov. 19, will leave the following day for the Canal Zone with personnel and old-type seaplanes being transferred from the San Diego base.

Brokers say that margin conditions are pretty good at the moment and that in event of another decline in the market there would be nothing like the necessitous selling which was a feature of the October decline. Some brokers say that the speculative position at the

* * *

A businessman suggested that while Congress is in deliberation making "new rules" for business it is hardly likely that either big or small business will be inclined to expand.

* * *

When directors of Pullman meet after the close today there is some expectation in the street that they will vote a year-end dividend. Earnings have sharply improved this year, and it appears probable that net income for the full year will run slightly above $3 a share on the stock. Four quarterly dividends aggregating $1.50 a share have already been paid giving directors leeway to vote up to $1.50 as a final payment. In prerecession days the company was a liberal dividend payer, having distributed approximately 70% of its net for that purpose. Perhaps the directors' action may be tempered at this time by the recent drought in equipment buying which suggests lower earnings for the first half of 1938.

Purely Gossip

AIR OFFICIALS AWAIT WORD OF FULLER FLIGHT

S. D. Sun 4/3/37

Plane, Weather May Hold Up Canada-Mexico Trip By Bendix Winner

San Diego officials of the National Aeronautical Association today awaited word from Frank Fuller Jr., winner of the 1937 Bendix airplane speed trophy, as to the exact plans for his proposed Vancouver, B, C.,-to-Agua Caliente dash.

Fuller recently informed William Van Dusen, San Diego observer and timer for the N. A. A., that he will attempt to break the existing record between Canada and Baja California late this week.

Ortman Holds Record

Two contingencies may hold up his flight, however, he indicated—use of his Seversky low-wing moonplane for movie work in Hollywood, and inclement weather in the Northwest.

Reports from Vancouver airport yesterday stated that Fuller may take off tomorrow.

The San Francisco sportsman pilot hopes to break the record of five hours, 38 minutes set by Earl Ortman in 1935. His Seversky plane is similar to the latest stock model Army pursuit craft, reputedly the fastest military land planes in America.

Timing Aides

Mr. Van Dusen probably will be assisted either by T. Claude Ryan or Edgar Gott, assistant to the president of Consolidated Aircraft Corp., in the official timing of Fuller at the flight's finish.

All the Vancouver-to-Auga Caliente record-breaking attempts in the past decade have been officially observed by Mr. Van Dusen. He timed Ruth Alexander when she flew the distance in 14 hours, Roscoe Turner when he made it in 6½ hours, Wedell Williams in 6 hours, and Ortman, the present record-holder.

LANGLEY COMING WITH NAVY FLIERS FOR HAWAII HOP

S.D. Sun Mar 37

Eighty-five officers and men of Squadron VP-10 will arrive here from Pearl Harbor, Nov. 19, aboard the aircraft tender Langley, preparatory to leaving early next year with 12 new airboats on a non-stop flight from San Diego to Hawaii.

The date of the Hawaiian flight, aircraft officials of the scouting force announced, will not be definitely determined until all the 12 multimotored patrol planes, now under construction at Consolidated, are delivered and tested. This is expected to be early in March.

The Langley will be in port less than 24 hours before weighing anchor and sailing for Coco Solo, C. Z. She is to transport to the Canal Zone personnel and planes from the Pearl Harbor naval air base.

The Langley will be one of the few warships of the battle fleet that will spend Thanksgiving day at sea. She will be off the Costa Rican coast Nov. 25.

CONSAIR BIDS LOW ON 78 NAVY PLANES

$8,000,000 Offer Made By S. D. Firm On Patrol Bombers

S.D. Sun 10/30/37

By United Press

WASHINGTON, Oct. 30.—The Navy Department today announced the opening of bids for 270 bombing planes to be constructed at a total cost of more than $20,000,000.

On one group of 14 patrol bombers, the Glenn L. Martin Co., Baltimore, bid $2,086,606. The Martin Co. was the only bidder.

On another group of 78 patrol bombers, Consolidated Aircraft Corp., San Diego, bid a total of $8,052,500. United Aircraft Corp., Sikorsky Aircraft division, Stratford, Conn., bid $9,041,254 on the same group.

Officials emphasized that none of the bids has been accepted, many perhaps will not be accepted, and no definite action will be announced for about two months.

Consair Completing Last 60-Plane Order

The Consolidated Corporation's bid was for the same type of patrol bombers as now being flown by the Navy and built by Consolidated. Consolidated is now completing a contract for the last of 60 such planes. Altogether, by June 1, the San Diego firm will have delivered 176 of these new bombers to the Navy.

The bombers are being used to replace destroyers as the scouting arm of the Navy.

Aircra...

Continu...

ment's aviation pro... the commercial tr... field are considered likely to prevent any major let-down in business for at least a year.

In fact, the curtailment in other industrial lines is likely to facilitate deliveries against the existing bank of orders by speeding receipt of materials. Earlier in the year, when general industrial operations were at their peak, deliveries by some companies in the aircraft field were slowed down by delays encountered in the receipt of materials ordered from other industries.

Net Profits Compared

The net profits of the seven aircraft concerns cited above compared as follows for the third quarter and first nine months of 1937 and 1936 and the full year 1936:

...gold amounting to £91,000 ava... the open market was taken for unknown d... nations.

Aviation Co... Boeing ... Curtiss-Wri... Douglas Ai... Glenn L. M... North Ame... United Airc...

At the time of fixing price authorities ... believed to have sold as continental hoar... bought, Reuters reports. Later there were ...ers at 140s, but buyers were not pressing.

* Profits ... PARIS—The Bank of France fixed the ... price Tuesday at 33,130 francs per kilo, ag... November 33,141 Monday.

‡ Fiscal per...

The sharp expansion in deliveries during the nine months was accompanied by a sharper rise in profits than in the dollar value of deliveries for the industry as a whole. Considerable variation was shown, however, in the profit margin position of individual companies in relation to 1936 levels.

Profit Margin Developments Vary

Curtiss-Wright and United Aircraft, both of which derive the major part of their earnings from engine manufacturing, showed substantial improvement in profit margin position over last year. On the other hand, Douglas and Boeing showed little or no improvement in margin over 1936, despite substantially larger deliveries. Glenn L. Martin, substantially all of whose business this year has been done on export orders, materially increased its profit margin over the level for the year 1936.

The ratio of net profits to sales for those companies which disclosed their sales volume for the nine months compares with 1936 as follows:

	Third quarter		1st 9 months		Year
	1937	1936	1937	1936	1936
Boeing	7.4	11.8	7.4	7.4	7.3
Douglas	*7.8	9.1	*7.0	7.8	12.4
Glenn L. Martin	15.3	...	17.7	...	11.8
United Aircraft	14.8	7.1	13.1	5.3	8.7

* Profits before undistributed profits surtax accrual of $205,000 made during third quarter.

Curtiss-Wright does not make public its sales ... for interim periods but is understood to

NINE DEAD IN AIR CRASHES

United States Planes

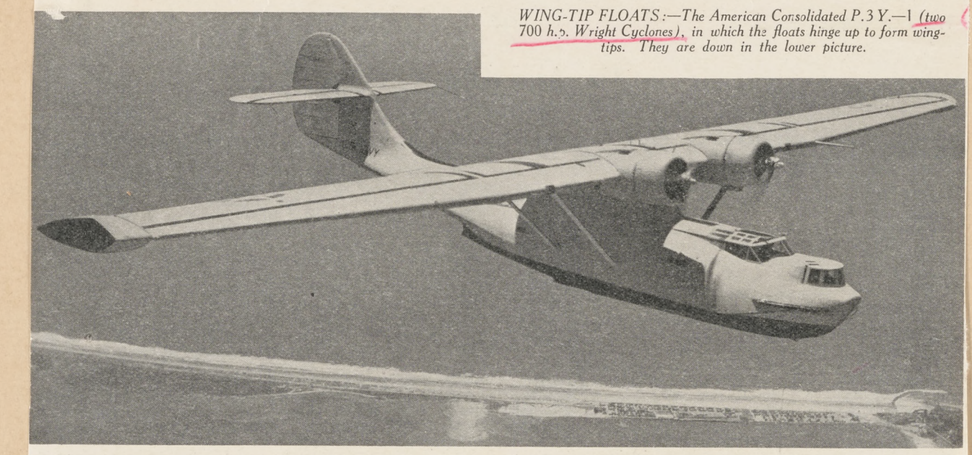
NEW YORK, Aug. 23.

Two accidents, involving United States aircraft, were reported to-day.

A flying-boat of the Navy Department crashed in the bay at San Diego (California). It is reported that six men were killed and two were injured. Three bodies have been recovered.

The flying-boat nose-dived into six feet of water with such force that some of the occupants were thrown high into the air. A search was carried out with the aid of searchlights on battle-ships and cruisers anchored in the bay.

A message from San Louis (Argentina) says that the three members of the crew were killed when a Pan-American airliner crashed and was burned. There were no passengers on board.



WING-TIP FLOATS:—The American Consolidated P.3 Y.—1 (two 700 h.p. Wright Cyclones), in which the floats hinge up to form wing-tips. They are down in the lower picture.

Our Worth-while Air Force

SIR SAMUEL HOARE, Secretary of State for Home Affairs, recently First Lord of the Admiralty, lately Secretary for Foreign Affairs, and for many years Secretary of State for Air, talking to the boys of the Public Schools' Aviation Camp at Norwich on Aug. 9 stated that the equipment of the Defence Services and the organisation to produce armament on a large scale are now so highly efficient that the idea of any country involving itself in a war against us is most unlikely.

Speaking as late First Lord of the Admiralty, he said that "the development of guns capable of sustaining a concentrated anti-aircraft fire was such that a massed dive on a battleship would probably result in at least ten enemy aircraft being brought down."

That seems quite a reasonable estimate and if 50 aeroplanes took part in the attack that would leave 40 to get their bombs or torpedoes home on the ship, after which the ship would not be an awful lot of use. And the loss of ten out of 50 machines would be very much less than the rate of loss of infantry battalions attacking in France during the War 1914-18.

Further, Sir Samuel said that probably in the future "attackers would not consider battleships worth-while targets, but would concentrate on more strategic objects where there was less risk of loss to the attackers."

Somebody must have been, as schoolboys used to say, "stuffing" Sir Samuel to make him believe that. Certainly the Air Force would concentrate on the greater strategic objects, such as cities, towns and villages where armament factories existed, and on cities which could swing political influence by panicking the politicians. But putting warships out of action might be of equal strategic importance, and so the tactics in attacking battleships become just as important as the tactics of bombing inhabited areas.

The Polar Record Claim

GROMOFF, YUMASHEFF AND DANILEF, the three Russian airmen who claim that they flew non-stop from Moscow to Francisco over the Pole and broke the World's long-distance record, have returned to the Communist Front in the French steamship *Normandie*. On Aug. 9 the so-called Soviet Ambassador in London, Maisky, who recently threw a spanner into the works of the International-Non-Intervention-in-Spain Committee so that Russia can go on supplying armament and ammunition to the Reds, boarded the *Normandie* off Cowes to give the aviators an official welcome.

Newspaper reports say that Gromoff said,—"Considerably longer flights than the one we undertook are practicable. In a few years' time it should be possible to arrange a regular service from Russia to San Francisco by the North Pole route. It would be quite safe using two-engined aeroplanes."

As that is a newspaper report it may be quite inaccurate, but at any rate the opinions expressed are inaccurate in that no route over the North Pole would be quite safe whether with two motors or any number. And in any case do the United States want a regular flow of Russian Communists to the Pacific Slope?

We await with interest the confirmation of this claimed performance by the *Féderation Aéronautique Internationale*. Unless an authenticated barograph record of the whole flight is available there is nothing to prove that the machine did not descend to be refuelled at one of the Russian aerodromes on the edge of the Arctic Ocean. And even if a barograph record which can be satisfactorily authenticated as not having been tampered with is produced, there is still nothing to show that the machine was not refuelled in the air in the Arctic.

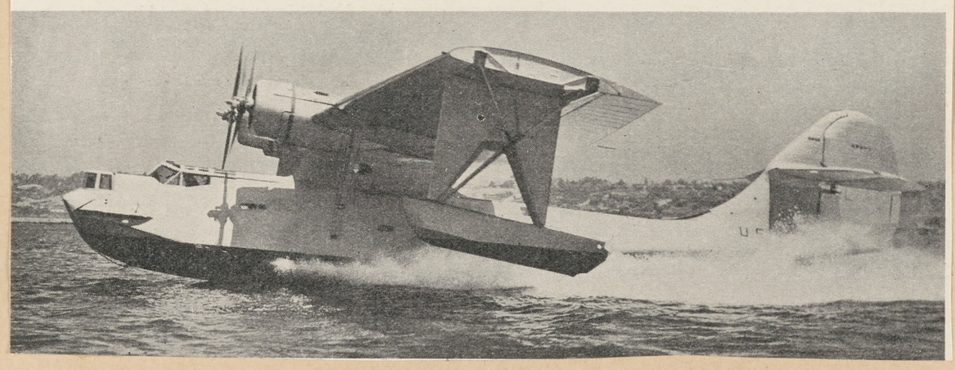
We know that the Russians are always keen on cribbing the very latest ideas, although, fortunately, they always make a mess of them when put into general use. And refuelling in the air is precisely the kind of trick that would appeal to the Russian love of novelty.

Vaulting Ambition

SIGISMUND LEVANEVSKY, with a crew of six, left Moscow in a four-motor amphibian, designed by one Bolkhovitinoff, on August 12, to fly about 4,100 miles to Fairbanks (Alaska) whence they proposed to go to Edmonton (Alberta), Chicago and New York. No reason was given for the circuitous course.

Reports said that they passed over the North Pole at a height of 20,000 ft. some 18 hours later. Their radio messages mentioned difficulty with ice-formation in heavy clouds, and later the lubrication failure of one motor. Since when they have disappeared.

Soviet aeroplanes and ice-breakers have begun to search. The Canadian Royal Corps of Signals has been instructed to co-operate.



Dick Archbold Anxious To Set Out On New Adventure

S.D.-Sun 10/31/37

Intrepid Explorer Awaits Delivery Of Consair Flying Boat

The impatience to be off on another epochal flight, to start another danger-filled adventure in a land of unexplored mountains and forests and precipitous gorges through which streams road turbulently, is gripping young Dick Archbold at the Consolidated Aircraft Corp. plant these days.

The thick, black hair and mustache, the somewhat casual manner of dress, and the detached, apparently unconcerned attitude of Archbold have, in themselves, stamped him as an extraordinary character around the factory. But the aviation world, of course, knows Archbold best for his intrepid San Diego-to-New York non-stop land flight in a seaplane last July.

Archbold since sold the plane to the Russian government for use by Sir Hubert Wilkins to search for the missing trans-Arctic aviators. Shortly afterward, he rushed back to San Diego to place an order with Consolidated for another airboat, because the sale of his first craft stymied plans for one of the most ambitious exploration projects ever to be undertaken.

Plane Due This Week

And this week, as Consolidated mechanics and engineers are completing Dick Archbold's second "Guba" (Sudden Storm), he will pore over maps of Dutch New Guinea, where Nature challenged and partially defeated him last year, where he is determined to conquer a vast wilderness seen by few white men.

Within the next week or two, Consolidated will turn over its replica of a Navy patrol bomber to Dick Archbold, and after that only his own fancy will govern what is to be done with it until January, when he will lead another American Museum of Natural History expedition into Dutch New Guinea. For Archbold has always been unpredictable, and not even the Consolidated executives, who are closest to his present plans, know exactly what he will do, once the plane has been delivered to him.

Pioneering Explorer

Archbold is a pioneer in the most advanced method of exploration—by use of an airplane to furnish the expedition food and supplies as it beats a path into inaccessible country.

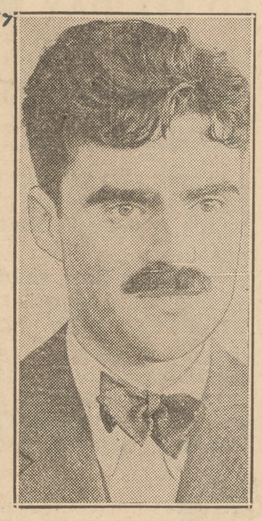
The aircraft, a Fairchild amphibian, was employed under the most precarious conditions of flight. Based on a small island off the coast of New Guinea, the Fairchild, with Archbold or Russell Rogers, pilot and mechanic, at the controls, made periodic trips to the remainder of the scientific group at its subsidiary base camp about 750 miles up the Fly River. What would have required three weeks to travel by boat took the plane only a few hours. Landings were dangerous. The plane crew had to contend with a seven to eight knot current, and little leeway between the banks of the river in the narrow gorge was afforded.

Supplies 'Chuted

Supplies in packages attached to parachutes were delivered by Archbold and Rogers in a method that required just about as much teamwork between pilot and 'chute dispatcher as that needed between pilot and bomber in a war plane.

Under circumstances that yet have not been completely learned, the Fairchild capsized at its mooring at Port Moresby in July, 1936. In hoisting the wreckage, the cable broke, damaging the ship beyond repair. Archbold forthwith returned to the United States to seek a larger and more suitable craft for further zoological exploration in New Guinea. He found what he wanted at Consolidated and in two months he'll take his replica of a Navy patrol bomber across the Pacific to Hawaii, thence to Midway, Wake and Guam and over to New Guinea.

And he's eager to get away, although he'll tell you that New Guinea is not the most comfortable place in the world. The fact that he suffered malaria there on his last expedition has not killed the attraction of another adventure to this mysterious hinterland.



DICK ARCHBOLD
Malaria didn't scare him

Cost of 270 Planes Will Total More Than $20,000,000

L.A. Times 10/31/37

WASHINGTON, Oct. 30. (U.P.)—The Navy Department today announced the opening of bids for 270 bombing planes to be constructed at a total cost of more than $20,000,000.

On a group of fifty-eight scout bombers, together with spare parts, data and drawings, Brewster Aeronautical Corporation bid $6,680,400 and United Aircraft Corporation, East Hartford, Ct., $3,425,694.

On another group of thirty-one scout bombers the Brewster company bid $2,267,160 and United's figure was $1,897,670.

BID ON TWO TYPES

Curtiss-Wright Corporation, Buffalo, was the only bidder on two other types of scout bombers, submitting a figure of $1,690,174 for one group and $2,928,276 for the other.

The Navy said bids were on a "restricted" basis and the specifications and the probable performance of the ships bid for will not be made public.

REPORT LATER

Officials emphasized that none of the bids has been accepted, many perhaps will not be accepted, and no definite action will be announced for about two months.

On one group of fourteen patrol bombers, the Glenn L. Martin Company, Baltimore, bid $2,086,606. The Martin company was the only bidder.

On another group of seventy-eight patrol bombers, Consolidated Aircraft Corporation, San Diego, bid a total of $8,052,500. United Aircraft Corporation, Sikorsky Aircraft division, Stratford, Ct., bid $9,041,254 on the same group.

Midget Racer—

Built by employees of Consolidated factory

Aviation aug-1937

ENTRY OF A MAJOR AIRCRAFT MANUFACTURER into the field of American closed course racing—at least by proxy—was signalized recently when employees of the Consolidated Aircraft Corporation, San Diego, Calif., completed and test flew a promising new midget racer. With a total wing area of only 35 sq.ft., and powered with an English Pobjoy "Niagara" engine, the little plane showed an indicated top speed of 200 m.p.h. The plane has a wood wing of cantilever type and steel tube fuselage with spruce fairing strips and cloth and screen wire covering. Control surfaces are also of steel tube construction with cloth cover. The plane was designed and constructed under the direction of C. C. Flagg, of the Consolidated Final Assembly Inspection Department; with the help of Young McClure, Lionel Machado, Sheet Metal Department; Herbert Hewell, Joe McCannon, Final Assembly and Joe Sturgess, Hull Department. Hugh Nicholson, Jr., Final Assembly Department, made the initial flight tests. Specifications are as follows:

Wing span	14 ft. 6 in.
Length	12 ft. 6 in.
Height	3 ft. 10 in.
Wing area	35 sq. ft.
Weight (empty)	408 lb.
Wing loading	19 lb./sq. ft.
Power loading	7.77 lb./hp.
Fuel capacity	12 gal.
Oil Capacity	2 gal.
Engine	English Pobjoy "Niagara" —90 hp.
Propeller	Wood—62 in. diameter, 42 deg. pitch at 2/3 station
Max. speed (designed)	200 m.p.h.
Landing speed (with flaps)	58 m.p.h.
Landing speed (without flaps)	70 m.p.h.

Constructors of the plane expressed particular appreciation for help given by I. M. Laddon, Consolidated chief engineer, and numerous other officials of the company.

Dec. 8 Tentative Date For Zone Mass Flight

S.D.-Sun 10/22/37

By HAROLD KEEN

As personnel of the Canal Zone's Patrol Squadron Two today started "shakedown" tests of the first patrol bomber delivered to that unit, Navy officials at North Island disclosed that Dec. 8 has been set as the tentative takeoff date for the squadron's non-stop mass flight to Coco Solo.

This hop may furnish another record to the Navy's bulging book of aviation accomplishments, inasmuch as 14 planes, the largest number in history to make a non-stop flight of this distance, are scheduled to take off from San Diego, it was indicated.

Two 'Spares' Included

In addition to the 12 Consolidated-built patrol bombers of Squadron VP-2 will probably be two airboats assigned to Squadron VP-3 of the Canal Zone as "spares." Flight personnel for these two planes, of the PBY-1 type, are enroute to San Diego aboard the Navy transport Vega, due here Oct. 30.

The 13th patrol bomber of Consolidated's PBY-2 contract was delivered yesterday to Lieut.-Comdr. B. E. Grow, commanding officer of Patrol Squadron Two. First 12 of this order have just been completed for Patrol Squadron 11, permanently based at North Island.

'Orphan' Status Ends

With VP-2 finally in possession of a plane of its own, the squadron will be able to discard the "orphan" status it has assumed since its personnel arrived in San Diego last June. During the four months they awaited delivery of a bomber they could "call their own," the VP-2 aviators have been accustoming themselves to the operation of the big airboats in craft belonging to other squadrons.

The December date for the southern flight was chosen, officers indicated, in order to coincide with the sailing schedule of the aircraft tender Langley, now functioning with patrol squadrons at Pearl Harbor. The Langley will serve as floating base for the Coco Solo seaplanes after the Hawaii tactics are completed, and about Dec. 8, the vessel will be steaming toward San Diego.

The Langley thus will be in a position to serve as one of the guard ships on the flight route between San Diego and the Canal Zone. Other vessels will be sent out for this duty from the Canal Zone and San Diego, and among the latter probably will be the Sandpiper, which recently returned from several months' duty in Alaskan waters.

Lieut.-Comdr. Grow today anticipated that better flight conditions will be enjoyed by his squadron than those through which Patrol Squadron Two made its non-stop flight from San Diego to Coco Solo last summer.

"The season of severe tropical thunderstorms will be just about over at that time," Lieut. Comdr. Grow said, "and if we're lucky we may not have to go off our course at all to dodge bad weather."

Careful Weather Check

Patrol Squadron Two not only fought through storms, or headed seaward to skirt storm areas, but also experienced serious obstacles to course-finding, such as a thin layer of clouds that obscured the heavens and made celestial navigation impossible.

"On a flight of such a great distance, we can't afford to go very far off our course," Lieut-Comdr. Grow commented. For this reason, weather conditions along the entire coast of Mexico and Central America will be carefully scrutinized before the exact time of takeoff is established.

LANGLEY SAILS ON WEDNESDAY

S. D. Sun 4 Nov. 37

To transport 85 officers and men of Hawaii's Patrol Squadron 10 to San Diego, the aircraft tender Langley will sail from Pearl Harbor next Wednesday, Aircraft Scouting Force headquarters at North Island reported today.

The Langley just completed service as base ship for Pearl Harbor patrol bomber squadrons in secret tactical maneuvers at French Frigate Shoals, 550 miles from Honolulu.

Personnel of VP-10 will be trained in the new Consolidated PBY airboats for a non-stop mass flight to Hawaii early in 1938. Twelve planes will be delivered to Squadron VP-10.

The Langley, due here Nov. 19, will leave the following day for the Canal Zone with personnel and old-type seaplanes being transferred from the San Diego base.

SEVEN CONCERNS NET NEAR $9,000,000

Large Backlogs Keep Industry Immune From Recession in General Business

PAC. COAST EDITION

INDIVIDUAL COMPARISONS

Wall St. Journal Wed NOV. 17-37

By N. S. KEITH

NEW YORK—Present indications are that the aggregate earnings this year of leading manufacturers in the aircraft and aviation equipment industry are likely to register a gain of around 80% over 1936.

This forecast covers the seven principal concerns which have reported nine-month earnings and is based on their operations in that period together with the outlook for deliveries during the fourth quarter.

For the first nine months, the combined profits of these seven manufacturers were $6,702,466, compared with $4,929,703 in the full year 1936. Current trade opinion is that the fourth quarter is likely to carry the year's combined profits for this group to around $9,000,000.

For the six companies in the group on which comparable 1936 interim earnings figures are available, the nine months net aggregated $5,683,627, against $2,606,299 in the like 1936 period. For the third quarter, the combined net profits of the six manufacturers were $2,392,848, against $987,653 in the like quarter of last year.

Rate of Delivery Gain to Taper

Current trade forecasts indicate that the industry's total fourth quarter deliveries, which in turn will determine the size of its total profits for the period, will continue to run ahead of the like 1936 quarter. The rate of increase, however, is expected to be materially smaller than during the first nine months of the year in reflection of the fact that deliveries in the fourth quarter of 1936 were the peak for last year and represented about 37% of total deliveries for that year.

Among individual producers, of course, some variation can be expected from this general trend. Douglas Aircraft officials, for example, have predicted that the company's fourth quarter earnings will probably be under a year ago. Likewise, the Boeing nine months' report pointed out that the major portion of the year's scheduled deliveries had been completed during the first nine months, with deliveries of the company's four-engine commercial planes and of additional units of its "flying fortresses" for the Army not commencing until next year.

Backlogs Keep Operations High

Taken as a whole, the aircraft industry has been immune from any curtailment resulting from the downtrend in general economic conditions during recent months. This situation results, of course, from the fact that the industry is operating on a large bank of unfilled orders which, in general, assures continued operations around current levels for many months ahead. Furthermore, the requirements of the Govern-

Continued on Third Page

The sharp expansion in deliveries during the nine months was accompanied by a sharper rise in profits than in the dollar value of deliveries for the industry as a whole. Considerable variation was shown, however, in the profit margin position of individual companies in relation to 1936 levels.

Profit Margin Developments Vary

Curtiss-Wright and United Aircraft, both of which derive the major part of their earnings from engine manufacturing, showed substantial improvement in profit margin position over last year. On the other hand, Douglas and Boeing showed little or no improvement in margin over 1936, despite substantially larger deliveries. Glenn L. Martin, substantially all of whose business this year has been done on export orders, materially increased its profit margin over the level for the year 1936.

The ratio of net profits to sales for those companies which disclosed their sales volume for the nine months compares with 1936 as follows:

	Third quarter		1st 9 months		Year
	1937	1936	1937	1936	1936
Boeing	7.4	11.8	7.4	7.4	7.3
Douglas	*7.8	9.1	*7.0	7.8	12.4
Glenn L. Martin	15.3	...	17.7	...	11.8
United Aircraft	14.8	7.1	13.1	5.3	8.7

*Profits before undistributed profits surtax accrual of $205,000 made during third quarter.

Curtiss-Wright does not make public its sales [illegible] but is understood to

AIR OFFICIALS AWAIT WORD OF FULLER FLIGHT

S. D.-Sun 4/3/37

Plane, Weather May Hold Up Canada-Mexico Trip By Bendix Winner

San Diego officials of the National Aeronautical Association today awaited word from Frank Fuller Jr., winner of the 1937 Bendix airplane speed trophy, as to the exact plans for his proposed Vancouver, B. C.,-to-Agua Caliente dash.

Fuller recently informed William Van Dusen, San Diego observer and timer for the N. A. A., that he will attempt to break the existing record between Canada and Baja California late this week.

Ortman Holds Record

Two contingencies may hold up his flight, however, he indicated—use of his Seversky low-wing moonplane for movie work in Hollywood, and inclement weather in the Northwest.

Reports from Vancouver airport yesterday stated that Fuller may take off tomorrow.

The San Francisco sportsman pilot hopes to break the record of five hours, 38 minutes set by Earl Ortman in 1935. His Seversky plane is similar to the latest stock model Army pursuit craft, reputedly the fastest military land planes in America.

Timing Aides

Mr. Van Dusen probably will be assisted either by T. Claude Ryan or Edgar Gott, assistant to the president of Consolidated Aircraft Corp., in the official timing of Fuller at the flight's finish.

All the Vancouver-to-Auga Caliente record-breaking attempts in the past decade have been officially observed by Mr. Van Dusen. He timed Ruth Alexander when she flew the distance in 14 hours, Roscoe Turner when he made it in 6½ hours, Wedell Williams in 6 hours, and Ortman, the present record-holder.

LANGLEY COMING WITH NAVY FLIERS FOR HAWAII HOP

S.D.-Union Nov 3

Eighty-five officers and men of Squadron VP-10 will arrive here from Pearl Harbor, Nov. 19, aboard the aircraft tender Langley, preparatory to leaving early next year with 12 new airboats on a non-stop flight from San Diego to Hawaii.

The date of the Hawaiian flight, aircraft officials of the scouting force announced, will not be definitely determined until all the 12 multimotored patrol planes, now under construction at Consolidated, are delivered and tested. This is expected to be early in March.

The Langley will be in port less than 24 hours before weighing anchor and sailing for Coco Solo, C. Z. She is to transport to the Canal Zone personnel and planes from the Pearl Harbor naval air base.

The Langley will be one of the few warships of the battle fleet that will spend Thanksgiving day at sea. She will be off the Costa Rican coast Nov. 25.

CONSAIR BIDS LOW ON 78 NAVY PLANES

$8,000,000 Offer Made By S. D. Firm On Patrol Bombers

S.D. Sun 10/30/37

By United Press

WASHINGTON, Oct. 30.—The Navy Department today announced the opening of bids for 270 bombing planes to be constructed at a total cost of more than $20,000,000.

On one group of 14 patrol bombers, the Glenn L. Martin Co., Baltimore, bid $2,086,606. The Martin Co. was the only bidder.

On another group of 78 patrol bombers, Consolidated Aircraft Corp., San Diego, bid a total of $8,052,500. United Aircraft Corp., Sikorsky Aircraft division, Stratford, Conn., bid $9,041,254 on the same group.

Officials emphasized that none of the bids has been accepted, many perhaps will not be accepted, and no definite action will be announced for about two months.

Consair Completing Last 60-Plane Order

The Consolidated Corporation's bid was for the same type of patrol bombers as now being flown by the Navy and built by Consolidated. Consolidated is now completing a contract for the last of 60 such planes. Altogether, by June 1, the San Diego firm will have delivered 176 of these new bombers to the Navy.

The bombers are being used to replace destroyers as the scouting arm of the Navy.

MELBOURNE

"ARGUS" WEDNESDAY,

25th August 1937.

NINE DEAD IN AIR CRASHES

United States Planes

NEW YORK, Aug. 23.

Two accidents, involving United States aircraft, were reported to-day.

A flying-boat of the Navy Department crashed in the bay at San Diego (California). It is reported that six men were killed and two were injured. Three bodies have been recovered.

The flying-boat nose-dived into six feet of water with such force that some of the occupants were thrown high into the air. A search was carried out with the aid of searchlights on battle-ships and cruisers anchored in the bay.

A message from San Louis (Argentina) says that the three members of the crew were killed when a Pan-American airliner crashed and was burned. There were no passengers on board.

WING-TIP FLOATS:—The American Consolidated P.3 Y.—1 (two 700 h.p. Wright Cyclones), in which the floats hinge up to form wing-tips. They are down in the lower picture.

Our Worth-while Air Force

SIR SAMUEL HOARE, Secretary of State for Home Affairs, recently First Lord of the Admiralty, lately Secretary for Foreign Affairs, and for many years Secretary of State for Air, talking to the boys of the Public Schools' Aviation Camp at Norwich on Aug. 9 stated that the equipment of the Defence Services and the organisation to produce armament on a large scale are now so highly efficient that the idea of any country involving itself in a war against us is most unlikely.

Speaking as late First Lord of the Admiralty, he said that "the development of guns capable of sustaining a concentrated anti-aircraft fire was such that a massed dive on a battleship would probably result in at least ten enemy aircraft being brought down."

That seems quite a reasonable estimate and if 50 aeroplanes took part in the attack that would leave 40 to get their bombs or torpedoes home on the ship, after which the ship would not be an awful lot of use. And the loss of ten out of 50 machines would be very much less than the rate of loss of infantry battalions attacking in France during the War 1914-18.

Further, Sir Samuel said that probably in the future "attackers would not consider battleships worth-while targets, but would concentrate on more strategic objects where there was less risk of loss to the attackers."

Somebody must have been, as schoolboys used to say, "stuffing" Sir Samuel to make him believe that. Certainly the Air Force would concentrate on the greater strategic objects, such as cities, towns and villages where armament factories existed, and on cities which could swing political influence by panicking the politicians. But putting warships out of action might be of equal strategic importance, and so the tactics in attacking battleships become just as important as the tactics of bombing inhabited areas.

The Polar Record Claim

GROMOFF, YUMASHEFF AND DANILEF, the three Russian airmen who claim that they flew non-stop from Moscow to Francisco over the Pole and broke the World's long-distance record, have returned to the Communist Front in the French steamship *Normandie*. On Aug. 9 the so-called Soviet Ambassador in London, Maisky, who recently threw a spanner into the works of the International-Non-Intervention-in-Spain Committee so that Russia can go on supplying armament and ammunition to the Reds, boarded the *Normandie* off Cowes to give the aviators an official welcome.

Newspaper reports say that Gromoff said,—"Considerably longer flights than the one we undertook are practicable. In a few years' time it should be possible to arrange a regular service from Russia to San Francisco by the North Pole route. It would be quite safe using two-engined aeroplanes."

As that is a newspaper report it may be quite inaccurate, but at any rate the opinions expressed are inaccurate in that no route over the North Pole would be quite safe whether with two motors or any number. And in any case do the United States want a regular flow of Russian Communists to the Pacific Slope?

We await with interest the confirmation of this claimed performance by the *Féderation Aéronautique Internationale*. Unless an authenticated barograph record of the whole flight is available there is nothing to prove that the machine did not descend to be refuelled at one of the Russian aerodromes on the edge of the Arctic Ocean. And even if a barograph record which can be satisfactorily authenticated as not having been tampered with is produced, there is still nothing to show that the machine was not refuelled in the air in the Arctic.

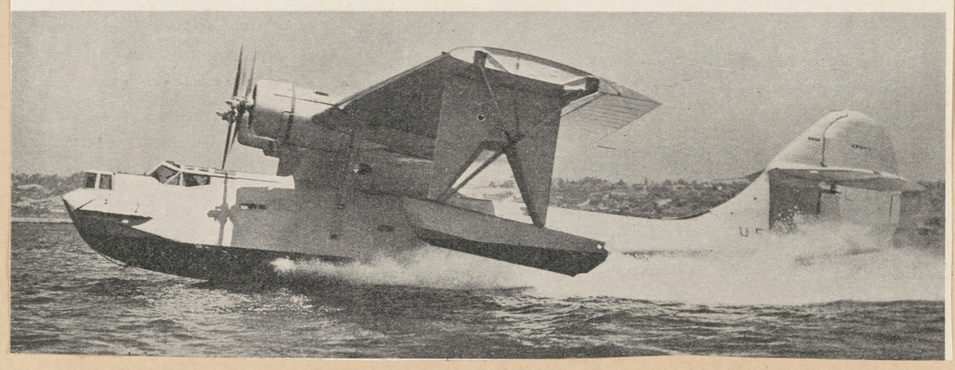
We know that the Russians are always keen on cribbing the very latest ideas, although, fortunately, they always make a mess of them when put into general use. And refuelling in the air is precisely the kind of trick that would appeal to the Russian love of novelty.

Vaulting Ambition

SIGISMUND LEVANEVSKY, with a crew of six, left Moscow in a four-motor amphibian, designed by one Bolkhovitinoff, on August 12, to fly about 4,100 miles to Fairbanks (Alaska) whence they proposed to go to Edmonton (Alberta), Chicago and New York. No reason was given for the circuitous course.

Reports said that they passed over the North Pole at a height of 20,000 ft. some 18 hours later. Their radio messages mentioned difficulty with ice-formation in heavy clouds, and later the lubrication failure of one motor. Since when they have disappeared.

Soviet aeroplanes and ice-breakers have begun to search. The Canadian Royal Corps of Signals has been instructed to co-operate.



Dick Archbold Anxious To Set Out On New Adventure

S.D.-Sun 10/31/37

Intrepid Explorer Awaits Delivery Of Consair Flying Boat

The impatience to be off on another epochal flight, to start another danger-filled adventure in a land of unexplored mountains and forests and precipitous gorges through which streams road turbulently, is gripping young Dick Archbold at the Consolidated Aircraft Corp. plant these days.

The thick, black hair and mustache, the somewhat casual manner of dress, and the detached, apparently unconcerned attitude of Archbold have, in themselves, stamped him as an extraordinary character around the factory. But the aviation world, of course, knows Archbold best for his intrepid San Diego-to-New York non-stop land flight in a seaplane last July.

Archbold since sold the plane to the Russian government for use by Sir Hubert Wilkins to search for the missing trans-Arctic aviators. Shortly afterward, he rushed back to San Diego to place an order with Consolidated for another airboat, because the sale of his first craft stymied plans for one of the most ambitious exploration projects ever to be undertaken.

Plane Due This Week

And this week, as Consolidated mechanics and engineers are completing Dick Archbold's second "Guba" (Sudden Storm), he will pore over maps of Dutch New Guinea, where Nature challenged and partially defeated him last year, where he is determined to conquer a vast wilderness seen by few white men.

Within the next week or two, Consolidated will turn over its replica of a Navy patrol bomber to Dick Archbold, and after that only his own fancy will govern what is to be done with it until January, when he will lead another American Museum of Natural History expedition into Dutch New Guinea. For Archbold has always been unpredictable, and not even the Consolidated executives, who are closest to his present plans, know exactly what he will do, once the plane has been delivered to him.

Pioneering Explorer

Archbold is a pioneer in the most advanced method of exploration—by use of an airplane to furnish the expedition food and supplies as it beats a path into inaccessible country.

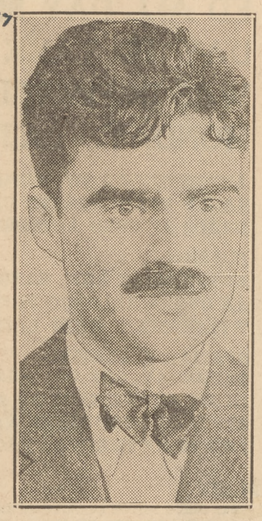
The aircraft, a Fairchild amphibian, was employed under the most precarious conditions of flight. Based on a small island off the coast of New Guinea, the Fairchild, with Archbold or Russell Rogers, pilot and mechanic, at the controls, made periodic trips to the remainder of the scientific group at its subsidiary base camp about 750 miles up the Fly River. What would have required three weeks to travel by boat took the plane only a few hours. Landings were dangerous. The plane crew had to contend with a seven to eight knot current, and little leeway between the banks of the river in the narrow gorge was afforded.

Supplies 'Chuted

Supplies in packages attached to parachutes were delivered by Archbold and Rogers in a method that required just about as much teamwork between pilot and 'chute dispatcher as that needed between pilot and bomber in a war plane.

Under circumstances that yet have not been completely learned, the Fairchild capsized at its mooring at Port Moresby in July, 1936. In hoisting the wreckage, the cable broke, damaging the ship beyond repair. Archbold forthwith returned to the United States to seek a larger and more suitable craft for further zoological exploration in New Guinea. He found what he wanted at Consolidated and in two months he'll take his replica of a Navy patrol bomber across the Pacific to Hawaii, thence to Midway, Wake and Guam and over to New Guinea.

And he's eager to get away, although he'll tell you that New Guinea is not the most comfortable place in the world. The fact that he suffered malaria there on his last expedition has not killed the attraction of another adventure to this mysterious hinterland.



DICK ARCHBOLD
Malaria didn't scare him

Navy Opens Bomber Bids

Cost of 270 Planes Will Total More Than $20,000,000

L.A. Times 10/31/37

WASHINGTON, Oct. 30. (U.P.)—The Navy Department today announced the opening of bids for 270 bombing planes to be constructed at a total cost of more than $20,000,000.

Purely Gossip

When directors of Pullman meet after the close today there is some expectation in the street that they will vote a year-end dividend. Earnings have sharply improved this year, and it appears probable that net income for the full year will run slightly above $3 a share on the stock. Four quarterly dividends aggregating $1.50 a share have already been paid giving directors leeway to vote up to $1.50 as a final payment. In predepression days the company was a liberal dividend payer, having distributed approximately 70% of its net for that purpose. Perhaps the directors' action may be tempered at this time by the recent drought in equipment buying which suggests lower earnings for the first half of 1938.

Plane, Weather May Hold Up Canada-Mexico Trip By Bendix Winner

San Diego officials of the National Aeronautical Association today awaited word from Frank Fuller Jr., winner of the 1937 Bendix airplane speed trophy, as to the exact plans for his proposed Vancouver, B. C.,-to-Agua Caliente dash.

Fuller recently informed William Van Dusen, San Diego observer and timer for the N. A. A., that he will attempt to break the existing record between Canada and Baja California late this week.

Ortman Holds Record

Two contingencies may hold up his flight, however, he indicated—use of his Seversky low-wing moonplane for movie work in Hollywood, and inclement weather in the Northwest.

Reports from Vancouver airport yesterday stated that Fuller may take off tomorrow.

The San Francisco sportsman pilot hopes to break the record of five hours, 38 minutes set by Earl Ortman in 1935. His Seversky plane is similar to the latest stock model Army pursuit craft, reputedly the fastest military land planes in America.

Timing Aides

Mr. Van Dusen probably will be assisted either by T. Claude Ryan or Edgar Gott, assistant to the president of Consolidated Aircraft Corp., in the official timing of Fuller at the flight's finish.

All the Vancouver-to-Auga Caliente record-breaking attempts in the past decade have been officially observed by Mr. Van Dusen. He timed Ruth Alexander when she flew the distance in 14 hours, Roscoe Turner when he made it in 6½ hours, Wedell Williams in 6 hours, and Ortman, the present record-holder.

LANGLEY COMING WITH NAVY FLIERS FOR HAWAII HOP

S. D. Union Nov. 19

Eighty-five officers and men of Squadron VP-10 will arrive here from Pearl Harbor, Nov. 19, aboard the aircraft tender Langley, preparatory to leaving early next year with 12 new airboats on a non-stop flight from San Diego to Hawaii.

The date of the Hawaiian flight, aircraft officials of the scouting force announced, will not be definitely determined until all the 12 multimotored patrol planes, now under construction at Consolidated, are delivered and tested. This is expected to be early in March.

The Langley will be in port less than 24 hours before weighing anchor and sailing for Coco Solo, C. Z. She is to transport to the Canal Zone personnel and planes from the Pearl Harbor naval air base.

The Langley will be one of the few warships of the battle fleet that will spend Thanksgiving day at sea. She will be off the Costa Rican coast Nov. 25.

CONSAIR BIDS LOW ON 78 NAVY PLANES

$8,000,000 Offer Made By S. D. Firm On Patrol Bombers

S.D. Sun 10/30/37

By United Press

WASHINGTON, Oct. 30.—The Navy Department today announced the opening of bids for 270 bombing planes to be constructed at a total cost of more than $20,000,000.

On one group of 14 patrol bombers, the Glenn L. Martin Co., Baltimore, bid $2,086,606. The Martin Co. was the only bidder.

On another group of 78 patrol bombers, Consolidated Aircraft Corp., San Diego, bid a total of $8,052,500. United Aircraft Corp., Sikorsky Aircraft division, Stratford, Conn., bid $9,041,254 on the same group.

Officials emphasized that none of the bids has been accepted, many perhaps will not be accepted, and no definite action will be announced for about two months.

Consair Completing Last 60-Plane Order

The Consolidated Corporation's bid was for the same type of patrol bombers as now being flown by the Navy and built by Consolidated. Consolidated is now completing a contract for the last of 60 such planes. Altogether, by June 1, the San Diego firm will have delivered 176 of these new bombers to the Navy.

The bombers are being used to replace destroyers as the scouting arm of the Navy.

MELBOURNE

"ARGUS" WEDNESDAY,

25th August 1937.

NINE DEAD IN AIR CRASHES

United States Planes

NEW YORK, Aug. 23.

Two accidents, involving United States aircraft, were reported to-day.

A flying-boat of the Navy Department crashed in the bay at San Diego (California). It is reported that six men were killed and two were injured. Three bodies have been recovered.

The flying-boat nose-dived into six feet of water with such force that some of the occupants were thrown high into the air. A search was carried out with the aid of searchlights on battle-ships and cruisers anchored in the bay.

A message from San Louis (Argentina) says that the three members of the crew were killed when a Pan-American airliner crashed and was burned. There were no passengers on board.

Aircraft Earnings

Continued from First Page

ment's aviation program, together with those of the commercial transport field are considered likely to prevent any major let-down in business for at least a year.

In fact, the curtailment in other industrial lines is likely to facilitate deliveries against the existing bank of orders by speeding receipt of materials. Earlier in the year, when general industrial operations were at their peak, deliveries by some companies in the aircraft field were slowed down by delays encountered in the receipt of materials ordered from other industries.

Net Profits Compared

The net profits of the seven aircraft concerns cited above compared as follows for the third quarter and first nine months of 1937 and 1936 and the full year 1936:

	—Third quarter—		-First 9 months-		Year
	1937	1936	1937	1936	1936
Aviation Corp	*$60,475	$58,374	†$82,681	†$115,896	$114,016
Boeing	121,546	39,289	375,443	131,712	168,364
Curtiss-Wright	690,987	440,312	1,591,584	1,262,132	1,017,657
Douglas Aircraft	‡326,973	83,032	852,795	277,644	976,342
Glenn L. Martin	492,532	.....	1,018,839	.....	732,652
North American	§160,224	†6,544	225,788	137,957	4,230
United Aircraft	1,032,643	364,190	2,720,698	912,750	1,926,442

* Profits for 1936 are for quarter and nine months ended September 30 and 11 months ended November 30; profits for 1937 are for quarter and nine months ended August 31. † Loss. ‡ Fiscal periods ended August 31 and November 30. § Includes Eastern Air Lines.

The sharp expansion in deliveries during the nine months was accompanied by a sharper rise in profits than in the dollar value of deliveries for the industry as a whole. Considerable variation was shown, however, in the profit margin position of individual companies in relation to 1936 levels.

Profit Margin Developments Vary

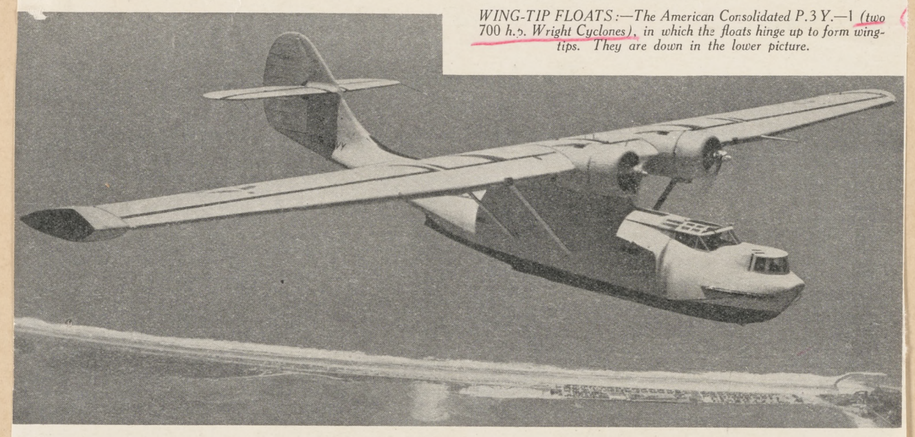
Curtiss-Wright and United Aircraft, both of which derive the major part of their earnings from engine manufacturing, showed substantial improvement in profit margin position over last year. On the other hand, Douglas and Boeing showed little or no improvement in margin over 1936, despite substantially larger deliveries. Glenn L. Martin, substantially all of whose business this year has been done on export orders, materially increased its profit margin over the level for the year 1936.

The ratio of net profits to sales for those companies which disclosed their sales volume for the nine months compares with 1936 as follows:

	Third quarter		1st 9 months		Year
	1937	1936	1937	1936	1936
Boeing	7.4	11.8	7.4	7.4	7.3
Douglas	*7.8	9.1	*7.0	7.8	12.4
Glenn L. Martin	15.3	...	17.7	...	11.8
United Aircraft	14.8	7.1	13.1	5.3	8.7

* Profits before undistributed profits surtax accrual of $205,000 made during third quarter.

Curtiss-Wright does not make public its sales [illegible] but is understood to have shown a net profit margin of around 10% on sales for the first nine months of this year. For the full year 1936, Curtiss-Wright's net profits represented only 5.4% of its sales volume.



WING-TIP FLOATS:—The American Consolidated P.3 Y.—1 (two 700 h.p. Wright Cyclones), in which the floats hinge up to form wing-tips. They are down in the lower picture.

Our Worth-while Air Force

SIR SAMUEL HOARE, Secretary of State for Home Affairs, recently First Lord of the Admiralty, lately Secretary for Foreign Affairs, and for many years Secretary of State for Air, talking to the boys of the Public Schools' Aviation Camp at Norwich on Aug. 9 stated that the equipment of the Defence Services and the organisation to produce armament on a large scale are now so highly efficient that the idea of any country involving itself in a war against us is most unlikely.

Speaking as late First Lord of the Admiralty, he said that "the development of guns capable of sustaining a concentrated anti-aircraft fire was such that a massed dive on a battleship would probably result in at least ten enemy aircraft being brought down."

That seems quite a reasonable estimate and if 50 aeroplanes took part in the attack that would leave 40 to get their bombs or torpedoes home on the ship, after which the ship would not be an awful lot of use. And the loss of ten out of 50 machines would be very much less than the rate of loss of infantry battalions attacking in France during the War 1914-18.

Further, Sir Samuel said that probably in the future "attackers would not consider battleships worth-while targets, but would concentrate on more strategic objects where there was less risk of loss to the attackers."

Somebody must have been, as schoolboys used to say, "stuffing" Sir Samuel to make him believe that. Certainly the Air Force would concentrate on the greater strategic objects, such as cities, towns and villages where armament factories existed, and on cities which could swing political influence by panicking the politicians. But putting warships out of action might be of equal strategic importance, and so the tactics in attacking battleships become just as important as the tactics of bombing inhabited areas.

The Polar Record Claim

GROMOFF, YUMASHEFF AND DANILEF, the three Russian airmen who claim that they flew non-stop from Moscow to Francisco over the Pole and broke the World's long-distance record, have returned to the Communist Front in the French steamship *Normandie*. On Aug. 9 the so-called Soviet Ambassador in London, Maisky, who recently threw a spanner into the works of the International-Non-Intervention-in-Spain Committee so that Russia can go on supplying armament and ammunition to the Reds, boarded the *Normandie* off Cowes to give the aviators an official welcome.

Newspaper reports say that Gromoff said,—"Considerably longer flights than the one we undertook are practicable. In a few years' time it should be possible to arrange a regular service from Russia to San Francisco by the North Pole route. It would be quite safe using two-engined aeroplanes."

As that is a newspaper report it may be quite inaccurate, but at any rate the opinions expressed are inaccurate in that no route over the North Pole would be quite safe whether with two motors or any number. And in any case do the United States want a regular flow of Russian Communists to the Pacific Slope?

We await with interest the confirmation of this claimed performance by the *Féderation Aéronautique Internationale*. Unless an authenticated barograph record of the whole flight is available there is nothing to prove that the machine did not descend to be refuelled at one of the Russian aerodromes on the edge of the Arctic Ocean. And even if a barograph record which can be satisfactorily authenticated as not having been tampered with is produced, there is still nothing to show that the machine was not refuelled in the air in the Arctic.

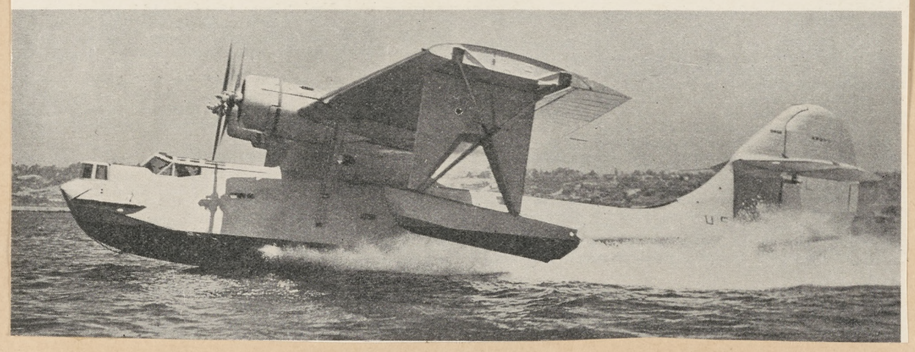
We know that the Russians are always keen on cribbing the very latest ideas, although, fortunately, they always make a mess of them when put into general use. And refuelling in the air is precisely the kind of trick that would appeal to the Russian love of novelty.

Vaulting Ambition

SIGISMUND LEVANEVSKY, with a crew of six, left Moscow in a four-motor amphibian, designed by one Bolkhovitinoff, on August 12, to fly about 4,100 miles to Fairbanks (Alaska) whence they proposed to go to Edmonton (Alberta), Chicago and New York. No reason was given for the circuitous course.

Reports said that they passed over the North Pole at a height of 20,000 ft. some 18 hours later. Their radio messages mentioned difficulty with ice-formation in heavy clouds, and later the lubrication failure of one motor. Since when they have disappeared.

Soviet aeroplanes and ice-breakers have begun to search. The Canadian Royal Corps of Signals has been instructed to co-operate.



Dick Archbold Anxious To Set Out On New Adventure

S.D.-Sun 10/31/37

Intrepid Explorer Awaits Delivery Of Consair Flying Boat

The impatience to be off on another epochal flight, to start another danger-filled adventure in a land of unexplored mountains and forests and precipitous gorges through which streams road turbulently, is gripping young Dick Archbold at the Consolidated Aircraft Corp. plant these days.

The thick, black hair and mustache, the somewhat casual manner of dress, and the detached, apparently unconcerned attitude of Archbold have, in themselves, stamped him as an extraordinary character around the factory. But the aviation world, of course, knows Archbold best for his intrepid San Diego-to-New York non-stop land flight in a seaplane last July.

Archbold since sold the plane to the Russian government for use by Sir Hubert Wilkins to search for the missing trans-Arctic aviators. Shortly afterward, he rushed back to San Diego to place an order with Consolidated for another airboat, because the sale of his first craft stymied plans for one of the most ambitious exploration projects ever to be undertaken.

Plane Due This Week

And this week, as Consolidated mechanics and engineers are completing Dick Archbold's second "Guba" (Sudden Storm), he will pore over maps of Dutch New Guinea, where Nature challenged and partially defeated him last year, where he is determined to conquer a vast wilderness seen by few white men.

Within the next week or two, Consolidated will turn over its replica of a Navy patrol bomber to Dick Archbold, and after that only his own fancy will govern what is to be done with it until January, when he will lead another American Museum of Natural History expedition into New Guinea. For Archbold has always been unpredictable, and not even the Consolidated executives, who are closest to his present plans, know exactly what he will do, once the plane has been delivered to him.

Pioneering Explorer

Archbold is a pioneer in the most advanced method of exploration—by use of an airplane to furnish the expedition food and supplies as it beats a path into inaccessible country.

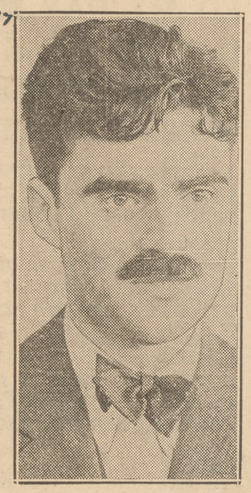
The aircraft, a Fairchild amphibian, was employed under the most precarious conditions of flight. Based on a small island off the coast of New Guinea, the Fairchild, with Archbold or Russell Rogers, pilot and mechanic, at the controls, made periodic trips to the remainder of the scientific group at its subsidiary base camp about 750 miles up the Fly River. What would have required three weeks to travel by boat took the plane only a few hours. Landings were dangerous. The plane crew had to contend with a seven to eight knot current, and little leeway between the banks of the river in the narrow gorge was afforded.

Supplies 'Chuted

Supplies in packages attached to parachutes were delivered by Archbold and Rogers in a method that required just about as much teamwork between pilot and 'chute dispatcher as that needed between pilot and bomber in a war plane.

Under circumstances that yet have not been completely learned, the Fairchild capsized at its mooring at Port Moresby in July, 1936. In hoisting the wreckage, the cable broke, damaging the ship beyond repair. Archbold forthwith returned to the United States to seek a larger and more suitable craft for further zoological exploration in New Guinea. He found what he wanted at Consolidated and in two months he'll take his replica of a Navy patrol bomber across the Pacific to Hawaii, thence to Midway, Wake and Guam and over to New Guinea.

And he's eager to get away, although he'll tell you that New Guinea is not the most comfortable place in the world. The fact that he suffered malaria there on his last expedition has not killed the attraction of another adventure to this mysterious hinterland.



DICK ARCHBOLD
Malaria didn't scare him

Navy Opens Bomber Bids

Cost of 270 Planes Will Total More Than $20,000,000

L.A. Times 10/31/37

WASHINGTON, Oct. 30. (U.P.)—The Navy Department today announced the opening of bids for 270 bombing planes to be constructed at a total cost of more than $20,000,000.

On a group of fifty-eight scout bombers, together with spare parts, data and drawings, Brewster Aeronautical Corporation bid $6,680,400 and United Aircraft Corporation, East Hartford, Ct., $3,425,694.

On another group of thirty-one scout bombers the Brewster company bid $2,267,160 and United's figure was $1,897,670.

BID ON TWO TYPES

Curtiss-Wright Corporation, Buffalo, was the only bidder on two other types of scout bombers, submitting a figure of $1,690,174 for one group and $2,928,276 for the other.

The Navy said bids were on a "restricted" basis and the specifications and the probable performance of the ships bid for will not be made public.

REPORT LATER

Officials emphasized that none of the bids has been accepted, many perhaps will not be accepted, and no definite action will be announced for about two months.

On one group of fourteen patrol bombers, the Glenn L. Martin Company, Baltimore, bid $2,086,606. The Martin company was the only bidder.

On another group of seventy-eight patrol bombers, Consolidated Aircraft Corporation, San Diego, bid a total of $8,052,500. United Aircraft Corporation, Sikorsky Aircraft division, Stratford, Ct., bid $9,041,254 on the same group.

Midget Racer—

Built by employees of Consolidated factory

Aviation aug-1937

ENTRY OF A MAJOR AIRCRAFT MANUFACTURER into the field of American closed course racing—at least by proxy—was signalized recently when employees of the Consolidated Aircraft Corporation, San Diego, Calif., completed and test flew a promising new midget racer. With a total wing area of only 35 sq.ft., and powered with an English Pobjoy "Niagara" engine, the little plane showed an indicated top speed of 200 m.p.h. The plane has a wood wing of cantilever type and steel tube fuselage with spruce fairing strips and cloth and screen wire covering. Control surfaces are also of steel tube construction with cloth cover. The plane was designed and constructed under the direction of C. C. Flagg, of the Consolidated Final Assembly Inspection Department; with the help of Young McClure, Lionel Machado, Sheet Metal Department; Herbert Hewell, Joe McCannon, Final Assembly and Joe Sturgess, Hull Department. Hugh Nicholson, Jr., Final Assembly Department, made the initial flight tests. Specifications are as follows:

Wing span	14 ft. 6 in.
Length	12 ft. 6 in.
Height	3 ft. 10 in.
Wing area	35 sq. ft.
Weight (empty)	408 lb.
Wing loading	19 lb./sq. ft.
Power loading	7.77 lb./hp.
Fuel capacity	12 gal.
Oil Capacity	2 gal.
Engine	English Pobjoy.."Niagara" —90 hp.
Propeller	Wood—62 in. diameter, 42 deg. pitch at 2/3 station
Max. speed (designed)	200 m.p.h.
Landing speed (with flaps)	58 m.p.h.
Landing speed (without flaps)	70 m.p.h.

Constructors of the plane expressed particular appreciation for help given by I. M. Laddon, Consolidated chief engineer, and numerous other officials of the company.

Airboats Leave S. D. For Shipment To Russia

S. D. Sun 10/31/37

FIVE CARLOADS AWAIT VESSEL AT SAN PEDRO

Airplane Parts, Factory Equipment Built At Consolidated

Five carloads of airplane parts, tooling, dyes, fixtures and other manufacturing equipment, today had been transported from the Consolidated Aircraft Corp. plant to Terminal Island, where they will be placed aboard the Inter-Ocean Steamship Co. freighter M. S. Burganger, Nov. 8, for shipment to Soviet Russia, it was revealed yesterday.

Included in the shipment will be what is known as a "temporarily constructed" flying boat, whose parts are either screwed or bolted, instead of riveted together.

Re-Constructed In Russia

The sections of this airboat will be disassembled by Russian mechanics and re-constructed according to the production methods being indoctrinated at a huge aircraft plant on the Sea of Azov by a corps of Consolidated engineers.

Undergoing final flight tests late last week was a complete replica of the Navy's PBY-1 patrol bomber, without armament. This airboat will be "knocked down" at the completion of the tests and shipped out of San Diego to Terminal Island the week of Nov. 22, plant officials indicated yesterday. This craft will be placed aboard another Inter-Ocean freighter bound for Europe.

Transferred In Europe

The Burganger and its sister ship will deliver the planes, materials, and equipment to a Russian freighter either at Rotterdam or Havre.

Shipment of the planes to Soviet Russia is possible through a Navy release of the PBY model for export after Nov. 1, which is one year after the first airboat of this type was delivered to North Island.

S. D. Engineers In Russia

Consolidated several months ago sent a group of engineers to the Soviet Union to offer advice on mass production of the PBY planes, [illegible] for commercial purposes.

With the completion of its present shipment, Consolidated still has a backlog of business for Soviet Russia of more than $1,000,000. This includes a $750,000 contract for special tooling, and a recently acquired $400,000 order for materials.

LE CONSOLIDATED P 30 (U. S. A.)

Cet appareil est un biplace de chasse muni d'un moteur Curtiss « Super-Conqueror SV-1570 » 12 cylindres en V de 675/705 CV.

Armement : deux mitrailleuses fixes tirant à travers l'hélice, une mitrailleuse orientable.

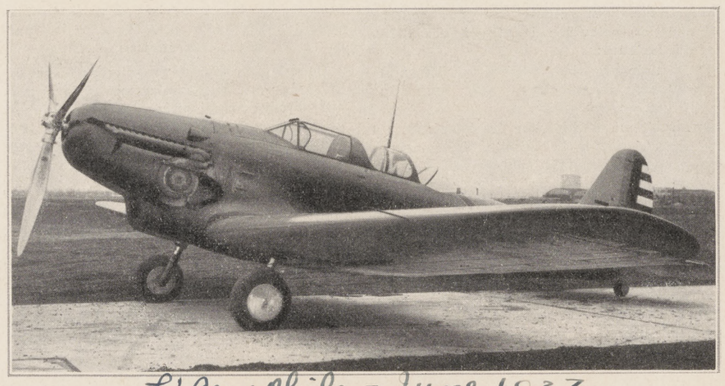
Poste émetteur et récepteur de T.S.F.

Caractéristiques :

Envergure	13 m. 42
Longueur	8 m. 84

Performances :

Vitesse maximum à 1.800 m...	403 kmh.
Montée à 5.000 m.	9 min.
Plafond absolu	8.300 m.
Rayon d'action	750 km.



L'Aeraphile - June 1937

3 S. D. CRUISERS LEAVING TODAY ON S. F. VOYAGE

S. D. Sun 11/8/37

Cincinnati, Memphis And Concord Assigned To Nov. 11 Celebration

Three locally-based light cruisers were to leave San Diego today for San Francisco to participate in that port's celebration of Armistice Day.

The Memphis, Concord and Cincinnati will remain at the Golden Gate until next Monday, returning here Nov. 19 after maneuvers at sea en route south They will be joined at San Francisco by their sister ship, the Milwaukee, which arrived at Mare Island Navy Yard for minor repairs yesterday.

Langley Returning

Other important San Diego arrivals next week will include the aircraft tender Langley, returning from Pearl Harbor; the transport-tanker Ramapo, detached from the Asiatic Fleet after several months' temporary duty; and the tanker Kanawha, from Hawaii.

Approximately 85 officers and men of Pearl Harbor's Patrol Squadron Ten will disembark from the Langley at North Island Nov. 19 to begin training for their mass flight of 12 Consolidated patrol bombers to Hawaii early in 1938. The Langley sails the following day for the Canal Zone with personnel and equipment transferred to that base from the West Coast.

Destroyer Also Due

The Ramapo is due here Nov. 20 and the Kanawha next Monday. One of the newest destroyers in the Navy, the USS Downes, will assume her permanent station in San Diego harbor Nov. 25, 1th Naval District headquarters were informed today. The Downes clears from the Canal Zone Nov. 17.

S. D. Aviators Bound By New Restrictions

S.D. Sun Nov. 14, 1937

The "super-cautious" new regulations of the U. S. Bureau of Air Commerce, which became effective Nov. 1, are baffling San Diego Navy aviators and test pilots of Consolidated Aircraft Corp.

According to the new rules, all military [illegible]s must refrain from carrying [illegible] standard tactical exercises al[illegible] a 50-mile wide established airway in whose limits North Island ironically is included; and Consolidated pilots are prohibited from carrying out test flights 25 miles east or west of Lindbergh Field.

Widespread protests have been sent to the Bureau of Air Commerce as a result of restrictions such as these, the San Diego Chamber of Commerce Aviation Committee has been informed. Changes in the new regulations are being considered by Washington officials without impairing the safety factor in transport flying, it was reported.

Under the new rules, a Navy plane engaged in aerial gunnery or dive bombing 25 miles offshore is a transgressor, and when a pilot zooms down toward North Island without crossing the established airway at specific levels, he may hear about it from Washington.

NORTH ISLAND TRIAL BOARD TESTS BOMBER

Plane First Of Airboats To Be Built By Local Factory

Nov. 11 '37 S.D. Sun

A Navy trial board of 12 officers is completing tests on Consolidated Aircraft Corp.'s PBY-3 type patrol bomber at North Island, it was revealed today.

The plane is first of 66 similar airboats to be built by the San Diego aircraft concern on the last of three Navy orders for a total of 176 planes valued at $19,000,000.

Alterations Needed

Minor alterations may be required in the PBY-3, and large-scale production of these craft is awaiting the trial board's acceptance.

Prior to their current inspection, the trial board conducted tests on the powerful new four-motored Sikorsky patrol bomber at Hampton Roads, Va. The plane, which now is undergoing shake-down flights on the east coast, will compete for a Navy contract with another experimental four-motored airboat to be finished by Consolidated next month.

80 Planes Completed

Eighty of the 176-plane order on Consolidated's books have been completed, it was reported at the plant yesterday. Bombers now being built are of the PBY-2 type, of which a full squadron of 12 have been equipped Patrol Squadron 11, based at North Island, and eight have been delivered to the Canal Zone's Patrol Squadron Two.

Accompanying this group's 12 planes on a non-stop flight to Coco Solo tentatively scheduled for Dec. 8 will be two spare airboats of Patrol Squadron Three, thus forming the largest squadron of Navy planes ever to make a long-distance mass flight.

S.D. Sun 11/10/37

INCREASE OVER 1936 TO REACH 200 PER CENT

Consair, Ryan And Solar Business For Year To Total 13 Millions

R.H.P. gave them some [illegible] ago but corrected it according to Gott

San Diego's aircraft industry will show a remarkably improved financial record for the current calendar year, advance figures revealed today.

When the books of Consolidated Aircraft Corp., Ryan Aeronautical Co., and Solar Aircraft Co. are completed as of Dec. 31, 1937, they will reveal, that more than $13,000,000 worth of airplanes and parts have been delivered this year, it was estimated.

200 Per Cent Increases

This total will represent increases over last year of as high as 200 per cent, as production schedules of the three local aircraft concerns were stepped up after the completion of considerable mass production preparation in 1936. The 1937 delivery record will be the highest in the aviation industry's history in Southern California, where three other concerns, Douglas Aircraft Co., of Santa Monica, Lockheed Aircraft Corp. of Burbank, and North American Aviation Co. of Inglewood, also reported huge gains over 1936, the previous high year.

More Expected

Consolidated total deliveries this year are estimated at $12,200,000, as compared with $4,218,399 in 1936, when large-scale production of Navy patrol bombers was just starting. Deliveries for the nine months ending Sept. 30 were $7,726,061, with an additional $4,500,000 in planes and spare parts expected to issue from the San Diego plant before New Year's Day.

Ryan's total deliveries this year will be $420,500, it was estimated, compared to $117,521 in 1936.

Unfilled Orders

Solar, which specialized in exhaust manifolds and other plane parts, will have delivered approximately $399,570 by Dec. 31, President Edmund T. Price reported.

On Oct. 1, Consolidated still had unfilled orders totalling $12,717,131, including 109 Navy bombers at $10,894,029, a private plane for Richard Archbold at $276,633, airplanes, spares, etc. for the Russian government at $1,536,265, and $10,204 business for the U. S. Army.

Ryan's backlog now is $340,000 and that of Solar's is more than $300,000.

SOU. CALIFORNIA FACTORIES BUSY

Shipments by Five Firms May Reach $42,000,000, More Than Forecast Earlier

PRODUCTION STEPPED UP

By T. C. Sullivan

LOS ANGELES—It is now apparent that deliveries by the five major aircraft manufacturers in Southern California for the year 1937 will at least equal and probably exceed an earlier estimate, despite the fact that one plant was closed by strike for seven weeks.

The Pacific Coast Edition of The Wall Street Journal estimates total deliveries of Consolidated Aircraft Corp., Douglas Aircraft Co., Lockheed Aircraft Corp., North Amer-

still gives it a high rating among average in-
the company's record and policy over the years
investigations too do not please investors, but
costs and taxes have affected the company and
small investors. The Street realizes that higher
around $10 a share, the stock is still favored by
5% and with estimates of earnings for 1937
price it did at the depression's low. Yielding
note that it is still selling at about twice the
surplus profits levy and the capital gains im-
post, will be substantially changed for 1938.
Traders feel that if their impact is reduced a
substantial basis for return of confidence in gen-
eral business will be found.

The Federation of Cotton Spinners has decided to organize a raw cotton company in North China with capital of 3,000,000 yen which will jointly be subscribed by the Federation of Cotton Spinners, Hsing-Chung Co., a Japanese concern, the Association of Japanese Cotton Spinners of China, and the Association of Raw Cotton Importers.

Japanese Cotton Action

OSAKA—(Reuter's)—The Federation of Cotton Spinners has decided that the monthly production of cotton yarns shall be limited to 300,000 bales. The monthly import of raw cotton is now restricted to 1,050,000 piculs.

LAWRENCE, Mass.—(UP)—Pacific Print Works, world's largest textile print works, has closed down until November 15 because of lack of orders, it was announced. The closing throws 1,800 out of work.

plays 400 workers.

day and Friday this week and all Thanksgiving week. Goddard Bros., operating Lonsdale Co., announced that the mill in Hope will be closed two weeks in the next three. This plant employs 600 workers.

Textile Mills Curtailing

NEW YORK—Rhode Island textile mills are planning severe curtailment because of lack of orders. The first to announce closing is Interlake Mills at Harris, R. I. This company's cotton plant, employing 600, will be closed on Thursday and Friday this week and all Thanksgiving week. Goddard Bros., operating Lonsdale Co., announced that the mill in Hope will be closed two weeks in the next three. This plant employs 600 workers.

Liverpool Cotton Close

LIVERPOOL—Cotton futures closed Saturday as follows: January, 4.42; March, 4.47; May, 4.52; July, 4.54.

NEW YORK—Wool tops closed Saturday as follows: March, 83.5, up 0.4; May, 82.9b, off 1.1; July, 83.1, unchanged; September, 83.0n, unchanged; October, 83.5, up 1.

New York spot cotton closed steady, 4 points lower: middling uplands, 7.83.

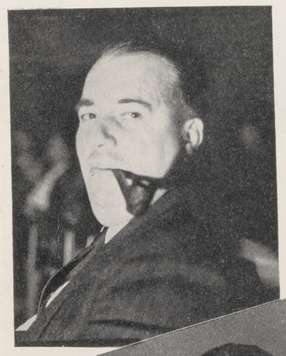
New Orleans spot cotton closed steady, unchanged: middling uplands, 7.85.

Average price of middling spot cotton in ten designated markets, 7.71, against 7.75 Friday.

RATIONALIZING

Aircraft Production

1937 S.A.E. National Aircraft Production Meeting brings better understanding of aviation industry methods.



A. C. Warner, S.A.E. General Manager.

Dr. A. L. Klein, chairman of the Thursday evening meeting.

CONTINUING THE TRADITION OF SUCCESS ushered in by the inaugural production meeting of 1936, the 1937 National Aircraft Production Meeting sponsored by the Society of Automotive Engineers, drew engineers and executives from all branches of the aviation industry to the seven sessions held at the Ambassador Hotel, Los Angeles, on Oct. 7, 8, and 9. Again, as in 1936, the sessions were jammed morning, noon, and night with capacity crowds. This in spite of the current World Series broadcasts, and the football classics of Saturday afternoon. A list of the 700 persons who registered officially would read like a Who's Who in aviation engineering, and merely to list all the firms

Truly national in its scope, the meeting drew nine of its fifteen papers from east of the Mississippi. Cooperating with the national S.A.E. body were the four Pacific Coast S.A.E. sections, headed by the Southern California Section under the chairmanship of W. B. Birren, Western Representative of the Wright Aeronautical Company. S.A.E. president Harry T. Woolson, executive engineer of Chrysler Corp., was in personal attendance. Past S.A.E. presidents Wm. B. Stout and Edward P. Warner repeated their roles of 1936, the former as master of ceremonies at the Annual Banquet, and the latter making the presentation of the Wright Brothers Medal for 1936. Carleton E. Stryker, Chief Engineer of Curtiss-Wright Technical Institute, again served as general chairman of the meeting, carrying the major burden of planning the details responsible for such outstanding success.

Climaxing the aviation industry's first peace time $100,000,000 production year, with aircraft orders running twenty five per cent ahead of 1936

meeting properly focused thought on the production problems peculiar to the aviation field. Mutual problems were discussed with commendable frankness by those in attendance. The keynote of such mutuality was struck by John A. C. Warner, S.A.E. General Manager, with the comment, "It is not a matter of sharing secrets but of avoiding economic waste."

Although the Wright Medal this year was presented for a paper read at the 1936 Production meeting, it became evident early in the current sessions that the papers offered were more representative, and the coverage of the aviation production problem was more comprehensive, than last year. Particularly gratifying was the obvious appreciation of those in attendance that production means something entirely different in aviation than it has come to mean to automobile men. This was well put by D. M. Carpenter, of the Consolidated Aircraft Corporation, in his paper on Factory Equipment and Tooling with the following comments:

"By far the most outstanding feature to be noted in connection with aircraft factory equipment and tooling is its general inadequacy. . . . aircraft factory budgets are limited by the comparatively small size of air-

Factory chiefs head for Los Angeles

EVERY aircraft and engine factory in America will be represented at the Production Meeting of the S.A.E. to be held in Los Angeles on October 7 to 9, according to John A. C. Warner, secretary of the Society of Automotive Engineers. The Los Angeles committee on arrangements has reservations from the chief executives, and production managers of practically all of the eastern factories already.

Interest in the production meeting is stimulated by the unprecedented success of the SAE meeting at Los Angeles of last year when the local committee was embarrassed by the unexpected influx of visiting engineers. This year the committee is prepared for any emergency.

The Army and the Navy, builders of aircraft and engines, transport companies, suppliers of raw materials, and the National Advisory Committee for Aeronautics all are contributing papers based upon theory and practical experience, according to John A. C. Warner, secretary and general manager of the Society.

Stainless steel and its place in aircraft manufacture is to be explained by a representative of one of the country's leading users of this material—the E. G. Budd Manufacturing Co. Steel castings, magnesium castings, die castings, and molded plastics will get concentrated attention.

A paper is scheduled on production problems in the manufacture of aluminum alloys. This, with another devoted to hydro-press operations will be features at the all-important session on Aircraft Processes.

"Factory Equipment and Tooling" and "Production Tools for Airplanes," are the titles of two vital papers that will comprise the Factory Equipment Session. Representatives of the Army and Navy will tell problems that occur in keeping fit the Nation's first line of defense.

SAE President Harry T. Woolson, executive engineer, Chrysler Corp.; Aircraft Engine Vice-President A. L. Beall, Wright Aeronautical Corp., and Aircraft Vice-President Fred E. Weick, Engineering & Research Corp., are cooperating with Carleton E. Stryker, Curtiss-Wright Technical Institute, general chairman of the meeting, in putting finishing touches to the program. Working with them are S. D. Heron, Ethyl Gasoline Corp., and Peter Altman, University of Detroit, meetings committee chairmen for the aircraft-engine and aircraft activities, respectively.

Among the authors are such authorities as: Donald H. Wood of the National Advisory Committee for Aeronautics; A. Lewis MacClain chief test pilot, and R. S. Buck, project engineer, Pratt & Whitney; Henry A. Berliner, president, Engineering & Research Corp.; Col. E. J. W. Ragsdale, E. G. Budd Manufacturing Co.; Robert Johnson, Wright Aeronautical Corp.; C. A. Van Dusen, Consolidated Aircraft Corp.; H. Oliver West, chief engineer, United Air Lines; Maj. Joseph T. Morris, U. S. Army Air Corps; and Fred Arnold, Naval Air Station, San Diego.

These men will present nine of the 16 papers scheduled for the meeting. Their topics will be fitted into sessions on Engine Performance, Engine Operation and Maintenance, Production, Aircraft Materials, Aircraft Processes, Factory Equipment and Operation and Maintenance.

An aviation banquet and ball will climax the meeting, affording relaxation after three days of fast-moving technical sessions.

Engineers rally to SAE session

engineers in the past in their attempts to set economic limits to air transport speeds. There is an article in the April, 1934 issue of the Journal of the Aeronautical Sciences by an English gentleman, Mr. M. F. Green, in which he arrives at the conclusion that the most economical speed for air transports would be 115 miles per hour under the reasonable design assumptions he had made, and which figure is increased to 130 or 140 miles per hour when traveling at 7500 feet altitude.

Had the speed term been empha-

nomic gain to the operator. Four or five years ago, I made such an analysis applied to a particular small transport and placed the value of one mile per hour speed increase at $375 cost increase. Later studies showed that this gauge must vary, depending on the particular characteristics of the airplane in question, on the operations for which it was to be used, and some other factors of lesser importance.

The value of speed

Another analysis has been made along similar lines for a large transport airplane suitable for transcontinental use and in this case the assumptions were: 10,000 pounds payload, four engines of 625 cruising horsepower each, flight at 25,000 feet altitude with pressure cabin, block-to-block speed of 225 miles an hour and life of equipment of 10,000 hours for the airplane and 3000 hours for the engines. Here the increase in speed to the operator worked out to $3240, a rather start-

Airboats Leave S. D. For Shipment To Russia

S. D. Sun 10/31/37

FIVE CARLOADS AWAIT VESSEL AT SAN PEDRO

Airplane Parts, Factory Equipment Built At Consolidated

Five carloads of airplane parts, tooling, dyes, fixtures and other manufacturing equipment, today had been transported from the Consolidated Aircraft Corp. plant to Terminal Island, where they will be placed aboard the Inter-Ocean Steamship Co. freighter M. S. Burganger, Nov. 8, for shipment to Soviet Russia, it was revealed yesterday.

Included in the shipment will be what is known as a "temporarily constructed" flying boat, whose parts are either screwed or bolted, instead of riveted together.

Re-Constructed In Russia

The sections of this airboat will be disassembled by Russian mechanics and re-constructed according to the production methods being indoctrinated at a huge aircraft plant on the Sea of Azov by a corps of Consolidated engineers.

Undergoing final flight tests late last week was a complete replica of the Navy's PBY-1 patrol bomber, without armament. This airboat will be "knocked down" at the completion of the tests and shipped out of San Diego to Terminal Island the week of Nov. 22, plant officials indicated yesterday. This craft will be placed aboard another Inter-Ocean freighter bound for Europe.

Transferred In Europe

The Burganger and its sister ship will deliver the planes, materials, and equipment to a Russian freighter either at Rotterdam or Havre.

Shipment of the planes to Soviet Russia is possible through a Navy release of the PBY model for export after Nov. 1, which is one year after the first airboat of this type was delivered to North Island.

S. D. Engineers In Russia

Consolidated several months ago sent a group of engineers to the Soviet Union to offer advice on mass production of the PBY planes, [illegible] for commercial purpose[illegible]

With the [illegible]pletion of its present shipment, Consolidated still has a backlog of business for Soviet Russia of more than $1,000,000. This includes a $750,000 contract for special tooling, and a recently acquired $400,000 order for materials.

L'Aeraphile - June 1937

3 S. D. CRUISERS LEAVING TODAY ON S. F. VOYAGE

S. D. Sun 11/8/37

Cincinnati, Memphis And Concord Assigned To Nov. 11 Celebration

Three locally-based light cruisers were to leave San Diego today for San Francisco to participate in that port's celebration of Armistice Day.

The Memphis, Concord and Cincinnati will remain at the Golden Gate until next Monday, returning here Nov. 19 after maneuvers at sea en route south They will be joined at San Francisco by their sister ship, the Milwaukee, which arrived at Mare Island Navy Yard for minor repairs yesterday.

Langley Returning

Other important San Diego arrivals next week will include the aircraft tender Langley, returning from Pearl Harbor; the transport-tanker Ramapo, detached from the Asiatic Fleet after several months' temporary duty; and the tanker Kanawha, from Hawaii.

Approximately 85 officers and men of Pearl Harbor's Patrol Squadron Ten will disembark from the Langley at North Island Nov. 19 to begin training for their mass flight of 12 Consolidated patrol bombers to Hawaii early in 1938. The Langley sails the following day for the Canal Zone with personnel and equipment transferred to that base from the West Coast.

Destroyer Also Due

The Ramapo is due here Nov. 20 and the Kanawha next Monday. One of the newest destroyers in the Navy, the USS Downes, will assume her permanent station in San Diego harbor Nov. 25, 1th Naval District headquarters were informed today. The Downes clears from the Canal Zone Nov. 17.

S. D. Aviators Bound By New Restrictions

S.D. Sun Nov. 14, 1937

The "super-cautious" new regulations of the U. S. Bureau of Air Commerce, which became effective Nov. 1, are baffling San Diego Navy aviators and test pilots of Consolidated Aircraft Corp.

According to the new rules, all military [illegible]s must refrain from carrying [illegible] standard tactical exercises al[illegible] a 50-mile wide established airway in whose limits North Island ironically is included; and Consolidated pilots are prohibited from carrying out test flights 25 miles east or west of Lindbergh Field.

Widespread protests have been sent to the Bureau of Air Commerce as a result of restrictions such as these, the San Diego Chamber of Commerce Aviation Committee has been informed. Changes in the new regulations are being considered by Washington officials without impairing the safety factor in transport flying, it was reported.

Under the new rules, a Navy plane engaged in aerial gunnery or dive bombing 25 miles offshore is a transgressor, and when a pilot zooms down toward North Island without crossing the established airway at specific levels, he may hear about it from Washington.

NORTH ISLAND TRIAL BOARD TESTS BOMBER

Plane First Of Airboats To Be Built By Local Factory

Nov. 11 '37 S.D. Sun

A Navy trial board of 12 officers is completing tests on Consolidated Aircraft Corp.'s PBY-3 type patrol bomber at North Island, it was revealed today.

The plane is first of 66 similar airboats to be built by the San Diego aircraft concern on the last of three Navy orders for a total of 176 planes valued at $19,000,000.

Alterations Needed

Minor alterations may be required in the PBY-3, and large-scale production of these craft is awaiting the trial board's acceptance.

Prior to their current inspection, the trial board conducted tests on the powerful new four-motored Sikorsky patrol bomber at Hampton Roads, Va. The plane, which now is undergoing shakedown flights on the east coast, will compete for a Navy contract with another experimental four-motored airboat to be finished by Consolidated next month.

80 Planes Completed

Eighty of the 176-plane order on Consolidated's books have been completed, it was reported at the plant yesterday. Bombers now being built are of the PBY-2 type, of which a full squadron of 12 have been equipped Patrol Squadron 11, based at North Island, and eight have been delivered to the Canal Zone's Patrol Squadron Two.

Accompanying this group's 12 planes on a non-stop flight to Coco Solo tentatively scheduled for Dec. 8 will be two spare airboats of Patrol Squadron Three, thus forming the largest squadron of Navy planes ever to make a long-distance mass flight.

S.D. Sun 11/10/37

INCREASE OVER 1936 TO REACH 200 PER CENT

Consair, Ryan And Solar Business For Year To Total 13 Millions

R.H.F. gave them some [illegible] according to Gott

San Diego's aircraft industry will show a remarkably improved financial record for the current calendar year, advance figures revealed today.

When the books of Consolidated Aircraft Corp., Ryan Aeronautical Co., and Solar Aircraft Co. are completed as of Dec. 31, 1937, they will reveal, that more than $13,000,000 worth of airplanes and parts have been delivered this year, it was estimated.

200 Per Cent Increases

This total will represent increases over last year of as high as 200 per cent, as production schedules of the three local aircraft concerns were stepped up after the completion of considerable mass production preparation in 1936. The 1937 delivery record will be the highest in the aviation industry's history in Southern California, where three other concerns, Douglas Aircraft Co., of Santa Monica, Lockheed Aircraft Corp. of Burbank, and North American Aviation Co. of Inglewood, also reported huge gains over 1936, the previous high year.

More Expected

Consolidated total deliveries this year are estimated at $12,200,000, as compared with $4,218,399 in 1936, when large-scale production of Navy patrol bombers was just starting. Deliveries for the nine months ending Sept. 30 were $7,726,061, with an additional $4,500,000 in planes and spare parts expected to issue from the San Diego plant before New Year's Day.

Ryan's total deliveries this year will be $420,500, it was estimated, compared to $117,521 in 1936.

Unfilled Orders

Solar, which specialized in exhaust manifolds and other plane parts, will have delivered approximately $399,570 by Dec. 31, President Edmund T. Price reported.

On Oct. 1, Consolidated still had unfilled orders totalling $12,717,131, including 109 Navy bombers at $10,894,029, a private plane for Richard Archbold at $276,633, airplanes, spares, etc. for the Russian government at $1,536,265, and $10,204 business for the U. S. Army.

Ryan's backlog now is $340,000 and that of Solar's is more than $300,000.

SOU. CALIFORNIA FACTORIES BUSY

Shipments by Five Firms May Reach $42,000,000, More Than Forecast Earlier

PRODUCTION STEPPED UP

By T. C. Sullivan

LOS ANGELES—It is now apparent that deliveries by the five major aircraft manufacturers in Southern California for the year 1937 will at least equal and probably exceed an earlier estimate, despite the fact that one plant was closed by strike for seven weeks.

The Pacific Coast Edition of The Wall Street Journal estimates total deliveries of Consolidated Aircraft Corp., Douglas Aircraft Co., Lockheed Aircraft Corp., North American Aviation and Ryan Aeronautical Co. for the current year will approximate $42,000,000, as compared with a forecast of $41,000,000 made last April.

Deliveries this year will be by far the largest in the history of the industry and will compare with $17,693,550 total deliveries by these same five companies made during 1936, which was the previous record, indicating an increase of 140% this year.

Production Still Being Stepped Up

Evidence that production schedules are still being stepped up is seen in the fact that about 30% of this year's deliveries will be made during the last quarter. Highly irregular and fluctuating deliveries are inherent to the industry, but managements are attempting to equalize deliveries and have made some progress in that direction. Factors which cause bunching of deliveries are many, however, and will require considerable more time before any semblance of equalized production can be obtained.

Most of the factories will be operating at practical capacity during the last two months of this year.

Despite the heavily increased output this year, total backlog of unfilled orders of the five companies was $60,000,000 on October 1, 1937, as compared with $57,000,000 on April 10, 1937. Assuming that no new business is obtained during the rest of 1937, these companies will start next year with a backlog of about $49,000,000. However, it is possible that this amount will be increased by a substantial amount in December through the award of at least one military contract.

Military Orders Relatively Heavier

Completion of many orders for commercial transports and the continued increase in purchases of aircraft by the Army and Navy have raised the proportion of military orders to other backlog. At the beginning of the fourth quarter, unfilled orders for United States Army and Navy constituted about 80% of total backlog, while domestic, commercial and export business accounted for the remaining 20%. This compares with 68% for the military and 32% for other purchases in April of this year.

Consolidated Aircraft Corp. estimates its total deliveries for the year to end December 31, 1937, at approximately $12,200,000, as compared

Aircraft

Continued from First Page

with $4,218,399 in 1936, an increase of nearly 200%. Deliveries for the nine months ended September 30 totaled $7,726,061, and it is expected that an additional $4,500,000 of planes and spare parts will leave the company's San Diego plant during the current quarter.

Unfilled orders on Consolidated's books at October 1 totaled $12,717,131, consisting of 109 units for the United States Navy amounting to $10,894,029, one domestic commercial unit at $276,633, $1,536,265 of airplanes, spares, etc., for export, and $10,204 for the United States Army. By value, the company's orders are 86% military and 14% export and domestic commercial.

Douglas Now Reducing Backlog

For the first time since orders started piling up in volume during the latter part of 1935, Douglas Aircraft Co. is making real progress in working off its backlog. The company's unfilled orders reached a high of $38,000,000 in June of this year, and since that time production has steadily gained over new orders received, so that on October 29 the backlog amounted to $31,535,665. Deliveries during November and December of this year should be at a substantially higher rate than in September and October, as the Northrop division plant was reopened on October 25 after having been closed by strike since early in September.

For the fiscal year ended November 30, 1937, Douglas' net sales will probably exceed $21,000,000, which would mean about $6,000,000 for the last quarter, or about 29%. Net sales for the nine months ended August 31 amounted to $15,283,066, on which the company reported a net profit of $852,795 after all charges and provision for both normal federal income tax and surtax on undistributed profits. This is a ratio of 5.6% to total net sales and compares with 12.2% for the year 1936 and with 17.1% in 1935. Ratio of net sales to net profit in preceding years, however, was much smaller. The lower rate this year can be attributed, in part at least, to labor difficulties and rising costs.

Backlog 65% Army Orders

The company's backlog is divided 65% army orders, 18% navy, 8% domestic transport and 9% foreign military and transports for export. Upon completion of the present commercial business in production, the company will have delivered 162 of its DC-3 model planes which were announced less than two years ago. This compares with 138 DC-2 models delivered to date. It is to be expected that orders for additional DC-3s will be comparatively light in view of the new DC-4 model which is expected to be ready for testing early in 1938. It will be a 60,000-pound, four-engined plane with a wing spread of approximately 135 feet and a useful load of about 20,000 pounds. It will carry 40 day passengers, with fewer accomodations in sleeper planes and those with special deluxe equipment.

Lockheed's deliveries this year might well exceed $4,000,000, or double total sales for 1936. Backlog as of October 1, 1937, amounted to $2,878,578, practically all of which was domestic commercial and export business. The company recently received its Department of Commerce approved type certificate for its model 14 plane, of which it has sold or delivered a total of 27. Deliveries on this model are now being made to Northwest Air Lines.

While deliveries at Lockheed were slowed up considerably during August, September and October, output for the last two months of this year will be at a considerably higher rate, due to production of the 14s.

North American Aviation's plant at Inglewood is now working at the highest rate in the company's history, with production of two basic combat trainers daily and three observation planes weekly. Deliveries in September amounted to $392,000, and were about the same in October. At the current rate of output, operations for the last two months of this year will be substantially larger.

First Half Deliveries Light

During the first six months of 1937, North American delivered only six planes, but output of spare parts made it possible for the manufacturing division to break about even. For the third quarter, there was a profit; and, with increased output for the remainder of 1937, this will be the first year in which the manufacturing division has been able to show a profit.

The company's total of unfilled orders amounted to $10,530,000, of which $9,730,000 is for United States military purposes and $800,000 for export. This is the highest backlog ever shown by North American and compares with $7,553,380 on April 10, 1937, and with $5,230,000 on January 1, 1937.

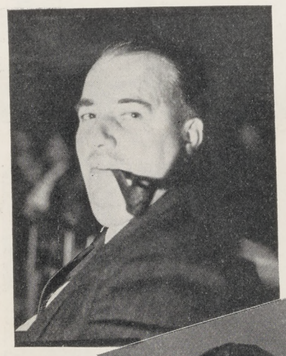
Sales for 1937 are estimated at $3,500,000, as compared with $1,050,042 in 1936 and $176,182 in 1935.

Ryan Aeronautical Co.'s backlog is now $340,000, consisting of 30 domestic commercial units amounting to $138,000, six units for export to cost $52,000, and miscellaneous orders for $150,000. It is estimated that Ryan's total deliveries this year will approximate $420,500, as compared with $117,521 in 1936.

RATIONALIZING

Aircraft Production

1937 S.A.E. National Aircraft Production Meeting brings better understanding of aviation industry methods.



A. C. Warner, S.A.E. General Manager.

Dr. A. L. Klein, chairman of the Thursday evening meeting.

CONTINUING THE TRADITION OF SUCCESS ushered in by the inaugural production meeting of 1936, the 1937 National Aircraft Production Meeting sponsored by the Society of Automotive Engineers, drew engineers and executives from all branches of the aviation industry to the seven sessions held at the Ambassador Hotel, Los Angeles, on Oct. 7, 8, and 9. SAE President Harry T. Woolson, executive engineer, Chrysler Corp.; Aircraft Engine Vice-President A. L. Beall, Wright Aeronautical Corp., and Aircraft Vice-President Fred E. Weick, Engineering & Research Corp., are cooperating with Carleton E. Stryker, Curtiss-Wright Technical Institute, general chairman of the meeting, in putting finishing touches to the program. Working with them are S. D. Heron, Ethyl Gasoline Corp., and Peter Altman, University of Detroit, meetings committee chairmen for the aircraft-engine and aircraft activities, respectively.

Among the authors are such authorities as: Donald H. Wood of the National Advisory Committee for Aeronautics; A. Lewis MacClain chief test pilot, and R. S. Buck, project engineer, Pratt & Whitney; Henry A. Berliner, president, Engineering & Research Corp.; Col. E. J. W. Ragsdale, E. G. Budd Manufacturing Co.; Robert Johnson, Wright Aeronautical Corp.; C. A. Van Dusen, Consolidated Aircraft Corp.; H. Oliver West, chief engineer, United Air Lines; Maj. Joseph T. Morris, U. S. Army Air Corps; and Fred Arnold, Naval Air Station, San Diego.

These men will present nine of the 16 papers scheduled for the meeting. Their topics will be fitted into sessions on Engine Performance, Engine Operation and Maintenance, Production, Aircraft Materials, Aircraft Processes, Factory Equipment and Operation and Maintenance.

An aviation banquet and ball will climax the meeting, affording relaxation after three days of fast-moving technical sessions.

Airboats Leave S. D. For Shipment To Russia

S. D. Sun 10/31/37

FIVE CARLOADS AWAIT VESSEL AT SAN PEDRO

Airplane Parts, Factory Equipment Built At Consolidated

Five carloads of airplane parts, tooling, dyes, fixtures and other manufacturing equipment, today had been transported from the Consolidated Aircraft Corp. plant to Terminal Island, where they will be placed aboard the Inter-Ocean Steamship Co. freighter M. S. Burganger, Nov. 8, for shipment to Soviet Russia, it was revealed yesterday.

Included in the shipment will be what is known as a "temporarily constructed" flying boat, whose parts are either screwed or bolted, instead of riveted together.

Re-Constructed In Russia

The sections of this airboat will be disassembled by Russian mechanics and re-constructed according to the production methods being indoctrinated at a huge aircraft plant on the Sea of Azov by a corps of Consolidated engineers.

Undergoing final flight tests late last week was a complete replica of the Navy's PBY-1 patrol bomber, without armament. This airboat will be "knocked down" at the completion of the tests and shipped out of San Diego to Terminal Island the week of Nov. 22, plant officials indicated yesterday. This craft will be placed aboard another Inter-Ocean freighter bound for Europe.

Transferred In Europe

The Burganger and its sister ship will deliver the planes, materials, and equipment to a Russian freighter either at Rotterdam or Havre.

Shipment of the planes to Soviet Russia is possible through a Navy release of the PBY model for export after Nov. 1, which is one year after the first airboat of this type was delivered to North Island.

S. D. Engineers In Russia

Consolidated several months ago sent a group of engineers to the So[illegible] Union to offer advice on mas[illegible]duction of the PBY planes, [illegible] for commercial purpose[illegible]

With the [illegible]pletion of its present shipment, Consolidated still has a backlog of business for Soviet Russia of more than $1,000,000. This includes a $750,000 contract for special tooling, and a recently acquired $400,000 order for materials.

LE CONSOLIDATED P 30 (U. S. A.)

Cet appareil est un biplace de chasse muni d'un moteur Curtiss « Super-Conqueror SV-1570 » 12 cylindres en V de 675/705 CV.

Armement : deux mitrailleuses fixes tirant à travers l'hélice, une mitrailleuse orientable.

Poste émetteur et récepteur de T.S.F.

Caractéristiques :

Envergure	13 m. 42
Longueur	8 m. 84

Performances :

Vitesse maximum à 1.800 m...	403 kmh.
Montée à 5.000 m.	9 min.
Plafond absolu	8.300 m.
Rayon d'action	750 km.

3 S. D. CRUISERS LEAVING TODAY ON S. F. VOYAGE

S. D. Sun 11/8/37

Cincinnati, Memphis And Concord Assigned To Nov. 11 Celebration

Three locally-based light cruisers were to leave San Diego today for San Francisco to participate in that port's celebration of Armistice Day.

The Memphis, Concord and Cincinnati will remain at the Golden Gate until next Monday, returning here Nov. 19 after maneuvers at sea en route south They will be joined at San Francisco by their sister ship, the Milwaukee, which arrived at Mare Island Navy Yard for minor repairs yesterday.

Langley Returning

Other important San Diego arrivals next week will include the aircraft tender Langley, returning from Pearl Harbor; the transport-tanker Ramapo, detached from the Asiatic Fleet after several months' temporary duty; and the tanker Kanawha, from Hawaii.

Approximately 85 officers and men of Pearl Harbor's Patrol Squadron Ten will disembark from the Langley at North Island Nov. 19 to begin training for their mass flight of 12 Consolidated patrol bombers to Hawaii early in 1938. The Langley sails the following day for the Canal Zone with personnel and equipment transferred to that base from the West Coast.

Destroyer Also Due

The Ramapo is due here Nov. 20 and the Kanawha next Monday. One of the newest destroyers in the Navy, the USS Downes, will assume her permanent station in San Diego harbor Nov. 25, 1th Naval District headquarters were informed today. The Downes clears from the Canal Zone Nov. 17.

S. D. Aviators Bound By New Restrictions

S.D. Sun Nov. 14, 1937

The "super-cautious" new regulations of the U. S. Bureau of Air Commerce, which became effective Nov. 1, are baffling San Diego Navy aviators and test pilots of Consolidated Aircraft Corp.

According to the new rules, all military [illegible]s must refrain from carrying[illegible] standard tactical exercises al[illegible] a 50-mile wide established airway in whose limits North Island ironically is included; and Consolidated pilots are prohibited from carrying out test flights 25 miles east or west of Lindbergh Field.

Widespread protests have been sent to the Bureau of Air Commerce as a result of restrictions such as these, the San Diego Chamber of Commerce Aviation Committee has been informed. Changes in the new regulations are being considered by Washington officials without impairing the safety factor in transport flying, it was reported.

Under the new rules, a Navy plane engaged in aerial gunnery or dive bombing 25 miles offshore is a transgressor, and when a pilot zooms down toward North Island without crossing the established airway at specific levels, he may hear about it from Washington.

NORTH ISLAND TRIAL BOARD TESTS BOMBER

Plane First Of Airboats To Be Built By Local Factory

Nov. 11 '37 S.D. Sun

A Navy trial board of 12 officers is completing tests on Consolidated Aircraft Corp.'s PBY-3 type patrol bomber at North Island, it was revealed today.

The plane is first of 66 similar airboats to be built by the San Diego aircraft concern on the last of three Navy orders for a total of 176 planes valued at $19,000,000.

Alterations Needed

Minor alterations may be required in the PBY-3, and large-scale production of these craft is awaiting the trial board's acceptance.

Prior to their current inspection, the trial board conducted tests on the powerful new four-motored Sikorsky patrol bomber at Hampton Roads, Va. The plane, which now is undergoing shakedown flights on the east coast, will compete for a Navy contract with another experimental four-motored airboat to be finished by Consolidated next month.

80 Planes Completed

Eighty of the 176-plane order on Consolidated's books have been completed, it was reported at the plant yesterday. Bombers now being built are of the PBY-2 type, of which a full squadron of 12 have been equipped Patrol Squadron 11, based at North Island, and eight have been delivered to the Canal Zone's Patrol Squadron Two.

Accompanying this group's 12 planes on a non-stop flight to Coco Solo tentatively scheduled for Dec. 8 will be two spare airboats of Patrol Squadron Three, thus forming the largest squadron of Navy planes ever to make a long-distance mass flight.

S.D. Sun 11/10/37

INCREASE OVER 1936 TO REACH 200 PER CENT

Consair, Ryan And Solar Business For Year To Total 13 Millions

R.H.F. gave them [illegible] but com[illegible] according to Gott

San Diego's aircraft industry will show a remarkably improved financial record for the current calendar year, advance figures revealed today.

When the books of Consolidated Aircraft Corp., Ryan Aeronautical Co., and Solar Aircraft Co. are completed as of Dec. 31, 1937, they will reveal, that more than $13,000,000 worth of airplanes and parts have been delivered this year, it was estimated.

200 Per Cent Increases

This total will represent increases over last year of as high as 200 per cent, as production schedules of the three local aircraft concerns were stepped up after the completion of considerable mass production preparation in 1936. The 1937 delivery record will be the highest in the aviation industry's history in Southern California, where three other concerns, Douglas Aircraft Co., of Santa Monica, Lockheed Aircraft Corp. of Burbank, and North American Aviation Co. of Inglewood, also reported huge gains over 1936, the previous high year.

More Expected

Consolidated total deliveries this year are estimated at $12,200,000, as compared with $4,218,399 in 1936, when large-scale production of Navy patrol bombers was just starting. Deliveries for the nine months ending Sept. 30 were $7,726,061, with an additional $4,500,000 in planes and spare parts expected to issue from the San Diego plant before New Year's Day.

Ryan's total deliveries this year will be $420,500, it was estimated, compared to $117,521 in 1936.

Unfilled Orders

Solar, which specialized in exhaust manifolds and other plane parts, will have delivered approximately $399,570 by Dec. 31, President Edmund T. Price reported.

On Oct. 1, Consolidated still had unfilled orders totalling $12,717,131, including 109 Navy bombers at $10,894,029, a private plane for Richard Archbold at $276,633, airplanes, spares, etc. for the Russian government at $1,536,265, and $10,204 business for the U. S. Army.

Ryan's backlog now is $340,000 and that of Solar's is more than $300,000.

SOU. CALIFORNIA FACTORIES BUSY

Shipments by Five Firms May Reach $42,000,000, More Than Forecast Earlier

PRODUCTION STEPPED UP

By T. C. Sullivan

LOS ANGELES—It is now apparent that deliveries by the five major aircraft manufacturers in Southern California for the year 1937 will at least equal and probably exceed an earlier estimate, despite the fact that one plant was closed by strike for seven weeks.

The Pacific Coast Edition of The Wall Street Journal estimates total deliveries of Consolidated Aircraft Corp., Douglas Aircraft Co., Lockheed Aircraft Corp., North Amer-

Purely Gossip

The feeling is crystallizing in Wall Street that the two most dislliked federal taxes, the surplus profits levy and the capital gains impost, will be substantially changed for 1938. Traders feel that if their impact is reduced a substantial basis for return of confidence in general business will be found.

* * *

In the trade picture retailers say that Christmas shopping is well under way.

* * *

There is still considerable bearish gossip on American Telephone, probably by traders who note that it is still selling at about twice the price it did at the depression's low. Yielding 5% and with estimates of earnings for 1937 around $10 a share, the stock is still favored by small investors. The Street realizes that higher costs and taxes have affected the company and investigations too do not please investors, but the company's record and policy over the years still gives it a high rating among average in-

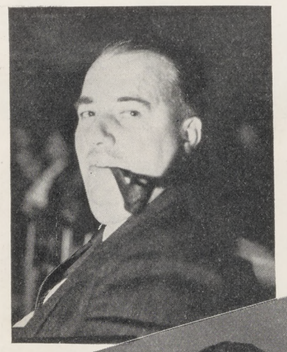
RATIONALIZING

Aircraft Production

1937 S.A.E. National Aircraft Production Meeting brings better understanding of aviation industry methods.



A. C. Warner, S.A.E. General Manager.

Dr. A. L. Klein, chairman of the Thursday evening meeting.

Continuing the tradition of success ushered in by the inaugural production meeting of 1936, the 1937 National Aircraft Production Meeting sponsored by the Society of Automotive Engineers, drew engineers and executives from all branches of the aviation industry to the seven sessions held at the Ambassador Hotel, Los Angeles, on Oct. 7, 8, and 9. Again, as in 1936, the sessions were jammed morning, noon, and night with capacity crowds. This in spite of the current World Series broadcasts, and the football classics of Saturday afternoon. A list of the 700 persons who registered officially would read like a Who's Who in aviation engineering, and merely to list all the firms

Truly national in its scope, the meeting drew nine of its fifteen papers from east of the Mississippi. Cooperating with the national S.A.E. body were the four Pacific Coast S.A.E. sections, headed by the Southern California Section under the chairmanship of W. B. Birren, Western Representative of the Wright Aeronautical Company. S.A.E. president Harry T. Woolson, executive engineer of Chrysler Corp., was in personal attendance. Past S.A.E. presidents Wm. B. Stout and Edward P. Warner repeated their roles of 1936, the former as master of ceremonies at the Annual Banquet, and the latter making the presentation of the Wright Brothers Medal for 1936. Carleton E. Stryker, Chief Engineer of Curtiss-Wright Technical Institute, again served as general chairman of the meeting, carrying the major burden of planning the details responsible for such outstanding success.

Climaxing the aviation industry's first peace time $100,000,000 production year, with aircraft orders running twenty five per cent ahead of 1936

meeting properly focused thought on the production problems peculiar to the aviation field. Mutual problems were discussed with commendable frankness by those in attendance. The keynote of such mutuality was struck by John A. C. Warner, S.A.E. General Manager, with the comment, "It is not a matter of sharing secrets but of avoiding economic waste."

Although the Wright Medal this year was presented for a paper read at the 1936 Production meeting, it became evident early in the current sessions that the papers offered were more representative, and the coverage of the aviation production problem was more comprehensive, than last year. Particularly gratifying was the obvious appreciation of those in attendance that production means something entirely different in aviation than it has come to mean to automobile men. This was well put by D. M. Carpenter, of the Consolidated Aircraft Corporation, in his paper on Factory Equipment and Tooling with the following comments:

"By far the most outstanding feature to be noted in connection with aircraft factory equipment and tooling is its general inadequacy. . . . aircraft factory budgets are limited by the comparatively small size of air-

Factory chiefs head for Los Angeles

EVERY aircraft and engine factory in America will be represented at the Production Meeting of the S.A.E. to be held in Los Angeles on October 7 to 9, according to John A. C. Warner, secretary of the Society of Automotive Engineers. The Los Angeles committee on arrangements has reservations from the chief executives, and production managers of practically all of the eastern factories already.

Interest in the production meeting is stimulated by the unprecedented success of the SAE meeting at Los Angeles of last year when the local committee was embarrassed by the unexpected influx of visiting engineers. This year the committee is prepared for any emergency.

The Army and the Navy, builders of aircraft and engines, transport companies, suppliers of raw materials, and the National Advisory Committee for Aeronautics all are contributing papers based upon theory and practical experience, according to John A. C. Warner, secretary and general manager of the Society.

Stainless steel and its place in aircraft manufacture is to be explained by a representative of one of the country's leading users of this material—the E. G. Budd Manufacturing Co. Steel castings, magnesium castings, die castings, and molded plastics will get concentrated attention.

A paper is scheduled on production problems in the manufacture of aluminum alloys. This, with another devoted to hydro-press operations will be features at the all-important session on Aircraft Processes.

"Factory Equipment and Tooling" and "Production Tools for Airplanes," are the titles of two vital papers that will comprise the Factory Equipment Session. Representatives of the Army and Navy will tell problems that occur in keeping fit the Nation's first line of defense.

SAE President Harry T. Woolson, executive engineer, Chrysler Corp.; Aircraft Engine Vice-President A. L. Beall, Wright Aeronautical Corp., and Aircraft Vice-President Fred E. Weick, Engineering & Research Corp., are cooperating with Carleton E. Stryker, Curtiss-Wright Technical Institute, general chairman of the meeting, in putting finishing touches to the program. Working with them are S. D. Heron, Ethyl Gasoline Corp., and Peter Altman, University of Detroit, meetings committee chairmen for the aircraft-engine and aircraft activities, respectively.

Among the authors are such authorities as: Donald H. Wood of the National Advisory Committee for Aeronautics; A. Lewis MacClain chief test pilot, and R. S. Buck, project engineer, Pratt & Whitney; Henry A. Berliner, president, Engineering & Research Corp.; Col. E. J. W. Ragsdale, E. G. Budd Manufacturing Co.; Robert Johnson, Wright Aeronautical Corp.; C. A. Van Dusen, Consolidated Aircraft Corp.; H. Oliver West, chief engineer, United Air Lines; Maj. Joseph T. Morris, U. S. Army Air Corps; and Fred Arnold, Naval Air Station, San Diego.

These men will present nine of the 16 papers scheduled for the meeting. Their topics will be fitted into sessions on Engine Performance, Engine Operation and Maintenance, Production, Aircraft Materials, Aircraft Processes, Factory Equipment and Operation and Maintenance.

An aviation banquet and ball will climax the meeting, affording relaxation after three days of fast-moving technical sessions.

Engineers rally to SAE session

ALREADY production technicians, experts on processing, materials, equipment, operation and maintenance, and engineers and representatives from factories all over the nation are starting their trek to Los Angeles for the second annual National Aircraft Production Meeting to be held under the sponsorship of the Society of Automotive Engineers in the Ambassador Hotel, October 7, 8, and 9. Cooperating with the S.A.E. is the Aeronautical Chamber of Commerce of America and the Air Transport Association of America.

The success of last year's meeting surpassed even the most optimistic expectations. Attendance at the sessions ran as high as 350, and 100 were turned away from the final banquet and grand ball. From early indications, this year's forum will be even better attended, more efficiently handled and more interesting than the 1936 meeting.

Similar to last year's program, the sessions will be extended over a three day period, starting with a session on engine performance at 10:00 a.m., Thursday, October 7, and ending with a banquet and ball on Saturday night. Sessions are scheduled for each morning, afternoon and evening of the three days, with a special trip through California Institute of Technology scheduled for Friday morning.

The banquet committee promises a better program with much more limited speeches than last year. Bill Stout is again master of ceremonies. Present interest in the banquet indicates another shortage of tickets.

The program for the three days follows:

THURSDAY, OCTOBER 7

10:00 A.M. — **Theatre**

ENGINE PERFORMANCE
J. W. Young, Chairman

"Flight Testing with an Engine Torque Indicator," by A. L. MacClain and R. S. Buck, Pratt & Whitney Aircraft Co.

"The Design of Cowlings for Air-Cooled Engines," by D. H. Wood, National Advisory Committee for Aeronautics.

2:00 P.M. — **Theatre**

ENGINE OPERATION AND MAINTENANCE
I. L. Shogran, Chairman

"Engine Maintenance from Operator's Viewpoint," by W. A. Hamilton, Transcontinental & Western Air, Inc.

"The Development of Successful Engine Installations," by R. E. Johnson, Wright Aeronautical Corp.

8:00 P.M. — **Colonial Room**

PRODUCTION
Mac Short, Chairman

"Engineering for Production in Stainless Steel," by E. J. W. Ragsdale, E. G. Budd Manufacturing Co.

"Production Control," by Eric Springer, Douglas Aircraft Co.

FRIDAY, OCTOBER 8

Morning — **Inspection Trip**

TRIP THROUGH CALIFORNIA INSTITUTE OF TECHNOLOGY

S. A. E. Cars leave Ambassador Hotel at 9:00 A.M.

2:00 P.M. — **Theatre**

MATERIALS
T. P. Wright, Chairman

"Procurement Planning of the United States Army Air Corps," by Major J. L. Stromme, Air Corps, United States Army.

"Quality Control of Aluminum Alloy Aircraft Castings," by K. R. Van Horn, and H. J. Heath, Aluminum Company of America.

"The Manufacture, Characteristics and Uses of Magnesium Castings," by W. G. Harvey, American Magnesium Corp.

8:00 P.M. — **Colonial Room**

PROCESSES
Hall Hibbard, Chairman

"Drop Hammer Applications," by C. R. Delaubenfels, Lockheed Aircraft Co.

"The Use of Plastics in Aircraft," by G. P. Young, Rohm & Haas Company.

SATURDAY, OCTOBER 9

10:00 A.M. — **Theatre**

OPERATION AND MAINTENANCE
Lieut. Knox Perrill, Chairman

"Maintenance Problems of Army Airplanes," by Major J. T. Morris, Air Corps, United States Army.

"Effect of Design and Construction on Maintenance and Overhaul of Naval Aircraft," by F. G. Arnold, Naval Air Station.

2:00 P.M. — **Theatre**

FACTORY EQUIPMENT
E. J. Rivers, Chairman

"Factory Equipment and Tooling," by D. M. Carpenter and J. W. Van Doren, Consolidated Aircraft Corp.

"European Aircraft Production Equipment," by H. A. Berliner, Engineering and Research Corp.

7:00 P.M. — **Fiesta Room**

BANQUET AND GRAND BALL

Southern California section, hosts.
W. B. "Bill" Stout, Master of Ceremonies.
Presentation of the Wright Brothers Medal, dinner, entertainment, followed by dancing.

Bloch To Head Fleet; King Named Aircraft Chief; Changes Feb. 1

S. D. SUN 11/10/37

Adm. Hepburn To Take Command Of 12th Naval District; Horne Assigned Board Post In Capital

The highest command in the United States fleet today was handed to Adm. Claude C. Bloch, veteran sea fighter, in a list of appointments that brought important changes in San Diego's Navy personnel.

The appointments were announced by Secretary of Navy Claude A. Swanson, and include the promotion of Rear Adm. Ernest J. King, commander of aircraft, Scouting Force, here, to relieve Vice Adm. Frederick J. Horne as commander of aircraft, Battle Force.

ADMIRAL BLOCH

Adm. Bloch relieves Adm. Arthur J. Hepburn, who after four years sea duty, will take command of the 12th Naval District at San Francisco.

The changes in command will be effective Feb. 1, Swanson said.

The promotion of Adm. King gives him command of all aircraft in the nation's fleet. He formerly was commander of aircraft, Base Force, which was changed to aircraft, Scouting Force, Oct. 1, when the huge new Consolidated Navy bombers replaced the fleet's destroyers in the Scouting Force.

His new rank will be that of vice admiral.

Swanson also announced that he had ordered a selection board to convene at the Navy Department Nov. 29 to recommend officers in the grade of captain and commander for promotion to the grade of rear admiral and captain, respectively.

Pioneer In Aviation

As head of the aircraft, Scouting Force, Adm. King contributed pioneering in Navy aviation. He has engineered the long mass flights to Coco Solo, to Hawaii and to Alaska from San Diego.

Adm. King will be succeeded by Rear Adm. Charles A. Blakely, commander of aircraft carrier division two, including the two new carriers Yorktown and Enterprise. Vice Adm. Horne, meanwhile, will be ordered to duty as a member of the Navy General Board in Washington, D. C.

Long Service Record

Adm. Bloch, the new commander-in-chief of the Fleet, is 59 years old. He was born in Woodbury, Ky., and was appointed to the Naval Academy in 1895. He served in the Spanish-American war, and participated in the China Relief expedition and the Philippine insurrection. During the World war he was in command of a troop transport.

Visit To F. R. Worries Navy Air Patrol Chief

S. D. SUN 11/10/37

Lieut.-Comdr. Fuller, Due To Receive Squadron Safety Trophy, Concerned Over Etiquette Rules

Lieut.-Comdr. Robert L. Fuller, commanding officer of North Island's Patrol Squadron Seven, would like to know what authorities on White House etiquette have to say in their chapters on "Meeting the President of the United States."

Lieut.-Comdr. Fuller is somewhat hazy on this subject, because he has never shaken hands with a President or stood at the Chief Executive's desk listening to the nation's No. 1 citizen deliver complimentary remarks. This was a cause for concern today because Lieut.-Comdr. Fuller soon expects to be called to the White House to receive from President Roosevelt personally the Herbert Schiff Memorial Trophy awarded his squadron for the best safety record of the fiscal year 1936-37.

Unable To Recall

The Navy flier was quite modest about the whole affair in his office at North Island today, being unable to recall any outstanding achievements of VP-7 during the period from July 1, 1936 to June 30, 1937.

With characteristic Navy understatement he remarked, "We performed our routine duties during that year with the other patrol squadrons. We were in no long-distance mass flights, and operated away from San Diego for two months in July and August of 1936, when we had tactical maneuvers in the Puget Sound and Alaska area. That's about all there is to it. I haven't even been officially notified about the reward. All I know is what I read in the papers."

Has Earned Trip

The official Bureau of Aeronautics records, released today, show that Lieut-Comdr. Fuller, as leader of Squadron VP-7, has well earned his forthcoming trip to the White House.

Equipped with six Consolidated-built P2Y3 patrol bombers, the unit amassed 2312 flight hours without a single accident traceable to personnel error. In other words, VP-7 was the Navy's most economical squadron in 1936-7 in the matter of lives preserved and material undamaged.

In winning the trophy, VP-7 accomplished a feat never before done by a patrol squadron, and bested 82 other Navy squadrons in the year-long competition.

Six Others Tied

Six other units tied VP-7 in its safety record, but were overshadowed in number of flight hours. Included in this group is the San Diego-based Marine Utility Squadron Two, commanded by Capt. Jacob F. Plechta during the fiscal year 1936-7, which compiled 1487 flight hours. Other "perfect-record" squadrons were:

Marine Scouting Squadron Three, St. Thomas, Virgin Islands, 980 hours; Patrol Squadron Fourteen, 1793 hours, whose commanding officer, Lieut.-Comdr. W. L. Peterson, is a San Diegan; Patrol Squadron Fifteen, 1563 hours; Naval Reserve Aviation Base, St. Louis, 1360 hours, and Experimental Squadron 2D1, Newport, R. I., 1333 hours.

Presented In 1925

The Schiff Memorial Trophy was presented to the Navy Department in 1925 by William Schiff, brother of Lieut. (jg) Herbert Schiff, Naval Reserve aviator killed on duty at the Naval Air Station, Hampton Roads, Virginia, on July 11, 1924. The donor's purpose was to stimulate interest in Naval flying and at the same time to reduce aviation accidents. Since 1928, when the trophy was presented to the squadron instead of the individual with the best safety record, the award has been made to the following San Diego-based units:

Fighting Squadron Seven, commanded by Lieut. Thomas G. Fisher, and Fighting Squadron Ten, Marine Crops, commanded by Capt. Vernon Guymon.

Navy Now Developing 50-Ton Bomber With 8,000-Mile Range

CONTACT 11/23/37

In an endeavor to secure a heavily armored, long range bomber superior to anything of its kind in the world, the Navy has designers and engineers of Consolidated Aircraft Company of San Diego, the Glenn L. Martin Company of Baltimore and the Sikorsky Division of United Aircraft at Hartford, Conn., secretly but busily at work on plans.

Since construction details of military craft of this type are always jealously guarded, little is known regarding the exact specifications of the new flying boat. It has been revealed however, that it will exceed 50 tons in weight and have a wing span of 170 feet. Four Pratt & Whitney motors, each developing over 1,500 horsepower, will power the craft, which is understood to have as an objective an 8,000-mile crusing range.

The latest patrol bomber acquired by the Navy—constructed by the Sikorsky Company—had a wing span of 125 ft. and a reported speed of over 200 miles per hour with a full military load. It weighed around 54,000 pounds and was also powered with four Pratt & Whitney Wasp engines.

The $850,000 cost of the Sikorsky job will probably be exceeded considerably in the new type bomber, some cost estimates running as high as $1,000,000. This is exclusive of the $250,000 allocated by the Navy for preliminary work.

S. D.-TO-GUINEA FLIGHT PLANNED

Archbold Seeks Manning As Navigator

S. D. Sun 11/14/37

Capt. Harry Manning, who accompanied Amelia Earhart on her first unsuccessful attempt to encircle the globe, has been asked by Richard Archbold, youthful explorer, to serve as navigator on a hazardous flight from San Diego to Dutch New Guinea early in 1938, it was learned yesterday.

Capt. Manning must secure permission from his employers, Pan-American Airways, before he can consent to make the trip with Archbold, the latter declared.

Route Charted

Archbold expects to make his flight in February, after tests on his replica of the Navy's PBY-2 patrol bombers are completed. The route to be taken by Archbold and his crew will be over Pan-American Airway lanes to Hawaii, Midway, Wake, Guam, and then to New Guinea.

Archbold, a veteran explorer at 30, will lead his second expedition into the wilds of Dutch New Guinea this winter for the American Museum of Natural History.

To Penetrate Jungle

His $250,000 plane, which recently left the assembly lines at Consolidated Aircraft Corp., will be used to transport personnel, equipment and food deep into New Guinea jungles from a base at the coast.

A similar expedition to New Guinea last year was cut short when the aircraft capsized during a rainstorm.

MASS FLIGHT TO COCO SOLO STARTS DEC. 8

S. D. SUN 11/23/37

100 Men From Canal Zone Begin Final Weeks Of Preparation

Officers and men of the Canal Zone's Patrol Squadron Two today entered their final two weeks' preparation for the Navy's largest long-distance mass flight in history—14 Consolidated-built patrol bombers from San Diego to the Coco Solo Air Base.

Tentative time of the takeoff is the morning of December 8, weather permitting, Aircraft Scouting Force headquarters reported today.

With seven men in each airboat, approximately 100 men will be included in the flight personnel. Twelve of the planes are assigned to Squadron VP-2, and two will serve as spare bombers for the Canal Zone's Patrol Squadron Three.

To Cross Jungles

Three aircraft tenders will serve as "guard ships" along the flight route. The USS Langley, now en route to the Canal Zone with airplane equipment and personnel transferred from the mainland to the Coco Solo air base, will be returning to San Diego at the time of the flight, and will be stationed on the west coast of Nicaragua. The planes will cut across Nicaraguan jungles to the Atlantic side of Central America, where the former San Diego-based USS Gannet, now operating at the Canal Zone, will be anchored.

The USS Sandpiper will steam out of San Diego to take a position off Cape San Lucas, at the lower tip of Baja California.

Grow To Command

Commander of the squadron will be Lieut.-Comdr. Bradford E. Grow.

Rear Adm. Ernest J. King, Aircraft Scouting Force commander under whose supervision the flight will be made, will leave San Diego tomorrow for Washington, D. C., where he will serve as a member of the Navy selection board to recommend promotion of seven captains to rear admiral and 33 commanders to captain. Another San Diego officer who will sit with the board, scheduled to convene next Monday, is Rear Adm. Julius C. Townsend, commander of Cruiser Division Two, aboard the USS Trenton.

15 S. D. AIRBOATS MAY HOP DEC. 8 FOR COCO SOLO

S. D. Union 11/30/37

Possibility that 15 airboats will leave San Diego early Dec. 8 on a nonstop flight to Coco Solo, C. Z., naval air station, was expressed yesterday by officers of the first patrol wing.

Twelve of the Consolidated multi-motored planes are attached to patrol squadron 2, to be commanded on the 3000-mile Panama flight by Lt. Comdr. B. E. Grow. The other three planes would be "spares" for squadrons now based at Coco Solo.

The flight route will take the planes along the west coast from Pt. Loma to the Gulf of Fonseca, then across the proposed Nicaraguan canal route to the Atlantic and southward along the Central American coast to the eastern entrance of the Panama canal.

The aircraft tender Langley, sailing from Balboa for San Diego Dec. 6, will act as patrol ship off the Nicaraguan coast on the flight. The take-off here will be between 8 and 10 in the morning.

EXPLORATION PLANE UNDERGOES TESTS

S. D. Sun 11/19/37

Test hops on the PBY-2 type airboat which Richard Archbold, youthful explorer, will fly from San Diego to Dutch New Guinea early in 1938, were started today.

The big plane, similar to the patrol bombers now in use by the United States Navy, will be delivered to Archbold within two weeks, Consolidated Aircraft Corp. officials estimated. It will be used in exploration work to be conducted by Archbold for the American Museum of Natural History in the jungles.

ARCHBOLD OFF ON TEST HOP OF NEW PLANE

Scientist-Aviator Carries 28,000-Pound Load In S. D. Takeoff

S.D. Sun 12/2/37

With a full gasoline load, Richard Archbold, American Museum of Natural History scientist-aviator, took off from San Diego bay shortly after 9 a. m. today on a four-hour test flight of his Consolidated-built airboat in which he is planning to span the continent, non-stop, tomorrow.

Carries Heavy Load

Archbold radioed to his base station in East San Diego that the plane was carrying a load of 27,000 to 28,000 pounds. His crew consisted of Russ Rogers, co-pilot, and Ray Booth, radioman. Consolidated Aircraft Corp. officials also were in the plane.

Archbold probably will take off tomorrow afternoon for Miami, Fla., he indicated. Lieut. Comdr. L. R. Gray, USN, ret., who served as Archbold's navigator on the first non-stop flight of a seaplane across the United States last summer, reported this morning that the flier was to have his compass checked today.

Long Trip Planned

Archbold will return here from the east coast to prepare for his flight to Dutch New Guinea early in 1938 to lead an expedition for the American Museum of Natural History.

SKY LABORATORY WILL HOP TODAY FOR EAST COAST

S.D. Union 12/3/37

Craft to Return Here Dec. 12 Before Starting on Survey Tour of New Guinea.

Flying the 14-ton "skyway laboratory," built by Consolidated Aircraft Corp. for the American Museum of Natural History's aerial survey of New Guinea, Richard Archbold and a crew of six will take off from San Diego bay at 2:30 this afternoon on a sustained flight to Miami. Archbold, a representative of the Museum of Natural History, will be accompanied on the Pacific-gulf flight by the following: Russell Rogers, pilot; Gerald Brown, engineer; Raymond Booth, radio operator; William Wheatley, test pilot for Consolidated; Irwin McWilliams, engineering inspector of the federal bureau of air commerce, and Frank Learman, director of public relations for Consolidated.

The huge airboat, sistership of the

(Continued on Page 4, Col. 5)

SKY LABORATORY WILL HOP TODAY

(Continued from Page One)

plane originally built by Consolidated for the New Guinea venture and which later was used after a flight across the continent in the quest for the missing Russian transpolar fliers, is expected to make the 2250-mile trip to Miami in 14 hours.

The plane, literally a flying archaeological laboratory, is 104 feet in length, 68-foot wingspread and is equipped with two 1000-horsepower Pratt-Whitney motors. It is capable of more than 4000 miles of sustained flight without refueling.

The plane will follow the southern air route pioneered more than two decades ago by Maj. Theodore Macaulay, who still holds the speed record for a westbound flight from the Atlantic to the Pacific. The record, made in 1919, was 19 hours and 10 minutes.

Archbold announced he will make a series of flights along the Florida coast during the next week. He will return to San Diego with the plane about Dec. 12 and will leave here for the flight to New Guinea via Hawaii and Guam early in March.

Archbold will carry letters from Mayor Percy Benbough and President Charles Cotant of the local chamber of commerce to the mayor and president of the Miami civic organization.

Archbold To Test Airboat With Flight To Miami

S. D. Sun 11/28/37

Young Explorer Plans Cross-country Hop From S. D. In Preparation For Jungle Venture

By HAROLD KEEN
The Sun's Navy Editor

Richard Archbold, youthful "flying explorer" of the American Museum of Natural History, is planning his second cross-country flight in a Consolidated-built airboat from San Diego to the east coast, The Sun learned yesterday.

The 30-year-old scientist-aviator revealed that he has set next Friday as the tentative take-off date for a non-stop hop from San Diego to Miami, Fla., where the 10th annual All-American air maneuvers are scheduled Dec. 2 to 5.

Consolidated Aircraft Corp. officials have notified him that his PBY-2 type plane, an unarmed replica of the patrol bombers now being delivered to the United States Navy, will have completed its test flights next Friday.

"Shakedown" Flight

The flight to Miami will be in the nature of a "shakedown" to test the plane's stamina in preparation for the gruelling trans-Pacific journey to Dutch New Guinea early in 1938, Archbold pointed out.

Archbold, a veteran in tropical exploration, will pilot his big plane to Honolulu, Midway, Wake and Guam along Pan American Airways' route, then will blaze across an uncharted airway to New Guinea, where he will lead an American Museum of Natural History expedition in search of zoological specimens.

To Enter Wilds

Deep into the island's otherwise inaccessible wilderness, the expedition will be able to establish base camps, with Archbold's plane shuttling back and forth from the sea coast with food, equipment and personnel. At present, Dr. Austin L. Rand, Archbold's asso-

(Turn to Page 6-A, Col. 6)

CONSOLIDATED Aircraft Corp., according to rumors from San Diego, is constructing a boat for the Navy of nearly 35 tons. It is said that it will be powered by four engines totaling about 5200 h.p., have a cruising range of 5,000 miles and will have a new type of boat hull possessing enough strength to land or take-off in rough water and withstand the most adverse weather stress.

CONSOLIDATED Aircraft delivered the first of the PBY 3's and expected to deliver the new Archbold plane prior to December 1 and test the engines on the new super-patrol-bomber. The new mammoth flying boat for the New Navy should be test flown during December.

It is reported that the Consolidated boat sold to the Russians by Archbold for the purpose of searching the Arctic wastes for the lost flyers flew 19,000 miles of intensive flying with a normal overload of 5,000 pounds. Each take-off was with about 32,000 pounds total load. Flights extended to within 150 miles of the Pole. The ship was powered by twin-row Wasps.

SKYWAYS

Notes on Landings and Takeoffs

L.A. TIMES
Nov. 28-37

by Jim Bassett

Over the coffee-cups (or was it coffee?) t'other night we chatted with a visiting gentleman who speaks with considerable authority anent air-line activities. He told us that:

The "big three' will watch Northwest's success with Lockheed Zephyrs with consuming interest this winter. At least one major transport line toys today with the notion of a crack, extra-fare flight from coast-to-coast in the 230-mile-an-hour ships. ("We aren't running S.R.O. with our large planes these days . . . so why not operate ten-passenger craft on a super-swift schedule?)

Plenty of attention will be paid during the coming year to re-routing the lines. For safety.

Radio-writing — transmitting actual hand-writing through the ether just as some big hotels send messages from floor to floor—is on its way. May replace verbal communication from station to plane.

NOW CURTISS-WRIGHT

For the first time, we believe, we can offer this exclusive bit of news: Curtiss-Wright at St. Louis bends every effort into task of building a secret, 40-passenger transport with two engines.

Our operative in the Midwest area whispers that Charlie France acts as mainspring in the venture. Favors a pair of 1500-horsepower, geared-up motors, for a ship approximating Douglas's long-tarrying DC-4. Will be ready in ten months. Mockups, already completed, show a bulging fuselage with passengers above, plenty of baggage space below.

Unlike the gargantuan Boeings and DC-4s, the C.-W. will cost only $175,000.

HOT-AIRSTREAM

Aggrieved, Howard Hughes wants it known that his Sikorsky amphibian (for which mysterious things have been rumored) didn't cost $110,000 as reported in the day's press. Set him back a cool $250,000—and a mere stock-model fetches $150,000. Howard's lads bustle like Santa Claus's gnomes out at Union Air Terminal, testing radios, welding gas tanks, and just tinkering . . . for what? . . . 'Round-the-world?

The slim millionaire has heard reports of a fabulous German commercial test pilot smacking his 352-m.p.h. landplane speed record. Said to have been O.K.'d by the International Aero Federation—according to the eminent New York Times.

But Howard—nonchalant as ever—says: "If this is true, I'll cable my congratulations. Try for a new record? Not today!" And asked for his opinion on absolute speeds for aircraft, he touched his moustache, observing: "There aren't any!"

PROPTALK

Like that old American staple dish, "ham and—?" Because your palate's about to be appeased. Within a fortnight a syndicate of hopeful aeronauts will open a swank Wilshire Boulevard foodery yclept "Ham-and-Eggs, Inc." Included are Carl Squier (Lockheed,) Si Morehouse (TWA pilot,) E. P. Querl (Chamber of Commerce,) Jimmy James (W.A.E.) . . .

Which is a long way from flying!

Through the ebullient Mr. Bill Wagner, Ryan of San Diego protests our recent chat on mass production. Offers to emulate Ford, if somebody'd just give him the orders . . . Says their shops are already tooled and equipped for bigger, faster building as soon as demand arises . . .

Now that safety is the be-all and end-all of air line operations we'd like to know truthfully: how many flights have been cancelled by U.A.L., TWA and A.A. since November 1. Gentlemen, to the rescue! Canny cancelling, it has been universally agreed, tops even skillful piloting as an accident-preventer.

Eleventh-hour statistics hot from the griddle: Los Angeles' capital investment aeronautically surpasses $11,000,000. Backlog in major shops approaches $56,000,000. Business in 1937 beats $27,000,000. More than 12,700 workmen employed in big plants alone with an annual $16,000,000 pay roll . . .

And to the list of Southland pilots have been added seventeen more names . . . including one woman pilot with a limited-commercial rating.

"Factory Equipment and Tooling" by D. M. Carpenter, Consolidated Aircraft Corp., questioned some of the material contained in Delaubenfels' paper regarding the economy of using the drop-hammer and brought forth considerable discussion. Also the economy of the use of the hydraulic press was questioned.

The key note to Carpenter's paper was that the factory executive constantly must be on the alert to avoid letting the knowledge of mass production possibilities run away with his judgment concerning the expenditures allowable for equipment and tooling. He questioned the economy of the drop-hammer when he found that an intricate part made by the drop hammer was costing more than the part formerly cost fabricated by hand. He acknowledged that Consolidated was jobbing out their drop-hammer work and that the difference might not exist if they did the work themselves, but it was quite evident that in some cases there was a question as to the economic superiority of the drop-hammer over other methods.

Material waste was another drawback listed against the drop hammer and hydraulic press. He stated that aluminum alloy scrap was becoming quite a problem. Scrap can be sold at only about a fifth of the original cost of the sheet.

"Production Control"

Carpenter called for some ingenious inventor to design a rivet sorter, expressed great concern over the corrosion problem and stated that in some instances it is necessary to fabricate some articles in the plant instead of purchasing them outside, so as to control the supply. In connection with this last statement, Carpenter said that Consolidated is now producing all of their own rivets.

Archbold To Test Airboat With Flight To Miami

(Continued from Page 1)

ciate, is in Holland, obtaining permission for the hazardous undertaking into regions where few white men have emerged alive.

Archbold's crew for the flight to Miami will include Ray Booth, radio operator who accompanied Sir Hubert Wilkins on his unsuccessful search last August for the six lost Russian transpolar fliers; Jerry Brown, flight engineer, and Russell Rogers, co-pilot.

His navigator has not yet been selected, although Archbold is attempting to obtain the services of Capt. Harry Manning of Panama Pacific Line for this important job. Capt. Manning was navigator on Amelia Earhart's first attempt to encircle the globe, returning to the United States after their Lockheed plane was damaged in taking off from Honolulu.

"I will know definitely by Wednesday whether we shall make the Miami flight," Archbold said today. "Our route will take us either directly across the Gulf of Mexico or along its shores."

On his hop to Miami, Archbold will attempt to keep in constant communication with Barney Boyd, San Diego amateur radio operator, and disabled war veteran. Boyd, whose call letters are W6LYY, resides at 4635 56th-st. He said today that he has been in touch with the Archbold plane on test flights over the bay and north to Oceanside, since last Monday.

Frequencies on which Archbold will operate during the flight will be 3105, 6210 and 12,420 kilocycles, both in voice and code, according to Boyd.

The airline distance to Miami, 2300 miles, is about 400 miles less than that to New York City, where Archbold set down his first Consolidated-built plane June 25 in a record-breaking dash of a seaplane over land in 17 hours, 4 minutes.

Archbold sold this plane to the Russian government for use by Sir Hubert Wilkins, and returned to San Diego for delivery of his new craft, a more advanced type airboat.

PBY I used in polar search

Archbold plane sold to Russians to comb Arctic wastes for flyers

With the permission of the United States Navy, Richard Archbold sold his recently acquired Consolidated boat to Russia to be used by an expedition to search for the lost trans-polar flyers. The expedition crew consists of Air Commodore Herbert Hollick-Kenyon, well-known flyer of the Lincoln Ellsworth Antarctic Expedition; Gerald Brown, the "Guba's" regular mechanic, Raymond Booth, radio man, and Al Cheeseman, ace pilot, who joined the searching party at Port Arthur, Alaska. The expedition is headed by Sir Hubert Wilkins.

Navy opens bids

One engine contract awarded and figures on four aircraft contracts read.

The Navy opened bids on four aircraft contracts the end of October and awarded a contract for engines the first of November. Glenn L. Martin was the only bidder on Navy 500-198 for patrol-bombers. The company bid $20,000 on item 1; $53,418 on item 2; the item 3 series ranged from $188,750 on item 3a down to $131,440 on item 3n; $1,521,325 was bid on 4; and $17,500 on 5.

On another set of specifications for patrol bombers, Navy 500-199, both Consolidated and United (Sikorsky Division) offered bids. Consolidated Aircraft bid $5,000 on lot 1, item 1; $37,000 on item 2; item 3 bids ranged from $119,750 on 3a down to $92,250 on 3n; $1,113,675 was bid on 4; and $22,000 on 5. Lot 2 bids were $5,000 for item 1; $37,000 on 2; bids on 3 ranged from $107,750 on 3a to $72,250 on 3j; the bid on 4 was $1,481,562.50; and 5 was $22,000. United Aircraft's bids were: $54,598 on item 1, lot 1; $62,411 on 2; 3 ranged from $161,694 on 3a down to $117,663.04 on 3n; $1.116,586,20 was bid on 4; and $111,489 on 5. Lot 2 bids were $54,598 on 1; $62,411 on 2; 3 ranged from $161,694 on 3a down to $112,448.59 on 3j; $1,568,168.11 was bid on 4; and $161,694 on 5.

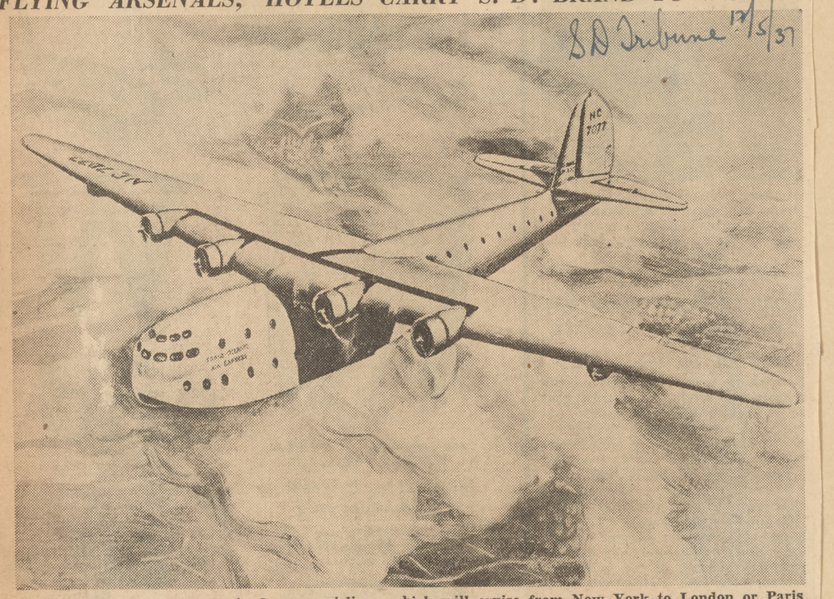
Two sets of specifications for scout-bombers were bid on. Curtiss Wright Corp. was the only bidder on Navy 500-217 with a bid of $1,690,174 on lot 1 and $2,928,276 on 2.

On Navy 500-214, Brewster Aeronautical Corp. bid $2,267,160 on lot 1 and $3,680,400 on 2. United Aircraft Corp. bid $1,897,670.70 on lot 1 and $3,425,694.60 on 2.

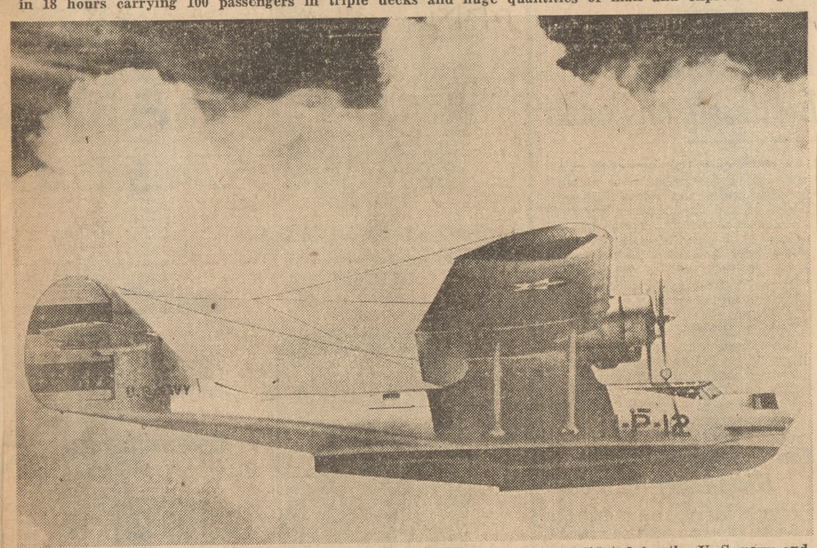
Wright Aeronautical Corp. obtained the contract for engines under their bid of $165,821 on Navy 500-188. The engine model is 1820-30.

FLYING ARSENALS, HOTELS CARRY S. D. BRAND TO WORLD

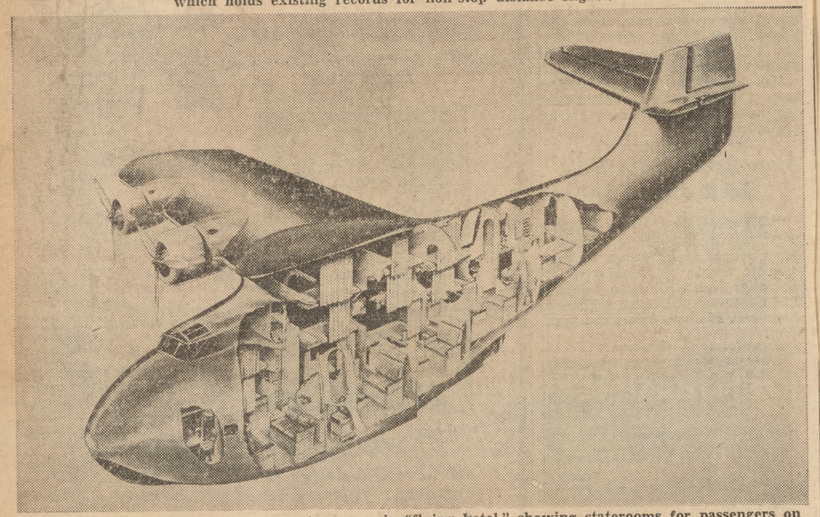
SD Tribune 12/5/37



Consolidated's huge four-engined ocean airliner which will cruise from New York to London or Paris in 18 hours carrying 100 passengers in triple decks and huge quantities of mail and express freight.



Type of multimotored long-range bomber and patrol plane built by Consolidated for the U. S. navy and which holds existing records for non-stop distance flights.



A cross-section of Consolidated's new transoceanic "flying hotel," showing staterooms for passengers on

Consair Meets Needs in New Ocean Air Liner

SD Tribune 12/5/37

Recent development and performance of long-range ocean airway liners has opened for the world of shipping and transportation a new field which Consolidated Aircraft Corp. at Lindbergh field has been pioneering for several years.

According to the U. S. maritime commission, direct competition between aircraft and ships in carrying mail and passengers on the world's trade routes is clearly indicated in the immediate future.

To meet the requirements of this new trade, Consolidated has designed an ocean airliner capable of transporting 100 passengers and a ton of mail from New York to London or Paris in 18 hours. This luxury liner of the airways will have three decks. There will be commodious sleeping apartments, a full-sized dining room, rest rooms and cocktail lounge. Its four engines of 6000 horsepower will enable this huge hotel of the air to span the Atlantic or Pacific at a speed in excess of 190 miles an hour.

Significant of the trend of the times is the announcement of the British air ministry that by the end of 1938 all first-class empire mail from Great Britain to its overseas possessions will be carried by air at the regular first class rate.

Economic Advantage

Transoceanic flying experience to date has demonstrated that the airplane has a large economic advantage of interest to all taxpayers over surface vessels. Pan-American airways announced last week that postage revenue of the government on air mail between San Francisco and Hawaii has come within 10 percent of paying back the amount expended by the government in maintaining the transoceanic airline.

Pan-American officials contend that airmail volume over the Atlantic would be even greater and that "given any reasonable chance a transatlantic airmail line should return to the government every penny that it is likely to pay for initiating and maintaining Atlantic air service. Before midsummer of 1938 such a route is expected to be in operation as a result of exhaustive flight tests carried on during the last year.

It was nearly a decade ago that Consolidated began pioneering in flying boat construction and since that period has achieved phenomenal success. The 14 Commodores, first of all the all-metal flying boats designed and built by Consolidated in 1929 and 1930 and delivered to Pan-American airways, still are in active passenger and airmail carrying service.

A year after delivery of the Commodores, Consolidated received its first large contract from the navy for long-range patrol bombers. Subsequent orders have kept the big plant busy. It is now completing a contract for 176 huge flying boats, several squadrons of which already have been delivered to air bases in Hawaii, the Canal Zone and Puget Sound, achieving new world records for distance and duration.

Flew Across U. S.

Another achievement was the flight of Richard Archbold in a Consolidated plane from San Diego across the continent to New York on June 24, the first time in aviation history a seaplane had essayed such a trip. Archbold made the flight in 17 hours. Designed for special air exploration in New Guinea the plane subsequently was turned over to Sir Hubert Wilkins, who used it in searching for the missing Russian transpolar fliers.

Consolidated has completed a new seaplane for Archbold and the American Museum of Natural History. This ship is expected to leave San Diego for New Guinea soon after Jan. 1.

"The wonderful cooperation of the navy bureau of aeronautics has been instrumental in enabling Consolidated to produce the finest flying boats owned by any nation," asserted Maj. Reuben H. Fleet, president of the Lindbergh field aircraft manufacturing plant. "Taking into consideration flying boats now on order and already constructed, Consolidated will have produced more than three times as many airboats as any other American manufacturer."

While Consolidated is bending every effort to keep in the vanguard of airboat construction, other American aircraft manufacturers have had the initiative and vision of adding new laurels to the history of aviation by building huge flying boats. Glenn L. Martin, who sold the government his first army plane at North Island, nearly a quarter of a century ago, has just launched a 32-ton airboat for the Soviet Union. Boeing is rushing to completion two 43-ton 72-passenger air liners and Igor Sikorsky is planning the immediate construction of a 100,-ton airboat.

Huge Liners Hit

Already there is a close relationship and community of interest between shipping concerns and airline operators. The Grace line is half owner of Pan-American airways. The Matson line owns a large share of the Inter-island Airways in Hawaii. The Hamburg-American line and the German Zeppelin Co. are associated Air France and the Compagnie Generale Transatlantique have formed a new combination. In the U. S. the most recent developments are the announced plans of the United States and American Export lines to add airliners to their surface fleets.

In stressing the fallacy of building huge liners like the Queen Mary and the Normandie, the U. S. Maritime commission said:

"Thirty years have elapsed since the liner Mauretania established an Atlantic record of 5 days and 2 hours. The Normandie succeeded in lowering that time by only 24 hours. Even if the horsepower of the Normandie were doubled—at a prohibitive cost—the time of crossing would only be reduced by 11 hours. Yet flying liners, in their present stage of development, promise a non-stop trip to Europe in 20 hours, while dirigibles repeatedly have made the crossing in 40 hours. The non-stop range of the huge airboats now being designed will change the potentialities of ocean air travel as weather hazards and delays will be reduced to a minimum. Shipping companies who do not make use of this new vessel on their trade routes will indeed be shortsighted."

ARCHBOLD LANDS PLANE AFTER 14 HOURS TO MIAMI

SD Tribune 12/6/37

Setting down his San Diego-built flying boat at Miami 14 hours and 10 minutes after leaving here, Richard Archbold, museum research associate, yesterday completed the first major test flight of his new 14-ton "skyway laboratory," The Associated Press reported.

Archbold and seven companions left here Friday afternoon at 2:35. His plane, the Guba ("Sudden Storm"), built by the Consolidated Aircraft Corp., is similar in design to the first flying boat of that name which he flew from here to New York last June in 17 hours and 3 minutes.

The flier plans a hop to New Guinea within a few months in connection with his work for the American Museum of Natural History. His plane, which left San Diego on the Miami flight with 1750 gallons of gasoline, had 700 gallons on arrival in Florida.

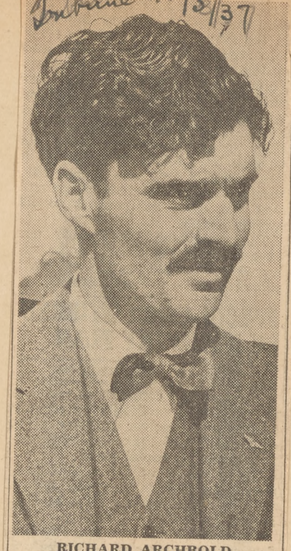
Archbold said the trip was a "shakedown" cruise in preparation for the flight to New Guinea. He will return here this week.

Constant radio reports were received from the plane by Bernard Boyd, 4635 Fifty-sixth st., radio experimenter and operator of amateur station 6LYY.

The flight throughout was reported "without incident." Throughout the afternoon and early evening Boyd maintained contact with the big ship, receiving its messages by voice transmission, and transmitting messages in code.

'Happy Landing'

SD Tribune 12/3/37



RICHARD ARCHBOLD

Richard Archbold, spanning the continent for the second time in less than six months in a Consolidated Aircraft Corp.-built flying boat, brought his 14-ton "skyway laboratory" to a safe landing at Miami, Fla., today after a non-stop flight from San Diego of 14 hours, 10 minutes, the Associated Press reports. The 30-year-old research associate of the American Museum of Natural History, who plans to fly his craft from California to New Guinea within a few months, left San Diego at 2:35 p.m. yesterday, accompanied by seven companions.

Archbold's plane, the Guba ("Sudden Storm"), is similar in design to the first flying boat of that name which he flew from here to New York last June in 17 hours, 3 minutes. The craft, leaving San Diego with 1750 gallons of gasoline, still had 700 gallons in its tanks when it arrived at Miami.

Radio Man Gives Aid

Constant radio reports were received from the plane by Bernard Boyd, 4635 Fifty-sixth st., radio experimenter and operator of amateur station 6LYY. Boyd, described by an official of Consolidated as hav-

Archbold To Hop Today On Flight to Miami

SD Tribune 12/3/37

His second transcontinental flight in a flying boat this year will be started by Richard Archbold, research associate, American Museum of Natural History, this afternoon. Going to Miami on a 2250-mile flight, which he hopes to make in 14 hours, Archbold, who flew from here to New York in June, plans to leave San Diego at 2:30 p.m.

His plane, NC-777, the same as his first flying boat, is named "Guba," ("Sudden Storm"), the same as his first Consolidated Aircraft Corp. built craft, which Sir Hubert Wilkins later flew in a north pole search for the missing Russian trans-polar fliers.

The plane, literally a flying archaeological laboratory, is 104 feet in length, 68-foot wingspread and is equipped with two 1000-horsepower Pratt-Whitney motors. It is capable of more than 4000 miles of sustained flight without refueling.

The plane will follow the southern air route pioneered more than two decades ago by Maj. Theodore Macaulay, who still holds the speed record for a westbound flight from the Atlantic to the Pacific. The record, made in 1919, was 19 hours and 10 minutes.

Carrying Letters

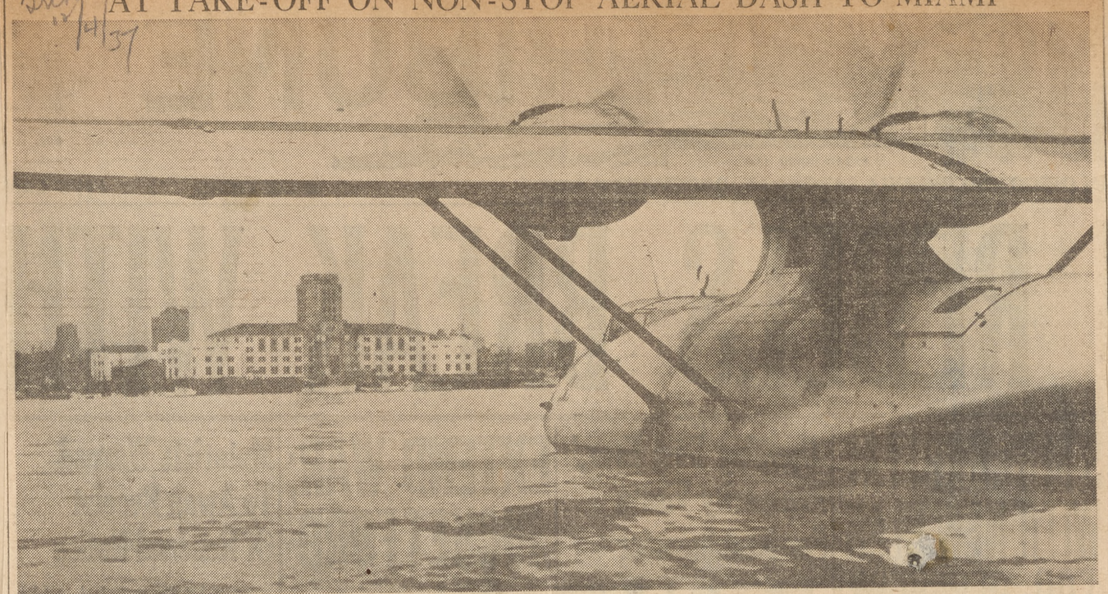
Archbold announced he will make a series of flights along the Florida coast during the next week. He will return to San Diego with the plane about Dec. 12 and will leave here for the flight to New Guinea via Hawaii and Guam early in March.

Archbold will carry letters from Mayor Percy Benbough and President Charles Cotant of the local chamber of commerce to the mayor and president of the Miami civic organization.

He will be accompanied by Russell Rogers, pilot; Gerald Brown, engineer; Raymond Booth, radio operator; William Wheatley, test pilot for Consolidated; Irwin McWilliams, engineering inspector of the federal bureau of air commerce, and Frank Learman, director of public relations for Consolidated.

Bernard Boyd, San Diego radio amateur, will be in communication with Archbold's plane during the flight, it was reported. Boyd operates station 6LYY at 4635 Fifty-sixth st.

AT TAKE-OFF ON NON-STOP AERIAL DASH TO MIAMI



Its wing framing San Diego's new Civic Center, the Guba ("Sudden Storm"), 14-ton flying boat built at Consolidated Aircraft Corp. for Richard Archbold, air explorer, is shown here on its take-off from San Diego bay yesterday afternoon, bound for Miami, Fla. The plane made the flight in 14 hours 10 minutes.

STORM DEFIED AS ARCHBOLD OFF TO CUBA

MIAMI, Dec. 6 (A.P.)—Heavy weather caused postponement until tomorrow of an air cruise to Havana planned today by a score of pilots as an aftermath of the all-American air maneuvers. Jacqueline Cochran, who established a New York-Miami speed record of 4 hours, 12½ minutes, last week, also delayed an attempt to seek new marks for 100, 50 and 25-mile closed courses. Richard Archbold, of New York, took off for Havana in the 14-ton flying boat he flew here non-stop from San Diego, but the other entrants in the cruise waited for the weather to clear. Miami's annual air show, marked by the fatal crashes of Rudy Kling and Frank Haines, closed yesterday with S. J. Wittman, of Oshkosh, Wis., winning the Glenn H. Curtiss trophy races. Wittman won easily at about 213 miles an hour. Harry Hammell, of Austin, Tex., finished second, and Bob Davis, of Bloomington, Ill., third.

The flight throughout was reported "without incident." Throughout the afternoon and early evening Boyd maintained contact with the big ship, receiving its messages by voice transmission, and transmitting messages in code.

Wives Get Messages

Special messages were transmitted to wives of crew members and it appeared to Boyd that the members of the crew were experiencing no difficulties, though they complained in several messages of the cold. Flight altitude of from 9000 to 13,000 feet was maintained, the latter reported at midnight.

The route of the big ship took it over El Centro to Yuma, across New Mexico to Austin, Tex., south of New Orleans and south of Tampa into Miami. The plane's arrival in Miami will be a feature of ceremonies attending the 10th annual All-American air maneuvers. After flights along the Florida coast, Archbold will return here in about a week.

Crew on Plane Listed

Aboard the airship were Russell Rogers, co-pilot; Gerald Brown, engineer; Raymond Booth, radio operator; William Wheatley, test pilot; Irwin McWilliams, engineering inspector for the bureau of air commerce; and Frank Learman jr., assistant to the manager at Consolidated aircraft.

The first Guba subsequently was sold to the Russian government for use by Sir Hubert Wilkins in an Arctic search for six missing Russion fliers.

S. D. AIRBOAT HOPS TODAY FOR FLORIDA

Richard Archbold, Crew Of Seven, Taking Off On Trial Flight

Richard Archbold, the American Museum of Natural History's nonchalant young aviator-explorer, today attempts to link the west and east coasts by non-stop seaplane flight for the second time in history.

Hops At 2:30 p. m.

The 30-year-old flier, accompanied by a crew of four and three passengers, will take off from San Diego bay at 2:30 p. m. today in a Consolidated-built replica of the Navy's newest patrol bombers, bound for Miami, Fla.

The cross-country hop will test the stamina of Archbold's plane for his contemplated trans-Pacific flight early in 1938 to Dutch New Guinea, where he will lead an American Museum of Natural History expedition.

Packs Poundage

The airboat will carry approximately 27,000 pounds, including 1750 gallons of gasoline.

Accompanying Archbold will be Russell Rogers, co-pilot; Gerald Brown and William Sanderson, mechanics; Raymond Booth, radio operator; William Wheatley, chief test pilot for Consolidated; Irwin K. McWilliams, Bureau of Air Commerce inspector; and Frank Learman Jr., assistant to the president at Consolidated.

"We expect to land in Miami in time for breakfast tomorrow," Archbold said today. "It should take us no more than about 15 hours for the 2300-mile flight."

June Hop Recalled

On his first transcontinental flight in a Consolidated seaplane last June, Archbold flew from San Diego to New York in 17 hours, 4 minutes. This plane later was sold to the Russian government for use by Sir Hubert Wilkins in searching for the missing Soviet transpolar aviators, and Archbold returned to San Diego for delivery on a more advanced type airboat.

The flight route to Miami will pass over the following points, according to Archbold:

Flight Route

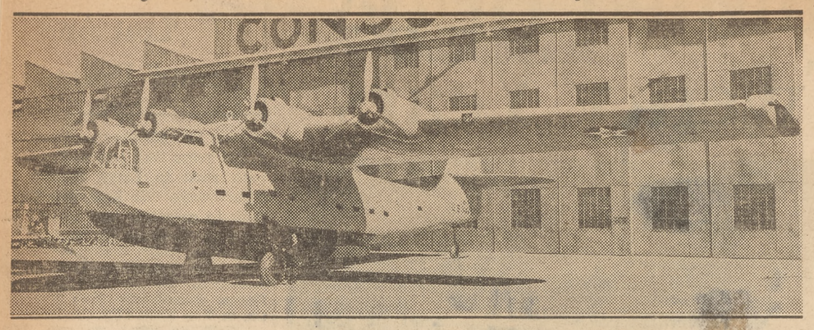
Yuma, north of Tucson, Lordsburg, N. M., north of Deming, N. M., north of Guadalupe Pass, Tex., south of Wink, Tex., north of Austin, Tex., south of New Orleans, south of Tampa, and into Miami.

The plane's arrival in Miami will be a feature of the 10th annual All-American Air Maneuvers. After a week of short flights along the Florida coast, Archbold and his passengers will return to San Diego.

Hopping Continent—Habit With Archbold

Richard Archbold, inset, was to take off from San Diego on a non-stop 2300-mile flight to Miami, Fla., at 2:30 p. m. today in the Consolidated airboat shown at top. Accompanying him were to be, left to right, above, Russell Rogers, co-pilot, Raymond Booth, radio operator, William Wheatley, Consolidated chief test pilot, and Gerald Brown, mechanic.

Navy's New Air Giant Ready For Test



The Navy's new four-motored "air battleship," built by Consolidated.

CONSAIR DRAWS VEIL FROM NEW AIR BATTLESHIP

4-Motored Bomber, Secretly Built, Has 5000-Mile Cruising Radius; Called Navy's Most Powerful Unit

A veritable battleship of the air was brought out from behind locked gates at the Consolidated Aircraft Corp. this morning.

Under secret construction for many months in the plant's experimental shop, where only Consolidated's most trusted employes were allowed to enter, the plane, a four-motored patrol bomber capable of spanning a distance of at least 5000 miles without stopping, was revealed by the Navy to be its latest and most powerful unit of national defense by air.

Data Kept Secret

Still restricted by Navy officials were performance data and dimensions of the huge craft.

Known in service nomenclature as the XPB2Y-1, the bomber will be powered with four Pratt & Whitney engines of 1050 horsepower each, mounted on a full cantilever type wing. Construc-

Picture on Page 3

tion is all-metal, and in order that the airboat may operate for an extended period thousands of miles away from its normal base, the hull has been protected from corrosion by latest approved finishes.

Tests on the air leviathan will be conducted late this month or early in January by a Navy trial board, it was announced at the plant today. The Consolidated four-motored airboat will compete with a similar plane completed by the Sikorsky Aircraft Co. for a Navy contract, it was reported.

Navy officials pointed out that, although they must withhold details on performance and dimensions, they are certain the plane's speed will be exceptionally high for such a heavy craft, while its ceiling and cruising range will be "remarkable."

Heavily Armed

The airboat will be the most heavily armed of any plane in the Navy's service, it was reliably learned. Machine gunners will be able to ward off attacks by enemy planes from all sides of the craft, while the bomber lays its "eggs" on opposing fleets far out at sea.

A special navigation turret aft of the wing will enable the navigator to have a completely unobstructed view of the sky for celestial observation.

A "tremendous load" of bombs will be carried by the air battleship, according to the official Navy announcement, which said:

"All facilities for extended flight and comfort of personnel are provided. These include commodious sleeping quarters, living quarters, galley complete with range and refrigerator, clothes lockers, toilet and washing facilities, heating and ventilating system, soundproofing, and even a well equipped workshop complete with all appurtenances."

Wing Tip Floats

Retractable wing tip floats have been installed and, in flight, will be drawn up to form the tip of the wing, as in the PBY-type planes now under construction at Consolidated.

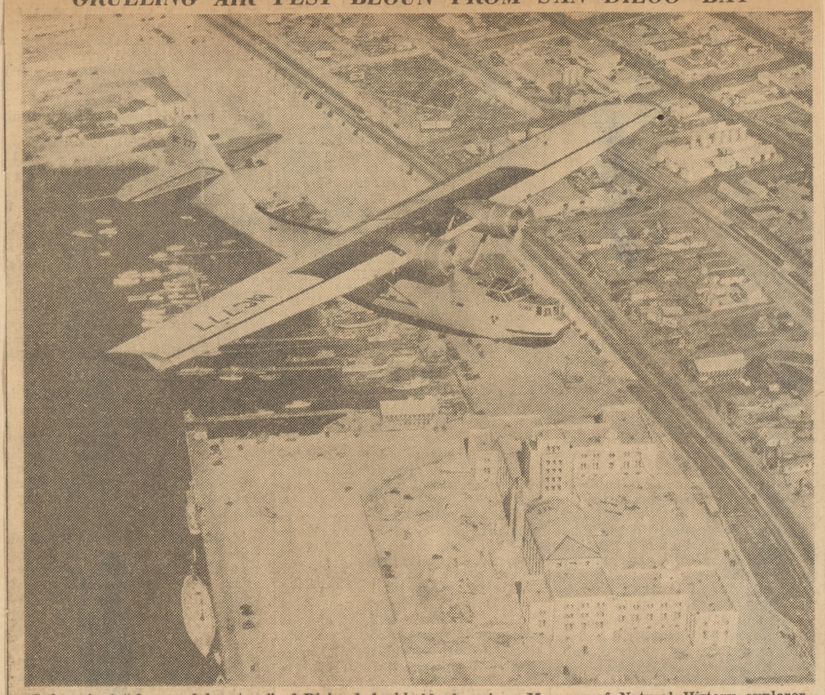
The floats are let down, at the time of landing, to provide the necessary flotation for the wing tips, as well as a braking effect for slow landing.

'Marks New Era'

A complete telephone system is installed within the boat whereby any member of the crew may contact any other member.

"Consolidated's four-motored airboat marks a new era in the national defense program of the United States," the Navy announcement released at the plant today said.

GRUELING AIR TEST BEGUN FROM SAN DIEGO BAY



Guba, giant "skyway laboratory" of Richard Archbold, American Museum of Natural History explorer, circled over Lindbergh field yesterday afternoon and headed eastward for a non-stop shakedown flight to Miami, Fla. The huge plane was photographed in the air over the new civic center building.

SKY LABORATORY IN CROSS COUNTRY TEST TO MIAMI

Archbold's 'Guba' Reported O. K. at Midnight Over Texas; Left S. D. at 2:35.

Somewhere over Texas, Richard Archbold's "skyway laboratory," the giant airship Guba which will be used for New Guinea exploration early next year, was winging smoothly along at midnight last night bound for Miami, Fla., on a 2300-mile non-stop shakedown flight.

Constant reports to Bernard Boyd, radio experimentor at 4635 Forty-sixth st., indicated that everything "was under control" and that the explorer-pilot expected to land at Miami about 6:30 P. S. T. this morning, exactly on the predicted schedule of 15 hours flying time. At the midnight report, Archbold's radio operator was unable to give the exact location of the ship but it was assumed that it was well across Texas

The cross-country flight will put the big ship to exacting tests under conditions expected to be similar to those to be encountered when Archbold takes off from here on his exploration trip next year.

Carrying 27,000 pounds, including 1750 gallons of gasoline, Archbold took the Guba, named for the New Guinea word for sudden

The pilot's mother and the builder's mother inspected the flying boat in which Richard Archbold was en route to Miami last night. Left to right, Mrs. John F. Archbold and Richard Archbold, the explorer pilot; and Maj. R. H. Fleet and Mrs. David W. Fleet. Maj. Fleet is president of Consolidated Aircraft Corp.

NAVAL PLANES HOP TOMORROW

Navigator Flouts Recently Broken Leg For Trip

SD Sun 1/7/37

Publicly proclaimed merely a "routine transfer" of equipment, 14 huge Navy patrol planes are scheduled to take off from the bay at 10 a. m. tomorrow for a 3057-mile non-stop flight to the Panama Canal Zone.

And originally scheduled to be left behind was Lieut. (jg) B. V. Clark, navigation officer. His leg was still in a cast. He had broken it three weeks ago in tripping over a railroad track at the Air Station.

A routine flight? Well, Lieut. Clark didn't think so—privately. He protested vigorously at being left behind on the Navy's greatest mass flight. Days of argument were climaxed yesterday when Navy physicians finally consented to remove the cast on his leg so Lieut. Clark could make the flight as navigation officer.

It will be his duty to guide the squadron unerringly down the Mexican and Central American coast, and across the Nicaraguan jungle to the Coco Solo air base.

North Island was a busy scene today, as the 98 officers and enlisted men prepared for the long flight. Pistols and ammunition were being inspected by officers.

"Never know when we might have to use 'em," one explains. "They'd come in mighty handy if any of us are forced down in those Central American jungles."

Machetes, it is further explained, are standard equipment of airplanes operating out of the Canal Zone. An aviator trapped in jungle country has only this hope of fighting his way to open country and civilization.

Most Young Men

The majority of the flight personnel consists of men in their 20's or early 30's. Among the pilots are eight aviation cadets who will have positions of responsibility in the piloting of Uncle Sam's most expensive flying equipment.

Navigation problems on the flight to the Canal Zone are many and varied. Vicious tropical rain squalls may cause the entire squadron to zig-zag off its predetermined route. Visibility on the first mass flight to the Canal Zone was so poor in spots that celestial navigation became impossible.

Information Scarce

There have been three such flights this year—two to Hawaii and one to the Canal Zone. The commanding officer of each squadron has been a tight-lipped person, who goes to any extreme necessary to stay out of the spotlight, and Lieut. Comdr. Bradford E. Grow, leader of tomorrow's flight, is no exception.

He has little to say about the undertaking. He won't even hazard a statement as to the number of miles the squadron expects to fly. He's just making the flight; others have to supply the information.

'Air Battleship' in Debut At Consolidated Plant

SD Tribune 1/7/37

An "air battleship," powered by four motors and provided with complete and powerful armament, made its appearance at the Consolidated Aircraft Corp. plant here today. The giant flying boat, largest ever manufactured by the plant, was wheeled out for official photos, with indications that its first flight might be made shortly after Jan. 1.

Under construction at the plant for several months, the United State's navy's latest answer to the policy of national defense, carries the designation of XPB2Y-1. Report at the plant was to the effect that performance data of the new leviathan of the air "has been withheld, but it is sufficient to say the speed of the craft is exceptionally high, while ceiling and range are most remarkable." Test flights are to be carried on in the vicinity of San Diego.

Powered by Four Engines

Its lines so graceful as to belie its mammoth proportions, the "air battleship" is a four-engined, all-metal monoplane, with a wing of the full cantilever type, mounting four Pratt & Whitney engines of 1050 horsepower each. One of the features, described as being of an extremely valuable nature, is the provision of a special navigation turret aft of the wing, for use by the navigator. Completely outfitted with instruments, the turret provides an unobstructed view of the sky for celestial observation.

"Armament details are withheld in accordance with navy policy," it was reported at the plant. "However, complete and powerful protection is provided in all directions, rendering the plane practically invulnerable. A tremendous load of bombs may also be carried." Further information on the craft was released, as follows:

"In order that this patrol bomber may be entirely independent of any base for an extended period of time, the hull has been protected from corrosion by latest approved finishes. Beaching gear is installed, which may be removed and stored in special racks within the hull structure.

"All facilities for extended flight and comfort of personnel are provided. These include commodious sleeping quarters, living quarters; galley complete with range and refrigerator, clothes lockers, toilet and washing facilities, heating and ventilating system, soundproofing and even a well-equipped workshop, with all appurtenances.

Wing Floats Retractable

"For safety in the air and on the water, many novel adjuncts have been provided. All necessary navigation and engine instruments are conveniently placed and there is, of course, a complete radio installation.

"Another novel feature is the installation of retractable wing tip floats, which, in flight, are drawn up to form the tip of the wing, thus increasing the performance of the patrol bomber materially, while at the time of landing they are let down and form, in addition to necessary flotation for the wing tips, an additional braking effect for slow landing.

"A complete telephone system is installed within the boat whereby any member of the crew may contact any other member. A 110-volt alternating current electrical system is also provided, powered by auxiliary power plant motors.

"After acceptance by the navy department the 'air battleship' will be flown to one of the United States naval air stations, where exhaustive tests will be conducted. Consolidated Aircraft Corp. and others who have seen the ship believe that its premiere marks a new era in the national defense program of the United States."

Ready For Take-Off—'Coco Solo Or Bust'

Above is shown the crew of Patrol Squadron Two, scheduled to take off from San Diego at 10 a. m. tomorrow in 14 planes for the Canal Zone. Commanded by Lieut Comdr. Bradford E. Grow, inset above, 20 officers who will pilot the big Consolidated patrol bombers are shown beside the squadron's "flagship." Left to right, front row, Lieut. (jg) Salem Van Every, and Aviation Cadets Lauren Hawes, Charles Eastman, Paul E. Kohler, Walter L. Maili, H. M. Kincheloe, Otto Finley, P. K. Blesh, and Roger Hutchins; rear, Lieut. (jg) A. J. Wilson, Lieut. (jg) Charles L. Westhofen, Lieuts. W. C. Asserson, G. J. Dufek, D. S. MacMahan, executive officer; Lieut. Comdr. B. E. Grow, commanding officer; A. B. Thompson, flight officer; D. J. Sullivan, L. A. Morris, L. B. Southerland, and Lieut. (jg) J. B. Vredenburgh. Lieut. (jg) B. V. Clark, navigation officer, at right, yesterday persuaded physicians to remove the cast placed on his leg when it was broken three weeks ago, so he could make the flight.

'Air Battleship' in Debut At Consolidated Plant

SD Tribune 1/7/37

An "air battleship," powered by four motors and provided with complete and powerful armament, made its appearance at the Consolidated Aircraft Corp. plant here today. The giant flying boat, largest ever manufactured by the plant, was wheeled out for official photos, with indications that its first flight might be made shortly after Jan. 1.

Under construction at the plant for several months, the United State's navy's latest answer to the policy of national defense, carries the designation of XPB2Y-1. Report at the plant was to the effect that performance data of the new leviathan of the air "has been withheld, but it is sufficient to say the speed of the craft is exceptionally high, while ceiling and range are most remarkable." Test flights are to be carried on in the vicinity of San Diego.

Powered by Four Engines

Its lines so graceful as to belie its mammoth proportions, the "air battleship" is a four-engined, all-metal monoplane, with a wing of the full cantilever type, mounting four Pratt & Whitney engines of 1050 horsepower each. One of the features, described as being of an extremely valuable nature, is the provision of a special navigation turret aft of the wing, for use by the navigator. Completely outfitted with instruments, the turret provides an unobstructed view of the sky for celestial observation.

"Armament details are withheld in accordance with navy policy," it was reported at the plant. "However, complete and powerful protection is provided in all directions, rendering the plane practically invulnerable. A tremendous load of bombs may also be carried." Further information on the craft was released, as follows:

"In order that this patrol bomber may be entirely independent of any base for an extended period of time, the hull has been protected from corrosion by latest approved finishes. Beaching gear is installed, which may be removed and stored in special racks within the hull structure.

"All facilities for extended flight and comfort of personnel are provided. These include commodious sleeping quarters, living quarters, galley complete with range and refrigerator, clothes lockers, toilet and washing facilities, heating and ventilating system, soundproofing and even a well-equipped workshop, with all appurtenances.

Wing Floats Retractable

"For safety in the air and on the water, many novel adjuncts have been provided. All necessary navigation and engine instruments are conveniently placed and there is, of course, a complete radio installation.

"Another novel feature is the installation of retractable wing tip floats, which, in flight, are drawn up to form the tip of the wing, thus increasing the performance of the patrol bomber materially, while at the time of landing they are let down and form, in addition to necessary flotation for the wing tips, an additional braking effect for slow landing.

"A complete telephone system is installed within the boat whereby any member of the crew may contact any other member. A 110-volt alternating current electrical system is also provided, powered by auxiliary power plant motors.

"After acceptance by the navy department the 'air battleship' will be flown to one of the United States naval air stations, where exhaustive tests will be conducted. Consolidated Aircraft Corp. and others who have seen the ship believe that its premiere marks a new era in the national defense program of the United States."

Ready For Take-Off—'Coco Solo Or Bust'

Above is shown the crew of Patrol Squadron Two, scheduled to take off from San Diego at 10 a. m. tomorrow in 14 planes for the Canal Zone. Commanded by Lieut Comdr. Bradford E. Grow, inset above, 20 officers who will pilot the big Consolidated patrol bombers are shown beside the squadron's "flagship." Left to right, front row, Lieut. (jg) Salem Van Every, and Aviation Cadets Lauren Hawes, Charles Eastman, Paul E. Kohler, Walter L. Maili, H. M. Kincheloe, Otto Finley, P. K. Blesh, and Roger Hutchins; rear, Lieut. (jg) A. J. Wilson, Lieut. (jg) Charles L. Westhofen, Lieuts. W. C. Asserson, G. J. Dufek, D. S. MacMahan, executive officer; Lieut. Comdr. B. E. Grow, commanding officer; A. B. Thompson, flight officer; D. J. Sullivan, L. A. Morris, L. B. Southerland, and Lieut. (jg) J. B. Vredenburgh. Lieut. (jg) B. V. Clark, navigation officer, at right, yesterday persuaded physicians to remove the cast placed on his leg when it was broken three weeks ago, so he could make the flight.

Lt. (jg) B. V. Clark, navigation officer, who had a cast removed from a broken leg so he could make the flight.

$4,000,000 Worth of Planes Manned by 25 Officers, 73 Men Ready for 3050-Mile Flight; Film Crews Here.

Fourteen huge long-range patrol bombers, representing an expenditure of about $4,000,000 and manned by a crew of 25 officers and 73 enlisted men, will take off from the harbor starting at 10 this morning on a history-making 3050-mile flight to the eastern entrance of the Panama canal.

The coastal, mountain and valley airways of several foreign countries will be traversed by the planes in their sustained dash from California to the lowest point of the continental divide at the Isthmus of Panama.

For the third time this month major newsreel cameramen and photographers representing many of the nation's pictorial news associations arrived here from Hollywood and Los Angeles last night to take pictures of the take-off this morning of the navy's 14-plane flight to Panama.

The publicity department of the San Diego-California club yesterday completed arrangements for the arrival of the newsreel crews and press cameramen. Other events this month which brought national attention to the city and county were the graduation of 1200 bluejackets at the naval training station and the dynamiting of the beryllium mine near Vista.

The planes include 12 airboats of patrol squadron 2, commanded by Lt. Comdr. B. E. Grow, and two ships to be delivered to squadron 3 at Coco Solo.

Leaving the north beach seaplane ramp of the naval air station, the multi-motored airboats will taxi southward to a point opposite the foot of E st. They then will swing across channel and northward to within a few hundred yards of the mole pier. Here they will point their bows to the westward and the open sea and with engines thundering at full power will skim along the bay waters for the take-off. Should the wind suddenly shift to the southwest the planes will take off from a two-mile course south of the ferry lane.

Although unfavorable weather has prevailed in the vicinity of the Gulf of Nicoyo off the Central American coast since Monday, reports from the aircraft tender Langley indicate these squalls rapidly are passing. Weather conditions from Pt. Loma to the Gulf of Nicoyo and from the Gulf of Chiriqui on the Atlantic coast to Panama are good.

Each of the airboats will carry rifles, revolvers and ammunition in event of a forced landing during the hazardous flight over the jungles and mountains of Nicaragua. However, by the time the planes reach this section of the international airway about dawn tomorrow their heavy gasoline load will be considerably lightened and navy aviation officials declare they should barge along over the mountain peaks without difficulty.

This is the fifth long distance flight by planes of the patrol wing this year and the last until early March, 1938. Other sustained flights of 1937 include two 12-plane "routine ferry operations" to Hawaii in January; a flight to Coco Solo in June, and a 1500-mile flight of 24 planes to Seattle in July. All were made without mishap, attesting to the efficiency of the air fleets manufactured for the navy by the Consolidated plant at Lindbergh field.

The flight in March will total 12 airboats to be delivered to the patrol and bombing squadrons based at Pearl Harbor, Hawaii. They will be among the last to be delivered by Consolidated under existing contracts with the bureau of aeronautics.

NAVY TO LAUNCH 'AIR BATTLESHIP' BUILT BY CONSAIR

Heralding the advent of a new fleet of "superdreadnaughts" of the air, the first of which is expected to prove the most powerful aircraft of its type ever built for the navy, was completed at the Consolidated Aircraft plant yesterday. It will be launched within the next 48 hours and delivered to the Naval Air station for a series of exhaustive tests.

The new four-motored long-range aerial "battleship," which combines all the characteristics of a speedy destroyer with the striking power of a battleship, has the somewhat impressive nomenclature of the XPB2Y-1.

The plane, perfectly streamlined, is of the all-metal type, cantilever wings and is propelled by four engines of a total of 4200 horsepower. It is the first aerial warship whose hull is protected from corrosion.

Armament Impressive

Coupled with its impressive armament, which includes bombs of such weight that the navy department forbids their being made public, are the unprecedented commodious quarters for its commissioned and enlisted personnel. The ships's company of the navy's newest air battleship will not only have excellent sleeping quarters, wardroom and forecastle, but a galley equipped with electric ranges and refrigerators, clothes lockers, thermostatic controlled heating and cooling system, sound proof compartments and a well-equipped workshop.

The navigation, engine and radio instruments are the last word in technical equipment.

A novel feature is the installation of retractable wing tip floats which, in flight, are drawn up to form the tip of the cantilever wing. This increases the flight speed of the plane, while in landing, to slow down the "aerial battleship," the floats are let down to protect the wing and to act as brakes.

View Unobstructed

A complete telephone system will enable the plane's commander to talk instantly to any part of the ship. Aft of the wing is installed a navigation turret where the navigator will have an unobstructed view of the sky to operate his sighting instruments.

Details of the gun placement are confidential but it is no secret that a plane, seeking its destruction by bombs or gunfire, will have a difficult time getting in range under the barrage of shells the new "battleship of the air" is fully capable of firing from every angle.

SPEED, STRIKING POWER COMBINED IN NEW PLANE

Consolidated Aircraft Corp.'s answer to the navy's demand for a "superdreadnaught" of the air boat combines the speedy characteristics of a destroyer and the striking power of a

14 Planes Off Tomorrow On 5th Long Mass Flight

The fifth long-distance mass flight of giant navy patrol planes from San Diego this year is to start tomorrow morning when 14 planes take off from San Diego bay on a 3080-mile flight to Coco Solo, C. Z. Take-off time is scheduled for 10 a.m., with the 98 officers and men making the flight expected to be at their Canal Zone destination 26 hours after leaving here.

Under command of Lt. Comdr. B. E. Grow, the flight will be down the west coast of Mexico to the Gulf of Nicoyo on the coast of Nicaragua, thence overland to the east coast of Central America, following the route of a similar flight from here in June. Station ships on the route are the seaplane tender Sandpiper, off Cape Falso on the Lower California coast; the tender Langley, in the Gulf of Nicoy and the tender Gannett, in the Gulf of Chiriqui, on the east coast of Central America.

Of the 14 planes, 12 are attached to patrol squadron 2. The others are to be delivered to VP-3 squadron at Coco Solo.

Year's Other Trips

Other long-distance mass flights made from here this year include two 12-plane flights to Honolulu, in January and April, covering 2500 miles; a flight to Coco Solo of 12 planes in June, and a 1500-mile flight of 24 planes from San Diego to Seattle in July. Navy's First 'Air Battleship' Ready to Soar

SAN DIEGO, Dec. 7.—Heralding the advent of a new fleet of "superdreadnaughts of the air," the first of what is expected to prove the most powerful aircraft of its type ever built for the Navy, was completed today at the Consolidated Aircraft plant here.

It will be launched within forty-eight hours and delivered to the naval air station for a series of exhaustive tests.

FOUR MOTORS

The new four-motored 1[illegible] range aerial "battleship," w[illegible] combines all the characteri[illegible] of speedy destroyer with [illegible] striking power of a battle[illegible] has the somewhat impre[illegible] nomenclature of the XPB2[illegible]

The plane, perfectly str[illegible] lined, is of the all-metal [illegible] cantilever wings and is pro[illegible] by four engines of a tot[illegible] 4200 horsepower. It is the first aerial warship whose hull is protected from corrosion.

Coupled with its impressive armament, which includes bombs of such weight that the Navy Department forbids their being made public, are the unprecedentedly commodious quarters for its commissioned and enlisted personnel.

ELECTRIC RANGES

The ship's company of the Navy's newest air battleship will not only have excellent sleeping quarters, wardrobe and forecastle, but a galley equipped with electric ranges and refrigerators, clothes lockers, thermostatic controlled heating and cooling system, soundproof compartments and a well-equipped workshop.

BIG SHIPS

Five of the big planes which American factories are building for foreign trade. From top to bottom: The PBY-1 patrol and bomber, built by Consolidated Aircraft Corporation at San Diego; next, BT-32-A bomber built by Curtiss-Wright, at St. Louis, Mo.; next the S-42-D clipper, transport, built by Sikorsky at Bridgeport, Conn.; next, the Sikorsky S-43 amphibion, now in use by the U. S. Navy, and at bottom the bomber built by Martin at Baltimore. All of these planes are available for export.

CONSAIR WINS 4 1-2 MILLION BOMBER JOB

S. D. Sun 12/8/37

Navy Order Assures S. D. Plant's Operation Through 1938; Maj. Fleet Announces Crew Cuts

A $4,500,000 contract which will guarantee Consolidated Aircraft Corp. sufficient work to keep the plant operating through 1938 was awarded the San Diego concern by the Navy Department today.

The contract is for 33 PBY-4 type patrol bombers, similar to the Navy airboats now under construction at Consolidated, but incorporating improvements that have been engineered since introduction of the airboats 13 months ago.

Orders for material will be placed by Consolidated, Maj. Reuben H. Fleet, president, said today.

To Curtail Crew

"During the period we are awaiting delivery of material—three to six months—it will be necessary for us to taper off our crew," Maj. Fleet announced. "However, this will be done gradually, and will not affect as many workers as would have been had we not received the contract.

"We expect to hold together a major portion of our plant employes during 1938, as a result of this award. We now have 3000 total personnel, which figure will only gradually be decreased until we have approximately 2000 eight months from today.

Seek New Order

"Meanwhile, we are hoping to get a Navy order this spring on the four-motored experimental plane which will undergo its first test flights in two weeks, and will be inspected by a Navy trial board shortly after the first of the year.

Consolidated's first bid on the PBY-4 planes seven months ago was ruled too high, and the Navy readvertised for estimates. The second bid, opened in Washington Oct. 29, was lower than those of Sikorsky and Martin.

Half Completed

Consolidated bid about $7,500,000 for 64 planes, Maj. Fleet said.

More than one-half of the plant's current contracts for 176 Navy patrol bombers has been completed. The 89th plane in this group recently was delivered to North Island, Maj. Fleet revealed.

Mass Flight Starts Today

Fourteen Navy Patrol Planes Will Hop Off for Canal Zone

L.A. Times 12/8/37

SAN DIEGO, Dec. 7. (AP)—The fifth long-distance mass flight of giant navy patrol planes from San Diego this year is to start at 10 a.m. tomorrow when fourteen planes take off from San Diego Bay on a 3080-mile flight to Coco Solo, C. Z.

The ninety-eight officers and men making the flight expect to be at their Canal Zone destination twenty-six hours after leaving here.

FLIGHT ROUTE

Under direction of Lieutenant-Commander B. E. Grow, the flight will be down the west coast of Mexico to the Gulf of Nicoyo on the coast of Nicaragua, thence overland to the east coast of Central America, following the route of a similar flight from here in June.

Station ships on the route are the seaplane tender Sandpiper, off Cape Falso on the Lower California coast; the tender Langley, in the gulf of Nicoyo, and the tender Gannett, in the gulf of Chiriqui, on the east coast of Central America.

TWELVE IN SQUADRON

Of the fourteen planes, twelve are attached to Patrol Squadron 2. The others are to be delivered to VP-3 squadron at Coco Solo.

The June flight from San Diego to Coco Solo, under command of Lieut. Robert W. Morse, was made in twenty-seven hours, fifty-eight minutes, with the planes maintaining an average altitude of 10,000 feet.

14 Bombers Roar South On Mass Hop

Navy Planes Set Take-Off Record In S. D. Bay; Canal Zone Goal

At noon today Lieut. Comdr. Bradford E. Grow, commanding the 14-plane non-stop flight from San Diego to the Canal Zone, radioed Aircraft Scouting Force headquarters at North Island that the squadron was 160 miles south of Point Loma.

By HAROLD KEEN
The Sun's Navy Editor

The Navy's most spectacular long distance flight in history was under way from San Diego today, with 14 giant two-motored patrol bombers winging down the Mexican and Central American coasts and into anticipated rain squalls toward the Canal Zone, a distance of approximately 3100 miles.

Starting at 9:57 a. m., the airboats were launched from North Island with clock-like precision, taxied down the harbor channel toward Point Loma and headed about to roar down a mile and one-half runway in an easterly direction.

Only 19 minutes elapsed from the moment the squadron flagship, piloted by Lieut.-Comdr. Bradford E. Grow, commanding officer, left the water, until all 14 planes were in the air. The leading airboat took off at 10:20 a. m., and the final bomber, a spare

Consair Seeks U. S. Aid To End Plane Monopoly

L.A. Tribune 12/8/37

Giant airliners within a few years regularly will be carrying 100 passengers over the Atlantic between America and Europe in 12 hours' flying time, Maj. Reuben H. Fleet, president and general manager of Consolidated Aircraft Corp. here, predicted today as witnesses, one of them a Consolidated executive, urged government aid in transoceanic flying before house and senate maritime committees in Washington, D. C.

Fleet's prediction was voiced in commenting on a report by The Associated Press that I. M. Laddon, Consolidated's chief engineer and vice president, told the house merchant marine committee that Pan American airways holds a "monopoly" over this country's transoceanic aviation and urged that the government act to assure "free and open" competition. Meanwhile, Joseph P. Kennedy, chairman of the maritime commission, was urging before a senate committee that the government should grant overocean airlines the same subsidies for construction and operation which are contemplated for steamers.

Competition Said Stifled

Testifying before the house committee on legislation designed to subsidize construction and operation of transoceanic aircraft, Laddon was quoted as saying the field is now "definitely limited" to Pan American airways. He explained that mail contracts awarded that company require that bidders obtain all concessions for flight to and over foreign countries and that Pan American had been "very aggressive and very bright" in obtaining such concessions, thus making it impossible for others to compete in bidding.

Laddon urged that the government itself acquire the foreign concessions, thus assuring competition.

Fleet explained that Laddon, in Washington on other business, had been requested to testify before the committee as an expert witness.

"We have specialized in the construction of flying boats for years," Fleet explained, "and Laddon, as our chief engineer, is considered an authority on the subject."

The San Diego firm's head explained that Consolidated is interested in the issue only as a supplier of transoceanic flying boats to those who operate them and as one interested in the nation's leadership in aviation, but that it believes the problems under discussion in Washington are of "enormous" importance.

Big Business Sighted

"We have felt," said Fleet, "that the Atlantic ocean is so important as far as transoceanic flying is concerned that it should not be monopolized by any one outfit so far as this country is concerned

14 Giant Bombers Will Point Wings Toward Coco Solo This Morning at 10

To Command Hop

Lt. Comdr. B. E. Grow, who will command a flight of 14 Corsair flying boats. The planes will take off from San Diego bay this morning for Coco Solo.

$4,000,000 Worth of Planes Manned by 25 Officers, 73 Men Ready for 3050-Mile Flight; Film Crews Here.

Fourteen huge long-range patrol bombers, representing an expenditure of about $4,000,000 and manned by a crew of 25 officers and 73 enlisted men, will take off from the harbor starting at 10 this morning on a history-making 3050-mile flight to the eastern entrance of the Panama canal.

The coastal, mountain and valley airways of several foreign countries will be traversed by the planes in their sustained dash from California to the lowest point of the continental divide at the Isthmus of Panama.

For the third time this month major newsreel cameramen and photographers representing many of the nation's pictorial news associations arrived here from Hollywood and Los Angeles last night to take pictures of the take-off this morning of the navy's 14-plane flight to Panama.

The publicity department of the San Diego-California club yesterday completed arrangements for the arrival of the newsreel crews and press cameramen. Other events this month which brought national attention to the city and county were the graduation of 1200 bluejackets at the naval training station and the dynamiting of the beryllium mine near Vista.

The planes include 12 airboats of patrol squadron 2, commanded by Lt. Comdr. B. E. Grow, and two ships to be delivered to squadron 3 at Coco Solo.

Leaving the north beach seaplane ramp of the naval air station, the multi-motored airboats will taxi southward to a point opposite the foot of E st. They then will swing across channel and northward to within a few hundred yards of the mole pier. Here they will point their bows to the westward and the open sea and with engines thundering at full power will skim along the bay waters for the take-off. Should the wind suddenly shift to the southwest the planes will take off from a two-mile course south of the ferry lane.

Although unfavorable weather has prevailed in the vicinity of the Gulf of Nicoyo off the Central American coast since Monday, reports from the aircraft tender Langley indicate these squalls rapidly are passing. Weather conditions from Pt. Loma to the Gulf of Nicoyo and from the Gulf of Chiriqui on the Atlantic coast to Panama are good.

Each of the airboats will carry rifles, revolvers and ammunition in event of a forced landing during the hazardous flight over the jungles and mountains of Nicaragua. However, by the time the planes reach this section of the international airway about dawn tomorrow their heavy gasoline load will be considerably lightened and navy aviation officials declare they should barge along over the mountain peaks without difficulty.

This is the fifth long distance flight by planes of the patrol wing this year and the last until early March, 1938. Other sustained flights of 1937 include two 12-plane "routine ferry operations" to Hawaii in January; a flight to Coco Solo in June, and a 1500-mile flight of 24 planes to Seattle in July. All were made without mishap, attesting to the efficiency of the air fleets manufactured for the navy by the Consolidated plant at Lindbergh field.

The flight in March will total 12 airboats to be delivered to the patrol and bombing squadrons based at Pearl Harbor, Hawaii. They will be among the last to be delivered by Consolidated under existing contracts with the bureau of aeronautics.

NAVY TO LAUNCH 'AIR BATTLESHIP' BUILT BY CONSAIR

Heralding the advent of a new fleet of "superdreadnaughts" of the air, the first of which is expected to prove the most powerful aircraft of its type ever built for the navy, was completed at the Consolidated Aircraft plant yesterday. It will be launched within the next 48 hours and delivered to the Naval Air station for a series of exhaustive tests.

The new four-motored long-range aerial "battleship," which combines all the characteristics of a speedy destroyer with the striking power of a battleship, has the somewhat impressive nomenclature of the XPB2Y-1.

The plane, perfectly streamlined, is of the all-metal type, cantilever wings and is propelled by four engines of a total of 4200 horsepower. It is the first aerial warship whose hull is protected from corrosion.

Armament Impressive

Coupled with its impressive armament, which includes bombs of such weight that the navy department forbids their being made public, are the unprecedented commodious quarters for its commissioned and enlisted personnel. The ships's company of the navy's newest air battleship will not only have excellent sleeping quarters, wardroom and forecastle, but a galley equipped with electric ranges and refrigerators, clothes lockers, thermostatic controlled heating and cooling system, sound proof compartments and a well-equipped workshop.

The navigation, engine and radio instruments are the last word in technical equipment.

A novel feature is the installation of retractable wing tip floats which, in flight, are drawn up to form the tip of the cantilever wing. This increases the flight speed of the plane, while in landing, to slow down the "aerial battleship," the floats are let down to protect the wing and to act as brakes.

View Unobstructed

A complete telephone system will enable the plane's commander to talk instantly to any part of the ship. Aft of the wing is installed a navigation turret where the navigator will have an unobstructed view of the sky to operate his sighting instruments.

Details of the gun placement are confidential but it is no secret that a plane, seeking its destruction by bombs or gunfire, will have a difficult time getting in range under the barrage of shells the new "battleship of the air" is fully capable of firing from every angle.

SPEED, STRIKING POWER COMBINED IN NEW PLANE

Consolidated Aircraft Corp.'s answer to the navy's demand for a "superdreadnaught" of the air, this flying boat combines the speedy characteristics of a destroyer and the striking power of a battleship.

14 Planes Off Tomorrow On 5th Long Mass Flight

The fifth long-distance mass flight of giant navy patrol planes from San Diego this year is to start tomorrow morning when 14 planes take off from San Diego bay on a 3080-mile flight to Coco Solo, C. Z. Take-off time is scheduled for 10 a.m., with the 98 officers and men making the flight expected to be at their Canal Zone destination 26 hours after leaving here.

Under command of Lt. Comdr. B. E. Grow, the flight will be down the west coast of Mexico to the Gulf of Nicoyo on the coast of Nicaragua, thence overland to the east coast of Central America, following the route of a similar flight from here in June. Station ships on the route are the seaplane tender Sandpiper, off Cape Falso on the Lower California coast; the tender Langley, in the Gulf of Nicoy. and the tender Gannett, in the Gulf of Chiriqui, on the east coast of Central America.

Of the 14 planes, 12 are attached to patrol squadron 2. The others are to be delivered to VP-3 squadron at Coco Solo.

Year's Other Trips

Other long-distance mass flights made from here this year include two 12-plane flights to Honolulu, in January and April, covering 2500 miles; a flight to Coco Solo of 12 planes in June, and a 1500-mile flight of 24 planes from San Diego to Seattle in July. The June flight from San Diego to Coco Solo, under

(Continued on Next Page, Col. 2)

command of Lt. Robert W. Morse, was made in 27 hours, 58 minutes, with the planes maintaining an average altitude of 10,000 feet in a V formation. All planes involved in the transfers are Consolidated Aircraft Corp built craft.

Names of officers and men who will participate in the flight starting tomorrow follow:

Navy's First 'Air Battleship' Ready to Soar

SAN DIEGO, Dec. 7.—Heralding the advent of a new fleet of "superdreadnaughts of the air," the first of what is expected to prove the most powerful aircraft of its type ever built for the Navy, was completed today at the Consolidated Aircraft plant here.

It will be launched within forty-eight hours and delivered to the naval air station for a series of exhaustive tests.

FOUR MOTORS

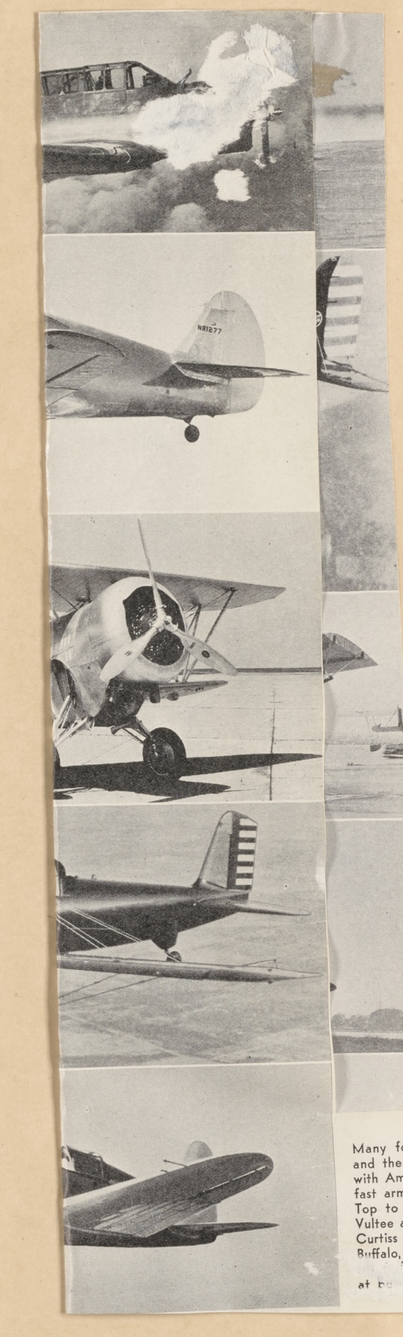
The new four-motored long-range aerial "battleship," which combines all the characteristics of speedy destroyer with the striking power of a battleship, has the somewhat impressive nomenclature of the XPB2Y-1.

The plane, perfectly streamlined, is of the all-metal type, cantilever wings and is propelled by four engines of a total of 4200 horsepower. It is the first aerial warship whose hull is protected from corrosion.

Coupled with its impressive armament, which includes bombs of such weight that the Navy Department forbids their being made public, are the unprecedentedly commodious quarters for its commissioned and enlisted personnel.

ELECTRIC RANGES

The ship's company of the Navy's newest air battleship will not only have excellent sleeping quarters, wardrobe and forecastle, but a galley equipped with electric ranges and refrigerators, clothes lockers, thermostatic controlled heating and cooling system, soundproof compartments and a well-equipped workshop.



FIGHTING PLANES

Many foreign governments ... South America and the Orient, are equip... forces with American fighters. Thes... are a few of the fast armed ships that are ava... for export. Top to bottom: The bomber fighter, built by Vultee at Downey, Calif.; the Hawk 75, built by Curtiss Aeroplane and Motor Company at Buffalo, N. Y.; another version of the Curtiss ... Type IV); the Curtiss Shrike A-12, and at b... the new V-143, built by the Vought factory at East Hartfo... Conn.

CONSAIR WINS 4 1-2 MILLION BOMBER JOB

S. D. Sun 12/8/37

Navy Order Assures S. D. Plant's Operation Through 1938; Maj. Fleet Announces Crew Cuts

A $4,500,000 contract which will guarantee Consolidated Aircraft Corp. sufficient work to keep the plant operating through 1938 was awarded the San Diego concern by the Navy Department today.

The contract is for 33 PBY-4 type patrol bombers, similar to the Navy airboats now under construction at Consolidated, but incorporating improvements that have been engineered since introduction of the airboats 13 months ago.

Orders for material will be placed by Consolidated, Maj. Reuben H. Fleet, president, said today.

To Curtail Crew

"During the period we are awaiting delivery of material—three to six months—it will be necessary for us to taper off our crew," Maj. Fleet announced. "However, this will be done gradually, and will not affect as many workers as would have been had we not received the contract.

"We expect to hold together a major portion of our plant employes during 1938, as a result of this award. We now have 3000 total personnel, which figure will only gradually be decreased until we have approximately 2000 eight months from today.

Seek New Order

"Meanwhile, we are hoping to get a Navy order this spring on the four-motored experimental plane which will undergo its first test flights in two weeks, and will be inspected by a Navy trial board shortly after the first of the year.

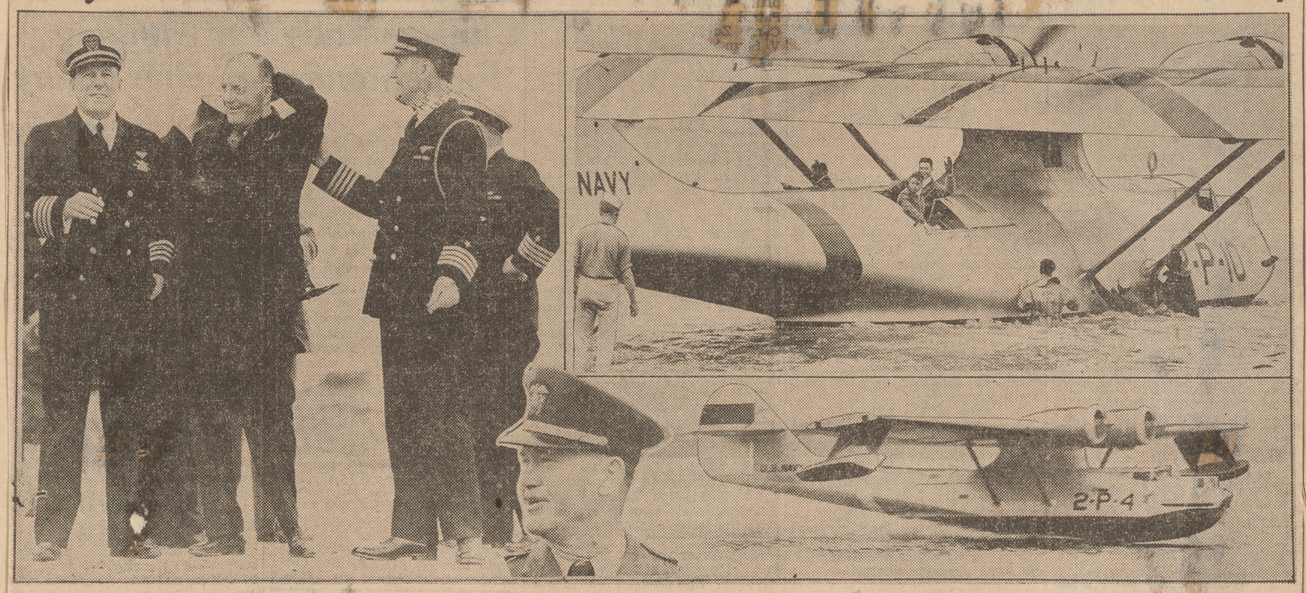
Consolidated's first bid on the PBY-4 planes seven months ago was ruled too high, and the Navy readvertised for estimates. The second bid, opened in Washington Oct. 29, was lower than those of Sikorsky and Martin.

Half Completed

Consolidated bid about $7,500,000 for 64 planes, Maj. Fleet said.

More than one-half of the plant's current contracts for 176 Navy patrol bombers has been completed. The 89th plane in this group recently was delivered to North Island, Maj. Fleet revealed.

Navy Airmen Panama-Bound . . . 14 Ships Face Storm On 24-Hour Hop



Witnessing the takeoff of 14 patrol bombers from San Diego to the Canal Zone at North Island this morning were high-ranking Navy officials, including Capt. Arthur L. Bristol, Jr., Naval Air Station commander, and Capt. Alva D. Bernhard, Aircraft Scouting Force chief of staff, shown left to right with Maj. Reuben H. Fleet, president of Consolidated Aircraft Corp. At top, right, is the plane piloted by Lieut. D. J. Sullivan being launched from the ramp as crew members wave farewells; and below, the plane of Lieut. A. B. Thompson, flight officer, shown poised a moment before it left the water on a perfect takeoff. Inset is Lieut. Comdr. William M. McDade, who commanded the first mass flight this year to Pearl Harbor. Lieut. Comdr. McDade, now stationed at San Pedro, was an unexpected spectator of the takeoff. *Photos by Earl Zahm, Sun Staff Photographer*

Mass Flight Starts Today

Fourteen Navy Patrol Planes Will Hop Off for Canal Zone

L.A. Times 12/8/37

SAN DIEGO, Dec. 7. (AP)—The fifth long-distance mass flight of giant navy patrol planes from San Diego this year is to start at 10 a.m. tomorrow when fourteen planes take off from San Diego Bay on a 3080-mile flight to Coco Solo, C. Z.

The ninety-eight officers and men making the flight expect to be at their Canal Zone destination twenty-six hours after leaving here.

FLIGHT ROUTE

Under direction of Lieutenant-Commander B. E. Grow, the flight will be down the west coast of Mexico to the Gulf of Nicoyo on the coast of Nicaragua, thence overland to the east coast of Central America, following the route of a similar flight from here in June.

Station ships on the route are the seaplane tender Sandpiper, off Cape Falso on the Lower California coast; the tender Langley, in the gulf of Nicoyo, and the tender Gannett, in the gulf of Chiriqui, on the east coast of Central America.

TWELVE IN SQUADRON

Of the fourteen planes, twelve are attached to Patrol Squadron 2. The others are to be delivered to VP-3 squadron at Coco Solo.

The June flight from San Diego to Coco Solo, under command of Lieut. Robert W. Morse, was made in twenty-seven hours, fifty-eight minutes, with the planes maintaining an average altitude of 10,000 feet.

14 Bombers Roar South On Mass Hop

Navy Planes Set Take-Off Record In S. D. Bay; Canal Zone Goal

At noon today Lieut. Comdr. Bradford E. Grow, commanding the 14-plane non-stop flight from San Diego to the Canal Zone, radioed Aircraft Scouting Force headquarters at North Island that the squadron was 160 miles south of Point Loma.

By HAROLD KEEN
The Sun's Navy Editor

The Navy's most spectacular long distance flight in history was under way from San Diego today, with 14 giant two-motored patrol bombers winging down the Mexican and Central American coasts and into anticipated rain squalls toward the Canal Zone, a distance of approximately 3100 miles.

Starting at 9:57 a. m., the airboats were launched from North Island with clock-like precision, taxied down the harbor channel toward Point Loma and headed about to roar down a mile and one-half runway in an easterly direction.

Only 19 minutes elapsed from the moment the squadron flagship, piloted by Lieut.-Comdr. Bradford E. Grow, commanding officer, left the water, until all 14 planes were in the air. The leading airboat took off at 10:20 a. m., and the final bomber, a spare

Consair Seeks U. S. Aid To End Plane Monopoly

S.D. Tribune 12/8/37

Giant airliners within a few years regularly will be carrying 100 passengers over the Atlantic between America and Europe in 12 hours' flying time, Maj. Reuben H. Fleet, president and general manager of Consolidated Aircraft Corp. here, predicted today as witnesses, one of them a Consolidated executive, urged government aid in transoceanic flying before house and senate maritime committees in Washington, D. C.

Fleet's prediction was voiced in commenting on a report by The Associated Press that I. M. Laddon, Consolidated's chief engineer and vice president, told the house merchant marine committee that Pan American airways holds a "monopoly" over this country's transoceanic aviation and urged that the government act to assure "free and open" competition. Meanwhile, Joseph P. Kennedy, chairman of the maritime commission, was urging before a senate committee that the government should grant overocean airlines the same subsidies for construction and operation which are contemplated for steamers.

Competition Said Stifled

Testifying before the house committee on legislation designed to subsidize construction and operation of transoceanic aircraft, Laddon was quoted as saying the field is now "definitely limited" to Pan American airways. He explained that mail contracts awarded that company require that bidders obtain all concessions for flight to and over foreign countries and that Pan American had been "very aggressive and very bright" in obtaining such concessions, thus making it impossible for others to compete in bidding.

Laddon urged that the government itself acquire the foreign concessions, thus assuring competition.

Fleet explained that Laddon, in Washington on other business, had been requested to testify before the committee as an expert witness.

"We have specialized in the construction of flying boats for years," Fleet explained, "and Laddon, as our chief engineer, is considered an authority on the subject."

The San Diego firm's head explained that Consolidated is interested in the issue only as a supplier of transoceanic flying boats to those who operate them and as one interested in the nation's leadership in aviation, but that it believes the problems under discussion in Washington are of "enormous" importance.

Big Business Sighted

"We have felt," said Fleet, "that the Atlantic ocean is so important as far as transoceanic flying is concerned that it should not be monopolized by any one outfit so far as this country is concerned

Consair Gets $4,500,000 Navy Plane Contract

RECORD SET BY LOCAL PLANT

San Diego's Consolidated Aircraft Corp. today was awarded a $4,500,000 contract for 33 VPB patrol planes, spare parts and engineering services by the navy department, The Associated Press reported from Washington, D. C.

The navy purchase is that which has been pending since last April, explained Maj. Reuben H. Fleet, president and general manager of Consolidated, when informed of the award, and is for the San Diego firm's giant PBY4 flying boats. The PBY4 ships are an advanced design similar to other Consolidated patrol bombers previously sold to the navy, such as the 14 which took off here today on the 3080-mile hop to the Panama canal.

Winning the new contract, Fleet commented, will help the San Diego plant to hold its present payroll personnel. It will not result in additional employment, he explained, but will help to avert marked reductions, which would have been necessitated had Consolidated not won the contract.

New Pay Scales Involved

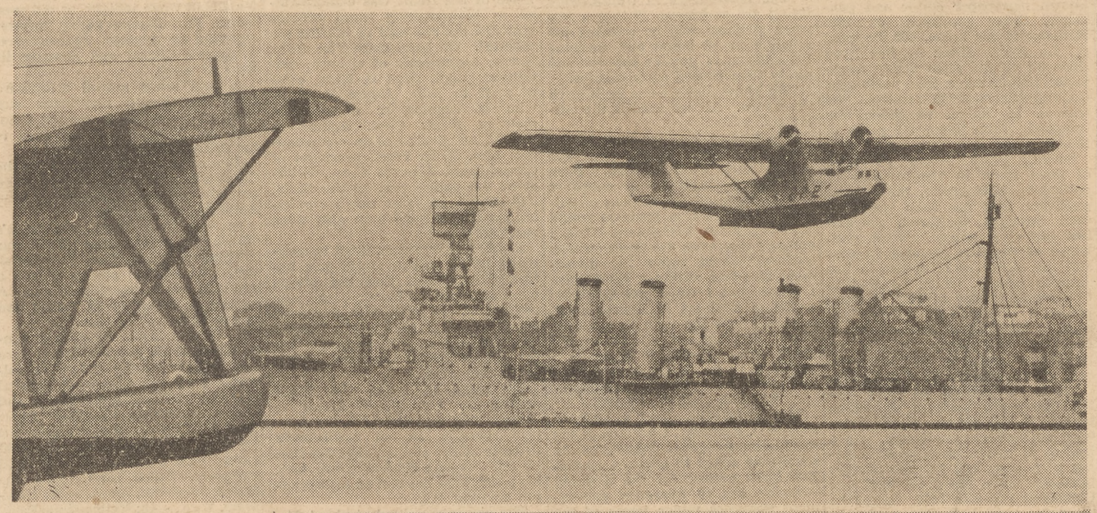
Aircraft manufacturers, including Consolidated, first bid on the order last April. Holding that the bids were too high, the navy let the bids expire. Recently it called for new bids and Consolidated submitted a new offer.

Fleet explained that the company, in the previous bid, allowed in its estimates for pay scales which the Aircraft Workers' union bargaining committee felt would be the prevailing wage rates at the time the order would be filled. The new bid was lowered, he explained, in belief that the prevailing rates would not attain the levels previously estimated.

The big San Diego aircraft plant still is producing patrol planes

(Continued on Next Page, Col. 1)

S. D. NAVY PLANES OFF ON 3050-MILE NON-STOP FLIGHT



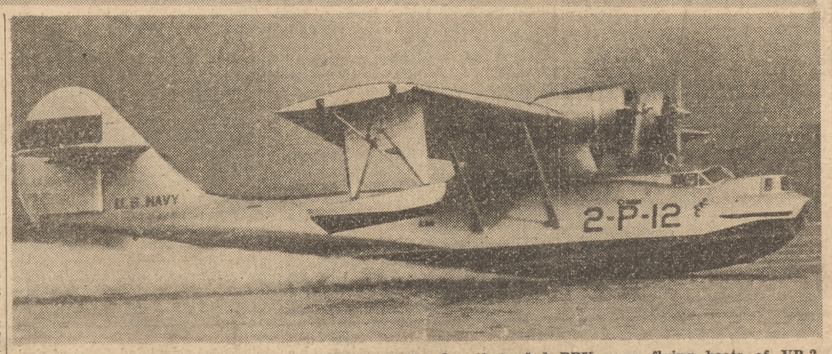
Huge, 14-cylinder engines straining, 14 heavily-loaded Consair PBY navy flying boats roared down the bay today in the take-off on an epic 3050-mile flight to Coco Solo, Canal Zone. Lt. Cmdr. B. E. Grow, squadron commander, was first off the water, at exactly 10:20.

Despite the tremendous loads of fuel carried by the big, twin-engined ships, the take-off was uneventful. The planes lifted with remarkable ease. Only one appeared to have difficulty in lifting clear, No. 6 of VP-3 squadron, piloted by Lt. C. J. Dufek. Many of the airboats were able to lift after runs of slightly more than a mile.

An advantageous shift of the wind enabled the planes to take-off almost due east, away from the low ceiling of fog which prevailed over Pt. Loma. To the east the fog was higher and less dense. Grow planned to lead his squadron through the haze and fly above it.

The airboats began to enter the water from the naval air station

(Continued on Next Page, Col. 4)



Clear of the bay after a hazardous take-off, one of the heavily-loaded PBY navy flying boats of VP-2 squadron is shown, upper, as it headed south today for Coco Solo, Canal Zone, 3050 miles away. Another of the 14 planes making the flight is shown below as it skimmed over the bay, wide-open engines straining to lift the heavy craft. Twelve of the planes comprise VP-2 squadron, under command of Lt. Comdr. B. E. Grow, which have been assigned to the Colo Solo base. The other two are "spares" for VP-3 squadron, already at the Panama base. The huge air boats were built here for the navy by the Consolidated Aircraft Corp.

SQUADRON FLIES TO PANAMA BASE IN RECORD TIME

14 Bombers Reach Canal Zone 22 Hours, 20 Minutes After San Diego Take-Off; Crafts Battle Storms

Conquering tropical rainstorms near the end of their epochal 3100-mile non-stop flight from San Diego to the Canal Zone, 14 giant Navy patrol bombers landed at the Coco Solo air base at 8:40 a. m. today (PST) in a record-breaking aviation achievement.

The airboats, commanded by Lieut. Comdr. Bradford E. Grow of Patrol Squadron Two, completed their "routine transfer" from North Island to the Canal Zone in 22 hours 20 minutes, eclipsing the previous Navy mass-flight mark by more than five hours.

June Hop 28 Hours

Last June, a squadron of 12 planes negotiated the first non-stop mass flight from San Diego to the Canal Zone in 27 hours 58 minutes.

From the time the air armada veered off the steamer lane to cut across the jungle country of Nicaragua until arrival at Coco Solo, they encountered vicious rain squalls, it was reported. The airboats apparently roared almost directly through the storms, with little or no detours required on the entire trip, according to Aircraft Scouting Force officers receiving radio messages on the flagship USS Wright at North Island.

Keep at 10,000 Feet

In rapid-fire take-offs, the 14 planes left San Diego starting at 10:20 a. m. yesterday, assembled off the Baja California coast, and maintained a 10,000-foot altitude down the Mexican and Central-American coasts.

As the tremendous gasoline load of the planes diminished, speed was gained, and with the additional impetus of tail winds, the squadron had averaged 142 miles per hour when they were within 300 miles of their goal.

The thunderstorms which enveloped the craft at this point slowed their progress and they arrived at the Coco Solo base an hour later than had been anticipated at dawn today.

The flight time exceeded expectations of Navy officers, who estimated before the take-off that the bombers should require approximately 24 hours for the undertaking.

The 14 airboats comprised the largest number of Navy planes ever to make a non-stop long-distance mass flight.

Of the PBY-2 type, they were built at Consolidated Aircraft Corp. and are valued at about $4,000,000. Fully loaded, each weighed 14 tons at the take-off. A personnel of 98 manned the planes in the so-called "ferry flight" to their permanent base in the Canal Zone.

CONSAIR GETS $4,500,000 33-PLANE NAVY CONTRACT

Contract for construction of 33 improved PBY type naval patrol planes, to be completed at a cost of $4,500,000, yesterday was awarded to Consolidated Aircraft Corp. by the navy department, The Associated Press reported from Washington.

The award finally was made after first bids on the PBY-4 contract had been allowed to expire by the navy and new bids had been called, Maj. Reuben H. Fleet, Consolidated president and general manager, said.

Aircraft manufacturers, including Consolidated, first bid on the order last April. The navy let the bids expire on the ground that they were too high. Fleet explained that the original bid allowed in its estimate for pay scales which members of aircraft workers' unions' scale committees predicted would be in effect when construction work started.

The new bid was lowered, he said, when it appeared that prevailing wages would not reach the estimated peaks.

Consolidated already has completed 89 of the big ships of similar design under a previous contract for construction of 176 ships in all. Completion and assembly of the remaining ships of that group and preparations for the work on the new contract will entail tapering off of present 3000 workers to about 2000 in eight months ountil materials are ready for the new construction job, Fleet said.

He announced that award of the contract, however, meant a guarantee of sufficient work to keep the aircraft plant operating through 1938.

Orders for materials are to be placed immediately, he said. The new planes will differ only slightly from the PBY ships previously turned out.

NAVY EXPANDS AIR FORCE WITH NEW SQUADRON

Pearl Harbor Bombers Get Commission As VP-18

Quietly expanding its powerful long-range air force of patrol bomber units, the Navy Department revealed today in a dispatch to 11th Naval District headquarters here that its 18th airboat squadron had been commissioned this week at Pearl Harbor, Hawaii.

More Being Built

Designated as VP-18, the squadron will be equipped with six P2Y3-type planes, predecessors to the twin-motored PBY airboats, of which 176 are under construction at San Diego's Consolidated Aircraft Corp.

The planes will be transferred to the new unit from Pearl Harbor squadrons now using the newest sky cruisers, it was indicated at Aircraft Scouting Force headquarters at North Island.

Sutton Commands

Lieut. Frank Sutton, former executive officer of Hawaii's Patrol Squadron One, is the first commanding officer of VP-18.

Commissioning of the new Pearl Harbor squadron follows soon after placing into active service of three patrol plane units of six planes each at Seattle—Squadrons VP-16, VP-17 and VP-19. Personnel of Squadron VP-17 is in San Diego awaiting delivery of six Consolidated PBY-2 bombers, which will be "ferried" in a mass flight next February to Seattle's Sand Point Naval Air Station.

NORTHROP QUITS AIRCRAFT POSTS; PLANS INDEFINITE

Douglas Accepts Decision With Regret; Doak Will Become General Manager

LOS ANGELES, Jan. 5 (A.P.)—John K. Northrop, vice president of Douglas Aircraft Corp. and general manager of the military plane factory bearing his name, resigned both positions today.

Northrop said his future plans are indefinite beyond a six-week vacation he will take "to get back into shape."

Donald Douglas, president of both corporations, said Northrop's resignations were accepted with "keen regret," and that Northrop was leaving of his own accord.

E. R. Doak, former vice president of the Northrop division of the Douglas Corp., will become general manager of the military plant, which lists a $4,500,000 backlog in orders, mostly for the war department for 250-miles-an-hour attack ships.

Northrop said he had no intention of re-entering the aircraft industry.

ARCHBOLD ON HOP TO COAST

Scientist-Flier Returning Non-Stop From Miami

Richard Archbold, 30-year-old research associate for the American Museum of Natural History, took off from Miami, Fla., at 7:45 a. m. today, Pacific time, for his return trip to San Diego in his huge Consolidated flying boat, according to a United Press report.

Archbold three weeks ago hopped non-stop from San Diego to Miami. His return also will be non-stop.

Upon arrival, the scientist will immediately begin plans for his trans-Pacific hop to Dutch New Guinea, for a scientific expedition. His flight, scheduled for early next year, depends upon official permission from the Dutch government.

ARCHBOLD TAKES OFF ON MISSISSIPPI RIVER

NEW ORLEANS, Dec. 16.—The twin-motored flying boat in which Richard Archbold plans to fly to New Guinea took off from the Mississippi River today on its return to San Diego. Archbold planned to re-fuel at San Antonio, Texas, landing on Lake Medina.

The 104-foot wingspread plane is returning in easy stages from the "shakedown" flight it made two weeks ago to Miami, Fla., in 14 hours. The boat later returned and put down on Lake Pontchartrain to await weather reports from San Antonio.

S. D. Air Armada Wings Way to Panama

SD Union 1/17/37

14 PLANES IN HISTORIC NON-STOP

Naval Dignitaries See Spectacular Take-Off From Bay; 98 Officers and Men Make 3080-Mile Flight.

Picking up speed as their gasoline load was lightened by consumption, the 14 naval patrol planes which left here yesterday morning for Coco Solo, C. Z., were 1912 nautical miles south of San Diego at midnight, according to radio report. Averaging 177 miles an hour in the previous two hours, the planes were flying at 10,000 feet through a clear sky with broken clouds. The planes had been averaging 144 to 152 miles an hour in the early evening. Their position was given as off Solina Cruz, Mex., far beyond the halfway mark, and their probable arrival time at their destination as 9 or 10 this morning.

After a panoramic take-off from San Diego bay, a roaring navy air armada, composed of 14 heavily-loaded Consolidated PBY flying boats, last night was blazing its way toward Coco Solo, Canal Zone, in an epochal 3080-mile flight.

Carrying tremendous loads of fuel, the giant, twin-engined ships, aided by a wind-shift which enabled them to take-off almost due east, gracefully soared out of the water in succession, with the last plane leaving the water at 10:39, 19 minutes after Lt. Comdr. B. E. Grow, squadron commander, made the first take-off. The take-off time established a new record.

Nose Through Fog

Although one of the boats, No. 6 of VP-3 squadron, encountered slight difficulty in lifting clear, many of the boats were able to take off after runs of slightly less than a mile. With a low ceiling of fog hanging over Pt. Loma at the start of the historic flight, Lt. Grow planned to lead his squadron through the fog and fly above it.

In addition to numerous relatives, friends and wives of the crew members, many high-ranking naval dignitaries crowded the sea-wall to witness the start of the flight, the fifth long-distance flight undertaken by navy patrol planes this year. On hand were Vice Adm. Horne, commander of aircraft, battleforce; Capt. Alva D. King, chief of staff to Adm. Ernest V. King, who is commander of aircraft scouting force; Capt. Arthur L. Bristol, naval air station commandant; Maj. R. H. Fleet, president of Consolidated Aircraft Corp., builder of the planes, and numerous others.

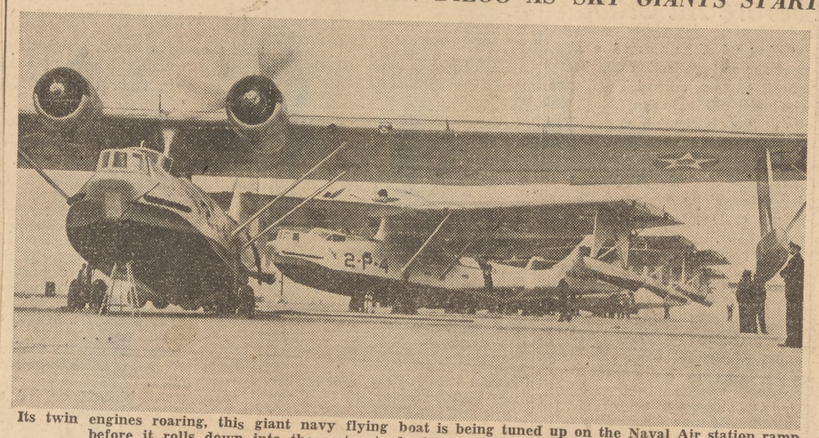
Valued at about $4,000,000, the 14 flying boats are manned by a crew of 25 officers and 73 enlisted men. Lt. A. B. Thompson, third in command of the flight, stated that the planes were carrying the heaviest load possible. In addition to a heavy load of fuel, the planes are equipped with rifles, revolvers and ammunition, a precaution in event any of them are forced to land in the jungles of Central America.

Bad Weather Possible

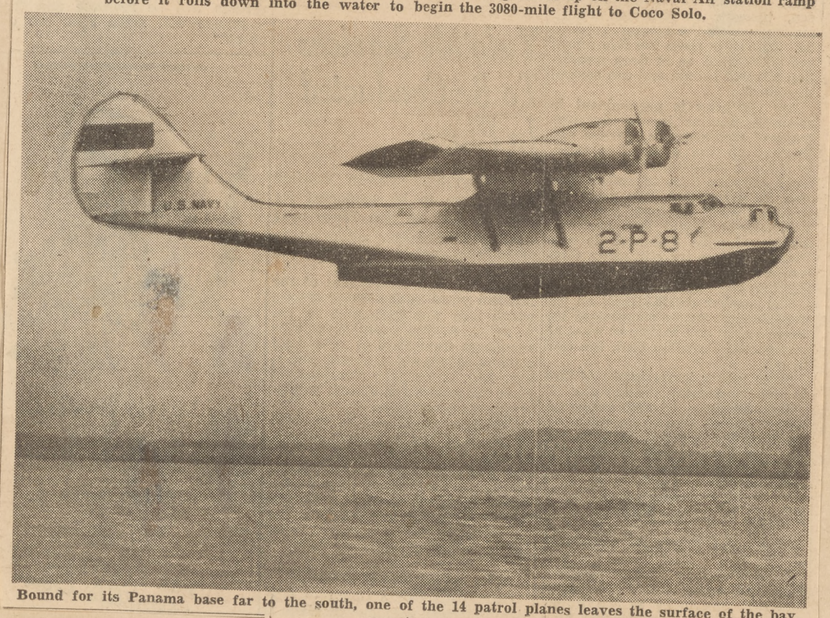
Although there was a possibility the ships would encounter bad weather in the vicinity of the Gulf of Nicoya, early reports from the aircraft tender Langley indicated the unsettled weather was clearing rapidly. In the course of the flight, the giant planes will fly over several foreign countries. The route also will take them over mountains, valleys and seacoasts.

The four other long distance navy flights this year include two 12-plane hops to Hawaii in January, a flight to Coco Solo in June and a 1500-mile flight of 24 planes to Seattle in July. All the flights were completed safely. Thenext long-distance flight is scheduled for March, 1938, when 12 airboats will be "delivered" to patrol and bombing squadrons based at Pearl Harbor, Hawaii.

ENGINES ROAR ADIEU TO SAN DIEGO AS SKY GIANTS START



Its twin engines roaring, this giant navy flying boat is being tuned up on the Naval Air station ramp before it rolls down into the water to begin the 3080-mile flight to Coco Solo.



Bound for its Panama base far to the south, one of the 14 patrol planes leaves the surface of the bay.

FLEET VISIONS ROUND-TRIP AIR LINE TO EUROPE

S. D. Plant Can Build Plane For 24-Hour Run, Says Official

SD Union 1/19/37

"Some day a fleet of American airliners, with a capacity of 100 passengers each, will make round trips to Europe from dawn to dawn."

No visionary is the man who made this prophesy today, but rather a hard-headed, practical-minded ex-Army flier who is engaged in the business of building the nation's largest airboats for the United States Navy, Maj. Reuben H. Fleet, president of San Diego's Consolidated Aircraft Corp.

"Consolidated can build a seaplane capable of carrying 100 persons across the Atlantic in 12 hours," Maj. Fleet said today.

Promotion Urged

"That seems to me the logical answer to the problem of America's merchant marine, which admittedly is not in a healthy condition."

Maj. Fleet reported that his chief engineer, I. M. Laddon, yesterday testified before the House Committee on Maritime Affairs that the United States Government would be wise in promoting the development of trans-oceanic flying boats.

Subsidies in the construction of these ocean-spanning seaplanes, similar to those now given by the Maritime Commission in the building of surface craft, should become an established policy at Washington, Mr. Laddon declared.

On blueprints and sketches at the Consolidated plant today is the result of two years' quiet effort by the concern to develop a commercial seaplane with a range greater than that of any airboat now in actual service.

On Own Initiative

"We have spent more than $150,000 in the engineering plans for this project," Maj. Fleet explained, "all on our own initiative and without any definite promise of business accruing as a result of this experimental work.

"This transatlantic airliner, weighing about 50 tons, would be able to carry 50 passengers 5000 miles without stopping.

"And we can build a plane with twice that passenger capacity, if and when that sort of airboat fits into the transportation policy of this country."

Discourages Shipbuilding

Maj. Fleet pointed out that the government has discouraged the building of luxury liners with the dimensions of the Queen Mary and the Normandie, at costs as high as $100,000,000.

"Here are ships that require more than a week for the round trip across the Atlantic, and they're the fastest afloat," Maj. Fleet said. "For an investment 5 per cent of the cost of the Queen Mary, an airboat capable of hopping to Europe and back in 24 hours can be built.

ARCHBOLD LANDS AT NEW ORLEANS EN ROUTE TO S. D.

SD Union 1/14/37

Richard Archbold, flying explorer for the American Museum of Natural History, flew his airboat Guba from Miami to New Orleans yesterday, the first leg of his return trip to San Diego.

Report of the flight was received here last night by Bennett Boyd, radio experimenter, who has contacted Archbold in his recent cross-country flights.

Archbold told Boyd he expected to take off at 7 this morning for Madina lake, near San Antonio, Tex., where he will spend tonight. Tomorrow morning, Archbold will pilot the big ship, built at Consolidated Aircraft Corp. plant for use in exploring the wilds of New Guinea, from San Antonio here, landing tomorrow afternoon or evening.

Archbold flew from here to Miami non-stop to participate in the All-American air maneuvers, just completed. He is making the return trip in leisurely manner. William Wheatley, chief test pilot, and Frank Learman jr., assistant to the manager at Consolidated, who accompanied Archbold on the eastward flight, arrived back in San Diego by train yesterday.

ARCHBOLD FINISHES 1620-MILE FLIGHT

SD Sun 1/17/37

Completing a non-stop 1620-mile flight from New Orleans in slightly over 10 hours, Richard Archbold, youthful aviator-explorer of the American Museum of Natural History, returned to San Diego at 10:10 a. m. today in his Consolidated-built airboat "Guba."

He made a non-stop cross-country flight from San Diego to Miami, Fla., Dec. 3-4, in approximately 14 hours. On his return trip, he was delayed at New Orleans for several days this week by bad weather.

ARCHBOLD RETURNS FROM DIXIE FLIGHT

Richard Archbold, covering 1620 miles in 10 hours and 10 minutes, arrived here from New Orleans in his new Consolidated Aircraft Corp flying boat, the "Guba," at 10:1(a.m. Archbold, research associat(of the American Museum of Nat ural History, who plans to fly th "Guba" from California to New Guinea soon in the interests of science, reported an uneventful flight, except for fog over Texas, over which the plane flew. He left San Diego early this month, flying nonstop to Miami, Fla., 2300 miles, in 14 hours, 10 minutes.

SD Tribune 1/17/37

Achbold Again Delayed By Inclement Weather

SD Union 1/16/37

Unfavorable weather again held Richard Archbold, flying explorer for the American Museum of Natural History, at New Orleans yesterday. He had planned to take off for Lake Medina, near San Antonio, Tex., on the second leg of his leisurely return flight from Miami to San Diego. He flew nonstop to Miami from here more than a week ago in his giant flying boat, Guba, built by Consolidated Aircraft Corp., in which he expects to fly to New Guiana early next year.

FLYING FORTRESSES PASS MIDWAY MARK IN MASS HOP

LA Times 12/8/37 Illustrated Section / Page 20, Part I

SAN DIEGO, Dec. 8. (U.P.)—Fourteen huge naval patrol bombers were roaring along the western coast of Mexico tonight en route to Coco Solo, Canal Zone, in the most ambitious long distance mass flight in naval history.

Aided by favorable weather, the squadron was picking up speed as it proceeded southward and at 10 p.m. was past the halfway mark in its 2664-mile nonstop hop from the North Island Naval Air Station.

Two hours earlier the planes were 1266 miles south of San Diego, off Manzanillo, Mex., and were streaking along on their route at an average speed of 152 miles an hour.

They flew directly over the Navy tanker Neches, en route here from the Canal Zone.

Lieutenant-Commander Bradford E. Grow was in charge of the squadron, with twenty-five officers and seventy-three enlisted men comprising the personnel.

It took just nineteen minutes from the time the flight leader lifted his plane from the water until the last of the squadron was streaking southward under overcast skies.

The planes are expected to traverse the overseas and jungle distance in twenty-four hours or less, depending on weather conditions.

Each of the planes, with a crew of seven officers and men, carried 1750 gallons of gasoline and weighed 28,000 pounds at the takeoff.

NORTH ISLAND FLIERS PRAISED FOR 22-HOUR HOP TO CANAL

SD Union 12/10/37

North Island naval aviation authorities were unanimous in declaring yesterday that the 22-hour flight of 14 airboats from San Diego to Coco Solo at the eastern entrance of the Panama canal was one of the finest exhibitions of airmanship in the history of flying.

In the annals of aviation it will be recorded as a breakfast-to-breakfast flight from California to the Canal Zone, for the 3080-mile hop along the coastal waters of two oceans and over the jungles and mountains of Nicaragua literally was achieved in that span of time. Many of the officers and men of Patrol Squadron 2 had breakfast soon after 7 a. m. at North Island Wednesday. They landed at Coco Solo yesterday in time for a similar repast.

Because the flight was classified by the bureau of aeronautics as merely a "routine transfer," no attempt was made to record it as a world record flight attempt under the rules of the National Aeronautic association and the Federation Aeronautique Internationale. It did not equal the present world record for distance held by Comdr. Knefler McGinnis in his 3281-mile nonstop flight from Coco Solo to San Francisco Oct. 14-15, 1935, but it exceeded in speed any existing universal record for aircraft of this type.

The flight added another brilliant chapter to the history of North Island airmen, military and naval, and brought added fame to San Diego as a city manufacturing aircraft equalling or exceeding the best produced elsewhere in America or in Europe.

ARCHBOLD DELAYS GUBA HOP TO S. D.

SD Union 12/15/37

Bad weather held Richard Archbold and his flying Guba at New Orleans yesterday, The Associated Press reported.

Archbold, who had planned to leave the Louisiana city for Madina lake, Tex., en route to San Diego, is expected to try the hop today. The flying explorer for the American Museum of Natural History will use the Consolidated Aircraft Corp.-built plane for scanning the wilds of New Guinea. He recently flew from San Diego to Miami non-stop for the All-American air maneuvers.

SD Tribune 12/11/37

Aviation Progress

San Diego made aviation news yesterday with two stories of national importance. One told of the departure of 14 San Diego-built planes for the Canal Zone, while another revealed that Consolidated Aircraft has been awarded a contract to construct 33 new naval patrol planes, at a cost of $4,500,000.

These two events would indicate that San Diego is becoming more and more an important aircraft center, particularly from the standpoint of national defense. Furthermore, it indicates a continuation of a large industrial payroll for this city. Recent completion of a large armored plane for the army by the local plant, also may lead to continued expansion of the industry here.

Ideal flying and working conditions, plus the proved ability to construct superior aircraft, make San Diego's business and industrial future look bright.

ARCHBOLD IN TEXAS, DUE HERE TOMORROW

Tribune 12/14/37

On the second leg of a leisurely return flight from Miami, Fla., to San Diego, Richard Archbold, American Museum of Natural History explorer, took off today from New Orleans for San Antonio, Tex., the United Press reported.

Archbold expects to leave San Antonio in his Consolidated airboat for San Diego tomorrow morning, arriving here early tomorrow afternoon. The plane was flown non-stop from San Diego to Miami in 14 hours Dec. 3.

ARCHBOLD HOPS FOR SAN DIEGO; DUE THIS MORNING

SD Union 12/17/37

Returning to San Diego to make preparations for his flight to New Guinea, Richard Archbold, flying explorer for the American Museum of Natural History, took off from New Orleans at 9 last night.

In radio communications, Archbold reported to Bennett Boyd, local radio experimenter, that he expects to land on San Diego bay between 11 this morning and noon.

Archbold and his crew of four men are flying a huge Consolidated Aircraft plane named Guba, in which he flew non-stop from here to Miami two weeks ago. He flew to New Orleans Monday on the first leg of the return flight and was held there until last night by unfavorable weather conditions.

He plans to take off from here early next year en route to New Guinea. He will prepare for the first leg of the flight, from here to Hawaii, after his arrival today. The big plane will be used in the New Guinea wilds to carry supplies and equipment to the exploration caravan, Archbold said before he left.

Consair Giant, Army To Pay Air Tribute

SD Tribune 12/17/37

Launching of the most powerful Navy airboat in the world, and takeoffs of Army planes from Lindbergh Field at the exact moment Orville Wright soared from Kitty Hawk, N. C., 34 years ago, will constitute San Diego's celebration tomorrow of the anniversary of man's "taking wings."

The giant four-motored patrol bomber recently completed in Consolidated Aircraft Corp.'s experimental shops will be launched from the municipal ramp at the Coast Guard Air Base at 8:30 a. m. William Wheatley, the concern's chief test pilot, will subject the mighty airboat, built for the United States Navy, to its first flight tests over San Diego harbor.

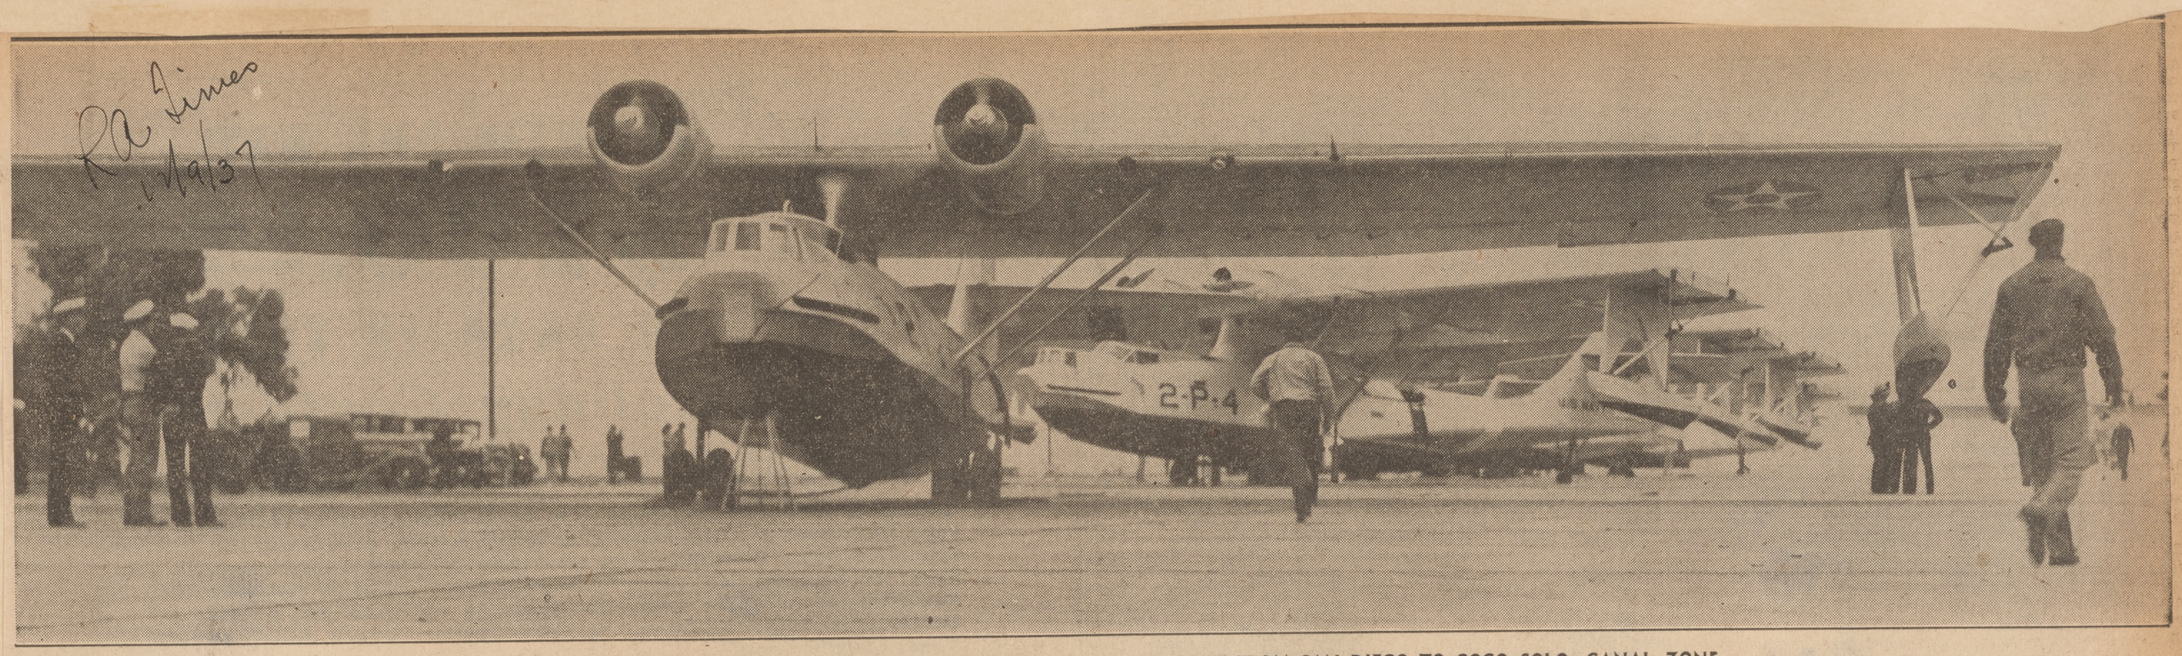
An hour earlier, Capt. Walter W. Gross, unit instructor of the

TWO ON ARCHBOLD HOP RETURN TODAY

SD Sun 12/17/37

Two Consolidated Aircraft Corp. officials were to return to San Diego today from Miami, Fla., where they accompanied Richard Archbold in a non-stop flight of a Consolidated-built airboat Dec. 3.

William Wheatley, chief test pilot, and Frank Learman Jr., assistant to the president, were to arrive by plane from the East today. Meanwhile, Archbold will remain in Florida several more days before flying his airboat back to San Diego to prepare for a trans-Pacific flight to Dutch New Guinea where he will lead an expedition for the American Museum of Natural History early next year.



FOURTEEN NEW NAVY "FLYING FORTRESSES" TAKE OFF FOR MASSED FLIGHT FROM SAN DIEGO TO COCO SOLO, CANAL ZONE

Fourteen of the Navy's newest and largest "flying fortresses" roared off from San Diego Bay yesterday on a 3080-mile flight down the west coast of Mexico and across the jungles of Nicaragua to Coco Solo, Canal Zone. The flight is expected to take twenty-six hours. Each plane carries rifles, revolvers and ammunition against a possible emergency landing in the jungles and mountains of Nicaragua when the seaplanes cut across Central America, but Navy spokesmen are confident flight will be made "without incident." The above picture shows the giant bombers lined up on the ramp ready for single take-offs. The planes massed at rendezvous off coast of California. (AP photo)

It's Mystery Ship Except it Isn't—Consair's New 'Flying Battleship' Ready For Navy's Use

San Diego Club Life 12/5/37

That big new Consolidated Aircraft "flying battleship" is a very, very secret "mystery ship," except the Navy has let loose all the interesting data on her—that is, all except specifications and performance estimates.

The Navy didn't let out, for instance, that she has a powerful high-caliber machine gun turret mounted in the tail section to fire on any enemy ships creeping up on her.

The Navy didn't even let it be known what her wing span is (observers estimate it at about 125 feet), but that she is powered with four motors developing 4,200 hp. seemed fair information for the world to get.

It was all o. k. to tell about the hull fully protected from corrosion, and the fact that she is "impressively armed," and that quarters for the commissioned and enlisted personnel are among the most comfortable of any aircraft in the world.

"Luxury" Ship

The ship's company of the Navy's newest air "battleship" will have not only fine sleeping quarters, wardroom and foc'sle, but also a galley with electric ranges and refrigerators, clothes lockers, thermostatic-controlled heating and cooling systems, sound-proofed compartments and even a well-equipped workshop.

Furthermore, there is complete telephone service, fore and aft, so that the commanding officer on the "bridge" can 'phone his orders below and aft. (There are two main "decks")

All of these things the Navy gladly tells—even with an air of pride. But tell of the power and weight of her bombs? Oh, no! they don't tell that! Nor about the specific armament.

Nor top speed, nor cruising, nor landing speeds—none are disclosed (rumor: top speed is 180 mph., cruising 160 mph.) They don't tell the cruising range, either, although everybody who has followed such aviation developments knows very well it had better be more than 4,000 miles or the Navy wouldn't give 'em the contract. (The grapevine reports its cruising range is that and more—possibly 5,000 miles).

So, San Diego can be very proud of Consolidated's latest contribution to the Navy's air forces.

'FLYING FORTRESS' LAUNCHING TODAY

S D Union 12/9/37

For the fifth time in as many weeks, newsreel cameramen and press photographers arrived here last night from Los Angeles and Hollywood. They will take pictures of the navy's new "flying fortress" at 9 this morning.

The giant 4-motored plane will be launched by Consolidated early this morning and taken on its first test flight.

In accordance with instructions from the navy, the San Diego-California club publicity department yesterday completed arrangements for newsreel pictures. The aerial "shots" will be taken by a newsreel cameraman flying in a plane piloted by Lt. Fred Harper of the Naval Air station. The film then will be sent to the navy department and released to the five major newsreel companies from the bureau of aeronautics.

GIANT AIRBOAT FLIES FRIDAY

S D Tribune 12/10/37

Consair To Launch Craft On Wright Anniversary

Thirty-four years to the day after man's first flight in an airplane, Consolidated Aircraft Corp. at 9 a. m. Friday will launch an airboat described as a veritable flying battleship.

Thirty-four years ago on that same date Orville Wright made the first flight in an airplane when he lifted off the ground in a flimsy "crate" at Kitty Hawk, N. C., and remained in the air at one time for nine seconds.

The plane which will be launched by Consolidated Friday will be the huge, four-motored plane developed for the Navy's air fleet and reported capable of flying more than 5000 miles without refueling.

Air Monopoly Charged By Consair Executive

Loss Of Airboat Business Blamed To Failure Of Competitors To Open Foreign Fields

S D Sun 12/13/37

By HAROLD KEEN

The cry of "monopoly" is being heard in the aviation industry.

It was uttered late last week in hearings before the House Committee on Merchant Marine and Fisheries, and a San Diego aircraft company official made the charge.

I. M. Laddon, chief engineer and vice president of Consolidated Aircraft Corp., testifying on behalf of amendments to the Merchant Marine Act proposed by the U. S. Maritime Commission, told the committee that since 1929, the San Diego concern has been unable to get any significant commercial airboat business, a situation "brought about solely by conditions of monopoly that now exist in transoceanic airline operations."

The reference, of course, was to Pan American Airways' apparent stranglehold on the United States' transoceanic flying business, a position maintained by the gaining of concessions in foreign lands and the establishment of one of the most efficient systems of flight operations in the world.

14 Consair Liners'

Eight years ago, Consolidated built 14 Commodore flying boats used in the first trips from New York to Rio de Janeiro and Buenos Aires. Later they were acquired by Pan-American and are still in use, having compiled a phenomenal record of continual service.

But that ended large-scale production of commercial planes by Consolidated, Mr. Laddon explained to the committee.

"We endeavored to interest an airline in the purchase of a commercial version of the Navy airboat, six of which first made the San Francisco-Hawaii flight in 1934, but we were told the airlines were not interested.

"We now are manufacturing for the United States Navy 176 airboats but for some reason we cannot interest any commercial airline customer in them."

Subsidies Sought

Mr. Laddon's suggested solution was the granting of Federal subsidies for trans-oceanic air lines, similar to the subsidies given American merchant vessels under the 1936 Merchant Marine Act. Such action, he pointed out, would be of tremendous importance to the Pacific Coast and Southern California in particular, since a majority of American aircraft manufacturers are located here.

He said that the United States should have obtained concessions for landing in Bermuda, later making them available to any bidders, instead of requiring that bidders make their own arrangements. At present Pan American is the only company with concessions permitting it to bid.

Gott Testifies

Also testifying before the Committee was Edgar N. Gott, assistant to Maj. Reuben H. Fleet, president of Consolidated. Mr. Gott revealed that the San Diego concern recently has had inquiries about airboats from an American steamship company.

These negotiations are being made secretly, and no details are available, C. A. Van Dusen, another of Maj. Fleet's assistants, said in San Diego today.

Giant Airplanes Seen in Future

Richmond News Leader 12/17/37

Will Dwarf Any Now in Use, Is Claim.

WASHINGTON, Dec. 17.—(AP)—The size of future planes will dwarf any now in the air, aviation officials said today on the thirty-fourth anniversary of the first airplane flight by Orville and Wilbur Wright.

Orville Wright, who piloted the pioneer airplane on its first flight at Kitty Hawk, N. C., in 1903, will be honored tonight in New York at a dinner given by memebrs of the Institute of the Aeronautical Sciences.

He was here yesterday for a meeting of the National Advisory Committee for Aeronautics, an official government research agency which is working on problems of the giant skyliners of the future.

Wright departed from custom in attending the meeting. He has not flown in recent years and has stayed close to home at Dayton, Ohio, because of an old spinal injury.

Nevertheless, other airmen said, he is still one of the best aeronautical engineers in the United States and maintains interest in aeronautical research.

The original Wright plane, now housed in the British Museum, could be accommodated within the tail of one of the giant flying boats to be built next year, such as the fifty-five-ton sky giant planned by Consolidated Aircraft Corporation.

This and other boats planned or being built by the larger manufacturers—Glenn L. Martin, Igor I. Sikorsky, Donald Douglas and the Boeing Aircraft Company—indicate "the shape of planes to come," said Dr. George W. Lewis, research director of the National Advisory Committee.

'FLYING BATTLESHIP' TAKES FIRST FLIGHT

WASH. PC-STAR 12/18/37

$1,000,000 Plane Capable of Carrying Tremendous Load of Bombs Being Tested.

By the Associated Press.

SAN DIEGO, Calif., Dec. 18.—The Navy's new $1,000,000 "flying battleship," declared capable of carrying "a tremendous load of bombs" on long-range flights, took to the air for the first time yesterday.

The big ship soared for an hour over the city without exposing any of its closely-guarded secrets.

Heralded as the first of several projected aerial "superdreadnaughts," the plane is about twice the size of the Navy's big distance patrol planes, which fly nonstop 3,000 miles or more with ease. It is supposed to be capable of carrying 30 to 50 persons and is built so its guns can fight off attacking planes in all directions.

Further tests will be made before the plane is turned over to the Navy.

GUBA READY TO HOP FROM NEW ORLEANS

S D Sun 12/16/37

Richard Archbold, flying explorer for the American Museum of Natural History, was to leave New Orleans at noon today for Lake Medina, about 30 miles from San Antonio, on his return trip to San Diego, Consolidated Aircraft Corp. officials reported. His airboat, the Guba, was held up by bad weather at New Orleans yesterday. His recent trip, a cross-country test, took him to Miami for the All-American air maneuvers and to Havana, Cuba. Archbold will use the Consolidated-built plane on a proposed exploration trip of the wilds of New Guinea.

FLYING FORTRESSES PASS MIDWAY MARK IN MASS HOP

LA Times 12/9/37 Illustrated on Page 20, Part I

SAN DIEGO, Dec. 8. (U.P.)—Fourteen huge naval patrol bombers were roaring along the western coast of Mexico tonight en route to Coco Solo, Canal Zone, in the most ambitious long distance mass flight in naval history.

SD Union 12/17/37

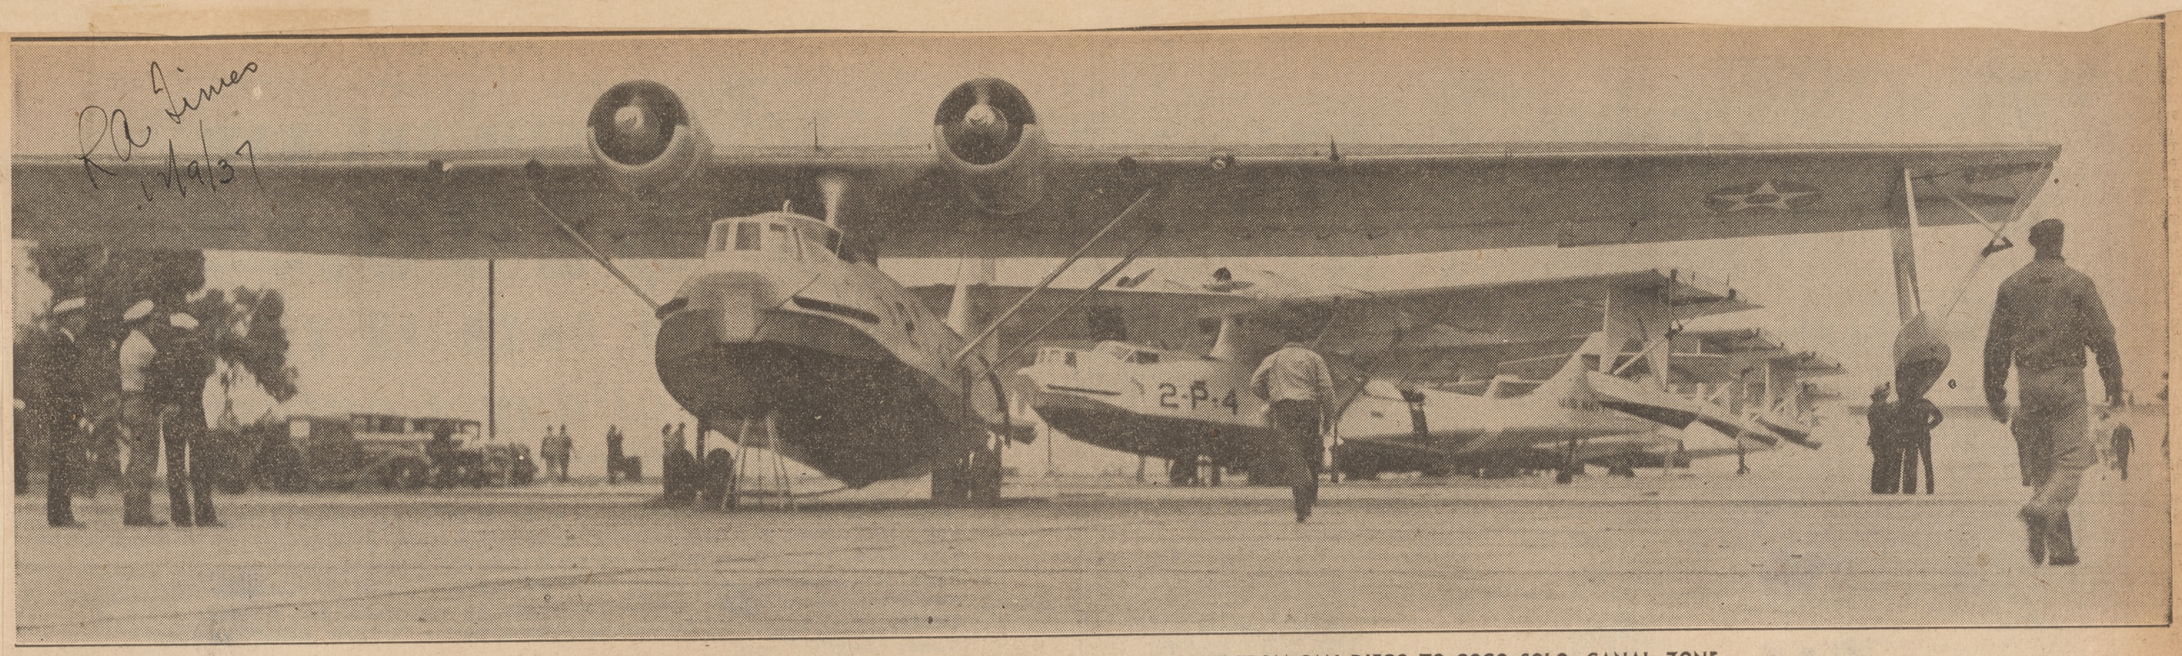
Two Consolidated Aircraft Corp. officials were to return to San Diego today from Miami, Fla., where they accompanied Richard Archbold in a non-stop flight of a Consolidated-built airboat Dec. 3.

William Wheatley, chief test pilot, and Frank Learman Jr., assistant to the president, were to arrive by plane from the East today. Meanwhile, Archbold will remain in Florida several more days before flying his airboat back to San Diego to prepare for a trans-Pacific flight to Dutch New Guinea where he will lead an expedition for the American Museum of Natural History early next year.



FOURTEEN NEW NAVY "FLYING FORTRESSES" TAKE OFF FOR MASSED FLIGHT FROM SAN DIEGO TO COCO SOLO, CANAL ZONE

Fourteen of the Navy's newest and largest "flying fortresses" roared off from San Diego Bay yesterday on a 3080-mile flight down the west coast of Mexico and across the jungles of Nicaragua to Coco Solo, Canal Zone. The flight is expected to take twenty-six hours. Each plane carries rifles, revolvers and ammunition against a possible emergency landing in the jungles and mountains of Nicaragua when the seaplanes cut across Central America, but Navy spokesmen are confident flight will be made "without incident." The above picture shows the giant bombers lined up on the ramp ready for single take-offs. The planes massed at rendezvous off coast of California. (AP photo)

It's Mystery Ship Except it Isn't—Consair's New 'Flying Battleship' Ready For Navy's Use

San Diego Club Life 12/5/37

That big new Consolidated Aircraft "flying battleship" is a very, very secret "mystery ship," except the Navy has let loose all the interesting data on her—that is, all except specifications and performance estimates.

The Navy didn't let out, for instance, that she has a powerful high-caliber machine gun turret mounted in the tail section to fire on any enemy ships creeping up on her.

The Navy didn't even let it be known what her wing span is (observers estimate it at about 125 feet), but that she is powered with four motors developing 4,200 hp. seemed fair information for the world to get.

It was all o. k. to tell about the hull fully protected from corrosion, and the fact that she is "impressively armed," and that quarters for the commissioned and enlisted personnel are among the most comfortable of any aircraft in the world.

"Luxury" Ship

The ship's company of the Navy's newest air "battleship" will have not only fine sleeping quarters, wardroom and foc'sle, but also a galley with electric ranges and refrigerators, clothes lockers, thermostatic-controlled heating and cooling systems, sound-proofed compartments and even a well-equipped workshop.

Furthermore, there is complete telephone service, fore and aft, so that the commanding officer on the "bridge" can 'phone his orders below and aft. (There are two main "decks")

All of these things the Navy gladly tells—even with an air of pride. But tell of the power and weight of her bombs? Oh, no! they don't tell that! Nor about the specific armament.

Nor top speed, nor cruising, nor landing speeds—none are disclosed (rumor: top speed is 180 mph., cruising 160 mph.) They don't tell the cruising range, either, although everybody who has followed such aviation developments knows very well it had better be more than 4,000 miles or the Navy wouldn't give 'em the contract. (The grapevine reports its cruising range is that and more—possibly 5,000 miles).

So, San Diego can be very proud of Consolidated's latest contribution to the Navy's air forces.

'FLYING FORTRESS' LAUNCHING TODAY

S D Union 12/9/37

For the fifth time in as many weeks, newsreel cameramen and press photographers arrived here last night from Los Angeles and Hollywood. They will take pictures of the navy's new "flying fortress" at 9 this morning.

The giant 4-motored plane will be launched by Consolidated early this morning and taken on its first test flight.

In accordance with instructions from the navy, the San Diego-California club publicity department yesterday completed arrangements for newsreel pictures. The aerial "shots" will be taken by a newsreel cameraman flying in a plane piloted by Lt. Fred Harper of the Naval Air station. The film then will be sent to the navy department and released to the five major newsreel companies from the bureau of aeronautics.

GIANT AIRBOAT FLIES FRIDAY

S D Tribune 12/10/37

Consair To Launch Craft On Wright Anniversary

Thirty-four years to the day after man's first flight in an airplane, Consolidated Aircraft Corp. at 9 a. m. Friday will launch an airboat described as a veritable flying battleship.

Thirty-four years ago on that same date Orville Wright made the first flight in an airplane when he lifted off the ground in a flimsy "crate" at Kitty Hawk, N. C., and remained in the air at one time for nine seconds.

The plane which will be launched by Consolidated Friday will be the huge, four-motored plane developed for the Navy's air fleet and reported capable of flying more than 5000 miles without refueling.

Air Monopoly Charged By Consair Executive

Loss Of Airboat Business Blamed To Failure Of Competitors To Open Foreign Fields

S D Sun 12/13/37

By HAROLD KEEN

The cry of "monopoly" is being heard in the aviation industry.

It was uttered late last week in hearings before the House Committee on Merchant Marine and Fisheries, and a San Diego aircraft company official made the charge.

I. M. Laddon, chief engineer and vice president of Consolidated Aircraft Corp., testifying on behalf of amendments to the Merchant Marine Act proposed by the U. S. Maritime Commission, told the committee that since 1929, the San Diego concern has been unable to get any significant commercial airboat business, a situation "brought about solely by conditions of monopoly that now exist in transoceanic airline operations."

The reference, of course, was to Pan American Airways' apparent stranglehold on the United States' transoceanic flying business, a position maintained by the gaining of concessions in foreign lands and the establishment of one of the most efficient systems of flight operations in the world.

14 Consair Liners'

Eight years ago, Consolidated built 14 Commodore flying boats used in the first trips from New York to Rio de Janeiro and Buenos Aires. Later they were acquired by Pan-American and are still in use, having compiled a phenomenal record of continual service.

But that ended large-scale production of commercial planes by Consolidated, Mr. Laddon explained to the committee.

"We endeavored to interest an airline in the purchase of a commercial version of the Navy airboat, six of which first made the San Francisco-Hawaii flight in 1934, but we were told the airlines were not interested.

"We now are manufacturing for the United States Navy 176 airboats but for some reason we cannot interest any commercial airline customer in them."

Subsidies Sought

Mr. Laddon's suggested solution was the granting of Federal subsidies for trans-oceanic air lines, similar to the subsidies given American merchant vessels under the 1936 Merchant Marine Act. Such action, he pointed out, would be of tremendous importance to the Pacific Coast and Southern California in particular, since a majority of American aircraft manufacturers are located here.

He said that the United States should have obtained concessions for landing in Bermuda, later making them available to any bidders, instead of requiring that bidders make their own arrangements. At present Pan American is the only company with concessions permitting it to bid.

Gott Testifies

Also testifying before the Committee was Edgar N. Gott, assistant to Maj. Reuben H. Fleet, president of Consolidated. Mr. Gott revealed that the San Diego concern recently has had inquiries about airboats from an American steamship company.

These negotiations are being made secretly, and no details are available, C. A. Van Dusen, another of Maj. Fleet's assistants, said in San Diego today.

Giant Airplanes Seen in Future

Richmond News Leader 12/17/37

Will Dwarf Any Now in Use, Is Claim.

WASHINGTON, Dec. 17.—(AP)—The size of future planes will dwarf any now in the air, aviation officials said today on the thirty-fourth anniversary of the first airplane flight by Orville and Wilbur Wright.

Orville Wright, who piloted the pioneer airplane on its first flight at Kitty Hawk, N. C., in 1903, will be honored tonight in New York at a dinner given by memebrs of the Institute of the Aeronautical Sciences.

He was here yesterday for a meeting of the National Advisory Committee for Aeronautics, an official government research agency which is working on problems of the giant skyliners of the future.

Wright departed from custom in attending the meeting. He has not flown in recent years and has stayed close to home at Dayton, Ohio, because of an old spinal injury.

Nevertheless, other airmen said, he is still one of the best aeronautical engineers in the United States and maintains interest in aeronautical research.

The original Wright plane, now housed in the British Museum, could be accommodated within the tail of one of the giant flying boats to be built next year, such as the fifty-five-ton sky giant planned by Consolidated Aircraft Corporation.

This and other boats planned or being built by the larger manufacturers—Glenn L. Martin, Igor I. Sikorsky, Donald Douglas and the Boeing Aircraft Company—indicate "the shape of planes to come," said Dr. George W. Lewis, research director of the National Advisory Committee.

'FLYING BATTLESHIP' TAKES FIRST FLIGHT

WASH. PC-STAR 12/18/37

$1,000,000 Plane Capable of Carrying Tremendous Load of Bombs Being Tested.

By the Associated Press.

SAN DIEGO, Calif., Dec. 18.—The Navy's new $1,000,000 "flying battleship," declared capable of carrying "a tremendous load of bombs" on long-range flights, took to the air for the first time yesterday.

The big ship soared for an hour over the city without exposing any of its closely-guarded secrets.

Heralded as the first of several projected aerial "superdreadnaughts," the plane is about twice the size of the Navy's big distance patrol planes, which fly nonstop 3,000 miles or more with ease. It is supposed to be capable of carrying 30 to 50 persons and is built so its guns can fight off attacking planes in all directions.

Further tests will be made before the plane is turned over to the Navy.

GUBA READY TO HOP FROM NEW ORLEANS

S D Sun 12/16/37

Richard Archbold, flying explorer for the American Museum of Natural History, was to leave New Orleans at noon today for Lake Medina, about 30 miles from San Antonio, on his return trip to San Diego, Consolidated Aircraft Corp. officials reported. His airboat, the Guba, was held up by bad weather at New Orleans yesterday. His recent trip, a cross-country test, took him to Miami for the All-American air maneuvers and to Havana, Cuba. Archbold will use the Consolidated-built plane on a proposed exploration trip of the wilds of New Guinea.

FLYING FORTRESSES PASS MIDWAY MARK IN MASS HOP

LA Times 12/9/37 Illustrated Section Page 20, Part I

SAN DIEGO, Dec. 8. (U.P.)—Fourteen huge naval patrol bombers were roaring along the western coast of Mexico tonight en route to Coco Solo, Canal Zone, in the most ambitious long distance mass flight in naval history.

Aided by favorable weather, the squadron was picking up speed as it proceeded southward and at 10 p.m. was past the halfway mark in its 2664-mile nonstop hop from the North Island Naval Air Station.

Two hours earlier the planes were 1266 miles south of San Diego, off Manzanillo, Mex., and were streaking along on their route at an average speed of 152 miles an hour.

They flew directly over the Navy tanker Neches, en route here from the Canal Zone.

Lieutenant-Commander Bradford E. Grow was in charge of the squadron, with twenty-five officers and seventy-three enlisted men comprising the personnel.

It took just nineteen minutes from the time the flight leader lifted his plane from the water until the last of the squadron was streaking southward under overcast skies.

The planes are expected to traverse the overseas and jungle distance in twenty-four hours or less, depending on weather conditions.

Each of the planes, with a crew of seven officers and men, carried 1750 gallons of gasoline and weighed 28,000 pounds at the takeoff.

NORTH ISLAND FLIERS PRAISED FOR 22-HOUR HOP TO CANAL

SD Union 12/10/37

North Island naval aviation authorities were unanimous in declaring yesterday that the 22-hour flight of 14 airboats from San Diego to Coco Solo at the eastern entrance of the Panama canal was one of the finest exhibitions of airmanship in the history of flying.

In the annals of aviation it will be recorded as a breakfast-to-breakfast flight from California to the Canal Zone, for the 3080-mile hop along the coastal waters of two oceans and over the jungles and mountains of Nicaragua literally was achieved in that span of time. Many of the officers and men of Patrol Squadron 2 had breakfast soon after 7 a. m. at North Island Wednesday. They landed at Coco Solo yesterday in time for a similar repast.

Because the flight was classified by the bureau of aeronautics as merely a "routine transfer," no attempt was made to record it as a world record flight attempt under the rules of the National Aeronautic association and the Federation Aeronautique Internationale. It did not equal the present world record for distance held by Comdr. Knefler McGinnis in his 3281-mile nonstop flight from Coco Solo to San Francisco Oct. 14-15, 1935, but it exceeded in speed any existing universal record for aircraft of this type.

The flight added another brilliant chapter to the history of North Island airmen, military and naval, and brought added fame to San Diego as a city manufacturing aircraft equalling or exceeding the best produced elsewhere in America or in Europe.

ARCHBOLD DELAYS GUBA HOP TO S. D.

SD Union 12/15/37

Bad weather held Richard Archbold and his flying Guba at New Orleans yesterday, The Associated Press reported.

Archbold, who had planned to leave the Louisiana city for Madina lake, Tex., en route to San Diego, is expected to try the hop today. The flying explorer for the American Museum of Natural History will use the Consolidated Aircraft Corp.-built plane for scanning the wilds of New Guinea. He recently flew from San Diego to Miami non-stop for the All-American air maneuvers.

Aviation Progress

SD Tribune 12/11/37

San Diego made aviation news yesterday with two stories of national importance. One told of the departure of 14 San Diego-built planes for the Canal Zone, while another revealed that Consolidated Aircraft has been awarded a contract to construct 33 new naval patrol planes, at a cost of $4,500,000.

These two events would indicate that San Diego is becoming more and more an important aircraft center, particularly from the standpoint of national defense. Furthermore, it indicates a continuation of a large industrial payroll for this city. Recent completion of a large armored plane for the army by the local plant, also may lead to continued expansion of the industry here.

Ideal flying and working conditions, plus the proved ability to construct superior aircraft, make San Diego's business and industrial future look bright.

ARCHBOLD IN TEXAS, DUE HERE TOMORROW

Tribune 12/14/37

On the second leg of a leisurely return flight from Miami, Fla., to San Diego, Richard Archbold, American Museum of Natural History explorer, took off today from New Orleans for San Antonio, Tex., the United Press reported.

Archbold expects to leave San Antonio in his Consolidated airboat for San Diego tomorrow morning, arriving here early tomorrow afternoon. The plane was flown non-stop from San Diego to Miami in 14 hours Dec. 3.

ARCHBOLD HOPS FOR SAN DIEGO; DUE THIS MORNING

SD Union 12/17/37

Returning to San Diego to make preparations for his flight to New Guinea, Richard Archbold, flying explorer for the American Museum of Natural History, took off from New Orleans at 9 last night.

In radio communications, Archbold reported to Bennett Boyd, local radio experimenter, that he expects to land on San Diego bay between 11 this morning and noon.

Archbold and his crew of four men are flying a huge Consolidated Aircraft plane named Guba, in which he flew non-stop from here to Miami two weeks ago. He flew to New Orleans Monday on the first leg of the return flight and was held there until last night by unfavorable weather conditions.

He plans to take off from here early next year en route to New Guinea. He will prepare for the first leg of the flight, from here to Hawaii, after his arrival today. The big plane will be used in the New Guinea wilds to carry supplies and equipment to the exploration caravan, Archbold said before he left.

Consair Giant, Army To Pay Air Tribute

SD Tribune 12/17/37

Launching of the most powerful Navy airboat in the world, and takeoffs of Army planes from Lindbergh Field at the exact moment Orville Wright soared from Kitty Hawk, N. C., 34 years ago, will constitute San Diego's celebration tomorrow of the anniversary of man's "taking wings."

The giant four-motored patrol bomber recently completed in Consolidated Aircraft Corp.'s experimental shops will be launched from the municipal ramp at the Coast Guard Air Base at 8:30 a. m. William Wheatley, the concern's chief test pilot, will subject the mighty airboat, built for the United States Navy, to its first flight tests over San Diego harbor.

An hour earlier, Capt. Walter W. Gross, unit instructor of the

TWO ON ARCHBOLD HOP RETURN TODAY

SD Sun 12/17/37

Two Consolidated Aircraft Corp. officials were to return to San Diego today from Miami, Fla., where they accompanied Richard Archbold in a non-stop flight of a Consolidated-built airboat Dec. 3.

William Wheatley, chief test pilot, and Frank Learman Jr., assistant to the president, were to arrive by plane from the East today. Meanwhile, Archbold will remain in Florida several more days before flying his airboat back to San Diego to prepare for a trans-Pacific flight to Dutch New Guinea where he will lead an expedition for the American Museum of Natural History early next year.

O. K. FIRST HOP OF 'FLYING BATTLESHIP'

SD Tribune 12/11/37

For a while this morning San Diego's sky lanes were filled with Consolidated Aircraft Corp.-built planes. While the "flying battleship" was warming up on the bay several navy patrol planes from North Island, which have been operating this week in California coast maneuvers, returned and landed. At 10:10 a.m., only 10 minutes after the new plane was in the air, Richard Archbold, air explorer, landed after a flight from New Orleans. A navy plane carrying newsreel men wove around the YPB2Y-1 during the time it was aloft.

In general appearance about twice the size of the PBY-type patrol planes which the aircraft firm has made here for the navy, the "flying battleship" carries every facility for extended flight and comfort of personnel. These nclude commodious sleeping quarters, living quarters, a galley complete with range and refrigerator, clothes lockers, toilet and washing facilities, heating and ventins good system, soundproofing and well-equipped workshop. ith & I is strictly a "San Diego product having been designed and built since Consolidated moved its plant here from Buffalo in 1935. Plans for the craft were prepared two years ago, actual construction work beginning a year ago.

Five in Firts Hop

Consilidated Aircraft Corp. officials, looking to the development of larger, more powerful planes for transoceanic commercial use, were on hand in a unit for this morning's launching and flight. Also "on the line," immediately behind the new craft, was navy patrol plane 10-P-11, the 100th patrol plane turned out by the plant for the navy, Consolidated having manufactured 1500 tons of navy patrol planes during the last year, each weighing 15 tons. An output of about 150 is expected during the coming year.

Capable of carrying from 30 to 50 persons, the new plane had five in it during today's flight. They are W. B. Wheatley, test pilot for Consolidated; George J. Newman, assistant test pilot; Henry Mandolf, project engineer; Jack Kline, flight engineer, and R. R. Keith, assistant flight engineer.

While official figures of the craft's size and performance ability were withheld, one official stating "we're giving no information on feet, inches, pounds or ounces," it was reported that there were approximately 600,000 rivets in the plane.

"We know," said an official. "We actually counted 500,000."

The designation XPB2Y-1 "breaks down" into the following meaning: "Experimental patrol bomber, second type, built by Consolidated, and the first craft of its type."

NAVY READY TO TAKE OVER NEW PLANES

Seattle Officers Arrive To Await Delivery Of Bombers

SD Sun 12/16/37

To take delivery on six new Consolidated PBY-type patrol bombers, Lt.-Comdr. John Perry and approximately 30 officers and men of Seattle's Patrol Squadron 17 arrived in San Diego harbor from the northwest yesterday afternoon.

The flight personnel "ferried" five PM-type seaplanes from the Sand Point Naval Air Station, stopping at Santa Cruz Monday night en route south. They took off from Santa Cruz early yesterday and landed here at 2:43 p. m.

New Units Commissioned

Squadron VP-17 is one of three newly commissioned seaplane units based at Seattle, and recently completed six weeks' maneuvers under difficult flight conditions at Sitka, Alaska, the Navy's northernmost air base where all-year operations were started last summer.

The six Consolidated long-range patrol bombers will be the first of this type of airboat to be delivered to the Seattle base, North Island officials reported. The squadron will receive them by February, it was indicated and will make a non-stop flight to Seattle at that time.

Maneuvers On Today

Meanwhile, three San Diego patrol squadrons, consisting of 30 patrol bombers, today are concentrated off the central California coast, at San Luis Obispo, Monterey and San Francisco, participating in open-sea maneuvers with the aircraft tenders Wright, Sandpiper and Lapwing. They are expected to return here Saturday.

CONSAIR DECLARES $287,200 DIVIDEND

SD Union 12/11/37

Common stockholders of Consolidated Aircraft Corp. will split a $287,200 Christmas dividend, the initial payment on common stock, it was announced yesterday in San Francisco.

The special dividend will amount to 50 cents a share for 1800 holders of 574,400 shares, The Associated Press reported. The payment will be made Dec. 27 of record Dec. 20.

Regular quarterly dividend of 75 cents a share will be paid Dec. 24, of record Dec. 14, to 450 preferred stock owners.

PLANE COMPANY EXPANDS PLANT

With current backlog of unfilled orders standing at $6,125,000, the highest figure in the company's history, officials of the Lockheed Aircraft Corporation yesterday announced plans for immediate construction of additional plant units designed to increase the present factory floor space by 25,000 square feet. Upon completion of these improvements, total floor space of the factory will be 240,000 square feet. Cost of buildings and improvements will be in the neighborhood of $41,500.

Largest of the new units will be a finished parts stockroom adjoining the main assembly hangar. Finished parts for the three types of Lockheed transports will be stored here within easy access of the major assembly lines. Other improvements include a stockroom for upholstery materials and an addition to the hydro-press building in the sheet metal department.

Lockheed officials announced that since receiving confirmation of a large number of orders last month, the employment figure has jumped to 1844. At the present time the factory is adding men daily and this will continue until an additional 500 men have been added.

CONSAIR TO BID ON SUPER-LINERS FOR SKY FLEET

SD Union 12/11/37

Flying boats to span the Atlantic in 15 hours?

That was the opinion hazarded yesterday when Consolidated Aircraft Corp. and seven other American Aircraft manufacturers were asked to submit bids on construction of giant 100-passenger, high-speed planes for Pan American Airways. The bid call was reported by The Associated Press in a dispatch from Washington, D. C.

Officials of the company, which this week was awarded a $4,500,000 order for navy patrol planes, said no official word of the Pan American Airways request had been received yet, but that the matter "likely is in the mail."

Cruising speed asked would place London within 14 or 15 hours of New York City. The desired craft would fly at a speed of 274 miles an hour at an altitude of 20,000 feet. The company called for bids in groups of three, six and 12, indicating it desired a sizeable fleet.

Largest Operator

Pan American, largest operator of transoceanic air lines in the world, with routes already extending to China and South America, invited the bids from eight domestic manufacturers. It was considered likely the planes would be used for both Atlantic and Pacific routes.

The planes probably would be twice the tonnage of the fleet of flying boats being fabricated by the Boeing Aircraft Co., Seattle, for P.A.A. The Boeings will weigh 85,000 pounds fully loaded and will have a wing span of 152 feet. Bids are to be delivered to Col. Charles A. Lindbergh, chairman of Pan American's technical committee, by March 15, 1938.

The first of the proposed giant craft probably would not be put into operation before late 1940 or early 1941. Each plane would carry a crew of 16. All details as to wing span, size of fuselage and type of power were left to the manufacturers. Manufacturers were asked to describe both single and double staterooms which could be built into the plane.

Eight Firms Listed

The eight companies asked to submit bids are: Boeing Aircraft Co., Seattle; Consolidated Aircraft Corp., San Diego; Curtiss-Wright Corp., Buffalo, N. Y.; Douglas Aircraft Co., Santa Monica; Lockheed Aircraft Corp., Burbank; Glenn L. Martin Co., Baltimore; North American Aviation, Inc., Englewood, and Sikorsky Aircraft, division of United Aircraft Corp., Bridgeport, Conn.

This week's new navy order for $4,500,000 worth of planes and parts from Consolidated raises the firm's total backlog of unfilled orders to about $15,000,000, The Associated Press reports in a dispatch from San Francisco. Company officials state that at the rate of deliveries during the last nine months the backlog is sufficient to maintain operations for 14 or 15 months.

CRAFT USED FOR OCEAN CROSSING

SD Tribune 12/11/37

Consolidated Aircraft Corp. of San Diego is one of eight airplane firms in the United States asked by Pan American Airways to submit bids on construction of giant 100-passenger, high speed planes for possible Atlantic or Pacific service, The Associated Press reports in a dispatch from Washington, D. C. The request from Pan American Airways came within 48 hours after Consolidated was awarded a $4,500,000 order for navy patrol planes.

Cruising speed asked would place London within 14 or 15 hours of New York City. The desired craft would fly at a speed of 274 miles an hour at an altitude of 20,000 feet. The company called for bids in groups of three, six and 12, indicating it desired a sizeable fleet.

Largest Operator

Pan American, largest operator of transoceanic air lines in the world, with routes already extending to China and South America, invited the bids from eight domestic manufacturers. It was considered likely the planes would be used for both Atlantic and Pacific routes.

The planes probably would be twice the tonnage of the fleet of flying boats being fabricated by the Boeing Aircraft Co., Seattle, for P.A.A. The Boeings will weigh 85,000 pounds fully loaded and will have a wing span of 152 feet. Bids are to be delivered to Col. Charles A. Lindbergh, chairman of Pan American's technical committee, by March 15, 1938.

The first of the proposed giant craft probably would not be put into operation before late 1940 or early 1941. Each plane would carry a crew of 16. All details as to wing span, size of fuselage and type of power were left to the manufacturers. Manufacturers were asked to describe both single and double staterooms which could be built into the plane.

Eight Firms Listed

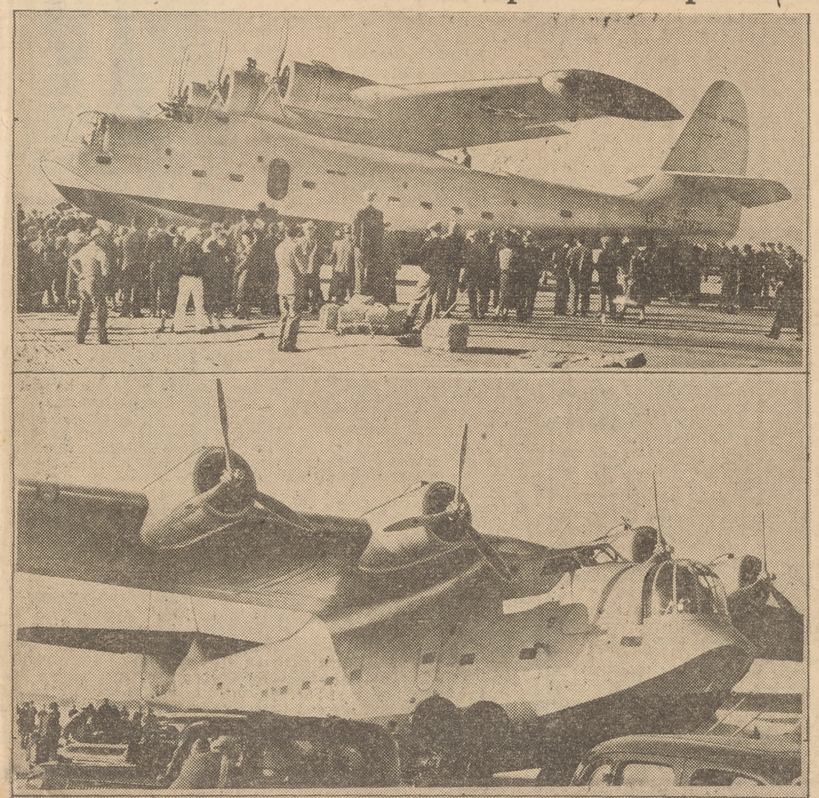
The eight companies asked to submit bids are: Boeing Aircraft Co., Seattle; Consolidated Aircraft Corp., San Diego; Curtiss-Wright Corp., Buffalo, N. Y.; Douglas Aircraft Co., Santa Monica; Lockheed Aircraft Corp., Burbank; Glenn L. Martin Co., Baltimore; North American Aviation, Inc., Englewood, and Sikorsky Aircraft, division of United Aircraft Corp., Bridgeport, Conn.

This week's new navy order for $4,500,000 worth of planes and parts from Consolidated raises the firm's total backlog of unfilled orders to about $15,000,000, The Associated Press reports in a dispatch from San Francisco.

Another Associated Press dispatch from San Francisco states that common stockholders of Consolidated will split a $287,200 Christmas dividend, the initial payment on common stock, the special dividend amounting to 50 cents a share for 1800 holders of 574,400 shares. The payment will be made Dec. 27, of record Dec. 20. Regular quarterly dividend of 75 cents a share will be paid Dec. 24, of record Dec. 14, to 450 preferred stock owners.

WORLD'S LARGEST BOMBER LAUNCHED BY NAVY IN S. D.

Newest 'Air Battleship' Goes Up



The deadliest air weapon of any navy in the world, launched in San Diego harbor today, is shown above, in two views. Built secretly by Consolidated Aircraft Corp. for the U. S. Navy, the mighty "air battleship" took to the air exactly 34 years after Orville Wright made man's first airplane flight.

PLANE COSTING MILLION FLIES ABOVE CITY

Consair Product Climaxes 34 Years' Progress In Aviation

Exactly 34 years after Orville Wright soared uncertainly for a few seconds above Kitty Hawk, N. C., the mightiest military plane in the world was launched in San Diego harbor today.

Built in Secret

Climaxing more than three decades of aviation progress, the four-motored, million-dollar "air battleship" of Consolidated Aircraft Corp., built under conditions of strictest secrecy, took to the air for the first time at 10 a. m. today, on the 34th anniversary of man's "taking wings."

While hundreds crowded the shore near the municipal ramp at the Coast Guard Air Base, the giant airboat—twice the size of the Navy's largest bombers now in active service—touched water at 9:22 a. m., moved away from the ramp at 9:40 a. m., and actually took off at 10 a. m.

20-Minute Tune-up

For 20 minutes the flight crew, consisting of W. B. Wheatley, chief test pilot; George Newman, assistant test pilot; Jack Kline, assistant foreman of final assembly; Henry Mandolph, project engineer, and R. R. Keith, assistant flight engineer, accustomed themselves to the controls and other equipment before lifting the 25-ton airboat from the water.

At the moment the plane left the water, a whistle sounded in the Consolidated plant, and 3000 workmen poured out of the buildings to watch the airboat in flight.

At 11:15 a. m., after circling low over the city and harbor for one hour and 15 minutes, the plane landed at almost the same spot opposite North Island it had taken off while heading toward Point Loma.

Dimensions Revealed

Dimensions of the bomber, a Navy secret throughout its period of construction, were unofficially revealed today. Despite the fact the bomber is approximately twice as heavy as its predecessor, the PBY-type now being delivered to Navy patrol squadrons, the wingspread is only 11 feet longer—forming a span of 115 feet.

The four 1050-horsepower engines are mounted in the wing, which is full cantilever type, without external supports. Cruising speed will be well over 150 miles per hour, at which rate the PBY planes can operate at 57 per cent horsepower. Top speed is expected to be more than 200 miles per hour.

Can Carry 50

Consolidated officials said that this newest air weapon of the United States Navy can be easily converted into a transatlantic passenger plane, carrying 30 passengers and six crew members. On shorter flights, the graceful hull would have a 50-passenger capacity, according to Maj. Reuben

Turn to Page 2, Col. 3.

-OVER-

New Aircraft Would Dwarf China Clipper

If the latest designs of American aircraft engineers are any indication, the modern "clipper" planes will be mere dwarfs in the near future.

This was indicated when Glenn L. Martin recently announced plans for a new air monster, which will weigh 58 tons, more than twice that of the China Clipper-type flying boat now in service on Pan-American transpacific lines.

The projected new plane, dimensions of which were revealed by Martin on the recent launching of the Soviet Clipper, probably would be put in transatlantic passenger and freight service—possibly on a non-stop schedule between the United States and a Mediterranean port yet to be designated.

Consolidated Aircraft Corp. of San Diego recently announced it also had plans for a super-airboat, of the type the U. S. Maritime Commission has recommended large-scale development to supplement the Merchant Marine.

The Soviet Clipper, with a gross weight of 63,000 pounds and a wingspread of 157 feet, was the largest airplane ever built in this country. Powered by four 1000-horsepower motors inserted in the leading edges of its wings, it has a flying range of between 3500 and 4000 miles—more than 1000 greater than the longest over-ocean route now in existence.

With tanks carrying their maximum of 4260 gallons of gasoline, the Soviet Clipper could, cruising at 10,000 feet with three motors in service, carry a 10-man crew, 46 passengers and a pay-load of freight non-stop from New York to London and 1000 miles beyond.

S. D. Held Certain To Play Important Rol In Production of Ocean-Flying Boats

Craft Designed At Consolidated Plant Here

By NEWELL JONES

American shipping soon may dominate the seas again—but along the skyways instead of the ship lanes.

And San Diego may play an important part in this regaining of United States merchant marine supremacy.

That's the real story behind the news these past few days of new and bigger schemes for transatlantic airways. Large-scale transoceanic flying has attainead reality so quickly—even the Pacific clippers scarcely prepared the imagination for the magnitude of aviators' transatlantic visions—that the broad significance of latest plans is not yet fully apparent, even to some aviation authorities. Some of the experts—San Diego's own Maj. Reuben H. Fleet, head of Consolidated Aircraft Corps., for instance—have seen and indicated this significance, though. And, in Fleet's fords, "it's enormous."

Briefly, in the terms of no less an authority than the United States martime commission, "transoceanic aviation looms an an important competitor of express-passenger vessels of the superliner type." There's every indication that the word "competitor" within a few years may be supplanted by "successor." And because the United States is the recognized leader of the world in construction and operation of commercial aircraft, it can, if it safeguards that leadership, become dominant in this all-important phase of ocean shipping. And because it is a headquarters for manufacture of long-range transoceanic flying boats, San Diego may take an important part in the development.

End of Long Decline

Arrival of the new era would mark the end in a long decline of the American merchant marine.

Away back in colonial days, sharp-witted Yankee traders and shipbuilders, playing their part in the building of a new nation, wisely reasoned that speed was the important factor in ocean travel. Faster and faster ships began coming out of American yards. Slowly and then quicker and more quickly, American ships drew passengers and cargo away from mighty Britain's East India Co., then dominant on the seas.

Then, in 1832 at Baltimore, a trim new ship, slid down the ways. There never had been a merchant sailing vessel quite like it before. It was full rigged, with a tall tapering sail plan, instead of the customary square canvas. It had yacht-like lines, a low freeboard and raking masts and stem and stern posts. It was the Ann McKim, 493-ton ship built for Isaac McKim. It was the first American "clipper ship."

The American clippers, fleetest merchantmen afloat, definitely brought the nation dominance on the trade and passenger lanes.

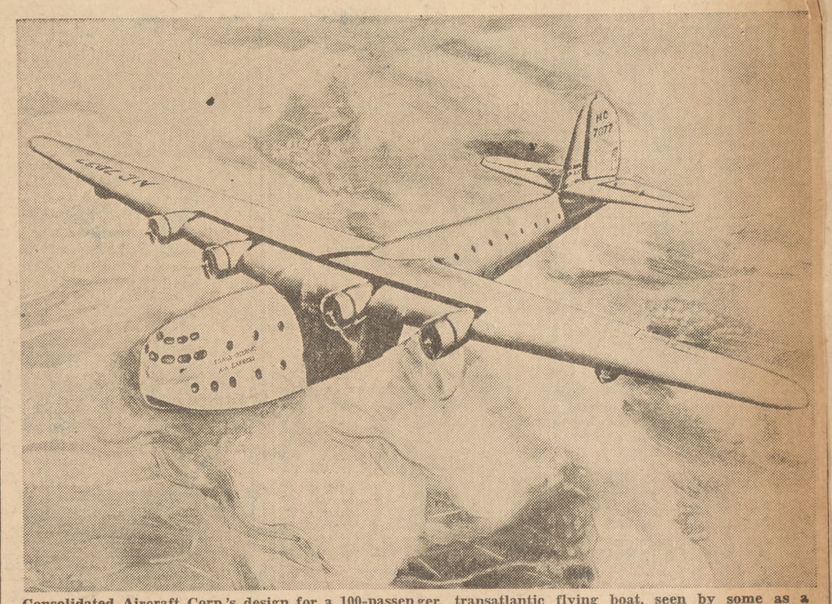
But in the same country, before the clippers scarcely had reached their peak in development, something else happened. Steam came to ships of the sea. And somehow, despite the lead given to them by Robert Fulton, Ame... ...ippers and shipbuilders allowe... ...ope to forge ahead in development of the steamer.

The American merchant marine slumped into a stagnation from which it never recovered.

Change Promised

But today, on the drawing boards and in the files of Consolidated, Boeing, Curtiss-Wright, Douglas, Glenn Martin, North American, and Sikorsky are plans and dreams of fliers and aeronautical engineers which promise to change all that—and soon. These and the airways developments of the past few days—a bid call by Pan-American Airways for 100-passenger transatlantic airliners, and proposals in congress for ocean airline subsidies like those granted to the steamers—promise not only a new era in ocean travel, but in American shipping and trade.

"The possibilities are enormous,"



Consolidated Aircraft Corp.'s design for a 100-passenger, transatlantic flying boat, seen by some as a forerunner of the return of American merchant marine supremacy.

Fleet commented the other day. "If the government spent $50,000,000 in subsidies at the start, I'm sure the sum would be repaid within a few years in taxes upon new business alone."

Development of transatlantic airlines on a large scale, the San Diego aviation head explained, not only would provide a faster and more comfortable means of Atlantic travel. It would bring American business millions of dollars in new trade.

Firmer, friendlier relations between American and European businessmen would be establish... through their relatively greater proximity and consequently more frequent personal contacts. And, able to cross between New York and London or Paris in a day or a night, business executives could develop vast new foreign trade which they simply haven't the time to develop under present conditions. At the same time, the American airliners which brought this about would be re-establishing America's shipping supremacy.

Nor is it all any idle dream. It's in the making now. Pan-American's clipper service across the Pacific has shown the way. In mail receipts alone, it already has repaid all but 10 percent of the government's subsidy investment in it.

And, staggering as it may be to the imagination, the clippers are almost as sparrows to eagles in comparison to the ships which the experts promise soon will be crossing the Atlantic.

No Idle Dream

The Atlantic will be regularly spanned in 12 hours, planes carrying 100 passengers in utmost comfort and safety. And that, the experts assure, is no idle dream of the distant future, either. Aeronautical engineers know that such super flying boats can be built now. All that ...s needed is assurance of a return on the costs. And the aviation interests are sure that passengers and mail soon will bring that, if the government can only supply the primer, in the form of subsidies.

Pan-American's bid-call specifications ask for a flying boat capable of carrying 100 passengers between America and Europe on a regular schedule of 15 hours or less.

The builders are ready to meet those specifications. In fact, only a few days ago Consolidated announced it had designed such a craft.

A pioneer in ...ocean flying boat construction, a ... of air-boats for the com... and the navy for the past 10 years, Consolidated designed a liner to carry 100 passengers and a ton of mail across the Atlantic in 18 hours. Its design calls for three decks within its great hull, sleeping compartments, dining room, rest rooms and cocktail lounge. Four engines of 6000 horsepower would drive it at more than 190 miles per hour.

That's double the payload possible in present transoceanic planes, and a greater flying radius, too.

And just how suddenly this new horizon in aviation has dawned and how its full significance has escaped wide attention so far, is revealed in the maritime commission's own recent expressions on the subject. The expressions were voiced only a brief time ago, but the actualities already have outstripped their prediction. The commission saw only "flying boats carrying 40 or 50 passengers, capable of crossing the Atlantic on a non-stop flight in 20 hours, and with transportation costs under those of super-liners of today."

And just how the airliner will replace the surface ship as a passenger and mail carrier is shown by the maritime body's estimate that 18 transatlantic flying boats could be manufactured at almost one-third the $50,000,000 cost of a new super-steamer.

AIRCRAFT MAGNATE S. D. VISITOR

Friendly, courteous John D. Hertz (left), founder of the Yellow Cab Co., stockholder and a director of San Diego's Consolidated Aircraft Corp., chats with Maj. Reuben Fleet, Consolidated head, on a visit here.

S D Union 1/5/38

Hertz Finds Consair Plant Among Most Modern in U. S.

Founder of Yellow Cab Co. Visits Fleet; Has Praise For Climate, Young Men Working at S. D. Factory.

"You can get anything in this world you want—if you strive for it."

Proof of his statement can be seen in the success of John D. Hertz, stockholder and a director in the Consolidated Aircraft Corp., who came here yesterday to visit San Diego as the guest of Maj. Reuben Fleet, Consair president.

Not eager to be "quoted for publication," Hertz spent nearly an hour chatting pleasantly and courteously about his trip, his impressions of San Diego and, only when urged, about his business affairs and successes.

"I came here to visit Maj. Fleet and to see the Consolidated plant," he explained.

Plant, Personnel Praised

"You have one of the country's most modern plants," he said as he warmed to the subject. "I have never seen better appearing personnel. You have such fine-appearing, young men."

As to San Diego's climate—

"You have it.

"I came here from Chicago, where everything was covered with ice. First it rained, then it sleeted, then it froze. In San Diego I found men working out-of-doors in their shirt sleeves."

Stock in San Diego's aircraft company is not the only interest Hertz has in aviation. He is the largest stockholder in the TWA. The Hertz family bought its first plane in 1928. The family has been flying ever since. His office is in New York city, his home is Cary, Ill., and he owns an estate in Florida. Travel between always is by air.

A reporter on the Chicago Record for nearly 15 years, Hertz made his first venture into the transportation field in 1915 when he founded the Yellow Cab Co. in Chicago with a dozen used cars. In one winter the cars paid for themselves.

Then he branched out into the bus business, first in Chicago and then in New York. Now he is chairman of the board of Omnibus Corp. of America, a director in numerous bus companies, a partner in Lehman Brothers, New York city banking house; a director in Hileah park, Miami; in Paramount Pictures, Inc., and in the Studebaker Corp.

Visits Santa Anita Track

With his wife, owner of Reigh Count, noted race horse, and of a breeding farm north of Chicago, Hertz had to visit the Santa Anita race track.

"One of the finest tracks in the country and extremely well-managed," was his reaction to California's biggest racing plant.

Hertz expects to spend the rest of week on the coast and then fly east. He was honored at an informal luncheon yesterday in the Cuyamaca club.

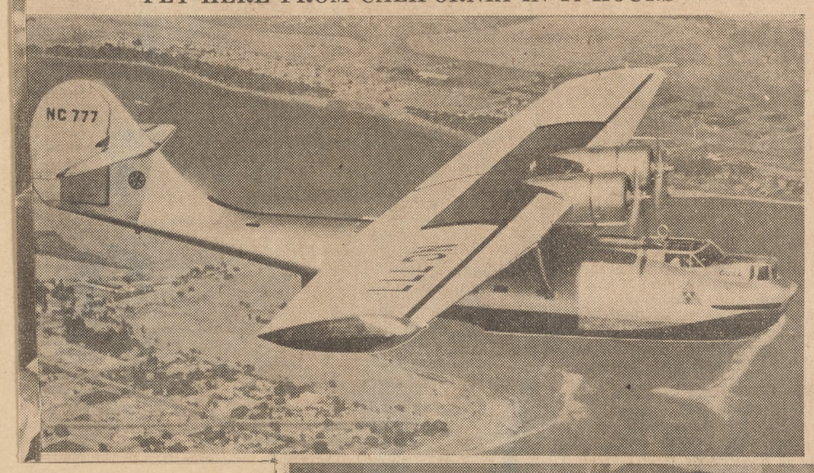
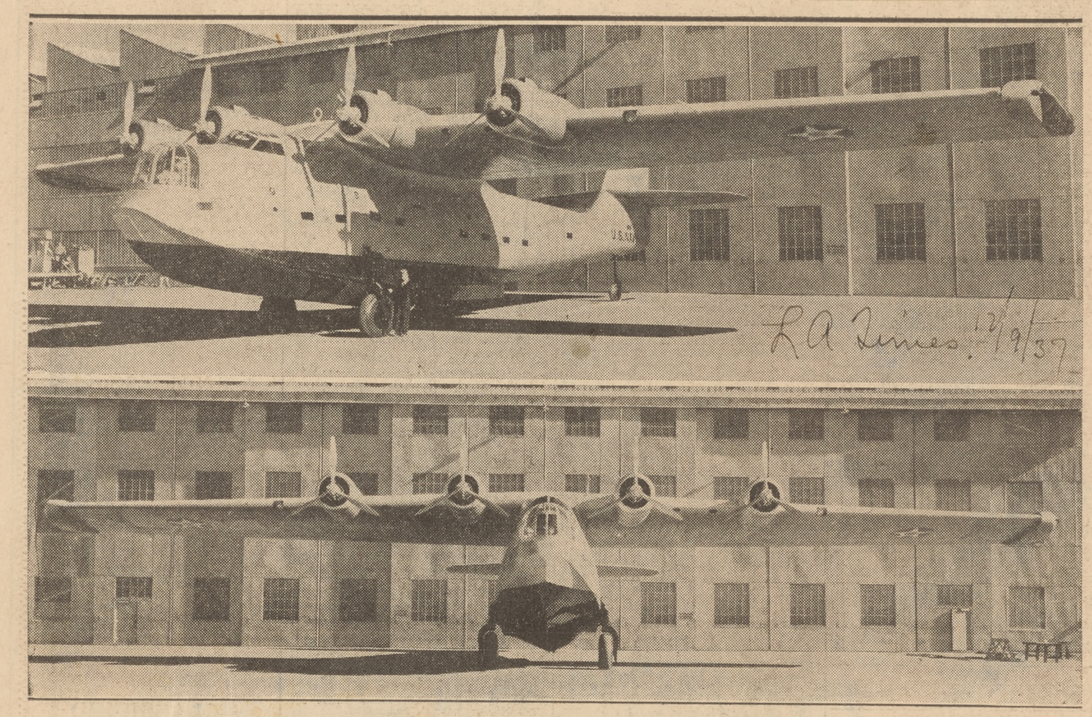
VOL. XLII. NO. 358. MIAMI, FLA., SATUR AY, DECEMBER 4, 1937 FIVE CENTS

FLY HERE FROM CALIFORNIA IN 14 HOURS





TWO VIEWS OF NEW AIR BATTLESHIP BUILT FOR UNITED STATES NAVY

A giant four-motored "air battleship," built for the Navy at San Diego, is shown here in two of its first official photos. The flying boat is an all-metal monoplane with a full cantilever type wing mounting four engines of 1050 horsepower each. It is called practically invulnerable. Details on armament and capacity are secrets.

(AP) photo

Top picture shows the plane in which Richard Archbold and Russell Rogers, co-pilot, right and left below, flew to Miami from San Diego in 14 hours and 10 minutes. They landed at Pan American base early today after the flight, first non-stop ever performed from the Pacific coast to Miami.

HOP TO MIAMI FROM PACIFIC MAKES RECORD

Cochran Smashes Time In Four-Hour Flight From New York

TO VISIT AIR RACES

San Diego Trip Establishes First Mark For Cross Country

The second non-stop distance flight to Miami in successive days ended here at 7:40 a. m. today when Richard Archbold, wealthy scientist and aviator, completed a 2,300-mile transcontinental hop from San Diego, Cal.

Jacqueline Cochran, 26-year-old New York woman flier, set a speed record of four hours and 12 minutes in a flight from New York city which ended at 3:21 p. m. yesterday at municipal airport. Averaging 278.13 miles an hour on her trip south, Miss Cochran beat the fastest time ever recorded either way between the two cities by eight minutes. That mark was set northbound by Howard Hughes.

The bushy-haired Archbold set his huge flying boat, similar to the U. S. navy bombers which have flown between California and Hawaii, down at International airport, Dinner key. The Pan American base had been in touch with the craft, which used the base's radio direction finder.

Exact flying time from San Diego to Miami was 14 hours and 10 minutes. The mark is an original record, since the two cities have never previously been linked in a non-stop flight.

Accompanying Archbold here were Russell Rogers, co-pilot; Gerald Brown, flight engineer; Raymond Booth, radio operator; William Sanderson, mechanic; Irwin K. McWilliams, engineer inspector of U. S. department of air commerce; William Wheatley, chief test pilot of Consolidated Aircraft Corp., San Diego; and Frank A. Learman, assistant manager of Consolidated.

Archbold, research associate of American Museum of Natural History, New York, bought the plane last spring for a flight from California to New Guinea, off Australia. The flight here was a "shake-down" cruise. Archbold and his party will return to San Diego next week, after seeing the All-American air maneuvers and "enjoying the Florida sunshine."

A New York-Havana non-stop flight record also was set yesterday when Maj. Alexander de Seversky flew the 1,350 miles in five hours and two minutes—two hours and one minute faster than Lieut. Commander Frank Hawks' record 1931. The new record-holder is expected to fly to Miami today.

WEATHER.

NAVY BOMBER, 7 ABOARD, LOST 24 HOURS

San Diego Business - January 1938

Factories The aircraft industry, which is the most important manufacturing industry in San Diego, is of value to the city in many ways. The three aircraft factories, namely, Consolidated Aircraft Corporation, Ryan Aeronautical Corporation and Solar Aircraft Co., employ 3395 men, which means that these plants are supporting approximately 10,000 residents.

In addition, each of these three companies carries on a continuous program of full-page advertising in the various aviation magazines, publicizing the importance of San Diego as an aviation center. This advertising gives San Diego international publicity, and results in attracting a good many new residents to this community.

The flights made by San Diego-built airplanes and flying boats have likewise attracted world-wide attention to this city. The squadron flights of Consolidated flying boats made by the Navy from San Diego to Honolulu and from San Diego to Panama have been front-page news everywhere; the flight of Richard Archbold in his Consolidated boat the "Guba" from San Diego to New York and later from San Diego to Miami and return; the flight of the "Guba" to the North Pole under command of Sir Hubert Wilkins; the aerobatic flights by Tex Rankin in his Ryan plane; these and numerous other famous flights have been of major benefit in attracting the attention of the world to San Diego as the "Air Capital of the West."

The recent successful test flight of the 30-ton Consolidated 4-engine flying boat was witnessed by hundreds of San Diegans, and will be viewed by millions who see the news reels. Recently Consolidated has been invited to bid on the construction of a one hundred passenger trans-oceanic flying boat for Pan American Airways. On December 8 the Navy Department announced award of a new contract to Consolidated for 33 PBY-4 patrol bombers and spare parts, amounting to $4,500,000. This will make a total of 209 of these twin-engined flying boats built by Consolidated since its establishment at Lindbergh Field in 1935.

Ryan Aeronautical Corporation has recently been awarded a contract by the Mexican government for $50,000 worth of its ST type all-metal planes. These will be used for military and patrol duty by the Mexican army. Ryan is doing considerable export business on his open cockpit plane and also the new cabin plane recently perfected.

Solar Aircraft Company, specializing in the manufacture of exhaust manifolds, is supplying these parts for most of the large aircraft manufacturers throughout the country, and is also supplying air lines and the services with its products.

San Diego is justly proud of its aviation industry, and is fully aware of the benefits of this industry to the community.

N. Y. BANKER ARRIVES FOR CONSAIR VISIT

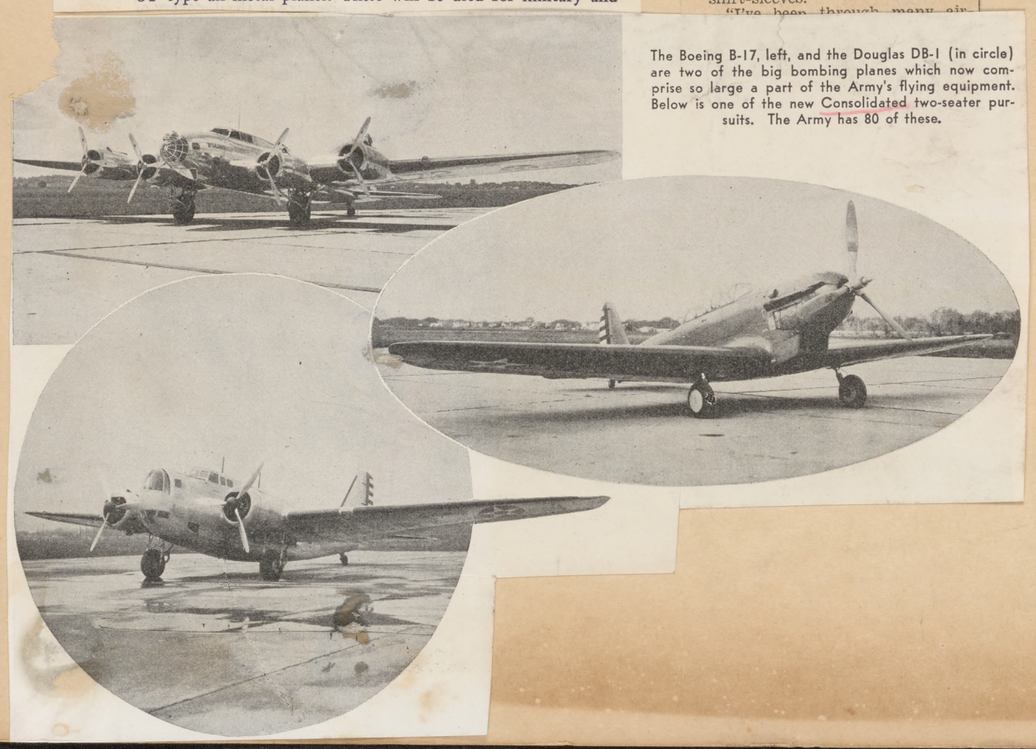
Director Of Plane Factory Commends Personnel, Mild Weather

SD Sun 1/5/38

John D. Hertz, New York financier who built the nation's largest taxicab business from shoestring beginnings 28 years ago, paid San Diego a visit today to inspect the Consolidated Aircraft Corp. plant for the first time since he became a director of the concern last March.

"Chicago was coated with ice when I left it for the west coast," he commented today, "and here I marvel at the sight of men working in the factory yards in their shirt-sleeves.

"I've been through many air-



The Boeing B-17, left, and the Douglas DB-1 (in circle) are two of the big bombing planes which now comprise so large a part of the Army's flying equipment. Below is one of the new Consolidated two-seater pursuits. The Army has 80 of these.

MELBOURNE "HERALD", 18/12/37.

U.S. AIR LINER COMING

Will Fly Tasman

One of America's most modern types of big flying-boats, which is to visit Melbourne within the next few months, will also make a return Tasman flight, according to private advice received here today.

Its wealthy young American owner would probably have already arrived here had not one of the Soviet flights across the Arctic ended in disaster.

Shortly after the plans of the owner, Mr Richard Archbold, to fly the boat from California to New Guinea on an exploring and research expedition for the American Museum of Natural History had been announced in The Herald, Levanevsky, the famous Soviet pilot, disappeared in the Arctic.

The 12-ton boat that had just been delivered to Mr Archbold by the Consolidated Aircraft Company, had been flown non-stop from California to New York to have elaborate radio equipment installed.

There an agent of the Soviet Government bought it, and with the Australian explorer, Sir Hubert Wilkins, in command, the boat left to join the search for Levanevsky in the Arctic.

SISTER SHIP

Promptly Mr Archbold ordered a sister-ship for delivery in November. It is this ship, probably named Guba, as was the first one, that will fly to Australia and New Zealand by way of Honolulu, Midway and Wake Islands, Guam and New Guinea.

Whether the Australian visit will be before or after the main work of the expedition in New Guinea is not yet known.

Except for its accommodation, the Guba is a sister-ship of 176 flying-boats used by the United States Navy in fleet patrol work, replacing destroyers. Similar boats have made formation flights between California and Hawaii and California and the Canal Zone, and until recently they held the world's long-distance seaplane record.

With full naval load the range of the boat is more than 4000 miles, so that, if Mr Archbold wished, it could easily make a double Tasman flight without alighting. The proposed flight will have no commercial or international significance, and no difficulty in getting permits is expected.

SEARCH IS PUSHED NEAR SAN DIEGO FOR MISSING SHIP

Scouting Force Chief of Staff Believes Craft Will Be Found.

REFUSES TO GIVE OUT NAMES OF PERSONNEL

Flying Boat Could Land in Any Kind of Sea—Had Twin Motors.

By the Associated Press.

SAN DIEGO, Calif., Jan. 6—Capt. Alva D. Bernhard, chief of staff of the Navy Aircraft Scouting Force, announced today a Navy bombing plane with seven men aboard has been missing since yesterday.

Capt. Bernhard revealed that the big patrol bomber had been missing since 5 p.m. yesterday, "when we lost radio contact with it."

"The plane was on a routine flight," he added. "I am not at liberty to say where it was bound or where it was believed to be when we lost contact.

Can Land in Any Sea.

"We believe the plane will be found. It is one of the flying boats capable of landing in any kind of a sea.

Capt. Berhnhard did not immediately release the names of those aboard, "as they are from different parts of the United States and it would cause needless worry."

Planes and surface vessels of the fleet searched all night for the missing plane, it was learned. The search was being pressed with vigor today.

Thought 200 Miles Away.

The plane was believed to have disappeared at sea about 200 miles northwest of here. Search was concentrated in that area.

The bomber was one of the new twin-motored patrol planes built for the Navy by Consolidated Aircraft Corp. here. These planes made five long massed flights from here last year, two to Honolulu, two to Coco Solo, C. Z., and one to Seattle.

One of the patrol planes crashed in San Diego Bay with a loss of six lives last August 23.

What Wonders Lie Ahead!

A Few of the Marvels that Have Appeared During the Last 25 Years

As Seen by COL. EDGAR S. GORRELL

COL. EDGAR S. GORRELL, president of the Air Transport Association of America, presented a stunning array of facts in a recent address delivered at the 8th Annual Mountain State Forest Festival, Elkins, W. Va. Colonel Gorrell is qualified to compare, based upon his personal experience, the aeronautical scene some thirty years ago and today. He knows about airplanes in war and peace, under Republican and Democratic administrations. Space will not permit publication of his address in full, but it is a pleasure and duty to give our readers the following excerpts:

I can remember, some twenty-five years ago, that airplanes were so slow that no one thought of wearing goggles in flying. Then one day, one of our associates got a bug in his eye while piloting his plane. Thus, goggles were originally adopted to avoid the hazard to the pilot of getting a bug in his eye. It was not until later that the speed of aircraft became sufficient to require the use of goggles. Well do I remember the day, in 1916, when the first aircraft, with windshields installed thereon, were provided to us. We took the windshields off the airplanes because we then felt that, unless we could feel the blast of air in our faces, it was impossible to fly with safety.

TWENTY-FIVE YEARS AGO, if we intended to fly, we sat upon the airplane in our usual civilian clothing, minus goggles, and, more often than not often for effect alone, reversed the position of the cap we were wearing. We sat on a seat with our feet dangling over into space, with an engine directly behind our heads and tail services attached to the wings by bamboo-appearing struts.

Today an air traveler enters the airplane with no need to reverse his cap and in his ordinary civilian clothing, for commercial aircraft is equipped with a fuselage to house the passengers and crew, to protect them from all the elements, and to provide for the utmost in their comfort. Today's competition between air lines is a competition in service wherein one tries to outdo the other, not only in the quantity of the service but also in the quality thereof. Luxury, even beyond that granted by the various modes of surface travel, exists for the air traveler.

WITHIN THE LAST TWENTY-FOUR HOURS America's scheduled air lines have carried 10% more passengers than they transported in the entire year 1926. Within the last twenty-four hours America's scheduled air lines have carried 300% more pounds of express than they did in the entire year of 1926. During each second of the day and night, more than 1,069 passengers and more than 14 tons of mail are being flown through the air on America's scheduled air lines. Every day more than 10 tons of express and 23 tons of mail are transported by air. Daily, America's scheduled air lines fly a distance equivalent to 7½ times around the world at the Equator, equivalent to three-quarters of the distance from the earth to the moon.

SHOULD THE PRESENT CONGRESS at its next session have the foresight to modernize the legislation governing our industry, it is our intention to order aircraft for transoceanic use that will weigh from 70 to 75 tons and will carry easily 125 to 150 passengers with the utmost of speed and luxury. *Should the Congress fail to modernize the antiquated legislation now governing our industry, such far-sighted business planning will not be justified.*

AVIATION IS NO LONGER A ROMANTIC LUXURY. It has become a business—one that requires so much money that only the hard-headed investing public can be expected to finance it. Our Congress must realize that the romance of losing money in the heavens is finished, that only by modernizing the legislation pertaining to this industry, granting it legislative rights such as have been granted to the railroads and the motor carriers, can the finances required for our future requirements be provided.

AT THE BEGINNING OF THE YEAR in which the World War started, the United States ranked fourteenth among the nations of the world in the amount contributed to the development of aviation. The rating was as follows:

Germany	$28,000,000	Japan	$1,500,000
France	22,000,000	China	700,000
Russia	12,000,000	Bulgaria	600,000
Italy	8,000,000	Spain	550,000
Austria	5,000,000	Brazil	500,000
Great Britain	3,000,000	United States	430,000
Belgium	2,000,000		

In the interim from 1908 to 1914, although America had failed to comprehend the meaning of the Wrights' successful flight at Fort Myer, other nations had comprehended the significance and had become responsible for such development as occurred in aircraft during the subsequent nine years.

Today, America leads the world in quality of aircraft and in quality and extent of its development in scheduled air line activities. Our Navy has the greatest naval air force of any nation in the world. By 1940, our Army should have been equipped with its full contemplated complement of modern combat aircraft.

The progress which aviation has made in the last twenty-five years has been so remarkable that it is difficult to define, said Colonel Gorrell, adding: "What progress it will make in the next twenty-five years, or even in the next decade, is beyond the ability of a prophet without honor to predict."

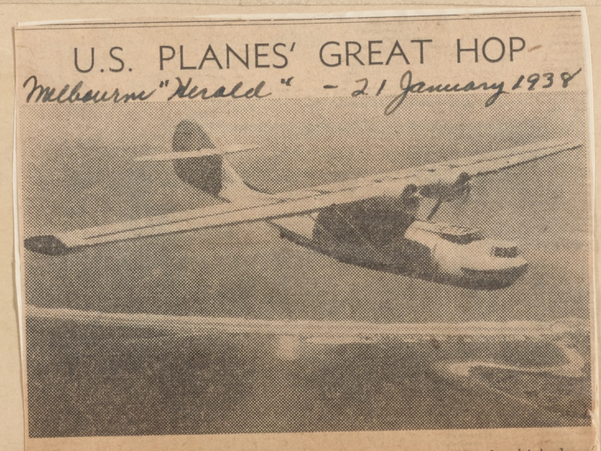
Y'S "PETS" JUST BEFORE BIG FLIGHT.—Two of the 18 new Navy patrol bomb- ictured at San Diego just before they set out for Honolulu, which they reached in and 30 minutes. No record was sought on the mass flight, but conditions of mass d performance of the bombers was studied.

commercial boat, the first plane being sold to Russia for the Arctic search. The explorer flew his plane across the continent to Miami non-stop for the All-American Air Maneuvers and returned to the West Coast the middle of December.

U.S. PLANES' GREAT HOP

Melbourne "Herald" - 21 January 1938



A UNITED STATES NAVY consolidated flying-boat, 18 of which have just flown from San Diego (California) across the Pacific Ocean to Honolulu without a single mishap. The U.S. navy uses nearly 200 of these planes which do much of the scouting work formerly carried out by destroyers.

Miami Daily News 12/4/37

NON-STOP HOP IS MADE HERE BY ARCHBOLD

Cochran Smashes New York Record At 278 Miles An Hour

TO VISIT AIR RACES

San Diego Trip Establishes First Mark For Cross Country

The second non-stop distance flight to Miami in successive days ended here at 7:40 a. m. today when Richard Archbold, wealthy scientist and aviator, completed a 2,300-mile transcontinental hop from San Diego, Cal.

Jacqueline Cochran, 26-year-old New York woman flier, set a speed record of four hours and 12 minutes in a flight from New York city which ended at 3:21 p. m. yesterday at municipal airport. Averaging 278.13 miles an hour on her trip south, Miss Cochran beat the fastest time ever recorded either way between the two cities by eight minutes. That mark was set northbound by Howard Hughes.

The bushy-haired Archbold set his huge flying boat, similar to the U. S. navy bombers which have flown between California and Hawaii, down at International airport, Dinner key. The Pan American base had been in touch with the craft, which used the base's radio direction finder.

Exact flying time from San Diego to Miami was 14 hours and 10 minutes. The mark is an original record, since the two cities have never previously been linked in a non-stop flight.

Accompanying Archbold here were Russell Rogers, co-pilot; Gerald Brown, flight engineer; Raymond Booth, radio operator; William Sanderson, mechanic; Irwin K. McWilliams, engineer inspector of U. S. department of air commerce; William Wheatley, chief test pilot of Consolidated Aircraft Corp., San Diego; and Frank A. Learman, assistant manager of Consolidated.

Archbold, research associate of American Museum of Natural History, New York, bought the plane last spring for a flight from California to New Guinea, off Australia. The flight here was a "shake-down" cruise. Archbold and his party will return to San Diego next week, after seeing the All-American air maneuvers and "enjoying the Florida sunshine."

A New York-Havana non-stop flight record also was set yesterday when Maj. Alexander de Seversky flew the 1,350 miles in five hours and two minutes—two hours and one minute faster than Lieut. Commander Frank Hawks' record of 1931. The new record-holder is expected to fly to Miami today.

NAVY BOMBER, 7 ABOARD, LOST 24 HOURS

San Diego Business - January 1938

Factories The aircraft industry, which is the most important manufacturing industry in San Diego, is of value to the city in many ways. The three aircraft factories, namely, Consolidated Aircraft Corporation, Ryan Aeronautical Corporation and Solar Aircraft Co., employ 3395 men, which means that these plants are supporting approximately 10,000 residents.

In addition, each of these three companies carries on a continuous program of full-page advertising in the various aviation magazines, publicizing the importance of San Diego as an aviation center. This advertising gives San Diego international publicity, and results in attracting a good many new residents to this community.

The flights made by San Diego-built airplanes and flying boats have likewise attracted world-wide attention to this city. The squadron flights of Consolidated flying boats made by the Navy from San Diego to Honolulu and from San Diego to Panama have been front-page news everywhere; the flight of Richard Archbold in his Consolidated boat the "Guba" from San Diego to New York and later from San Diego to Miami and return; the flight of the "Guba" to the North Pole under command of Sir Hubert Wilkins; the aerobatic flights by Tex Rankin in his Ryan plane; these and numerous other famous flights have been of major benefit in attracting the attention of the world to San Diego as the "Air Capital of the West."

The recent successful test flight of the 30-ton Consolidated 4-engine flying boat was witnessed by hundreds of San Diegans, and will be viewed by millions who see the news reels. Recently Consolidated has been invited to bid on the construction of a one hundred passenger trans-oceanic flying boat for Pan American Airways. On December 8 the Navy Department announced award of a new contract to Consolidated for 33 PBY-4 patrol bombers and spare parts, amounting to $4,500,000. This will make a total of 209 of these twin-engined flying boats built by Consolidated since its establishment at Lindbergh Field in 1935.

Ryan Aeronautical Corporation has recently been awarded a contract by the Mexican government for $50,000 worth of its ST type all-metal planes. These will be used for military and patrol duty by the Mexican army. Ryan is doing considerable export business on his open cockpit plane and also the new cabin plane recently perfected.

Solar Aircraft Company, specializing in the manufacture of exhaust manifolds, is supplying these parts for most of the large aircraft manufacturers throughout the country, and is also supplying air lines and the services with its products.

San Diego is justly proud of its aviation industry, and is fully aware of the benefits of this industry to the community.

N. Y. BANKER ARRIVES FOR CONSAIR VISIT

Director Of Plane Factory Commends Personnel, Mild Weather

SD Sun 1/5/38

John D. Hertz, New York financier who built the nation's largest taxicab business from shoestring beginnings 28 years ago, paid San Diego a visit today to inspect the Consolidated Aircraft Corp. plant for the first time since he became a director of the concern last March.

"Chicago was coated with ice when I left it for the west coast," he commented today, "and here I marvel at the sight of men working in the factory yards in their shirt-sleeves.

"I've been through many aircraft plants in the country, but the Consolidated personnel seemed to me just about the most intelligent-appearing of any I've seen."

Mr. Hertz, who will remain in this vicinity for the remainder of the week, refused to comment on the outlook for business in 1938.

"After all," he said, "I'm a banker, and you wouldn't want me to put myself on the spot by making predictions or suggesting what ought to be done either by government or business, would you?"

MELBOURNE "HERALD", 18/12/37.

U.S. AIR LINER COMING

Will Fly Tasman

One of America's most modern types of big flying-boats, which is to visit Melbourne within the next few months, will also make a return Tasman flight, according to private advice received here today.

Its wealthy young American owner would probably have already arrived here had not one of the Soviet flights across the Arctic ended in disaster.

Shortly after the plans of the owner, Mr Richard Archbold, to fly the boat from California to New Guinea on an exploring and research expedition for the American Museum of Natural History had been announced in The Herald, Levanevsky, the famous Soviet pilot, disappeared in the Arctic.

The 12-ton boat that had just been delivered to Mr Archbold by the Consolidated Aircraft Company, had been flown non-stop from California to New York to have elaborate radio equipment installed.

There an agent of the Soviet Government bought it, and with the Australian explorer, Sir Hubert Wilkins, in command, the boat left to join the search for Levanevsky in the Arctic.

SISTER SHIP

Promptly Mr Archbold ordered a sister-ship for delivery in November. It is this ship, probably named Guba, as was the first one, that will fly to Australia and New Zealand by way of Honolulu, Midway and Wake Islands, Guam and New Guinea.

Whether the Australian visit will be before or after the main work of the expedition in New Guinea is not yet known.

Except for its accommodation, the Guba is a sister-ship of 176 flying-boats used by the United States Navy in fleet patrol work, replacing destroyers. Similar boats have made formation flights between California and Hawaii and California and the Canal Zone, and until recently they held the world's long-distance seaplane record.

With full naval load the range of the boat is more than 4000 miles, so that, if Mr Archbold wished, it could easily make a double Tasman flight without alighting. The proposed flight will have no commercial or international significance, and no difficulty in getting permits is expected.

to the West Coast the middle of December.

Our Airports Must Be Enlarged

WHAT PROMISES TO BE one of the most important conferences in the history of aviation is scheduled to be held in Washington on the 6th of this month. In a word, it is a coming together of all interests in air transportation to devise a plan for the immediate enlargement and improvement of the principal American air terminals to take care of the traffic now here and the still greater volume of the future.

There is great promise in this meeting because all parties are in agreement on the essential points to be considered—the imminent need of larger, better equipped airports and the necessity for distributing the cost in the most equitable way.

The present inadequacy of our terminals, especially in the larger cities in the United States, is a condition developing so rapidly that it is considered little short of a crisis. Nobody in particular is blamed for it; the swift enlargement and improvement of aircraft in the past few years together with the steadily increasing air traffic have caught us with a sky full of full-laden craft and wretchedly inadequate landing facilities on the ground. It is like having a great fleet of modern ships on the ocean with nothing but ancient sailing ship piers in our harbors; or the railway lines cluttered with streamline fast trains and inadequate terminals for their service. In the words of the old song, "We're all dressed up and nowhere to go."

The conference is called by the American Municipal Association but all interests in aviation, civil and military, will be represented and pulling together for the speedy starting of the job and a plan for financing it. Hitherto the development of American airports has been a patchwork performance with little provision for the future or semblance of coordinated plan. Some municipalities, through local enthusiasm, have located landing fields, often in the wrong place and with detrimental surroundings; others have laid out their terminals on a too ambitious scale and never finished them, while some of the larger cities have slept over the matter and done practically nothing to be ready for the great enterprise of air travel which has come upon us so rapidly.

No single group or interest is responsible for our present plight; in fact, all concerned have chipped in more or less, but in haphazard fashion. Most of the cities in the past few years have been bled white by relief, unemployment, and other demands of the hour and therefore are unable to find funds for such terminals as might have been planned or desired. The Department of Commerce has used such funds as it could control for intermediate, emergency landing fields and the air lines themselves have contributed most liberally from the meager revenues they were permitted to have. But leaving out of the picture altogether the question of who did or who didn't, the hour has now arrived when somehow, somebody must put our air terminals in proper working condition, or through default, we must forfeit the proud position we have attained in the world of aviation.

One of the groups most acutely and fundamentally interested in the forthcoming conference is the United States Conference of Mayors. Mayor LaGuardia of New York City is president of the group and probably more deeply and directly interested than any other mayor in the country. That is so because New York, the metropolis of the continent and the largest city in the world, is poorly equipped to take care of its air traffic today and with no definite plan or provision for adequate terminal facilities to take care of the tremendous pressure that must come upon it in the future. The Newark Airport, busiest landing field in the United States, is serving today as New York City's main terminal and air mail base. It is located in the state of New Jersey, some twenty miles from New York and difficult of access. Floyd Bennett Field, situated on the outskirts of Brooklyn and North Beach Airport in Queens Borough, are both owned by the City of New York, but they have been unable to capture much of the Newark Airport business and are entirely inadequate to take care of the traffic just around the corner.

New York is the natural terminus for the continental lines and the transatlantic lines just as it is the great terminus for the railroad and steamship lines, but it has practically no terminal facilities for air traffic today and no stated plans for the future. Since the establishment of the Bermuda air service the big clipper ships are obliged to have their mooring place in a bay at Port Washington, on Long Island Sound, a distance of some forty miles from New York, and this winter the terminal for the Bermuda ships has been removed to Baltimore.

The Pan American lines have been greatly handicapped in the development of their wonderful service because of the lack of any suitable base in or near New York. For several years rumors have been floating about in the murky atmosphere of New York of a gigantic plan of the U. S. Government to acquire for the Army a huge base near New York that would serve both as the eastern continental base for the Army air forces, and as a great metropolitan commercial base as well. Rumor has located this great base several miles up the Hudson River, on the high land outside the fog zone and where it could be reached from all points without flying over New York City. But the Army has not as yet confirmed anything of the sort and the plan has not got beyond the blueprint of rumor.

But New York is being aroused from its slumber, chiefly through the keen interest and vision of Mayor LaGuardia, and it is more than likely that the Washington conference may put forth some plan for the Metropolis that will be of interest both here and abroad.

•

Colonel Macfadden Honored

COL. BERNARR MACFADDEN, publisher, health exponent, and aviator, received the first annual aviation award of Air Service Post 501, American Legion, at a banquet tendered in his honor at the Hotel Astor, New York City, November 22. The award, to be given annually to the individual accomplishing something outstanding in aviation, went to Colonel Macfadden in token of the 70-year-old flyer's completion of 1,000 hours of civilian flying. Recently the publisher completed a nonstop New York-Miami solo flight.

There an agent of the Soviet Government bought it, and with the Australian explorer, Sir Hubert Wilkins, in command, the boat left to join the search for Levanevsky in the Arctic.

SISTER SHIP

Promptly Mr Archbold ordered a sister-ship for delivery in November. It is this ship, probably named Guba, as was the first one, that will fly to Australia and New Zealand by way of Honolulu, Midway and Wake Islands, Guam and New Guinea.

Whether the Australian visit will be before or after the main work of the expedition in New Guinea is not yet known.

Except for its accommodation, the Guba is a sister-ship of 176 flying-boats used by the United States Navy in fleet patrol work, replacing destroyers. Similar boats have made formation flights between California and Hawaii and California and the Canal Zone, and until recently they held the world's long-distance seaplane record.

With full naval load the range of the boat is more than 4000 miles, so that, if Mr Archbold wished, it could easily make a double Tasman flight without alighting. The proposed flight will have no commercial or international significance, and no difficulty in getting permits is expected.

Tactics

SEARCH IS PUSHED NEAR SAN DIEGO FOR MISSING SHIP

Scouting Force Chief of Staff Believes Craft Will Be Found.

REFUSES TO GIVE OUT NAMES OF PERSONNEL

Flying Boat Could Land in Any Kind of Sea—Had Twin Motors.

By the Associated Press.

SAN DIEGO, Calif., Jan. 6—Capt. Alva D. Bernhard, chief of staff of the Navy Aircraft Scouting Force, announced today a Navy bombing plane with seven men aboard has been missing since yesterday.

Capt. Bernhard revealed that the big patrol bomber had been missing since 5 p.m. yesterday, "when we lost radio contact with it."

"The plane was on a routine flight," he added. "I am not at liberty to say where it was bound or where it was believed to be when we lost contact.

Can Land in Any Sea.

"We believe the plane will be found. It is one of the flying boats capable of landing in any kind of a sea.

Capt. Berhnhard did not immediately release the names of those aboard, "as they are from different parts of the United States and it would cause needless worry."

Planes and surface vessels of the fleet searched all night for the missing plane, it was learned. The search was being pressed with vigor today.

Thought 200 Miles Away.

The plane was believed to have disappeared at sea about 200 miles northwest of here. Search was concentrated in that area.

The bomber was one of the new twin-motored patrol planes built for the Navy by Consolidated Aircraft Corp. here. These planes made five long massed flights from here last year, two to Honolulu, two to Coco Solo, C. Z., and one to Seattle.

One of the patrol planes crashed in San Diego Bay with a loss of six lives last August 23.

CALIFORNIA-MIAMI FLIGHT SUCCEEDS

14 Naval Bombers Roar for Coco Solo

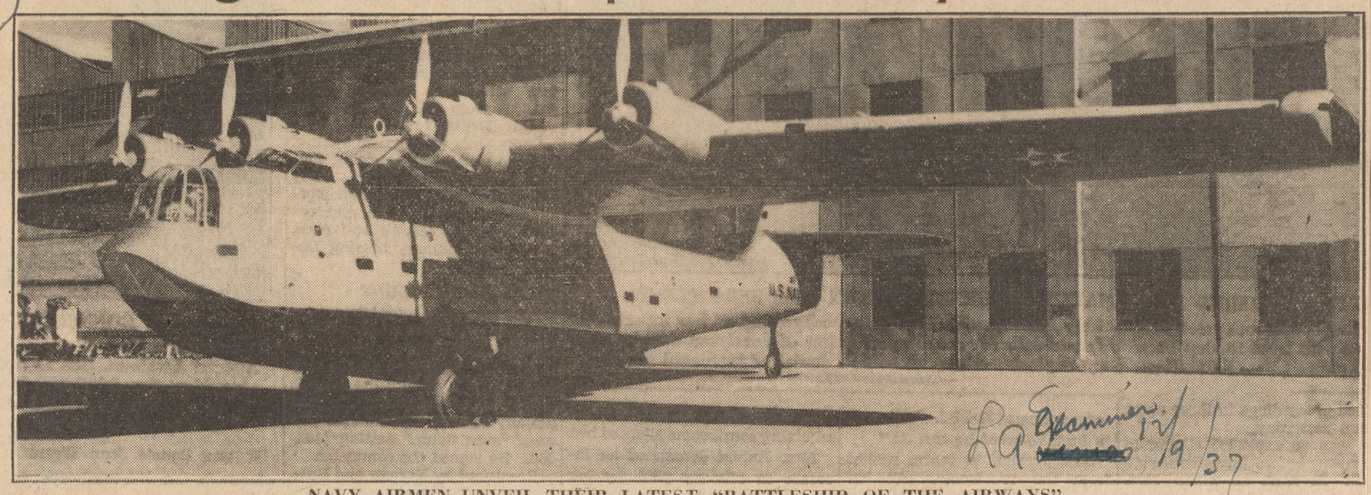
SAN DIEGO, Dec. 8.—(AP)—Fourteen Navy patrol bombing planes roared off San Diego Bay today on a 3080-mile flight down the west coast of Mexico and across the jungles of Nicaragua to Coco Solo, Canal Zone.

Lieutenant Commander B. E. Grow, commanding the flight, led the 14 giant seaplanes, carrying 98 officers and men, lifting his plane from the bay at 10:20 a. m. in a fog that began thinning shortly before the take-off.

Navy Places Order for 33 Planes

WASHINGTON, Dec. 8.—(AP)—The Navy Department awarded today a $4,500,000 contract for thirty-three Type VPB patrol planes and spare parts to the Consolidated Aircraft Corporation, San Diego, Calif.

Winged Battleships for Navy Air Force



NAVY AIRMEN UNVEIL THEIR LATEST "BATTLESHIP OF THE AIRWAYS"

After months of secret construction at Consolidated Aircraft Corporation, this huge, four-motored craft was tested at San Diego. It will compete with a similar Sikorsky ship for a Navy contract. Capable of a 5000-mile nonstop flight, the craft carries a huge load of bombs and is the most heavily armed fighting ship in the airforce. Performance and dimension details are being withheld by Navy officials.

—Picture From International News Photograph Service.

Pan American calls for bid

Eight manufacturers requested to offer proposals on mammoth craft

A bomb dropped in the center of the aircraft industry could have stirred little more excitement than Pan American's request for bids from eight major manufacturers on a super transport capable of carrying 100 passengers in the substratosphere a distance of 5,000 miles at speeds approaching 300 m.p.h.

It is understood that specifications were broad. Only results were specified, the manner in which the manufacturer obtained the results was up to him. Neither land plane nor sea plane was called for and requests for bids were issued to some manufacturers who evidently would not bid on flying boats.

Very little has been released by Pan American concerning the details of their specifications and the manufacturers have been instructed to withhold release of information. In general, however, it is known that the specifications call for "the design and construction of a practical operating airplane—a commercially feasible one—that can carry 25,000 pounds of actual payload 5,000 miles, with minimum cruising speeds ranging from 200 m.p.h. at sea level, to 299 m.p.h. at altitude."

Additional specifications called for "stateroom accommodations for at least 100 passengers with dressing rooms, dining room and a galley having adequate facilities for the preparation and storage of food. Crew accommodations should allow for a crew of 16, and cargo compartments should be provided for mail, baggage and express permitting full use of all payload capacity not utilized by passengers."

Bids were requested on quantities of three, six or twelve aircraft and lots of three, six and twelve additional aircraft subject to option. Bids are to be delivered, in outline, before March 15, 1938. Then the manufacturer or manufacturers with the most practical design or designs, will enter into a working contract for the detailed engineering called for—for which Pan American will pay $35,000 for the necessary work on each design. The manufacturers have six months for the completion of that part of the project.

The manufacturers requested to submit proposals consist of: Boeing Aircraft Company, Consolidated Aircraft Corp., Curtiss-Wright Airplane Co., Douglas Aircraft Co., Inc., Lockheed Aircraft Corp., Glenn L. Martin Co., North American Aviation, Inc., and the Sikorsky Aircraft Division of United Aircraft Corp.

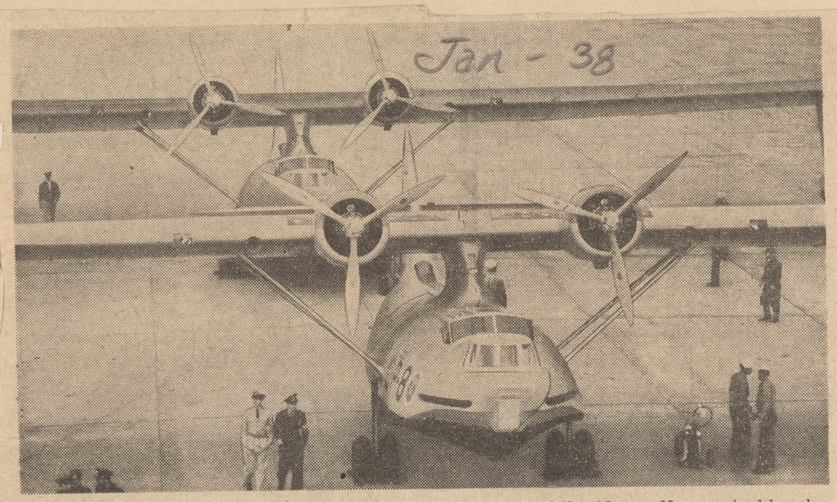
The manufacturers of this group that ordinarily would be considered first as logical bidders on any transoceanic aircraft are the boat manufacturers. Boeing is now working on an 85,000 pound boat for Pan Am and has had a great deal of experience in the design and production of large landplanes as well. Consolidated has just launched a four-engine boat that probably weighs about 30 tons; Martin just delivered a 63,000 pound boat to Russia and is understood to be in position to submit designs on boats several times this size immediately; Sikorsky Clippers are not so large as either of the foregoing boats but Sikorsky has a reputation as one of the outstanding manufacturers of large boats in the world and is understood to be ready to submit proposals on craft many times the size of past designs.

In regard to the other manufacturers on the list, Douglas seems the most

(Continued on Page 28)

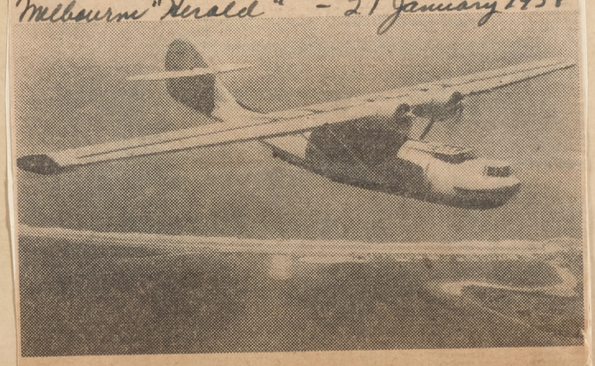
CONSOLIDATED Aircraft obtained an order for 33 patrol bombers from the Navy and launched its new four-engine super-patrol-bomber (complete details can be found elsewhere in this issue) . . . Richard Archbold received delivery of his second PBY-type commercial boat, the first plane being sold to Russia for the Arctic search. The explorer flew his plane across the continent to Miami non-stop for the All-American Air Maneuvers and returned to the West Coast the middle of December.

The Navy contract was awarded the Consolidated Aircraft Corporation for 33 patrol-bombing planes.



NAVY'S "PETS" JUST BEFORE BIG FLIGHT.—Two of the 18 new Navy patrol bombers are pictured at San Diego just before they set out for Honolulu, which they reached in 20 hours and 30 minutes. No record was sought on the mass flight, but conditions of mass flight and performance of the bombers was studied.

U.S. PLANES' GREAT HOP—
Melbourne "Herald" - 21 January 1938



A UNITED STATES NAVY consolidated flying-boat, 18 of which have just flown from San Diego (California) across the Pacific Ocean to Honolulu without a single mishap. The U.S. navy uses nearly 200 of these planes which do much of the scouting work formerly carried out by destroyers.

Miami Daily News 12/4/37

NON-STOP HOP IS MADE HERE BY ARCHBOLD

Cochran Smashes New York Record At 278 Miles An Hour

TO VISIT AIR RACES

San Diego Trip Establishes First Mark For Cross Country

The second non-stop distance flight to Miami in successive days ended here at 7:40 a. m. today when Richard Archbold, wealthy scientist and aviator, completed a 2,300-mile transcontinental hop from San Diego, Cal.

Jacqueline Cochran, 26-year-old New York woman flier, set a speed record of four hours and 12 minutes in a flight from New York city which ended at 3:21 p. m. yesterday at municipal airport. Averaging 278.13 miles an hour on her trip south, Miss Cochran beat the fastest time ever recorded either way between the two cities by eight minutes. That mark was set northbound by Howard Hughes.

The bushy-haired Archbold set his huge flying boat, similar to the U. S. navy bombers which have flown between California and Hawaii, down at International airport, Dinner key. The Pan American base had been in touch with the craft, which used the base's radio direction finder.

Exact flying time from San Diego to Miami was 14 hours and 10 minutes. The mark is an original record, since the two cities have never previously been linked in a non-stop flight.

Accompanying Archbold here were Russell Rogers, co-pilot; Gerald Brown, flight engineer; Raymond Booth, radio operator; William Sanderson, mechanic; Irwin K. McWilliams, engineer inspector of U. S. department of air commerce; William Wheatley, chief test pilot of Consolidated Aircraft Corp., San Diego; and Frank A. Learman, assistant manager of Consolidated.

Archbold, research associate of American Museum of Natural History, New York, bought the plane last spring for a flight from California to New Guinea, off Australia. The flight here was a "shake-down" cruise. Archbold and his party will return to San Diego next week, after seeing the All-American air maneuvers and "enjoying the Florida sunshine."

A New York-Havana non-stop flight record also was set yesterday when Maj. Alexander de Seversky flew the 1,350 miles in five hours and two minutes—two hours and one minute faster than Lieut. Commander Frank Hawks' record of 1931. The new record-holder is expected to fly to Miami today.

THE SAN DIEGO UNION: SUNDAY MORNING, JAN. 2, 1938

las of Year 1937: War

AERIAL WORLD ACHIEVEMENTS MANY IN 1937

By DEVON FRANCIS
Associated Press Aviation Editor

A new world landplane speed record of 379.16 miles an hour polished off an impressive series of achievements in aviation for 1937.

Mechanical flight in the new year promises flying hotels, fresh conquests of the north polar regions and inauguration of scheduled service across the Atlantic to complete the belting of the earth.

In no period since man first left the ground with power of his own invention with the possible exception of the World war has aeronautical activity been more intense than in the year now closing.

Commercial aviation explored new frontiers. Service to Asuncion, Paraguay, completed a network of lines touching the capital of every nation in the Americas. Bermuda and the United States were linked by scheduled air transport.

International Competition

Great Britain and Italy projected lines to South America to share the business enjoyed by Germany and France. The British planned to span the Pacific. The United States schemed to fling a regular airway to New Zealand. American flying boats completed a year of passenger transport across the Pacific without incident.

Bell-wether for other nations, the United States demonstrated the practicability of regular airplane passenger service over the world's stormiest ocean, the Atlantic. Germany and Great Britain also flew the route.

It was estimated that 3500 persons flew on American transport routes every 24 hours in 1937, and that airliners winged 223,000 miles each day over 64,000 miles of routes.

Military developments were given point by the wartime use of aircraft in Spain and China.

Huge Bomber Stands Out

America's XB-15 bomber, big brother of the "flying fortress," with a wingspread of 150 feet, probably was the greatest development in the military field. The most radical was the Bell fighting plane, with motors mounted aft of two gunners' nacelles on the leading edge of the wing.

Pan American Airways invited manufacturers to bid on 100-passenger transoceanic craft. Thirty-ton-plus landplanes were built by the Douglas Aircraft Co., Santa Monica, for domestic service.

Technical advances, many unsung, were numerous. Motors were stepped up to 1500 horsepower.

The army developed a wholly automatic landing device. Its substratosphere experimental plane gave promise of yielding new discoveries at high altitude.

At least one commercial company completed experimental work on a transport capable of exceptionally high speeds at altitudes up to five miles with cabins supercharged to insure passengers a normal oxygen supply.

Tragedy Intervenes

Dick Merrill and Jack Lambie twice flew the Atlantic to London and back.

The highest sustained speed ever registered was made by Howard Hughes on his coast-to-coast flight last January, just shy of 5½ miles a minute. Germany, however, captured the landscape speed burst record with a pace of 379.16 m.p.h.

But the aerial accomplishments by individuals were clouded by one tragedy. Amelia Earhart, the nation's most famous woman flier, and Fred Noonan, her navigator, were lost at sea while trying to fly around the world.

The year's greatest adventures were the two Russian flights to America's western seaboard, one for a new distance record of 6262 miles. A third attempt failed, but Russia indicated a determination to establish an airline over the polar regions.

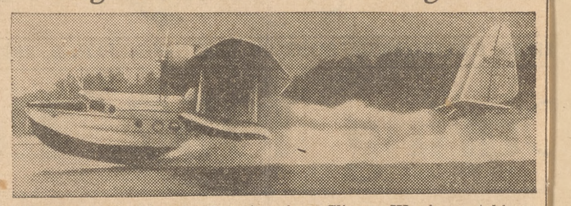
Less spectacular, but significant in the year's story, was the flight of Masaaki Iinuma and Kenji Tsukagaski, Japanese airmen, from London to Tokyo in 94 hours with coronation photographs.

Private Flying Booms

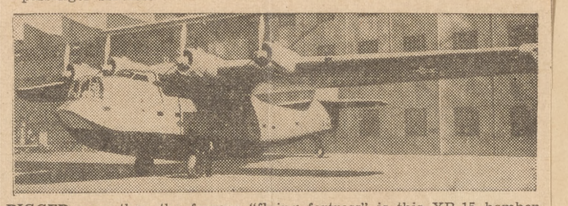
There was a small boom in private flying. One light-plane manufacturer geared his production to 3000 low-cost planes a year. The "flying automobile," a roadable plane, performed at the national air races in Cleveland.

Accidents in domestic transport operations took more than two score lives. The year's most awesome air catastrophe was the destruction of the German Zeppelin Hindenburg at Lakehurst, N. J., with a loss of 36 persons. Germany planned to put another lighter-than-air craft in service in 1938, using American non-inflammable helium.

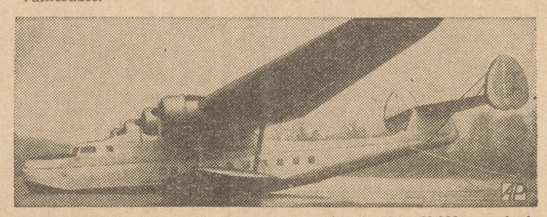
Huge Planes Boost Air Progress



BIG flying boats like the Pan American Clipper III, shown taking off from Port Washington, L. I., criss-cross the Atlantic in 1937 on trial flights expected to lead, next summer, to regular transatlantic passenger service.



BIGGER even than the famous "flying fortress" is this XB-15 bomber, year's tops in military aviation. Built for the U. S. army, it has a wingspread of 150 feet. Announced attack rating: "practically invulnerable."



BIGGEST flying boat ever built in America is this 63,000-pound sky giant completed in November for Soviet Russia by the Glenn Martin company at Baltimore. It has a 157-foot wing spread and will carry 46 passengers.

BOMBERS IN COLLISION

VLIEGENDE „DREADNOUGHT" IN AMERIKA

De Consolidated PBY met een werkingsfeer van 8000 km onmisbaar voor de Amerikaansche vloot.

SNELHEID ONGEVEER 320 KM PER UUR

SEDERT 1 October 1937 zijn de torpedobooten der Amerikaansche Marine toegevoegd aan de gevechtsvloot en is hun rol van verkenners overgenomen door snelle vliegbooten met een groot vliegbereik. Ruim tweehonderd machines van het type Consolidated PBY zijn voor dit doel gereserveerd. Deze vliegbooten, uitgerust met twee motoren van ruim 1000 pk elk, hebben een vliegbereik van meer dan 6000 km bij een snelheid van ongeveer 230 km per uur, waardoor zij in staat zullen zijn ver voor de vloot uit de bewegingen van den vijand te verkennen en veel eerder berichten hieromtrent den eigen bevelhebber draadloos door te geven dan mogelijk is met de snelste torpedojagers. Waar buitendien deze vliegbooten zwaar bewapend zijn met bommen, kunnen zij den vijand reeds groote schade toebrengen voordat de feitelijke slag is begonnen en bijv. de vliegtuig-moederschepen vernietigen of zoo beschadigen, dat de vijandelijke vloot het moet stellen zonder vliegtuigen en daardoor een groot deel van haar gevechtswaarde zal hebben ingeboet.

Intusschen is deze drastische verandering in de samenstelling van de Amerikaansche vloot geen noodmaatregel. De verschillende groote vluchten in groepsverband, ondernomen met die Consolidated vliegbooten naar Honoloeloe en het Panama Kanaal, hadden de waarde dezer vliegtuigen als lange-afstand verkenners definitief bewezen en men kwam als vanzelf op de idee, deze vliegtuigen te gaan gebruiken als de voorposten van de vloot. Vice-admiraal Ernest J. King zal het bevel voeren over deze verkenners-groep, welke is verdeeld over de bases Coco Solo in de Panama Kanaal Zone en Pearl Harbour op Honoloeloe. De vliegtuig-moederschepen Wright, Langley, Thrush en Owl en het daarbij behoorende lichtere materieel zijn eveneens aan deze groep toegevoegd.

Zoo goed als het Legervliegkorps naast de betrekkelijk lichte twee-motorige bommenwerpers, een aantal zeer zware vier-motorige bommenwerpers heeft aangekocht, welke den naam van vliegende forten ten volle verdienen, is de Marine van oordeel, dat die voorpostengroep eveneens de beschikking behoort te hebben over zeer groote viermotorige vliegbooten, welke nog meer dan de twee-motorige machines van hun basis onafhankelijk zijn en welke geruimen tijd als zelfstandige uniteiten kunnen opereeren. Een dergelijke „Vliegende Dreadnought" is de Consolidated PB2Y-I.

Deze enorme geheel metalen vliegboot is uitgerust met vier luchtgekoelde motoren van 1050 pk elk, welke de machine een snelheid geven van ongeveer 320 km per uur. Ten einde te maken, dat de machine inderdaad geruimen tijd ver van haar basis kan verblijven, is de bootromp behandeld met een speciale soort verf, welke het aanbakken en roestvorming voorkomt. Bij de inrichting der kajuiten is alle aandacht besteed aan het comfort der bemanning. Zoo vinden wij hier ruime en goed geventileerde slaapplaatsen, een longroom, een keuken (compleet met electrisch fornuis en een ijskast), de noodige kleerkasten, een toilet met waschbakken, een verwarmings- en ventilatie-systeem dat het verblijf aan boord zoowel in de tropen als in het hooge noorden aangenaam maakt, en een compleet ingerichte werkplaats voor het verrichten der noodige herstellingen aan motoren of boot. De wanden zijn bekleed met geluiddempend materiaal.

Evenals bij de PBY-vliegbooten, zijn de hulpdrijvers intrekbaar gemaakt en vormen zij in de vlucht de vleugelpunten, hetgeen de prestaties der machine ten goede komt door den verminderden weerstand. Een telefoonnet is geïnstalleerd, waardoor de bemanning onderling steeds contact heeft en de commandant snel en gemakkelijk zijn orders kan uitdeelen. Het electrische net heeft een spanning van 110 Volt en wordt bediend door een aparte installatie, onafhankelijk van de hoofdmotoren.

Achter den vleugel, boven in den romp, bevindt zich een kajuit voor den waarnemer-navigator. Van hier uit heeft deze een onbelemmerd zicht op den hemel voor het schieten van de zon of sterren en hij beschikt over een volledig stel instrumenten voor het doen zijner waarnemingen en voor het bepalen van den te vliegen koers. De gesloten kajuit voor de bestuurders bevindt zich in den bovenkant van den romp voor den vleugel.

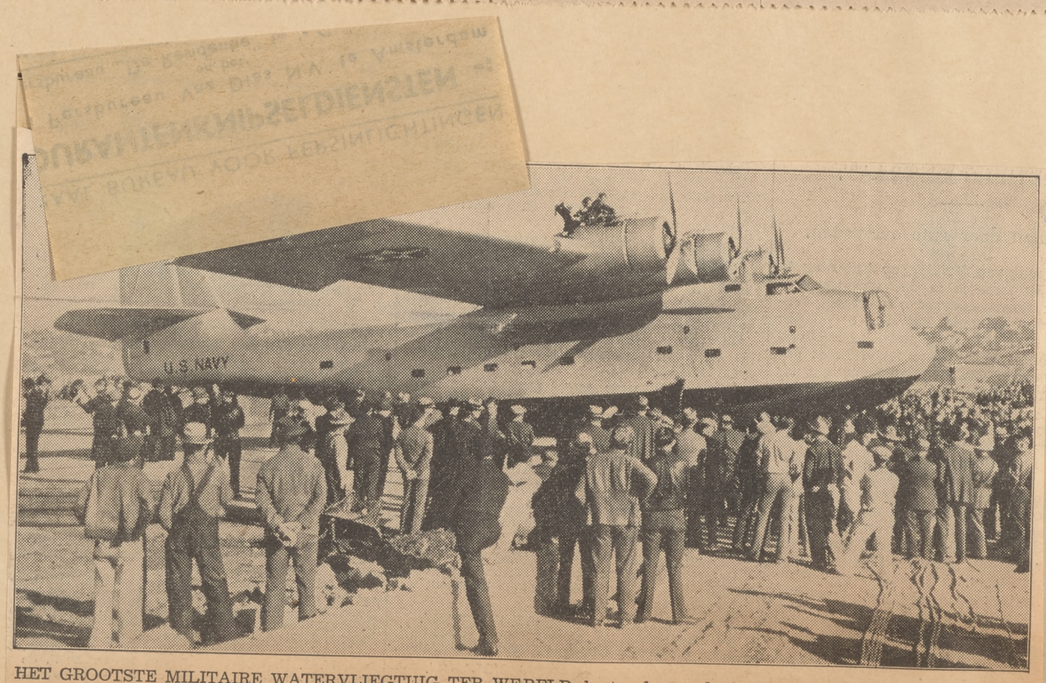
Geheel voor in den neus is een gesloten geschutkoepel, terwijl een tweede koepel zich bevindt in den rompstaart, onder het stabilo. Verder bevinden zich nog geschutstanden in de zijwanden en in het dak van den romp, zoodat deze machine zich behoorlijk naar alle kanten kan verdedigen. Een zeer groote bommenlast kan worden meegevoerd. Het vliegbereik bedraagt 8000 km bij, zooals reeds gezegd, een snelheid van ongeveer 320 km per uur.

De eerste machine van dit type heeft in den loop van December proefgevlogen en is daarna overgebracht naar de basis van het Marine Vliegkorps voor het nemen van verdere proeven. Verwacht mag worden, dat in den loop van dit jaar een eerste bestelling op een serie dezer machines zal worden gegeven, zoodat de Amerikaansche vloot in den Stillen Oceaan het volgende jaar over een aantal dezer „Vliegende Dreadnoughts" zal beschikken.

Behalve de Consolidated Aircraft Corporation, welke in Europa door Fokker wordt vertegenwoordigd, kreeg ook Sikorsky Aircraft opdracht voor het bouwen van zoo'n groote vliegboot, waaromtrent echter nog slechts weinig bekend is.

DE CONSOLIDATED P.B.Y. VOOR DE AMERIKAANSCHE MARINE, die een snelheid kan ontwikkelen van 320 km per uur.

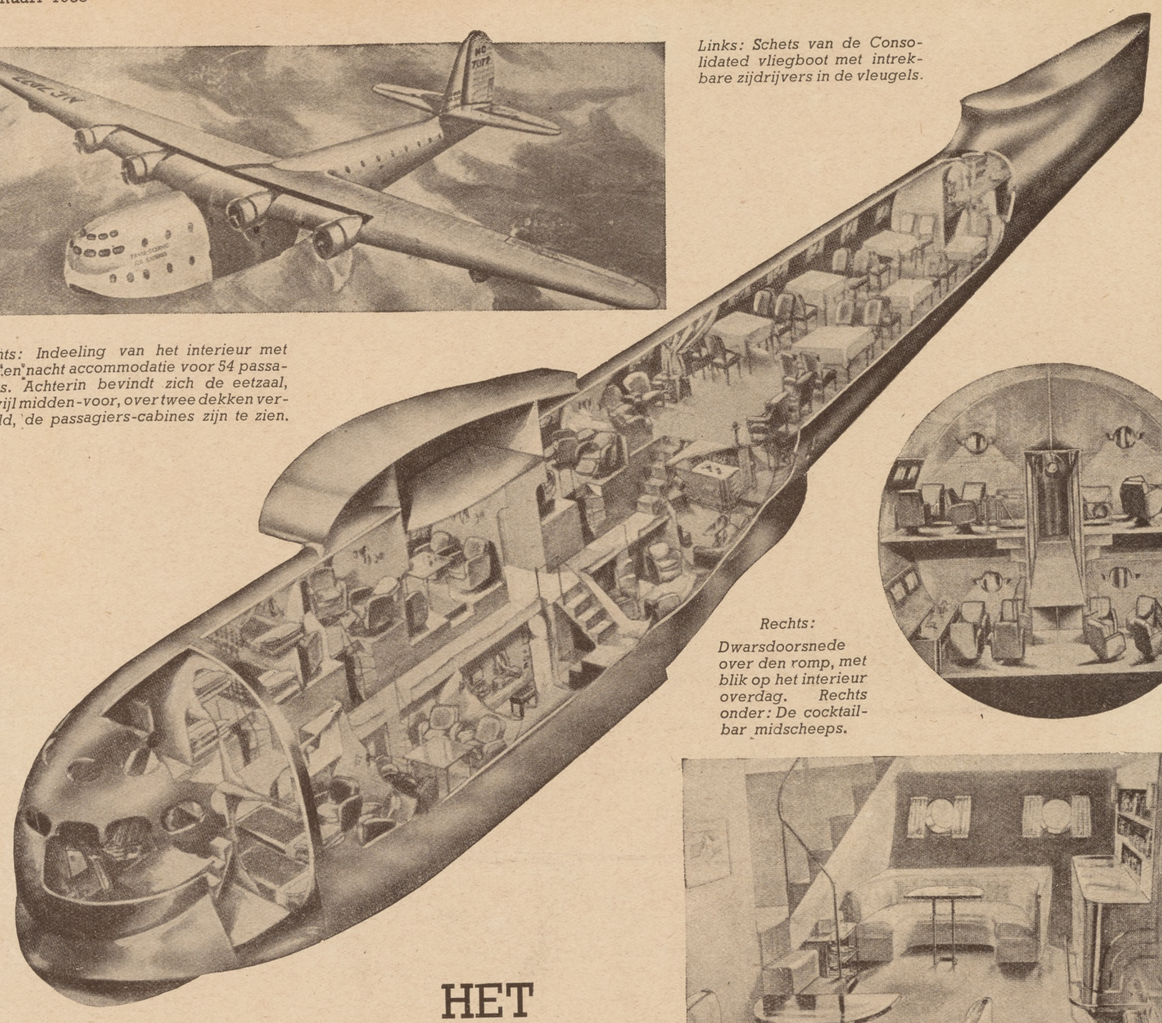
"Algemeen Handelsblad" January 9, 1938
(Holland)

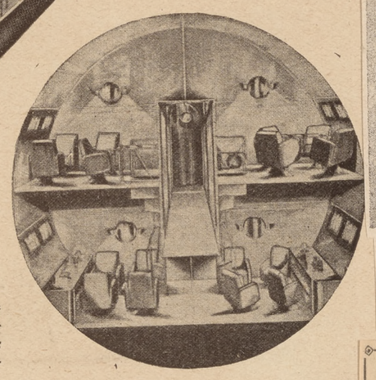


HET GROOTSTE MILITAIRE WATERVLIEGTUIG TER WERELD, bestemd voor de Amerikaansche marine, werd te San Diego te water gelaten. De afmetingen van het toestel komen door vergelijking met de personen er omheen goed tot uiting

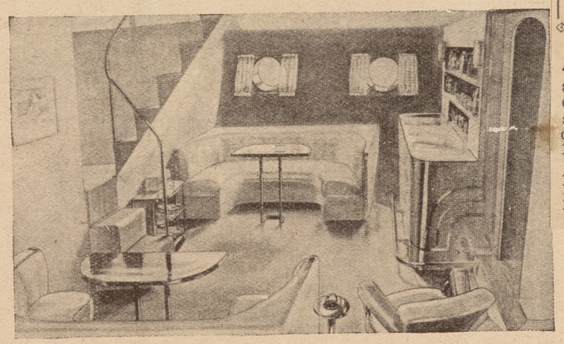
Links: Schets van de Consolidated vliegboot met intrekbare zijdrijvers in de vleugels.

Rechts: Indeeling van het interieur met dag en nacht accommodatie voor 54 passagiers. Achterin bevindt zich de eetzaal, terwijl midden-voor, over twee dekken verdeeld, de passagiers-cabines zijn te zien.





Rechts: Dwarsdoorsnede over den romp, met blik op het interieur overdag. Rechts onder: De cocktail-bar midscheeps.



HET TRANSATLANTISCHE PROJECT VAN CONSOLIDATED

Een 50-tons vliegboot voor 54 passagiers met een ongekende luxe.

IN aansluiting op hetgeen reeds aan het slot van *Vliegwereld in Vogelvlucht* in dit nummer werd geschreven, haasten we ons, onzen lezers hierbij op de hoogte te brengen met de zoo juist ontvangen details betreffende de nieuwe door Consolidated ontworpen vliegboot. Deze fabriek komt met een project onder den naam van „Transoceanic Air Express" van 50 ton, dat bestemd is voor regelmatig luchtverkeer tusschen Europa en Amerika. De luchtreus biedt voor 54 passagiers dag en nacht accommodatie en vertoont een interieur van ongekende luxe. De bemanning zal bestaan uit 10 koppen. De romp heeft twee dekken, waarover 14 passagierscabines verdeeld zijn, ieder voor twee of drie personen. Een volledige eetzaal is aanwezig achterin, waar twintig gasten kunnen plaats nemen aan zes tafels. In het midden van de romp is een loopgang ontworpen, die met trapjes naar de verschillende hutten en zalen op beide etages toegang geeft. Als bijzonderheid vermelden we dat er aan boord zelfs een aparte cocktailbar aanwezig is. Voor verdere details verwijzen we naar bovenstaande afbeeldingen, die voor zich zelf spreken.

De Consolidated Trans-oceanic is een geheel metalen eendekker, uitgerust met vier motoren van 1500 pk elk, die deze vliegboot een topsnelheid kunnen geven van circa 360 km/u op 3000 meter hoogte. Actieradius met volle belasting ongeveer 5000 km. Leeggewicht 55.500 lbs en volbelast gewicht 110.000 lbs. De nuttige lading is dus 54.500 lbs. Plafond 6000 meter. Spanwijdte vleugel 85 voet, of meer dan 56 meter.

Het is werkelijk verbazingwekkend te zien met welke enorme ontwerpen de Amerikaansche vliegtuigfabrikanten van zins zijn binnenkort voor den dag te komen. Vliegtuigen met afmetingen en een inrichting waarvan men tot voor kort slechts dorst te droomen, staan thans op het punt om verwezenlijkt te worden. Wij beleven ongetwijfeld in 1938 een hoogst bel

2 S. D. NAVY FLIERS KILLED

S D Sun 1/26/38

A Naval officer and a cadet from San Diego were killed at Scott Field, Belleville, Ill., today, when their plane caught in a dirigible mooring mast and crashed to the ground, the United Press reported to The Sun.

The men were identified as Lieut. Comdr. Emile Chourre, inspector of Naval aircraft at the Consolidated Aircraft Corp., and Aviation Cadet Michael J. Ola of the U. S. Naval reserve stationed at San Diego.

The Navy scout plane was attempting to land after a flight from Dayton, O.

Although weather conditions at the field were said to be perfect and visibility good, a strong wind was blowing from the northwest making a landing possible only by flying over the hangar which houses dirigibles at the field.

The plane circled the field, flew too low and scraped the 250-foot mooring mast. A wing was torn off and the ship plunged to the ground continuing for about 200 yards before coming to rest. The passengers were killed instantly.

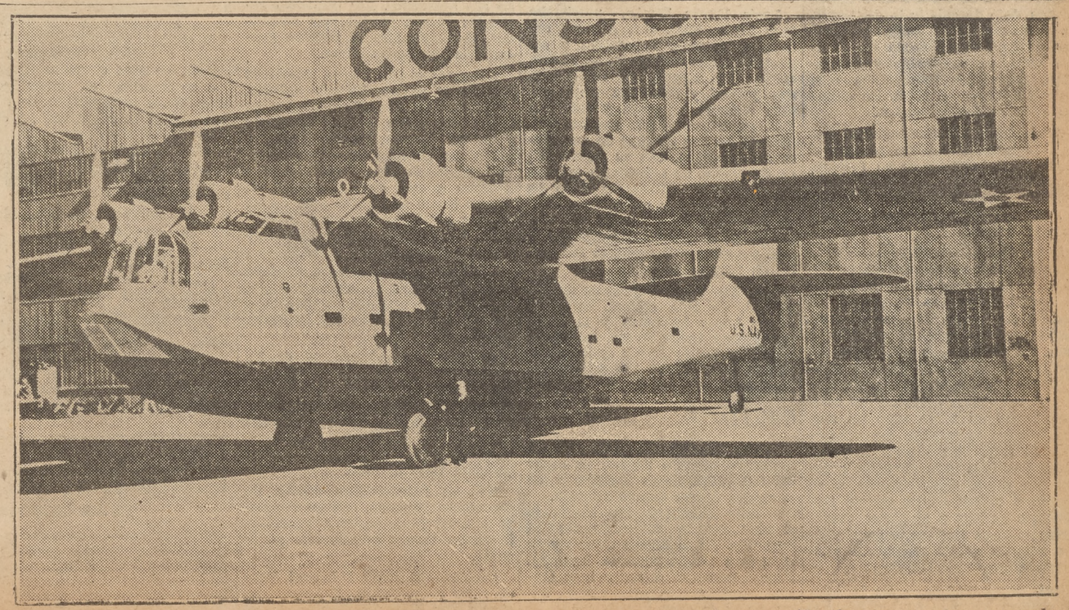
Officials at the airport said Lieut. Comdr. Chourre left Dayton at 8 a. m., C. S. T.

Scott Field authorities said Navy officials had been notified and that an investigation would begin as soon as officially authorized.

Lieut. Comdr. Chourre had been attached to the Consolidated Aircraft Corp. for more than a year, and had flown East to confer with the Navy Department in Washington, D. C.

He was returning to his post when the accident occurred. His widow, Catherine, resides at 568 I-av, Coronado.

LOS NUEVOS ACORAZADOS DEL AIRE



Este avión es el primero de una serie que está construyendo el gobierno norteamericano y puede ser considerado como un super-acorazado del aire. La foto ha sido tomada en San Diego, California, cuando la nave aérea se preparaba para las pruebas anteriores a su entrega a la armada.

THE SAN DIEGO UNION: SUNDAY MORNING, JAN. 2, 1938

las of Year 1937: War

AERIAL WORLD ACHIEVEMENTS MANY IN 1937

By DEVON FRANCIS
Associated Press Aviation Editor

A new world landplane speed record of 379.16 miles an hour polished off an impressive series of achievements in aviation for 1937.

Mechanical flight in the new year promises flying hotels, fresh conquests of the north polar regions and inauguration of scheduled service across the Atlantic to complete the belting of the earth.

In no period since man first left the ground with power of his own invention with the possible exception of the World war has aeronautical activity been more intense than in the year now closing.

Ruim tweehonderd machines van het type Consolidated PBY zijn voor dit doel gereserveerd. Deze vliegbooten, uitgerust met twee motoren van ruim 1000 pk elk, hebben een vliegbereik van meer dan 6000 km bij een snelheid van ongeveer 230 km per uur, waardoor zij in staat zullen zijn ver voor de vloot uit de bewegingen van den vijand te verkennen en veel eerder berichten hieromtrent den eigen bevelhebber draadloos door te geven dan mogelijk is met de snelste torpedojagers. Waar buitendien deze vliegbooten zwaar bewapend zijn met bommen, kunnen zij den vijand reeds groote schade toebrengen voordat de feitelijke slag is begonnen en bijv. de vliegtuig-moederschepen vernietigen of zoo beschadigen, dat de vijandelijke vloot het moet stellen zonder vliegtuigen en daardoor een groot deel van haar gevechtswaarde zal hebben ingeboet.

Intusschen is deze drastische verandering in de samenstelling van de Amerikaansche vloot geen noodmaatregel. De verschillende groote vluchten in groepsverband, ondernomen met die Consolidated vliegbooten naar Honoloeloe en het Panama Kanaal, hadden de waarde dezer vliegtuigen als lange-afstand verkenners definitief bewezen en men kwam als vanzelf op de idee, deze vliegtuigen te gaan gebruiken als de voorposten van de vloot. Vice-admiraal Ernest J. King zal het bevel voeren over deze verkenners-groep, welke is verdeeld over de bases Coco Solo in de Panama Kanaal Zone en Pearl Harbour op Honoloeloe. De vliegtuig-moederschepen Wright, Langley, Thrush en Owl en het daarbij behoorende lichtere materieel zijn eveneens aan deze groep toegevoegd.

Zoo goed als het Legervliegkorps naast de betrekkelijk lichte twee-motorige bommenwerpers, een aantal zeer zware vier-motorige bommenwerpers heeft aangekocht, welke den naam van vliegende forten ten volle verdienen, is de Marine van oordeel, dat die voorpostengroep eveneens de beschikking behoort te hebben over zeer groote viermotorige vliegbooten, welke nog meer dan de twee-motorige machines van hun basis onafhankelijk zijn en welke geruimen tijd als zelfstandige uniteiten kunnen opereeren. Een dergelijke „Vliegende Dreadnought" is de Consolidated PB2Y-I.

Deze enorme geheel metalen vliegboot is uitgerust met vier luchtgekoelde motoren van 1050 pk elk, welke de machine een snelheid geven van ongeveer 320 km per uur. Ten einde te maken, dat de machine inderdaad geruimen tijd ver van haar basis kan verblijven, is de bootromp behandeld met een speciale soort verf, welke het aanbakken en roestvorming voorkomt. Bij de inrichting der kajuiten is alle aandacht besteed aan het comfort der bemanning. Zoo vinden wij hier ruime en goed geventileerde slaapplaatsen, een longroom, een keuken (compleet met electrisch fornuis en een ijskast), de noodige kleerkasten, een toilet met waschbakken, een verwarmings- en ventilatie-systeem dat het verblijf aan boord zoowel in de tropen als in het hooge noorden aangenaam maakt, en een compleet ingerichte werkplaats voor het verrichten der noodige herstellingen aan motoren of boot. De wanden zijn bekleed met geluiddempend materiaal.

Evenals bij de PBY-vliegbooten, zijn de hulpdrijvers intrekbaar gemaakt en vormen zij in de vlucht de vleugelpunten, hetgeen de prestaties der machine ten goede komt door den verminderden weerstand. Een telefoonnet is geïnstalleerd, waardoor de bemanning onderling steeds contact heeft en de commandant snel en gemakkelijk zijn orders kan uitdeelen. Het electrische net heeft een spanning van 110 Volt en wordt bediend door een aparte installatie, onafhankelijk van de hoofdmotoren.

Achter den vleugel, boven in den romp, bevindt zich een kajuit voor den waarnemer-navigator. Van hier uit heeft deze een onbelemmerd zicht op den hemel voor het schieten van de zon of sterren en hij beschikt over een volledig stel instrumenten voor het doen zijner waarnemingen en voor het bepalen van den te vliegen koers. De gesloten kajuit voor de bestuurders bevindt zich in den bovenkant van den romp voor den vleugel.

Geheel voor in den neus is een gesloten geschutkoepel, terwijl een tweede koepel zich bevindt in den rompstaart, onder het stabilo. Verder bevinden zich nog geschutstanden in de zijwanden en in het dak van den romp, zoodat deze machine zich behoorlijk naar alle kanten kan verdedigen. Een zeer groote bommenlast kan worden meegevoerd. Het vliegbereik bedraagt 8000 km bij, zooals reeds gezegd, een snelheid van ongeveer 320 km per uur.

De eerste machine van dit type heeft in den loop van December proefgevlogen en is daarna overgebracht naar de basis van het Marine Vliegkorps voor het nemen van verdere proeven. Verwacht mag worden, dat in den loop van dit jaar een eerste bestelling op een serie dezer machines zal worden gegeven, zoodat de Amerikaansche vloot in den Stillen Oceaan het volgende jaar over een aantal dezer „Vliegende Dreadnoughts" zal beschikken.

Behalve de Consolidated Aircraft Corporation, welke in Europa door Fokker wordt vertegenwoordigd, kreeg ook Sikorsky Aircraft opdracht voor het bouwen van zoo'n groote vliegboot, waaromtrent echter nog slechts weinig bekend is.

DE CONSOLIDATED P.B.Y. VOOR DE AMERIKAANSCHE MARINE, die een snelheid kan ontwikkelen van 320 km per uur.

HET TRANSATLANTISCHE PROJECT VAN CONSOLIDATED

Een 50-tons vliegboot voor 54 passagiers met een ongekende luxe.

IN aansluiting op hetgeen reeds aan het slot van *Vliegwereld in Vogelvlucht* in dit nummer werd geschreven, haasten we ons, onzen lezers hierbij op de hoogte te brengen met de zoo juist ontvangen details betreffende de nieuwe door Consolidated ontworpen vliegboot. Deze fabriek komt met een project onder den naam van „Transoceanic Air Express" van 50 ton, dat bestemd is voor regelmatig luchtverkeer tusschen Europa en Amerika. De luchtreus biedt voor 54 passagiers dag en nacht accommodatie en vertoont een interieur van ongekende luxe. De bemanning zal bestaan uit 10 koppen. De romp heeft twee dekken, waarover 14 passagierscabines verdeeld zijn, ieder voor twee of drie personen. Een volledige eetzaal is aanwezig achterin, waar twintig gasten kunnen plaats nemen aan zes tafels. In het midden van de romp is een loopgang ontworpen, die met trapjes naar de verschillende hutten en zalen op beide etages toegang geeft. Als bijzonderheid vermelden we dat er aan boord zelfs een aparte cocktailbar aanwezig is. Voor verdere details verwijzen we naar bovenstaande afbeeldingen, die voor zich zelf spreken.

De Consolidated Trans-oceanic is een geheel metalen eendekker, uitgerust met vier motoren van 1500 pk elk, die deze vliegboot een topsnelheid kunnen geven van circa 360 km/u op 3000 meter hoogte. Actieradius met volle belasting ongeveer 5000 km. Leeggewicht 55.500 lbs en volbelast gewicht 110.000 lbs. De nuttige lading is dus 54.500 lbs. Plafond 6000 meter. Spanwijdte vleugel 85 voet, of meer dan 56 meter.

Het is werkelijk verbazingwekkend te zien met welke enorme ontwerpen de Amerikaansche vliegtuigfabrikanten van zins zijn binnenkort voor den dag te komen. Vliegtuigen met afmetingen en een inrichting waarvan men tot voor kort slechts dorst te droomen, staan thans op het punt om verwezenlijkt te worden. Wij beleven ongetwijfeld in 1938 een hoogst belangrijk jaar in de luchtvaart en aan de hand van hetgeen nu reeds bekend is, kan de luchtreiziger zich een denkbeeld vormen over de wijze waarop hij straks in 1939—40 door het luchtruim vervoerd zal worden. Het luchtverkeer is nog zoo jong en de naaste toekomst zal ons leeren dat het nog heel wat meer kan presteeren dan menigeen vermoedt.

In ieder geval is deze Consolidated Trans-oceanic nog slechts een ontwerp, waarop, voor zoover we weten, nog geen bestellingen zijn binnengekomen. Of het zoover komt, zullen we dus dienen af te wachten. Consolidated heeft in vroegere jaren al eens eerder commercieele vliegtuigen gebouwd, doch den laatsten tijd verkreeg de fabriek voornamelijk bekendheid door de toestellen voor de Amerikaansche marine. Thans komt men met een alleszins vooruitstrevend verkeersvliegtuig, dat niet zal nalaten de aandacht te trekken.

De nieuwe Consolidated XPB$_2$ Y-I voorzien van vier Twin Wasp motoren. In de vleugeltips zitten de opklapbare drijvers.

2 S. D. NAVY FLIERS KILLED

SD Sun 1/26/38

A Naval officer and a cadet from San Diego were killed at Scott Field, Belleville, Ill., today, when their plane caught in a dirigible mooring mast and crashed to the ground, the United Press reported to The Sun.

The men were identified as Lieut. Comdr. Emile Chourre, inspector of Naval aircraft at the Consolidated Aircraft Corp., and Aviation Cadet Michael J. Ola of the U. S. Naval reserve stationed at San Diego.

The Navy scout plane was attempting to land after a flight from Dayton, O.

Although weather conditions at the field were said to be perfect and visibility good, a strong wind was blowing from the northwest making a landing possible only by flying over the hangar which houses dirigibles at the field.

The plane circled the field, flew too low and scraped the 250-foot mooring mast. A wing was torn off and the ship plunged to the ground continuing for about 200 yards before coming to rest. The passengers were killed instantly.

Officials at the airport said Lieut. Comdr. Chourre left Dayton at 8 a. m., C. S. T.

Scott Field authorities said Navy officials had been notified and that an investigation would begin as soon as officially authorized.

Lieut. Comdr. Chourre had been attached to the Consolidated Aircraft Corp. for more than a year, and had flown East to confer with the Navy Department in Washington, D. C.

He was returning to his post when the accident occurred. His widow, Catherine, resides at 568 I-av, Coronado.

VLIEGENDE „DREADNOUGHT" IN AMERIKA

De Consolidated PBY met een werkingsfeer van 8000 km onmisbaar voor de Amerikaansche vloot.

SNELHEID ONGEVEER 320 KM PER UUR

SEDERT 1 October 1937 zijn de torpedobooten der Amerikaansche Marine toegevoegd aan de gevechtsvloot en is hun rol van verkenners overgenomen door snelle vliegbooten met een groot vliegbereik. Ruim tweehonderd machines van het type Consolidated PBY zijn voor dit doel gereserveerd. Deze vliegbooten, uitgerust met twee motoren van ruim 1000 pk elk, hebben een vliegbereik van meer dan 6000 km bij een snelheid van ongeveer 230 km per uur, waardoor zij in staat zullen zijn ver voor de vloot uit de bewegingen van den vijand te verkennen en veel eerder berichten hieromtrent den eigen bevelhebber draadloos door te geven dan mogelijk is met de snelste torpedojagers. Waar buitendien deze vliegbooten zwaar bewapend zijn met bommen, kunnen zij den vijand reeds groote schade toebrengen voordat de feitelijke slag is begonnen en bijv. de vliegtuig-moederschepen vernietigen of zoo beschadigen, dat de vijandelijke vloot het moet stellen zonder vliegtuigen en daardoor een groot deel van haar gevechtswaarde zal hebben ingeboet.

Intusschen is deze drastische verandering in de samenstelling van de Amerikaansche vloot geen noodmaatregel. De verschillende groote vluchten in groepsverband, ondernomen met die Consolidated vliegbooten naar Honoloeloe en het Panama Kanaal, hadden de waarde dezer vliegtuigen als lange-afstand verkenners definitief bewezen en men kwam als vanzelf op de idee, deze vliegtuigen te gaan gebruiken als de voorposten van de vloot. Vice-admiraal Ernest J. King zal het bevel voeren over deze verkenners-groep, welke is verdeeld over de bases Coco Solo in de Panama Kanaal Zone en Pearl Harbour op Honoloeloe. De vliegtuig-moederschepen Wright, Langley, Thrush en Owl en het daarbij behoorende lichtere materieel zijn eveneens aan deze groep toegevoegd.

Zoo goed als het Legervliegkorps naast de betrekkelijk lichte twee-motorige bommenwerpers, een aantal zeer zware vier-motorige bommenwerpers heeft aangekocht, welke den naam van vliegende forten ten volle verdienen, is de Marine van oordeel, dat die voorpostengroep eveneens de beschikking behoort te hebben over zeer groote viermotorige vliegbooten, welke nog meer dan de twee-motorige machines van hun basis onafhankelijk zijn en welke geruimen tijd als zelfstandige uniteiten kunnen opereeren. Een dergelijke „Vliegende Dreadnought" is de Consolidated PB2Y-I.

Deze enorme geheel metalen vliegboot is uitgerust met vier luchtgekoelde motoren van 1050 pk elk, welke de machine een snelheid geven van ongeveer 320 km per uur. Ten einde te maken, dat de machine inderdaad geruimen tijd ver van haar basis kan verblijven, is de bootromp behandeld met een speciale soort verf, welke het aanbakken en roestvorming voorkomt. Bij de inrichting der kajuiten is alle aandacht besteed aan het comfort der bemanning. Zoo vinden wij hier ruime en goed geventileerde slaapplaatsen, een longroom, een keuken (compleet met electrisch fornuis en een ijskast), de noodige kleerkasten, een toilet met waschbakken, een verwarmings- en ventilatie-systeem dat het verblijf aan boord zoowel in de tropen als in het hooge noorden aangenaam maakt, en een compleet ingerichte werkplaats voor het verrichten der noodige herstellingen aan motoren of boot. De wanden zijn bekleed met geluiddempend materiaal.

Evenals bij de PBY-vliegbooten, zijn de hulpdrijvers intrekbaar gemaakt en vormen zij in de vlucht de vleugelpunten, hetgeen de prestaties der machine ten goede komt door den verminderden weerstand. Een telefoonnet is geïnstalleerd, waardoor de bemanning onderling steeds contact heeft en de commandant snel en gemakkelijk zijn orders kan uitdeelen. Het electrische net heeft een spanning van 110 Volt en wordt bediend door een aparte installatie, onafhankelijk van de hoofdmotoren.

Achter den vleugel, boven in den romp, bevindt zich een kajuit voor den waarnemer-navigator. Van hier uit heeft deze een onbelemmerd zicht op den hemel voor het schieten van de zon of sterren en hij beschikt over een volledig stel instrumenten voor het doen zijner waarnemingen en voor het bepalen van den te vliegen koers. De gesloten kajuit voor de bestuurders bevindt zich in den bovenkant van den romp voor den vleugel.

Geheel voor in den neus is een gesloten geschutkoepel, terwijl een tweede koepel zich bevindt in den rompstaart, onder het stabilo. Verder bevinden zich nog geschutstanden in de zijwanden en in het dak van den romp, zoodat deze machine zich behoorlijk naar alle kanten kan verdedigen. 18 VLIEGBOOTEN LEGGEN 4000 K.M. AF.

DE achttien vliegbooten van de Amerikaansche marine, die zoo juist den enormen afstand van San Diego in Californië naar Pearl Harbour op Hawaii (4000 K.M.) in groepsverband hebben afgelegd, hebben hiermede gedemonstreerd, dat de Amerikaansche marine over uitmuntend materieel beschikt.

Wel is waar is dit traject reeds ettelijke malen door afzonderlijke vliegtuigen afgelegd, doch in die gevallen werd aan lading zoo goed als uitsluitend benzine meegenomen, terwijl de 18 vliegbooten, die van het type Consolidated PBY zijn, waarvan Fokker de vertegenwoordiging voor geheel Europa bezit, volledig bemand met elk zeven koppen en verder met complete bewapening een normale dienstvlucht volbrachten.

Dit is niet de eerste maal, dat Consolidated vliegbooten in groepsverband dit traject, waarop nauwkeurige navigatie een eerste vereischte is, hebben afgelegd. Reeds verscheidene groepen werden op deze wijze in de Zuidzee gestationneerd, doch dit is wel het grootste aantal vliegtuigen, dat in groepsverband dezen moeilijken tocht ondernam.

S. D. Flier Killed In Crash; Cadet Also Dies

S.D. Union 1/27/38

Coronado Officer's Plane Wrecked on Hop From East

Lt. Comdr. Emile Chourre, 43, pioneer San Diego naval flier, and Michael Ola, 25, flying cadet, were killed yesterday when their two-seated scouting plane crashed into a 250-foot mooring mast at Scott field, Belleville, Ill.

The mishap, in which the plane's right wing was sheared off when it struck the yellow-and-black striped mast, occurred in "excellent" weather and army officers last night could not account for the crash, The Associated Press reported.

Chourre and the cadet were ferrying the plane here from Anacostia, D. C. The wreckage plummeted to the ground 200 yards from the mast. Both men were dead when soldiers reached the scene.

Waar buitendien deze vliegbooten zwaar bewapend zijn met bommen, kunnen zij den vijand reeds groote schade toebrengen voordat de feitelijke slag is begonnen en bijv. de vliegtuig-moederschepen vernietigen of zoo beschadigen, dat de vijandelijke vloot het moet stellen zonder vliegtuigen en daardoor een groot deel van haar gevechtswaarde zal hebben ingeboet.

Intusschen is deze drastische verandering in de samenstelling van de Amerikaansche vloot geen noodmaatregel. De verschillende groote vluchten in groepsverband, ondernomen met die Consolidated vliegbooten naar Honoloeloe en het Panama Kanaal, hadden de waarde dezer vliegtuigen als lange-afstand verkenners definitief bewezen en men kwam als vanzelf op de idee, deze vliegtuigen te gaan gebruiken als de voorposten van de vloot. Vice-admiraal Ernest J. King zal het bevel voeren over deze verkenners-groep, welke is verdeeld over de bases Coco Solo in de Panama Kanaal Zone en Pearl Harbour op Honoloeloe. De vliegtuig-moederschepen Wright, Langley, Thrush en Owl en het daarbij behoorende lichtere materieel zijn eveneens aan deze groep toegevoegd.

Zoo goed als het Legervliegkorps naast de betrekkelijk lichte twee-motorige bommenwerpers, een aantal zeer zware vier-motorige bommenwerpers heeft aangekocht, welke den naam van vliegende forten ten volle verdienen, is de Marine van oordeel, dat die voorpostengroep eveneens de beschikking behoort te hebben over zeer groote viermotorige vliegbooten, welke nog meer dan de twee-motorige machines van hun basis onafhankelijk zijn en welke geruimen tijd als zelfstandige uniteiten kunnen opereeren. Een dergelijke „Vliegende Dreadnought" is de Consolidated PB2Y-I.

Deze enorme geheel metalen vliegboot is uitgerust met vier luchtgekoelde motoren van 1050 pk elk, welke de machine een snelheid geven van ongeveer 320 km per uur. Ten einde te maken, dat de machine inderdaad geruimen tijd ver van haar basis kan verblijven, is de bootromp behandeld met een speciale soort verf, welke het aanbakken en roestvorming voorkomt. Bij de inrichting der kajuiten is alle aandacht besteed aan het comfort der bemanning. Zoo vinden wij hier ruime en goed geventileerde slaapplaatsen, een longroom, een keuken (compleet met electrisch fornuis en een ijskast), de noodige kleerkasten, een toilet met waschbakken, een verwarmings- en ventilatie-systeem dat het verblijf aan boord zoowel in de tropen als in het hooge noorden aangenaam maakt, en een compleet ingerichte werkplaats voor het verrichten der noodige herstellingen aan motoren of boot. De wanden zijn bekleed met geluiddempend materiaal.

Evenals bij de PBY-vliegbooten, zijn de hulpdrijvers intrekbaar gemaakt en vormen zij in de vlucht de vleugelpunten, hetgeen de prestaties der machine ten goede komt door den verminderden weerstand. Een telefoonnet is geïnstalleerd, waardoor de bemanning onderling steeds contact heeft en de commandant snel en gemakkelijk zijn orders kan uitdeelen. Het electrische net heeft een spanning van 110 Volt en wordt bediend door een aparte installatie, onafhankelijk van de hoofdmotoren.

Achter den vleugel, boven in den romp, bevindt zich een kajuit voor den waarnemer-navigator. Van hier uit heeft deze een onbelemmerd zicht op den hemel voor het schieten van de zon of sterren en hij beschikt over een volledig stel instrumenten voor het doen zijner waarnemingen en voor het bepalen van den te vliegen koers. De gesloten kajuit voor de bestuurders bevindt zich in den bovenkant van den romp voor den vleugel.

Geheel voor in den neus is een gesloten geschutkoepel, terwijl een tweede koepel zich bevindt in den rompstaart, onder het stabilo. Verder bevinden zich nog geschutstanden in de zijwanden en in het dak van den romp, zoodat deze machine zich behoorlijk naar alle kanten kan verdedigen. Een zeer groote bommenlast kan worden meegevoerd. Het vliegbereik bedraagt 8000 km bij, zooals reeds gezegd, een snelheid van ongeveer 320 km per uur.

De eerste machine van dit type heeft in den loop van December proefgevlogen en is daarna overgebracht naar de basis van het Marine Vliegkorps voor het nemen van verdere proeven. Verwacht mag worden, dat in den loop van dit jaar een eerste bestelling op een serie dezer machines zal worden gegeven, zoodat de Amerikaansche vloot in den Stillen Oceaan het volgende jaar over een aantal dezer „Vliegende Dreadnoughts" zal beschikken.

Behalve de Consolidated Aircraft Corporation, welke in Europa door Fokker wordt vertegenwoordigd, kreeg ook Sikorsky Aircraft opdracht voor het bouwen van zoo'n groote vliegboot, waaromtrent echter nog slechts weinig bekend is.

DE CONSOLIDATED P.B.Y. VOOR DE AMERIKAANSCHE MARINE, die een snelheid kan ontwikkelen van 320 km per uur.

ddo 20 JAN. 1938

Luchtvaart

Vliegende „Dreadnoughts" in Amerika

„Consolidated P. B. Y." Onmisbaar voor Vloot; Taak Torpedobooten als Verkenners Overgenomen

Zelfstandig Optreden als Voorposten

Lange-Afstand-Verkenners

Sedert 1 October 1937 zijn de torpedobooten der Amerikaansche Marine toegevoegd aan de gevechtsvloot en is hun rol van verkenners overgenomen door snelle vliegbooten met een groot vliegbereik. Ruim tweehonderd machines van het type Consolidated PBY zijn voor dit doel gereserveerd.

Deze vliegbooten, uitgerust met twee motoren van ruim 1000 pk elk, hebben een vliegbereik van meer dan 6.000 km bij een snelheid van ongeveer 230 km per uur, waardoor zij in staat zullen zijn ver voor de vloot uit de bewegingen van den vijand te verkennen en veel eerder berichten hieromtrent den eigen bevelhebber draadloos door te geven dan mogelijk is met de snelste torpedojagers. Daar buitendien deze vliegbooten zwaar bewapend zijn met bommen, kunnen zij den vijand reeds groote schade toebrengen voordat de feitelijke slag is begonnen en bijv. de vliegtuig-moederschepen vernietigen of zóó beschadigen, dat de vijandelijke vloot het moet stellen zonder vliegtuigen en daardoor een groot deel van haar gevechtswaarde zal hebben ingeboet.

Intusschen is deze drastische verandering in de samenstelling van de Amerikaansche vloot geen noodmaatregel, aldus lezen wij in het „Alg. Hbl." De verschillende groote vluchten in groepsverband, ondernomen met die Consolidated-vliegbooten naar Honoloeloe en het Panama-Kanaal, hadden de waarde dezer vliegtuigen als lange-afstand-verkenners definitief bewezen en men kwam als vanzelf op de idee, deze vliegtuigen te gaan gebruiken als de voorposten van de vloot. Vice-admiraal Ernest J. King zal het bevel voeren over deze verkenners-groep, welke is verdeeld over de bases Coco Solo in de Panama Kanaal zône en Pearl Harbour op Honoloeloe. De vliegtuig-moederschepen „Wright", „Langley", „Thrush" en „Owl" en het daarbij behoorende lichtere materieel zijn eveneens aan deze groep toegevoegd.

Zoo goed als het Legervliegkorps naast de betrekkelijk lichte twee-motorige bommenwerpers, een aantal zeer zware viermotorige bommenwerpers heeft aangekocht, welke den naam van vliegende forten ten volle verdienen, is de Marine van oordeel, dat die voorposten-groep eveneens de beschikking behoort te hebben over zeer groote viermotorige vliegbooten, welke nog meer dan de twee-motorige machines van hun basis onafhankelijk zijn en welke geruimen tijd als zelfstandige eenheden kunnen opereeren. Een dergelijke „Vliegende Dreadnought" is de Consolidated PB2Y-I.

Snelheid ongeveer 320 Km per Uur

Deze enorme, geheel metalen vliegboot is uitgerust met vier luchtgekoelde motoren van 1050 pk elk, welke de machine een snelheid geven van ongeveer 320 km per uur. Teneinde te maken, dat de machine inderdaad geruimen tijd ver van haar basis kan verblijven, is de bootromp behandeld met een speciale soort verf, welke het aanbakken en roestvorming voorkomt. Bij de inrichting der kajuiten is alle aandacht besteed aan het comfort der bemanning. Zoo vinden wij hier ruime en goed geventileerde slaapplaatsen, een longroom, een keuken (compleet met electrisch fornuis en een ijskast), de noodige kleerkasten, een toilet met waschbakken, een verwarmings- en ventilatie-systeem dat het verblijf aan boord zoowel in de tropen als in het hooge Noorden aangenaam maakt, en een compleet ingerichte werkplaats voor het verrichten der noodige herstellingen aan motoren of boot. De wanden zijn bekleed met geluiddempend materiaal.

Evenals bij de PBY-vliegbooten, zijn de hulpdrijvers intrekbaar gemaakt en vormen zij in de vlucht de vleugelpunten, hetgeen de prestaties der machine ten goede komt door den verminderden weerstand. Een telefoonnet is geïnstalleerd, waardoor de bemanning onderling steeds contact heeft en de commandant snel en gemakkelijk zijn orders kan uitdeelen. Het electrische net heeft een spanning van 110 Volt en wordt bediend door een aparte installatie, onafhankelijk van de hoofdmotoren.

Achter den vleugel, boven in den romp, bevindt zich een kajuit voor den waarnemer-navigator. Van hier uit heeft deze een onbelemmerd zicht op den hemel voor het schieten van de zon of sterren en hij beschikt over een volledig stel instrumenten voor het doen zijner waarnemingen en voor het bepalen van den te vliegen koers. De gesloten kajuit voor de bestuurders bevindt zich in den bovenkant van den romp vóór den vleugel.

Werkingssfeer 8.000 Km

Geheel voor in den neus is een gesloten geschutkoepel, terwijl een tweede koepel zich bevindt in den rompstaart, onder het stabilo. Verder bevinden zich nog geschutstanden in de zijwanden en in het dak van den romp, zoodat deze machine zich behoorlijk naar alle kanten kan verdedigen. Een zeer groote bommenlast kan worden meegevoerd. Het vliegbereik bedraagt 8.000 km bij, zooals reeds gezegd, een snelheid van ongeveer 320 km per uur.

De eerste machine van dit type heeft in den loop van December proefgevlogen en is daarna overgebracht naar de basis van het Marine Vliegkorps voor het nemen van verdere proeven. Verwacht mag worden, dat in den loop van dit jaar een eerste bestelling op een serie dezer machines zal worden gegeven, zoodat de Amerikaansche vloot n den Stillen Oceaan het volgend jaar over een aantal dezer „Vliegende Dreadnoughts" zal beschikken.

Behalve de Consolidated Aircraft Corporation, welke in Europa door Fokker wordt vertegenwoordigd, kreeg ook Sikorsky Aircraft opdracht voor het bouwen van zoo'n groote vliegboot, waaromtrent echter nog slechts weinig bekend is.

18 VLIEGBOOTEN LEGGEN 4000 K.M. AF.

DE achttien vliegbooten van de Amerikaansche marine, die zoo juist den enormen afstand van San Diego in Californië naar Pearl Harbour op Hawaii (4000 K.M.) in groepsverband hebben afgelegd, hebben hiermede gedemonstreerd, dat de Amerikaansche marine over uitmuntend materieel beschikt.

Wel is waar is dit traject reeds ettelijke malen door afzonderlijke vliegtuigen afgelegd, doch in die gevallen werd aan lading zoo goed als uitsluitend benzine meegenomen, terwijl de 18 vliegbooten, die van het type Consolidated PBY zijn, waarvan Fokker de vertegenwoordiging voor geheel Europa bezit, volledig bemand met elk zeven koppen en verder met complete bewapening een normale dienstvlucht volbrachten.

Dit is niet de eerste maal, dat Consolidated vliegbooten in groepsverband dit traject, waarop nauwkeurige navigatie een eerste vereischte is, hebben afgelegd. Reeds verscheidene groepen werden op deze wijze in de Zuidzee gestationneerd, doch dit is wel het grootste aantal vliegtuigen, dat in groepsverband dezen moeilijken tocht ondernam.

S. D. Flier Killed In Crash; Cadet Also Dies

S.D. Union 1/27/38

Coronado Officer's Plane Wrecked on Hop From East

Lt. Comdr. Emile Chourre, 43, pioneer San Diego naval flier, and Michael Ola, 25, flying cadet, were killed yesterday when their two-seated scouting plane crashed into a 250-foot mooring mast at Scott field, Belleville, Ill.

The mishap, in which the plane's right wing was sheared off when it struck the yellow-and-black striped mast, occurred in "excellent" weather and army officers last night could not account for the crash, The Associated Press reported.

Chourre and the cadet were ferrying the plane here from Anacostia, D. C. The wreckage plummeted to the ground 200 yards from the mast. Both men were dead when soldiers reached the scene.

VISIBILITY GOOD

"I don't see why they didn't see it, unless they weren't looking," an army major said, referring to the mast which stands 600 yards southeast of the area used in plane operations and which was built when the field was a lighter-than-air base.

The ceiling was unlimited and visibility was 10 miles when the plane circled for a landing, veered suddenly and sharply and rammed the mast. The craft was demolished.

Chourre's death came within a few weeks after he had completed 20 years' flying in the navy without a serious accident. Born in San Francisco Aug. 28, 1894, Chourre was attending the University of California when America entered the World war. He enlisted in the naval reserve corps, won his wings as a naval aviator, and for a time was stationed with Comdr. Marc Mitcher at the Naval Air base at Miami.

In 1919 he returned to San Diego for duty with the navy's first spotting or observation squadron. Subsequently he was attached to the aircraft carrier Langley and later became engineering officer of the naval air station. With the advent of the flying boat Chourre transferred from land plane flying to the "big boats" and participated in many of the navy's outstanding flights with this type of aircraft.

AIRCRAFT INSPECTOR

Because of his thorough knowledge of all types of navy planes he was assigned by the navy department to act as official announcer and commentator at the National Air races in Cleveland in 1934-35. He was appointed June 30, 1936, as inspector of naval aircraft at the Consolidated factory at Lindbergh field, a position he held at the time of his death.

The naval officer is survived by his wife and two children, residing at 568 I ave., Coronado.

Ola, 25, recently had completed the flying cadet course at Pensacola and was en route here for further flying training before being assigned to duty aboard one of the carriers. He resided in Geisto... Pa.

FLIERS COVER 2,631 MILES IN MASS FLIGHT

Eighty Men Pilot Craft Over Pacific From San Diego In 21 Hours 48 Minutes

McDade Puts Plane Down In Pearl Harbor at 4:29 A. M. To Receive Welcome

By JOHN TERRY

Thirteen officers and 67 enlisted men of the fleet air base are resting today after bringing the 12 new patrol bombing planes of Squadron VP-6 safely to Pearl Harbor through a violent storm in the closing hours of a flight from San Diego.

Behind the silver hulls of the navy's newest aircraft lies a 2,631 mile ocean route, successfully covered in a 21 hour 48 minute flight, which ended when Lt. Cmdr. William M. McDade, squadron commander, radioed his arrival time at Pearl Harbor at 3:50 this morning.

WASHINGTON, Jan. 29. (AP)— Secretary of the Navy Claude A Swanson expressed the navy's elation today at the completion this morning of the flight of 12 new patrol planes from San Diego to Honolulu.

"While the flight was routine for the delivery of new planes to replace obsolete planes at Honolulu," the secretary said, "it was nevertheless a grueling test of the new patrol planes and the skill of the operating personnel.

"To fly 12 large planes in formation through all kinds of weather for a distance of 2,600 miles and maintain a schedule of departure and arrival fixed several weeks ago is a gratifying example of the efficiency of our naval aviation."

His plane, first to land, swept down on the channel surface opposite the air base at 4:29. A few minutes later he was ashore, bringing with him the first detailed report of an hour's fight with a storm encountered approximately 300 miles from Pearl Harbor at midnight.

Radio Reports Bad Weather

Preliminary indications of weather trouble were afforded by radio messages, the first at 12 p. m. last night saying, "Am in very bad weather at 12,000 feet in vicinity of Pelican (aircraft tender). Give weather report immediately."

At 3 the communications office at the fleet air base picked up another message reading, "Have been trapped in heavy weather for the past hour. Solid from surface to 15,000 feet. Am in the clear now. Coming in on bearings."

Just as a red dawn was breaking behind Diamond Head, Lt. (jg) J. B. H. Young's plane, last of the group to land, touched water at 6:35, bringing to a close the biggest mass flight ever made between the mainland and Hawaii — a flight which the navy describes as a

(Continued on Page 9. Col. 1)

SWANSON LAUDS HAWAII FLIGHT

By United Press

WASHINGTON, Jan. 20.—Secretary of the Navy Claude A. Swanson today summarized in the words, "Well done," his praise for the flight of the 18 naval patrol planes from San Diego to Pearl Harbor, Hawaii.

Swanson issued a formal statement, however, saying:

"The successful delivery flight of 18 patrol planes, non-stop, between San Diego and Pearl Harbor, has again demonstrated the soundness of the training methods and the reliability of the material employed by the Navy.

"I again offer my congratulations to the officers and men carrying out these flights.

12 NAVY PLANES ARRIVE AT P. H.

(Continued from Page 1)

routine replacement of old craft here.

It was 6:02 yesterday morning when the squadron formed over San Diego and sped on its overwater path to Pearl Harbor.

Approximaetly 170 men and women, and even a few children, lined the shoreside of the squadron's hangar to welcome the fliers.

Capt. Kenneth Whiting, air base commander, and Cmdr. Henry M. Mullinnix, air base executive officer, were among the first to greet Cmdr. McDade.

Capt. Whiting laid an arm around the squadron commander's shoulder.

"Nice work, Shorty," he said.

Trying Voyage Completed

It was a commendation from one of the navy's first airplane pilots to a flier who had brought his planes through a trying voyage.

Shortly before 4 the red and green lights of the squadron appeared in the eastern sky approaching Pearl Harbor. The soft hum of engines swelled to a roar as the planes swept over the base.

"They're making sweet music," an enlisted man commented.

The moon was riding almost directly overhead, shining through fleecy clouds. Against it the planes were silhouetted like immense black birds.

Green rockets arched into the sky, signaling to the fliers that the channel was clear for a landing.

Circles Base Twice

Shortly after 3:50 Cmdr. McDade came in for a landing. His plane roared low over the water, then rose with blue fire streaming from exhausts of the two engines, to circle over the base again.

He was down at 4:27. Beach crews met his plane at the ramp's edge and brought it ashore by tractor.

Remaining planes made their landings in accordance with flares fired from shore, green denoting a clear channel, red warning of obstructions.

Occasional pieces of debris drifted down the channel, washed into the water by heavy rains which accompanied a storm that broke over Oahu at midafternoon.

Morning Breaks Clear

Serene morning skies bore little resemblance to the black clouds that had piled up over the island earlier.

The aircraft tender Pelican from Pearl Harbor, stationed 300 miles toward San Diego from Pearl Harbor, had notified the squadron before its takeoff on the coast that a thunder shower was gathering over the islands.

Squadron personnel is expected back on duty Monday. The new twin engined planes, capable of flying in excess of 3,400 miles, face a strenuous period of training operations, making up for time which crews lost while their planes were being completed.

CRASH VICTIM PIONEER S. D. NAVAL FLIER

Comdr. Chourre Recently Completed 20 Years Of Service

Lieut. Comdr. Emile Chourre, 43-year-old San Diego Navy flier who died yesterday with Michael Ola, 25, in a plane crash at Belleville, Ill., was one of San Diego's early fliers, it was disclosed today.

The body of the veteran aviator, who had just completed 20 years of Navy flying, will be shipped to San Diego for burial, North Island officials reported today. Interment will occur at Ft. Rosecrans National Cemetery, with full military honors.

Lieut. Comdr. Chourre was attending the University of California when the United States entered the World War. He enlisted in Navy aviation, won his wings, and was stationed in Miami.

In 1919, he came to San Diego, where he was attached to the Navy's first observation squadron. Later, after serving duty on the aircraft carrier, Langley, he became engineering officer at the Naval Air Station, North Island. He was noted for his thorough knowledge of all types of Navy planes, and because of this, was named official announcer at the 1934-35 National Air races in Cleveland.

A year and a half ago, Comdr. Chourre was appointed inspector of naval aircraft at Consolidated Aircraft Corp., Lindbergh Field. His widow and two children live at 568 I-av, Coronado. Ola, who died with Chourre, was a flying cadet, scheduled to assume duties here.

Luchtvaart en Automobilisme

De vliegende „Dreadnought" in Holland

De Consolidated PBY met een werkingssfeer van 8000 KM.

320 KM PER UUR

Naar bekend, heeft Fokker licentie gekregen op de „Consolidated PBY"; dat „Anton" een fijne neus gehad heeft, moge uit het ondervolgende, ontleend aan de Msb., blijken.

Sedert 1 October 1937 zijn de torpedobooten der Amerikaansche Marine toegevoegd aan de gevechtsvloot en is hun rol van verkenners overgenomen door snelle vliegbooten met een groot vliegbereik. Ruim tweehonderd machines van het type Consolidated PBY zijn voor dit doel gereserveerd. Deze vliegbooten, uitgerust met twee motoren van ruim 1000 pk elk, hebben een vliegbereik van meer dan 6000 km bij een snelheid van ongeveer 230 km per uur, waardoor zij in staat zullen zijn ver voor de vloot uit de bewegingen van den vijand te verkennen en veel eerder berichten hieromtrent den eigen bevelhebber draadloos door te geven dan mogelijk is met de snelste torpedojagers. Waar buitendien deze vliegbooten zwaar bewapend zijn met bommen, kunnen zij den vijand reeds groote schade toebrengen voordat de feitelijke slag is begonnen en bijv. de vliegtuig-moederschepen vernietigen of zoo beschadigen, dat de vijandelijke vloot het moet stellen zonder vliegtuigen en daardoor een groot deel van haar gevechtswaarde zal hebben ingeboet.

Intusschen is deze drastische verandering in de samenstelling van de Amerikaansche vloot geen noodmaatregel. De verschillende groote vluchten in groepsverband ondernomen met die Consolidated vliegbooten naar Honoloeloe en het Panama Kanaal hadden de waarde dezer vliegtuigen als lange-afstand verkenners definitief bewezen en men kwam als vanzelf op de idee, deze vliegtuigen te gaan gebruiken als de voorposten van de vloot. Vice-admiraal Ernest J. King zal het bevel voeren over deze verkenners-groep, welke is verdeeld over de basis Coco Solo in de Panama Kanaal Zône en Pearl Harbour op Honoloeloe. De vliegtuig-moederschepen Wright, Langley, Thrush en Owl en het daarbij behoorende lichtere materieel zijn eveneens aan deze groep toegevoegd.

Achter den vleugel, boven in den romp, bevindt zich een kajuit voor den waarnemernavigator. Van hier uit heeft deze een onbelemmerd zicht op den hemel voor het schieten van de zon of sterren en hij beschikt over een volledig stel instrumenten voor het doen zijner waarnemingen en voor het bepalen van den te vliegen koers. De gesloten kajuit voor de bestuurders bevindt zich in den bovenkant van den romp voor den vleugel.

Geheel voor in den neus is een gesloten geschutkoepel, terwijl een tweede koepel zich bevindt in den rompstaart, onder het stabilo.

Verder bevinden zich nog geschutstanden in de zijwanden en in het dak van den romp, zoodat deze machine zich behoorlijk naar alle kanten kan verdedigen. Een zeer groote bommenlast kan worden meegevoerd. Het vliegbereik bedraagt 8000 km bij, zooals reeds gezegd, een snelheid van ongeveer 320 km per uur.

De eerste machine van dit type heeft in den loop van December proefgevlogen en is daarna overgebracht naar de basis van het Marine Vliegkorps voor het nemen van verdere proeven. Verwacht mag worden, dat in den loop van dit jaar een eerste bestelling op een serie dezer machines zal worden gegeven, zoodat de Amerikaansche vloot in den Stillen Oceaan het volgende jaar over een aantal dezer „Vliegende Dreadnoughts" zal beschikken.

Behalve de Consolidated Aircraft Corporation, welke in Europa door Fokker wordt vertegenwoordigd, kreeg ook Sikorsky Aircraft opdracht voor het bouwen van zoo'n groote vliegboot, waaromtrent echter nog slechts weinig bekend is.

De consolidated P. B. Y. voor de Amerikaansche Marine, die een snelheid kan ontwikkelen van 320 km per uur

VLIEGEND FORT

Zoo goed als het Legervliegkorps naast de betrekkelijk lichte twee-motorige bommenwerpers, een aantal zeer zware vier-motorige bommenwerpers heeft aangekocht, welke den naam van vliegende forten ten volle verdienen, is de Marine van oordeel, dat die voorpostengroep eveneens de beschikking behoort te hebben over zeer groote viermotorige vliegbooten, welke nog meer dan de twee-motorige machines van hun basis onafhankelijk zijn en welke geruimen tijd als zelfstandige uniteiten kunnen opereeren. Een dergelijke „Vliegende Dreadnought" is de Consolidated PB2Y-I.

Deze enorme geheel metalen vliegboot is uitgerust met vier luchtgekoelde motoren van 1050 pk elk, welke de machine een snelheid geven van ongeveer 320 km per uur. Ten einde te maken, dat de machine inderdaad geruimen tijd ver van haar basis kan verblijven, is de bootromp behandeld met een speciale soort verf, welke het aanbakken en roestvorming voorkomt. Bij de inrichting der kajuiten is alle aandacht besteed aan het comfort der bemanning. Zoo vinden wij hier ruime en goed geventileerde slaapplaatsen, een longroom, een keuken (compleet met electrisch fornuis en een ijskast), de noodige kleerenkasten, een toilet met waschbakken, een verwarmings- en ventilatie-systeem dat het verblijf aan boord zoowel in de tropen als in het

● The Navy dispatched fourteen big Consolidatel patrol boats on another routine transfer of equipment from San Diego to Coco Solo. C. Z., Dec. 8. Twenty-one and a half hours later they had all arrived in first class shape. The force of ninety-eight officers and men.

18 San Diego Bombers Hop for Hawaii Today

WORLD CAPITALS WATCH FLIGHT; 553 MILLION NAVY BILL REPORTED TO HOUSE

Radio Chains Will Carry Description of Start From North Island; Adm. Leahy Warns of Increasing Threats to International Peace.

S D Union 1/18/38

San Diegans, including navy personnel, who read with interest yesterday the reports from Washington about Adm. Leahy's testimony that world political conditions demand strengthening of the national defense, also saw some concrete aspects of the situation close at hand. For one thing, a report spread that the light cruisers Trenton, Milwaukee and Memphis, now on the way to Australia, may remain in Asiatic waters indefinitely.

Meanwhile last-minute preparations were made to hasten the flight of 18 powerful new patrol bombing planes from San Diego to Honolulu a day earlier than originally planned. The change was due to weather conditions, which promise to be favorable to the earlier start. That this great mass flight is being watched with keen interest not only in America but abroad is the firm belief of local aviation experts.

A description of the departure of 18 navy patrol planes—largest mass flight attempted over a long distance—for Honolulu, will be aired over KGB this morning at 8. In case of postponement, KGB will go on the air as soon as the flight begins. KFSD and NBC broadcast is scheduled for 8:30. Van C. Newkirk, Louis Hall and Dave Young are to describe activities from vantage point atop a hangar at North island and then will shift controls to Sid Fuller and Eddie Tidwell on the Pickwick hotel roof for a description of the planes in flight.

Largest Naval Mass Jaunt Set for 8:40

Eighteen multimotored long-range patrol bombers, the largest and most powerful flotilla of aircraft that ever has attempted an ocean flight in mass formation, will roar out of San Diego this morning on a 2570-mile continuous flight to Hawaii. The first plane is scheduled to take off at 8:40.

Although classified by the navy high command "as a ferry detachment to Pearl Harbor," the flight will be watched by the capitals of Europe and Asia with keen interest.

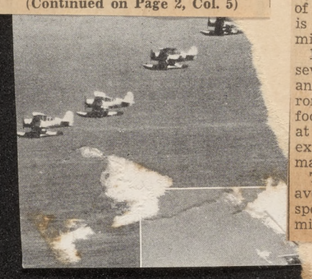
Arrangements are being made by radio networks, newsreels and press cameramen to cover the event. NBC will have a total of 102 stations from coast to coast on a network with Don Wilson and Clinton Twiss doing the announcing from North Island. Five newsreel crews arrived from Los Angeles last night.

Due In 18-20 Hours

Rear Adm. Ernest J. King, commander, aircraft, base force, said the planes, under command of Lt. Comdrs. S. H. Warner and W. G. Tomlinson, will follow the great circle route from Pt. Loma to Diamond Head. They should reach Hawaii in 18 to 20 hours, or between 4 and 6 o'clock tomorrow morning, Pacific coast time.

Probability of storms sweeping down from the Aleutian islands into the California-Hawaii airway led to the determination to advance the flight 24 hours. Indications are that favorable weather will prevail in the vicinity of Pearl Harbor at the time of landing. For the first 1000 miles of the flight the weather will be somewhat spotty, with both head-on and beam winds. These handicaps gradually will be elim-

(Continued on Page 2, Col. 5)



18 BOMBERS HOP FOR HAWAII TODAY

(Continued from Page One)

inated as the squadrons near the islands.

Ships to Guard Route

Three surface ships will act as plane guards and disseminate weather information. The aircraft tender Langley's station is midway between San Diego and Honolulu. Five hundred miles west is the destroyer Litchfield. The destroyer Reid is 500 miles east of the Langley.

The air fleet comprises patrol squadron 10, consisting of 12 Consolidated-built bombers, and six planes of squadron 9. Squadron 10 is to remain based at Pearl Harbor. The planes of squadron 9 are to be turned over to patrol squadron 4. The personnel of No. 9 will return to San Diego by steamer, and probably will ferry 12 more planes to Hawaii in June.

The flight is the fifth mass distance ocean hop by aircraft of the scouting force within 12 months. Two of these flights, of 12 planes each, were made to Hawaii, and two of 12 and 14 planes each to Panama. All were carried out without mishap and in fast time.

Ships Thoroughly Tested

For nearly two months the personnel of squadrons 9 and 10 have been carrying out a series of intensive test flights with the 18 planes, flying both by day and night. Each of the huge offshore patrol bombers is capable of flying more than 4000 miles without refueling.

Each plane will carry a crew of seven officers and men. The pilot and commander of plane 2 of squadron 9 is Lt. Tom Hamilton, former football coach of the naval academy at Annapolis. It will be his first experience in an overseas mass formation flight.

The voyage will be made at an average altitude of 10,000 feet. The speed will vary from 120 to 170 miles an hour.

NAVY BOMBERS SET NEW MARK ON HAWAII HOP

S D Sun 1/19/38

18 S. D. Planes Reach Pearl Harbor In 20½ Hours After Bucking Headwinds; Trip Without Trouble

Sliding through the air beneath a brilliant moon, 18 of the Navy's huge twin-motored patrol planes reached Hawaii at 5:48 a. m. today, 20 hours and 30 minutes after leaving San Diego harbor, to establish a new navy air record between California and Hawaii.

When the last airboat had landed at Pearl Harbor base, the Navy had completed its fifth long-distance mass flight in a year.

In this time, the Navy has launched a mighty sky fleet of 68 planes carrying more than 500 officers and men over a total air distance of 14,010 miles.

With monotonous regularity the Navy has sent its ships into the air—42 to Hawaii and 26 to Coco Solo in the Panama Canal Zone—in world-reminding demonstrations of the new aerial strength of a Navy being rushed into the most powerful strength of its history.

Delivery of these giant airboats to Panama and mid-Pacific bases has strengthened the far-flung "first line of defense" which the Navy has erected on a great semi-circle from Alaska to Hawaii to Panama.

The 18 planes which reached Hawaii this morning droned on through the night without incident, but in slower time than had been expected. The average speed was cut down because of wind resistance that held the bombers to a little more than a 100-mile-an-hour clip over the

NAVY BOMBERS SET NEW MARK ON HAWAII HOP

20 Hours And 30 Minutes Required For Long Mass Flight

(Continued from Page 1)

early part of the flight.

They traveled the entire distance in the two V-shaped formations. Along the route the Navy had spaced three ships, the Reid, the Langley and the Talburt, to aid in case of trouble.

Lieut. Comdr. Warner, who insisted the flight was "only routine" despite its magnitude, described the trip as "so-so."

"Strong headwinds slowed us up exceedingly on the first third of the trip," he said. "It was cloudy a good part of the way but we didn't strike any rain.

"The only difficulty we encountered was icing on the propellors and the wings. There was no trouble with carburetors, however, and the trip at no time was dangerous."

"There was no trouble with any ship, to my knowledge," the commander added, "and we maintained sight contact throughout."

The squadrons flew their charted route except once when they bore slightly to the south. All the control vessels except the Reid were sighted, the commander said.

Easy Trip

The officers reported that no

JAPANESE SNUB HOP

By United Press

PEARL HARBOR, HONOLULU, T. H., Jan. 19.—Arrival here today of 18 naval bombers after a non-stop flight from San Diego was not covered by newspapermen from local Japanese papers. Neither the Hochi nor Nippu Jiji asked the Navy to furnish passes so its representatives could enter the Navy yard. Naval authorities were asked if passes would have been granted if requested and answered, "That is a situation that would have been handled if it had come up."

THE EVENING TRIBUNE, San Diego, Cal., Tuesday, Jan. 25, 1938

Fleet Reviews Accomplishments Of Consair During Year

Two Consolidated Aircraft Corp. officials, C. A. Van Dusen, vice president and works manager, and Gordon E. Mounce, now on their way to Europe are expected to obtain enough foreign business to keep the aircraft plant here operating for many years, Maj. Reuben H. Fleet, president of Consolidated reported in "The President's Column" of the current issue of Consolidator, monthly publication of the plant. Fleet devotes the article to a summary of Consolidated achievements in 1937 and some of the prospects for 1938. The article, written about the first of the year, refers to the San Diego-to-Honolulu flight of 18 Consolidated planes as a coming event. This flight was completed successfully last week. His summary follows:

During the year, Consolidated delivered to our navy 88 (101 to date) PBY type flying boats, plus spares equivalent to 17½ more. At the opening of 1937, we had on hand orders totaling $18,000,000. Additional orders were received during the year for nearly $8,000,000 worth of flying equipment and the company still has a backlog of nearly $14,000,000 to start on in 1938. The Argentine government took delivery of six of our P2Y-3 type airboats, plus spares. Mr. Archbold accepted two GUBA (PBY) boats, one of which was turned over to the Russian government to be used in search of the Russian fliers lost in the Arctic and the Russian government itself took delivery of a commercial version of the PBY-1.

Progress Followed

While we point with pride at the amount of business that we have done and the number of airboats we have delivered, it is more important to Consolidated to follow the progress of our products after they have been turned over to our customers.

Let us first take the case of the PBY's that Uncle Sam is now using so extensively in naval operations. When, on Jan. 28, Capt. Whiting sent a brief radio from Pearl Harbor, Hawaii, to Adm. King in San Diego saying "Patrol Squadron 6 arrived in excellent condition, reported for duty, ready for service," it was characteristic of what is expected and received from Consolidated boats in service. Such a short message, after the successful flight of 12 flying boats across the Pacific for 2553 miles in record-breaking time, for the first formation flight of that length in history, tells little of the story behind such a flight. When, however, another 12 PBY-1 flying boats took off from San Diego on April 12 and landed San Diego on April 12 and landed in perfect order at Pearl Harbor, breaking the same recodd, it was indeed "routine" for the navy and for Consolidated flying boats. This was followed on June 21 by another record-breaking flight of 3087 miles, the only difference being a change in direction from San Diego to Coco Solo, Canal Zone. To show how simple it was the navy flew 14 more PBY's to Coco Solo on Dec. 8 in the unheard of time of 22 hours and 20 minutes. Thus four record-breaking mass formation flights were completed in the year — all with Consolidated air boats and all in "routine" without mishap. At the time of writing, it is reported that at least 18 more Consolidated PBY's are to take off for Pearl Harbor on the 19th of January. In addition, the navy has used PBY's on dozens of other "routine" flights and rough water landings, etc., in connection with navy activities.

Flight First of Kind

While of an entirely different nature, the flights of Mr. Archbold during the year 1937 with his Consolidated Gubas are accomplishments that have received the commendation of all aviation followers. Not content with flying Guba from San Diego to Boulder lake and from San Diego to Lake Tahoe (where take-off was made at an altiture of 6425 feet) Mr. Archbold made a non-stop flight with Guba from San Diego to New York, the first time this has ever been done in a flying boat. At the time of the loss of the Russian fliers in the Arctic, the Russian government persuaded Mr. Archbold to release his ship as it was the only one available with sufficient range to cover the vast arctic wastes in this search. Flown by Sir Hubert Wilkins and Herbert Hollick-Kenyon, it covered over 19,000 miles of polar regions, returning south only when the freeze-up prevented further water operation. The second Guba was then built for Mr. Archbold and while he has not had it for long, it has already completed a round trip to Cuba, flying non-stop from San Diego to Miami on the first leg of the journey.

Proud of Performance

And so we may well be proud of the performance of Consolidated products during the year 1937. Now let us look into the reasons behind the efficient production that has been carried on in our company. Mr. John D. Hertz, one of our directors, who paid us his first visit on Jan. 4, after a careful inspection of our plant, remarked that it was the finest manufacturing plant that he had ever seen in his life and he considered our type of workmen the best with which he had ever been in contact. This is praise indeed as Mr. Hertz has a knowledge of factories and personnel equalled by few. There is no doubt but that our plant is in as fine condition as possible right now. Our additions that were completed at the opening of 1937 gave us the second largest aircraft factory in the country and we are proud to say we are the largest producers of airboats in the world. Production methods employed throughout Consolidated closely represent those in the most efficient manufacturing plants in the world today.

Best in Existence

The management feels that the employe-employer relations within our organization, are the best in existence. The agreement entered into with Aircraft Lodge 1125 of the International Association of Machinists, on the 26th of April, 1937, has worked out to the best interests of everyone. Regular meetings are held with representatives of our employes and differences are ironed out with prompt dispatch almost as they occur. Successful management prefers this type of relationship, not for humane reasons alone but for the good of the corporation through better workmanship and better products as a result of perfect coordination with the workmen.

And so we feel better able to serve the needs of the world in aviation today than ever before. We have done a good job for Uncle Sam and are still working on the latest in flying boats for him. The Consolidated XPB2Y-1 four-engine Flying Dreadnaught which has just been completed and flown, is probably the largest and fastest airboat that has yet been developed. With speed and load-carrying ability in excess of anything flying today it should prove a formidable addition to our navy air arm and national defense. We hope to sell commercial versions of this type for transatlantic passenger service. In the meantime, our PBY-1 type airboat has been released for export and in the 15th of this month, Mrs. C. A. Van Dusen, vice president and works manager, and Mr. Gordon E. Mounce, who represented Consolidated for some years in Europe, are sailing on the Isle de France for Europe to further our interests there.

Let us take a look at what we have to offer. Airboats present tremendous advantages for world-wide operation. They require no expensive landing fields, utilizing any open water for this purpose. With a boat such as the PBY-1 that Mr. Archbold has already landed and taken off at altitudes of nearly 6500 feet and which he plans to operate in New Guinea on a lake 12,000 feet high, it is doubly true that every bit of open water is available for landing. PBY's have been flight tested and taken off with one motor completely dead—not idling, and have demonstrated their ability to climb to cruising altitude and maintain same on one motor. Their cruising range of over 4000 miles makes them invaluable as commercial cargo planes over any airway or over any ocean in the world. Their reliability has been proved in actual service with our navy. In addition to their regular service duties, the routine transfer of 50 airboats of their size in four mass flights totaling 141,400 non-stop airplane miles is an accomplishment unequalled by any aircraft in the world.

So we know we have the best product in the world to sell and we are now in a position to offer it to friendly foreign nations at a price that we would be unable to meet were we not in full production. It is expected that Messrs. Van Dusen and Mounce will obtain sufficient business to keep our force going full blast for some years to come.

We can well say that "progress has been made" in 1937.

FLIERS COVER 2,631 MILES IN MASS FLIGHT

Eighty Men Pilot Craft Over Pacific From San Diego In 21 Hours 48 Minutes

McDade Puts Plane Down In Pearl Harbor at 4:29 A. M. To Receive Welcome

By JOHN TERRY

Thirteen officers and 67 enlisted men of the fleet air base are resting today after bringing the 12 new patrol bombing planes of Squadron VP-6 safely to Pearl Harbor through a violent storm in the closing hours of a flight from San Diego.

Behind the silver hulls of the navy's newest aircraft lies a 2,631 mile ocean route, successfully covered in a 21 hour 48 minute flight, which ended when Lt. Cmdr. William M. McDade, squadron commander, radioed his arrival time at Pearl Harbor at 3:50 this morning.

WASHINGTON, Jan. 29. (AP)— Secretary of the Navy Claude A Swanson expressed the navy's elation today at the completion this morning of the flight of 12 new patrol planes from San Diego to Honolulu.

"While the flight was routine for the delivery of new planes to replace obsolete planes at Honolulu," the secretary said, "it was nevertheless a grueling test of the new patrol planes and the skill of the operating personnel.

"To fly 12 large planes in formation through all kinds of weather for a distance of 2,600 miles and maintain a schedule of departure and arrival fixed several weeks ago is a gratifying example of the efficiency of our naval aviation."

His plane, first to land, swept down on the channel surface opposite the air base at 4:29. A few minutes later he was ashore, bringing with him the first detailed report of an hour's fight with a storm encountered approximately 300 miles from Pearl Harbor at midnight.

Radio Reports Bad Weather

Preliminary indications of weather trouble were afforded by radio messages, the first at 12 p. m. last night saying, "Am in very bad weather at 12,000 feet in vicinity of Pelican (aircraft tender). Give weather report immediately."

At 3 the communications office at the fleet air base picked up another message reading, "Have been trapped in heavy weather for the past hour. Solid from surface to 15,000 feet. Am in the clear now. Coming in on bearings."

Just as a red dawn was breaking behind Diamond Head, Lt. (jg) J. B. H. Young's plane, last of the group to land, touched water at 6:35, bringing to a close the biggest mass flight ever made between the mainland and Hawaii — a flight which the navy describes as a

(Continued on Page 9. Col. 1)

SWANSON LAUDS HAWAII FLIGHT

By United Press

WASHINGTON, Jan. 20.—Secretary of the Navy Claude A. Swanson today summarized in the words, "Well done," his praise for the flight of the 18 naval patrol planes from San Diego to Pearl Harbor, Hawaii.

Swanson issued a formal statement, however, saying:

"The successful delivery flight of 18 patrol planes, non-stop, between San Diego and Pearl Harbor, has again demonstrated the soundness of the training methods and the reliability of the material employed by the Navy.

"I again offer my congratulations to the officers and men carrying out these flights.

12 NAVY PLANES ARRIVE AT P. H.

(Continued from Page 1)

routine replacement of old craft here.

It was 6:02 yesterday morning when the squadron formed over San Diego and sped on its over-water path to Pearl Harbor.

Approximaetly 170 men and women, and even a few children, lined the shoreside of the squadron's hangar to welcome the fliers.

Capt. Kenneth Whiting, air base commander, and Cmdr. Henry M. Mullinnix, air base executive officer, were among the first to greet Cmdr. McDade.

Capt. Whiting laid an arm around the squadron commander's shoulder.

"Nice work, Shorty," he said.

Trying Voyage Completed

It was a commendation from one of the navy's first airplane pilots to a flier who had brought his planes through a trying voyage.

Shortly before 4 the red and green lights of the squadron appeared in the eastern sky approaching Pearl Harbor. The soft hum of engines swelled to a roar as the planes swept over the base.

"They're making sweet music," an enlisted man commented.

The moon was riding almost directly overhead, shining through fleecy clouds. Against it the planes were silhouetted like immense black birds.

Green rockets arched into the sky, signaling to the fliers that the channel was clear for a landing.

Circles Base Twice

Shortly after 3:50 Cmdr. McDade came in for a landing. His plane roared low over the water, then rose with blue fire streaming from exhausts of the two engines, to circle over the base again.

He was down at 4:27. Beach crews met his plane at the ramp's edge and brought it ashore by tractor.

Remaining planes made their landings in accordance with flares fired from shore, green denoting a clear channel, red warning of obstructions.

Occasional pieces of debris drifted down the channel, washed into the water by heavy rains which accompanied a storm that broke over Oahu at midafternoon.

Morning Breaks Clear

Serene morning skies bore little resemblance to the black clouds that had piled up over the island earlier.

The aircraft tender Pelican from Pearl Harbor, stationed 300 miles toward San Diego from Pearl Harbor, had notified the squadron before its takeoff on the coast that a thunder shower was gathering over the islands.

Squadron personnel is expected back on duty Monday. The new twin engined planes, capable of flying in excess of 3,400 miles, face a strenuous period of training operations, making up for time which crews lost while their planes were being completed.

Thursday, January 27, 1938

W

CRASH VICTIM PIONEER S. D. NAVAL FLIER

Comdr. Chourre Recently Completed 20 Years Of Service

Lieut. Comdr. Emile Chourre, 43-year-old San Diego Navy flier who died yesterday with Michael Ola, 25, in a plane crash at Belleville, Ill., was one of San Diego's early fliers, it was disclosed today.

The body of the veteran aviator, who had just completed 20 years of Navy flying, will be shipped to San Diego for burial, North Island officials reported today. Interment will occur at Ft. Rosecrans National Cemetery, with full military honors.

Lieut. Comdr. Chourre was attending the Unversity of California when the United States entered the World War. He enlisted in Navy aviation, won his wings, and was stationed in Miami.

In 1919, he came to San Diego, where he was attached to the Navy's first observation squadron. Later, after serving duty on the aircraft carrier, Langley, he became engineering officer at the Naval Air Station, North Island. He was noted for his thorough knowledge of all types of Navy planes, and because of this, was named official announcer at the 1934-35 National Air races in Cleveland.

A year and a half ago, Comdr. Chourre was appointed inspector of naval aircraft at Consolidated Aircraft Corp., Lindbergh Field. His widow and two children live at 568 I-av, Coronado. Ola, who died with Chourre, was a flying cadet, scheduled to assume duties here.

Luchtvaart en Automobilisme

De vliegende „Dreadnought" in Holland

De Consolidated PBY met een werkingssfeer van 8000 KM.

320 KM PER UUR

Naar bekend, heeft Fokker licentie gekregen op de „Consolidated PBY"; dat „Anton" een fijne neus gehad heeft, moge uit het ondervolgende, ontleend aan de Msb., blijken.

Sedert 1 October 1937 zijn de torpedobooten der Amerikaansche Marine toegevoegd aan de gevechtsvloot en is hun rol van verkenners overgenomen door snelle vliegbooten met een groot vliegbereik. Ruim tweehonderd machines van het type Consolidated PBY zijn voor dit doel gereserveerd. Deze vliegbooten, uitgerust met twee motoren van ruim 1000 pk elk, hebben een vliegbereik van meer dan 6000 km bij een snelheid van ongeveer 230 km per uur, waardoor zij in staat zullen zijn ver voor de vloot uit de bewegingen van den vijand te verkennen en veel eerder berichten hieromtrent den eigen bevelhebber draadloos door te geven dan mogelijk is met de snelste torpedojagers. Waar buitendien deze vliegbooten zwaar bewapend zijn met bommen, kunnen zij den vijand reeds groote schade toebrengen voordat de feitelijke slag is begonnen en bijv. de vliegtuig-moederschepen vernietigen of zoo beschadigen, dat de vijandelijke vloot het moet stellen zonder vliegtuigen en daardoor een groot deel van haar gevechtswaarde zal hebben ingeboet.

Intusschen is deze drastische verandering in de samenstelling van de Amerikaansche vloot geen noodmaatregel. De verschillende groote vluchten in groepsverband ondernomen met die Consolidated vliegbooten naar Honoloeloe en het Panama Kanaal, hadden de waarde dezer vliegtuigen als lange-afstand verkenners definitief bewezen en men kwam als vanzelf op de idee, deze vliegtuigen te gaan gebruiken als de voorposten van de vloot. Vice-admiraal Ernest J. King zal het bevel voeren over deze verkenners-groep, welke is verdeeld over de basis Coco Solo in de Panama Kanaal Zône en Pearl Harbour op Honoloeloe. De vliegtuig-moederschepen Wright, Langley, Thrush en Owl en het daarbij behoorende lichtere materieel zijn eveneens aan deze groep toegevoegd.

VLIEGEND FORT

Zoo goed als het Legervliegkorps naast de betrekkelijk lichte twee-motorige bommenwerpers, een aantal zeer zware vier-motorige bommenwerpers heeft aangekocht, welke den naam van vliegende forten ten volle verdienen, is de Marine van oordeel, dat die voorpostengroep eveneens de beschikking behoort te hebben over zeer groote viermotorige vliegbooten, welke nog meer dan de twee-motorige machines van hun basis onafhankelijk zijn en welke geruimen tijd als zelfstandige uniteiten kunnen opereeren. Een dergelijke „Vliegende Dreadnought" is de Consolidated PB2Y-I.

Deze enorme geheel metalen vliegboot is uitgerust met vier luchtgekoelde motoren van 1050 pk elk, welke de machine een snelheid geven van ongeveer 320 km per uur. Ten einde te maken, dat de machine inderdaad geruimen tijd ver van haar basis kan verblijven, is de bootromp behandeld met een speciale soort verf, welke het aanbakken en roestvorming voorkomt. Bij de inrichting der kajuiten is alle aandacht besteed aan het comfort der bemanning. Zoo vinden wij hier ruime en goed geventileerde slaapplaatsen, een longroom, een keuken (compleet met electrisch fornuis en een ijskast), de noodige kleerenkasten, een toilet met waschbakken, een verwarmings- en ventilatie-systeem dat het verblijf aan boord zoowel in de tropen als in het hooge noorden aangenaam maakt, en een compleet ingerichte werkplaats voor het verrichten der noodige herstellingen aan motoren of boot. De wanden zijn bekleed met geluiddempend materiaal.

Evenals bij de PBY-vliegbooten, zijn de hulpdrijvers intrekbaar gemaakt en vormen zij in de vlucht de vleugelpunten, hetgeen de prestaties der machine ten goede komt door den verminderden weerstand. Een telefoonnet is geïnstalleerd, waardoor de bemanning onderling steeds contact heeft en de commandant snel en gemakkelijk zijn orders kan uitdeelen. Het electrische net heeft een spanning van 110 Volt en wordt bediend door een aparte installatie, onafhankelijk van de hoofdmotoren.

ONBELEMMERD ZICHT

Achter den vleugel, boven in den romp, bevindt zich een kajuit voor den waarnemernavigator. Van hier uit heeft deze een onbelemmerd zicht op den hemel voor het schieten van de zon of sterren en hij beschikt over een volledig stel instrumenten voor het doen zijner waarnemingen en voor het bepalen van den te vliegen koers. De gesloten kajuit voor de bestuurders bevindt zich in den bovenkant van den romp voor den vleugel.

Geheel voor in den neus is een gesloten geschutkoepel, terwijl een tweede koepel zich bevindt in den rompstaart, onder het stabilo.

Verder bevinden zich nog geschutstanden in de zijwanden en in het dak van den romp, zoodat deze machine zich behoorlijk naar alle kanten kan verdedigen. Een zeer groote bommenlast kan worden meegevoerd. Het vliegbereik bedraagt 8000 km bij, zooals reeds gezegd, een snelheid van ongeveer 320 km per uur.

De eerste machine van dit type heeft in den loop van December proefgevlogen en is daarna overgebracht naar de basis van het Marine Vliegkorps voor het nemen van verdere proeven. Verwacht mag worden, dat in den loop van dit jaar een eerste bestelling op een serie dezer machines zal worden gegeven, zoodat de Amerikaansche vloot in den Stillen Oceaan het volgende jaar over een aantal dezer „Vliegende Dreadnoughts" zal beschikken.

Behalve de Consolidated Aircraft Corporation, welke in Europa door Fokker wordt vertegenwoordigd, kreeg ook Sikorsky Aircraft opdracht voor het bouwen van zoo'n groote vliegboot, waaromtrent echter nog slechts weinig bekend is.

De consolidated P. B. Y. voor de Amerikaansche Marine, die een snelheid kan ontwikkelen van 320 km per uur

● **The Navy dispatched** fourteen big Consolidatel patrol boats on another routine transfer of equipment from San Diego to Coco Solo. C. Z., Dec. 8. Twenty-one and a half hours later they had all arrived in first class shape. The force of ninety-eight officers and men.

Aviation (Mag.) Jan '38

18 San Diego Bombers Hop for Hawaii Today

WORLD CAPITALS WATCH FLIGHT; 553 MILLION NAVY BILL REPORTED TO HOUSE

Radio Chains Will Carry Description of Start From North Island; Adm. Leahy Warns of Increasing Threats to International Peace.

S D Union 1/18/38

San Diegans, including navy personnel, who read with interest yesterday the reports from Washington about Adm. Leahy's testimony that world political conditions demand strengthening of the national defense, also saw some concrete aspects of the situation close at hand. For one thing, a report spread that the light cruisers Trenton, Milwaukee and Memphis, now on the way to Australia, may remain in Asiatic waters indefinitely.

Meanwhile last-minute preparations were made to hasten the flight of 18 powerful new patrol bombing planes from San Diego to Honolulu a day earlier than originally planned. The change was due to weather conditions, which promise to be favorable to the earlier start. That this great mass flight is being watched with keen interest not only in America but abroad is the firm belief of local aviation experts.

A description of the departure of 18 navy patrol planes—largest mass flight attempted over a long distance—for Honolulu, will be aired over KGB this morning at 8. In case of postponement, KGB will go on the air as soon as the flight begins. KFSD and NBC broadcast is scheduled for 8:30. Van C. Newkirk, Louis Hall and Dave Young are to describe activities from vantage point atop a hangar at North island and then will shift controls to Sid Fuller and Eddie Tidwell on the Pickwick hotel roof for a description of the planes in flight.

Largest Naval Mass Jaunt Set for 8:40

Eighteen multimotored long-range patrol bombers, the largest and most powerful flotilla of aircraft that ever has attempted an ocean flight in mass formation, will roar out of San Diego this morning on a 2570-mile continuous flight to Hawaii. The first plane is scheduled to take off at 8:40.

Although classified by the navy high command "as a ferry detachment to Pearl Harbor," the flight will be watched by the capitals of Europe and Asia with keen interest.

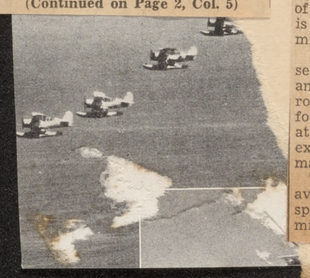
Arrangements are being made by radio networks, newsreels and press cameramen to cover the event. NBC will have a total of 102 stations from coast to coast on a network with Don Wilson and Clinton Twiss doing the announcing from North Island. Five newsreel crews arrived from Los Angeles last night.

Due In 18-20 Hours

Rear Adm. Ernest J. King, commander, aircraft, base force, said the planes, under command of Lt. Comdrs. S. H. Warner and W. G. Tomlinson, will follow the great circle route from Pt. Loma to Diamond Head. They should reach Hawaii in 18 to 20 hours, or between 4 and 6 o'clock tomorrow morning, Pacific coast time.

Probability of storms sweeping down from the Aleutian islands into the California-Hawaii airway led to the determination to advance the flight 24 hours. Indications are that favorable weather will prevail in the vicinity of Pearl Harbor at the time of landing. For the first 1000 miles of the flight the weather will be somewhat spotty, with both head-on and beam winds. These handicaps gradually will be elim-

(Continued on Page 2, Col. 5)



18 BOMBERS HOP FOR HAWAII TODAY

(Continued from Page One)

inated as the squadrons near the islands.

Ships to Guard Route

Three surface ships will act as plane guards and disseminate weather information. The aircraft tender Langley's station is midway between San Diego and Honolulu. Five hundred miles west is the destroyer Litchfield. The destroyer Reid is 500 miles east of the Langley.

The air fleet comprises patrol squadron 10, consisting of 12 Consolidated-built bombers, and six planes of squadron 9. Squadron 10 is to remain based at Pearl Harbor. The planes of squadron 9 are to be turned over to patrol squadron 4. The personnel of No. 9 will return to San Diego by steamer, and probably will ferry 12 more planes to Hawaii in June.

The flight is the fifth mass distance ocean hop by aircraft of the scouting force within 12 months. Two of these flights, of 12 planes each, were made to Hawaii, and two of 12 and 14 planes each to Panama. All were carried out without mishap and in fast time.

Ships Thoroughly Tested

For nearly two months the personnel of squadrons 9 and 10 have been carrying out a series of intensive test flights with the 18 planes, flying both by day and night. Each of the huge offshore patrol bombers is capable of flying more than 4000 miles without refueling.

Each plane will carry a crew of seven officers and men. The pilot and commander of plane 2 of squadron 9 is Lt. Tom Hamilton, former football coach of the naval academy at Annapolis. It will be his first experience in an overseas mass formation flight.

The voyage will be made at an average altitude of 10,000 feet. The speed will vary from 120 to 170 miles an hour.

NAVY BOMBERS SET NEW MARK ON HAWAII HOP

SD Sun 4/9/38

18 S. D. Planes Reach Pearl Harbor In 20½ Hours After Bucking Headwinds; Trip Without Trouble

Sliding through the air beneath a brilliant moon, 18 of the Navy's huge twin-motored patrol planes reached Hawaii at 5:48 a. m. today, 20 hours and 30 minutes after leaving San Diego harbor, to establish a new navy air record between California and Hawaii.

When the last airboat had landed at Pearl Harbor base, the Navy had completed its fifth long-distance mass flight in a year.

In this time, the Navy has launched a mighty sky fleet of 68 planes carrying more than 500 officers and men over a total air distance of 14,010 miles.

With monotonous regularity the Navy has sent its ships into the air—42 to Hawaii and 26 to Coco Solo in the Panama Canal Zone—in world-reminding demonstrations of the new aerial strength of a Navy being rushed into the most powerful strength of its history.

Delivery of these giant airboats to Panama and mid-Pacific bases has strengthened the far-flung "first line of defense" which the Navy has erected on a great semi-circle from Alaska to Hawaii to Panama.

The 18 planes which reached Hawaii this morning droned on through the night without incident, but in slower time than had been expected. The average speed was cut down because of wind resistance that held the bombers to a little more than a 100-mile-an-hour clip over the

NAVY BOMBERS SET NEW MARK ON HAWAII HOP

20 Hours And 30 Minutes Required For Long Mass Flight

(Continued from Page 1)

early part of the flight.

They traveled the entire distance in the two V-shaped formations. Along the route the Navy had spaced three ships, the Reid, the Langley and the Talburt, to aid in case of trouble.

Lieut. Comdr. Warner, who insisted the flight was "only routine" despite its magnitude, described the trip as "so-so."

"Strong headwinds slowed us up exceedingly on the first third of the trip," he said. "It was cloudy a good part of the way but we didn't strike any rain.

"The only difficulty we encountered was icing on the propellors and the wings. There was no trouble with carburetors, however, and the trip at no time was dangerous."

JAPANESE SNUB HOP

By United Press

PEARL HARBOR, HONOLULU, T. H., Jan. 19.—Arrival here today of 18 naval bombers after a non-stop flight from San Diego was not covered by newspapermen from local Japanese papers. Neither the Hochi nor Nippu Jiji asked the Navy to furnish passes so its representatives could enter the Navy yard. Naval authorities were asked if passes would have been granted if requested and answered, "That is a situation that would have been handled if it had come up."

"There was no trouble with any ship, to my knowledge," the commander added, "and we maintained sight contact throughout."

The squadrons flew their charted route except once when they bore slightly to the south. All the control vessels except the Reid were sighted, the commander said.

Easy Trip

The officers reported that no member of his crew suffered any fatigue on the trip.

Mrs. Frederick Trapnell, wife of one of the lieutenants on the flight, placed a carnation lei around Comdr. Warner's neck as he disembarked.

The harbor scene was most colorful as the bombers came down at intervals of from six to 10 minutes.

Red and white guide lights ringed the landing space, maroon and green Very lights were used to signal the planes down and the huge motors of the ships gave out red and blue exhaust flames.

The last plane landed at 7:07 a. m. (PST).

This flight was the greatest of the five Navy mass flights. A previous squadron of 12 planes flew to Honolulu in 21 hours and 21 minutes. Each of the bombers carried seven and eight men and 10,000 pounds of gasoline.

THE EVENING TRIBUNE, San Diego, Cal., Tuesday, Jan. 25, 1938

Fleet Reviews Accomplishments Of Consair During Year

Two Consolidated Aircraft Corp. officials, C. A. Van Dusen, vice president and works manager, and Gordon E. Mounce, now on their way to Europe are expected to obtain enough foreign business to keep the aircraft plant here operating for many years, Maj. Reuben H. Fleet, president of Consolidated reported in "The President's Column" of the current issue of Consolidator, monthly publication of the plant. Fleet devotes the article to a summary of Consolidated achievements in 1937 and some of the prospects for 1938. The article, written about the first of the year, refers to the San Diego-to-Honolulu flight of 18 Consolidated planes as a coming event. This flight was completed successfully last week. His summary follows:

During the year, Consolidated delivered to our navy 88 (101 to date) PBY type flying boats, plus spares equivalent to 17½ more. At the opening of 1937, we had on hand orders totaling $18,000,000. Additional orders were received during the year for nearly $8,000,000 worth of flying equipment and the company still has a backlog of nearly $14,000,000 to start on in 1938. The Argentine government took delivery of six of our P2Y-3 type airboats, plus spares. Mr. Archbold accepted two GUBA (PBY) boats, one of which was turned over to the Russian government to be used in search of the Russian fliers lost in the Arctic and the Russian government itself took delivery of a commercial version of the PBY-1.

Progress Followed

While we point with pride at the amount of business that we have done and the number of airboats we have delivered, it is more important to Consolidated to follow the progress of our products after they have been turned over to our customers.

Let us first take the case of the PBY's that Uncle Sam is now using so extensively in naval operations. When, on Jan. 28, Capt. Whiting sent a brief radio from Pearl Harbor, Hawaii, to Adm. King in San Diego saying "Patrol Squadron 6 arrived in excellent condition, reported for duty, ready for service," it was characteristic of what is expected and received from Consolidated boats in service. Such a short message, after the successful flight of 12 flying boats across the Pacific for 2553 miles in record-breaking time, for the first formation flight of that length in history, tells little of the story behind such a flight. When, however, another 12 PBY-1 flying boats took off from San Diego on April 12 and landed San Diego on April 12 and landed in perfect order at Pearl Harbor, breaking the same recodd, it was indeed "routine" for the navy and for Consolidated flying boats. This was followed on June 21 by another record-breaking flight of 3087 miles, the only difference being a change in direction from San Diego to Coco Solo, Canal Zone. To show how simple it was the navy flew 14 more PBY's to Coco Solo on Dec. 8 in the unheard of time of 22 hours and 20 minutes. Thus four record-breaking mass formation flights were completed in the year — all with Consolidated air boats and all in "routine" without mishap. At the time of writing, it is reported that at least 18 more Consolidated PBY's are to take off for Pearl Harbor on the 19th of January. In addition, the navy has used PBY's on dozens of other "routine" flights and rough water landings, etc., in connection with navy activities.

Flight First of Kind

While of an entirely different nature, the flights of Mr. Archbold during the year 1937 with his Consolidated Gubas are accomplishments that have received the commendation of all aviation followers. Not content with flying Guba from San Diego to Boulder lake and from San Diego to Lake Tahoe (where take-off was made at an altiture of 6425 feet) Mr. Archbold made a non-stop flight with Guba from San Diego to New York, the first time this has ever been done in a flying boat. At the time of the loss of the Russian fliers in the Arctic, the Russian government persuaded Mr. Archbold to release his ship as it was the only one available with sufficient range to cover the vast arctic wastes in this search. Flown by Sir Hubert Wilkins and Herbert Hollick-Kenyon, it covered over 19,000 miles of polar regions, returning south only when the freeze-up prevented further water operation. The second Guba was then built for Mr. Archbold and while he has not had it for long, it has already completed a round trip to Cuba, flying non-stop from San Diego to Miami on the first leg of the journey.

Proud of Performance

And so we may well be proud of the performance of Consolidated products during the year 1937. Now let us look into the reasons behind the efficient production that has been carried on in our company. Mr. John D. Hertz, one of our directors, who paid us his first visit on Jan. 4, after a careful inspection of our plant, remarked that it was the finest manufacturing plant that he had ever seen in his life and he considered our type of workmen the best with which he had ever been in contact. This is praise indeed as Mr. Hertz has a knowledge of factories and personnel equalled by few. There is no doubt but that our plant is in as fine condition as possible right now. Our additions that were completed at the opening of 1937 gave us the second largest aircraft factory in the country and we are proud to say we are the largest producers of airboats in the world. Production methods employed throughout Consolidated closely represent those in the most efficient manufacturing plants in the world today.

Best in Existence

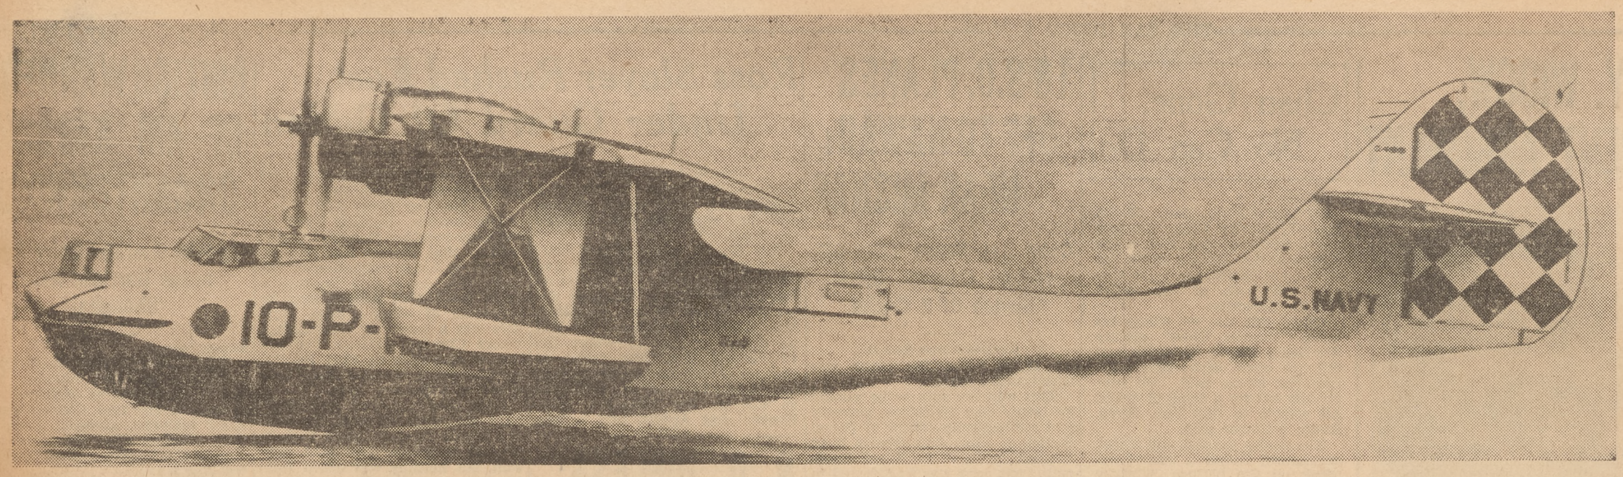
The management feels that the employe-employer relations within our organization, are the best in existence. The agreement entered into with Aircraft Lodge 1125 of the International Association of Machinists, on the 26th of April, 1937, has worked out to the best interests of everyone. Regular meetings are held with representatives of our employes and differences are ironed out with prompt dispatch almost as they occur. Successful management prefers this type of relationship, not for humane reasons alone but for the good of the corporation through better workmanship and better products as a result of perfect coordination with the workmen.

And so we feel better able to serve the needs of the world in aviation today than ever before. We have done a good job for Uncle Sam and are still working on the latest in flying boats for him. The Consolidated XPB2Y-1 four-engine Flying Dreadnaught which has just been completed and flown, is probably the largest and fastest airboat that has yet been developed. With speed and load-carrying ability in excess of anything flying today it should prove a formidable addition to our navy air arm and national defense. We hope to sell commercial versions of this type for trans-atlantic passenger service. In the meantime, our PBY-1 type airboat has been released for export and on the 15th of this month, Mrs. C. A. Van Dusen, vice president and works manager, and Mr. Gordon E. Mounce, who represented Consolidated for some years in Europe, are sailing on the Isle de France for Europe to further our interests there.

Let us take a look at what we have to offer. Airboats present tremendous advantages for world-wide operation. They require no expensive landing fields, utilizing any open water for this purpose. With a boat such as the PBY-1 that Mr. Archbold has already landed and taken off at altitudes of nearly 6500 feet and which he plans to operate in New Guinea on a lake 12,000 feet high, it is doubly true that every bit of open water is available for landing. PBY's have been flight tested and taken off with one motor completely dead—not idling, and have demonstrated their ability to climb to cruising altitude and maintain same on one motor. Their cruising range of over 4000 miles makes them invaluable as commercial cargo planes over any airway or over any ocean in the world. Their reliability has been proved in actual service with our navy. In addition to their regular service duties, the routine transfer of 50 airboats of their size in four mass flights totaling 141,400 non-stop airplane miles is an accomplishment unequalled by any aircraft in the world.

So we know we have the best product in the world to sell and we are now in a position to offer it to friendly foreign nations at a price that we would be unable to meet were we not in full production. It is expected that Messrs. Van Dusen and Mounce will obtain sufficient business to keep our force going full blast for some years to come.

We can well say that "progress has been made" in 1937.



Off To Honolulu!

Hawaii-bound on the greatest mass flight of Navy history are 18 San Diego patrol bombers today, led by the flagship of Lieut.-Comdr. Spencer H. Warner, shown right as it churned along the take-off channel in the harbor this morning. (Story in Col. 2.) *(Photo by Erle Zahm, Sun staff photographer.)*

FIVE CENTS

The Fact-o-Graph by WILLIS WERNER

It's All Free.

FOUR out of five San Diegans are too busy to realize it—but you can ride on boats, watch human drama in the making, see how pencils are made, enjoy a million dollars worth of armchair adventure—and do it all free!

◇ ◇ ◇

More dramatic than any imaginative creation—for there's no guaranteed happy ending in the last chapter—are the cases which come up for trial in San Diego's six superior, six municipal courts.

◇ ◇ ◇

A score of San Diegans spend their entire time going from courtroom to courtroom, are familiar figures to bailiffs and court clerks — but hundreds more have never watched a hearing proceed—except in the movies.

◇ ◇ ◇

The day's "program" is posted in the County Clerk's office, tells what cases are coming up in the superior courts, how long they're expected to last, whether or not a jury is being used.

◇ ◇ ◇

Regular courtroom followers become "fans" of certain lawyers, know when they appear in cases against certain other lawyers fireworks may be anticipated.

◇ ◇ ◇

Cases in two divisions—civil (such as suits for damages), and criminal (trials for negligent homicide, drunk driving, etc.) You can also hear wills contested, juries selected, and—particularly on Saturday mornings—watch the divorce parade.

◇ ◇ ◇

MORE personal are the actions to collect back rent, small damages—as in the case where a man sued for teeth he lost when he bit into a nail in chewing tobacco—in the five municipal courts on the fifth floor of the Spreckels building. Sixth municipal court—police court—adjoins the police station on second-av

S. D. BOMBERS OFF TO HAWAII; NEAR MISHAP

Calm Bay Slows Take-Off; Motor Causes Quick Switch Of 2 Crafts

Averaging 120 miles per hour, the 18 San Diego Navy planes attempting the Hawaii flight were 177 miles at sea at 11 a. m. today. They were at 11,000 feet and encountering good weather. Shortly after this report from Aircraft Scouting Force headquarters, the planes passed out of the zone of 40-knot headwinds and were expected to gain speed.

Battling adverse takeoff conditions, 18 heavily loaded Navy patrol bombers soared away from San Diego harbor this morning on a 2570-mile non-stop mass flight to Hawaii—a flight which almost began disastrously for several of the 14-ton airboats.

With wind velocity alarmingly low and the bay's surface smooth as glass, the giant planes experienced great difficulty freeing themselves from the tremendous suction on their hulls as they pounded down the take-off lanes toward Point Loma.

Weather Ideal

With weather conditions almost ideal on the transpacific route, the planes are expected to reach Pearl Harbor, in the light of a full moon, at 1 a. m. tomorrow (PST), Aircraft Scouting Force staff officials estimated.

Fifty-eight minutes elapsed from the moment the first plane—10-P-4, piloted by Lieut. H. V. Hopkins, took to the air at 8:38 a. m. until the final craft—10-P-12, with Lieut. (jg) G. M. Greene at the controls, leaped through sheets of foaming spray and sped away to an air rendezvous off the Baja California coast.

9-P-2 Withdrawn

At 8 a. m., when mechanics began tuning up the 1000-horsepower motors of the big ships, it was learned that one of 9-P-2's engines was not functioning properly. Rather than risk a possible forced landing along the hazard-

Chief of Bureau of Aeronautics

nine squadrons, seven of which are tactical and two are utility. The tactical squadrons include two fighting, two bombing and three scouting. The utility units consist of transports, amphibians and odd types. The operating personnel of Marine Corps Aviation consists of approximately 200 officers, 40 flying cadets, 1200 enlisted mechanics and 30 reserve officers on active duty.

The squadrons are assigned to two composite groups designated Aircraft One and Aircraft Two. The former is stationed at the Marine Barracks, Quantico, Virginia, the latter at the Naval Air Station, San Diego, California, where it operates with the carrier divisions of the Battle Force. A separate scouting squadron garrisons the Virgin Islands, with station at St. Thomas, Virgin Islands.

U. S. Naval and Marine Corps Reserve aviation comprises the naval reserve aviation bases, and reserve squadrons attached to them. These bases provide the facilities for the training of the organized reserves and for conducting elimination flight training of new officer material for the aviation reserve.

The aircraft organization assigned to a vessel forms an integral part of the organization of that vessel. Aircraft organizations assigned to and quartered on board carriers, tenders or other auxiliary vessels constitute the air department of such vessels. Aircraft organizations assigned to other vessels of the fleet constitute a part of the gunnery department of such vessels.

Experience has demonstrated that airplanes in themselves are not capable of operating as independent units indefinitely over vast areas of the sea. Therefore the naval force cannot avail itself of the advantages inherent in air operations unless it provides in the fleet itself, means for carrying, maintaining, and efficiently operating aircraft in whatever area it becomes necessary to exercise sea power, and unless through constant training, there are developed methods for harmonious cooperation between air, surface, and sub-surface activities. Through constant training and indoctrination, the methods of cooperation have now reached the point where aircraft in fleet activities are accepted as a commonplace part of the day's work; air and surface operations working in the closest harmony, each supporting and complementing the other. A means for

PBY-1 adapted for commerce

Consolidated plans commercial version of long range patrol boat.

In anticipation of the export release on the PBY-1 series flying boats, Consolidated Aircraft Corporation is preparing plans for the commercial conversion of the long distance Navy patrol boat. The boat was released by the Navy for domestic commercial use in January this year, but, even for commercial use, the boat is restricted from export until November 1, this year. The release of the military version of the boat will not be made until after the completion of all the PBY types now on order, which will be about May 1, 1938.

The commercial version of the PBY-1 will be a 24-passenger boat similar to the Commodore, but greatly improved in performance characteristics. Because of present restrictions, neither performance data nor weight data can be released on any version of the PBY series.

Air-Conditioned by Nature

San Diego—where your thermometer works less than in any other American city. Only thrice in 64 years has the mercury fallen below 32 or risen above 100 degrees. In the last five years, the lowest recorded temperature has been 30 degrees, the highest 94 degrees.

SAN DIEGO BOMBERS NEARING HAWAII

Japanese Attacked Near Panay Disaster Scene

TOKYO ENDS RELATIONS WITH CHINA

Action Considered Equal to War Declaration; Nipponese Tanks, Ships Rush to Aid Beleaguered Troops.

SHANGHAI, Jan. 19 (Wednesday) (A.P.)—Chinese and Japanese forces today were reported locked in bitter battle along the Yangtze river near where the U. S. gunboat Panay was sunk by the Japanese a month ago.

Chinese said two reinforced columns had arrived in the vicinity of Wuhu, 25 miles up stream from where the Panay sank, and were pressing the Japanese hard for possession of the important river port.

Forces Bolstered

They said Japanese had rushed four boatloads of troops to Wuhu to bolster their forces, while two Japanese warcraft shelled Chinese positions above the city.

Japanese reported a Japanese tank unit had occupied Hohsien, nearest town to the scene of the Panay incident, after killing 200 Chinese and driving out 500 others. The unit then advanced toward Hanshan, where the Panay survivors fled.

Since Japanese troops held Hohsien when the Panay was bombed, the tank maneuver was interpreted as meaning possibly that Chinese had recaptured the town.

A Hongkong dispatch, indicating the Japanese were increasing their activities in south China, said Japanese had warned British authorities they planned to keep the Hongkong-Canton road under bombardment and any British subjects using the road would do so "at their own risk."

Advances Slowed Down

Chinese counter attacks and guerilla warfare were reported slowing down Japanese advances in south Shantung and in Chekiang province,

TVA WON'T PAY, C. & S. DEAL VIEW

WASHINGTON, Jan. 18 (A.P.)—David E. Lilienthal, Tennessee valley authority director, said today the TVA was willing to negotiate for useful physical assets of Commonwealth & Southern Corp. monwealth & Southern, huge southeastern utilities, but did not intend "to pay for water, or write-ups."

Lilienthal added that TVA would cooperate in the sale of distribution lines to municipalities for a "fair price" but inflated prices.

"San Diego business men are willing to get behind the county fair and they feel it is good for both the city and county," Hansen said. "The reorganization move is designed to cement further city and county friendship and the nomination of new directors are signed to bring to the fore men truly representative of the county in various endeavors."

Events which culminated with resignation of the directors and nomination to others began several weeks ago when a proposal was laid before the federation that seven directors would quit if the federation would nominate new directors for appointment by the governor. Financial troubles of the last county fair and a reported lack of confidence in the present set-up were ascribed for the proposal.

Situation Revealed

The situation was outlined by Matzen to a committee including Kent Allen, Del Mar Turf club; C. D. Collom, San Diego Merchants' association secretary; Crowell D. Eddy, county assessor; Capt. F. A. Gillies, County Farm bureau president, Donald E. Hanson, San Diego chamber of commerce; Arnold Klaus, San Diego-California club manager; Maj. T. C. Macaulay, chamber executive manager; Fred R. Mitchell, San Diego Realty board vice president; Fred W. Mitchell, Melvin N. Wilson, San Diego Clearing house president; McLean Wilson, Central committee chairman; Andrew Wilson, county farm bureau; Magner White, San Diego Sun; J. Helman Bjornstad, County Development federation president; Claude Wilson, federation vice president; R. E. Badger, Claude J. Fennel, Walter E. Flack, Fred J. Hansen, and George Stephan, federation directors, and Harry L. Olmstead, federation secretary.

The nominating committee included Hansen, chairman, R. E. Badger, Donald E. Hanson, Walter E. Flack and Andrew Wilson.

The planes faced probably the finest flying conditions possible. According to the weather map of Lt. E. W. Stephens, aerologist of the U. S. S. Wright, there was practically a perfect airway from a point 100 miles west of San Diego clear to Midway island, far westward of Honolulu.

The weather chart clearly showed the pilots what to do. Instead of climbing to 10,000 feet as originally planned, the squadrons dropped down to 2000 feet for the first two hours. By doing this they encountered a beam wind, whereas at 10,000 feet the wind was blowing at 40 knots head on.

At 350 miles from Pt. Loma the planes climbed to the 10,000-foot level where, experts said, unless the winds suddenly shifted, they would have a favorable wind all the way to Hawaii. "The airway from San Diego to Hawaii is ideal for a fast flight," Stephens said. "The only storm areas are in the vicinity of the Gulf of Alaska and on the north Pacific coast."

Lt. Hamilton's failure to take off the first time was attributed to the fact that his original plane, 9-P-2, developed motor trouble while receiving last-minute tests Monday. Plane 12-P-3 from squadron 12 was substituted as time did not permit the installation of new motors.

There were few lingering farewells of the flight crews and their families preceding the take-off. Most of the officers and men did not report at the air station until 8 o'clock, 40 minutes before the first plane launching. With characteristic navy efficiency the air flotilla had been made ready. When the signal was given to go the launching crews worked smoothly and swiftly.

After the federation's action, C. L. Cotant, president, San Diego chamber of commerce, pledged the untiring efforts of his organization to support the county fair program.

This history of highway construction in California and particularly in San Diego county was outlined by Frank G. Forward, chairman, S. D. chamber of commerce highway committee.

S. D. BOMBERS OFF TO HAWAII; NEAR MISHAP

Calm Bay Slows Take-Off; Motor Causes Quick Switch Of 2 Crafts

Averaging 120 miles per hour, the 18 San Diego Navy planes attempting the Hawaii flight were 177 miles at sea at 11 a. m. today. They were at 11,000 feet and encountering good weather. Shortly after this report from Aircraft Scouting Force headquarters, the planes passed out of the zone of 40-knot headwinds and were expected to gain speed.

Battling adverse takeoff conditions, 18 heavily loaded Navy patrol bombers soared away from San Diego harbor this morning on a 2570-mile non-stop mass flight to Hawaii—a flight which almost began disastrously for several of the 14-ton airboats.

With wind velocity alarmingly low and the bay's surface smooth as glass, the giant planes experienced great difficulty freeing themselves from the tremendous suction on their hulls as they pounded down the take-off lanes toward Point Loma.

Weather Ideal

With weather conditions almost ideal on the transpacific route, the planes are expected to reach Pearl Harbor, in the light of a full moon, at 1 a. m. tomorrow (PST), Aircraft Scouting Force staff officials estimated.

Fifty-eight minutes elapsed from the moment the first plane—10-P-4, piloted by Lieut. H. V. Hopkins, took to the air at 8:38 a. m. until the final craft—10-P-12, with Lieut. (jg) G. M. Greene at the controls, leaped through sheets of foaming spray and sped away to an air rendezvous off the Baja California coast.

9-P-2 Withdrawn

At 8 a. m., when mechanics began tuning up the 1000-horsepower motors of the big ships, it was learned that one of 9-P-2's engines was not functioning properly. Rather than risk a possible forced landing along the hazard-

Federal Census Indicates 6268 Are Out Of Work In City Proper

By RUTH FINNEY
The Sun's Washington Correspondent

WASHINGTON, Jan. 18.—The Biggers unemployment census registered 9027 persons in San Diego county as totally unemployed and wanting work. In the city of San Diego the total was 6268.

This would mean a total of 12,553 unemployed persons in the county and 8705 persons in the city the government estimates, since tests made in representative districts showed that the voluntary registration was 72 per cent effective.

3105 Are Women

Of these who registered in the county 5922 were men, 3105 women. This was an unusually high percentage of unemployed

Dubinsky And Hillman Shrewd Leaders For Lewis In Needle Trades Unions

In the second of 12 articles on the CIO, Mr. Stolberg, for years a student of labor affairs, discusses the leadership of the great needle-trades unions and the newer leaders of the automobile and West Coast maritime unions—the hillbilly ex-preacher Homer Martin and the spectacular longshoreman, Harry Bridges.—The Editor.

By BENJAMIN STOLBERG
Special Writer For The Sun

NEXT to the miners the needle trades furnished most of the top leadership and most of the money to the C. I. O. The International Ladies' Garment Workers, the Amalgamated Clothing Workers, the C. I. O. and the A. F. of L., as did most of the leaders in the needle trades.

With Hillman of the Amalgamated, Max Zaritzy of the Millinery Workers, and Charles P. Howard of the Typographers, he was instru-

he gives some 15 hours a day of his great administration ability, he is much interested in labor politics, especially in the American Labor Party in New York City. In the C. I. O. Dubinsky is not very active except in a crisis. Then his strategic position and his mixture of great common sense and honest slyness give him considerable power.

Sidney Hillman is almost the opposite of Dubinsky. He lacks Dubinsky's good humor, his tough and homely

PBY-1 adapted for commerce

Consolidated plans commercial version of long range patrol boat.

In anticipation of the export release on the PBY-1 series flying boats, Consolidated Aircraft Corporation is preparing plans for the commercial conversion of the long distance Navy patrol boat. The boat was released by the Navy for domestic commercial use in January this year, but, even for commercial use, the boat is restricted from export until November 1, this year. The release of the military version of the boat will not be made until after the completion of all the PBY types now on order, which will be about May 1, 1938.

The commercial version of the PBY-1 will be a 24-passenger boat similar to the Commodore, but greatly improved in performance characteristics. Because of present restrictions, neither performance data nor weight data can be released on any version of the PBY series.

...maintaining, and efficient-...ing aircraft on the decks ...t has been accomplished. Eac... leship, each cruiser, and eac... aircraft carrier carries her complement of planes.

Many considerations have influenced the policy in respect to the development of these aircraft as a part of our fighting forces. Among the most important considerations is the fact that the United States is separated from probable enemies by wide stretches of open sea. Therefore, a fighting force is required at sea which is able to insure the integrity of our coastal areas, and adequate protection for our merchant shipping in any ocean. To this end, the development of air strength as an integral and necessary part of the Navy is believed to be entirely sound.

In order to insure that the terms of the Vinson-Trammell bill, signed in March, 1934, by the President, would be efficiently carried out, an orderly and continuous aircraft program was laid down calling for approximately 2000 airplanes by 1941. This program has been carried out in a highly satisfactory manner, to the point where there are actually on hand approximately 1000 aircraft. Planes and an additional 800 either on order or funds available for their purchase. When the entire planned program is complete, the Navy will have a total of 68 combatant squadrons, of which 37 will be ship-based, 22 tender based, and 9 attached to the Fleet Marine Force. Unless the number of surface ships is increased, this program will fulfill the Navy's aviation requirements based on the "Treaty Navy" requirements.

During the past fiscal year the Bureau of Aeronautics procured 422 ...

SAN DIEGO BOMBERS NEARING HAWAII

Japanese Attacked Near Panay Disaster Scene

TOKYO ENDS RELATIONS WITH CHINA

Action Considered Equal to War Declaration; Nipponese Tanks, Ships Rush to Aid Beleaguered Troops.

SHANGHAI, Jan. 19 (Wednesday) (A.P.)—Chinese and Japanese forces today were reported locked in bitter battle along the Yangtze river near where the U. S. gunboat Panay was sunk by the Japanese a month ago.

Chinese said two reinforced columns had arrived in the vicinity of Wuhu, 25 miles up stream from where the Panay sank, and were pressing the Japanese hard for possession of the important river port.

Forces Bolstered

They said Japanese had rushed four boatloads of troops to Wuhu to bolster their forces, while two Japanese warcraft shelled Chinese positions above the city.

Japanese reported a Japanese tank unit had occupied Hohsien, nearest town to the scene of the Panay incident, after killing 200 Chinese and driving out 500 others. The unit then advanced toward Hanshan, where the Panay survivors fled.

Since Japanese troops held Hohsien when the Panay was bombed, the tank maneuver was interpreted as meaning possibly that Chinese had recaptured the town.

A Hongkong dispatch, indicating the Japanese were increasing their activities in south China, said Japanese had warned British authorities they planned to keep the Hongkong-Canton road under bombardment and any British subjects using the road would do so "at their own risk."

Advances Slowed Down

Chinese counter attacks and guerilla warfare were reported slowing down Japanese advances in south Shantung and in Chekiang province,

27 Missing, Many Injured Among Boy Students, Teaching Brothers; Heat Drives Some Into Jumping From Windows; Smoking Ruins Hide Fate of Many Youths.

ST. HYACINTHE, Que., Jan. 18 (Canadian Press.) — Flames which flared in the night swept the College of the Sacred Heart for boys here today, leaving 17 known dead and 27 persons missing.

Two faculty members from Rhode Island were among the teaching brothers and students missing and four from New England were among 21 victims in hospitals. Among

Firemen, caps coated with frozen spray, poured tons of water into the flaming ruins throughout the day.

Terror and confusion were described by Robert Dionne, 18, of Drummondville, Quebec, injured as he jumped into the snow below.

"The first I knew was when I was awakened by someone shouting: 'Fire, fire'," the youth said. "I jumped out of bed and every-

CABINET WELDED BY CHAUTEMPS IN UNSOLVED CRISIS

Premier Gets Socialists' Support But Fails to Clinch Communist Aid.

PARIS, Jan. 18 (A.P.)—Premier Camille Chautemps tonight succeeded in forming a new government composed principally of Radical-Socialists, ending in its fifth day the longest French cabinet crisis since the World war.

The question of continuation of the 19-month-old People's Front, coalition of Leftist parties, remained undecided however.

The premier, whose resignation early Friday created the crisis, was assured Socialist support for his new government in the chamber of deputies. But the Socialists, who participated in Chautemps' preceding government, did not take posts in the new cabinet.

Their Communist allies in the People's Front decided to await a ministerial declaration of policy in the chamber Friday, then "to judge by the government's program" whether to continue supporting Chautemps and keep the People's Front intact.

Even if the Communists vote against him Chautemps appeared sure of a parliamentary majority with the votes of the Socialists, Radical-Socialists, and two smaller Independent Left groups—the Socialist and Republican Union and the Independent Left.

The official cabinet list includes: Ministers of state—Louis Frossard and Georges Bonnet; foreign affairs—Yvon Delbos; interior—Albert Sarraut; justice—Cesar Campinchi; national defense and war—Edouard Daladier.

Erie Road Bankrupt; Court Takes Control

$10,000,000 Debts Force Action by Historic Carrier; Stocks Sink $3, Bonds Tumble $130 More; Trustees To Be Named Feb. 14; Losses of Other Rails Eyed.

CLEVELAND, Jan. 18 (A.P.)—A U. S. district court took control of historic Erie railroad today under section 77, federal bankruptcy act.

The road, reporting it expected to be unable to meet approximately $10,000,000 in debts due between Jan. 1 and March 1, asked for the action.

Judge Samuel H. West signed the application four hours after it was filed, making operations subject to court approval pending appointment of one or more trustees Feb. 14. He ordered Erie to submit a financial statement by April 18 and to make monthly reports thereafter.

In its petition, Erie said it owed $10,071,062 between Jan. 1 and March 1 and said its net cash balance Jan. 15 was $2,116,330. Cash from all sources through March 1 was estimated at $10,102,955 to pay operating expenses and taxes estimated at $10,613,495, "so that estimated amount available for debts due and to become due in that period will be approximately $1,605,790."

Erie stocks and bonds plummeted. Erie common dropped $1 to around $3, compared with a 1937 high of $23.62. Erie $1000 bonds, already down $100 to $250 from 1937's close, shrank as much as $130 further.

The bankruptcy action focused new attention upon all railroads, seeking increased freight rates to offset a sharp drop in earnings.

The action also brought into relief a dispute between the Chesapeake & Ohio railroad, controlling interest holder in Erie, and the Reconstruction Finance Corp. RFC, already Erie's creditor to the extent of $16,000,000, refused the road a year-end loan of $6,006,000 unless C. & O. guaranteed repayment or helped Erie put up sufficient collateral. This the C. & O. declined to do.

Anti-Noise Law Ordered Here As Hotels Kick

Preparation of an anti-noise ordinance was ordered by the city council yesterday after a conference with San Diego Hotel association members.

Hotel men told councilmen that loud and unnecessary noises are depriving people of rest and hurting the hotel business.

A list of noises to be outlawed was submitted to the city attorney, with instructions to submit an ordinance as soon as possible. Noises to be banned include:

Unnecessary sounding of horns or signals.

Noises from public places or resorts which disturb neighbors.

Loud shouting by peddlers, hawkers or vendors on the streets.

Use of drums or loudspeakers to attract attention to shows or sales.

Use of loudspeakers on vehicles for advertising or other purposes except by special police permit.

BLOCH TO RELIEVE HEPBURN JAN. 29

WASHINGTON, Jan. 18 (A.P.)—Adm. Claude C. Bloch, battle force commander, will relieve Adm. Arthur J. Hepburn as U. S. fleet commander in chief Jan. 29.

The command exchange, first announced by Secy. Swanson in November, will take place aboard the U. S. S. Pennsylvania, fleet flagship, at San Pedro.

Adm. Hepburn, who has served as commander in chief since June 24, 1936, will become 12th Naval district commandant, with headquarters at San Francisco.

Navy officials said the officers concerned would determine what civilians would be permitted to witness the ceremonies.

Adm. Bloch, born at Woodbury, Ky., lists Bowling Green, Ky., in naval records as his present address.

7 FAIR DIRECTORS PROPOSED BY S. D. DEVELOPER GROUP

Resignation of 6 Reported As County-Wide Support Promised in New Set-Up.

Six of the eight 22nd Agricultural district directors have signed a letter of resignation addressed to Gov. Merriam and a seventh is expected to sign today, it was announced last night at a County Development federation meeting at Chula Vista, when seven men were nominated to succeed the retiring directors.

The letter of resignation is expected to be sent to Merriam tonight, along with federation nominations.

Eighth to Keep Post

Directors who have signed the letter of resignation are N. Matzen, Ernest L. Bullen, E. J. Buckbee, Richard Allen, Fred W. Mitchell and John C. Barger. A seventh director, H. E. Whittemore, is expected to sign today. The eighth director, Robert Graham, has indicated he would not resign.

Nominated for the board, which has received assurances of county-wide support, are the following:

R. E. Badger, Rancho Santa Fe, for two terms County Farm bureau president and now executive committeeman, San Dieguito chamber of commerce vice president, San Diego Production Credit association president and Rancho Santa Fe Home Owners' association director. He is a nurseryman.

Harry S. Carroll, Escondido, former advertising manager of Broadway store, Los Angeles, residing on avocado ranch.

Matzen Re-Named

Dr. N. Matzen, Escondido, only board member nominated for new group. He is a delegate from the southern five counties to the California State Farm bureau and Escondido Lemon association chairman.

George Mendenhall, Rincon, native of San Diego county, Cattlemen's association member and Mendenhall Cattle Co. manager.

G. F. Poggi, Sorrento, county res-

TAIL WINDS SPEED HUGE AIR ARMADA

18 Planes Roar Away From Harbor in Smooth Start; Fair Weather May Cut Time Below 20 Hours.

Massed in the greatest over-ocean formation ever attempted, 18 navy patrol bombers, bearing 127 officers and men, late last night rode assisting tailwinds as they droned through the darkness, clipping off one monotonous mile after another on a non-stop flight from here to Honolulu.

At 1 a. m., the air armada was 700 miles from Pearl Harbor, having passed the half-way mark at 9 p. m. on the 2570-mile flight that was scheduled to take from 18 to 20 hours.

Millions Listen In

Through the medium of two national radio networks, millions of Americans yesterday morning listened to a description of the take-off as the heavily loaded flying boats, wallowing deep in the water, taxied down San Diego bay and took off to seaward for a rendezvous 15 miles west of Coronado.

It was 8:40 yesterday morning when the planes of Patrol Squadron 9 were wheeled over the seaplane ramp on North Beach, North Island, and dipped into the bay. Heading the parade was Lt. Comdr. W. G. Tomlinson, squadron commander, followed immediately by Lt. Tom Hamilton, former football coach at Annapolis.

Taxiing to a position off the starboard bow of the destroyer tender Dobbin, Tomlinson opened the throttles wide. Handicapped by lack of wind and an incoming tide, the commander, with motors roaring, taxied nearly a mile and one-half but failed to lift the 14-ton ship. Hamilton, a few hundred yards astern, likewise failed. On the second try, however, both planes were able to take off after 3-minute runs.

Start in Quick Time

The first plane to rise off the way was Plane 4 of Squadron 10. One after another the others followed in rapid succession and at 9:42 all planes of Squadrons 9 and 10, under command of Lt. Comdr. S. H. Warner, were aloft, making the actual take-off time 34 minutes as

(Continued on Page 2, Col. 4)

S. D. GETS SHOWER; NO MORE SIGHTED

A light shower wet San Diego last night, bringing .05 of an inch of rain up to 10 o'clock. Fair, but unsettled weather, was forecast for today with little change in temperature. A maximum of 65 degrees was recorded yesterday.

The shower here was part of a storm centered over Oregon and Washington which caused heavy rains in areas. The storm was not expected to bring any more rain to San Diego.

Light rains fell in various parts of Southern California. Los Angeles recorded .07 of an inch, San Luis Obispo, .15, and Redlands, .07. Generally fair weather was forecast for the southland today.

JEWS MUST LEAVE, ORDER IN ECUADOR

QUITO, Ecuador, Jan. 18 (A.P.)—The expulsion of all Jews from Ecuador except those engaged in farming today was decreed by the provisional military government of Col. Alberto Enriquez. The decree declared hundreds of jews permitted to colonize in Ecuador to escape persecution in central Europe had entered business instead of agriculture as expected.

4 SAFE IN SLIDE; LIMITED DELAYED

SAN FRANCISCO, Jan. 18 (A.P.)—Four track laborers were engulfed in a slide north of Dunsmuir, but all were rescued, Southern Pacific headquarters announced today. The slide buried 600 feet of track five miles north of Dunsmuir and tied up the Cascade limited.

S. D. JURY BLAMES DOCTOR IN DEATH

Dr. Blanche Ramer, San Diego physician, yesterday was held criminally responsible by a coroner's jury for the asserted illegal operation death of Mrs. Mary Monte Ne Beck, 36, 4143 Georgia st., in a local hospital Jan. 14, Dave Gershon, deputy coroner, reported. Dr. Ramer is at liberty under $2500 bail pending preliminary hearing Feb. 8 on a murder complaint.

HONDURAS NAMES HULL FOR AWARD

TEGUCIGALPA, Honduras, Jan. 18 (A.P.)—Honduras today announced it had proposed Cordell Hull, United States secretary of state, to the Norwegian government for the 1938 Nobel peace prize. Peru and Nicaragua also have nominated Hull.

REDS CALL HALT TO PARTY PURGE

MOSCOW, Jan. 18 (A.P.)—The Communist party's central committee tonight called a virtual halt in the purge of party ranks by a stern resolution condemning the mass expulsion of party members which usually resulted in their loss of jobs and often arrest. The committee forbade mass expulsions which it blamed either on over-ambitious informers or officials too anxious to get ahead.

MOORE N. J. CHIEF; MILTON TO SENATE

TRENTON, N. J., Jan. 18 (A.P.)—A. Harry Moore resigned from the U. S. senate, became New Jersey's governor for the third time and named his successor in Washington within three hours today. First senator within memory to resign to become governor, Moore appointed to the senate John Milton, legal adviser to three New Jersey Democratic governors.

Thar's Gold in That Attic!

How is business?

What, no vacant property? Nothing that you wish to sell?

Take a look in the garage. Yes, and try the attic, too, if you have one. And don't forget that storeroom closet. Find anything? Good.

Now dial M-2121. (Central will get it for you, if you have no dial on your phone.) Ask for classified advertising. An efficient ad writer for The Union and Evening Tribune will help you draft your ad.

All of which is one way of calling your attention to National Ad week, which is being observed in this country and Canada. The National Association of Advertising Managers is sponsoring the week, which has one objective:

To inspire news readers to give their newspaper the opportunity to help them solve many of their problems, as the want ad department specially is fitted to do.

And remember, observance is for the benefit of newspaper's friends—not for the advertising department. Accordingly, special rates are being offered that allow you to run an ad for seven days for the price of five.

But want ads bring quick results.

Your contract says seven days. Probably you won't need that long—not with the thousands of new readers who are studying the classified pages this week. So you may cancel your contract in the 5-day period and pay for only the days the ad appeared.

No need to call at The Union-Tribune office. Just telephone M-2121.

FIVE CENTS

The Fact-O-Graph by WILLIS WERNER

It's All Free.

FOUR out of five San Diegans are too busy to realize it—but you can ride on boats, watch human drama in the making, see how pencils are made, enjoy a million dollars worth of armchair adventure—and do it all free!

◇ ◇ ◇

More dramatic than any imaginative creation—for there's no guaranteed happy ending in the last chapter—are the cases which come up for trial in San Diego's six superior, six municipal courts.

◇ ◇ ◇

A score of San Diegans spend their entire time going from courtroom to courtroom, are familiar figures to bailiffs and court clerks — but hundreds more have never watched a hearing proceed—except in the movies.

◇ ◇ ◇

The day's "program" is posted in the County Clerk's office, tells what cases are coming up in the superior courts, how long they're expected to last, whether or not a jury is being used.

◇ ◇ ◇

Regular courtroom followers become "fans" of certain lawyers, know when they appear in cases against certain other lawyers fireworks may be anticipated.

◇ ◇ ◇

Cases in two divisions—civil (such as suits for damages), and criminal (trials for negligent homicide, drunk driving, etc.) You can also hear wills contested. Juries selected, and—particularly on Saturday mornings—watch the divorce parade.

◇ ◇ ◇

MORE personal are the actions to collect back rent, small damages—as in the case where a man sued for teeth he lost when he bit into a nail in chewing tobacco—in the five municipal courts on the fifth floor of the Spreckels building. Sixth municipal court—police court—adjoins the police station on second-av

Chief of Bureau of Aeronautics

nine squadrons, seven of which are tactical and two are utility. The tactical squadrons include two fighting, two bombing and three scouting. The utility units consist of transports, amphibians and odd types. The operating personnel of Marine Corps Aviation consists of approximately 200 officers, 40 flying cadets, 1200 enlisted mechanics and 30 reserve officers on active duty.

The squadrons are assigned to two composite groups designated Aircraft One and Aircraft Two. The former is stationed at the Marine Barracks, Quantico, Virginia, the latter at the Naval Air Station, San Diego, California, where it operates with the carrier divisions of the Battle Force. A separate scouting squadron garrisons the Virgin Islands, with station at St. Thomas, Virgin Islands.

U. S. Naval and Marine Corps Reserve aviation comprises the naval reserve aviation bases, and reserve squadrons attached to them. These bases provide the facilities for the training of the organized reserves and for conducting elimination flight training of new officer material for the aviation reserve.

The aircraft organization assigned to a vessel forms an integral part of the organization of that vessel. Aircraft organizations assigned to and quartered on board carriers, tenders or other auxiliary vessels constitute the air department of such vessels. Aircraft organizations assigned to other vessels of the fleet constitute a part of the gunnery department of such vessels.

Experience has demonstrated that airplanes in themselves are not capable of operating as independent units indefinitely over vast areas of the sea. Therefore the naval force cannot avail itself of the advantages inherent in air operations unless it provides in the fleet itself, means for carrying, maintaining, and efficiently operating aircraft in whatever area it becomes necessary to exercise sea power, and unless through constant training, there are developed methods for harmonious cooperation between air, surface, and sub-surface activities. Through constant training and indoctrination, the methods of cooperation have now reached the point where aircraft in fleet activities are accepted as a commonplace part of the day's work; air and surface operations working in the closest harmony, each supporting and complementing the other. A means for

POWERED by the recently introduced Allison engine, the YIP-37 model marks the return of Curtiss-Wright to the manufacture of airplanes for liquid cooled power plants. The YIP-37 is an all-metal monoplane pursuit ship, used by the Army Air Corps. Performance and weight details have not yet been released by the Air Corps. The YIP-37 is not available for export.

NEW YORK WOMAN HELD AS SUSPECT IN SPY ACTIVITY

WASHINGTON, Jan. 18 (A.P.)—Sec. Hull, receiving word from the Soviet government that Mrs. Marie Rubens of New York had been arrested in Moscow on suspicion of espionage, tonight asked Soviet authorities to permit an American official to see her.

State department spokesmen said the request was made so a secretary of the American embassy in Moscow could determine how she was being treated and whether her story of her detention corresponded with the Soviet version.

Sister Overjoyed

Counsel for Miss Constance Boerger of New York, sister of Mrs. Rubens, announced he would ask Hull to arrange if possible that the prisoner be represented by counsel of her choice.

Overjoyed at word her sister—long missing—still was alive, Miss Boerger said in New York:

"I know she's completely innocent of any espionage. If she is involved, I am sure it was entirely without her knowledge."

Held Since December

Maxim Litvinoff, Soviet foreign minister, informed Hull the mysterious woman known also as "Mrs. Donald Louis Robinson" had been under virtual arrest since the beginning of December.

"Donald Louis Robinson," with whom she entered Russia, also is under arrest on suspicion of espionage after being found in a Ural mountain town carrying numerous false passports of various countries, Litvinoff said.

MAY REFUSE INTERVIEW

MOSCOW, Jan. 19 (Wednesday) (A.P.)—American embassy officials today were ready to ask Soviet authorities for permission to visit Mrs. Marie Rubens of New York in prison here as soon as instructions from Washington were received.

Immediate authority to interview the mysterious woman was considered unlikely in foreign circles, but an eventual talk with her in the presence of Soviet officials was expected.

An espionage charge would make the woman liable to execution by shooting.

OIL PRODUCTION SOARS

NEW YORK, Jan. 18 (A.P.)—Crude oil production and gasoline stocks increased to record seasonal peaks in the week ended Jan. 15. American Petroleum institute estimates indicate crude flow jumped 39,800 barrels daily to 3,476,900 barrels. Finished and unfinished gasoline stocks rose 1,616,000 barrels to 80,947,000 barrels.

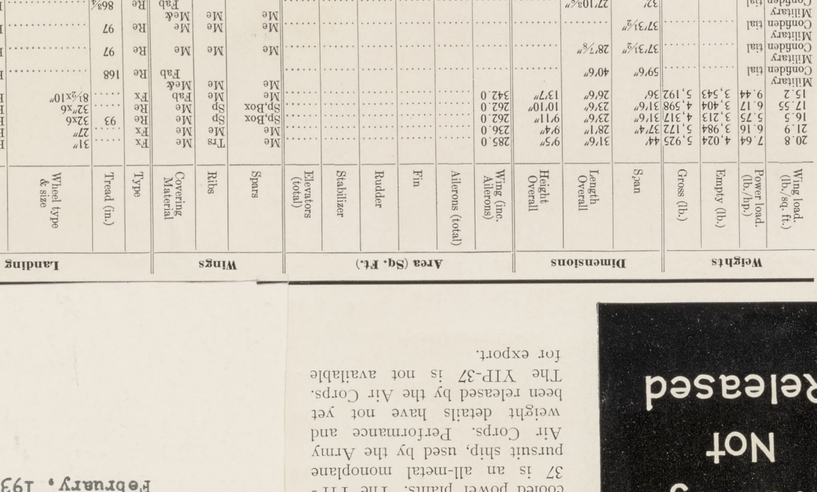
Scenes at Take-Off of 10 Planes



IMPROVEMENTS FOR REST HAVEN TO COST $30,000

More than $30,000 in improvements at Rest Haven preventorium, and an increase in Christmas seal sale were announced yesterday by Mrs. Florence E. Mead who, as president for her 12th term, began her 25th year of service with the San Diego Tuberculosis association.

Mrs. Mead became identified with the organization early in 1914, later serving many years as chairman of its board and becoming president in 1927.

Re-elected also were Mrs. F. Leigh Nason and Mrs. Harold Starkey, vice presidents, and Mrs. Nelson Barker jr., recording secretary. Officers, with Mrs. Frank G. Belcher, Dr. E. H. Christopherson, Philip Gildred, Mrs. John C. Schlappi and Dr. J. J. O'Hara, comprise the board. The only change in the directorate was naming of Mrs. Schlappi for the vacancy caused by retirement of Mrs. Peter DeJonge.

To Increase Facilities

In her annual report, Mrs. Mead discussed improvements at the preventorium, where undernourished children, potential tuberculosis victims, are cared for, and the increased facilities to be available with completion of the admittance hospital. This project was financed by a subscription campaign last summer, the cost being in excess of $30,000.

Mrs. Mead also announced the Christmas seal sale has grossed $14,000 to date, an increase of $2300 over last year. About 80 percent of the net fund is used here for free clinic services and early diagnosis campaigns in public schools, the remainder going to cooperating state and national agencies.

When final returns are in from the sale, she added, the sum will be the largest raised in recent years. She said several thousand persons who received seals through the mails are tardy in making remittances, and requested their cooperation in closing the campaign.

Free Clinics 187 Last Year

Free clinics conducted last year numbered 187, a total of 1801 men, women and children being examined, Cleo Raley, clinic nurse, reported. In the early diagnosis phase of the work, tuberculin tests were given to 1254 high school students, 440 State college students, and 139 in the college's student-teacher training department.

Work of the association and preventorium is supported by Community Chest allotments, seal sales and donations.

—Union photo—Harry T. Bishop.

Down the ramp and into San Diego bay yesterday morning slid 18 patrol planes as Lt. Comdr. Spencer H. Warner studied a chart of the route between here and Honolulu over which he would be leading the bombers a few minutes later.

ident for eight years; past president, San Diego Poultry association.

Charles Davies, San Diego, past president, junior chamber of commerce; vice president, state junior chamber of commerce; director, national junior chamber; only honorary vice president, state junior chamber. He is a San Diego Consolidated Gas & Electric Co. executive and Wholesale Credit Men's association director.

McLean Wilson, San Diego, now serving his second term as San Diego County grange manager, past president of first farm bureau in Pennsylvania and one of the 50 honorary members Luther Burbank Society of California.

Hansen Announces Plans

BOMBERS NEARING HAWAII IN FAST FLIGHT FROM S. D.

(Continued from Page One)

15 minutes elapsed between the launching of Squadron 9 and those of Squadron 10.

And as the planes, a fighting wing of the navy, roared into the darkness, gaining speed as weather improved and fuel load lessened, the navy described the flight as "delivery by air of new aircraft in conformity with naval practice."

Both Rear Adm. Ernest King, commander aircraft, scouting force, and his chief of staff, Capt. Alva Bernhard, were pleased at the smart airmanship displayed by the Hawaiian-bound pilots. Confronted with unusual handicaps in taking off, the ship commanders employed all the skill at their command in getting their heavily laden planes "on step" and into the air.

CHINESE ATTACK FOE NEAR PANAY DISASTER SCENE

(Continued from Page One)

where the Chinese were attempting to retake Hangchow, 125 miles southwest of Shanghai.

The Japanese said there were strong Chinese units in the vicinity of Chuhsien, 30 miles north of Nanking, presumably trying to cut the Tientsin-Pukow line behind the Japanese forces.

A Tsingtao dispatch said Japanese Vice Admiral Toyoda had apologized to American and British authorities for unwarranted action by Japanese marines against two British and one American sailor Jan. 11. The Japanese ousted the sailors from their signal post at bayonet point, the report said.

Fighting continued in the Hangchow area, but reports were meager.

ENVOY RECALLED

TOKYO, Jan. 18 (A.P.)—The Japanese ambassador to China was called home today as indications increased Japan eventually would recognize the new Peiping regime as the government of China.

The recall of Ambassador Shigeru Kawagoe from Shanghai set the seal on the repudiation of the Chinese government of Gen. Chiang Kai-Shek made in the Japanese government's statement last Sunday.

The chief secretary of the Japanese cabinet, Akira Kazami, asserted this repudiation was stronger than a declaration of war. He said Japan considered Chiang's government only a local regime, and did not intend to recognize it by a declaration of war.

Premier Prince Fumimaro Konoye said in an interview the government was determined the Peiping regime, created under protection of the Japanese army, should grow and cooperate with Japan for peace and culture in the Orient.

He said he did not believe the Peiping regime would become the central government of China without undergoing changes, but that he believed it "certainly would become the mainstay" of the new China Japanese expect to come into being.

The newspapers Asahi and Yomiuri predicted recognition of the Peiping government would be forthcoming when it controls the greater part of China.

Konoye said Japan welcomed foreign capital for the development of north China, adding the vested rights of third powers in the conquered areas would be respected.

U. S. STAND UNALTERED

WASHINGTON, Jan. 18 (A.P.)—President Roosevelt indicated today the United States contemplated no immediate change in its attitude toward the Sino-Japanese hostilities as a result of Japan's withdrawal of its ambassador from China.

He reiterated at his press conference, however, this government's policy was on a 24-hour basis.

In response to questions about Japan's action, Mr. Roosevelt said the state department had advised him it did not constitute a severance of diplomatic relations. He has refrained from invoking the neutrality act against China and Japan in the past on the grounds they had not declared war nor broken relations.

Japan's action drew renewed demands from leaders of the neutrality bloc in congress that the President invoke the neutrality act. It provides the chief executive shall ban arms shipments to belligerents when he finds a state of war existing abroad.

Senators Clark (D-Mo) and Nye (R-ND) said they regarded the withdrawal of the Japanese ambassador as tantamount to the formal declaration of war which Japan

Gary Wilcox, 10 months, says with a smile that he doesn't care if winter comes. That woolly suit he's dressed up in is one of 150 articles knitted in a San Diego Evening High school class in the semester just closing.

Knitting Lost Art?—Class At Evening High Increasing

San Diego is on the knit.

A general call for knitters, aspirants as well as the needle-broke variety, went out from San Diego Evening High school at the beginning of the fall semester which ends this month, and the response was enthusiastic.

Any one who believes that pioneer handicrafts of women are a lost art to moderns will be interested in the report of the class instructor, Mrs. Lula Niles. Knitters in the semester completed 42 women's knit dresses, 21 women's blouses, 18 cardigans and men's pull-overs, 21 children's sweaters, a banquet cloth, seven center pieces, 14 doily sets and several baby sets.

Proud owner of two of the baby sets is Gary Wilcox, 10 months, son of Mr. and Mrs. C. B. Wilcox, 4271 Swift ave. He obligingly posed in his Spahi red knitted outfit and smiled broadly when his tile-colored knit costume was brought out for display. He should have! It took 3080 yards of yarn to knit those two suits, according to the knitter, Mrs. Martha Wilcox. She is Gary's grandmother.

It takes the same number of yards to knit a woman's dress and, at the rate San Diego knitters are interesting themselves in the class, it looks like big business for the allied wool industries.

The new semester begins next week and will be held Monday and Wednesday afternoons, 2:30 to 5, room 220.

"Hand-knit garments are comfortable, economical and give long service," Mrs. Niles said. "Those interested may enroll now for the new semester."

AS POLICE RUSH AID OF INHALATOR

While police sped to Mercy hospital with an inhalator, Josephine Sweeny, 16, 3552 Pershing ave., died from asthma in the hospital's giant Drinker respirator at 9:45 last night, hospital attaches reported.

A desperate effort by physicians to save the girl's life began when she was admitted to the hospital at 8:40 o'clock. A few minutes later Josephine was placed in the respirator.

Dr. Paul R. Brust, police surgeon, and a police inhalator crew were summoned soon after 9:30. When they arrived, the girl was dead, Dr. Brust said.

Josephine is survived by her mother, Mrs. Edith Sweeny. Funeral arrangements will be announced from Benbough's mortuary.

TRUST EMPLOYE ARRESTED

SAN FRANCISCO, Jan. 18 (A.P.)—The arrest in New York City of Harold J. Fenton on a charge of misapplication "in excess of $25,000" while an employe of the American Trust Co., here, was announced today by Nat Peiper, local head of the federal bureau of investigation.

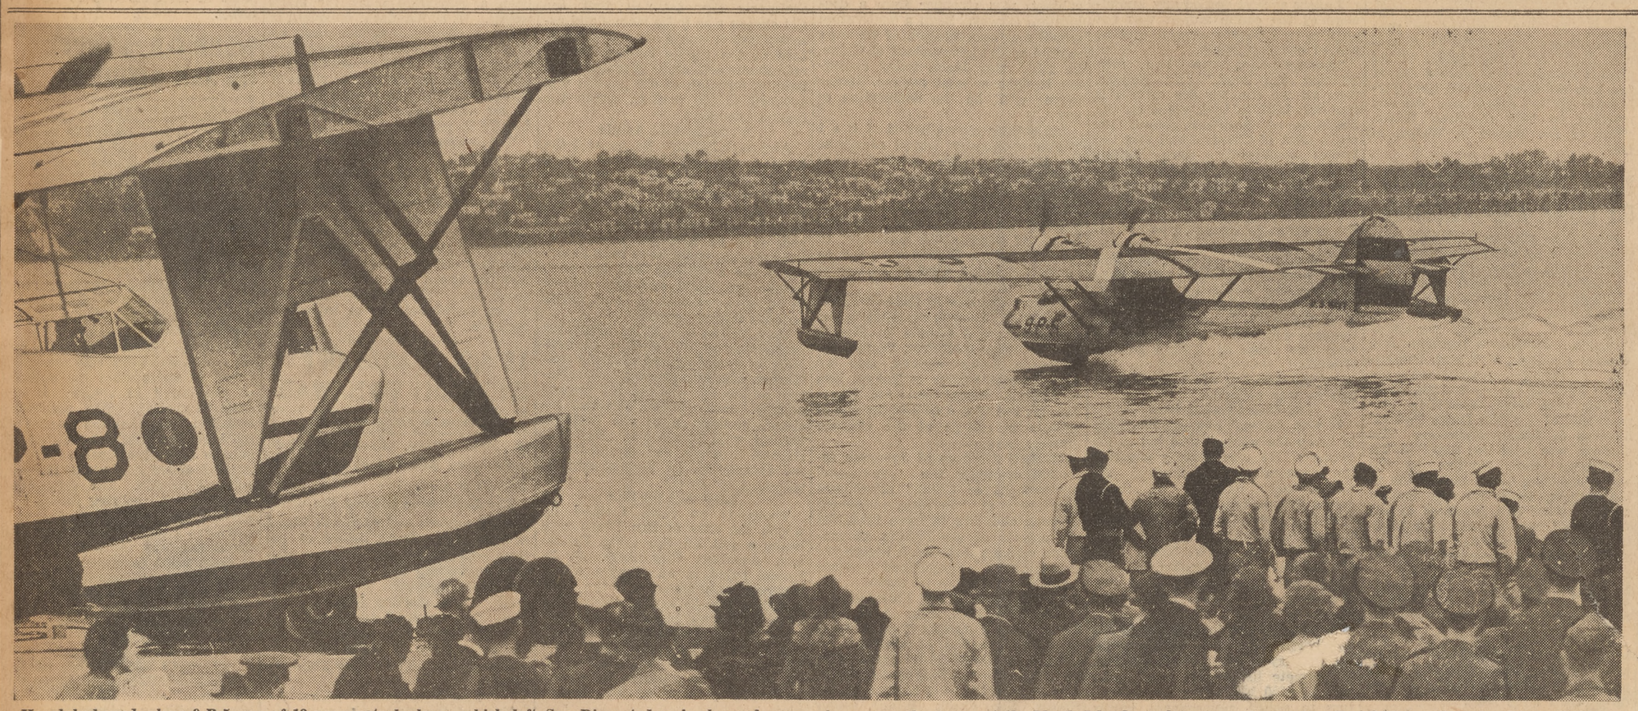
PLANES SPEEDING TO HAWAII



Honolulu-bound, plane 9-P-5, one of 18 navy patrol planes which left San Diego today, is shown here roaring across the bay past the North Island seaplane ramp for a take-off at 8:55 a.m. Carrying Lt. A. C. Olney, two aviation cadets and four enlisted men, 9-P-5 was one of the first of the Consolidated Aircraft Corp.-built planes to get off the water after a long run from the area off the foot of G st. On the ramp is plane 10-P-8 ready to take to the water, while in the foreground are a few of the hundreds of spectators watching the start of the navy's greatest mass flight to Hawaii.—(Photo by Harry T. Bishop, head of The Evening Tribune art and photographic department.)

FAR AT SEA AFTER SLOW TAKE-OFF

Eighteen bombing planes flying to Honolulu in the navy's greatest over-water hop were 170 miles off Pt. Loma at 11 a.m. today, according to a radio message received at the naval air station here.

Rise Without Difficulty

The navy announced the official take-off time as 9:34 a.m.

The big flying boats, heavily-laden with gasoline, rode deep in the water as they moved sluggishly down the bay from North Island. Then, at intervals, they roared back on a two-mile take-off course, motors straining as the pilots "gave them the gun."

Some of the planes rose into the air without difficulty. Seven or eight, however, bounced "like rubber balls" before they climbed aloft. They flew one by one down the harbor channel and then headed for a rendezvous more than 100 miles at sea, as in former massed flights to Honolulu and Coco Solo, C. Z.

Visibility "Thick"

Skies were overcast for the take-off. Visibility was good to the north, but it became increasingly "thick" to the southwest as the planes began going up at intervals.

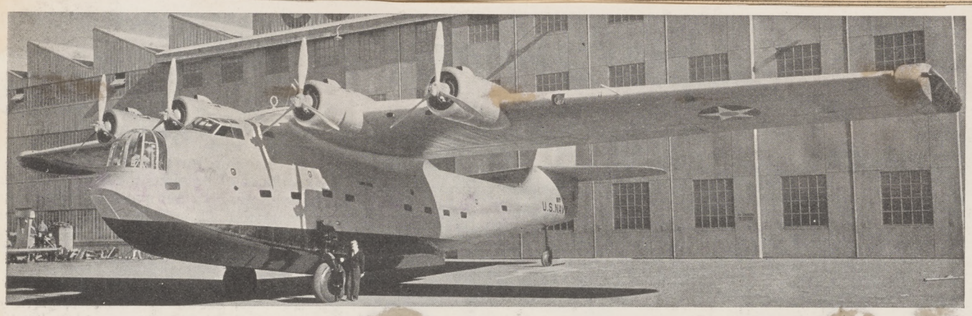
A crowd of about 400 persons, including families of the fliers, watched the take-off from the beach appeared to be a handicap to the take-off. Later it was explained that a fishing boat had nosed into the area and the two delayed their departure purposely.

The second group of nine began entering the water before the two delayed planes were aloft. They headed for Broadway pier at intervals, then roared westward at a fast clip, the first taking to the air at 9:19. The others climbed aloft at two-minute intervals. The last one was off at 9:37.

Lt. Comdr. S. H. Warner, senior officer aboard, is in command of the flight. Lt. Tom Hamilton, former football coat at Annapolis, is piloting one of the planes.

Aboard are 127 officers and men. Seventeen planes carried crews of seven each, and the other eight.

The days of "flying the ocean with a sandwich" are past. Each plane carries an electric stove, ice box, percolator, etc., and the men dine as well in the air as they do on terra firma. Each plane has a crew member who is an excellent unofficial cook.



Consolidated's new four-engine patrol-bomber for the Navy, the XPB2Y-1. As a comparison in size, note the man standing by the wheel.

Another flying battleship

CONSOLIDATED Aircraft offers the XPB2Y-1, a large four-engine flying boat, as its solution to the Navy's quest for super patrol-bombers. The boat was launched in San Diego Bay December 17. First maneuvering the boat about on the surface of the bay, test pilot William B. Wheatley finally lifted the huge boat from the surface in its first test flight and remained aloft for a period of about 1 hour and 15 minutes. The boat left the water after a brief run of about 31 seconds.

Little official information has been released concerning the exact specifications of the flying battleship but it appears to have a span of about 115 feet, overall length of about 80 feet, and height of about 22 feet (on land with beaching gear attached). It is understood to have a range of 5,000 miles, a top speed of 240 m.p.h. and to weigh about 30 tons gross. Power plants [illegible] 1050 h.p. Pratt [illegible]

The construction is all-metal. The hull is protected from corrosion by the latest approved finishes. Beaching gear is installed which may be removed and stored in special racks within the hull structure.

The wing has a sweep back to the leading-edge and a straight trailing edge, different in design from the PBY wing. The wing, however has straight lines and is tapered in a fashion bespeaking of Consolidated design. To add to the similarity to other Consolidated wings, the wing float that retracts to form the wing-tip has been incorporated in the design. Trailing-edge flaps extend from the wing-root to the aileron on each side.

The hull has round lines, shaped similar to the majority of the other big boats recently produced in this country and the Short boats in England. All facilities [illegible] ded fl[illegible] and comfort [illegible] The[illegible] clude commodious sleeping quarters, living quarters, galley complete with range and refrigerator, clothes lockers, toilet and washing facilities, heating and ventilating system, soundproofing, and even a well-equipped workshop complete with all appurtenances.

A complete telephone system is installed within the boat whereby any member of the crew may contact any other member.

A 110-volt alternating current electrical system is also provided, powered by auxiliary power plant motors.

Provision is made for a special navigation turret aft of the wing.

No official information is available concerning the armament but it is understood that the craft will carry a tremendous load of large bombs, and is well protected against attack from any angle. Protection from rear attacks is offered in a roomy gunnery compartment in the very end of the tail.

After acceptance by the Navy Department, the "Aerial Battleship" will be flown to one of the United States Naval Air Stations, where exhaustive

Aero Institute starts classes

Nelson E. Grace and Thomas E. Shelton picked to head faculty.

With enrolled students and a waiting list of future students hailing from nearly every state in the Union, the new Aero Industries Technical Institute at Los Angeles is now holding its first classes. Opening on September 14, this new aircraft industries training institution's "take-off" climaxed over a year of careful planning and preparation on the part of its executive board and management.

The Aero Industries Technical Institute, merely a name a year ago, opened its doors as an elaborate educational institution having a five acre campus and four handsome new buildings providing some of the most advanced classroom and shop facilities known to vocational training in the aircraft industry.

Exercising general supervision over the school is an Executive Board composed of Robert E. Gross, President, Lockheed Aircraft Corp.; John K. Northrop, President, Northrop Corp.; and C. A. Van Dusen, Vice President, Consolidated Aircraft Corp. James L. McKinley, well-known vocational school executive, is manager of the school.

CONSAIR DELAYS DELIVERY OF BIG NAVAL AIRBOAT

Engineers Plan Changes In Structure To Meet Objections

A month's delay in delivery to the Navy of its experimental four-motored bomber has been encountered by Consolidated Aircraft Corp., it was revealed today.

Dissatisfied with certain performances, company engineers are making several changes in the huge air boat's structure to meet approval of Naval inspectors.

Three Test Hops

About three test flights have been made since the 25-ton bomber, declared to be the most powerful Navy plane in the world, was launched in San Diego harbor last December.

Company officials had expected to have the plane ready for the Navy Trial Board by Feb. 1, but the unforeseen need of alterations has caused a postponement, at least until March 1.

No Mishaps

Consolidated assumes the risk of damage to the plane in preliminary test flights, which have been conducted by Chief Pilot William Wheatley. It was emphasized today that no mishaps had been suffered by the plane in its recent hops. The bomber represents a $1,000,000 investment to Consolidated, Major Reuben H. Fleet, president, revealed at the time it was launched.

The performance of the airboat must satisfy Lieut. Henry J. McRoberts, Naval aircraft inspector at the San Diego plant, before it undergoes so-called "commanding officer preliminary trials," supervised by Capt. Arthur L. Bristol Jr., commanding officer of the Naval Air Station.

Final Inspection

When the plane meets the latter's approval, a Navy Trial Board, consisting of eight experts in various divisions of aviation, is called from Washington, D. C., to make the final inspection.

This procedure already has been completed by Consolidated's competitor in the four-motored Navy bomber field—Sikorsky Aircraft Co. of East Hartford, Conn. The Sikorsky airboat underwent final trials several months ago and will vie with the Consolidated plane for a large-scale production contract.

Pairings Announced In Consair Golf

Pairings and starting times for the qualifying round in the Consolidated Aircraft corporation's championship golf tournament were announced today. The pairings reveal 120 will tee off in the preliminary test at the Emerald Hills links Saturday. Match play will follow on four consecutive Saturdays. Pairings and starting times:

7:30—F. Williamson, J. Williamson, R. George, J. Bryant.
8:15—J. Dole, H. Moeller, T. Johnson, M. Doerr.
8:30—Smith, Woerner, Taylor, Salmon.
8:36—Anderson, Ballard, Gumber, Wiley.
8:42—P. A. Carlson, R. K. Whitney, C. L. Freel, T. J. Coughlin.
8:54—H. G. Moe, L. E. May, L. C. Ekrem, R. R. Hoover.
9:00—W. Luppke, R. Paine, B. Bartha, J. Zamiska.
9:06—W. A. Schurr, A. D. Kligman, H. O. Nelson, W. E. Eldred.
9:12—P. McMichael, D. Biggs, R. Ramet, J. Rhodes.
9:18—Goss, Leggot, J. Le Clare, C. Le Clare.
9:24—B. W. Sheahan, T. M. Hemphill, K. B. Barnes, F. Meer.
9:30—A. Abels, E. H. Watts, R. C. Sebold, H. Hinckley.
9:36—G. Wier, T. Tumpkins, G. Grosher, R. Smeltzer.
9:42—D. D. Waller, J. Strachan, C. L. R. Smeltzer, J. Robinson.
9:48—Sloboda, Santong, Galley.
9:54—E. Williams, H. Abbott, C. W. Seymour, Campbell.
10:00—E. Wesp, R. Berg, L. G. Ireeland, D. W. Etchings.
10:06—C. M. Vates, M. Rosenbaum, H. M. Turner, D. R. Kirk.
10:12—G. Gandee, P. A. Stacy, J. C. Felix, G. A. French.
10:18—W. W. Williams, C. L. Gardner, Al Dolan, J. Robinson.
10:24—I. M. Laddon, H. A. Sutton, Dave Fleet, E. Vining.
10:30—R. A. Miller, F. W. Devlin, C. Farnsworth, P. Bourque.
10:36—C. Leich, J. Kelley, Hull, R. H. Schwarz.
10:42—H. W. Ryan, A. F. Vinje, F. B. Kester, Tom Malm.
10:48—Ed Gengras, R. Gartmayer, H. Muck, P. Kriegger.
10:54—F. Bender, K. Williams, J. Kany, J. Sylvester.
11:00—W. Seacord, J. Donahue, R. S. Madison, H. Golden.
11:06—R. E. Ingold, Craig, J. Stracham, Ted Laven, D. Burkhardt.

AVIATION MAG. Feb. '38

● **What a fleet of patrol bombers** the Navy is going to have pretty soon! Month ago a $4,500,000 contract for 33 more twin-engined Consolidateds brought the number of that type on-hand or on-order up to 255. Now comes a $5,299,538 contract to Glenn L. Martin for 21 patrol bombers of a new twin-engined gull-winged design that is expected to beat everything in its class.

Consolidated Could Carry 100

FURTHER FIGURES on the new Consolidated commercial trans-oceanic flying boat (announced exclusively in the January issue of AVIATION) show that this craft can be supplied with interior arrangements to accommodate 100 passengers and baggage on eastbound trans-Atlantic flights, and 75 passengers and baggage on westbound flights. These payload increases entail a corresponding decrease in the ship's super-luxury

AVIATION MAG Feb '38

recreational facilities, as illustrated in our January issue, but no change in stateroom size or luxury, and the same performance is maintained.

JAPAN WARNS FOREIGNERS TO EVACUATE

Bomb Operations To Cover 100,000 Square Miles North Of Yangtse

By United Press

SHANGHAI, Feb. 3.—Japanese authorities today warned foreigners to evacuate an area of more than 100,000 square miles in Central China "in view of the possibility of extensive operations"—the battle north of the Yangtse River which is now entering its climactic stage and may be the decisive battle of the war.

Note Sent Diplomats

The warning came from the

Buoy Saves Man Trapped In Icy River

By United Press

LOWELL, Mass., Feb. 3.—A man trapped for nearly eight hours on a clump of rocks in the middle of the swiftly-running Merrimac river, was rescued in a breeches buoy by Coast-Guardsmen today.

Identified as Walter Giblin, a musician, about 30, he was hurried to hospital here. He was only partly conscious and his condition was reported poor.

His dark overcoat was frozen stiff and his face and hands were almost black from exposure to a 10-degree temperature.

Only an hour before he was pulled to shore in the breeches buoy, Giblin had grabbed a guide line and tumbled into the water. He managed to swim to another rock, however, and this time waited until Surfman Harold Manchester reached him in

INJURIES OF 3 SURVIVORS ONLY SLIGHT

Commander Of One Plane Orders Crew To Jump, Stays With Ship

Leaps in parachutes saved the lives of three enlisted men who were aboard the Navy airboats which collided 70 miles at sea and carried 11 others to their deaths, the Navy reported today.

Fourth Succumbs

A fourth man who also jumped with his parachute died later aboard the hospital ship Relief. He was J. H. Hester, radioman, 1c.

Hero's Death

WORST HEAVIER-THAN-AIR TRAGEDY IN NAVY HISTORY OCCURS OFF COAST DURING SQUALL

One Craft Dives Into Sea Ablaze; Bodies Of 10 Who Went Down With Ships, Hunted; Injuries Fatal To Rescued Flier

In the worst heavier-than-air disaster of United States Naval history, two San Diego-based patrol bombers collided in mid-air during a sudden rain squall 70 miles southwest of Point Loma last night, killing 11 of the flight personnel and demolishing both aircraft.

Three aviators survived the crash, which caused one of the airboats to burst out into flames and the other to spin into the sea, smashing into splinters.

It was believed that in the sudden rain squall, a heavy wind had blown up, literally tossing the two planes, flying in a close

Loss Put At Million

Meanwhile, 68 of the Consolidated-built bombers have, since January, 1937, completed five phenomenal non-stop flights to Hawaii and the Canal Zone without even minor trouble.

Value of each airboat, totally equipped with armament, is approximately $250,000. Loss in equipment alone in the three fatal accidents reaches $1,000,000.

It was recalled today that five of the crew that perished were included in the flight personnel of Patrol Squadron 11, when it delivered 12 bombers to Pearl Harbor last April. They are Lieut. Cooper, pilot of plane No. 3, Radioman Hester, Chief Aviation Machinist's Mate Fitzmaurice, Radioman Julian Rawls, and Aviation Chief Machinist's Mate Nelderlelt.

First Used In 1936

Patrol Squadron 11 is the pioneer advanced type airboat squadron of the Navy. Under command of Lieut.-Comdr. L. A. Pope, its crews have flown the giant bombers more hours and miles than any other group of aviators in the service.

To Lieut.-Comdr. Pope on Oct. 5, 1936, the first PBY-1 plane was delivered from the Consolidated plant. His men served as "instructors" to the crew of Patrol Squadron 6 of Pearl Harbor, first unit to make a long-distance delivery flight of PBY planes, in January, 1937. The following April, 84 officers 11 "ferried" their complement of planes to Hawaii, delivered them to a Pearl Harbor-based squadron, and returned to San Diego for 12 new bombers.

Searchlights of the fleet, 98 fighting ships massed in giant

The two giant Navy bombing planes, which collided last night, with a loss of 11 men, are among the world's most powerful aircraft.

They are designed to fly non-stop and an adequate defensive armament of machine guns, and bombs and other ordnance to stop 4000 miles with a load of bombs and a adequate defensive armament of machine guns, and the Navy boasts that when forced down at sea, their boatlike hulls will ride out any storm that a ship can live through.

Three men are needed to fly them—pilot, navigator and radio man—and folding bunks are provided for the others of the seven-man crew who may be off duty. Though engaged in mimic battle tactics, the planes had been out of their base for 12 hours and it was believed that some of the victims may have been off duty, perhaps killed while asleep in their bunks.

The blunt-nosed hulls are of chine gun nest to guard the tail.

Bombers In Crash Among World's Most Powerful

William Woodruff, aviation chief machinist's mate, (wife, Ruth), San Diego.

The survivors, all injured, were:

D. B. McKay, aviation chief machinist's mate, (wife, Mrs. Donald McKay), San Diego, fractured leg.

V. O. Hatfield, (no record yet of kin or home), extensive cuts on right leg.

L. S. Carpenter, aviation machinists mate, (wife, Violet), San Diego), broken arm and shock.

Armament details are the Navy's jealous secret. A glassed-in compartment at the nose holds two men, apparently to operate machine guns and release bombs which are believed also to be carried in this room.

A glassed-in revolving machine gun turret pokes up further back along the top of the hull. Behind this is the pilot's compartment, and then the wing. Below the wing are the navigator's and commander's quarters. Aft the wing are the crew's quarters, with living accommodations for extensive tactics, the planes had been out of their base for 12 hours and it was believed that some of the victims may have been off duty, perhaps killed while asleep in their bunks.

At the same time, the city street department began dumping sacks of sand and concrete along the ocean front between Lonbranch and Brighton-sts., where the ocean has washed out bulkheads, portions of lots and streets during the past three days.

Although not as high as the tide yesterday, the high water line today took out another large amount of sand along a two-block front, residents reported. City Public Works Director Fred Rhodes, after surveying the disturbance, said the city would co-operate with property owners in the construction of a permanent sea-wall.

Prosecutor Roll produced Wright's earlier signed confession to police, telling how he shot to "destroy that thing." Roll based his next questions on the confession.

Q. When you saw what you did, did you think of destroying it as you said in your statement at the Glendale police station?

A. I don't know what I thought.

My mind went blank.

Q. Did you suspect that she was participating in an unnatural act?

A. Yes.

Wright gripped the arms of the chair.

The cross-examination switched to Wright's own conduct. He admitted having gone out with other women, but insisted it was for business reasons, and that Mrs. Wright had been informed of his vane. He said he could not remember telling detectives that he brought new flood dangers to Governor Emmerson, who had prevailed on the eastern seaboard to get relief to hundreds of marooned families.

were down.

The storm continued unabated today. Power lines westward to San Francisco, and eastward to Reno, were down.

When Garvin made his last report by telephone prior to his arrival in Prattville he said that he had carried Lambert to a shelter cabin Monday night, and had started with him again Tuesday morning, fearing that they would starve before they were rescued. Then the line was cut off by the storm.

The snowfall measured six feet deep in level areas, and drifts were piled high across the roads.

Northern Illinois Faces Flood Peril

By United Press

Unseasonably warm weather and heavy rains, carried eastward by gales from the Pacific coast, brought new flood dangers to Northern Illinois today.

The midwestern cold wave was broken but freezing temperatures prevailed on the eastern seaboard.

Government engineers feared that a sudden rise in temperatures would loose a potential flood stored in an 80-mile stretch of thick ice on the Rock river from Rockford, Ill., to the Mississippi.

On the Michigan peninsula, highway crews and rescue parties still were attempting to get relief to hundreds of marooned families.

Funds Sought For Two U.S. Dirigibles

WASHINGTON, Feb. 3 (A.P.)—Adm. William D. Leahy testified today the United States never had a 5-3 naval ratio with Japan because of the necessity of keeping part of the fleet in the Atlantic ocean. Although this ratio was fixed by the London and Washington naval treaties, Leahy told the house naval committee division of the fleet between the two oceans prevented its establishment.

Leahy, questioned by Rep. Maas (R-Minn), asserted in the event of hostilities in the Pacific, he would want all the fleet available in that ocean. Responding to Rep. Brewster (R-Me), the navy's top-ranking officer declared the navy never had considered any plans for "quarantining" aggressor nations.

Brewster asked his question in reference to President Roosevelt's foreign policy speech at Chicago. The discussion brought criticism from Maas that the president had been "misquoted." "I think the

3-Year Lows In Mart Break

By VICTOR EUBANK

NEW YORK, Feb. 3 (A.P.)—Leading stocks crashed through lowest levels since 1935 in today's market, with losses running to 5 or more points at the worst. Rallying periods were slow and generally failed to follow through, although sufficient support appeared in the closing hour to enable principal sufferers to revive somewhat at the finish.

Another sharp break in American Telephone, which toppled more than 8 points at one time, unsettled sentiment at the start and touched off selling in virtually all industrial groups. Rails and utilities did relatively well throughout, the majority holding declines to fractions. Steels, motors, rubbers, aircrafts, farm implements, electrical equipments, chemicals and specialties were in the forefront of the slide. Transfers ran around 1,100,000 shares.

Bonds fell with stocks. Grain futures recovered substantially but other commodities were uneven. Wheat at Chicago was up ⅜ to 1 cent a bushel and corn improved ¾ to 1.

Conspicuous on the downside were U. S. Steel, Bethlehem, Chrysler, General Motors, Westinghouse, Allied Chemical, DuPont, Sears Roebuck, J. I. Case, Eastman Kodak, Douglas Aircraft, Kennecott, Johns-Manville, Allis Chalmers, Phillips Petroleum, Union Pacific, Homestake, Crown Cork and American Can.

Brokers attributed American Telephone's relapse partly to thoughts of possibility of a near-by adverse

Big Sea Search On For Bodies in Navy Tragedy

Death toll of a mid-air collision 70 miles off Pt. Loma last night of two giant navy bombing planes—worst plane disaster in American naval history—rose to 11 today as search by sea and air was made for missing bodies of 10 airmen. Rescued from the water after the bomber 11-P-4 fell in a splintering impact with plane No. 11-P-3, J. H. Hester, RMlc, of San Diego, died aboard the hospital ship Relief at San Clemente island early this morning, The Associated Press reports.

Expected To Recover

Three of Hester's companions are safe. Seriously injured, but expected to recover, they are D. B. McKay, ACMM, broken leg; V. O. Hatfield, ACMM, broken leg and cuts, and L. S. Carpenter, AMM2C, broken arm. All are married and reside here.

The 10 missing airmen, listed by the navy simply as "unaccounted for," and their nearest kin, are:

Crew of 11-P-3:

Lt. Elmer Glenn Cooper, commanding officer; wife, Mrs. Frances Cooper, Coronado.

Aviation Cadet Erwin John Koch, second pilot; mother, Mrs. John Koch, Toledo, O.

Maurice Fitzmaurice, ACMM; wife, Mrs. Victoria Fitzmaurice, El Cajon.

George Gordon Griffin, AMM1C; wife, Mrs. Sadie Griffin, San Diego.

Joseph Earl Walton, AMM2C; wife, Mrs. Mary Walton, San Diego.

Paul Landgrebe, AMM2C; father, Frank Landgrebe, Stillwell, Ind.

Julian Rawls, RM2C; wife, Chula Vista.

Crew of 11-P-4:

Lt. Carleton Barmore Hutchins,

24 S.D. Fliers Killed In Recent Crashes

The collision of two navy patrol bombing planes off Pt. Loma last night with a loss of 11 lives was the third disaster to planes of this type within the past six months, bringing the death toll to 24.

Six men were killed on the night of Aug. 23 when one of the giant planes crashed in San Diego bay. The plane, swooping down for a landing, hit the half-submerged hulk of the abandoned whaling ship Narwhal.

Seven men were lost Jan. 5 when a bomber disappeared at sea about 200 miles northwest of San Diego. A gigantic five-day search by two-score warships and hundreds of planes failed to reveal any trace of the bomber or its crew.

Evidence Blows Up

Herbs.

ALMOST anything grows in San Diego—a local chef even raises his own mint in the shadow of a downtown hotel—but more herbs grow on a sun-drenched Lemon Grove hillside than anywhere else in the county.

◇ ◇ ◇

There you will find the only lovage in San Diego—as well as such items as savory, scurvy grass and fennel stalks.

◇ ◇ ◇

They were planted by Dr. John Lovranich of Vienna, who has been experimenting with herbs and edible plants ever since he was cured of an illness while a young man. He works in his patch every morning.

◇ ◇ ◇

The lovage seeds he imported direct from Germany—they produce an herb with an aromatic celery flavor. Finely chopped, it's favored by gourmets for flavoring potatoes, meats and salads.

◇ ◇ ◇

Fennel stalks are eaten like celery while scurvy grass is a garden cress like watercress. Savory is favored as a seasoning for string beans.

◇ ◇ ◇

Important to Dr. Lovranich are the dandelions most people shun. He describes them as the calomel of the vegetable kingdom, prepares them for use with salads and cooked greens. "Garlic with a high school education" is the chive, which gives an onion like flavor to cottage cheese or omelettes.

◇ ◇ ◇

DR. LOVRANICH'S first experiment was to try increasing the iron in spinach. He soaked iron nails in water, used the rusty water on the growing spinach.

◇ ◇ ◇

The experiment was successful—except that experts in Vienna informed him that it had already been done and that there was already more iron in spinach than we need anyway. Since has learned something which should make youngsters happy.

◇ ◇ ◇

That's the fact that lettuce contains more iron than spinach, is more healthful than spinach because the latter contains sharp oxalic acid.

◇ ◇ ◇

Dr. Lovranich's experiments indicate that if you ate more vegetables containing sodium you'd eat less salt which contains sodium in another form.

◇ ◇ ◇

Explains that's why people who use the herb romaine use less salt—it's rich in sodium. He crossed romaine with dandelion (rich in potassium and iron), made an herb he calls rodan which he presented to President Roosevelt on the latter's visit here. He has a letter saying the President liked it.

◇ ◇ ◇

Dr. Lovranich went from Vienna to Berlin to study and while there developed a system of calisthenics which won him a gold medal. Speaking Hungarian, Roumanian and Esperanto (which he once taught) as well as German, he made world-wide acquaintances, came to this country as a result of one of them.

◇ ◇ ◇

A WEALTHY Oregon businessman urged him to come to Portland—so he did, gradually worked south until he settled in San Diego, finds Lemon Grove ideal for growing herbs.

◇ ◇ ◇

Now past 60, whitehaired with a trim Van Dyke beard, Dr. Lovranich is bronzed and vigorous, looks much younger, enjoys finding new uses for what most people consider weeds.

◇ ◇ ◇

Nettle, wild sage, wild horehound, dried and chopped all

BOB BURNS Says:

I THINK one reason for the divorces among the picture actors is because there is so much excitement in making pictures that home life jest seems a little dull. One actress told me the other day that her marriage would've gone on the rocks sure if her husband hadn't took up horseback ridin.'

She says since then her life has been filled with thrills and excitement because she never knows which to expect home first, her husband or the horse.

JAPAN WARNS FOREIGNERS TO EVACUATE

Bomb Operations To Cover 100,000 Square Miles North Of Yangtse

By United Press

SHANGHAI, Feb. 3.—Japanese authorities today warned foreigners to evacuate an area of more than 100,000 square miles in Central China "in view of the possibility of extensive operations"—the battle north of the Yangtse River which is now entering its climactic stage and may be the decisive battle of the war.

Note Sent Diplomats

The warning came from the Japanese embassy at Peiping.

The embassy's statement was that in a note to foreign diplomats, "third parties"—foreigners—had been warned to evacuate the area extending northward from the Yangtse to an irregular line drawn from Tsingtao on the coast to Taiyuan, far back in Shansi province.

The embassy recommended also that foreign property in the area be marked clearly and that Japanese authorities be notified of its location.

Peiping 'New Capital'

The spokesman here, in discussing the embassy note, referred to Peiping as the "new capital."

The Japanese announced here their airplanes had bombed the Amoy area, between Shanghai and Hong Kong on the coast, and it was asserted that the Fulshan forts and the barracks there had been destroyed.

SNOW, RAINS DUE IN COUNTY

Two Of Six Men Missing In Sierra Storm, Safe

Winter sport enthusiasts took heart today as snowfall in the higher mountain regions during the next 24 hours was forecast by Dean Blake, government meteorologist.

Blake said the storm which brought cloudiness, but no rain yesterday, should produce showers tonight and Friday in the city.

Temperatures will remain moderate; winds moderate to fresh from the southwest. The mercury during the 24 hours ending at 8 a. m. ranged between 50 and 64 degrees. Season rain total to date

FATAL ARMY AIR CRASH MYSTIFIES

By United Press

MIAMI, Fla., Feb. 3.—The charred and twisted wreckage of an Army observation plane in which two Army Reserve officers crashed near here failed today to disclose the cause of the fatal accident.

Lieut. L. H. Hale, 25, and Lieut. Paul B. Williamson, 30, both of Coral Gables, died in the crash. The fliers, both commercial airline pilots, took off from Chapman Field on a routine training flight. Over Virginia Key, the plane suddenly dropped into dense undergrowth and caught fire immediately.

HOOVER BEGINS LONG TRIP TO BELGIUM

By United Press

SAN FRANCISCO, Feb. 3—Former President Herbert Hoover was enroute to New York today aboard a train on the first lap of a trip which will carry him to Belgium.

Accompanied by Paul C. Smith, general manager, San Francisco Chronicle, Hoover will revisit the scenes of his relief work during the World War. The trip is at the invitation of the Belgium government.

Buoy Saves Man Trapped In Icy River

By United Press

LOWELL, Mass., Feb. 3.—A man trapped for nearly eight hours on a clump of rocks in the middle of the swiftly-running Merrimac river, was rescued in a breeches buoy by Coast-Guardsmen today.

Identified as Walter Giblin, a musician, about 30, he was hurried to hospital here. He was only partly conscious and his condition was reported poor.

His dark overcoat was frozen stiff and his face and hands were almost black from exposure to a 10-degree temperature.

Only an hour before he was pulled to shore in the breeches buoy, Giblin had grabbed a guide line and tumbled into the water. He managed to swim to another rock, however, and this time waited until Surfman Harold Manchester reached him in the buoy. Giblin was lying semi-conscious on the rock when Manchester arrived.

WIFE 'SPENDER', WRIGHT CLAIMS

Cross-Examination Held Up By Prosecutor

LOS ANGELES, Feb. 3.—Paul A. Wright, testifying on re-direct examination in his trial for the murder of his wife, Evelyn, and John Kimmel, today told how he economized while his wife ran up large bills at department stores.

He said the suit he was wearing at the trial was purchased in 1933 and cost $22.50. The last suit of clothing he bought in 1936, and it cost $35.

Wife's Bills Large

Defense Atty. Jerry Giesler had Wright identify department store bills for $239, $296, $100 and $42 for clothing and other articles which Mrs. Wright purchased during 1935 and 1936.

Late in 1936 Wright wrote to the department stores and ordered them to discontinue his wife's credit, he testified.

Roll Delays Quiz

Wright, 39-year-old aviation executive who confessed he shot and killed his wife and Kimmel when he found them in an abnormal situation in Wright's home last Nov. 8, was to have been cross-examined

Turn to Page 2, Col. 6.

BOYD REVEALED AS FEDERAL FUGITIVE

William Edward Boyd, sought for the kidnaping, robbing and shooting of Police Officer B. E. Hammond in San Diego last Sept. 26, really is Karl Clark Strain, fugitive from Federal agents.

This was the information forwarded to the sheriff's office today in a Federal Bureau of Identification bulletin from Washington, D. C. He is wanted by the government on charges of unlawful flight to avoid prosecution, conditional release violator, violation of the National Motor Vehicle Theft act, and for impersonating an Army officer.

10,000 S. D. AUTOISTS YET TO GET PLATES

Some 10,000 San Diego auto owners had better hurry to the motor vehicle department office before 5 p. m. tomorrow if they want to avoid paying heavy penalties on their 1938 license plates, E. Robert Anderson, local manager, warned today.

Anderson said there were some 10,000 plates yet to be distributed here when the office opened today at 310 Cedar-st. It will be open until 5 p. m. today and tomorrow. Penalties of 100 per cent on registration fees and 50 per cent on license fees are charged those who fail to make the deadline.

BURLINGAME FLOODED

By United Press

BURLINGAME, Feb. 3.—A cloudburst which struck Burlingame last night overflowed Burlingame creek and flooded five downtown blocks today.

INJURIES OF 3 SURVIVORS ONLY SLIGHT

Commander Of One Plane Orders Crew To Jump, Stays With Ship

Leaps in parachutes saved the lives of three enlisted men who were aboard the Navy airboats which collided 70 miles at sea and carried 11 others to their deaths, the Navy reported today.

Fourth Succumbs

A fourth man who also jumped with his parachute died later aboard the hospital ship Relief. He was J. H. Hester, radioman, 1c.

Those who leaped to the sea and were picked up, only slightly injured, were D. B. McKay, aviation chief machinist's mate; V. O. Hatfield, and L. S. Carpenter, aviation chief machinist's mate.

All were aboard plane No. 4.

Wings Tangle

Navy officers said that the accident occurred when the squadron—of between three and six planes—attempted to close formation and struck a low cloud. The two planes drifted into each other and their wings tangled.

Plane No. 3 caught fire and dove into the sea. The other plane, however, remained in the air for a few minutes, as Lieut. Elmer Glenn Cooper struggled with the controls to bring the crippled plane down to a safe landing on the sea.

Abandon Ship

The order to jump evidently was given by the ship's commander. The four, who evidently were in the rear of the plane, hurriedly fastened on parachutes and abandoned ship. Only Hester suffered serious enough injuries to cause his death.

The commander and the others with him in the control room of the plane were unable to get out—the officer remaining with his ship as it finally spun around and dove into the ocean.

NAVY LEARNS BY DISASTERS

New Safety Devices Result, Says Blakely

By HAROLD KEEN
The Sun's Navy Editor

"Out of this regrettable and costly accident we may arrive at a new safety feature in aircraft maneuvers."

Deeply moved by the crash which robbed the Navy of 11 able fliers last night, Rear Adm Charles A. Blakely, new commander of Aircraft Scouting Force, thus today epitomized the Navy's continual quest for methods which will provide greater security to its personnel.

"From each mishap, aboard surface ships or in the air, the Navy attempts to gain information which will make it impossible for such tragedies to occur again," Rear Adm. Blakely said.

"Many years ago there was an explosion aboard one of our warships, killing 34 men. It was not until some time later, in the battle of Jutland, when three disasters of a similar nature occurred to British ships, that the English navy learned the lesson given us in peace time—at much less cost."

As in the case of the two previous disasters during the past year, the exact causes will never be known, it was pointed out by Navy

MINERS SEE LEWIS AS U. S. PRESIDENT

By United Press

WASHINGTON, Feb. 3.—Lieut. Gov. Frank J. Hayes of Colorado told the United Mine Workers' Union today that one of its members may some day become President of the United States and said that John L. Lewis is competent to hold the office.

"We have such a candidate—such a man. I don't know whether he wants to run or not—but we have a man competent to fill the position in John L. Lewis." The 2018 delegates rose to their feet applauding.

ELKO SUICIDE IDENTIFIED

By United Press

SAN FRANCISCO, Feb. 3.—San Francisco police today announced that the woman who committed suicide with Harry L. Brewer in an automobile near Elko, Nev., last week had been identified as Mrs. Tom Coleman, 27, of San Francisco.

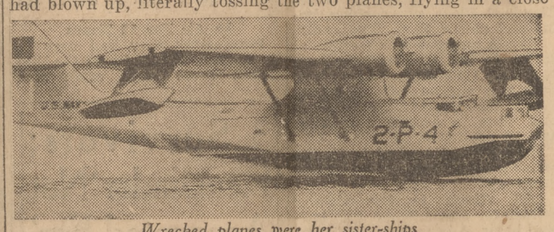
WORST HEAVIER-THAN-AIR TRAGEDY IN NAVY HISTORY OCCURS OFF COAST DURING SQUALL

One Craft Dives Into Sea Ablaze; Bodies Of 10 Who Went Down With Ships, Hunted; Injuries Fatal To Rescued Flier

In the worst heavier-than-air disaster of United States Naval history, two San Diego-based patrol bombers collided in mid-air during a sudden rain squall 70 miles southwest of Point Loma last night, killing 11 of the flight personnel and demolishing both aircraft.

Three aviators survived the crash, which caused one of the airboats to burst out into flames and the other to spin into the sea, smashing into splinters.

It was believed that in the sudden rain squall, a heavy wind had blown up, literally tossing the two planes, flying in a close



Wrecked planes were her sister-ships

formation, together and grinding them to pieces before the eyes of thousands of bluejackets on battleships and destroyers maneuvering in the vicinity.

The smashed planes plunged into the sea and disappeared. Fragments of wreckage drifted to the surface. The men rescued leaped from their falling ship with parachutes and were picked up in small boats launched immediately from the many warships in the vicinity.

The dead were first officially listed as "missing," while powerful searchlights of the warships pierced the rain-swept seas in an attempt to locate the bodies.

The planes were of Patrol Squadron 11, engaged in partol duty with the Pacific Fleet, now conducting intensive war drills off the Southern California coast.

The dead:

Aboard plane No. 3 which fell in flames—

Lieut. Elmer Glenn Cooper.

Aviation Cadet Erwin John Koch.

Joe Earl Walton, aviation machinist's mate, 2c.

Maurice John Fitzmaurice, chief aviation machinist's mate.

George Gordon Griffith, machinist's mate, 1c.

Julian Rawls, radioman, 2c.

William Hall Landgreve, aviation machinist's mate, 2c.

Aboard plane No. 4, which broke up on diving, with terrific force, into the storm-swept sea.

Lieut. Carlton Barmore Hutchins.

John Gregory Marion Neidzeicki, aviation chief machinist's mate.

William Woodruff, aviation chief machinist's mate.

J. H. Hester, radioman, 1c.

The survivors, who were rescued by speedy battleship launches, are:

D. B. McKay, aviation chief machinist's mate, fractured leg.

V. O. Hatfield, aviation machinist's mate, extensive cuts on right leg, 1025 22nd-st, San Diego.

L. S. Carpenter, aviation machinist's mate, 2c, 505 21st-st,

TELEPHONE STOCK LEADS MARKET DIP

By United Press

NEW YORK, Feb. 3.—A wide-open break in American Telephone sent the stock market to new lows since 1935 and caused increased selling in other sections.

Telephone broke to a new low of 129½, off 8¼, before meeting support. Selling in this prime investment favorite was said to be coming either from an estate or from a large university. A thin Telephone market made the stock vulnerable to only moderate offerings.

EX-MRS. MISSELWITZ MARRIES 'BUD' EKINS

By United Press

RENO, Feb. 3.—Herbert Roslyn "Bud" Ekins, 37, noted war correspondent, was honeymooning today with his bride, the former Mrs. Ted Catherine Lowrance Misselwitz of New York City.

Judge Thomas Moran performed the ceremony after he had granted Mrs. Misselwitz an uncontested divorce from Henry Francis Misselwitz, former New York newspaperman now living in Beverly Hills.

500 STUDENTS ON STRIKE IN SAN JOSE

By United Press

SAN JOSE, Feb. 3.—Five hundred San Jose high school students, protesting defeat of a $1,800,000 bond issue for construction of new school buildings to alleviate overcrowded conditions, went on a "classroom strike" today and paraded through downtown streets, then returned to their classes.

1000 CHICKENS BURN

OAKLAND, Feb. 3.—A thousand baby chicks were burned to death today when fire destroyed a chicken hatchery owned by Walter Graf.

Funds Sought For Two U.S. Dirigibles

WASHINGTON, Feb. 3 (A.P.)—Adm. William D. Leahy testified today the United States never had a 5-3 naval ratio with Japan because of the necessity of keeping part of the fleet in the Atlantic ocean. Although this ratio was fixed by the London and Washington naval treaties, Leahy told the house naval committee division of the fleet between the two oceans prevented its establishment.

Leahy, questioned by Rep. Maas (R-Minn), asserted in the event of hostilities in the Pacific, he would want all the fleet available in that ocean. Responding to Rep. Brewster (R-Me), the navy's top-ranking officer declared the navy never had considered any plans for "quarantining" aggressor nations.

Brewster asked his question in reference to President Roosevelt's foreign policy speech at Chicago. The discussion brought criticism from Maas that the president had been "misquoted." "I think the
(Continued on Next Page, Col. 3)

3-Year Lows In Mart Break

By VICTOR EUBANK

NEW YORK, Feb. 3 (A.P.)—Leading stocks crashed through lowest levels since 1935 in today's market, with losses running to 5 or more points at the worst. Rallying periods were slow and generally failed to follow through, although sufficient support appeared in the closing hour to enable principal sufferers to revive somewhat at the finish.

Another sharp break in American Telephone, which toppled more than 8 points at one time, unsettled sentiment at the start and touched off selling in virtually all industrial groups. Rails and utilities did relatively well throughout, the majority holding declines to fractions. Steels, motors, rubbers, aircrafts, farm implements, electrical equipments, chemicals and specialties were in the forefront of the slide. Transfers ran around 1,100,000 shares.

Bonds fell with stocks. Grain futures recovered substantially but other commodities were uneven. Wheat at Chicago was up ⅜ to 1 cent a bushel and corn improved ¾ to 1.

Conspicuous on the downside were U. S. Steel, Bethlehem, Chrysler, General Motors, Westinghouse, Allied Chemical, DuPont, Sears Roebuck, J. I. Case, Eastman Kodak, Douglas Aircraft, Kennecott, Johns-Manville, Allis Chalmers, Phillips Petroleum, Union Pacific, Homestake, Crown Cork and American Can.

Brokers attributed American Telephone's relapse partly to thoughts of possibility of a near-by adverse

Big Sea Search On For Bodies in Navy Tragedy

Death toll of a mid-air collision 70 miles off Pt. Loma last night of two giant navy bombing planes—worst plane disaster in American naval history—rose to 11 today as search by sea and air was made for missing bodies of 10 airmen. Rescued from the water after the bomber 11-P-4 fell in a splintering impact with plane No. 11-P-3, J. H. Hester, RMlc, of San Diego, died aboard the hospital ship Relief at San Clemente island early this morning, The Associated Press reports.

Expected To Recover

Three of Hester's companions are safe. Seriously injured, but expected to recover, they are D. B. McKay, ACMM, broken leg; V. O. Hatfield, ACMM, broken leg and cuts, and L. S. Carpenter, AMM2C, broken arm. All are married and reside here.

The 10 missing airmen, listed by the navy simply as "unaccounted for," and their nearest kin, are:

Crew of 11-P-3:

Lt. Elmer Glenn Cooper, commanding officer; wife, Mrs. Frances Cooper, Coronado.

Aviation Cadet Erwin John Koch, second pilot; mother, Mrs. John Koch, Toledo, O.

Maurice Fitzmaurice, ACMM; wife, Mrs. Victoria Fitzmaurice, El Cajon.

George Gordon Griffin, AMM1C; wife, Mrs. Sadie Griffin, San Diego.

Joseph Earl Walton, AMM2C; wife, Mrs. Mary Walton, San Diego.

Paul Landgrebe, AMM2C; father, Frank Landgrebe, Stillwell, Ind.

Julian Rawls, RM2C; wife, Chula Vista.

Crew of 11-P-4:

Lt. Carleton Barmore Hutchins,
(Continued on Next Page, Col. 1)

24 S.D. Fliers Killed In Recent Crashes

The collision of two navy patrol bombing planes off Pt. Loma last night with a loss of 11 lives was the third disaster to planes of this type within the past six months, bringing the death toll to 24.

Six men were killed on the night of Aug. 23 when one of the giant planes crashed in San Diego bay. The plane, swooping down for a landing, hit the half-submerged hulk of the abandoned whaling ship Narwhal.

Seven men were lost Jan. 5 when a bomber disappeared at sea about 200 miles northwest of San Diego. A gigantic five-day search by two-score warships and hundreds of planes failed to reveal any trace of the bomber or its crew.

Evidence Blows Up

DETROIT, Feb. 3 (A.P.)—Explosion of some of the evidence today caused abrupt adjournment of a court examination involving

2 Children Die In Home Fire; Locked In, Hint

ALBUQUERQUE, Feb. 3 (A.P.)—Two children were burned to death today when a small two-room adobe home in a suburb was destroyed by fire.

The victims were Celina, 2, and Ernest Vigil jr., 3, children of Mr. and Mrs. Ernesto Vigil. Vigil is a WPA worker.

Milt Grande, assistant fire chief, said the two apparently had been locked in the home while their mother visited a neighbor a short distance away. The cause of the blaze was not determined immediately. The mother said she had left the children on a bed and that she had been absent from the home only 15 minutes.

EXTRADITION REQUESTED

SACRAMENTO, Feb. 3 (I.N.S.)—Requisition papers were issued by the governor's office here today for the extradition of James Jones, 21, under arrest at Newport, Tenn., and wanted at Los Angeles on charges of criminally attacking 16-year-old Clara Ruth Fuhrman. Extradition also was sought for Robert Chavez, held at Albuquerque and wanted in Los Angeles on grand theft charges.

KEN MURRAY SAYS

New Navy Planes To Fly Thursday

Feb 18

The big new patrol planes of Squadron VP-6, which recently flew to Pearl Harbor from San Diego, are scheduled to take off from the fleet air base between 7:30 and 8:30 Thursday morning on a training flight in this area.

That operation may afford Honolulu residents with their first opportunity of seeing the squadson in daylight flight, depending on whether or not the planes fly over the city.

CONSAIR REPORTS JUMP IN PROFITS

SD Sun — 2/17/38

A net profit of $462,959 for 1937, as compared with $192,411 for 1936, was reported by Consolidated Aircraft Corp., it was learned today. The profit amounts to 68 cents per share on common stock.

Pay envelopes of the 2943 persons employed by the San Diego concern last year contained a total of $5,193,754. A backlog of $14,000,000 in unfilled orders on 66 PBY-3 and 33 PBY-4 Navy patrol bombers guarantees the plant activity for the remainder of 1938, officials reported.

ARCHBOLD SETS TAKEOFF TODAY ON MIAMI HOP

Final Tests of Giant Non-Stop Airboats Are Completed

With final tests on his $250,000 "flying laboratory" completed, Richard Archbold, sicentist, explorer and aviator of the American Museum of Natural History was to take off from San Diego for Miami this afternoon—the third time he will have flown a Consolidated airboat across the United States, non-stop.

Watches Weather

Archbold said that only a change for the worse in weather conditions along the line of flight will cause him to postpone the hop. He plans to remain in Miami until after March 8, he declared today.

In his crew today will be Russ Rogers, co-pilot; Raymond Booth, radioman, Jerry Brown and William Sanderson, mechanics; and Lieut. Comdr. C. S. Williams, U. S. N., ret., of Los Angeles, navigator, who will be making his first trip in the "Guba," Archbold's plane.

Date Set

Archbold announced today that May 2 has been set as the tentative takeoff date for his flight from San Diego to Dutch New Guinea via Honolulu, Midway, Wake and Guam.

Permission to enter wilderness never before penetrated by scientific expeditions in search of zoological specimens has been granted the Archbold party, he revealed. Dr. Austin Rand, Archbold's associate, after several months of negotiations with the Dutch colonial authorities in Batavia, secured the permit.

Base Camp

Two members of the Archbold expedition, William Richardson, Mammologist, and Harold Ramm, radio operator, left Wednesday from New York on the liner Manhattan to join Dr. Rand. They are due in Batavia April 2, and will proceed to Dutch New Guinea to establish a base camp.

Archbold, who within the last year has piloted a Consolidated airboat non-ston once to New York and once to Miami, said one stop probably would be made on the return to San Diego.

Airboat Poised For Miami Hop

SD Union 2/25/38

"It'll be just a training flight to test our celestial reckoning."

That was the way Richard Archbold, flying explorer for the American Museum of Natural History, last night described his planned flight from San Diego to Miami. Archbold's big flying boat, Guba II, was poised ready for the take-off at noon today, "unless flying conditions are adverse."

The overland trip will be made entirely by celestial navigation to simulate conditions under which the ship will be flown from here to Hawaii on the first leg of an exploration trip into New Guinea, in April.

Aboard the Guba II when it takes off today on the non-stop flight, which was made only once before by an airboat, Archbold's Guba, last December, will be Archbold, Russell Rogers, pilot; Lt. Comdr. C. S. Williams, U. S. N., ret., navigator; Ray E. Booth, radio operator; Gerald Brown, flight engineer; and William Sanderson, mechanic.

Archbold plans to fly direct to Miami then later to Nassau, returning here in about two weeks. He will keep in constant contact with Bernard Boyd, 4635 Fifty-sixth st., local radio experimenter.

SD Union 2/17/38

Consair Profits Up

Consolidated Aircraft Corp. of San Diego reports $462,959 net profit for 1937, The Associated Press states in a dispatch from San Francisco. This amounts to 68 cents a share on common stock, and compares with $192,411, or 29 cents a share, in 1936 on a smaller number of shares. Sales of virtually $12,000,000 and unfilled orders of nearly $14,000,000 at the year end provided 1938 with a promise of extended activity. The company employed 2943 persons and paid them $5,193,754.

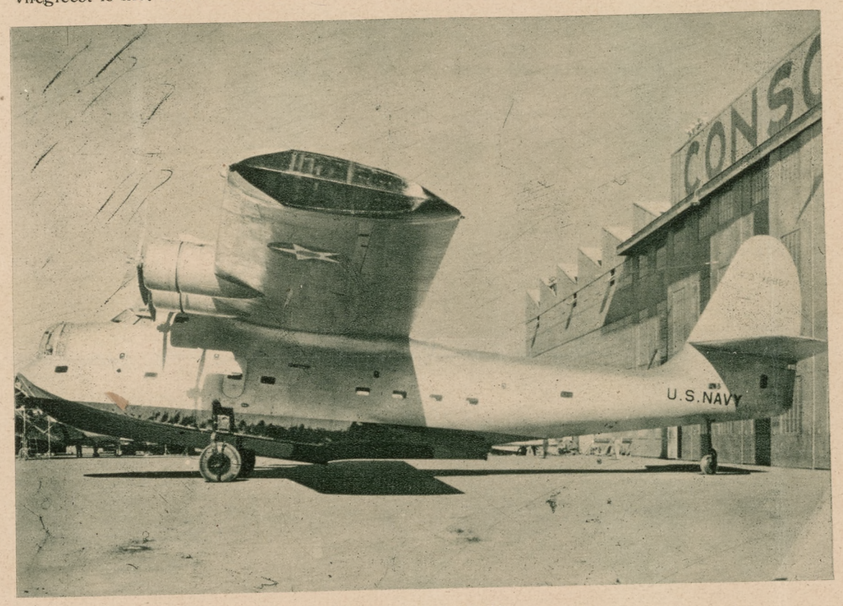
De Luchtvaartweek.

DE vliegfeesten te Hendon zullen worden afgeschaft, daar het Air Ministry van meening is, dat de moderne machines te snel zijn om voor dergelijke demonstraties nog te kunnen worden gebruikt. De werkelijke reden zal wel een andere zijn, doch met dat al, hèt vliegfeest is niet meer. Want Hendon was het klassieke jaarlijksche feest van het Britsche Vliegkorps en het is sedert 1920 zonder een enkele onderbreking gehouden. De nettoopbrengst kwam ten goede aan het Weduwen- en Weezenfonds van de R.A.F. Hendon heeft tot voorbeeld gediend van ontelbare jaarfeesten van andere militaire vliegkorpsen, doch hoewel men de perfecte organisatie en het perfecte vliegen der Engelschen soms heeft kunnen benaderen, overtroffen heeft men ze nimmer. Zeventien jaar lang heeft men kunnen genieten van een festijn, dat zoowel den leek als den vakman een genot was en ieder jaar was weer beter dan zijn voorganger. Duizenden en duizenden trokken er heen; niet alleen uit Londen en naaste omgeving kwamen zij, ook uit het overige deel van Engeland, uit Schotland, uit Ierland en zelfs het Europeesche continent leverde jaarlijks 'n groot aantal bezoekers. Dien dag herleefde Hendon, het oude Hendon, dat reeds voor den oorlog bestond en waar Graham White, Desoutter, Latham en zooveel andere pioniers hun triomfen vierden. Dien dag kon men het kunnen der Engelsche vliegers bewonderen. Een groep jachtvliegtuigen, onderling verbonden door linten, duikt en draait, loopt en vliegt op den rug, doch als zij landen, zijn alle linten nog intact. Een tweemotorig gevechtsvliegtuig wordt aangevallen door jagers, doch die groote machine draait en keert, dat die kleinere kisten geen kans krijgen. Enorme bommenwerpers denderen voorbij; op de vleugels staan parachutespringers met twee, drie parachutes ieder, die ze om de beurt losmaken om eindelijk en masse op het veld te dalen. Snelle verkenners pikken berichten op, wij zagen crazy flying en een leerling, die voor het eerst gaat stunten. En ten slotte het „set piece", een dorp, een schip, een station, gebouwd van oude vleugels en vliegtuigkisten, dat werd aangevallen door bommenwerpers en in vlammen opging. Dat alles is voorbij en is herinnering geworden. Geen vliegfeest op Hendon meer; niet alleen onze Engelsche vrienden, ook wij betreuren het.



Consolidated P B 2Y.

De eerste Douglas DC. 4 is nu eindelijk zoo ver, dat de proefvluchten over enkele weken kunnen beginnen, vele maanden later dan men oorspronkelijk had gedacht. Zijn deze proefvluchten beëindigd, dan gaat de machine nog eenige maanden dienst doen op de lijnen van United Air Lines om het type in de harde practijk goed aan den tand te voelen en eerst als álle kinderziekten zijn genezen, zal men tot den serie-bouw overgaan. Met een beetje geluk wordt dat de herfst van dit jaar. Waar echter de ontwikkelingskosten van dit type zijn betaald door de vijf groote Amerikaansche luchtverkeersmaatschappijen, moeten eerst de voor hen bestemde machines worden afgeleverd, voor Douglas er aan mag denken te gaan exporteeren. M.a.w., wederom met een beetje geluk, het wordt eind 1939, begin 1940 voor een begin zou kunnen worden gemaakt met het uitvoeren van een eventueele bestelling der K.L.M. op deze groote machines. Men zou nu zoo denken, dat deze Nederlandsche luchtverkeersmaatschappij ditmaal tijdig in serieuze onderhandelingen zou treden met de Nederlandsche vliegtuigindustrie. Inderdaad is er ook wel gepraat, doch tegelijkertijd zien wij, dat de K.L.M. groote belangstelling toont voor een buitenlandsch viermotorig verkeersvliegtuig. Van eenige opdracht aan onze eigen vliegtuigfabrieken om de kwestie grondig te bestudeeren en voor den dag te komen met serieuze voorstellen, welke ook serieus in overweging zouden worden genomen, is ons nog niets bekend. Het schijnt de K.L.M. zéér moeilijk te vallen, niet in het buitenland te koopen; in ieder geval, wij kunnen ons niet aan den indruk onttrekken, dat men éérst overal in het buitenland rondkijkt, alvorens de eigen industrie een bestelling te gunnen. Ter aanschaffing van nieuw materiaal is de K.L.M. een kas-voorschot van *f* 2.500.000.— toegestaan door het Rijk; het wil ons voor-

New Navy Planes To Fly Thursday

Feb 18

The big new patrol planes of Squadron VP-6, which recently flew to Pearl Harbor from San Diego, are scheduled to take off from the fleet air base between 7:30 and 8:30 Thursday morning on a training flight in this area.

That operation may afford Honolulu residents with their first opportunity of seeing the squadson in daylight flight, depending on whether or not the planes fly over the city.

CONSAIR REPORTS JUMP IN PROFITS

SD Sun — 2/17/38

A net profit of $462,959 for 1937, as compared with $192,411 for 1936, was reported by Consolidated Aircraft Corp., it was learned today. The profit amounts to 68 cents per share on common stock.

Pay envelopes of the 2943 persons employed by the San Diego concern last year contained a total of $5,193,754. A backlog of $14,000,000 in unfilled orders on 66 PBY-3 and 33 PBY-4 Navy patrol bombers guarantees the plant activity for the remainder of 1938, officials reported.

ARCHBOLD SETS TAKEOFF TODAY ON MIAMI HOP

Final Tests of Giant Non-Stop Airboats Are Completed

With final tests on his $250,000 "flying laboratory" completed, Richard Archbold, sicentist, explorer and aviator of the American Museum of Natural History was to take off from San Diego for Miami this afternoon—the third time he will have flown a Consolidated airboat across the United States, non-stop.

Watches Weather

Archbold said that only a change for the worse in weather conditions along the line of flight will cause him to postpone the hop. He plans to remain in Miami until after March 8, he declared today.

In his crew today will be Russ Rogers, co-pilot; Raymond Booth, radioman, Jerry Brown and William Sanderson, mechanics; and Lieut. Comdr. C. S. Williams, U. S. N., ret., of Los Angeles, navigator, who will be making his first trip in the "Guba," Archbold's plane.

Date Set

Archbold announced today that May 2 has been set as the tentative takeoff date for his flight from San Diego to Dutch New Guinea via Honolulu, Midway, Wake and Guam.

Permission to enter wilderness never before penetrated by scientific expeditions in search of zoological specimens has been granted the Archbold party, he revealed. Dr. Austin Rand, Archbold's associate, after several months of negotiations with the Dutch colonial authorities in Batavia, secured the permit.

Base Camp

Two members of the Archbold expedition, William Richardson, Mammologist, and Harold Ramm, radio operator, left Wednesday from New York on the liner Manhattan to join Dr. Rand. They are due in Batavia April 2, and will proceed to Dutch New Guinea to establish a base camp.

Archbold, who within the last year has piloted a Consolidated airboat non-ston once to New York and once to Miami, said one stop probably would be made on the return to San Diego.

Airboat Poised For Miami Hop

SD Union 2/25/38

"It'll be just a training flight to test our celestial reckoning."

That was the way Richard Archbold, flying explorer for the American Museum of Natural History, last night described his planned flight from San Diego to Miami. Archbold's big flying boat, Guba II, was poised ready for the take-off at noon today, "unless flying conditions are adverse."

The overland trip will be made entirely by celestial navigation to simulate conditions under which the ship will be flown from here to Hawaii on the first leg of an exploration trip into New Guinea, in April.

Aboard the Guba II when it takes off today on the non-stop flight, which was made only once before by an airboat, Archbold's Guba, last December, will be Archbold, Russell Rogers, pilot; Lt. Comdr. C. S. Williams, U. S. N., ret., navigator; Ray E. Booth, radio operator; Gerald Brown, flight engineer; and William Sanderson, mechanic.

Archbold plans to fly direct to Miami then later to Nassau, returning here in about two weeks. He will keep in constant contact with Bernard Boyd, 4635 Fifty-sixth st., local radio experimenter.

SD Union 2/17/38

Consair Profits Up

Consolidated Aircraft Corp. of San Diego reports $462,959 net profit for 1937, The Associated Press states in a dispatch from San Francisco. This amounts to 68 cents a share on common stock, and compares with $192,411, or 29 cents a share, in 1936 on a smaller number of shares. Sales of virtually $12,000,000 and unfilled orders of nearly $14,000,000 at the year end provided 1938 with a promise of extended activity. The company employed 2943 persons and paid them $5,193,754.

De Vereenigde Staten gaan hun Marine belangrijk versterken, waarbij zij speciaal aandacht besteden aan den Stillen Oceaan. Zooals wij reeds eerder schreven, heeft men daar den voorpostendienst geheel in handen gegeven van den Marine Vliegdienst en zijn torpedojagers toegevoegd aan de gevechtsvloot. De machines, welke voor dit werk worden gebruikt, zijn Consolidated PBY vliegbooten, waarvan een beschrijving verscheen in „De Vliegsport" van den 17en September '37. Zoo goed echter als het leger naast de betrekkelijk lichte twee-motorige bommenwerpers een aantal zware vier-motorige machines van deze soort heeft gekocht, is de marine van oordeel, dat de voorpostengroep de beschikking behoort te hebben over zeer groote vier-motorige vliegbooten, welke nog meer dan de reeds in dienst zijnde twee-motorige machines, van hun basis onafhankelijk zijn en welke geruimen tijd als zelfstandige uniteiten kunnen opereeren. Voor dit doel bouwde Consolidated een nieuwe machine, de PB 2 Y, van welk type wij hierbij eenige foto's publiceeren.

Deze „Flying Dreadnought" is uitgerust met vier luchtgekoelde motoren (Pratt & Whitney of Wright) van 1050 pk elk, welke de machine een snelheid geven van 320 km/h. De bootromp is behandeld met een speciale soort

ROND

— Volgens berichten uit Bender Abbas, heeft men het toestel van den Franschen vlieger Moensch, die op den terugtocht was van Saigon, in zee bij het eiland Laft, op 70 km ten Zuidwesten van Bender Abbas, teruggevonden. De stuurstoel en de vleugel van het toestel heeft men opgehaald. De motor ontbrak. Van Moensch zelf vond men geen spoor.

— De uitvoer van Britsche vliegtuigen en vliegtuigmateriaal bedroeg in 1937 3.676.493 pond sterling, hetgeen 752.000 pond meer is dan in 1936. Het blijkt dat de Britsche vliegtuigindustrie, ondanks de geweldige behoefte van de eigen luchtmacht, toch nog in staat is voor een groot gedeelte tegemoet te komen aan de vraag van de overzeesche gewesten.
In de laatste maanden van het vorige jaar werd een aanzienlijk aantal militaire vliegtui-

Long Hop No Thrill To Squadron Chief

Lieut.-Comdr. Perry Became Distance Flight Expert by Accident Way Back in 1934

Long-distance mass flights are no novelty for Lieut.-Comdr. John Perry, who will lead a squadron of seven Navy patrol bombers on a delivery hop from San Diego to Seattle, March 5.

Lieut.-Comdr. Perry quite unexpectedly piloted one of the six P2-Y1 Consolidated planes in the first successful trans-Pacific flight of Navy history—in January, 1934, from San Francisco to Hawaii.

"At the time I was on the staff of Rear Adm. A. W. Johnson, Aircraft Base Force commander," he recalled today. "One of the pilots regularly assigned to the hop, which was commanded by Lieut.-Comdr. Knefler McGinnis, became ill and I was ordered to fill the vacancy."

Irritating Incident

The most irritating incident connected with this flight, according to Lieut.-Comdr. Perry, occurred after the squadron had returned from a test hop of 20 hours through a driving downpour.

Dog-tired and looking forward to an immediate rest, the pilots were told the press was impatiently waiting. When a cot would have been the most welcome sight possible, each flier had to stare into a battery of cameras.

The longest non-stop flight ever undertaken by the Navy is no more hazardous than ordinary every-day operations in the Alaska sector off Sitka, Lieut. Comdr. Perry believes.

"That's the toughest flying country in the world," he commented today.

And Patrol Squadron 17 is headed that way in March. After a short stop at Seattle, where they will leave one of the bombers—a spare—six of the Consolidated PBY airboats will be flown to Sitka to relieve Patrol Squadron 16.

Personnel Here

Squadron VP-17's flight personnel came to San Diego several months ago in a half dozen ancient PM-type planes—delivered to the Navy by Glenn Martin in 1930. They lost no time sending them to the junk pile before accepting delivery on the glistening new PBY's.

But the PM's, one of the oldest type planes of the Navy, still are battling the rain squalls, the high winds, and the thick fogs of Alaska—and they seem to be doing quite an efficient job of it, the record will show. No fatalities and very few mishaps of any kind have marred the year-round operations schedule.

Squadron 16 Home

When Lieut. Comdr. Perry and his VP-17 crew arrive at Sitka about March 10 with their six PBY craft, Patrol Squadron 16 will head south for San Diego.

Squadron VP-17 originally was scheduled to leave San Diego for Seattle and Sitka last Wednesday, but delay in installation of equipment on the aircraft tender Sandpiper at Mare Island, caused postponement of the hop to March 5. The Sandpiper will serve as floating base for the squadron in Alaskan waters.

Labor Factions Renew 'Warfare' At Consair

CIO Group To Demand Election To Determine Bargaining Unit

A battle between labor factions for recognition as collective bargaining agents appears imminent at the Consolidated Aircraft Corporation plant, it was learned today.

Opposing sides will be the United Automobile Workers of America, Aircraft Local 506, a C. I. O. affiliate, and the International Association of Machinists, Aircraft Local 1125, an A. F. L. union.

A. F. L. Won Election

At a National Labor Relations Board election last year, the A. F. of L. organization won an overwhelming victory over a labor unit known as the Consolidators, and thereby became the recognized collective bargaining agency for the factory employes. A contract was signed by the management and the union representatives establishing wages and working conditions. This went into effect May 2, 1937.

CIO Group Withdraws

Since that date, the A. F. of L. Aircraft Local has been split by the withdrawal from its ranks of the nucleus of the present C. I. O. union, whose international representative, John Orr, announced today that a petition probably will be filed this week asking the National Labor Relations Board to certify an election determining which union shall conduct negotiations with the management on a new contract.

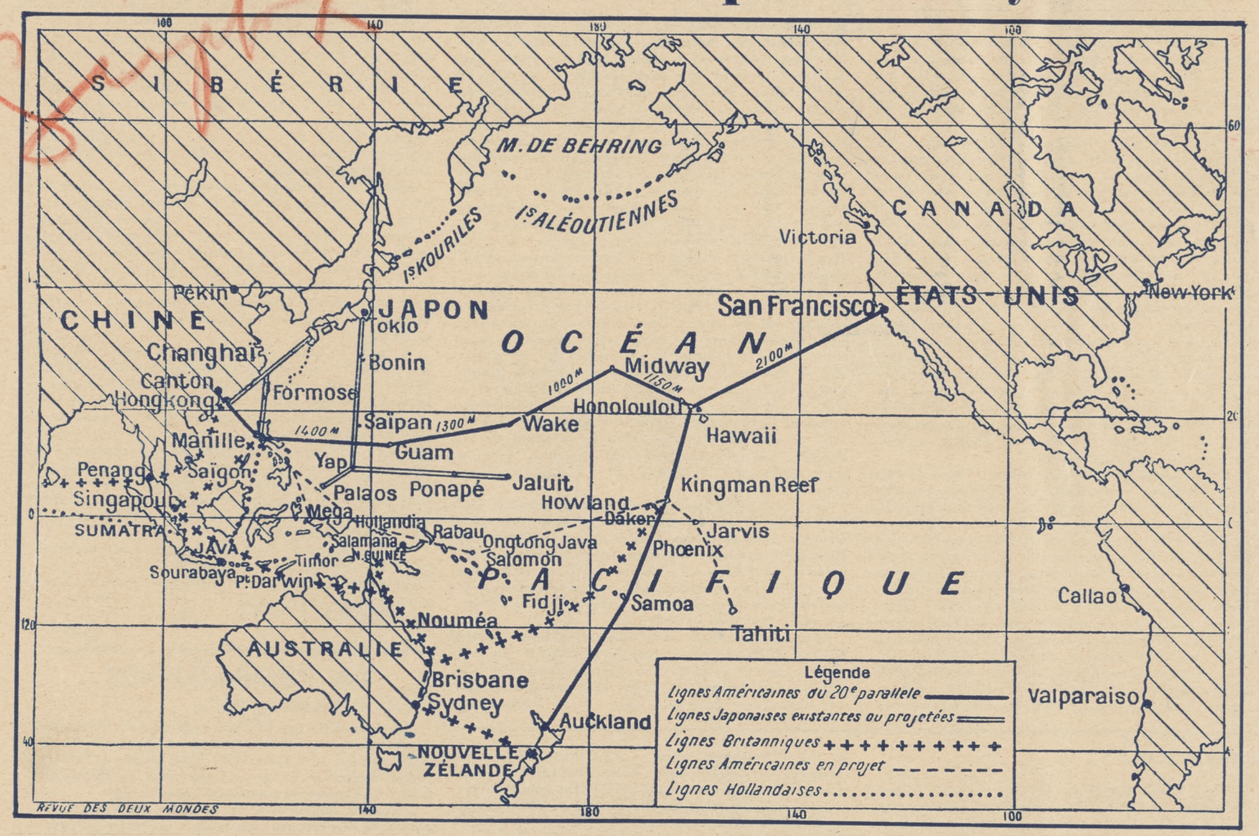
A similar petition was filed last August, but later withdrawn, Orr said. He intimated that the C. I. O. union today is more certain of the strength it will be able to muster in a labor board poll of the Consolidated employes.

Compiling Data

Meanwhile, the A. F. L. union is compiling data for use in negotiations it plans to have with the management this spring, according to C. L. Bentley, local international representative of the International Association of Machinists.

Bentley declared he did not have immediately available the number of members in the A. F. L. aircraft local. Orr today claimed a roster of approximately 560 in the C. I. O. organiaztion.

L'ACTUALITE - Le Pacifique et les hydravions



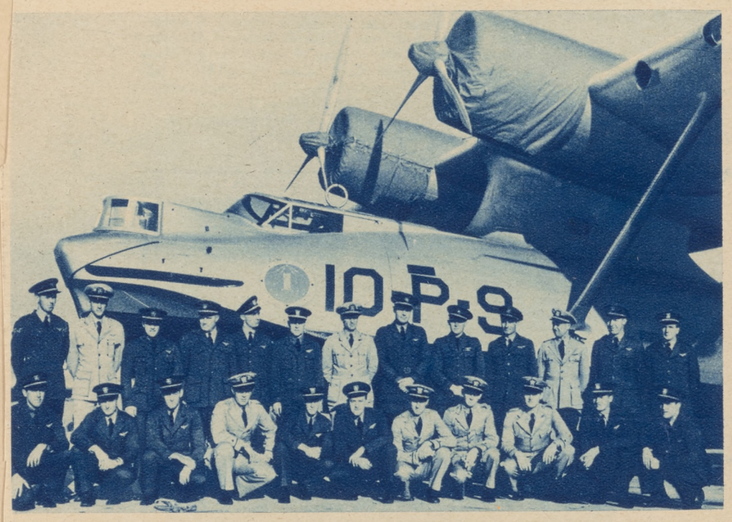
Carte des lignes aériennes du Pacifique.

Nous avons, dans notre précédent numéro, rendu compte du nouvel exploit de l'aviation navale des Etats-Unis traversant le Pacifique, de San Diego à Pearl Harbour, aux îles Hawaï, dans le temps record de 20 h. 12 m.

Nous publions, ici, les premières photographies reçues d'Amérique à ce sujet. On y voit, devant un de leurs appareils Consolidated P. B. 3, les officiers de l'escadrille V. P. 10 qui prit part à ce voyage en formation.

Au milieu, le lieutenant Comdr S.-H. Warner, commandant l'escadrille.

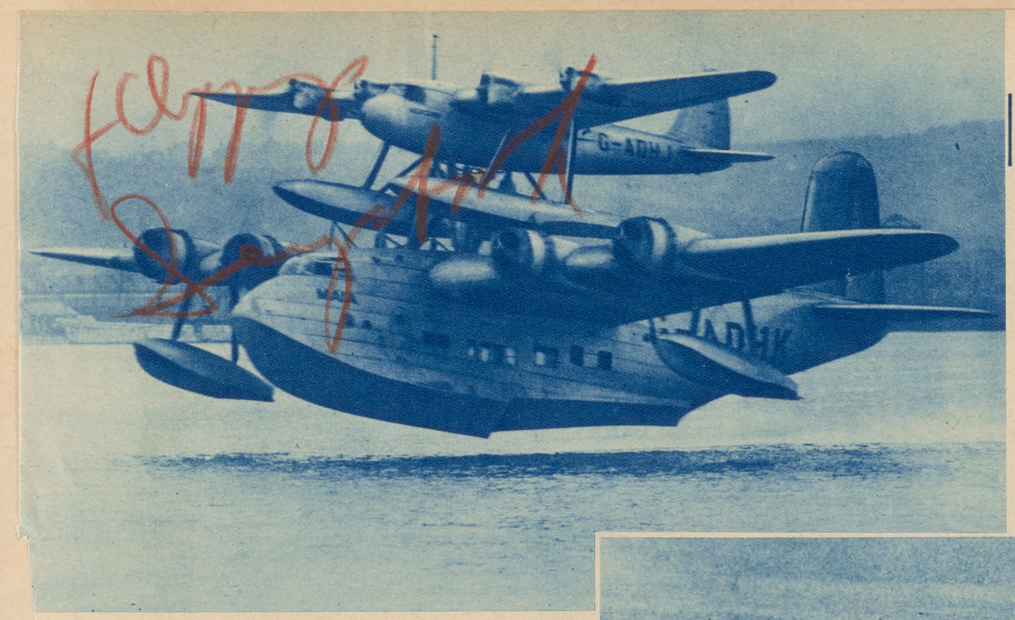
Une partie des appareils de la formation photographiés pendant les préparatifs du départ à San Diego. On notera sur l'appareil qui se trouve à l'avant-plan, à droite, le détail de l'extrémité du plan dans le prolongement duquel viennent se relever en vol les flotteurs latéraux. Il y a lieu de noter, à l'appui de l'article qu'on lira, d'autre part, dans ce numéro et qu'illustre la carte ci-dessus, que ce dernier raid, accompli en formation, porte au total de plus de 210 les appareils réunis autour des îles Hawaï et que, grâce au rayon d'action des patrouilleurs bombardiers Consolidated P. B. 3, ces hydravions entreprennent de fréquentes missions, en formation, jusqu'à divers points d'escale de la ligne commerciale, dont l'aménagement a constitué autant de bases.



LE MATCH C. S. HELIO S. A. R. - C. S. GENDARMERIE

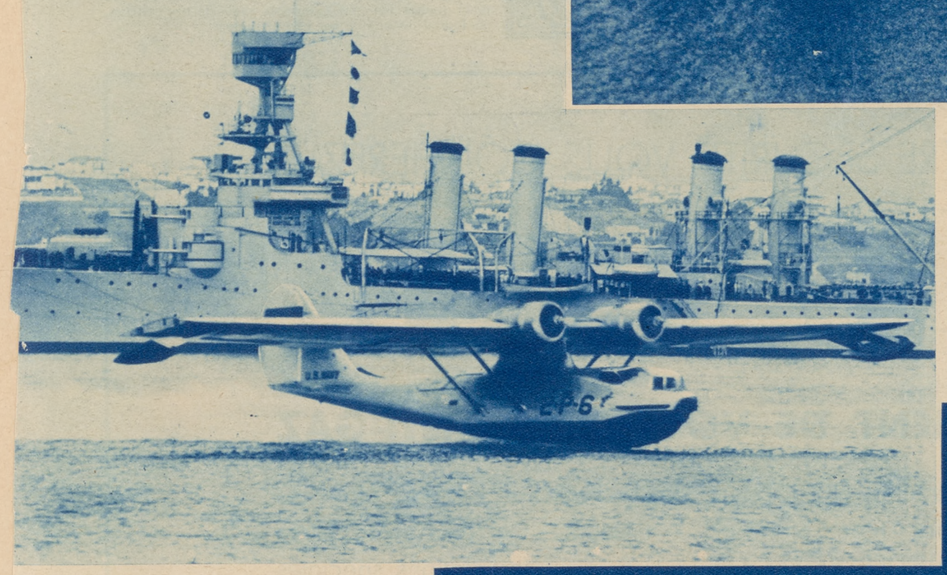
Vu l'intérêt que nous portons à l'activité sportive du dévoué personnel technique qui assure, avec une si grande maîtrise, la parution de notre revue, nous publions ici, à titre exceptionnel, une série de photographies sortant du cadre normal de notre publication. Elles sont relatives au match de football qui vient d'opposer le C. S. Hélio S. A. R. au C. S. Gendarmerie. 1) La tribune officielle. On reconnaît de gauche à droite : MM. Dambremé, Malherbe, secrétaire communal, Partous, ff. Bourgmestre, le Lt Gl Kettelle, Mme Boute, M. O. Boute, Adm.-Dél. de la S. A. R., MM. Bourgeois, Rey et Van Hyfte, du Comité de l'Œuvre de la Crèche et Goutte de Lait d'Anderlecht. — 2) Le Président de l'Hélio S. A. R. souhaite la bienvenue au Lt Gl Kettelle. — 3) Le choix du terrain, par les 2 capitaines et l'arbitre M. Schoeder. — 4) L'équipe du C. S. Hélio S. A. R. — 5) Présentation des équipes aux personnalités officielles.

l'Actualité

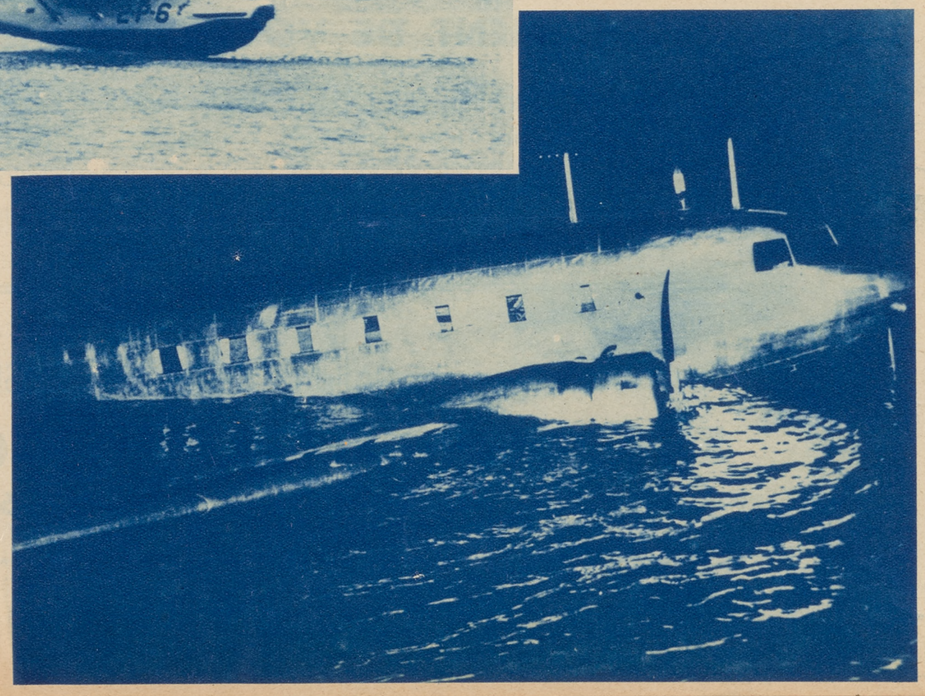


Ci-dessous, l'appareil au moment de son amerissage.

Le « Composite Short Mayo » a volé. Pour la première fois, le 21 janvier, les deux appareils assemblés, avec leurs 8 moteurs en marche, développant ensemble 5.120 CV au décollage, ont quitté, à Rochester, la surface de l'eau. On voit ici le Composite photographié au moment de l'envol, qui s'est fait sur 500 m., l'appareil n'étant pas chargé. Le premier essai a duré un quart d'heure.



Un nouvel exploit est à porter au crédit de l'aviation navale des Etats-Unis et du bimoteur Consolidated P. B. 3. 18 hydravions de ce type ont, en effet, franchi, sans escale, les 4.130 km. séparant Perl Harbour, aux îles Hawaï de San Diego (Californie). Ce vol a été fait en 20 h. 12 m., ce qui donne une moyenne de 200 km.-h.
Deux fois déjà, au cours de l'année 1937, deux formations de chacune douze appareils avaient accompli le même voyage respectivement en 21 h. 43 m. et en 21 h. 25 m.
On voit ici un de ces appareils photographié au décollage en rade de San Diego lors d'un voyage précédent.



Contrairement à nos principes nous publions ici une photographie d'accident, c'est qu'elle est, cette fois, démonstrative de la sécurité assurée par certaines constructions.
On voit ici, en effet, un bimoteur américain forcé par une panne de ses moteurs de se poser dans la baie de San Fransisco, après que le pilote eut largué toute la provision d'essence. L'appareil flotta et ses 5 occupants purent être sauvés par un bateau appelé par un S. O. S. du radio de bord.

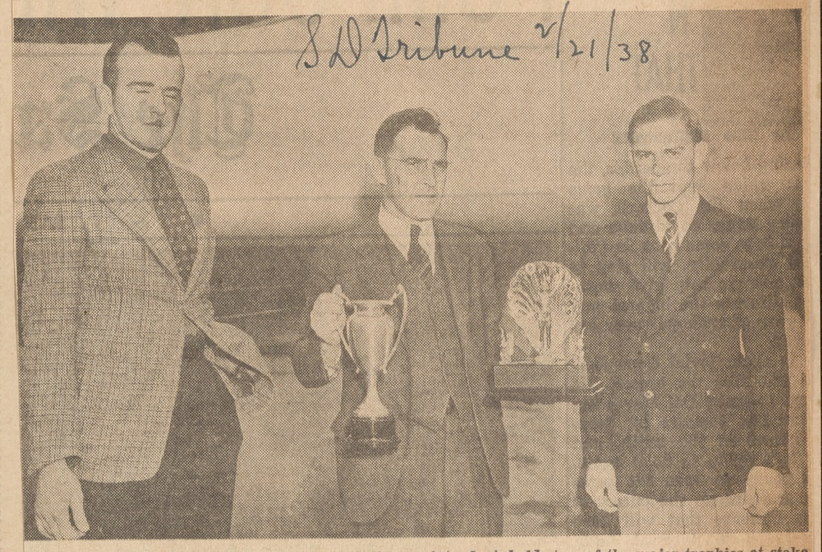
AMONG PRIZES CONSAIR GOLFERS WILL PLAY FOR IN TOURNAMENT

S D Tribune 2/21/38



Jim Kelly (center), Consolidated Aircraft plant superintendent, holds two of the major trophies at stake in the plant golf tournament under way on the Municipal course. Ted Laven (left) is tournament chairman and Tommy Johnson (right) is in charge of prizes.

CHIPS AND BIRDIES By MONROE McCONNELL

Low gross honors in the qualifying round of the Consolidated Aircraft corporation's championship tournament yesterday at Balboa Park were shared by R. Ramet, T. M. Hemphill and Tom Johnson, each of whom shot an 81. Dave Fleet and R. George tied for first in the blind bogey, while low net honors in the bogey went to R. Ramet and K. B. Barnes. High gross fell to the lot of G. Briant, with 144,, and he also salvaged high net from the wreckage.

First round matches will be played next Saturday. Qualifying round results:

81—R. Ramet, T. M. Hemphill, T. Johnson.
82—K. B. Barnes.
87—R. A. Miller.
89—P. Bourque, P. McMichael.
90—F. Meer.
91—T. Rhodes.
92—C. LeClare, Kennedy, Seymour, M. Doerr.
94—Berry, A. J. Molleur, H. Pinnick.
95—J. Bartha.
96—W. W. Williams, J. Zamiska, B. W. Sheehan, J. Sloboda.
97—H. A. Sutton.
98—Woodruff.
99—J. Clarke, J. Le Clare.
100—F. T. Williamson, Kester.
101—R. C. Sebold, Smith.
102—B. Burkhardt, Dall, Zweng.
103—T. Laven, W. A. Rhs, H. G. Moe, Tiedman, T. Sylvester, J. Doig, T. J. Coughlin.
104—D. Biggs, H. H. Abbott, D. G. Fleet, F. Vining, E. C. Williams, H. Wylie, L. E. May, L. G. Ireland.

WILL U.S. PROTECT ITS ATLANTIC TRADE ROUTES?

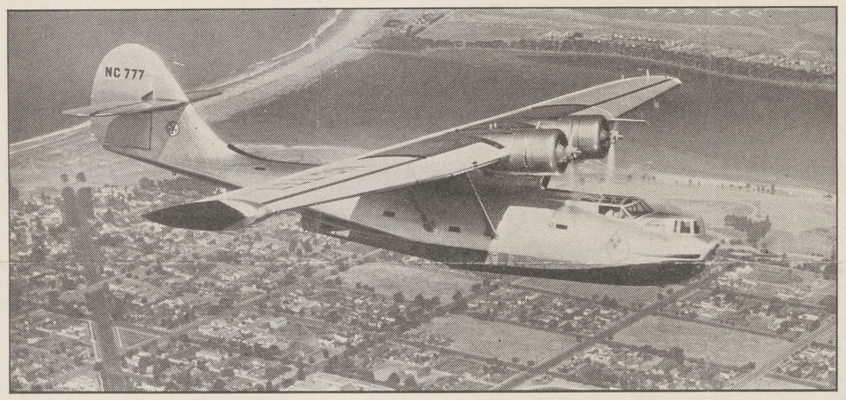
Two American Companies Ready to Assist

—*Await Action of Congress*

AMERICAN EXPORT AIRLINES

American Export Lines (Export Steamship Corporation) with its international organization, its diplomatic relationships, its modern radio communication system, its eighteen passenger and freight steamships equipped to observe and report weather conditions, has organized American Export Airlines, Inc., to safeguard not only the existing American activity on an important Atlantic trade route, but to contribute its share in the battle to bring back American supremacy in trans-Atlantic commerce.

American Export Airlines is a wholly-owned subsidiary of American Export



This Consolidated long range patrol boat has been selected for Export's experimental flights.

Lines, Inc., and is officered by the same officials as the steamship line. These are W. H. Coverdale, President; John E. Slater, Vice-President and General Manager; John Gehan, Vice-President and European Director; with the addition of James M. Eaton, Vice-President. Thomas Hitchcock, Jr., is a Director of the Airline subsidiary and Edward P. Warner was retained as consultant.

Aviation experts and transportation engineers have been engaged both here and abroad for the past two years in an international survey covering the problems of non-stop overseas flying, suitable aircraft, weather, communications and terminal facilities in foreign countries, including Portugal, France, Germany, Italy and other countries bordering on the Mediterranean and Black Seas.

American Export Lines made application months ago to the U. S. Government to conduct experimental flights "looking towards permanent scheduled operations" to these countries. The company's application was approved by the U. S. Department of Commerce and transmitted by the State Department to the countries involved. France, Germany, Italy, Greece, and Egypt were quick to respond with permits intended to hasten experimental flights to these nations.

The above multi-motored flying boat, similar to those establishing non-stop records to Honolulu and Panama for the navy, and capable of flying the ocean non-stop with necessary crew, has been selected for these experimental flights which can be started early this summer.

Trained Personnel

Investigations have disclosed that more than sufficient personnel trained in aviation is available for the experimental flights and permanent scheduled operation.

Radio Communications and Weather

An important contribution to Atlantic weather forecasts is being made by American Export Lines, which recently inaugurated twice daily detailed radio weather reports from its ships at sea. Under the supervision of Dr. James H. Kimball, chief of the Weather Bureau in New York, the captains and officers of Export's eighteen passenger and merchant ships are being instructed in making special weather observations which will result in tremendous improvement in the preparation of existing ocean weather maps. These reports are being transmitted in the standard radio weather code and will be invaluable to Export's operation across the Southern Route. Later, the number of daily reports will be increased to four.

Equipment

American Export Airlines' plans call for equipment and personnel sufficient to meet approximately one half of the foreign flag competition as reported by W. H. Coverdale, head of the industrial engineering firm of Coverdale & Colpitts and president of American Export Lines, whose exhaustive studies have produced an insight into the potential traffic volume across the Atlantic for the next ten years.

Export's plan anticipates starting with two round trip flights per week with flying boats capable of sleeping 20 to 24 passengers non-stop across the Atlantic, using Portugal or France as its European terminal. The operating program further provides that these 24-passenger flying boats be replaced at the end of three years with 60-passenger non-stop sleepers; and at the end of the sixth year these 60-passenger planes will be replaced with 100-passenger sleepers.

Aircraft Manufacturers Ready

American aircraft manufacturers are ready to start immediately to build the 24-passenger flying boats and to guarantee their range, cruising speeds and payloads for both eastbound and westbound crossings (see back page). These same manufacturers have engineered and designed 60-passenger boats for later delivery; and at the individual request of both companies interested in trans-Atlantic operation, are working on the 100-passenger carrying flying boat.

American aircraft engine manufacturers have kept abreast of developments and are working on larger engines to power the even larger flying boats that are to come.

Leaders in American aviation, manufacturers interested in the development of American Commerce, travel agents, and business interests generally throughout the country have expressed the belief that America has too much at stake in its trans-Atlantic trade routes both on and over the ocean to let the opportunity to regain the supremacy which aviation offers, slip from the palm of its hand. Many of these groups which go to make up the backbone of our overseas trade, are unanimous in their belief that trans-Atlantic aviation needs several strong American flag companies in the field.

They believe that this can only be accomplished when and if the U. S. Government moves quickly to select these companies and sets up constructive permanent legislation, backed up with adequate appropriations, so that no time will be lost in getting a foothold in the trans-Atlantic battle for commercial supremacy.

PAN AMERICAN AIRWAYS

Pan American Airways, with its unusual backlog of overseas operations, during the summer of 1937 made three experimental round trip flights to England. Two of these were over the "Northern Route," with stops at Botwood, Newfoundland and Foynes, Ireland; and one over the "Southern Route," with stops at Bermuda and the Azores. They previously established a radio station at Reikiavik, Iceland, for the purpose of gathering weather reports from ships in the North Atlantic, consolidating these reports for transmittal to Pan American headquarters in the United States.

It is believed that during the coming summer Pan American Airways will take delivery from the Boeing Aircraft Company of the first of the 82,000 lb. flying boats. It is generally understood that some of these Boeing flying boats will be used in the Atlantic service and that Pan American will be able to make scheduled flights across the Atlantic with these ships.

Although not designed for non-stop flights over the distance between the United States and England, these boats will be able to carry in luxury a good sized passenger list with intermediate stops made at Newfoundland and Ireland.

Dr. J. H. Kimball, Chief U. S. Weather Bureau in New York, discussing Atlantic weather map with Captain S. N. Groves, Commodore American Export's Steamship Fleet.

Ten Bombers a Month

CONSOLIDATED AIRCRAFT CORPORATION, San Diego, with orders for approximately one hundred Navy flying boats on the books, reported as of Feb 1, that deliveries were averaging ten patrol planes per month, with current business sufficient to maintain the company on a full production schedule for one year. Total unfilled orders as of Feb. 1, stood at approximately $14,000,000 compared with total deliveries during 1937 of about $12,000,000.

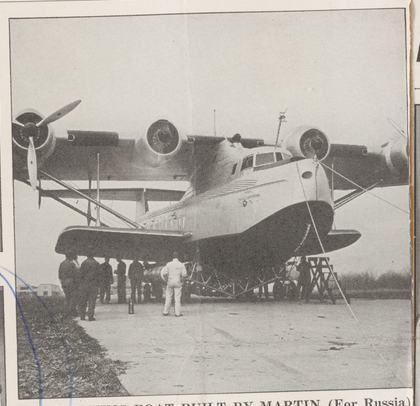
NAVY BOAT BUILT BY SIKORSKY



GIANT FLYING BOAT BUILT BY MARTIN (For Russia)

NAVY BOAT BUILT BY CONSOLIDATED

THIS AMAZING ARRAY of aircraft capable of flying non-stop for a distance of 4,500 miles, in still air, with 20 passengers and mail is an example of what American aircraft manufacturers have recently produced.

America has the engineers, designers and materials; America has the skill and experienced personnel; and America has the manufacturing facilities and well financed companies ready to design and build giant long range aircraft.

KEEPING pace with aircraft development; engine manufacturers have already produced airplane engines capable of supplying ample power to fly these giants through the air at more than 200 miles an hour, using only half their rated horsepower.

Maj. Fleet, Navy Chiefs To Confer in Washington

S. D. Union 3/11/38

Maj. R. H. Fleet, Consolidated Airicraft Corp. president, left last night for Washington to confer with navy department officials. Fleet also will talk with Edgar Gott, Consolidated vice president, who has been in the east the last four months.

Before leaving, Fleet voiced appreciation for assistance from Earl C. Popp, regional director of airports for the bureau of air commerce.

"Popp was responsible for expediting release of $180,000 in WPA funds for improving Lindbergh field," Fleet said. "He deserves much praise for his efforts."

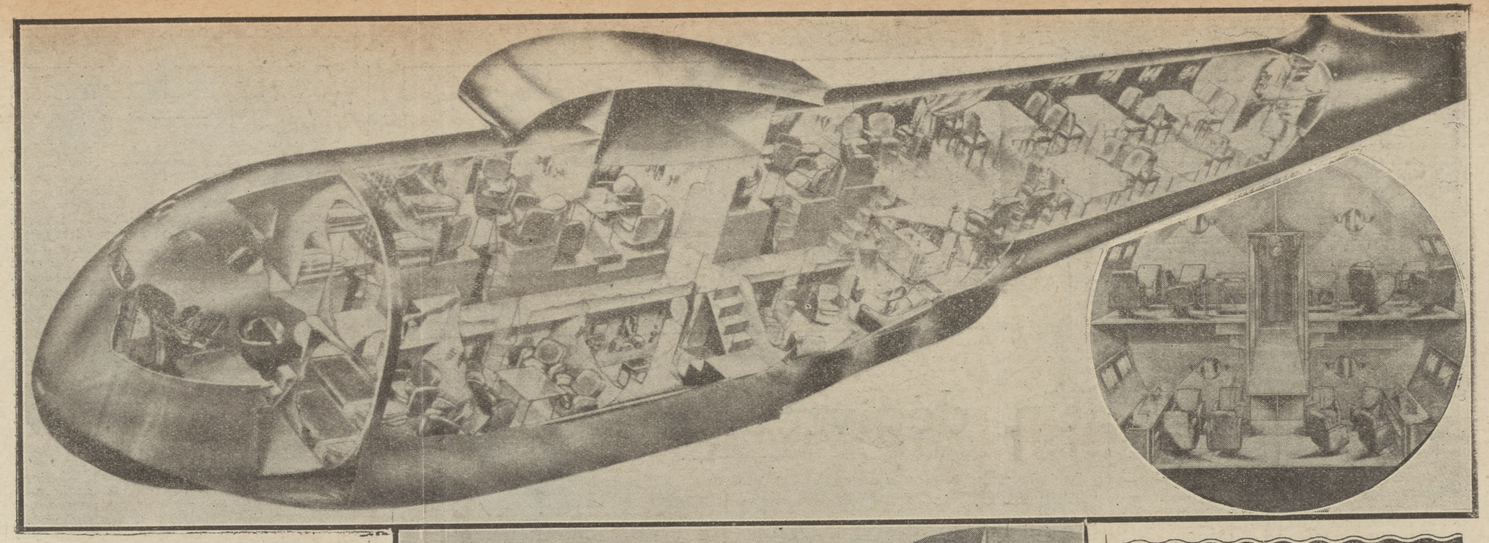
Ends Flying Laboratory Trip

MIAMI, Fla., March 5 (AP).—Dr. Richard Archbold, scientist of the American Museum of Natural History of New York, completed today a round-trip flight to St. Thomas, Virgin Islands, to test his $250,000 flying laboratory. Dr. Archbold made the return flight of 1,300 miles in 7 hours 40 minutes, and said he was well satisfied with the ship. He flew it here last week from San Diego, Calif., and plans to make other flights before returning to California, whence he will start on an expedition to New Guinea.



des utilisateurs. Cette expérience pratique sera complète lorsqu'on connaitra les résultats d'emploi de la série des moteurs Clerget qui a été construite.

●

Puisque les questions de moteurs à huile intéressent maintenant directement le progrès de l'Aviation, beaucoup plus qu'il y a quelques années, parlons un peu des travaux du Naca qui, pour s'effectuer dans le silence n'en sont pas moins fort remarquables.

Le Naca avait consacré d'importants crédits de temps, d'argent et d'intelligence à l'étude du moteur à injection d'huile lourde et à allumage par compression. Selon ses principes qui éliminent systématiquement les idées préconçues, le Naca a travaillé tout à la fois les moteurs à quatre et à deux temps. Voici, d'après les renseignements confidentiels, les résultats qui ont été obtenus.

Moteur à quatre temps : avec une consommation de 175 gr. au CV.-heure, et une pression de suralimentation de 700 gr. environ, on a enregistré une ordonnée moyenne de 18 kg. au régime de 2.500 tours.

Moteur à deux temps : avec une consommation de 195 gr. au CV.-heure, soit 10 % de plus que pour le quatre temps, une pression de balayage de 700 gr. on a réalisé une ordonnée moyenne de 13 kg. au régime de 2.350 à 2.500 tours.

Ces travaux ne sont pas finis et les ingénieurs américains espèrent arriver prochainement à 15 kg. de pression moyenne effective ce qui donnera un rendement de 70 CV. au litre, aux régimes précités.

●

Notons tout de suite qu'aucun moteur à essence d'aviation n'a encore obtenu de tels rendements. Il n'est pas question ici des moteurs « record » d'automobile avec des pistons gros comme des verres à madère et des régimes de 8.000 à 10.000 tours.

Nous pensons que les Américains ont obtenu ces résultats avec des monocylindres permettant une transposition industrielle, c'est-à-dire, offrant un alésage et une course convenables. Connaissant leur souci des réalités pratiques, nous sommes convaincus que leurs moteurs « injection-compression » ont la simplicité des moteurs ordinaires, c'est-à-dire sans doubles pistons opposés, doubles vilebrequins et trains d'engrenages, comme le veut la formule Junkers, tout en réalisant le nécessaire balayage en équicourant.

Maurice VICTOR.

● *LA REVUE ANGLAISE* ENGINEERING *rapporte de curieux essais effectués sur des surfaces de portée recouvertes d'un enduit métallique au pistolet. (Il doit s'agir du dépôt d'un antifriction par les procédés Schoop.)*

Un axe en acier graissé à l'huile ordinaire grippe sous une charge de 63 à 70 kg. au cm2, et à 91 kg. si l'huile est graphitée ; avec recouvrement au pistolet d'un enduit métallique, l'axe a supporté 140 kg. sans gripper.

D'autre part, les vilebrequins d'automobile à portées métallisées ont révélé une usure réduite de 15 0/0. (Note Heb.)

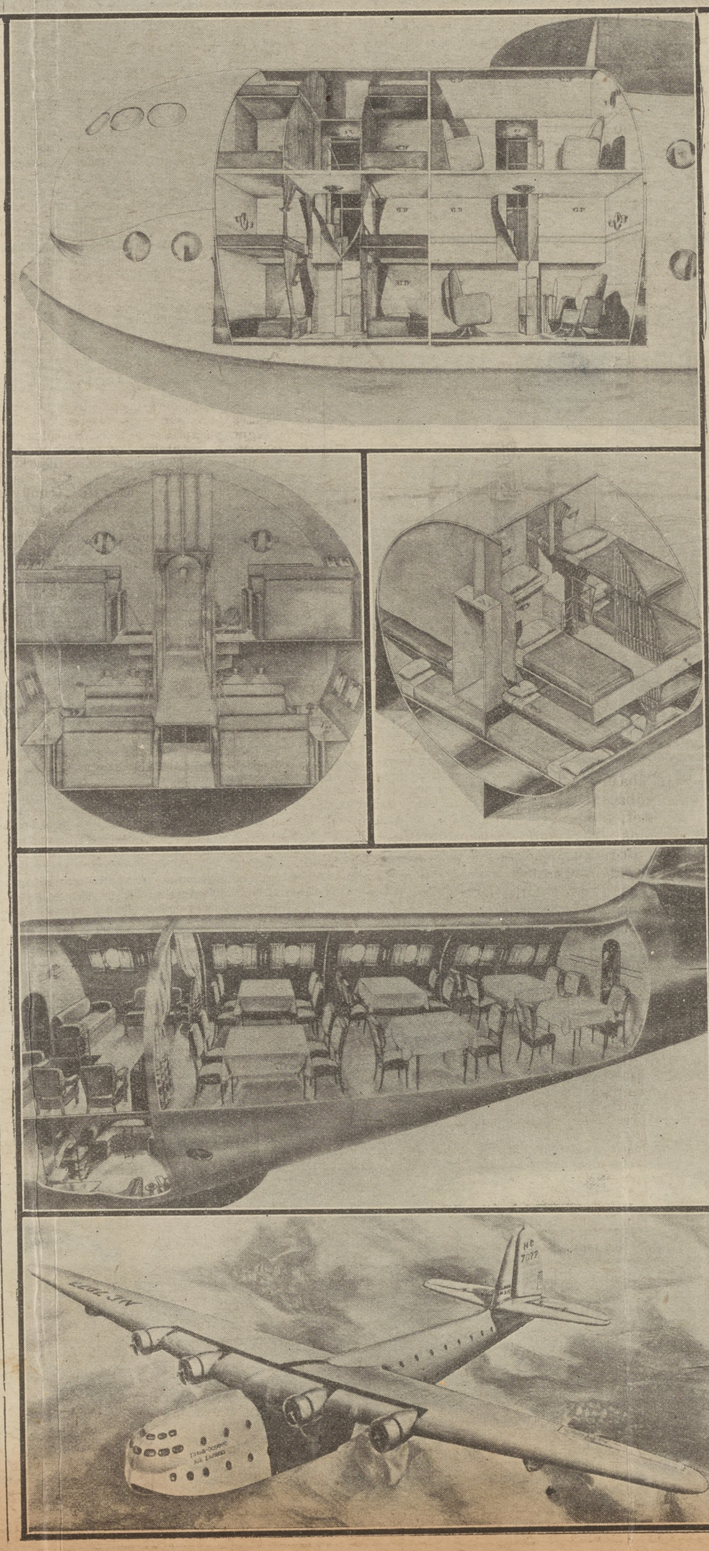
● *LA CHARGE ALAIRE OPTIMUM a été étudiée en fonction de la vitesse de croisière par un ingénieur britannique, M. H. F. Wessey qui est arrivé aux conclusions suivantes :*

— Pour les avions actuels, à hautes performances, la charge alaire devrait être poussée jusqu'à 300 kg. au mètre carré, et même davantage, s'il n'y avait pas lieu de tenir compte des conditions d'atterrissage et de décollage.

— Pour les avions normaux, ayant une autonomie moyenne et un assez faible poids au CV., la charge alaire est surtout limitée par le roulement à l'atterrissage.

— L'efficacité des dispositifs hypersustentateurs normaux permet d'envisager comme normales des charges de 145 kg. au mq. pour les avions, 170 kg. pour les hydravions et 195 kg. pour les avions possédant une troisième roue d'atterrissage à l'avant.

— Pour les appareils à très grand rayon d'action, les conditions d'atterrissage ne sont pas à envisager, étant donné la diminution de poids due au délestage du combustible. C'est seulement le décollage qui limite la charge alaire. Les moyens d'améliorer les conditions du départ sont : l'hélice à pas variable, le volet à faible traînée, les dispositifs de décollage auxiliaires tels que catapulte, avion de renfort, ravitaillement en vol, etc.



LES GEANTS DE L'AIR

LES 50 TONNES CONSOLIDATED "TRANS-OCEANIC"

C'est un quadrimoteur de 6.000 CV. qui offre 9.700 km. de rayon d'action avec une charge utile de 4.500 kg.

APRES le Boeing 314, après le Martin 156, après le Sikorsky « Flying Dreadnaught », voici que la « Consolidated Aircraft Corp », se lance dans la construction des hydravions transatlantiques. Il s'agit, en l'espèce, d'un grand monoplan qui pourra emmener de cinquante à cent passagers, selon l'étape qu'il aura à franchir.

A étudier les diverses coupes que nous présentons ci-contre, on imagine quel confort il offrira aux passagers, et aussi quelle concurrence de pareils hydravions en service régulier sur l'Atlantique vont faire aux paquebots.

Le Consolidated « Trans-Océanic » est d'un dessin tout à fait classique. C'est un monoplan à aile haute de 56 m. 20 d'envergure et 270 mq. de surface, ce qui donne 11,7 d'allongement. Par ce seul chiffre, on voit que les ingénieurs de Consolidated ont voulu résoudre le difficile problème qui leur était posé à l'aide d'une amélioration notable de la qualité aérodynamique.

Le « Trans-Océanic » possède quatre moteurs tractifs de 1.500 CV. plantés dans le bord d'attaque de la partie centrale de l'aile. Les flotteurs latéraux sont « rétractables » en vol et viennent se coller contre le ventre de l'aile. La coque, dont la hauteur maximum est de 4 m. 70, a une section moyenne circulaire avec des surfaces hydroplanantes rapportées en dessous. Le poste de pilotage est aménagé dans le nez d'où la vue est excellente.

L'aile contient les logements pour les dix hommes qui composent l'équipage. Il y a quatorze cabines pour deux ou quatre passagers chacune, réparties entre les deux ponts avec un couloir central les desservant. Le pont supérieur s'étend de la cabine de navigation, dans la proue, à la cuisine, dans la poupe. A côté de celle-ci, dans la partie rétrécie de la coque, c'est la salle à manger avec vingt places réparties entre six tables. En dessous, on trouve le bar qui termine les aménagements du pont inférieur.

Voici maintenant quelques caractéristiques de ce sensationnel appareil : Poids total, 50 tonnes; vitesse maximum à 3.000 mètres, 365 km.-h.; vitesse maximum au niveau de la mer, 330 km.-h.; vitesse minimum pleine charge, 109 km.-h.; plafond pratique, 5.000 mètres; temps de montée à 3.000 m., 21,5 minutes; vitesse de montée au niveau de la mer, 150 mètres-minute; rayon d'action, 9.700 km. avec 4.500 kg. charge payante ou 4.850 km. avec 13.600 kg.; décollage en 67 secondes; puissance au frein de chaque moteur, constante du niveau de la mer à 3.000 mètres, 1.200 CV. à 2.100 tours; puissance au frein pour le décollage 1.500 CV. à 2.300 tours; réducteur 2 à 1; diamètre des hélices 4 m. 90; profil de la voilure Naca 21 modifié.

On arrive aux charges suivantes : poids à vide 25.300 kg.; charge utile 24.700 kg.; équipage 690 kg.; 54 passagers et leurs bagages 4.900 kg.; poste 670 kg.; essence, (23.700 litres) 17.000 kg.; huile 1.440 kg. La charge au mètre carré s'élève à 186 kg. (Nous ne connaissons pas le dispositif hypersustentateur utilisé) et la puissance au CV. est de 10 kg. 4. Il nous semble que l'appareil sera un peu tangent, car une telle charge au mètre carré devrait impliquer des charges au CV. plus faibles. Il est vrai, toutefois, que lorsqu'on arrive à de telles dimensions, on travaille avec des nombres de Reynolds (produit vitesse × longueur) et dont nous n'avons pas encore l'habitude et qui ont, parait-il, la propriété d'améliorer considérablement la portance.

Nos documents représentent, en haut, une coupe de la coque montrant l'aménagement général; à droite, une section courante montrant les deux étages de cabines disposées pour le jour, et le couloir central; en dessous, les cabines situées dans le nez de la coque; puis deux autres coupes : à gauche, une autre disposition de jour; à droite, montage des couchettes pour la nuit; enfin, en bas, l'aménagement de la salle de restaurant avec, en dessous le bar et, dans la queue, la cuisine. Un dessin montre ce que sera le nouveau Consolidated en vol.

ARCHBOLD, 4 COMPANIONS FEARED LOST

S D Sun 3/9/38

Flier, In S. D.-Made Plane, Unheard From After Miami Take-off

Richard Archbold, flying scientist, had not been heard from today, more than 28 hours after he took off from Miami in his San Diego-built flying boat for an unannounced destination, the United Press reported to The Sun.

Officials at Pan-American Airport in Miami said Archbold, who has been testing his ship here for a flight in May from San Diego to New Guinea on a scientific expedition, had the plane's gas tanks filled and took off at 1 p. m. yesterday with four companions.

Test Hop Assumed

At the airport it had been assumed he planned a short test hop. Last week he flew to the Virgin Islands and back.

Possibility that Archbold was returning to San Diego appeared unlikely when the hotel at which he was staying reported he still was registered. Archbold said previously he expected to return to San Diego "about March 8." He flew to Miami non-stop from San Diego, arriving Feb. 26.

Bermuda Possibility

Officials at Consolidated Aircraft Corp., which built the airboat, said Archbold indicated before he left that he intended to make a flight from Miami to Bermuda before returning to San Diego. They said he might have made this flight suddenly without announcing his intention.

A report that he had flown to Clearwater, Fla., was unfounded, the United Press said.

Archbold Back in Miami After Secret Flight

S D Journal 3/10/38

Exploding rumors that he was "missing," Richard Archbold, flying explorer for the American Museum of Natural History, returned to Miami in his $250,000 Consolidated flying boat after an unannounced flight to Clearwater, Fla. In a telegram to Consolidated officials, Archbold explained that he had been to Clearwater to visit friends. The scientist recently flew nonstop from San Diego to Miami.

ARCHBOLD LEAVES VIRGIN ISLANDS

S D Sun 3/5/38

By United Press

MIAMI, Fla., March 5.—Richard Archbold, flying scientist, left St. Thomas, Virgin Islands, for Miami today in his $250,000 flying boat, Pan-American Airways advised.

He has been testing the plane preparatory to a scientific expedition from San Diego to New Guinea next May. Archbold, who flew non-stop yesterday from Miami to St. Thomas in slightly less than eight hours, also planned to make the return trip of 1300 miles non-stop.

10 Navy Planes Reach Trinidad on Panama Hop

PORT-OF-SPAIN, Trinidad, March 7 (A.P.)—Ten U. S. navy planes arrived tonight en route to their Canal Zone base from marine maneuvers in the Caribbean. The 20 officers and 50 enlisted men in the group will continued their flight Wednesday. S.D. Union 3/8/38

Consair Submits Plans for Plane

S.D. Union 3/16/38

NEW YORK, March 15 A.P.) —Aeronautical engineers tonight studied proposals of five aircraft manufacturing companies to construct giant machines to bridge the Atlantic and keep the United States abreast of foreign competition.

In response to an invitation issued by Pan American Airways, world's largest operator of transoceanic planes, to eight manufacturers, three submitted preliminary plans for machines to carry 100 passengers at speeds up to 300 miles an hour.

A fourth manufacturer—Seversky Aircraft Corp., Farmingdale, N. Y., contributed a design described as being able to accommodate 120 passengers in berths. The machine also could be used as a high-speed bomber, it was said:

Other proposals came from Consolidated Aircraft Corp., San Diego, Calif., which specializes in military craft; Boeing Aircraft Co., Seattle; Douglas Aircraft Co., Santa Monica, Calif., and Sikorsky division, United Aircraft Corp., Bridgeport, Conn.

Lockheed Aircraft Co., Burbank, Calif., wrote it did not have the facilities for building planes of the required size.

'AMERICA'S FREEDOM TO ENDURE BECAUSE IT IS RIGHT'

"Democracy . . . will endure because it is right," Patrick Jay Hurley, war secretary in Hoover's cabinet, told a supervisors' and engineers' convention luncheon yesterday. He was introduced by Maj. R. H. Fleet. Left to right—Mrs. Fleet, Mrs. Hurley, Major Fleet and Hurley.

U. S. DEMOCRACY SAFE, HOOVER WAR SECRETARY SAYS HERE

Friday S.D. Union 3/25/38

Centralized Government Hit by Hurley In Speech Before Supervisors, Engineers

"Democracy will continue in America for my children and for your children," Patrick Jay Hurley, war secretary in the Hoover administration, told delegates to state conventions of county supervisors and county engineers when they met together at luncheon yesterday at the new Civic Center.

"We are going through a major transition," he said, "and the thing to do is to confront it intelligently. I've read democracy's challenge to autocratic power. Socrates made that challenge; so did Christ. You will find it in the Magna Charta, the United States Constitution, and in the words of Patrick Henry, Thomas Jefferson, Abraham Lincoln and Woodrow Wilson. Democracy is an institution that will endure because it is right."

The speaker described Americanism as a form of government based on individual liberty and collectivism as an institution based on autocratic power. At present, he said, there are only two great democracies left; all other governments have turned to some form of dictatorship.

America is safe, the speaker declared, as long as it keeps its government decentralized and free from a form of federal bureaucracy. Guarantee of that safety is the structure of the government, with its three main branches, executive, legislative and judicial, with 48 sovereign states linked under the federal government and with each state administering its functions through its many counties.

Hurley decried the present tendency toward centralization of power in the federal government. He agreed it was a natural trend, as modern transportation and communication tend to obliterate county, state and even national boundaries.

"To what degree can we centralize government and keep our liberties?" he asked. "I believe in decentralization of power as the future hope of government. A centralized bureaucracy destroys individual liberty."

The speaker was presented by Maj. R. H. Fleet, Hurley's host while visiting here. The luncheon was given by the chamber of commerce

(Continued on Page 2, Col. 2)

Blakely, Maj. Fleet Arrive in Honolulu

S.D. Union 4/8/38

Rear Adm. C. A. Blakely, commander of aircraft scouting force and patrol wing based here, and Maj. R. H. Fleet, Consolidated Aircraft Corp. president, arrived in Honolulu yesterday, The Associated Press reported.

Adm. Blakely will investigate two crashes of navy patrol bombing planes, in which 11 lives were lost last week in fleet maneuvers.

Maj. Fleet announced that his visit had been planned for several months to inspect general performance of bombers which the plant here manufactures. He expressed the opinion that the two planes lost were "flown into the sea" because of poor visibility.

U. S. DEMOCRACY SAFE, HURLEY TELLS SUPERVISORS, ENGINEERS

(Continued from Page 1)

for the several hundred delegates attending the two conventions. Charles Cotant, chamber president, presided.

RELIEF DISCUSSED

Supervisors, in their sessions at U. S. Grant hotel, devoted most of the day to discussion of relief problems. Highlight of the convention of county engineers, meeting at Hotel San Diego, was an illustrated talk on the All-American canal by L. J. Foster, project construction engineer.

Welfare endeavors must be so coordinated that all classes of persons needing government assistance shall receive their just share, C. A. Herbage, coordinator, state department of social welfare, warned. He explained that there is a limit to the money that can be spent for relief, and that if one group of needy is favored over another, there is lack of justice and fair play.

"If we talk politics out of the picture and stop figuring how many votes can be made out of the relief program, we could do something constructive," E. V. Latham, member of the assembly revenue and taxation interim committee, told the supervisors.

ECONOMY "FOR OTHERS"

"When I went into the legislature six years ago, I thought every one in California wanted governmental economy. You do, but for the other fellow. You will never get any that way. You must take selfishness out of your programs. You must realize that the amount of a tax is not as important as seeing that it is fairly assessed and its burden properly distributed. The way is open to solve the problem through the work of the coordinating committee of governmental agencies which is seeking to draft a sane relief measure.

"It was said somewhere that 'the Lord giveth and the Lord taketh away.' It's different in government. The legislature giveth, but it never taketh away, with the result that cost of government cannot help but increase. Perhaps we had better start producing to meet our economic needs and stop talking about saving. The public wants government and will have to pay the bill."

Elmer Lore, assembly social welfare committee chairman, urged coordination and consolidation of SRA and county welfare, declaring that under the present set-up "each is chiseling on the other." He stressed the need for careful consideration of migratory workers. Agriculture needs them and demands that they move about, he said, and as an essential part of the state population they must receive legislative study. The Voorhies bill now in congress deals with the problem. Lore said he was not speaking for the bill, but for some form of federal participation in that part of the relief problem dealing with migratories.

ASKS MORE STATE POWER

Lessening of federal control of state relief problems was urged by Harold E. Pomeroy, state relief administrator. He said he believed there would be greater efficiency if the states were given outright federal grants. Such a plan, he said, would make possible a program requiring all who can to work for whatever relief they obtain.

Mrs. Carl L. Voss, California League of Women Voters president, preceding Pomeroy, had stressed need for checking "a current trend toward encouraging pauperism." It cannot be sucessfully checked, said Pomeroy, as long as the federal government pursues its present policies, which are enforced upon the states accepting its assistance.

Birth control as a need to ultimately reduce taxation was discussed by Dr. Glen E. Carlson, professor of sociology, University of Redlands. It is something that county government must consider and make available to persons unable financially or unfitted mentally or physically, to rear children, he said.

LABOR ROW EXPECTED

This morning the supervisors will devote their attention to association business, receiving reports of standing committees, including that of the resolutions committee, which has had several highly controversial subjects submitted to it. The San Francisco delegation plans to take the floor in strong opposition to a resolution demanding that San Francisco authorities guarantee a cessation of labor controversy in that city, on penalty of losing state participation in next year's Golden Gate international exposition.

Gov. Merriam will address the convention at 2 in the afternoon and will be followed by Earl Lee Kelly, state director of public works, and Ray L. Riley, state railroad commission member.

State association officers will be elected at 3:40, and delegates will join county engineers in a dinner in the Plata Real at 7.

This morning's session of the engineers at Hotel San Diego will be devoted to talks on use of concrete in paving and in pipe. Mosquito abatement will be discussed by Harold F. Gray, Alameda mosquito abatement district engineer. In the afternoon delegates will visit El Capitan dam under guidance of Fred Pyle, San Diego hydraulic engineer.

Lockheed Completes Two Planes for Foreign Lines

3/18/38

Special to The Christian Science Monitor

LOS ANGELES—Lockheed Aircraft Corporation has announced the completion and delivery of two new transport planes for foreign air lines. Both planes are 10-passenger Electra types, powered with Wasp engines capable of a top speed of over 200 m. p. h.

One of the planes has been shipped to England to British Airways, Ltd., operators of the London, Paris air service, marking the sixth plane of this type delivered to the British air line since February, 1937.

Delivery of the second plane was ordered by the Rumanian air line, Linille Aerienne Romane Exploatate Cu Statul. This was the second of a $560,000 fleet of Lockheeds ordered by the line.

The two planes were valued at approximately $105,000, the company officials reported.

National Steel Car Corp. To Construct Airplane Plant Employing 350

TORONTO, Mar. 23—National Steel Car Corporation will commence construction almost immediately on an airplane factory at Malton, according to an announcement by Mayor Day of Toronto. The plant, he indicated, will entail an expenditure of approximately $500,000.

The plant, it is expected, will be in operation by August and will employ 300 to 350 men.

Seven Stay-In Strikers Found Guilty By Pennsylvania Court

READING, Pa., Mar. 23. — Seven employes of Reading Batteries, Inc., were found guilty of forcible detainer by a Berks County jury today in what attorneys described as one of the first convictions of stay-in strikers in the nation and the first in the state.

The court defined "forcible detainer" as "keeping possession of other people's property, in plain English."

Aircraft Group To Present Benefit Tonight

RED CROSS FUND

Contributions yesterday	$ 268
Previously reported	7081
	$7349

First of several benefit performances in support of the Red Cross flood relief fund will be presented tonight in Russ auditorium when Consolidated Aircraft Corp. employes offer their "1938 Extravaganza."

More than 50 aircraft employes, and a number of others, will appear on the program of 24 acts. The show will begin at 7:30, with Les Crawford as master of ceremonies.

Featured numbers include ensembles by 16 dancers, song and dance duos, Singing Hat Check Girls, bagpipers, acrobatic dances, instrumental soloists, Stutzke and his Singing Waiters, and Howard Kraft and his Club Continental orchestra.

The artists donating their talents include Sally O'Connell, Elinor Gibbs, Elinor Woolenhurst, Joan Harris, Nickolas Tuevsky, Arcady Kaufman, Norman Robertson, Kathryn Hubbard, Joan Barbara, Mary and Louise Balelo, Helen Jean Church, Norma Scavardo, Lucy Sanchez, Catherine Chambers, Joan Smith, Maxine Eastman, Gloria Marks, Betty Allison, Nancy Werden, James Garren, Albert Robinson, Mary Adella Trushinski, Joyce Williams, William Farringby, Catherine and Margaret Phipps.

Bobby Gould, Carol Jennings, Viola Mae and Nancy Lee Clutinger, Helen Sepulvida, Robert Abels, Lucy Schatzel, Anna Martin, Charles Z. Sheppherd, Lavina Sheppherd, Jeanette Parrot, Earl Lawson, Ernis Hodgson, Noble Crawford, Norman Robertson, C. R. Brady's Country Playboys, Kel Aiken, John Doig, Walter Bayer, E. W. Roesce, Dick Bartlett, John Holloway, Allen Cowley, R. D. Kerns, A. Droeden, A. Phillips, W. H. Stutzke, Mrs. W. Luppke, Howard Kraft and his Continental orchestra.

Army's Giants Soar In Test Flights

S.D. Union 4/4/38

NEW YORK, April 3 (A.P.)—Two of the army's newest units—mighty experimental bomber XB-15, America's largest fighting plane, and XC-35, speedy substratosphere warcraft—participated here today in an aerial prelude to the celebration of national Army day Wednesday.

The giant bomber flew to Bolling field, Washington, after the demonstration, while the XC-35 remained overnight at Mitchel field.

The planes cruised over New York, the stratoship at 33,000 feet, as occupants of both participated in a radio program.

Transatlantic Planes Carrying 120 Planned

By a Staff Correspondent of The Christian Science Monitor

NEW YORK, March 16—Five proposals for an ultra-modern type of transport equipment designed for transatlantic service were studied by officials of Pan American Airways today after receipt in sealed form of plans from leading American manufacturers.

The proposed airplanes, according to requirements established by the company last fall, would be capable of carrying 100 passengers, a crew of 16 and necessary baggage on non-stop flights of at least 5,000 miles. Cruising speeds of the airliners would range from 200 miles an hour at near sea level to nearly 300 miles an hour at altitudes around 25,000 feet.

Preliminary designs submitted by the builders were being distributed to members of a technical committee of which Col. Charles A. Lindbergh is chairman, it was announced. Should any one of the plans be acceptable, the line expects to award engineering contracts for detailed drawings and then to negotiate for the construction of an airplane fleet in lots of three, six and 12 units.

Four manufacturers with broad experience in the construction of large airplanes were listed among those responding to the invitation of Pan American to submit preliminary designs for the transatlantic equipment. They were the Douglas Aircraft Company, of Santa Monica, Calif.; the Boeing Aircraft Company, of Seattle, Wash.; the Consolidated Aircraft Corporation, of San Diego, Calif., and the Sikorsky Aircraft Company, of Bridgeport, Conn. A fifth builder—the Seversky Aircraft Corporation of Farmingdale, N. Y.—made a proposal on its own initiative for the construction of an airplane far larger than asked by the Pan American Lines.

While the Seversky Company has in the past specialized in the production of small military, training and amphibion craft, its proposal to Pan American calls for a flying boat to carry 120 passengers at a speed of 300 miles an hour. The company estimated two years would be required to build its airplane and that the cost of the first unit might be $7,000,000.

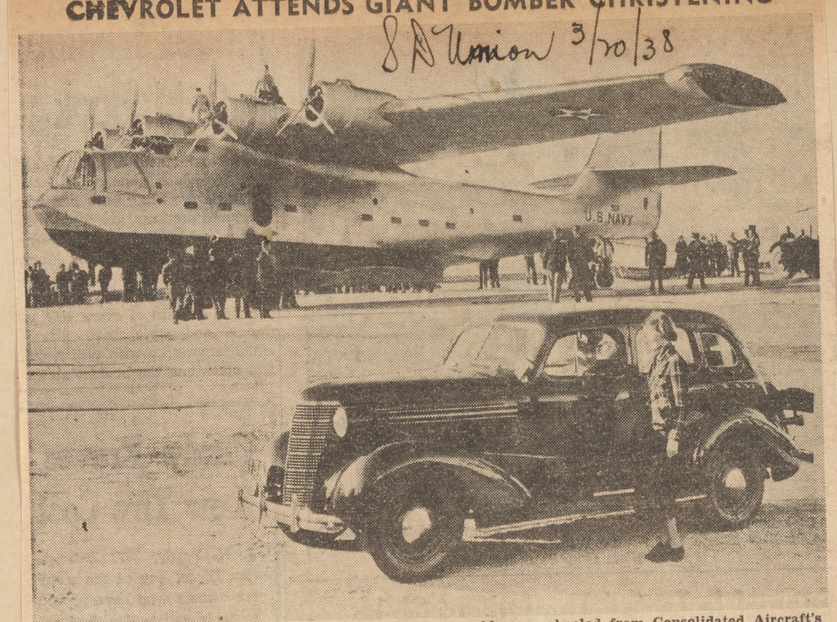
Among the preliminary designs submitted to Pan American only that for the Seversky equipment was made public.

Col. Alexander P. Seversky, president of the corporation, described his airplane as a great flying wing which could in time of war be transformed into a super-aerial dreadnaught with a capacity of carrying ten 2000-pound bombs for 12,000 miles at a speed of 300 miles an hour. If the bomb load were reduced to 6400 pounds, the airplane could fly 3000 miles at a speed of 380 miles an hour, he said.

The design shows two parallel hulls which would be retracted against the flying wing in flight. Passengers would be housed in the wing itself. Eight engines of 2300 horsepower each, geared to five propellers to drive the giant craft through the air, also would be located in the same structure.

CHEVROLET ATTENDS GIANT BOMBER CHRISTENING

S D Union 3/30/38



When the U. S. Navy's giant bomber, the largest in the world, was wheeled from Consolidated Aircraft's factory for its recent christening and maiden test flight, a Chevrolet from the Campbell Chevrolet Co. was on hand for the impressive ceremony.

AERIAL RESEARCH EXPLORER ARRIVES

S D Tribune 4/4/38

Richard Archbold, zoological research explorer for the American Museum of Natural History, who arrived yesterday from Miami via Medina Lake, near San Antonio. Flying the same $250,000 Consolidated plane which he will pilot from here to New Guinea on a scientific mission next month, he landed on the Texas lake to refuel.

Lockheed Delivers Planes To Polish Air Line 'Lot'

4/1/38

Special to The Christian Science Monitor

LOS ANGELES—Two Lockheed transport planes have been delivered to New York for shipment to the Polish air line Polskie Linjie Lot, the Lockheed Aircraft Corporation announced. The planes, part of a $525,000 order from the Polish lines, are the model 14 type which is reputed to be the world's fastest commercial land plane. Four sister ships are nearing completion and will be ready for delivery within a month.

Known throughout Europe as "Lot," Polish Air Lines is one of the leading air services on the Continent, serving a vast area from the Baltic to the Aegean Sea, in addition to local services from Warsaw to the leading cities in Poland Lot maintains important air routes between Poland and Germany, Latvia, Esthonia, Rumania, Austria, Bulgaria and Greece. Delivery of the six new planes will bring to 16 the total of Lockheeds purchased by Lot.

Archbold Flying From Florida

S D Tribune 4/3/38

Richard Archbold, flying research associate of the American Museum of Natural history, is expected back in San Diego Monday after a one-stop flight from Miami, Fla. He will take off from Miami in his big Consolidated flying boat at 6 a.m. tomorrow, and on the flight will check a new directional radio beam antenna with Bernard Boyd, local radio amateur. Archbold, who has made two flights to Miami in the plane and is preparing for a flight from California to New Guinea next month, will make his one stop en route from Miami at San Antonio, Tex., acording to present plans.

Consair Sales $3,379,740 For Last 3 Months

S D Union 4-13-38

Increasing the purchase price from $2,647,000 to $3,379,740, Consolidated Aircraft Corp. of San Diego delivered 28 percent more finished products to customers in the first quarter of this year than in the same period in 1937, The Associated Press reported from San Francisco yesterday. In the quarter, unfilled orders were reduced from $14,000,000 to $10,748,815, it was announced.

Archbold to Explore In Plane, Club Told

S D Tribune 4/22/38

Explaining the impracticability of traveling with native boys in the New Guinea wilderness and mountains, Richard Archbold, flying explorer, told San Diego Aero club members he would establish a chain of camps on rivers and lakes and do his exploring in the $250,000 Consolidated-built plane which he will use on his forthcoming expedition.

He will spend two years in New Guinea, collecting specimens and doing research for the American Museum of Natural History.

Films on "Man's Conquest of the Air" were shown by Zeno Klinker. Auxiliary members of the club, local chapter of the National Aeronautic association, were present at the dinner in San Diego club Friday.

Pan-American Base In San Diego Looms

Brennan To Confer With Company Officials In Honolulu Regarding Facilities Here

S D Union 4/1/38

By HAROLD KEEN

Pan-American Airways officials are considering San Diego as an emergency landing base in trans-Pacific operations, it was learned today.

Port Director Joe Brennan, who will leave for Honolulu tomorrow, accompanied by Maj. Reuben H. Fleet, president, and I. M. Laddon, chief engineer, of Consolidated Aircraft Corp., revealed he expects to confer with Pan-Am officials at the islands. He also will inspect landing facilities for the big clipper ships, to determine what improvements would be required in San Diego harbor to accommodate these airboats.

Long Considered

Negotiations between Pan-American authorities, the Harbor Department and the aviation division of the Chamber of Commerce have been under way for some time, it was disclosed.

At a recent Junior Chamber of Commerce banquet, Tom Bomar, industrial and aviation manager of the Chamber, announced that Pan-American operation out of San Diego is a possibility in the not-too-distant future.

Pan-American officials, it is reported, are not entirely satisfied with weather conditions confronting planes coming into San Francisco harbor, the present major terminus on the west coast.

Forced To Circle

Recently, a clipper ship was forced to circle over San Francisco bay several hours before an overcast condition cleared sufficiently to enable the pilots to poke their way through a "hole" in the ceiling for a safe landing.

"The present plan is to have Pan-American Airways use San Diego as an emergency base in case a plane is forced back on a scheduled flight because of mechanical difficulties," Mr. Brennan explained today.

"Later, if they are satisfied with what we have to offer them, Pan-American may come in here permanently."

Mr. Brennan, Maj. Fleet and Mr. Laddon will sail on the SS Lurline from San Pedro tomorrow for Honolulu. They will remain on the islands 16 days, returning here late this month.

Observe Bombers

Maj. Fleet and Mr. Laddon will observe operations, under simulated wartime conditions, of the long-range Consolidated bombers, 42 of which have been "ferried" to Pearl Harbor since January, 1937.

Their trip is not being made in connection with the disastrous series of patrol plane crashes in the current war games near Hawaii. The decision to sail to Honolulu was reached by all three at least a month ago.

Mr. Brennan will study the feasibility of transplanting cocoanut palms from Hawaii to San Diego.

Will Plant 50

"I'm going to arrange for a Navy ship to haul about 50 of these trees to San Diego," he declared, "and we'll try planting them in the dredged island we're building at the south end of the Yacht Harbor. I understand their roots thrive in salt water, which is more than you can say for the date palms we rely on now to beautify our waterfront."

Mr. Brennan's trip will be in the nature of a vacation, and will be undertaken at his personal expense, he explained today.

Archbold Expected To Arrive Today

S D Union 4/3/38

Richard Archbold, zoological research explorer for the American Museum of Natural History, is expected to leave Medina lake near San Antonio early today for his final dash to San Diego, The Associated Press reported last night. He is expected to arrive here about noon.

Archbold landed on the lake yesterday to refuel his $250,000 Consolidated-built plane after a non-stop flight from Miami, Fla. The scientist-flier will spend his time here preparing for an expedition to New Guinea, scheduled for next month.

U. S. Can Export 3000 Warplanes In Year

S D Union 4/15/38

NEW YORK, April 14 (A.P.)—If Europe wants to buy American-made warplanes for rearmament, more than 3000 bombers and fighters—described by their makers as the fastest and most effective in the world—can be exported in the 12 months dating from July 1, a survey today showed.

The British undersecrtary for air announced yesterday in the house of comons that the government was investigating the possibility of buying warplanes in the United States and Canada.

FRENCH PLACE ORDER

The nationalized French aviation industry, it was learned reliably today, has anticipated the British by secretly placing orders for bombing and fighting aircraft with American manufacturers.

One American-made pursuit plane released for export has a sustained operating speed of more than 300 miles an hour, can climb to 30,000 feet and carries bombs as well as machine guns.

The greatest of the exportable bombers cruises at more than 200 miles an hour and can fly 2500 miles non-stop with a load of explosives weighing in excess of 2½ tons.

All told, 18 American aircraft plants, it was estimated, could turn out upward of 3300 warplanes in their next fiscal year.

3187 BUILT IN 1937

In the 1937 calendar year the industry produced 3187 planes, of which 949 were military types. The value of plane exports was $24,000,000, but what part of the 629 planes shipped abroad were for defense purposes was not disclosed.

The most outstanding naval patrol planes in the service of this country, some types of which can be exported, are made by the Consolidated Aircraft Corp., San Diego, and Sikorsky Aircraft, a division of United Aircraft Corp., Bridgeport, Conn.

Other exportable American military planes include the Martin twin-engine bomber, made in Baltimore; the Chance-Vought "CorsairV-142" dive-bomber, and the Vultee attack plane made at Glendale, Calif.

WOODEN SCALE PLANES TO BE BUILT IN S. D.

Consair Gets Orders For Experimental Jobs, Needed By Government

S D Sun 4/11/38

The United States should spend $20,000,000 annually for development of experimental military aircraft, in the opinion of Maj. Reuben H. Fleet, Consolidated Aircraft Corp. president.

Expressed by Maj. Fleet just before he left for Honolulu April 2, this statement was brought into bold relief today with receipt of unofficial reports that the Consolidated plant's experimental division has been ordered to start work on a "mockup" (wooden, full-scale model of an experimental plane) for a twin-engined patrol bomber which will greatly exceed performance characteristics of the present PBY's.

250 Miles Per Hour

It was understood that the plans for the new bomber call for a plane capable of a speed in excess of 250 miles per hour, made possible by a unique new wing design and a pair of 2000-horsepower engines. Maj. Fleet ordered full speed ahead on the preliminary engineering of such a plane a short time before he sailed for Hawaii, accompanied by I. M. Laddon, Consolidated vice-president and chief engineer, and Port Director Joe Brennan.

The $20,000,000 which Maj. Fleet believes should be expended yearly on military aviation experiments, should be evenly divided between the Army and Navy.

Services Handicapped

"Every major aircraft company—there are only about one dozen—should be working on a total of four experimental models—one just delivered and undergoing tests by one of our military services, one two-thirds completed, one one-third completed, and one a new conception under study by one of the services," he pointed out.

"Our two great military services, while the most efficient in the world, have been handicapped by lack of appropriations for purchase and development of experimental aircraft."

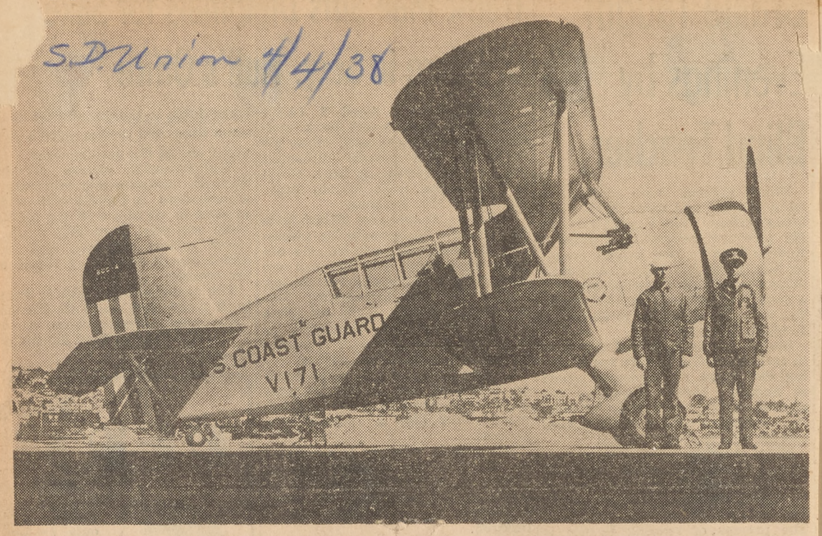
BUFFALO PLANE READY FOR S. D. COAST GUARD DUTY

S.D. Union 4/4/38



First SOC-4 out of the Curtiss plane factory at Buffalo, N. Y., this scouting-observation plane is ready for duty at the coast guard air base. Lt. S. C. Linholm, base commandant (right), flew the plane from Washington, D. C., arriving late Wednesday. With him was W. D. MacNeil AMM1c (left).

Britain in Market For Navy Planes Built by Consair

S.D. Tribune 4-28-38

By MERRILL MUELLER

Copyright, 1938, International News Service

WASHINGTON, April 28.—The British delegation, now in the United States seeking American aircraft, will negotiate to purchase three types of fighting planes and two types of training planes.

"Fortresses" Shunned

Just before the delegation, headed by James Weir, director of the Bank of England and honorary air commodore, left for the west coast to inspect plane factories, a spokesman for the group revealed that Britain definitely is not interested in obtaining planes similar to the United States four-motored "flying fortresses." The planes which the delegation is particularly interested in are:

1.—The Lockheed "14," a commercial transport capable of 260 miles an hour and readily adaptable into a bombardment and combat airplane.

2.—The Douglas bomber, standard equipment with many U. S. army squadrons and a heavy bomber capable of speeds up to 240 M.P.H.

3.—The Consolidated flying boat, a United States naval bomber that has been flown non-stop in "routine squadron transfers" from San Diego to Honolulu in about 22 hours. It is capable of carrying large bomb loads at speeds around 200 M.P.H.

4.—The North American advanced trainer, a single-motored low-wing two-place monoplane capable of 200 M.P.H. and an excellent ship to convert into a "secondary fighter" with machine guns and bomb racks.

5.—The Curtiss 19-R advanced trainer, a ship similar to the North American, equally adaptable and slightly faster.

All these models are released for foreign export.

Keynote of Program

Although the spokesman could not reveal the amount of money the British would spend in this country for large scale production of these planes, he stressed the fact that the keynote of this foreign purchasing program was speed. To obtain orders, he said, the factories must show that they are capable of completing the orders within 12 or 18 months.

This necessity for speed is the reason why the British are not interested in America's "flying fortresses," whic hare not released for export. The slow production schedules on these planes make them prohibitive to the British program.

It is noteworthy that the British are interested only in highly maneuverable bombardment airplanes, passing up American-made Seversky, Curtiss and Grumann 350-mile-an-hour pursuit planes now in United States army and navy service.

CONSOLIDATED FIXES 'KINKS' IN NEW DESIGN

Return to Wanley

PBY-4 Ships Also Face Scrutiny Of Trial Board

S.D. Sun 4/19/38

Completion of company flight tests on the million-dollar, four-motored experimental Navy patrol bomber, by May 15, was foreseen yesterday by officials of Consolidated Aircraft Corp.

A Navy trial board, headed by Lieut.-Comdr. Ralph E. Jennings, is due here from Washington, May 1, to inspect the first of 33 PBY-4 planes, it was learned at the plant yesterday.

The PBY-4 is the most advanced of the twin-engined PBY planes and represents the last type in the series of Navy airboats now under construction at the Consolidated plant.

Will Inspect Giant

The trial board probably will remain here, after officially accepting the PBY-4 ship, to place its stamp of approval on the four-motored, 25-ton Consolidated bomber. It is expected the plane will be ready for its first official inspection by May 15.

Deficiencies in the auxiliary generating equipment and in the tail design have caused several months' delay in completion of flight tests by Consolidated.

Two auxiliary power plants, independent of the main engines, have been installed to operate all apparatus not concerned with actual propulsion of the plane. An innovation in big airboat construction, the generators have not performed satisfactorily to date, with several modifications required, it was disclosed at the factory yesterday.

Gun Causes Change

Another departure from Navy bomber design—providing for a machine-gun turret in the tail—has resulted in unforeseen engineering difficulties, with the result that alterations have been required to overcome tail instability.

The Consolidated plant is well on the road to completion of its PBY-3 contract for 66 planes. When the PBY-4 order is finished about the end of this year, the concern will have absorbed all its present backlog of work.

Consair Vote Ordered On Bargaining Issue

S.D. Tribune 4/13/38

The National Labor Relations board has ordered another election to determine who shall act as the collective bargaining agency at the Consolidated Aircraft plant, John Orr, representing Aircraft Workers' union, U.A.W.A., announced today following a telephone conversation with Dr. Towne Nylander in Los Angeles.

"Nylander told me that he was informed by the head office of the board in Washington that our appeal has been sustained and an election will be called at an early date," said Orr. The aircraft union represented by Orr is affiliated with the C.I.O.

An election held under supervision of Nylander last March to determine the bargaining issue resulted in a victory for the group affiliated with the American Federation of Labor. The C.I.O. affiliate protested, charging that a minority was recognized as the bargaining agency. The case on appeal was argued before the NLRB at Washington. There are approximately 6400 employes eligible to vote, said Orr.

U. S. Neighbors, Art To Be Forum Topics

S.D. Union 4/10/38

Richard Requa, architect, and J. O. Lockwood, Consolidated Aircraft Corp., will address public affairs forums tomorrow night at 7:30, Dr. Charles J. Falk, forum supervisor, anounced yesterday.

Requa wil speak at East San Diego forum, Hoover Evening High school, on "Art in City Planning." Drawings, photographs and maps will be shown. Mrs. Marguerite E. Bowly is forum chairman.

Lockwood, former resident of Cuba, will speak on "Our Caribbean Neighbors" at Little Theater forum, San Diego High school. This will open a series on "Our Good Neighbor Policy." Harvey Franken is forum chairman.

Want to Go Places in Aircraft Construction

They both got jobs in the summer of 1932 and didn't return to their high school classes that fall. But Frank and Joseph Williamson soon found that in filling out application blanks for advancement, their "didn't finish high school" record wasn't doing them any good. They wanted to go places in aircraft construction, hold more responsible jobs and earn more money. Without education, there was not much chance.

"When Consolidated sent a scout to an aircraft factory in Baltimore in search of experienced men who wanted to come to the coast," said Frank, oldest of the brothers, "we came to San Diego in 1936. Last fall we enrolled at San Diego Evening High school. We think it is great that we will be able to graduate this June. Both of us plan to take college work. We have to pay our own way, of course."

LEARN TO CONCENTRATE

Frank is an assembler and Joseph a tool maker—and both speak with a southern accent that is pleasant to hear. Joseph wants to study mechanical drawing and his brother wants to be an aeronautical engineer.

"We don't have much time to study," said Joseph, "and so we have learned to really concentrate. We have discovered that two hours of home work can be done in half an hour if the student shuts out all distractions and puts his mind on his lesson.

"I had always heard it said that you appreciate an education when you work for it yourself. You do. But you also appreciate it when you see the need of it to attain something you want. Teachers at night school interest me—they don't teach subjects to classes — they teach them to individuals. It makes required subjects, as well as the ones we specially want, interesting and easy to learn."

LIVE NEAR OCEAN

To insure quiet for study, the brothers live alone in a cabin near the ocean. Frank has wanted to live by the sea since the time when he dropped out of school for a year between sophomore and junior classes to work on a vessel that plied between the Atlantic coast, France and Germany. Fond of athletics, he had won two medals for wrestling. Runner-up in the south Atlantic A. A. U. championships in 1933, he was able to win the Baltimore wrestling conference championship in 1935. He also was winner of the south Atlantic A. A. U. weight lifting championship.

Since coming to San Diego, the Williamsons have learned to climb mountains and play golf. They also are active in Y. M. C. A. athletics and belong to the Consolidated Gun club.

SAN DIEGO UNION: 4-29-38

S.D.-Built Planes May Be Used By Britain

San Diego-built airplanes may provide a part of Great Britain's air defense and offense in the event of European war.

That was indicated yesterday as a delegation of five members of a British military delegation studying American aircraft arrived in Los Angeles to inspect southern California manufacturing plants and products, The Associated Press reported.

In Washington a spokesman for the delegation announced that interest centered in five types of planes that can be delivered within 18 months—Consolidated Aircraft Corp. bombers, Lockheed transports capable of being transformed into combat planes, Douglas bombers, North American training planes and Curtis training planes.

The delegation is expected to visit the Consolidated plant here sometime within the next week, although Consolidated executives said last night they had received no notice of the planned visit. Members of the party who arrived in Los Angeles yesterday were Air Commodore James G. Weir, Commodore Arthur T. Harris, Comdr. Caspar John, Squadron Leader Charles E. Horrex and Engineer Frederick Rowarth.

Weir, leader of the group, declined to comment on the purpose of the visit beyond saying "we are here to look around and see if there is any business to be done and if there is to do it."

Aircrafts Check Downward Trend Of Other Groups

S.D. Union 4/21/38

NEW YORK, April 20 (A.P.)—A boom in aircraft shares in the stock market today helped check a flight of other groups in lower levels.

Spotlighted by reports a British commission was en route to the United States to inspect airplane manufacturing facilities, perhaps with an eye to placing orders for England's rearmament needs, the aviation group had the speculative stage pretty much to itself in demonstrating climbing prowess.

Wright aeronautical, mostly held by Curtiss Wright and usually an inactive issue, soared nearly 7 points. In brisk trading Douglas Aircraft, Glenn Martin, United Aircraft, Curtiss Wright, Consolidated Aircraft and Boeing rose fractions to more than 2 points.

Despite a late rally, moderate losses predominated in the main list. The upturn started after leading industrials had yielded from one-third to one-half of the April recovery gains. Forenoon losses running to more than 3 points were reduced or eliminated before the finish.

Traders were more friendly to the buying side as leaders approached the half-way mark down to the March lows in belief technical conditions had been improved by profit-taking this week.

Transactions increased to 777,540 shares from 571,680 yesterday.

BRITISH AIR HEADS TO VISIT CONSAIR

S.D. Tribune 4/28/38

A mission of British aviation experts will visit the Consolidated Aircraft Corp. plant here tomorrow, according to advices from Los Angeles today.

Although actual negotiations have not yet been begun, it was deemed likely that the English agents may place a large-scale order for Consolidated airboats to augment Britain's rapidly expanding air force.

ARCHBOLD EXPLAINS JUNGLE TRIP TO CLUB

How he expects to reach virtually inaccessible exploration sites in the rugged jungle country of Dutch New Guinea with his $250,000 Consolidated airboat was described last night by Richard Archbold to members of the San Diego Aeroneers at a dinner in Hotel San Diego.

S.D. Sun 4/23/38

Archbold, a research associate of the American Museum of Natural History, will take off from San Diego late in May or early in June for a two years' expedition collecting animal, bird and plant specimens.

EXPLORING BY PLANE

Melbourne "Argus" 1 June 1938

NEW GUINEA BASE

SAN DIEGO (California), Tuesday.

Mr. Richard Archbold has announced that he will take off on Wednesday on the first leg of his 8,000-mile flight to Hollandia, New Guinea, which will be the base for scientific explorations to last two years.

The explorer will be accompanied by Mr. Russell Rogers (pilot), Mr. Lewis Yancey (navigator), Mr. Gerald Brown (engineer), Mr. Stephen Barrinka (assistant engineer), and Mr. Ray Booth (wireless operator).

The 250,000-dollar (£A62,500) "flying laboratory" will make a non-stop flight of 2,250 miles to Honolulu, and thence to Midway and Wake islands.

Fleet Predicts Non-Stop Hop Across Pacific

By United Press

S.D. Sun 4/29/38

SAN FRANCISCO, April 28.—Giant airliners, comparable in size to the great ocean passenger ships, which will make 24-hour non-stop flights between San Francisco and the Orient, will be in operation within the next 12 years, Maj. R. H. Fleet, president of Consolidated Aircraft Corp., San Diego, predicted today.

Maj. Fleet, who returned on the Lurline from Hawaii, said the planes will refuel as they fly over the islands and continue on their way.

These future ships will be so large, he said, that they will be unable to raise themselves from the water without outside aid, and probably will be launched with the aid of a catapult.

Maj. Fleet said the company presently is working on plans for such planes.

CONSAIR HEAD DUE BACK IN S.D. SATURDAY

S.D. Sun 4/25/38

Port Director, U. S. Navy Officers On Hawaii Inspection Tour

Maj. Reuben H. Fleet, president of Consolidated Aircraft Corp.; his chief engineer, I. M. Laddon, and Port Director Joe Brennan are due in San Diego from Honolulu Saturday, it was reported today.

Left This Month

The trio left here early this month for Hawaii, accompanied by Rear Adm. Charles A. Blakely, Aircraft Scouting Force commander, and his flag lieutenant, Lieut. B. W. Wright. The latter two arrived here last Thursday on the aircraft tender Langley.

While in Hawaii, Maj. Fleet and Mr. Laddon observed maintenance procedure on the Consolidated PBY planes, of which 42 have been delivered to Pearl Harbor in three mass flights since January 1937.

Facilities Inspected

Mr. Brennan conferred with Pan-American Airways' representatives and inspected facilities for handling the clipper planes, with a view to providing similar equipment, on a small scale, in San Diego, which has been accorded the status of an emergency base in the Pan-Am. transpacific operations.

The San Diego port director also looked into the feasibility of transplanting Hawaiian cocoanut palms to the local waterfront as a feature of the Harbor Department's landscaping plan.

Capital Glittered With Dignitaries At First Air Mail Flight

SD Sun 5/10/38

Next Sunday the United States will celebrate the 20th anniversary of its air mail service, National Air Mail Week having been proclaimed from May 15 to 21. In a series of articles, of which this is the second, the important part played by present San Diego residents in launching this daring venture is being told.—THE EDITOR.

By HAROLD KEEN
The Sun's Aviation Editor

The setting for the takeoff of the first airmail flight in United States history May 15, 1918, was resplendent with Washington officialdom. While Maj. Reuben H. Fleet and Lieut. George Boyle, the pilot chosen for the pioneer hop between Washington and Philadelphia, conferred over the course to be followed, a host of dignitaries observed the scene which was to change the picture of American commercial transportation.

President Was There

There were President and Mrs. Wilson, Postmaster General Burleson, Postmaster Merritt O. Chance of Washington, D.C., Postmaster Gen. K. Kambara of Japan, and Otto Praeger, a San Diego resident today, and second assistant postmaster general of the U. S. at that time.

The original plan had been for Maj. Fleet to make the flight, but the postoffice department decided his services were needed in Washington to coordinate the activities of the Army pilots engaged in transporting the U.S. mail through the clouds.

Lost His Course

So Lieut. Boyle took off from Washington on a journey that was to be short but not sweet.

Twenty minutes after his takeoff, he lost his course and decided to come down and get his bearings. Unfortunately, the field he chose was roughly plowed, and when Lieut. Boyle dusted himself off after emerging from his craft, he discovered that its nose was imbedded in the ground, a prop was broken, and the mail had gone through exactly 30 miles, to Waldorf, Md.

Meanwhile, two other Army pilots were ready to make aviation history, Maj. Fleet recalled yesterday.

First Successful One

Lieut. Leroy H. Webb of California took off from the old Belmont Race Track at Long Island, converted into an airport for the occasion, at 11:40 a.m., and exactly 1 hour, 20 minutes later, swooped to a perfect landing at Philadelphia, 90 miles away. The first successful air mail flight had been made!

In the midst of the uproar and excitement that prevailed at Philadelphia, the mail was transferred from Lieut. Webb's plane to that of Lieut. J. C. Edgerton.

It was like a relay race, with the baton consisting of the mail load.

Difficult Job

Lieut. Edgerton had a really difficult job ahead of him—128 miles of visual navigation from Philadelphia to Washington. What is child's play for today's transport pilots was high adventure in those days, when radio beams and automatic pilots were unknown. You looked for a railroad track and followed it. If fog or heavy clouds blotted out the earth, you better start looking for a place to land, pronto. That was the sort of flying the Army had to do in inaugurating the United States air mail 20 years ago.

Lieut. Edgerton's plane roared into Washington one hour and 40 minutes after leaving Philadelphia at 4 p.m., May 15, 1918. That officially put the Army in the air-mail business, with Maj. Fleet, head of San Diego's largest industry, Consolidated Aircraft Corp., at the helm.

TOMORROW: Why Fliers Get Lost.

Despite the pressing problems of the World War, Washington dignitaries appeared in full force at the inauguration of the U. S. airmail service 20 years ago this month. Left to right, above, are Otto Praeger, a San Diego resident today, and second assistant postmaster general in charge of the airmail in 1918; Merrit O. Chance, Washington, D. C., postmaster; Postmaster General Burleson and President Wilson.

Maj. Reuben H. Fleet, now president of San Diego's largest industry, Consolidated Aircraft Corp., is shown above as he conferred with President Wilson shortly before the first air mail flight in U. S. history May 15, 1918.

Archbold Tells Plans For New Guinea Flight

SD Union 5/7/38

Richard Archbold, American Museum of Natural History research associate, outlined his plans for a flying-boat exploration trip to New Guinea before 125 Masons last night at the Consolidated Aircraftsmen's Masonic club meeting in Masonic temple. The craft was built here. William Stutsky, president, introduced Archbold.

Consair Labor Hearing Opens; Fleet Testifies

SD Union 5/11/38

To determine what bargaining agency shall represent hourly paid employes of Consolidated Aircraft Corp., a national labor relations board hearing was started in federal courtroom yesterday by George Kennedy, examiner. Among those testifying were Maj. Reuben H. Fleet, Consolidated president.

Stating wages and working conditions of employes were predicated on the plant's expenses and income, Fleet asked that the C.I.O. petition for a bargaining agency election be denied.

"Consolidated did not and does not attempt to influence its employes' choice of bargaining agencies, but we do not wish to be whip-sawed between two factions," Fleet said. He declared 2500 hourly paid employes are in the unit with which the plant has a contract. He maintained that unless a majority of the workers petition for a new bargaining agency, no election should be held.

Unions represented at the hearing include: Local 506, United Automobile Workers of America, C.I.O. affiliate, petitioners; Aircraft Lodge 1125, International Association of Machinists, which since April 26, 1937, has had a working agreement with the Consolidated management, and the United Aircraft Welders of America, intervening with the claim they should not be represented by either of the other two, but by their own organization.

With Kennedy is William Walsh, NLRB attorney, Los Angeles.

Fleet Cites Business Drop At NLRB Hearing

Continued Employment Of 2500 Workers Problematical Unless Army, Navy Contracts Are Won

SD Sun 5/11/38

While rival labor factions are seeking to oust each other from the favor of Consolidated Aircraft Corp. employes, Maj. Reuben H. Fleet, president of the firm, has still another struggle on his hands—that of gaining sufficient business in the near future to keep from laying off any of his workers, whether AFL or CIO-minded.

After testimony at a National Labor Relations Board hearing here yesterday, which indicated that Consolidated is bidding for Army, Navy and foreign airplane contracts on a large scale, Maj. Fleet told The Sun that continued employment of the plant's 2500 hourly paid workers depends entirely on obtaining new orders immediately.

Backlog Short

"With our present backlog," he said, "we don't have enough work to keep a full force in certain departments even until the end of this year.

"Because of our high wages—possibly only one other aircraft firm in the United States exceeds our scale—we find it difficult to bid successfully on world business. We have had representatives touring Europe for several months now with no results.

"When we signed the contract with the AFL Aircraft Local 1125 last year, we promised to consider a second 10 per cent wage increase the following June. We were going on the assumption that our bid for 64 PBY-4 Navy airboats would probably be accepted by the Navy, and, at the price we established, wage raises would have been possible.

Price Too High

"However, the Navy couldn't afford that price, even though we were lowest bidder, and several months later new estimates were called for. We submitted a substantially lower figure, and obtained a contract for 33 PBY-4's. But, the wage increase was out of the question.

"Managers and owners have their problems, as well as labor. For nine and one-half years, 2500 stockholders of Consolidated have allowed us to use their investment without one cent of return. We had to mortgage our plant to enlarge it a year ago, and it is costing us $71,000 per pear to meet the payments on this debt."

Have Tried Hard

As far as wages are concerned, Consolidated has made sincere attempts to pay all it can to its workers, Maj. Fleet contended.

"As a matter for fact," he told Examiner George Kennedy, of the National Labor Relations Board in the hearing yesterday, "I instructed Edgar N. Gott, our Washington representative, last February, to urge at Congressional hearings on the Walsh-Healy Bill that the minimum wage of aircraft helpers and mechanics should be set at 50 cents per hour, regardless of their marital status. That made a lot of our competitors angry, but we owe them nothing, and I was determined to have my ideas on wage scales made known."

Highlight of Hearing

Maj. Fleet's testimony was the highlight of yesterday's hearing, at which the CIO affiliate, Aircraft Local 506, and the Aircraft Welders of America, sought to prove they would be shown to represent a majority of the hourly paid employes if an election were held at the plant. Opposing this contention were representatives of the AFL organization, Aircraft Local 1125, with whom Consolidated signed a contract on wages and working conditions April 26, 1937. Since then, this group has been split, with a number of former members organizing the CIO unit.

Maj. Fleet wound up his presentation with the following statement:

"The labor movement is on trial before public opinion. I don't want to see it hurt, even though I am an employer, because I, too, once had to pack a dinner pail. But, constant concessions to labor eventually will kill the goose that laid the golden egg."

10,477 Wage Increases

He showed that since establishment of the plant in San Diego, the firm has granted 10,477 individual wage and salary increases, totaling $1,062,068.54, exclusive of the general 10 per cent boost in pay granted May 2, 1937, when the contract with the union went into effect. Since then, 1139 individual wage increases have been given, costing $32,955.71, and expenditures to improve working conditions, at the request of the union, have aggregated $35,243.66 to date.

$290,000 Payroll

Average monthly payroll of Consolidated, not including executives' salaries and overtime, is $290,000, Maj. Fleet revealed.

Several weeks will be required to consider the evidence presented by the unions yesterday before the NLRB will announce whether an election at the factory is necessary, according to Atty. William Walsh, of the Board.

The hearing was called to determine whether an election is necessary at the Consolidated plant to decide whether the CIO

Consair [illegible]ds; A.F.L. Men 'Satisfied'

SD Union 5/13/38

A hearing on a petition for a plant election at the Consolidated Aircraft Corp., to determine what bargaining agency shall represent production employes, ended yesterday afternoon. In session in the federal court room three days, the hearing was concluded after A.F.L. representatives and other witnesses testified they were "satisfied" with conditions at the plant. Among them were George Dayton, president of the A.F.L. Machinists' union, who described the history of labor organization at Consolidated, and John Waskey, who described negotiation meetings between the management and the union. Final decision on whether an election will be held, as requested by the United Automobile Workers of America, aircraft local 506, C.I.O. affiliate, will be made by the national labor relations board in Washington, D. C.

50 Palm Trees Brennan's 'Loot' From Honolulu

SD Union 5/3/38

By JERRY MacMULLEN

The "Brennan touch," it appears, has extended some 2200 nautical miles southwesterly from San Diego.

Back at his desk yesterday morning after a vacation in Honolulu, Port Director Joe Brennan announced that he had "obtained" 50 coconut palms, for planting on Shelter island. Queried as to how much they would cost, he said that he thought of the same question, but that all the satisfaction he could get from Earl Thacker, of the Honolulu harbor commission, was "Never mind about that—all you've got to do is to collect them at Wilmington." They're coming in the Matson liner Matsonia, commanded by Capt. Frank A. Johnson, for many years a resident of San Diego. Capt. Johnson was master of the old Yale.

Joe Brennan

The donation of the palm trees by the Honolulu commission followed Brennan's attendance at one of their meetings. While he was there they fired questions at him on how San Diego handled various port problems. He also attended a meeting of the Honolulu chamber of commerce harbor committee and in general made a one-man goodwill tour of what was supposed to have been a month's rest.

PLANE EASE—AND NAVY

Honolulu has splendid facilities for the transpacific planes, Brennan found, but he is sure that San Diego can equal them. There is the same long runway here, and in lieu of Honolulu's seaplane drydock, the big flying boats can be hauled out here with the city's crane.

Brennan was at Honolulu while the navy was there, and met Adms. Claude C. Bloch, U. S. fleet commander-in-chief, and E. C. Kalbfus, battle force commander, as well as Vice Adm. W. T. Tarrant, former district commandant here, who now commands the scouting force. In Honolulu with Brennan was Maj. R. H. Fleet, Consolidated Aircraft president, who went to the mid-Pacific base to check up on the planes from the local plant. Brennan said that everyone in Honolulu was enthusiastic over the performance of the San Diego-built planes in the boisterous weather which greeted certain phases of Fleet Problem XIX.

HUGE FLYING DESTROYER SOON IN HANDS OF NAVY PILOTS

Giant bomber starts last phase of its flight tests before delivery to U. S. navy.

S D Union 5/4/38

Consair Bomber Tests Near End

Consolidated's 30-ton multimotored long-range patrol bomber, launched several weeks ago, is entering the last phase of its exhaustive flight tests before being turned over to the navy, it was announced yesterday at the Lindbergh field plant.

William Wheatley, test pilot, has been taking the plane aloft several times a week to work out the bugs" before navy pilots take over controls.

Consolidated is competing with Sikorsky for a contract which, if successful, will mean millions of dollars of new airboat construction for the local plant. The "flying destroyer" is reputed to be probably the most powerfully armed of its type in the world. It is swifter and of greater cruising range than the PBY type planes now forming a major part of equipment of fleet patrol wings.

Britons Visit Consair Plant

Headed by Air Commodore James G. Weir, a five-man British air commission, on a tour of the nation's aircraft factories, inspected the Consolidated plant at Lindbergh field Monday.

Traveling with Commodore Weir were Comdr. Caspar John, British admiralty representative; Squadron Leader Charles E. Horrex, test pilot for Martleston Heath works at Suffolk; Frederick Romarth, air ministry delegate, and Air Commodore Arthur T. Harris, chief No. 4 bombardment group, royal air force.

Tho commission is touring the United States to purchase American military and naval aircraft which are exportable under the present policy of the war and navy departments. Locally this would apply to the airboats of the PBY-1 type manufactured by Consolidated but would not apply to either the latest type PBY's now being delivered to the fleet or to the new four-motored plane receiving its initial acceptance tests for the government.

The commission left Monday night for Los Angeles and Seattle.

ARCHBOLD HOP SLATED JUNE 1

Scientist To Leave S. D. In Consair Plane

S D Sun 5/8/38

By United Press

NEW YORK, May 7. — The American Museum of Natural History announced tonight that Richard Archbold, research associate of the department of mammals, will take off June 1 on an 8000-mile flight across the Pacific from San Diego to Dutch New Guinea to join the museum's 1938 expedition there.

Eight-Day Flight

The eight-day flight will be by way of Hawaii, possibly Wake Island and Guam. The 1900-mile journey from Guam to Hollandia, D.N.G., will be the first over that particular stretch of water.

Archbold will be accompanied by Russell Rogers, co-pilot; Raymond E. Booth, radio operator; Gerald D. Brown, flight engineer, and Capt. Lewis A. Yancey, navigator, in a plane similar to that in which he made the first flying boat crossing of the continent in 1937.

In Consair Plane

The new craft, built by Consolidated Aircraft Corporation of San Diego, is equipped with two 1000-horsepower engines, has a cruising range of 4000 miles and a cruising speed of 140 miles an hour.

Archbold will establish a base camp on the fresh water lake, Sentani, a few miles inland from Hollandia, and will transport members of the expedition to Lake Habbema, 11,000 feet above sea level near 15,560-foot Mt. Wilhemina. The collecting party will work up to snow line and down to 5000 feet. It will receive food supplies dropped by parachute from the plane. The expedition will collect mammals, birds and plants.

CONSAIR CHIEF IN NLRB PLEA

S D Sun 5/10/38

Fleet Protests Another Vote On Bargaining

A plea to maintain industrial harmony at the Consolidated Aircraft Corp. plant was made today by Maj. Reuben H. Fleet, president of the concern, at a National Labor Relations Board hearing in Federal court here.

The hearing was called to receive a petition by the CIO Aircraft Local 506, and the Aircraft Welders of America, requesting an election at the plant to determine the collective bargaining agency for the hourly paid workers. Contesting the petition was Aircraft Local 1125, AFL affiliate, with which Consolidated signed a contract on wages and working conditions April 26, 1937.

Protests 'Whipsaw'

"We do not attempt to influence our men's choice of bargaining agencies, but we do not wish to be whipsawed between two labor factions," Maj. Fleet said.

"We are entitled to aid from NLRB to keep industrial peace. Until the majority of our 2500 hourly paid factory workers actually petitions the board to choose another bargaining agency, I hope you will not subject our organization to the turmoil of another labor election.

Pay High Wages

Maj. Fleer itemized a large number of wage and salary increases given by the concern since the contract with Aircraft Local 1125 went into effect.

"Aside from possibly one other firm, we are paying the highest wages of any aircraft factory in the United States," he said. "We are bidding on world business and can't get it, because of the high price we must charge. We are paying all we can and the management now is struggling to land more contracts to keep its workers employed."

Lieut George Boyle hopefully took off on the first airmail flight of U S. history May 15, 1918, a few minutes after the above photograph was taken, showing him, in helmet at right, carefully planning with his chief, Maj. Reuben H. Fleet, the route between Washington and Philadelphia. He got as far as Waldorf, Md., where he lost his course, landed in a plowed field, and broke his plane's propellor.

MORE THAN 2000 PLANES BUILT BY CONSOLIDATED IN 15 YEARS

S D Tribune 5/17/38

"1923-1938 Consolidated, A Pioneer in the Development of Long-Range, Over-Water Aircraft.

"First, Consolidated's Commodore —14 ships of this type were built. Twelve are still in active service.

"Then came the Ranger—55 of this model were constructed.

"Consolidated's PBY type, the plane San Diegans know, built here. Two-hundred and twelve of these patrol bombers delivered, or now building.

"And now, XPB2Y-1—newest and mightiest arm of the navy's coast defense.

"Fifteen short years—yet those vital years in which American aviation cast off its swaddling clothes in a super-conquest of space and time. Consolidated looks backward on achievements almost incredible, yet forward confidently toward a future development beyond the bounds of present-day imagination!"

This summary, with photos illustrating the various kinds of aircraft built by Consolidated, keynotes the 100-page special edition of 15,000 copies of Consolidator, monthly publication of the Consolidated Aircraft, corp., out this week. The 15,000 copies, celebrating Consolidated's 15th anniversary, have circulation throughout the world, said Frank A. Learman, editor and business manager.

Support of 1200 Families

Of special significance to San Diego's observation with the rest of the nation of "air mail week" next weeks is an account in the publication of Maj. Reuben H. Fleet, president and manager, Consolidated Aircraft Corp. Fleet, who won the rating of junior military aviator at Rockwell field in 1917 as the United States entered the World War, was officer-in-charge of the airmail when it was first inaugurated in May, 1918, between Washington, D. C., and New York. The magazine prints a picture of Fleet, dressed in flying togs, standing beside President Wilson.

Under the heading "15 Year Facts," are the statements that since 1923 Consolidated has built more than 2000 planes. . . . Consolidated planes have flown more than 615,000

History, non-stop transcontinental San Diego to New York, 2700 miles, 17 hours, 3 minutes.

Aug. 19, 1937, to Sept. 24, 1937: Commercial PBY, Sir Hubert Wilkins, who acquired Archbold's plane to search for missing Russian transpolar fliers, New York to Aklavik, North West Territory, Canada, 19,000 miles over Arctic wastes.

Dec. 3, 1937: Commercial PBY, Archbold, non-stop transcontinental, San Diego to Miami, Fla., 2300 miles, 14 hours, 10 minutes.

Dec. 8, 1937: Routine navy delivery, 14 PBY's, San Diego to Coco Solo, C. Z., 3087 miles, 22 hours, 20 minutes.

Jan. 19, 1938: Routine navy delivery, 18 PBY's, non-stop formation San Diego to Pearl Harbor, 2553 miles, 20 hours, 30 minutes.

Feb. 26, 1938: Commercial PBY, Archbold, non-stop transcontinental San Diego to Miami, 2300 miles, 12 hours, 35 minutes.

That Consolidated is known round the world is shown in a report that the firm is represented in the following places: Argentina, Chile, Paraguay, Australia, New Zealand, Papua, Bolivia, Peru, Brazil, China, Colombia, Mexico, Portugal, Venezuela, Siam, Roumania and Jugoslavia. The firm also sent engineers to Russia.

Hearing Ends At Consolidated

S. D. Union May 13, 1938

After A. F. of L. Machinists' union had presented members and non-members to testify that conditions were "satisfactory" at Consolidated Aircraft Corp. plant here, a national labor relations board hearing adjourned yesterday afternoon.

The hearing was called on request of members of United Automobile Workers of America, aircraft local 506, a C.I.O. affiliate, who petitioned for a plant election to determine the bargaining agency for employes.

Yesterday's session, the third day, concluded testimony in the complicated case involving three jurisdictional disputes in the plant. The third union involved was the United Aircraft Welders of America, which sought to keep its craft separate from both the other organizations.

The session opened with John M. Orr, executive secretary of the C. I. O. group on the stand as attorneys sought to trace funds of Orr's organization, while it still was an A. F. of L. affiliate. Examiner George Kennedy ruled the evidence out of order on the grounds the board has no jurisdiction over funds or records or their use of ownership.

George Dayton, president of the Machinist's union, traced the history of labor organization in the plant and John Waskey described negotiation meetings between the management and the union. Other witnesses were called to tell of their satisfaction under the A. F. of L. set-up.

Findings of the examiner will be turned over to the board in Washington for final decision as to whether an election shall be held.

Red Law Rules A.F.L., Consair Hearing Charge

S D Union 5/7/38

Charge that the preamble to the A.F.L. constitution was "taken from a Communistic manifesto" enlivened an otherwise drab session yesterday afternoon at a hearing before a national labor relations board examiner on a plea of a C.I.O. affiliatie for an election to determine the collective bargaining representative for Consolidated Aircraft Corp. employes.

The hearing, which opened before George Kennedy Tuesday, is being conducted in the federal courtrooms and probably will be ended this evening. A ruling from the labor board in Washington then will be handed down.

CONTROVERSY INVOLVED

The A.F.L. preamble charge was hurled by Bert Simmons, who testified that he formerly was employed at Consolidated; that for a brief time he was a member of the A.F.L. and paid his dues with $5 he said he found in his tool box, and that he now is employed at North Island.

Another tangle in an already complicated labor picture at the plant is the intervention of United Aircraft Welders of America in the hearing, asking recognition as a craft and without affiliation with either the C.I.O. or the A.F.L.

The current dispute dates to April 10, 1937, when a national labor relations board election was held to allow employes to choose between the Consolidators, described on the stand yesterday as a "so-called company union," and Aircraft lodge 1125, International Association of Machinists, A.F.L.

VOTE WON BY A.F.L.

The A.F.L. was victorious, and a contract was entered into with the management April 26, 1937. On July 7, witnesses testified, the machinists' union was ordered dissolved by its executive board, and a majority of the members joined the United Automobile Workers of America, local 506, a C.I.O. affiliate. The A.F.L. unit was reorganized and functioned under terms of the contract.

Meantime, C.I.O. members claim they have a majority, and that if an election is held non-union members "who are afraid they will be discriminated against if they join the C.I.O." will favor that union. Witnesses yesterday afternoon testified along this line, and this morning the A.F.L. backers are expected to put their men on the stand.

The A.F.L. also challenges legality of the July machinists' union vote, and contends that a majority of machinist union members did not participate.

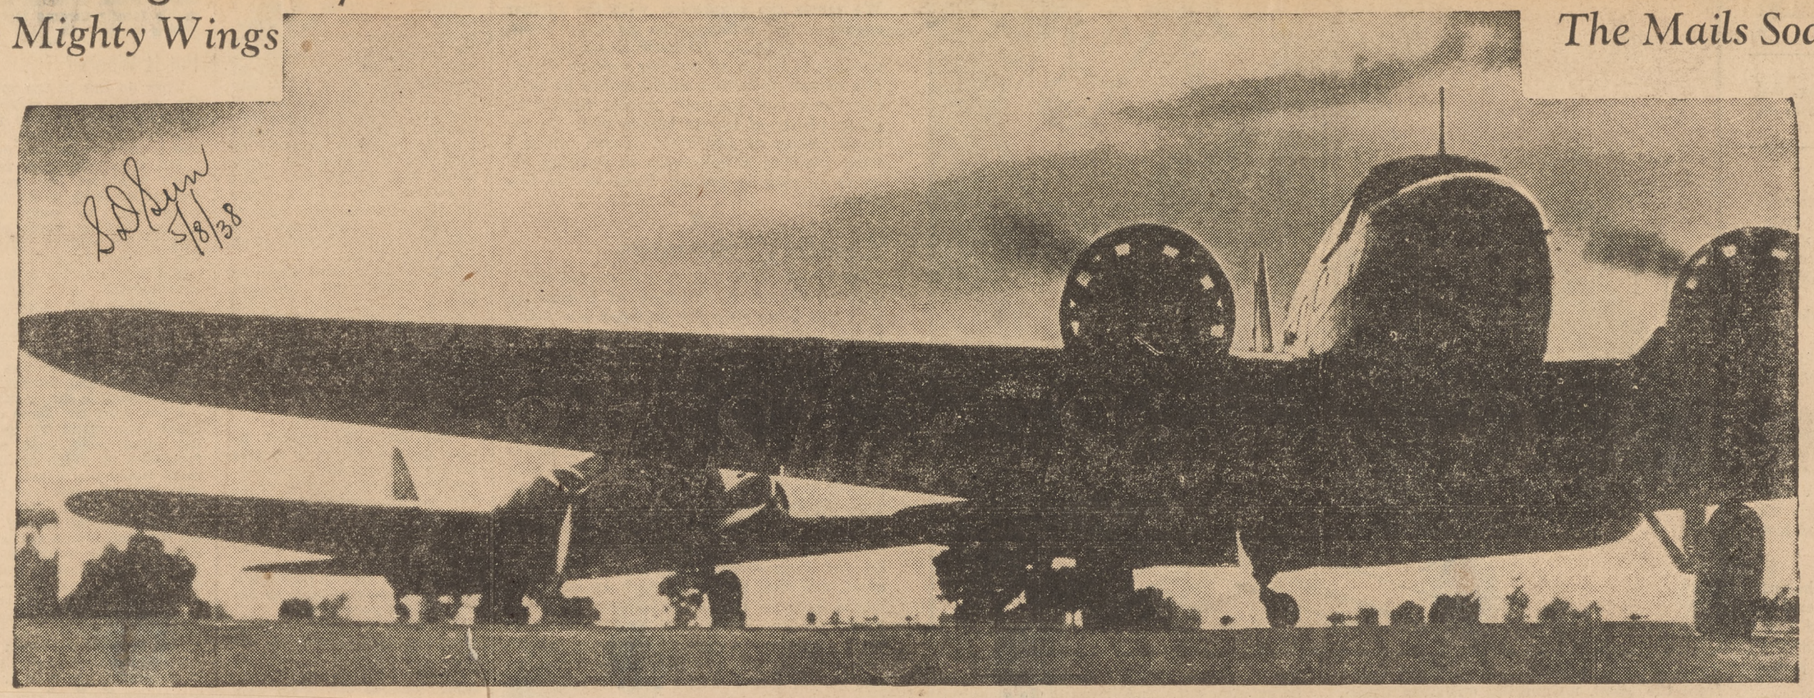
PAPERS PUT IN EVIDENCE

The morning session was marked by an exchange between counsel when certain papers were requested of John M. Orr, U.A.W. international representative and president of the local C.I.O. council. The request came from the machinists' counsel, and when they were handed over, the attorney gave them to Thomas McNett, international machinists' representative.

The examiner ordered the papers offered in evidence and then returned to Orr.

San Diegans Key Men In 20 Years Of Uncle Sam's Air Mail Growth

On Mighty Wings — *The Mails Soar*



Near Battle at Consair Hearing As A.F.L. Tries To Grab Records

An attempted "lifting" by counsel for Aircraft lodge 1125, International Association of Machinists, A.F.L., of certain documents in possession of local 506, United Automobile Workers of America, C.I.O., enlivened a national labor relations board hearing in federal court here today.

The hearing, which opened yesterday, was called by the board to determine whether to hold a board election to decide a bargaining agency at Consolidated Aircraft Corp. The hearing was asked by the U.A.W., which claims support of a majority of employes at the plant, where the machinists hold a contract.

The documents, including the machinists' A.F.L. charter and minute records, have been in possession of John M. Orr, international representative of U.A.W. and president of the local C.I.O. council, who today was a witness at the hearing.

The papers were requested by Orr, apparently for purposes of evidence, by machinists' counsel. Orr handed them over, but the attorney, instead of identifying them for the record, gave them to Thomas McNett, international machinists' representative, here from Seattle for the hearing.

"Just a minute," interposed the U.A.W. attorney. "What do you intend to do with those documents—keep them or use them in evidence?"

"We intend to keep them," was the reply. From the spectators' gallery, crowded with C.I.O. and A.F.L. partisans, came angry murmurs, quickly quieted when Examiner George Kennedy ordered the papers offered in evidence and rturned to Orr.

Fleet Opposing C.I.O.

In the course of his testimony, Orr explained that he had come into possession of the charter and minute records when the machinists' union was ordered dissolved by its executive board after an election last July. In the election, he stated, a majority of the members voted to affiliate with the C.I.O.

"The minutes will show that the machinists' union was dissolved last July," Orr stated. "As secretary of the old organization, I assumed charge of all documents."

A.F.L. sympathizers have held that the July election was invalid and that a majority of Machinist union members did not participate. They declare the only legal ballot was that taken last April, when Consolidated employes chose the A.F.L. union as their bargaining agent with the management.

In the April election, the machinists were opposed only by an independent union known as the Con-

last beyond the end of the week was expressed by road officials. In any event, it would not be effective beyond June 30, end of the fiscal year. Starting July 1, the department would be operating upon a new budget, not requiring extra transfers.

Bellon today declared that the lay-off was a gesture, from which the workers would suffer needless loss of pay. He said the road department payroll fund was not affected, and that the department had "plenty of money" to pay its

Maj. Reuben H. Fleet And Otto Praeger Take Spotlight As Nation Prepares To Celebrate Anniversary Of Winged Service

Next Sunday the United States will celebrate the 20th anniversary of its air mail service, National Air Mail Week having been proclaimed from May 15 to 21. In a series of articles, of which this is the first, the important part played by present San Diego residents in launching this daring venture will be told.—THE EDITOR.

By HAROLD KEEN

TWENTY years ago this month, two San Diegans were plotting to "shrink" the map of the United States.

They had a fantastic notion that wings could be put on the mail, first from New York to Philadelphia to Washington, later across the death trap of the Alleghenies to Chicago, and then some day—over the Rockies to San Francisco.

Their scheming, given ludicrous expression when an Army pilot, on the first airmail flight in U. S. history, lost his course and nosed over in a plowed field, eventually proved to be the foundation of the world's greatest air transport system.

Fleet, Praeger Due Honor

And as the nation today prepares to celebrate the 20th anniversary of the air mail's founding on May 15, 1918, the spotlight swings to Otto Praeger and Maj. Reuben H. Fleet, the pair perhaps most responsible for inauguration of the service.

In his home at 4437 Cleveland-ave, where he is confined by arthritis, Otto Praeger yesterday looked back two decades, to a time when he was second assistant postmaster general of the United States and the man to whom Postmaster General Burleson had just said:

Preface 4 Years Early

"If you think we can start an air mail service and keep it going, I'll get you all the money you need."

But the story of Otto Praeger's role in the launching of the "aerial mail," as it was known in 1918, has its preface four years earlier.

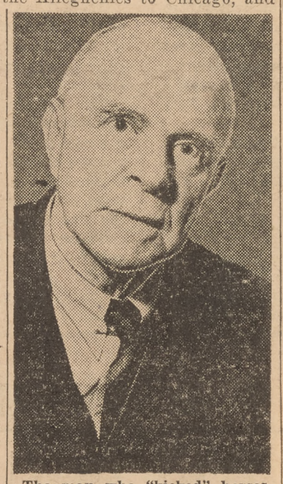
For, if Otto Praeger had not "kicked" the mail carriage horses off the streets of Washington, D. C. in 1914 and 1915, he probably would not have been chosen to vault the Postoffice Department above ground in 1918.

Burleson Speed Fanatic

In four years, Mr. Praeger spanned centuries of transportation progress—from the horse-drawn vehicles to the airplane.

Burleson was a fanatic on speeding up the mails. When Mr. Praeger was postmaster of Washington, D. C. in 1914, he was instructed to make his city a testing ground for the primitive, wheezing trucks that terrified man and beast.

Turn to Page 4-B, Col. 4



The man who "kicked" horses out of the postal service, motorized mail delivery, and then sent the mails through the air—all in the span of four years—is a San Diego resident today. He is Otto Praeger, pictured above in his home, who two decades ago was second assistant postmaster general of the United States, in charge of the "aerial mail."

San Diegans Key Men In Air Mail Anniversary

Continued from Page 1-B

ceeded full blast. The mail delivery service inside Washington was accelerated.

Trucks replaced horses in other major cities. The demand for drivers far exceeded the qualified supply.

"The Civil Service Commission had to shut one eye in certifying truck drivers for the postal service in those days," Mr. Praeger recalled.

People Charged Rashness

"People said we were being rash, that the mail would be stalled continually by our equipment breaking down. But we showed the skeptics. We showed them that trucks provided a better and cheaper service, and the postoffice department adopted this revolutionary system of moving the mails."

Motorizing the U. S. Mail service required 18 months of Mr. Praeger's time, while he officially was postmaster of Washington, D. C. Postmaster General Burleson was satisfied, and he was ready for a still more phenomenal undertaking.

Mr. Praeger was appointed second asisstant postmaster general, and in the winter of 1918, he was told to get the mail into the air.

That's where Maj. Reuben H. Fleet, now president of San Diego's Consolidated Aircraft Corp., came into the picture.

After conferring with the War Department and the National Advisory Committee on Aeronautics, Mr. Praeger told Burleson that the experts thought it could be done.

"I don't want you to start anything we may have to drop," Burleson warned.

Army Takes Over

Col. F. W. Deeds, head of Army Air Corps training during the World war, saw an excellent opportunity for severe cross-country exercise for his pilots in the proposed air mail setup. Army planes and Army fliers were offered the postoffice department. Pilots from Rockwell Field in San Diego and Kelly Field in Texas were mobilized.

And Maj. Fleet, who had learned to fly at Rockwell after his enlistment in 1917, was the man appointed to survey the first air mail route from New York to Philadelphia, pick the emergency landing fields, aid in the selection of pilots, and run the world's first postal plane service.

Fleet Gives 'Go' Signal

On May 15, 1918, Maj. Fleet gave Lieut. George Boyle the "go" signal on the initial "aerial mail" flight before President Wilson, Postmaster General Burleson, and Second Assistant Postmaster General Praeger.

(Tomorrow: The First Air Mail Flight).

Los Angeles Herald 5/17/38

Air Industry Gains Reported

Southland Plants Will Build $53,000,000 of Planes This Year

Charting a gain of more than 25 per cent over 1937, Southern California aviation manufacturing companies will produce more than $53,000,000 worth of ships this year, according to a forecast yesterday by the Board of Supervisors and the Chamber of Commerce.

Four huge aircraft plants in the Southland area will do the lion's share of the Pacific Coast's estimated $62,000,000 worth of business for 1938, the prediction said.

BACKLOGS REPORTED

Already 300 per cent ahead of 1936 orders, Douglas, Consolidated, Lockheed and North American Aviation companies delivered $12,296,309 worth of aircraft during the first three months of this year.

Meanwhile their books show heavy backlogs of civil and military orders, the report said.

Douglas, with $21,191,364 worth of Army and Navy contracts received before April, and $5,409,973 in commercial and export contracts, led the list. Consolidated was second with a total of $10,748,815, mostly Navy Department patrol bombers; North American was third with $10,375,000 and Lockheed fourth with $5,402,547.

NEW ORDER RECEIVED

A new Army order for thirty-seven cargo-transports will increase Douglas's backlog by $2,327,724, it was stated. The Santa Monica corporation's two divisions including the Northrop factory, employ 7550 men, pay a weekly $232,000 in salaries.

Douglas officials also made known the following figures on their 1937 operations:

In their twenty-three acres of roofed factory, they built 303 planes for the Army and Navy, aircraft for eighteen different nations on five continents, paid the government $1,422,373 in taxes. Douglas-built commercial transports flew 3,389,000 miles, serviced 100 major cities of the world, were used by twenty-two air lines.

TRAINERS DELIVERED

North American Aviation's first-quarter shipments included fifty basic trainers for the Army Air Corps, and the equivalent of twenty planes for export. And because the corporation has sold Eastern Airlines, it can now build commercial aircraft — a phase of manufacturing previously prohibited them under the Air Mail Act. It employs 2200 men.

At Lockheed, contracts were effected with Holland for a Java-Australia route. Great Britain, Poland and Canada.

Tho commission is touring the United States to purchase American military and naval aircraft which are exportable under the present policy of the war and navy departments. Locally this would apply to the airboats of the PBY-1 type manufactured by Consolidated but would not apply to either the latest type PBY's now being delivered to the fleet or to the new four-motored plane receiving its initial acceptance tests for the government.

The commission left Monday night for Los Angeles and Seattle.

ARCHBOLD HOP SLATED JUNE 1

Scientist To Leave S. D. In Consair Plane

S D Union 5/8/38

By United Press

NEW YORK, May 7. — The American Museum of Natural History announced tonight that Richard Archbold, research associate of the department of mammals, will take off June 1 on an 8000-mile flight across the Pacific from San Diego to Dutch New Guinea to join the museum's 1938 expedition there.

Eight-Day Flight

The eight-day flight will be by way of Hawaii, possibly Wake Island and Guam. The 1900-mile journey from Guam to Hollandia, D.N.G., will be the first over that particular stretch of water.

Archbold will be accompanied by Russell Rogers, co-pilot; Raymond E. Booth, radio operator; Gerald D. Brown, flight engineer, and Capt. Lewis A. Yancey, navigator, in a plane similar to that in which he made the first flying boat crossing of the continent in 1937.

In Consair Plane

The new craft, built by Consolidated Aircraft Corporation of San Diego, is equipped with two 1000-horsepower engines, has a cruising range of 4000 miles and a cruising speed of 140 miles an hour.

Archbold will establish a base camp on the fresh water lake, Sentani, a few miles inland from Hollandia, and will transport members of the expedition to Lake Habbema, 11,000 feet above sea level near 15,560-foot Mt. Wilhemina. The collecting party will work up to snow line and down to 5000 feet. It will receive food supplies dropped by parachute from the plane. The expedition will collect mammals, birds and plants.

CONSAIR CHIEF IN NLRB PLEA

S D Union 5/10/38

Fleet Protests Another Vote On Bargaining

A plea to maintain industrial harmony at the Consolidated Aircraft Corp. plant was made today by Maj. Reuben H. Fleet, president of the concern, at a National Labor Relations Board hearing in Federal court here.

The hearing was called to receive a petition by the CIO Aircraft Local 506, and the Aircraft Welders of America, requesting an election at the plant to determine the collective bargaining agency for the hourly paid workers. Contesting the petition was Aircraft Local 1125, AFL affiliate, with which Consolidated signed a contract on wages and working conditions April 26, 1937.

Protests 'Whipsaw'

"We do not attempt to influence our men's choice of bargaining agencies, but we do not wish to be whipsawed between two labor factions," Maj. Fleet said.

"We are entitled to aid from NLRB to keep industrial peace. Until the majority of our 2500 hourly paid factory workers actually petitions the board to choose another bargaining agency, I hope you will not subject our organization to the turmoil of another labor election.

Pay High Wages

Maj. Fleer itemized a large number of wage and salary increases given by the concern since the contract with Aircraft Local 1125 went into effect.

"Aside from possibly one other firm, we are paying the highest wages of any aircraft factory in the United States," he said. "We are bidding on world business and can't get it, because of the high price we must charge. We are paying all we can and the management now is struggling to land more contracts to keep its workers employed."

MORE THAN 2000 PLANES BUILT BY CONSOLIDATED IN 15 YEARS

S D Tribune 5/17/38

"1923-1938 Consolidated, A Pioneer in the Development of Long-Range, Over-Water Aircraft.

"First, Consolidated's Commodore —14 ships of this type were built. Twelve are still in active service.

"Then came the Ranger—55 of this model were constructed.

"Consolidated's PBY type, the plane San Diegans know, built here. Two-hundred and twelve of these patrol bombers delivered, or now building.

"And now, XPB2Y-1—newest and mightiest arm of the navy's coast defense.

"Fifteen short years—yet those vital years in which American aviation cast off its swaddling clothes in a super-conquest of space and time. Consolidated looks backward on achievements almost incredible, yet forward confidently toward a future development beyond the bounds of present-day imagination!"

This summary, with photos illustrating the various kinds of aircraft built by Consolidated, keynotes the 100-page special edition of 15,000 copies of Consolidator, monthly publication of the Consolidated Aircraft, corp., out this week. The 15,-000 copies, celebrating Consolidated's 15th anniversary, have circulation throughout the world, said Frank A. Learman, editor and business manager.

Support of 1200 Families

Of special significance to San Diego's observation with the rest of the nation of "air mail week" next weeks is an account in the publication of Maj. Reuben H. Fleet, president and manager, Consolidated Aircraft Corp. Fleet, who won the rating of junior military aviator at Rockwell field in 1917 as the United States entered the World War, was officer-in-charge of the airmail when it was first inaugurated in May, 1918, between Washington, D. C., and New York. The magazine prints a picture of Fleet, dressed in flying togs, standing beside President Wilson.

Under the heading "15 Year Facts," are the statements that since 1923 Consolidated has built more than 2000 planes. . . . Consolidated planes have flown more than 615,-000,000 miles, equal to 1285 round-trips to the moon, and have consumed more than 200,000,000,000 gallons of fuel. . . . Consolidated has been the direct support of an average af 1200 families for 15 years . . . the firm's planes have had engines installed which total more than 700,000 horsepower . . . riveters working on the planes have driven more than 110,000,000 rivets.

Since January, 1937, Consolidated planes have covered 60,000,000 square miles of territory, from San Diego to Panama, from here to Hawaii, from here to New York, from here to Miami, and from New York to Nome, states Consolidator. Added is the report that within the range of constant observation possible to PBY airplanes operating from existing United States navy bases, concentration at any base is possible in 48 hours' time.

Record Flights

Record flights the Consolidated planes have made the past 17 months are listed as follows:

Jan. 28, 1937: Routine navy delivery, 12 PBY's, non-stop formation San Diego bay to Pearl Harbor, T. H., 2553 miles, 21 hours, 43 minutes.

April 13, 1937: Routine navy delivery, 12 PBY's, non-stop formation San Diego bay to Pearl Harbor, T. H., 2553 miles, 21 hours 21 minutes.

June 21, 1937: Routine navy delivery, 12 PBY's, non-stop formation San Diego bay to Coco Solo, C. Z., 3087 miles, 27 hours, 58 minutes.

June 24, 1937: Commercial PBY, Richard Archbold, research associate American Mueseum of Natural History, non-stop transcontinental San Diego to New York, 2700 miles, 17 hours, 3 minutes.

Aug. 19, 1937, to Sept. 24, 1937: Commercial PBY, Sir Hubert Wilkins, who acquired Archbold's plane to search for missing Russian transpolar fliers, New York to Aklavik, North West Territory, Canada, 19,-000 miles over Arctic wastes.

Dec. 3, 1937: Commercial PBY, Archbold, non-stop transcontinental, San Diego to Miami, Fla., 2300 miles, 14 hours, 10 minutes.

Dec. 8, 1937: Routine navy delivery, 14 PBY's, San Diego to Coco Solo, C. Z., 3087 miles, 22 hours, 20 minutes.

Jan. 19, 1938: Routine navy delivery, 18 PBY's, non-stop formation San Diego to Pearl Harbor, 2553 miles, 20 hours, 30 minutes.

Feb. 26, 1938: Commercial PBY, Archbold, non-stop transcontinental San Diego to Miami, 2300 miles, 12 hours, 35 minutes.

That Consolidated is known round the world is shown in a report that the firm is represented in the following places: Argentina, Chile, Paraguay, Australia, New Zealand, Papua, Bolivia, Peru, Brazil, China, Colombia, Mexico, Portugal. Venezuela, Siam, Roumania and Jugoslavia. The firm also sent engineers to Russia.

S. D. Union May 13, 1938

Hearing Ends At Consolidated

After A. F. of L. Machinists' union had presented members and non-members to testify that conditions were "satisfactory" at Consolidated Aircraft Corp. plant here, a national labor relations board hearing adjourned yesterday afternoon.

The hearing was called on request of members of United Automobile Workers of America, aircraft local 506, a C.I.O. affiliate, who petitioned for a plant election to determine the bargaining agency for employes.

Yesterday's session, the third day, concluded testimony in the complicated case involving three jurisdictional disputes in the plant. The third union involved was the United Aircraft Welders of America, which sought to keep its craft separate from both the other organizations.

The session opened with John M. Orr, executive secretary of the C. I. O. group on the stand as attorneys sought to trace funds of Orr's organization, while it still was an A. F. of L. affiliate. Examiner George Kennedy ruled the evidence out of order on the grounds the board has no jurisdiction over funds or records or their use of ownership.

George Dayton, president of the Machinist's union, traced the history of labor organization in the plant and John Waskey described negotiation meetings between the management and the union. Other witnesses were called to tell of their satisfaction under the A. F. of L. set-up.

Findings of the examiner will be turned over to the board in Washington for final decision as to whether an election shall be held.

Red Law Rules A.F.L., Consair Hearing Charge

S D Union 5/7/38

Charge that the preamble to the A.F.L. constitution was "taken from a Communistic manifesto" enlivened an otherwise drab session yesterday afternoon at a hearing before a national labor relations board examiner on a plea of a C.I.O. affiliatie for an election to determine the collective bargaining representative for Consolidated Aircraft Corp. employes.

The hearing, which opened before George Kennedy Tuesday, is being conducted in the federal courtrooms and probably will be ended this evening. A ruling from the labor board in Washington then will be handed down.

CONTROVERSY INVOLVED

The A.F.L. preamble charge was hurled by Bert Simmons, who testified that he formerly was employed at Consolidated; that for a brief time he was a member of the A.F.L. and paid his dues with $5 he said he found in his tool box, and that he now is employed at North Island.

Another tangle in an already complicated labor picture at the plant is the intervention of United Aircraft Welders of America in the hearing, asking recognition as a craft and without affiliation with either the C.I.O. or the A.F.L.

The current dispute dates to April 10, 1937, when a national labor relations board election was held to allow employes to choose between the Consolidators, described on the stand yesterday as a "so-called company union," and Aircraft lodge 1125, International Association of Machinists, A.F.L.

VOTE WON BY A.F.L.

The A.F.L. was victorious, and a contract was entered into with the management April 26, 1937. On July 7, witnesses testified, the machinists' union was ordered dissolved by its executive board, and a majority of the members joined the United Automobile Workers of America, local 506, a C.I.O. affiliate. The A.F.L. unit was reorganized and functioned under terms of the contract.

Meantime, C.I.O. members claim they have a majority, and that if an election is held non-union members "who are afraid they will be discriminated against if they join the C.I.O." will favor that union. Witnesses yesterday afternoon testified along this line, and this morning the A.F.L. backers are expected to put their men on the stand.

The A.F.L. also challenges legality of the July machinists' union vote, and contends that a majority of machinist union members did not participate.

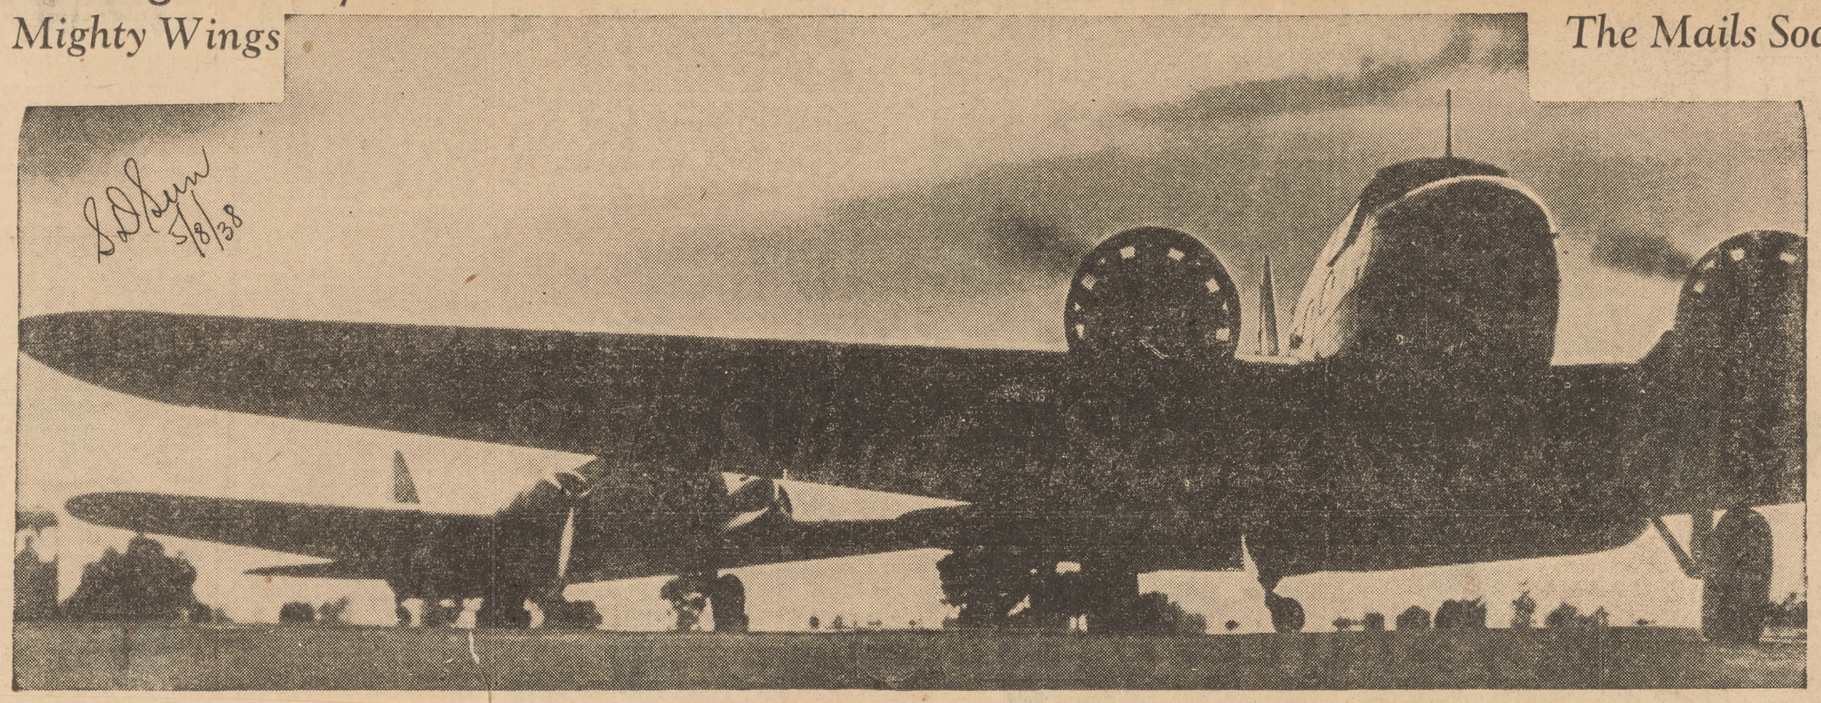
PAPERS PUT IN EVIDENCE

The morning session was marked by an exchange between counsel when certain papers were requested of John M. Orr, U.A.W. international representative and president of the local C.I.O. council. The request came from the machinists' counsel, and when they were handed over, the attorney gave them to Thomas McNett, international machinists' representative.

The examiner ordered the papers offered in evidence and then returned to Orr.

San Diegans Key Men In 20 Years Of Uncle Sam's Air Mail Growth

On Mighty Wings — *The Mails Soar*



S D Sun 5/8/38

* * *

Maj. Reuben H. Fleet And Otto Praeger Take Spotlight As Nation Prepares To Celebrate Anniversary Of Winged Service

Next Sunday the United States will celebrate the 20th anniversary of its air mail service, National Air Mail Week having been proclaimed from May 15 to 21. In a series of articles, of which this is the first, the important part played by present San Diego residents in launching this daring venture will be told.—THE EDITOR.

By HAROLD KEEN

TWENTY years ago this month, two San Diegans were plotting to "shrink" the map of the United States.

They had a fantastic notion that wings could be put on the mail, first from New York to Philadelphia to Washington, later across the death trap of the Alleghenies to Chicago, and then some day—over the Rockies to San Francisco.

Their scheming, given ludicrous expression when an Army pilot, on the first airmail flight in U. S. history, lost his course and nosed over in a plowed field, eventually proved to be the foundation of the world's greatest air transport system.

Fleet, Praeger Due Honor

And as the nation today prepares to celebrate the 20th anniversary of the air mail's founding on May 15, 1918, the spotlight swings to Otto Praeger and Maj. Reuben H. Fleet, the pair perhaps most responsible for inauguration of the service.

In his home at 4437 Cleveland-ave, where he is confined by arthritis, Otto Praeger yesterday looked back two decades, to a time when he was second assistant postmaster general of the United States and the man to whom Postmaster General Burleson had just said:

Preface 4 Years Early

"If you think we can start an air mail service and keep it going, I'll get you all the money you need."

But the story of Otto Praeger's role in the launching of the "aerial mail," as it was known in 1918, has its preface four years earlier.

For, if Otto Praeger had not "kicked" the mail carriage horses off the streets of Washington, D. C. in 1914 and 1915, he probably would not have been chosen to vault the Postoffice Department above ground in 1918.

Burleson Speed Fanatic

In four years, Mr. Praeger spanned centuries of transportation progress—from the horse-drawn vehicles to the airplane.

Burleson was a fanatic on speeding up the mails. When Mr. Praeger was postmaster of Washington, D. C. in 1914, he was instructed to make his city a testing ground for the primitive, wheezing trucks that terrified man and beast.

The motorization program pro-

Turn to Page 4-B, Col. 4

The man who "kicked" horses out of the postal service, motorized mail delivery, and then sent the mails through the air—all in the span of four years—is a San Diego resident today. He is Otto Praeger, pictured above in his home, who two decades ago was second assistant postmaster general of the United States, in charge of the "aerial mail."

Near Battle at Consair Hearing As A.F.L. Tries To Grab Records

S D Sun 5/17/38

An attempted "lifting" by counsel for Aircraft lodge 1125, International Association of Machinists, A.F.L., of certain documents in possession of local 506, United Automobile Workers of America, C.I.O., enlivened a national labor relations board hearing in federal court here today.

The hearing, which opened yesterday, was called by the board to determine whether to hold a board election to decide a bargaining agency at Consolidated Aircraft Corp. The hearing was asked by the U.A.W., which claims support of a majority of employes at the plant, where the machinists hold a contract.

The documents, including the machinists' A.F.L. charter and minute records, have been in possession of John M. Orr, international representative of U.A.W. and president of the local C.I.O. council, who today was a witness at the hearing.

The papers were requested by Orr, apparently for purposes of evidence, by machinists' counsel. Orr handed them over, but the attorney, instead of identifying them for the record, gave them to Thomas McNett, international machinists' representative, here from Seattle for the hearing.

"Just a minute," interposed the U.A.W. attorney. "What do you intend to do with those documents—keep them or use them in evidence?"

"We intend to keep them," was the reply. From the spectators' gallery, crowded with C.I.O. and A.F.L. partisans, came angry murmurs, quickly quieted when Examiner George Kennedy ordered the papers offered in evidence and rturned to Orr.

Fleet Opposing C.I.O.

In the course of his testimony, Orr explained that he had come into possession of the charter and minute records when the machinists' union was ordered dissolved by its executive board after an election last July. In the election, he stated, a majority of the members voted to affiliate with the C.I.O.

"The minutes will show that the machinists' union was dissolved last July," Orr stated. "As secretary of the old organization, I assumed charge of all documents."

A.F.L. sympathizers have held that the July election was invalid and that a majority of Machinist union members did not participate. They declare the only legal ballot was that taken last April, when Consolidated employes chose the A.F.L. union as their bargaining agent with the management.

In the April election, the machinists were opposed only by an independent union known as the Consolidators. The U.A.W. entered the field in the July election, when affiliation was transferred to the C.I.O. However, the management stood by its contract with the Machinists' union and refused to recognize the U.A.W.

The contract, covering wage and working conditions, expired in April. The U.A.W., claiming its members are not properly represented by the machinists, are asking the labor board to order an official election before a new contract is negotiated. William Walsh, Los Angeles, labor board attorney, is acting as adviser.

Maj. Reuben H. Fleet, Consolidated president, was a witness yesterday. Stating wages and working conditions of employes were predicated on the plant's income and expenses he asked that the C.I.O. petition be denied.

Counsel for the U.A.W. expected to call six or seven additional witnesses today, all employes of the aircraft firm.

San Diegans Key Men In Air Mail Anniversary

Continued from Page 1-B

ceeded full blast. The mail delivery service inside Washington was accelerated.

Trucks replaced horses in other major cities. The demand for drivers far exceeded the qualified supply.

"The Civil Service Commission had to shut one eye in certifying truck drivers for the postal service in those days," Mr. Praeger recalled.

People Charged Rashness

"People said we were being rash, that the mail would be stalled continually by our equipment breaking down. But we showed the skeptics. We showed them that trucks provided a better and cheaper service, and the postoffice department adopted this revolutionary system of moving the mails."

Motorizing the U. S. Mail service required 18 months of Mr. Praeger's time, while he officially was postmaster of Washington, D. C. Postmaster General Burleson was satisfied, and he was ready for a still more phenomenal undertaking.

Mr. Praeger was appointed second asisstant postmaster general, and in the winter of 1918, he was told to get the mail into the air.

That's where Maj. Reuben H. Fleet, now president of San Diego's Consolidated Aircraft Corp., came into the picture.

After conferring with the War Department and the National Advisory Committee on Aeronautics, Mr. Praeger told Burleson that the experts thought it could be done.

"I don't want you to start anything we may have to drop," Burleson warned.

Army Takes Over

Col. F. W. Deeds, head of Army Air Corps training during the World war, saw an excellent opportunity for severe cross-country exercise for his pilots in the proposed air mail setup. Army planes and Army fliers were offered the postoffice department. Pilots from Rockwell Field in San Diego and Kelly Field in Texas were mobilized.

And Maj. Fleet, who had learned to fly at Rockwell after his enlistment in 1917, was the man appointed to survey the first air mail route from New York to Philadelphia, pick the emergency landing fields, aid in the selection of pilots, and run the world's first postal plane service.

Fleet Gives 'Go' Signal

On May 15, 1918, Maj. Fleet gave Lieut. George Boyle the "go" signal on the initial "aerial mail" flight before President Wilson, Postmaster General Burleson, and Second Assistant Postmaster General Praeger.

(Tomorrow: The First Air Mail Flight).

Air Industry Gains Reported

Los Angeles Herald 5/17/38

Southland Plants Will Build $53,000,000 of Planes This Year

Charting a gain of more than 25 per cent over 1937, Southern California aviation manufacturing companies will produce more than $53,000,000 worth of ships this year, according to a forecast yesterday by the Board of Supervisors and the Chamber of Commerce.

Four huge aircraft plants in the Southland area will do the lion's share of the Pacific Coast's estimated $62,000,000 worth of business for 1938, the prediction said.

BACKLOGS REPORTED

Already 300 per cent ahead of 1936 orders, Douglas, Consolidated, Lockheed and North American Aviation companies delivered $12,296,309 worth of aircraft during the first three months of this year.

Meanwhile their books show heavy backlogs of civil and military orders, the report said.

Douglas, with $21,191,364 worth of Army and Navy contracts received before April, and $5,409,973 in commercial and export contracts, led the list. Consolidated was second with a total of $10,748,815, mostly Navy Department patrol bombers; North American was third with $10,375,000 and Lockheed fourth with $5,402,547.

NEW ORDER RECEIVED

A new Army order for thirty-seven cargo-transports will increase Douglas's backlog by $2,327,724, it was stated. The Santa Monica corporation's two divisions including the Northrop factory, employ 7550 men, pay a weekly $232,000 in salaries.

Douglas officials also made known the following figures on their 1937 operations:

In their twenty-three acres of roofed factory, they built 303 planes for the Army and Navy, aircraft for eighteen different nations on five continents, paid the government $1,422,373 in taxes. Douglas-built commercial transports flew 3,389,000 miles, serviced 100 major cities of the world, were used by twenty-two air lines.

TRAINERS DELIVERED

North American Aviation's first-quarter shipments included fifty basic trainers for the Army Air Corps, and the equivalent of twenty planes for export. And because the corporation has sold Eastern Airlines, it can now build commercial aircraft — a phase of manufacturing previously prohibited them under the Air Mail Act. It employs 2200 men.

At Lockheed, contracts were effected with Holland for a Java-Australia route, Great Britain, Poland and Canada.

Patrol Planes To Fly To A

SQUADRONS TO OPERATE OVER ALASKAN GULF

Four San Diego Aircraft Tenders To Serve Airboats

San Diego-based Navy patrol squadrons will leave North Island late next month to engage in the annual training program of Aircraft Scouting Force at the Gulf of Alaska, it was announced here yesterday.

Officers on the staff of Rear Adm. Charles A. Blakely, Aircraft Scouting Force commander, refused to disclose the exact dates the bombers will take off for Alaska, but stated that the complete schedule has been submitted to Adm. Claud C. Bloch, Fleet commander-in-chief, for approval.

May Leave June 25

From semi-official sources it was learned, however, that the aircraft will leave here about June 25, five days after the aircraft tenders Wright and Langley head toward Sitka, Alaska. The other two locally-based plane tenders, the Lapwing and Teal, are slated to steam north May 30 and 31, respectively. The Lapwing's destination is Seattle, where she is due June 4, and the Teal will remain at Puget Sound until May 30, departing for Sitka.

All four vessels, it is believed, will serve as floating bases for the planes and flight personnel during operations between Sitka and Kodiak, on opposite sides of the Gulf of Alasaka.

48 Planes May Take Part

Last year, 24 Navy seaplanes from San Diego participated in the summer flights in the far north. If all four Aircraft Scouting Force units are ordered north this year, a total of 48 craft probably will make a spectacular non-stop mass flight to Seattle before proceeding to Sitka. All North Island patrol squadrons have been equipped with new PBY Consolidated bombers.

60 Million Mile Span Claimed For Navy Planes

Consolidated Aircraft Corp. officials, preparing to celebrate the company's 15th anniversary this month, yesterday estimated that its twin-engined Navy patrol bombers can patrol 60,000,000 square miles of the earth, as shown in non-shaded portion of map above.

☼ ☼ ☼

Sixty million square miles of the earth's surface!

This is the phenomenal "coverage" Consolidated-built patrol bombers can give the United States Navy at any moment an enemy Fleet appears headed toward our shores, it was estimated yesterday as the San Diego plane concern this month celebrates the 15th anniversary of its formation.

The big twin-engined bombers, whose majestic wings already have spread across the Pacific to Hawaii, down the Mexican and Central American coast to Panama, across the United States, over Canada into the shadow of the Arctic Circle at Aklavik, and across the mist-shrouded waters of the Gulf of Alaska—these giant planes already have proved they can patrol a great sea area which must be clear of hostile raiders if the United States is to consider itself safe.

Consolidated officials yesterday drew out compasses and charts and did some tall figuring.

4000 Miles Non-Stop

They worked on the assumption that a PBY bomber, because it has a cruising range of 4000 miles, can go on a patrol mission 2000 miles from its base, drop its lethal load, make vital observations, and return to its base without stopping.

Thus, from established naval bases at San Diego, Seattle, Sitka, Coco Solo, Pensacola, and Norfolk, the PBY's can range over trackless ocean wastes totaling 60 million square miles. And wherever the enemy marauders are "spotted," the entire force of long-range bombers can be concentrated—at any U. S. Naval base in the Atlantic or Pacific—in 48 hours!

By the end of this year, Consolidated will have turned out 209 patrol planes in four contracts. With spare ships, the total number of PBY airboats bearing Navy insignia on Jan. 1, 1939, will be close to the 250 mark. With the greatest number of bombers naturally in San Diego, Coco Solo and Hawaii, every portion of the mainland and its insular possessions will be provided with keen-eyed sentinels, unceasing in their vigilance in an era when wars are under way long before they are declared.

The patrolling efficiency of the Consolidated bombers over the Pacific has been demonstrated on the three mass flights of 42 airboats from San Diego to Pearl Harbor, and two delivery trips of 26 planes to Coco Solo.

Flies Cross Country

Lieut. (jg.) James M. Peters last month conclusively demonstrated that squadrons of Consolidated bombers can be shifted from the West to East Coast over night when he flew from San Diego to Pensacola, much of his route overland, in less than 11 hours. Operating out of Florida, Norfolk, or New York, the planes would be in a position to intercept an aggressor 2000 miles from the Atlantic shore.

From Hawaii, the long arm of the Navy's new sky fleet extends protectively toward the strategic islands of Wake, Midway and Guam on the west, and Canton, Enderbury and Samoa on the south. From Sitka, Alaska, the Aleutians are patrolled.

And when the planes are based at Guam, as recent reports from Washington indicate will occur in the near future, the big ships will be within easy distance of the Philippines.

Sixty million square miles is a lot of territory, but the Navy must be prepared to go far to sea in case of hostilities, and its advance messengers of death for the enemy already are "tuned up" to roar away at top speed—just in case.

Navy Plane With 6 Forced Down 140 Miles Off Miami

PLY WASH. D.C. POST

Miami, May 15 (U.P.).—A United States Navy patrol bombing plane, one of 13 flying from the Canal Zone to Norfolk, made a forced landing in the Atlantic 140 miles northeast of here when it ran out of fuel.

The bomber, with a crew of six, became separated from the squadron in a fog over Cuba when its voice radio transmitter failed. It made the forced landing safely alongside the S. S. City Service Toledo, which communicated a report to the Coast Guard base here.

The 12 other planes of the squadron landed here and the one which made the forced landing joined the squadron after refueling from two seaplanes from the Coast Guard air base here.

TO BUY U. S. BOMBERS

The Netherlands Plans to Bolster Its Naval Defense.

THE HAGUE, May 20 (AP).—The Netherlands is considering strengthening its Navy and will buy a third group of 39 American-made bombing planes for the Army in Java, the government announced today in the Senate.

The government denied that any military or naval pact existed between Britain and the Netherlands regarding the Netherlands East Indies, which include Java.

ARMY ORDERS 13 NEW TYPE PLANES

$3,168,265 Contract Is Let for Formidable Pusher Style 'Airacudas.'

Awarding of a $3,168,265 contract for 13 of the revolutionary new twin-engined pusher fighters known as "airacuda," with which to equip an entire Army Air Corps squadron for service test purposes, was announced yesterday by Acting Secretary of War Louis Johnson.

The contract, awarded to the Bell Aircraft Co. of Buffalo, N. Y., calls for 13 of the new fighters, including spares, to be equipped with new-type engines developed by the Allison Engineering Corp., Indianapolis, in conjunction with Army Air Corps engineers.

The new fighters include a number of radical changes in design not found in any other military airplane in the air forces of any country. It is characterized by Mr. Johnson in announcing the contract, as "further proof of the leadership which, up to the present time, has been maintained by American aeronautical engineers."

The speed of the new fighter is a military secret, but Mr. Johnson said it is fast enough "to overhaul any modern bomber now in production or building."

One of the most unusual features is the use of pusher propellers behind the wing, the forward portion of the engine nacelles, in the wings, being given over to wing gunners, who have a free field of fire and observation to the front, uninterrupted by engine or propeller and free from the propeller blast, a handicap to gun maneuver and accuracy.

The new airplanes are to be equipped with six guns, including two aircraft cannon—the most powerful armament ever carried on a fighter. Each ship will be manned by a crew of five—pilot, co-pilot-navigator, radio operator-gunner and two wing gunners. All members of the crew may change places without difficulty while in flight and complete telephone intercommunication is provided among all stations. Crew compartments are to be electrically heated for operation at fighting altitude, over 30,000 feet.

400-Mile-an-Hour Planes for Army

Contract Let to Build 13; Craft Will Carry 6 Guns

By L. W. Meredith

Staff Correspondent International News Service

WASHINGTON, May 21.—(INS)—The War Department today contracted for its mighty air armada the purchase of 13 new pursuit planes of revolutionary design, capable of a 400-mile-an-hour speed, a 30,000-foot fighting altitude and carrying six guns, including two aircraft cannon.

The War Department awarded the contract to the Bell Aircraft Co., for $3,168,265 as a result of eight months of secret tests. Known as the "Airacuda," the new dual-engine pursuit ship will be a vital complement to the formidable "flying-fortress" bombers.

The planes will carry a crew of five—pilot, co-pilot-navigator, radio-operator—gunner and two outboard wing gunners—and will provide "heated compartments for all members of its crew.

Nationalization of Plants Forces Government to Buy in U. S.

By PIERRE DENOYER.

PARIS, May 21 (N.A.N.A.).—Purchase of 100 airplanes from American manufacturers, announced by the air ministry this week, provides additional evidence that the nationalization of airplane manufactures in France has had disappointing results so far. Production has not lived up to expectations, and France, like Great Britain, is compelled to make purchases or manufacturing agreements in the United States, without which she cannot fulfill her rearmament program in time.

The nationalization program was adopted by the French Parliament in August, 1936. It had been advocated by leaders of the Left parties for some time on two grounds:

1. Most of the manufactures were situated in the Paris region. Thus concentrated in a small area, at a short distance from the border (less than 90 minutes by airplane), they were very vulnerable in case of war.

Priavte Plants Antiquated.

2. The private manufactures had antiquated equipment. Their production was slow. Strikes due to bad management often made it slower and delayed deliveries. Their financial structure was too weak for them to expand fast enough to face the needs of the rearmament program. None was able to buy enough machinery and equipment to take care of an expanded war production.

The purpose of the nationalization law presented by the Popular Front government, immediately after coming to power, was twofold. One was to remove a number of factories to remote parts of France, where production might continue, whatever happens to the northeast of France and to Paris. The second was to build and equip the new factories in such a way that manufacturing on a much larger scale would soon be possible.

The government could have extended financial assistance to private companies, and asked them to move to more modern quarters in distant parts of the country. But some of them were already heavily indebted. It was preferred to keep a close control of the use of the government funds injected in the industry.

Reform Under Pierre Cot.

Under a young and daring air minister, Pierre Cot, the reform took place. Most of the private manufacturers working for the army and navy have been bought by the government. Breguet, Bleriot, Potez, Farman, Bewoitine, Marcel Bloch, etc., have been expropriated, against compensation, of course.

Six new companies have been formed to regroup the plants. The government has a majority interest in all of them. A few plants have been retained in Paris and the north of France. New ones have been created and old ones have been enlarged in distant cities like Nantes, Bordeaux, Toulouse.

Big U. S. Naval Expansion Bill Goes to Roosevelt for Signing

5/14/38

By a Staff Correspondent of The Christian Science Monitor

WASHINGTON, May 14—The new naval expansion bill—America's major share in the new world arms race—went to the President for his signature today following routine adoption by the Senate late yesterday of the conference report which smoothed out minor differences between original Senate and House bills.

The final Senate action was accomplished without fuss and without any serious challenge. The opposition which made itself vocal during the early stages of the debate subsided long before the measure reached the final stage of legislative action yesterday. It was just a question of the final dottings of i's and crossing of t's on a measure which sets up as the ten-year objective of the United States navy a fleet of 272 modern fighting ships, a fleet to be the second largest and most powerful in the world.

Briefly the measure raises by 46 ships the total number of under-age units which may legally be incorporated in the fighting ranks of the U. S. Navy. The old limit of the Vinson-Trammel bill was 226 ships or 1,262,068 tons. The new limit will be 272 ships of 1,557,480 tons. The actual cost of increasing the Navy from the old limit to the new, including a thousand more airplanes and the various auxiliaries which the Navy thinks are necessary with the increased fighting strength, is estimated at roughly $1,156,000,000. This represents the additional amount which will be spent on ship and aircraft construction during the next ten years above what would otherwise have been spent—providing Congress provides the money.

The expansion bill itself appropriates no money. Up to this time all actual appropriations for this coming fiscal year have been made under authorizations of the old Vinson-Trammel Act. The first call for actual appropriations under the new bill will come soon. Admiral William D. Leahy, Chief of Operations of the Navy, talked over this subject with the President yesterday and indicated that a second naval deficiency appropriation bill would be introduced promptly asking for about $5,000,000 with which to start construction on two more light cruisers, several fleet auxiliaries and some new-type small torpedo boats during the 1939 fiscal year.

Passage of the new bill puts naval activities near the top of the list of work done by Congress at its current session. It previously appropriated $546,866,000 as the navy's regular budget for the coming fiscal year. There is already one supplement to this regular budget before Congress amounting to $25,597,000 of which $5,000,000 is to start two more battleships and the rest to improve construction facilities in navy yards. There is also pending an authorization bill of roughly $30,000,000 to improve naval bases and stations—mostly in the Pacific Ocean area of naval activities.

There is to be at least one more, and perhaps two more, supplements to the 1939 budget appropriation before the session's naval job is finished. This will undoubtedly be the biggest "big navy" session of Congress since World War days before it is finished.

NEW AIRCRAFT INSPECTOR AT CONSAIR NAMED

Navy Calls Lieut.-Comdr. R. G. Mayer To S. D. Post 5/17/38

Lieut. Comdr. Roland G. Mayer, now on duty at the Naval Aircraft factory, Philadelphia Navy Yard, has been ordered to duty as aircraft inspector at the Consolidated Aircraft Corp. plant in San Diego, according to word received here today from Washington.

Present inspector at Consolidated is Lieut. Henry P. McRoberts, who assumed this duty on the death of Lieut. Comdr. Emile Chourre, killed several weeks ago on a cross-country flight.

Other changes involving San Diego naval duty in the near future will include:

Comdr. Bertram J. Rodgers, from service at the Panama Canal, to command the new 1850-ton destroyer USS Selfridge about May 25; Comdr. William G. Ludlow Jr., from executive officer, USS Dobbin, about June 20, to 16th Naval District, Cavite, P. I., as communications officer; Comdr. Hubert E. Paddock, from command of the 1500-ton destroyer USS Lamson, about June 18, to R. O. T. C. unit, Georgia Tech, Atlanta; Comdr. Alexander D. Douglas, from executive officer, USS Holland, about May 21, to operations office, Washington; Comdr. Francis P. Traynor, from command, USS Altair, about May 31, to retirement.

Comdr. Edward A. Mitchell, from command, 1500-ton destroyer USS Shaw, about June 4, to Naval War College for instruction; Lieut. Comdr. Robert E. Davenport, from command USS Jacob Jones, to duty as executive officer, USS Holland.

NAVY TO 'TEST' PATROL BOMBER

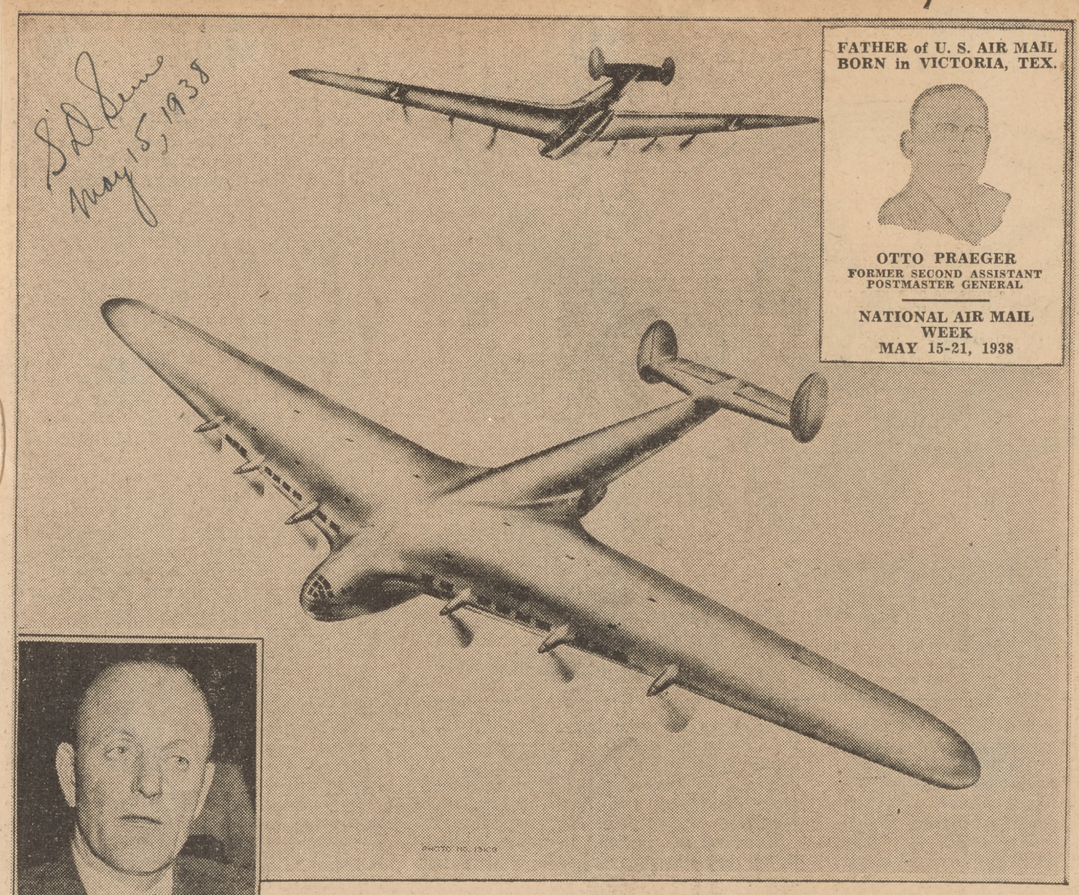
5/16/38

A Navy trial board has been sent to San Diego from Washington, D. C., to inspect Consolidated Aircraft Corporation's PBY-4 type patrol bomber, of which 33 have been ordered for delivery to patrol squadrons, it was revealed here toay.

The board is completing tests on this most advanced type of the series of four PBY planes, on which the Navy has granted construction contracts to Consolidated.

On approval of the plane by the board, the order to go ahead with production of the 33 PBY-4's at top speed will be given. It is expected all of Consolidated's PBY backlog will be completed before the close of this year, at which time approximately 250 long-range airboats, including spare planes, will have been delivered to the Navy.

What Of Airmail 20 Years From Today?



San Diegans celebrating the 20th anniversary of the airmail today considered the radical design of the airplane of the future, shown above, as conceived by Consolidated Aircraft Corp. engineers. This six-engined craft would have a probable capacity of 300 passengers, in addition to baggage and mail, with a range sufficient to cross not only the continent, but any ocean, at a speed of well over 300 miles per hour in the stratosphere. At upper right is a facsimile of the cachet issued today by the postoffice of Victoria, Tex., birthplace of Otto Praeger, a San Diego resident today, and second assistant postmaster general in charge of the airmail in 1918. Maj. Reuben H. Fleet, lower left, who was head of flight operations for the Army in the inauguration of the service 20 years ago, looks forward to the day when his San Diego aircraft plant may manufacture such leviathans of the sky as pictured above.

* * *

Program For Air Mail Week

A special air mail flight from San Diego to Phoenix, Thursday, will feature local celebration of National Air Mail Week.

Lieut. S. C. Linholm, commandant of the San Diego Coast Guard air base, will take off at 8 a. m. in a new Curtiss scout observation plane with a load of mail. He will stop at Yuma and El Centro on his return trip, dropping mail by parachute at Julian in the afternoon.

Radio broadcasts in which San Diego air mail pioneers, including Maj. Reuben H. Fleet, Otto Praeger, and Ed Havens, will participate, are scheduled.

A special cachet, depicting the take-off of Glenn Curtiss from San Diego bay, Jan. 26, 1911, in the world's first seaplane flight, has been issued by the local postoffice.

Big Strides In Service Made Since Inauguration In 1918; Consair Chief Predicts Plane Of Future To Span U. S. In 8 Hours

Today San Diego, along with communities throughout the United States, celebrates the 20th anniversary of the first airmail flight in American history. In the following article, sixth and last of a series which has told the important part played by San Diego residents in launching this service, aviation development of the past two decades is appraised and a glance is cast into the future.—THE EDITOR

By HAROLD KEEN

From its limping start of 20 years ago, the U. S. airmail, celebrating two decades of progress today, has gone an astonishingly long way, has attained performance capabilities undreamed of in 1918.

Yet even the builders and pilots of today's powerful airliners hesitate to risk a forecast of fantastic developments they are certain will accur in aviation during the next 20 years.

Additional details on Air Mail Week on Page 6D

On May 15, 1918, four "flying cheeseboxes" were provided the Postoffice department by the Army. They were "Jennies," powered by 150 h. p. Hispano-Suiza engines. Those whose faith in the planes overcame their better judgment crammed as much as 350 pounds of mail in them at a time.

Navigation by Sight

They possessed no radio guides. Navigation was entirely by visual contact. It required all the skill of the U. S. Army Air Corps to fly those ships over the 218-mile course from Washington to New York, with an intermediate stop at Philadelphia.

On May 15, 1918, the first plane to take off with airmail got exactly 30 miles out of Washington before it wound up in a plowed field. The 90 miles from New York to Philadelphia that day was flown in 80 minutes; the 128 miles from Philadelphia to Washington was covered in 100 minutes.

Today transports, with a payload capacity up to 5000 pounds, dash across the continent on "aerial highways" rigidly kept in zones of safety by radio beams, at a speed of three miles a minute and more. Engines of 1000 horsepower attract little attention today.

Plane of Future

What will the winged mail-carrier of tomorrow be?

In the Consolidated Aircraft Corp. plant here, engineers are working on designs of the plane of the future, and their boss, Maj. Reuben H. Fleet, who had charge of putting the mail into the air 20 years ago, will admit that he is estimating conservatively, indeed, when he tells you that an airship taking off on the Pacific coast shortly after breakfast in 1958 should get to New York City in plenty of time for dinner the same day.

To reduce this form of speculation to concrete figures, the average air transport 20 years hence probably will be able to attain a top speed of 450 miles per hour, an economical cruising speed of 300 miles per hour, enabling it to span the continent in eight to 10 hours, compared to the 15 or 16 required today.

Strides in 10 Years

And whizzing through the air at a speed of five to eight miles a minute may be a reality before 1958, many aircraft engineers believe. You have but to consider, they point out, that in only 10 years, from 1928 to 1938, the time required to fly the mail across the nation has been reduced from 33 to 15 hours.

That San Diego, site of the Consolidated factory, will be the pivotal point for phenomenal aircraft development in the future is a certainty. The layman would gasp with wonder, were he allowed to stroll through the experimental building at Maj. Fleet's plant, where many astounding aviation conceptions already have found their way into blueprints.

During the events of National Airmail Week, opening today, San Diego's Maj. Reuben H. Fleet and Otto Praeger, the former second assistant postmaster general who directed the airmail's inauguration, and Ed Havens of La Mesa, the first chief mechanic of the service, will reunite and marvel over the advances that have been made in 20 years.

But their high-sounding talk of today's aviation giants will sound small, indeed, 20 years hence. Of that we can be certain.

THE END.

'Old' Consair Employes Honored

S.D. Sun MAY 29, 1938

As Consolidated Aircraft Corp. today celebrated its 15th anniversary by throwing open its doors for a factory inspection by the general public, the employes pictured above were honored for continuous service to the concern for periods of five to 10 years. Left to right, in rear row, Joseph Drozdy, Frank Lessle, Roy Coykendall, Herbert Hinckley, Craig Clark, and Albert Clark. Front row, left to right, Leo Niemet, Roman Szalkowski, Joseph E. Nie, Gladys R. Thomas, Herbert Ezard, Raymond J. Tuite, and R. F. Webber.

Archbold Set for 8000-Mile Hop

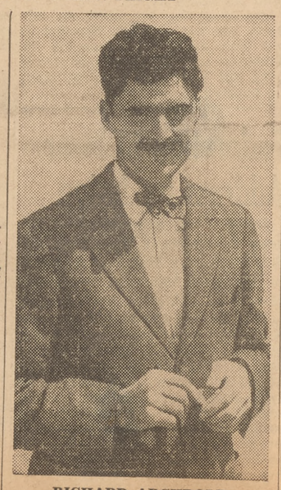
Last Test Today, Flight Tomorrow

The American Museum of Natural History's $250,000 "flying labatory" will take off tomorrow from San Diego bay on the first leg of an 8000-mile flight for exploration work in New Guinea's interior, Richard Archbold, flight commander, announced yesterday.

Archbold, 30, heir to a great industrial fortune and scion of a Standard Oil magnate, who has spent most of his adult life in scientific expeditions to remote parts of the world, said weather conditions between here and Hawaii will determine take-off time.

The "flying laboratory," construct-

(Continued on Page 2, Col. 6)



RICHARD ARCHBOLD

Archbold Take-Off Set for Tomorrow

(Continued from Page 1)

ed by Consolidated, will make its last test flight today. The huge multimotored plane will then be made ready for the 2250-mile nonstop flight to Honolulu.

FLIGHT CREW NAMED

Flying with Archbold will be Russell Rogers, pilot; Capt. Lewis A. Yancey, navigator; Gerald Brown, flight engineer; Stephan Barrinka, assistant flight engineer, and Ray Booth, radio operator.

The airboat, carrying the native name Guba, meaning Sudden Storm, will follow the route of Pan American's transpacific Clipper planes from Honolulu to Midway and Wake islands. Then it will span waters near the route of Amelia Earhart's tragic flight until it alights at Hollandia, a settlement on New Guinea's north coast which will serve as a base during the two years the expedition will spend collecting information, photos and specimens of New Guinea's plant and animal life for the museum.

After that Archbold hopes, the San Diego-built plane will become a practical arm of scientific exploration.

INLAND CAMPS PLANNED

Over jungle trails scientific expedition members traveled for days with mules or native Papuan carriers, the Guba will soar in minutes. Archbold plans to establish a camp on Lake Habbema, 12,500 feet above sea level and 300 miles inland from the coast. To reach the lake afoot requires a heartbreaking trip of three months. By air it takes only two hours.

Jungle camps where the plane cannot land because of the dense tropical growth, will be provisioned by parachute, a device Archbold

Patrol Planes To Fly To Alaska Nex

SQUADRONS TO OPERATE OVER ALASKAN GULF

Four San Diego Aircraft Tenders To Serve Airboats

San Diego-based Navy patrol squadrons will leave North Island late next month to engage in the annual training program of Aircraft Scouting Force at the Gulf of Alaska, it was announced here yesterday.

Officers on the staff of Rear Adm. Charles A. Blakely, Aircraft Scouting Force commander, refused to disclose the exact dates the bombers will take off for Alaska, but stated that the complete schedule has been submitted to Adm. Claud C. Bloch, Fleet commander-in-chief, for approval.

May Leave June 25

From semi-official sources it was learned, however, that the aircraft will leave here about June 25, five days after the aircraft tenders Wright and Langley head toward Sitka, Alaska. The other two locally-based plane tenders, the Lapwing and Teal, are slated to steam north May 30 and 31, respectively. The Lapwing's destination is Seattle, where she is due June 4, and the Teal will remain at Puget Sound until May 30, departing for Sitka.

All four vessels, it is believed, will serve as floating bases for the planes and flight personnel during operations between Sitka and Kodiak, on opposite sides of the Gulf of Alasaka.

48 Planes May Take Part

Last year, 24 Navy seaplanes from San Diego participated in the summer flights in the far north. If all four Aircraft Scouting Force units are ordered north this year, a total of 48 craft probably will make a spectacular non-stop mass flight to Seattle before proceeding to Sitka. All North Island patrol squadrons have been equipped with new PBY Consolidated bombers.

60 Million Mile Span Claimed For Navy Planes

Consolidated Aircraft Corp. officials, preparing to celebrate the company's 15th anniversary this month, yesterday estimated that its twin-engined Navy patrol bombers can patrol 60,000,000 square miles of the earth, as shown in non-shaded portion of map above.

☼ ☼ ☼

Sixty million square miles of the earth's surface!

This is the phenomenal "coverage" Consolidated - built patrol bombers can give the United States Navy at any moment an enemy Fleet appears headed toward our shores, it was estimated yesterday as the San Diego plane concern this month celebrates the 15th anniversary of its formation.

The big twin-engined bombers, whose majestic wings already have spread across the Pacific to Hawaii, down the Mexican and Central American coast to Panama, across the United States, over Canada into the shadow of the Arctic Circle at Aklavik, and across the mist-shrouded waters of the Gulf of Alaska—these giant planes already have proved they can patrol a great sea area which must be clear of hostile raiders if the United States is to consider itself safe.

Consolidated officials yesterday drew out compasses and charts and did some tall figuring.

4000 Miles Non-Stop

They worked on the assumption that a PBY bomber, because it has a cruising range of 4000 miles, can go on a patrol mission 2000 miles from its base, drop its lethal load, make vital observations, and return to its base without stopping.

Thus, from established naval bases at San Diego, Seattle, Sitka, Coco Solo, Pensacola, and Norfolk, the PBY's can range over trackless ocean wastes totaling 60 million square miles. And wherever the enemy marauders are "spotted," the entire force of long-range bombers can be concentrated—at any U. S. N. in the Atlantic or Pacific—in 48 hours!

By the end of this year, Consolidated will have turned out 209 patrol planes in four contracts. With spare ships, the total number of PBY airboats bearing Navy insignia on Jan. 1, 1939, will be close to the 250 mark. With the greatest number of bombers naturally in San Diego, Coco Solo and Hawaii, every portion of the mainland and its insular possessions will be provided with keen-eyed sentinels, unceasing in their vigilance in an era when wars are under way long before they are declared.

The patrolling efficiency of the Consolidated bombers over the Pacific has been demonstrated on the three mass flights of 42 airboats from San Diego to Pearl Harbor, and two delivery trips of 26 planes to Coco Solo.

Flies Cross Country

Lieut. (jg.) James M. Peters last month conclusively demonstrated that squadrons of Consolidated bombers can be shifted from the West to East Coast over night when he flew from San Diego to Pensacola, much of his route overland, in less than 11 hours. Operating out of Florida, Norfolk, or New York, the planes would be in a position to intercept an aggressor 2000 miles from the Atlantic shore.

From Hawaii, the long arm of the Navy's new sky fleet extends protectively toward the strategic islands of Wake, Midway and Guam on the west, and Canton, Enderbury and Samoa on the south. From Sitka, Alaska, the Aleutians are patrolled.

And when the planes are based at Guam, as recent reports from Washington indicate will occur in the near future, the big ships will be within easy distance of the Philippines.

Sixty million square miles is a lot of territory, but the Navy must be prepared to go far to sea in case of hostilities, and its advance messengers of death for the enemy already are "tuned up" to roar away at top speed—just in case.

'ERNIE' SMITH TO GIVE TALK

Capt. Ernest L. Smith, co-pilot in the first civilian flight from the West Coast to the Hawaiian Islands, will be principal speaker at the meeting of the San Diego Aero Club in the Pompeiian Room, San Diego Hotel, at 6:30 p. m. tomorrow.

One of America's best known commercial aviators, "Ernie" Smith flew from Oakland to the island of Molokai with Emory Bronte July 14, 1927, in 25 hours, 36 minutes, their plane being forced down when the fuel supply gave out short of Honolulu, their goal.

The Smith-Bronte flight occurred one month before the ill-fated Dole race, won by Art Goebel and Lieut. Wm. K. Davis only after several other entries were killed.

Capt. Smith at present is chief dispatcher for TWA at Burbank.

S. D., L. A. FIRMS SUBMIT LOW BIDS

One San Diego and two Los Angeles concerns have been declared low bidders on contracts for construction jobs in the 11th Naval District, it was reported here yesterday.

Lipscomb & Barclay of San Diego submitted a $11,437 estimate for the building of a timber seaplane runway at Terminal Island; in another phase of the same project, Rohl-Connolly Co. of Los Angeles was low bidder at $5700. A. Corrandini & Sons of Los Angeles presented a successful bid of $1795 for installation of terrazzo floors in galleys at the San Diego Marine Corps Base.

TO COMMAND AIR BASE

Capt. Aubrey W. Fitch, will assume command of the Pensacola, Fla. Naval Air Station soon after completing the senior course at the Naval War College May 15. He will relieve Rear Adm. William F. Halsey, recently ordered to command of Carrier Division 3, including the Yorktown, Enterprise and Wasp, none of which are yet in active service.

HUGE PLANE BILL

Proposed U. S. military aircraft appropriations for the next year are $108,000,000.

FLEET MUM ON CHARGE OF 'MASS' DISCHARGES

S D Sun 6/1/38

Maj. Reuben H. Fleet, president of Consolidated Aircraft Corp., refused to comment on charges made today by officials of CIO Aircraft Local 506 that 75 employes per week are being laid off at the plant.

"Reliable sources are indicating," the union officers said, "that the mass discharge will continue until there is nothing but a skeleton crew of five or six hundred men working at Consolidated."

SOLAR PROFITS REACH $50,000

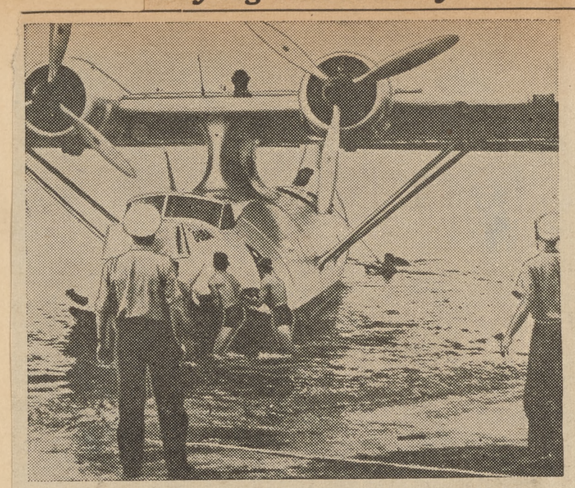
S D Sun — 6/1/38

Solar Aircraft Corp. of San Diego made an estimated net profit of approximately $50,000 for the fiscal year ending April 30, President Edmund T. Price announced here today. The figure is subject to audit, and was computed before deduction of taxes and other charges.

The financial report stated that the profit is equal to 38½ cents a share on the 129,640 shares of $1 par value common capital stock outstanding, or an increase of 142 per cent over the period from January 1 to December 31, 1936, inclusive.

A gain of 125 per cent in gross sales for the calendar year 1936 was noted during the last fiscal year, when the figure reached $500,259.

Flying Laboratory on Record Trip



The "Guba," huge flying laboratory of Richard Archbold expedition into New Guinea, is moored (left above) on landing at Pearl Harbor, Hawaii, after record flight from San Diego. Ship will be expedition headquarters and laboratory on arrival in New Guinea. Archbold wears leis on arrival. The 6,284-mile flight was completed without incident on June 10. The expedition will explore New Guinea for two years. National Geo News JUNE 15, 1938

Richard Archbold

S.D. Tribune 6/1/38

Richard Archbold's scientific flight to Dutch New Guinea is encouraging disproof of that old belief—a belief which seems to be growing these days, too—that rich men's heirs are bound to be wastrels.

This idea that wealth begets only profligacy has been voiced so long and so often that it has come to be accepted as a general rule. It has come to be as if birth into comfort and luxury were a sin per se.

But here comes a scion of fortune, of one of the nation's great oil fortunes, dedicating himself to a hard and dangerous enterprise; an exploration in a San Diego-built flying boat of one of the world's few remaining, genuine wilds; an undertaking which cannot be characterized other than as a lofty and worthwhile one. Offhand, the pursuit of bugs, birds and beasts, which is Archbold's particular goal, undertaken in behalf of the American Museum of Natural History, may seem an ephemeral business. Actually, it is an arduous one, requiring downright hard mental and physical work and strict discipline of mind and body. Moreover, it is from such bits of knowledge as Archbold and his colleagues will acquire, that the sum total of human learning is slowly built up, toward the goal of a better life in this world.

Certainly the enterprise of this young easterner who has almost become one of us through his long stay here while preparing for his flight, proves that the rule about rich men's heirs, like most others, does have its exceptions. And it's barely possible that if the total of their cases could be examined, children of wealth generally would prove not much different in this regard than others.

Archbold Makes Honolulu-Wake Hop

S D Union 6/8/38

WAKE ISLAND, June 8 (Wednesday) (A. P.)—Guided unerringly over 2300 miles of lonely ocean, the Guba, San Diego-built flying laboratory of the American Museum of Natural History, alighted in the lagoon of Wake island today.

The huge flying boat, under command of Richard Archbold, research associate of the museum, arrived after it left Honolulu 16 hours and 45 minutes. It was the first time the Honolulu-Wake Island flight had been made non-stop.

Pan American Airways clippers travel the Honolulu to Wake route weekly but stop at Midway island.

Lewis A. Yancey, veteran transatlantic flight navigator, directed the Guba to this tiny coral islet. Radio contact was maintained throughout the flight with Honolulu and with Hollandia, on the coast of New Guinea.

Archbold and his companions are en route to New Guinea. They left San Diego Thursday.

New Guinea Hop To Start Today

S.D. UNION 6/2/38

Laden with 1700 gallons gasoline, emergency rations sufficient to last three weeks and with the last of its test flights now a matter of history, the $250,000 airboat of the American Museum of Natural History will take to the air at 2 this afternoon for Honolulu on the first leg of a flight to New Guinea.

Richard Archbold, flight commander, reported yesterday after a conference with weather bureau officials, that ideal flying conditions prevailed between Pt. Loma and Diamond Head.

"It looks definitely as if we shall get away promptly at 2 Thursday afternoon," Archbold said.

Newsreel camermen will take pictures of the start of the history making 6000-mile flight to Hollandia on the northeast coast of New Guinea. From Wake Island to Hollandia Archbold and his flight companions will blaze a new air trail into the south Pacific.

Archbold's Flight To Start Tomorrow

S D Union 6-1-38

Pending a favorable weather report from the U. S. weather bureau office at San Francisco, Richard Archbold, research associate, American Museum of Natural History, yesterday announced he will take off at 2 p.m. tomorrow in his $250,000 "flying laboratory" for Honolulu. From the crossroads of the Pacific Archbold will fly to Hollandia, New Guiena, via Midway and Wake islands.

Archbold and Capt. Lewis Yancey, navigator of the two-motored air boat, conferred yesterday with Dean Blake meteorologist. Blake said indications are for fair weather over the entire San Diego-Honolulu airway tomorrow with the plane being aided on the 2250-mile flight by northeast trade winds.

Final test flights were conduct by Archbold yesterday.

The plane is to spend three years in New Guinea on scientific work for the New York museum.

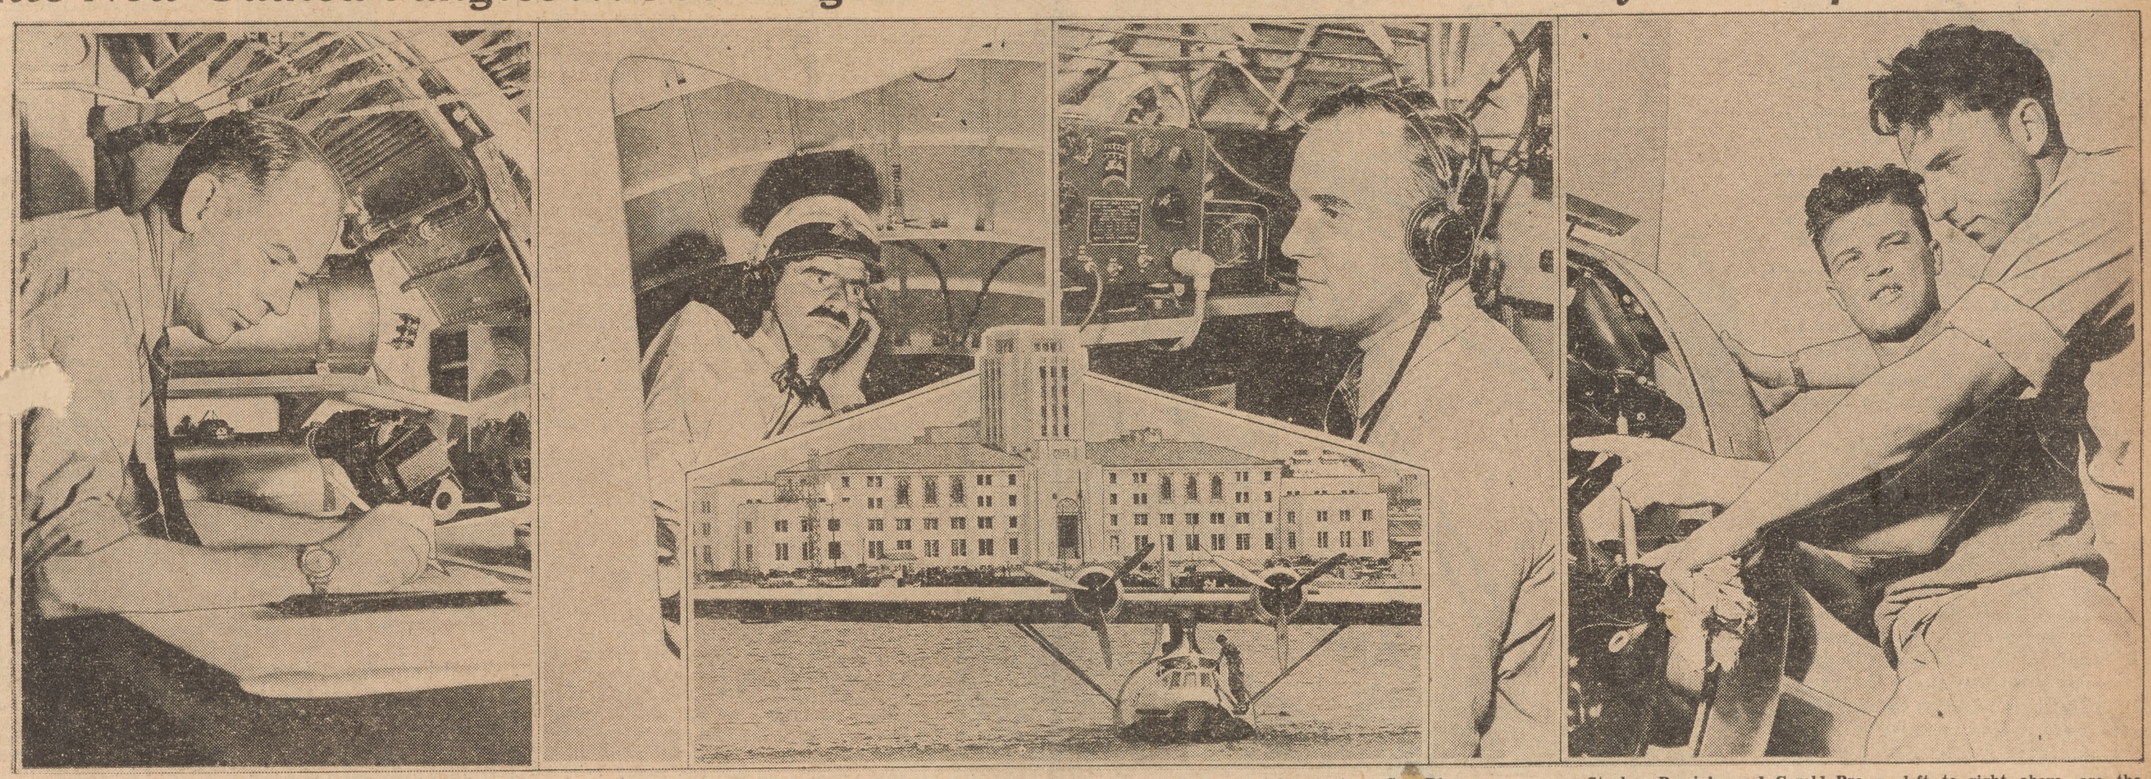
Into New Guinea Jungles... Over High Peaks... Archbold Plane Ready To Hop This Week



These men will lock themselves away from civilization for two years as they guide the world's largest privately owned plane over the jungle fastness of Dutch New Guinea in an American Museum of Natural History scientific expedition. Above is Capt. Lewis A. Yancey, navigator of Richard Archbold's $250,000 Consolidated airboat "Guba," pictured at right, at its moorings in San Diego harbor, with the Civic Center in background. The plane will remove scientists already at Humbolt Bay, D. N. G., to a camp in the rugged interior, at the foot of a three-mile high mountain.

Archbold, leader of the expedition and pilot of the giant seaplane, which will take off from San Diego late this week on a three-stop, 8000-mile flight to Dutch New Guinea, is shown at top left testing the craft's interphone communication system. It will be up to Radio Operator Raymond E. Booth, at right, above, to keep the "Guba" in contact with the scientific party's base camp on the shores of Lake Habbema, 11,000 feet above sea level, as the plane shuttles between Humboldt Bay on the coast and the lake, 110 miles inland, with food, equipment and supplies. Food will be parachuted to scientists as they work their way up precipitous, 15,560-foot Mt. Wilhelmina, by Archbold from a specially constructed hatch in the tail of the airboat. The rare specimens of mammals, birds, insects and plants which the expedition will seek will be transported by plane to the coast, from which they will be shipped to the American Museum of Natural History in New York. The "Guba" (Papuan dialect meaning "Sudden Storm") will leave here Wednesday or soon thereafter, depending on weather conditions over the Pacific.

Stephen Barrinka and Gerald Brown, left to right above, are the mechanics in the flight crew. Since Archbold arrived in San Diego in the fall of 1936 to order a de-militarized version of the Navy's patrol bombers, he has flown approximately 750,000 miles in test flights, including three transcontinental non-stop dashes, accomplished for the first time in aviation history by a seaplane. With Archbold and his co-pilot, Russ Rogers, at the controls, "Guba" this week will fly to Honolulu, Wake and Guam before attempting the 1900-mile crossing from the latter island to New Guinea over a route never before spanned by a plane.

ARCHBOLD WILL BEGIN 2000-MILE HOP TO WAKE AT DAWN TOMORROW

S D Tribune 6/6/38

Richard Archbold, American Museum of Natural History research associate, and his five companions who flew from San Diego to Hawaii in their $250,000 Consolidated airboat in 18 hours, 9 minutes Thursday, will take off on the second leg of their flight to New Guinea at dawn tomorrow. Radio advices to this effect were received yesterday by Barney Boyd, local radio amateur.

From Honolulu the "flying laboratory" will wing its way to Wake island, 2000 miles westward across the Pacific, Wednesday or Thursday Archbold and his crew of air adventurers will leave Wake for Hollandia on the north coast of New Guinea, a flight of 2000 miles over part of the South Pacific hitherto unspanned by aircraft.

Boyd, who has maintained communication with Archbold on all his previous experimental flights, will keep in constant radio touch with the plane in both of the hops to be made this week and later when the plane establishes a base at Hollandia and at Lake Habbema, 300 miles in the interior of New Guinea.

Archbold Lands In New Guinea

S D Union 6/10/38

SAN FRANCISCO, June 9 (A.P.)—Richard Archbold and five companions landed their $250,000 flying laboratory in far-away New Guinea today to join scientists of the American Museum of Natural History for two years of research among the head-hunting savages of the back-country.

News of their safe arrival after a three-lap, 8600 mile flight from San Diego, came from Archbold by Pan American Airways.

They left San Diego last Thursday, stopping at Honolulu and Wake Island en route.

The six men will traverse jungles and rugged mountains in an attempt to bring back rare species of bird and animal life from the area surrounding Lake Habbean, 12,500 feet above sea level.

Achbold May Hop For Wake Today

S D Union 6/6/38

Weather conditions between Honolulu and Wake Island prevailing today will determine whether Richard Archbold, research associate American Museum of Natural History, and his five flight companions will take off this afternoon in their $250,000 "flying laboratory" on the second leg of their flight from San Diego to New Guinea.

According to radio advices from Pearl Harbor, where Archbold's plane is being made ready for the 2000-mile hop to Wake, indications are that the flying explorer will leave soon before sunset. This would bring the 14-ton airboat to the Pan-American Airways base at the island early tomorrow morning and enable him to carry out his original flight plan of leaving Wake for Hollandia on the north Guinea coast Wednesday afternoon.

Archbold Gives Flying Equipment Final Checkup Before Take-Off Tomorrow

Airboat Put Through Test Flight For U. S. Inspectors

S D Sun 6/1/38

Final checkup of his navigation equipment today occupied Flying Explorer Richard Archbold in test flights with Department of Commerce inspectors aboard the $250,000 Consolidated airboat in which he and a crew of five will take off between 2 and 3 p. m. tomorrow for Dutch New Guinea.

2 Years Preparation

Departure of the plane tomorrow will climax almost two years of preparation by Archbold for a scientific expedition into hitherto inaccessible jungle country of Dutch New Guinea in search of rare zoological specimens for the American Museum of Natural History.

Archbold, wealthy heir to an oil fortune, will blaze a new air trail over part of the flight from San Diego to Dutch New Guinea. The airboat will head for Honolulu Thursday, a distance of 2250 nautical miles. From Hawaii, the plane will hop to Wake Island, 1950 nautical miles away. After a short stop, the plane, named "Guba," will leave, either directly for Hollandia, on the northern sea coast of Dutch New Guinea, or, if the weather is unfavorable, will fly to Guam. The former course would be over an uncharted air lane of 1920 nautical miles. Never has a seaplane ever flown from Guam to Hollandia, 930 miles apart.

The total distance of the flight route will be about 6500 nautical miles, or 7400 statute miles.

At Hollandia, Archbold will take aboard scientists comprising the main exploring party and transport them to Lake Habbema, 110 miles inland and 11,000 feet above sea level. Five tons of equipment, food and supplies will be carried to the lake by the airboat. A base camp will be established, and the scientists will work their way up 15,560-foot Mt. Wilhelmina, a region never before penetrated by scientists. Archbold and his crew will parachute supplies to the expedition in this jungle area.

Members of his crew will include Russ Rogers, co-pilot; Raymond E. Booth, radio operator; Gerald D. Brown and Stephen Barrinka, mechanics; and Capt. Lewis A. Yancey, navigator.

The present expedition will be the second Archbold has led into New Guinea for the American Museum of Natural History. In 1936, he piloted a Fairchild amphibian over the swift-running rivers cutting through deep, narrow gorges of British New Guinea. The plane capsized at its base in Port Moresby during a sudden storm, prematurely ending the tropical venture. Defying superstition, Archbold has named his present ship "Guba," which means "sudden storm" in the native dialect of Papua.

Patrol Planes To Fly To Alaska Nex

SQUADRONS TO OPERATE OVER ALASKAN GULF

Four San Diego Aircraft Tenders To Serve Airboats

San Diego-based Navy patrol squadrons will leave North Island late next month to engage in the annual training program of Aircraft Scouting Force at the Gulf of Alaska, it was announced here yesterday.

Officers on the staff of Rear Adm. Charles A. Blakely, Aircraft Scouting Force commander, refused to disclose the exact dates the bombers will take off for Alaska, but stated that the complete schedule has been submitted to Adm. Claud C. Bloch, Fleet commander-in-chief, for approval.

May Leave June 25

From semi-official sources it was learned, however, that the aircraft will leave here about June 25, five days after the aircraft tenders Wright and Langley head toward Sitka, Alaska. The other two locally-based plane tenders, the Lapwing and Teal, are slated to steam north May 30 and 31, respectively. The Lapwing's destination is Seattle, where she is due June 4, and the Teal will remain at Puget Sound until May 30, departing for Sitka.

All four vessels, it is believed, will serve as floating bases for the planes and flight personnel during operations between Sitka and Kodiak, on opposite sides of the Gulf of Alasaka.

48 Planes May Take Part

Last year, 24 Navy seaplanes from San Diego participated in the summer flights in the far north. If all four Aircraft Scouting Force units are ordered north this year, a total of 48 craft probably will make a spectacular non-stop mass flight to Seattle before proceeding to Sitka. All North Island patrol squadrons have been equipped with new PBY Consolidated bombers.

60 Million Mile Span Claimed For Navy Planes

Consolidated Aircraft Corp. officials, preparing to celebrate the company's 15th anniversary this month, yesterday estimated that its twin-engined Navy patrol bombers can patrol 60,000,000 square miles of the earth, as shown in non-shaded portion of map above.

☼ ☼ ☼

Sixty million square miles of the earth's surface!

This is the phenomenal "coverage" Consolidated - built patrol bombers can give the United States Navy at any moment an enemy Fleet appears headed toward our shores, it was estimated yesterday as the San Diego plane concern this month celebrates the 15th anniversary of its formation.

The big twin-engined bombers, whose majestic wings already have spread across the Pacific to Hawaii, down the Mexican and Central American coast to Panama, across the United States, over Canada into the shadow of the Arctic Circle at Aklavik, and across the mist-shrouded waters of the Gulf of Alaska—these giant planes already have proved they can patrol a great sea area which must be clear of hostile raiders if the United States is to consider itself safe.

Consolidated officials yesterday drew out compasses and charts and did some tall figuring.

4000 Miles Non-Stop

They worked on the assumption that a PBY bomber, because it has a cruising range of 4000 miles, can go on a patrol mission 2000 miles from its base, drop its lethal load, make vital observations, and return to its base without stopping.

Thus, from established naval bases at San Diego, Seattle, Sitka, Coco Solo, Pensacola, and Norfolk, the PBY's can range over trackless ocean wastes totaling 60 million square miles. And wherever the enemy marauders are "spotted," the entire force of long-range bombers can be concentrated—at any U. S. N... in the Atlantic or Pacific—in 48 hours!

By the end of this year, Consolidated will have turned out 209 patrol planes in four contracts. With spare ships, the total number of PBY airboats bearing Navy insignia on Jan. 1, 1939, will be close to the 250 mark. With the greatest number of bombers naturally in San Diego, Coco Solo and Hawaii, every portion of the mainland and its insular possessions will be provided with keen-eyed sentinels, unceasing in their vigilance in an era when wars are under way long before they are declared.

The patrolling efficiency of the Consolidated bombers over the Pacific has been demonstrated on the three mass flights of 42 airboats from San Diego to Pearl Harbor, and two delivery trips of 26 planes to Coco Solo.

Flies Cross Country

Lieut. (jg.) James M. Peters last month conclusively demonstrated that squadrons of Consolidated bombers can be shifted from the West to East Coast over night when he flew from San Diego to Pensacola, much of his route overland, in less than 11 hours. Operating out of Florida, Norfolk, or New York, the planes would be in a position to intercept an aggressor 2000 miles from the Atlantic shore.

From Hawaii, the long arm of the Navy's new sky fleet extends protectively toward the strategic islands of Wake, Midway and Guam on the west, and Canton, Enderbury and Samoa on the south. From Sitka, Alaska, the Aleutians are patrolled.

And when the planes are based at Guam, as recent reports from Washington indicate will occur in the near future, the big ships will be within easy distance of the Philippines.

Sixty million square miles is a lot of territory, but the Navy must be prepared to go far to sea in case of hostilities, and its advance messengers of death for the enemy already are "tuned up" to roar away at top speed—just in case.

'ERNIE' SMITH TO GIVE TALK

Capt. Ernest L. Smith, co-pilot in the first civilian flight from the West Coast to the Hawaiian Islands, will be principal speaker at the meeting of the San Diego Aero Club in the Pompeiian Room, San Diego Hotel, at 6:30 p. m. tomorrow.

One of America's best known commercial aviators, "Ernie" Smith flew from Oakland to the island of Molokai with Emory Bronte July 14, 1927, in 25 hours, 36 minutes, their plane being forced down when the fuel supply gave out short of Honolulu, their goal.

The Smith-Bronte flight occurred one month before the ill-fated Dole race, won by Art Goebel and Lieut. Wm. K. Davis only after several other entries were killed.

Capt. Smith at present is chief dispatcher for TWA at Burbank.

S. D., L. A. FIRMS SUBMIT LOW BIDS

One San Diego and two Los Angeles concerns have been declared low bidders on contracts for construction jobs in the 11th Naval District, it was reported here yesterday.

Lipscomb & Barclay of San Diego submitted a $11,437 estimate for the building of a timber seaplane runway at Terminal Island; in another phase of the same project, Rohl-Connolly Co. of Los Angeles was low bidder at $5700. A. Corrandini & Sons of Los Angeles presented a successful bid of $1795 for installation of terrazzo floors in galleys at the San Diego Marine Corps Base.

TO COMMAND AIR BASE

Capt. Aubrey W. Fitch, will assume command of the Pensacola, Fla. Naval Air Station soon after completing the senior course at the Naval War College May 15. He will relieve Rear Adm. William F. Halsey, recently ordered to command of Carrier Division 3, including the Yorktown, Enterprise and Wasp, none of which are yet in active service.

HUGE PLANE BILL

Proposed U. S. military aircraft appropriations for the next year are $108,000,000.

FLEET MUM ON CHARGE OF 'MASS' DISCHARGES

S D Sun — 6/1/38

Maj. Reuben H. Fleet, president of Consolidated Aircraft Corp., refused to comment on charges made today by officials of CIO Aircraft Local 506 that 75 employes per week are being laid off at the plant.

"Reliable sources are indicating," the union officers said, "that the mass discharge will continue until there is nothing but a skeleton crew of five or six hundred men working at Consolidated."

In the CHART HOUSE

By HAROLD KEEN

ANOTHER of the Navy's old timers has stepped down the gangway for the last time.

◇ ◇ ◇

Word was received here yesterday of the death of James B. Nolan in the Chelsea, Mass. Naval Hospital. Well known to the San Diego naval colony, Mr. Nolan was a chief warrant officer aboard the submarine tender USS Holland. With Mrs. Nolan, he left for duty in the east two years ago.

Military honors were accorded this shipmate of countless bluejackets at his funeral in Dedham, Mass.

◇ ◇ ◇

THE SAN DIEGO light cruiser Richmond, flagship of the Submarine Force, was barely out of sight of Point Loma at the outset of the recent war games when things began to happen.

◇ ◇ ◇

From the submarine Plunger, which left from San Diego on the same day but headed toward Alaska instead of Pearl Harbor, came a distress call. A man was seriously ill and needed immediate medical assistance.

◇ ◇ ◇

The Richmond instantly veered off its course, sped toward the Plunger. Coming alongside late in the afternoon, the cruiser's crew lowered a motor whaleboat in extremely rough seas, making maneuvering quite difficult.

◇ ◇ ◇

In charge was Chief Boatswain Paul Smith, assisted by Coxswain R. Parrow, Machinist's Mate 2c J. J. Abend, and Seamen 1c N. J. Caputo and R. Stodgsdill.

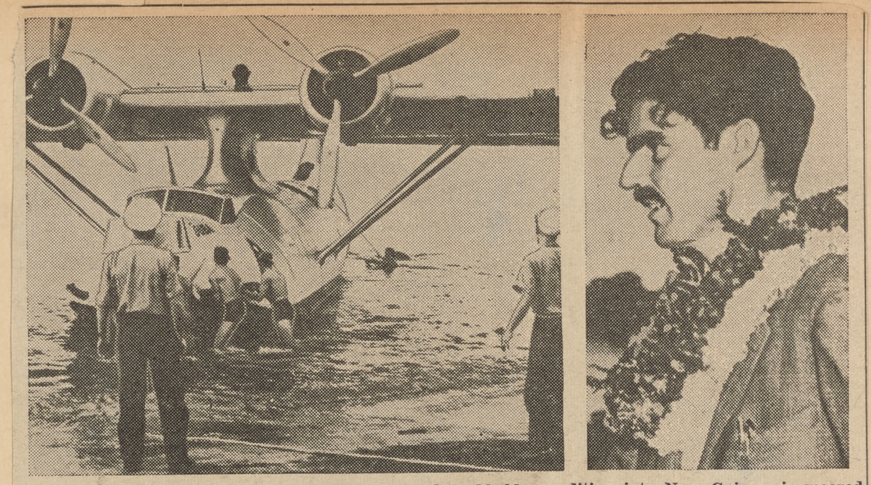
◇ ◇ ◇

Carefully the small boat was guided through huge waves pounding against its hull with unabating fury. The Plunger was reached, and a San Diego sailor, R. Maithson, was removed, and brought safely back to the Richmond, where he was nursed back to health in the sick bay.

◇ ◇ ◇

Just part of a day's work at sea!

Flying Laboratory on Record Trip



The "Guba," huge flying laboratory of Richard Archbold expedition into New Guinea, is moored (left above) on landing at Pearl Harbor, Hawaii, after record flight from San Diego. Ship will be expedition headquarters and laboratory on arrival in New Guinea. Archbold wears leis on arrival. The 6,284-mile flight was completed without incident on June 10. The expedition will explore New Guinea for two years. National Geo. News JUNE 15, 1938

Richard Archbold

S.D. Tribune 6/1/38

Richard Archbold's scientific flight to Dutch New Guinea is encouraging disproof of that old belief—a belief which seems to be growing these days, too—that rich men's heirs are bound to be wastrels.

This idea that wealth begets only profligacy has been voiced so long and so often that it has come to be accepted as a general rule. It has come to be as if birth into comfort and luxury were a sin per se.

But here comes a scion of fortune, of one of the nation's great oil fortunes, dedicating himself to a hard and dangerous enterprise; an exploration in a San Diego-built flying boat of one of the world's few remaining, genuine wilds; an undertaking which cannot be characterized other than as a lofty and worthwhile one. Offhand, the pursuit of bugs, birds and beasts, which is Archbold's particular goal, undertaken in behalf of the American Museum of Natural History, may seem an ephemeral business. Actually, it is an arduous one, requiring downright hard mental and physical work and strict discipline of mind and body. Moreover, it is from such bits of knowledge as Archbold and his colleagues will acquire, that the sum total of human learning is slowly built up, toward the goal of a better life in this world.

Certainly the enterprise of this young easterner who has almost become one of us through his long stay here while preparing for his flight, proves that the rule about rich men's heirs, like most others, does have its exceptions. And it's barely possible that if the total of their cases could be examined, children of wealth generally would prove not much different in this regard than others.

SOLAR PROFITS REACH $50,000

S D Sun — 6/1/38

Solar Aircraft Corp. of San Diego made an estimated net profit of approximately $50,000 for the fiscal year ending April 30, President Edmund T. Price announced here today. The figure is subject to audit, and was computed before deduction of taxes and other charges.

The financial report stated that the profit is equal to 38½ cents a share on the 129,640 shares of $1 par value common capital stock outstanding, or an increase of 142 per cent over the period from January 1 to December 31, 1936, inclusive.

A gain of 125 per cent in gross sales for the calendar year 1936 was noted during the last fiscal year, when the figure reached $500,259.

Archbold Makes Honolulu-Wake Hop

S D Union 6/8/38

WAKE ISLAND, June 8 (Wednesday) (A. P.) — Guided unerringly over 2300 miles of lonely ocean, the Guba, San Diego-built flying laboratory of the American Museum of Natural History, alighted in the lagoon of Wake island today.

The huge flying boat, under command of Richard Archbold, research associate of the museum, arrived after it left Honolulu 16 hours and 45 minutes. It was the first time the Honolulu-Wake Island flight had been made non-stop.

Pan American Airways clippers travel the Honolulu to Wake route weekly but stop at Midway island.

Lewis A. Yancey, veteran transatlantic flight navigator, directed the Guba to this tiny coral islet. Radio contact was maintained throughout the flight with Honolulu and with Hollandia, on the coast of New Guinea.

Archbold and his companions are en route to New Guinea. They left San Diego Thursday.

New Guinea Hop To Start Today

S.D. UNION 6/2/38

Laden with 1700 gallons gasoline, emergency rations sufficient to last three weeks and with the last of its test flights now a matter of history, the $250,000 airboat of the American Museum of Natural History will take to the air at 2 this afternoon for Honolulu on the first leg of a flight to New Guinea.

Richard Archbold, flight commander, reported yesterday after a conference with weather bureau officials, that ideal flying conditions prevailed between Pt. Loma and Diamond Head.

"It looks definitely as if we shall get away promptly at 2 Thursday afternoon," Archbold said.

Newsreel camermen will take pictures of the start of the history making 6000-mile flight to Hollandia on the northeast coast of New Guinea. From Wake Island to Hollandia Archbold and his flight companions will blaze a new air trail into the south Pacific.

Archbold's Flight To Start Tomorrow

S D Union 6-1-38

Pending a favorable weather report from the U. S. weather bureau office at San Francisco, Richard Archbold, research associate, American Museum of Natural History, yesterday announced he will take off at 2 p.m. tomorrow in his $250,000 "flying laboratory" for Honolulu. From the crossroads of the Pacific Archbold will fly to Hollandia, New Guiena, via Midway and Wake islands.

Archbold and Capt. Lewis Yancey, navigator of the two-motored air boat, conferred yesterday with Dean Blake meteorologist. Blake said indications are for fair weather over the entire San Diego-Honolulu airway tomorrow with the plane being aided on the 2250-mile flight by northeast trade winds.

Final test flights were conduct by Archbold yesterday.

The plane is to spend three years in New Guinea on scientific work for the New York museum.

Scenes as Richard Archbold took off yesterday afternoon for New Guinea. Upper: Archbold's plane, the Guba, races across the bay. The new civic center building is in the background. Lower: Archbold.

ARCHBOLD SET FOR LAST 'LEG'

S. D. Scientist, Party Hop Today For New Guinea

At Wake Island, Richard Archbold and the five men with whom he is making a trans-Pacific flight from California to Hollandia, Dutch New Guinea, today prepared their giant flying boat for the last leg of the journey.

Archbold, sportsman and explorer, said the take-off would be made at 7:30 p. m. (PST) today.

The twin-motored flying boat made the long hop here from Honolulu in 16 hours and 40 minutes and Archbold described the jump as "uneventful."

In New Guinea the craft will be used to aid in explorations for the American Museum of Natural History.

NEWS FLASHES TIE IN S. D., HONOLULU ON GUBA ARRIVAL

By SPENCER HELD

The speed with which modern news travels was shown graphically by the "photo finish" staged by the Associated Press bureaus in San Diego and Honolulu today in reporting the arrival of the flying boat "Guba" at Pearl Harbor.

Richard Archbold's big plane, 18 hours and nine minutes out of San Diego, settled down on the waters of Honolulu harbor at 8:52 a.m.

Newspaper men at San Diego and Honolulu got the story at approximately the same time. Bernard Boyd, local radio amateur, in constant communication with the "Guba" as it roared over the Pacific, telephoned the news to a Tribune reporter. The latter passed it on to the Associated Press correspondent at the next desk.

The A.P. man typed a brief bulletin and handed it to Ted McKenna, another member of the staff. Ted dashed upstairs to the A.P. office, giving the bulletin to H.P. ("Wilkie") Wilkinson, teletype operator. Wilkinson sat down at his sending machine — a typewriter-like instrument—and broke into the "Big City" wire with the bulletin.

Clicks Nearly Identical

As he punched out the story, the words were recorded automatically on the teletype machine next to him—hooked to the 'Big City" wire —and simultaneously on the machines in Los Angeles, Long Beach, Fresno, Oakland, Sacramento and San Francisco, the control point.

Next to the "Big City" teletype in the local office is another machine receiving news on the "Round Robin' east wire. This hookup includes San Francisco, Sacramento, Reno, Salt Lake City, Denver, Kansas City, the control point; Albuquerque, Phoenix, Los Angeles, Long Beach, San Diego and Fresno.

As "Wilkie" punched out the first few words of the local bulletin, the "Round Robin" wire was carrying a bulletin from Honolulu via San Francisco. "The flying boat 'Guba' . . . landed here from San Diego, Calif., at 6:22 a.m. today" (8:52 Pacific standard time), it stated.

The stories were punched out almost word for word from San Francisco and San Diego, appearing simultaneously on the two teletype machines. 'They finished in a dead heat," said McKenna.

Archbold Hops At 2 P.M.; Plane Tested

June 2d 38

Richard Archbold, planning to take off from San Diego for New Guinea at 2 p.m. today in his $250,000 Consolidated Aircraft Corp.-built flying boat "Guba," took the 13½-ton craft aloft this noon for its final test flight before attempting the 6284-mile flight across the Pacific.

With five flight companions, Archbold hopes to land at Pearl Harbor, Honolulu, first stop en route, shortly after 6 a.m. tomorrow.

Aboard Archbold's plane, the "Guba," are 1700 gallons of gasoline and emergency rations sufficient to last for three weeks. Newsreel cameramen arrived here today to take pictures of the take-off.

With Archbold on the flight will be Russell Rogers, pilot; Lewis A. Yancey, navigator; Gerald D. Brown, flight engineer; Raymond Booth, radio operator, and Stephen Barrinka, assistant flight engineer.

The six hope to fly the 2267 miles to Honolulu in 18 hours, the 1999 miles from Honolulu to Wake island in 14.3 hours, and the 2018 miles from Wake island to Humboldt bay, New Guinea, in 14.4 hours.

Archbold, mammologist and research associate of the American Museum of Natural History, plans to remain in New Guinea for about two years, collecting specimens and photographs for the museum. He will use the "Guba" to transport equipment and personnel from the base on the north coast of New Guinea to virtually inaccessible lakes high in the interior.

GUBA TO MAKE WAKE ISLAND FLIGHT TODAY

Archbold May Continue Non-Stop To Guam, Says Message

Richard Archbold and his crew of five were to take off from Hawaii in their Consolidated airboat "Guba" at about 4:30 p. m. (P.S.T.) today for Wake Island, 1999 miles away, with a possibility that the big exploration plane may be flown directly to Guam, a distance of 3300 miles.

Daylight Landing

In radio conversation with Barney F. Boyd, his San Diego base station operator, Archbold last night said the second lap of the flight to Dutch New Guinea would begin this afternoon in order to make a daylight landing at Wake. He mentioned the possibility of continuing non-stop to Guam if weather conditions are favorable and the plane is functioning perfectly.

The giant craft, which will be used in transporting scientists and equipment in Dutch New Guinea for an American Museum of Natural History expedition, flew from San Diego, where it was built, to Pearl Harbor in 18 hours, six minutes last week.

Protection Promised

Never before has a plane been piloted non-stop from Hawaii, either to Wake or Guam.

Archbold has been informed that 150 Dutch soldiers will be assigned to the explorers at Lake Habbema, 110 miles from the seacoast of Dutch New Guinea, to protect them from native head hunters.

S D Tribune 6/3/38

NAPED BOY

Navy Mark Falls In Flight From S. D. to Hawaii

Richard Archbold, flying Pacific sky lanes in the interest of natural science, dropped his huge $250,000 Consolidated flying boat "Guba" down on the glassy waters of Honolulu harbor at 8:52 a.m. (P.S.T.) today, completing the first leg of his 6284-mile flight from San Diego to New Guinea.

Navy Mark Falls

Archbold, with five companions, made the 2267-mile flight from Pt. Loma to Honolulu in 18 hours, 9 minutes, a new record for an aerial

(Pictures on Page 15-A.)

crossing from California to Hawaii. It bettered the previous fastest San Diego-Honolulu flight of 20 hours, 30 minutes, made Jan. 18-19 this year by 18 navy planes, by 2 hours, 11 minutes.

The "Guba," a New Guinea native word for "sudden storm," rose quickly from the waters of San Diego bay at 2:43 p.m. yesterday after a short run of less than 1000 yards. A crowd of more than 200 was assembled at the Lindbergh field ramp to watch the take-off.

Although visibility conditions here at the time of departure were only fair, Archbold apparently found good weather for flying during most of the journey to Honolulu. Bernard Boyd, local radio amateur, who maintained radio contact with the plane throughout the flight, said no reports were received of the type of weather encountered. The International News Service reported a brisk tail wind aided the plane as it neared Honolulu.

Next Hop Monday

With Archbold, who plans to spend two years exploring in New Guinea for the American Museum of Natural History, of which he is a research associate, are Russell Rogers, pilot; Lewis A. Yancey, navigator; Gerald D. Brown, flight engineer; Raymond Booth, radio operator, and Stephen Barrinka, assistant flight engineer. They plan to remain at Honolulu until Monday, when they depart for Wake island, 1999 miles distant, and after a short lay-over there continue on to Humboldt bay, New Guinea, 2018 miles from Wake island.

When Archbold left San Diego he estimated the required flying time from here to Honolulu as 18 hours. He hopes to fly from Honolulu to Wake Island in 14 hours, 18 minutes, and from Wake Island to Humboldt bay in 14 hours, 24 minutes.

The "Guba" was flown at an average altitude of from 6000 to 7000 feet, according to radio advices from the plane to Boyd. A feature of the flight, Boyd said, was the contacting by the "Guba" of the expedition's base station in New Guinea by radio, and the contacting by Boyd of the same station.

Rare Specimens Sought

Awaiting Archbold and his flight companions at Hollandia, New Guinea, is a party of museum scientists, which will seek rare specimens of plant and animal life from the jungles surrounding Lake Habbema, 12,500 feet above sea level. In the museum's party are Dr. Austin Rand, Dr. Charles Brass, of Brisbane, Australia; William Richards, and Harold Rann, radio engineer. For the next two years the plane is to be used to carry supplies from Hollandia to the isolated camp high in the interior. Specimens gathered will be flown back to Hollandia for shipment to New York.

Archbold's plane, similar to the navy's long range patrol bombers, is equipped with life rafts, parachute flares and emergency rations. It is the second built by Consolidated Aircraft Corp., for Archbold,

(Continued on Page 6-A, Col. 3)

Record Set By Archbold On Pacific Hop

CONTINUED FROM PAGE ONE

the first having been turned over to the Sir Hubert Wilkins Arctic expedition last year, which sought six missing Russian transpolar fliers.

The "Guba" is the forty-fifth Consolidated Aircraft Corp.-built plane to fly from San Diego to Honolulu in the last 18 months. In a routine navy delivery Jan. 28, 1937, 12 PBY planes landed at Pearl Harbor, covering 2553 miles in 21 hours, 43 minutes. A second flight of 12 navy bombers was made April 12-13, 1927, when they flew 2553 miles in 21 hours, 21 minutes. The navy's mass flight record to Honolulu was made Jan. 18-19 this year, when 18 flew 2553 miles in 20 hours, 30 minutes. Archbold, himself, has made three previous long-distance flights in Consolidated planes. The first to cross the continent in a flying boat, Archbold flew from San Diego to New York June 23-24, 1937, covering 1700 miles in 17 hours, 3 minutes. On Dec. 3, 1937, he landed at Miami, Fla., after a 2300-mile flight from San Diego, made in 14 hours and 10 minutes. He repeated his Miami flight Feb. 26 this year, covering the 2300 miles in 12 hours, 35 minutes. His plane is powered by two Pratt & Whitney, twin-row Wasp engines. Its gasoline load, 1700 gallons, weighs 10,200 pounds.

Archbold's mother, residing at Bostonia, bade farewell to her son at home and was not at Lindbergh field for the take-off. The only relative of the "Guba's" personnel at the field when the plane left were Archbold's aunt, Mrs. Margaret Barron, and Mrs. Yancey, wife of the navigator.

STRANGE ABODE

Continued from Page Seven

of nine watches concealed within the walls of the home is the key to the music.

The mechanism is simple. He took an ordinary watch, removed the hands and substituted a cam. A pendulum is released every half an hour by the cam. This permits a wire lever to contact a mercury vial. This in turn forms a contact which starts a blower in the basement and the flutes play.

The instruments carved of wood by Dr. Nixon play three tunes, "Waters of Minnetonka," the "Indian Love Call" and "O Sole Mio."

Other watches in the walls with cam arrangements instead of hands form contacts which cause musical notes to come from hidden places. One set of notes is an exact reproduction of the singing of a canary. Another is that of a mocking bird. Several of these are arranged to play every twenty minutes. Another watch completes an electrical contact which causes a music box to run and play the tunes hidden within its mechanism. The box is one the doctor has adapted to his own whims.

A FEW years ago Dr. Nixon was listening to an organ concert. He was so thrilled by the voluminous music that he decided he must have an organ in his house. There was one small room which would be ideal for a small organ. Next day he started out to buy one. Nothing but a good one would do. Such organs are expensive. They cost much more than he could afford to pay. So Dr. Nixon trudged to the public library, obtained all the available textbooks on the art of organ building and made one himself.

Today the mighty pipes from which the fine music comes occupy a major part of the basement. This organ built by the doctor is the marvel of San Francisco's leading organists who declare that its delicate tone is unsurpassed by professional work. By installing a number of microphones and an ingenious system of mechanical control, Dr. Nixon has fixed the organ so it will play at a spoken command. To shut it off he pushes a pin into a small hole in the floor of an adjoining room.

His love of beauty is reflected in every room in the house. Although all you see on the outside is dull-looking window shades which are rarely raised, the windows on the inside are framed by rich drapes and curtains. The sills and casings are beautiful wood carvings.

The walls and ceilings of each room are a series of panel carvings, either of rosewood, walnut or mahogany, giving them a museum beauty, in some effects somber, yet cathedral-like in tone.

Connoisseurs have become excited at the doors in his mystery house. They are exquisite portraits of wood design entirely handmade. The doctor applied sculptural ability to the fashioning of gargoyle heads in several rooms. One of these he calls Bluebeard. It is on the door leading from the organ room to the entrance hall.

This head has discs concealed in its mouth. The voice, acting on a platinum point, forms a contact with the discs. This turns on electricity which sets gears to working and the door opens or closes at your command. There are also two beautiful reproductions in bronze of Parthenon friezes, another accomplishment of the doctor. Even the floors are inlaid in a delicate pattern design.

In the hallway is a disappearing hat rack. He did not want a row of hats to disturb the beauty of line in the panel carvings so he arranged a rack that folds back out of sight into the wall with a simple turn of a couple of hinges.

Near this rack is a telephone concealed behind a panel. When the bell rings, the clapper releases a miniature mouse trap and completes an electrical circuit that sounds buzzers in distant rooms.

HIS drive for beautiful surroundings is deeply reflected in his Death Valley room. Hanging on one wall is a beautiful and huge panoramic painting of the famous desert. A fountain plays in the center of the room among rocks and sand brought from Death Valley. Two other large paintings decorate the walls. One is of Yosemite Valley, the other of a woman.

The accomplishments of this man are not confined to these ingenious arrangements. If his house needs wiring he does it himself, for he is a qualified electrician. He has complete knowledge of architecture and building construction and also does his own remodeling. If he is ill he treats himself for he has mastered medicine. He can also compound his own prescriptions for he has a thorough knowledge of pharmacy. These are some of the trades he has followed during his life. Shipbuilding was another.

He quite often entertains friends in the haunted house on Saturday evenings. A favorite form of entertainment is to prove to them that the hand is faster than the eye. He is an accomplished magician, having been on the stage entertaining with magic when a young man.

When asked why the exterior of his home is in such startling contrast to the interior he declares there are several reasons. First, he lives within the house and it is there he wishes his beauty. Second, he does not want the house to be too attractive for it attracts enough people now who bother him and keep him from his work.

His principal reason for leaving the outside weather-beaten, he says, is because "no haunted house has a fresh coat of paint."

Lighting

A NEW vista is opening in the field of artificial lighting as a result of bombarding fluorescent powders with ultraviolet rays.

Cool light is thus being produced which duplicates all the pastel tints of the rainbow. It is announced by the General Electric laboratories that these new lumiline lamps provide hitherto unobtainable tints of colored light with as much as 120 times the illumination which could be produced by filament lamps of the same color. And the latest fluorescent lamps not only consume less current, but generate next to no heat.

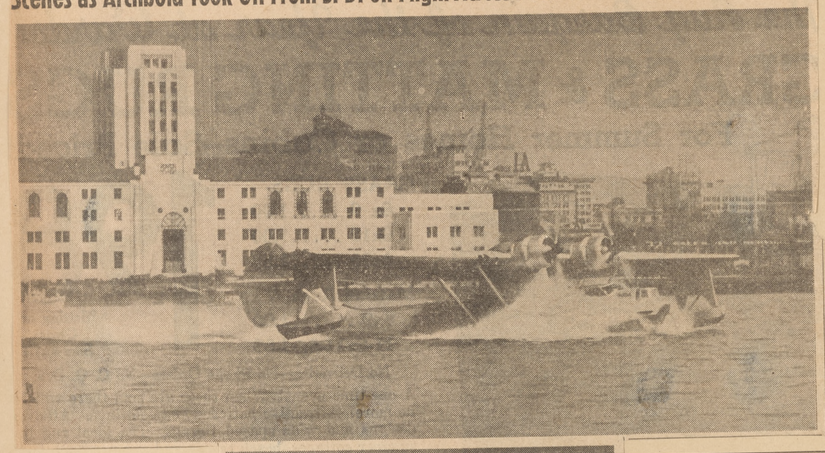
Scenes as Archbold Took Off From S. D. on Flight Across Pacific to New Guinea



Scenes as Richard Archbold took off yesterday afternoon for New Guinea. Upper: Archbold's plane, the Guba, races across the bay. The new civic center building is in the background. Lower: Archbold.

ARCHBOLD SET FOR LAST 'LEG'

S Diego 4/8/38

S. D. Scientist, Party Hop Today For New Guinea

At Wake Island, Richard Archbold and the five men with whom he is making a trans-Pacific flight from California to Hollandia, Dutch New Guinea, today prepared their giant flying boat for the last leg of the journey.

Archbold, sportsman and explorer, said the take-off would be made at 7:30 p. m. (PST) today.

The twin-motored flying boat made the long hop here from Honolulu in 16 hours and 40 minutes and Archbold described the jump as "uneventful."

In New Guinea the craft will be used to aid in explorations for the American Museum of Natural History.

NEWS FLASHES TIE IN S. D., HONOLULU ON GUBA ARRIVAL

By SPENCER HELD

The speed with which modern news travels was shown graphically by the "photo finish" staged by the Associated Press bureaus in San Diego and Honolulu today in reporting the arrival of the flying boat "Guba" at Pearl Harbor.

Richard Archbold's big plane, 18 hours and nine minutes out of San Diego, settled down on the waters of Honolulu harbor at 8:52 a.m.

Newspaper men at San Diego and Honolulu got the story at approximately the same time. Bernard Boyd, local radio amateur, in constant communication with the "Guba" as it roared over the Pacific, telephoned the news to a Tribune reporter. The latter passed it on to the Associated Press correspondent at the next desk.

The A.P. man typed a brief bulletin and handed it to Ted McKenna, another member of the staff. Ted dashed upstairs to the A.P. office, giving the bulletin to H.P. ("Wilkie") Wilkinson, teletype operator. Wilkinson sat down at his sending machine—a typewriter-like instrument—and broke into the "Big City" wire with the bulletin.

Clicks Nearly Identical

As he punched out the story, the words were recorded automatically on the teletype machine next to him—hooked to the 'Big City" wire—and simultaneously on the machines in Los Angeles, Long Beach, Fresno, Oakland, Sacramento and San Francisco, the control point.

Next to the "Big City" teletype in the local office is another machine receiving news on the "Round Robin' east wire. This hookup includes San Francisco, Sacramento, Reno, Salt Lake City, Denver, Kansas City, the control point; Albuquerque, Phoenix, Los Angeles, Long Beach, San Diego and Fresno.

As "Wilkie" punched out the first few words of the local bulletin, the "Round Robin" wire was carrying a bulletin from Honolulu via San Francisco, "The flying boat 'Guba' . . . landed here from San Diego, Calif., at 6:22 a.m. today" (8:52 Pacific standard time), it stated.

The stories were punched out almost word for word from San Francisco and San Diego, appearing simultaneously on the two teletype machines. 'They finished in a dead heat," said McKenna.

Archbold Hops At 2 P.M.; Plane Tested

June 29 38

Richard Archbold, planning to take off from San Diego for New Guinea at 2 p.m. today in his $250,000 Consolidated Aircraft Corp.-built flying boat "Guba," took the 13½-ton craft aloft this noon for its final test flight before attempting the 6284-mile flight across the Pacific.

With five flight companions, Archbold hopes to land at Pearl Harbor, Honolulu, first stop en route, shortly after 6 a.m. tomorrow.

Aboard Archbold's plane, the "Guba," are 1700 gallons of gasoline and emergency rations sufficient to last for three weeks. Newsreel cameramen arrived here today to take pictures of the take-off.

With Archbold on the flight will be Russell Rogers, pilot; Lewis A. Yancey, navigator; Gerald D. Brown, flight engineer; Raymond Booth, radio operator, and Stephen Barrinka, assistant flight engineer.

The six hope to fly the 2267 miles to Honolulu in 18 hours, the 1999 miles from Honolulu to Wake island in 14.3 hours, and the 2018 miles from Wake island to Humboldt bay, New Guinea, in 14.4 hours.

Archbold, mammologist and research associate of the American Museum of Natural History, plans to remain in New Guinea for about two years, collecting specimens and photographs for the museum. He will use the "Guba" to transport equipment and personnel from the base on the north coast of New Guinea to virtually inaccessible lakes high in the interior.

LEGO S Diego Tribune 6/7/38

GUBA TO MAKE WAKE ISLAND FLIGHT TODAY

Archbold May Continue Non-Stop To Guam, Says Message

Richard Archbold and his crew of five were to take off from Hawaii in their Consolidated airboat "Guba" at about 4:30 p. m. (P.S.T.) today for Wake Island, 1999 miles away, with a possibility that the big exploration plane may be flown directly to Guam, a distance of 3300 miles.

Daylight Landing

In radio conversation with Barney F. Boyd, his San Diego base station operator, Archbold last night said the second lap of the flight to Dutch New Guinea would begin this afternoon in order to make a daylight landing at Wake. He mentioned the possibility of continuing non-stop to Guam if weather conditions are favorable and the plane is functioning perfectly.

The giant craft, which will be used in transporting scientists and equipment in Dutch New Guinea for an American Museum of Natural History expedition, flew from San Diego, where it was built, to Pearl Harbor in 18 hours, six minutes last week.

Protection Promised

Never before has a plane been piloted non-stop from Hawaii, either to Wake or Guam.

Archbold has been informed that 150 Dutch soldiers will be assigned to the explorers at Lake Habbema, 110 miles from the seacoast of Dutch New Guinea, to protect them from native head hunters.

NAPED BOY

Navy Mark Falls In Flight From S. D. to Hawaii

Richard Archbold, flying Pacific sky lanes in the interest of natural science, dropped his huge $250,000 Consolidated flying boat "Guba" down on the glassy waters of Honolulu harbor at 8:52 a.m. (P.S.T.) today, completing the first leg of his 6284-mile flight from San Diego to New Guinea.

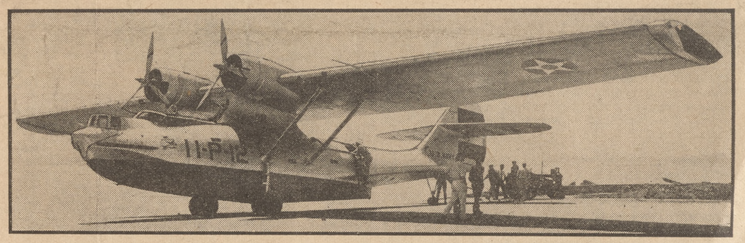
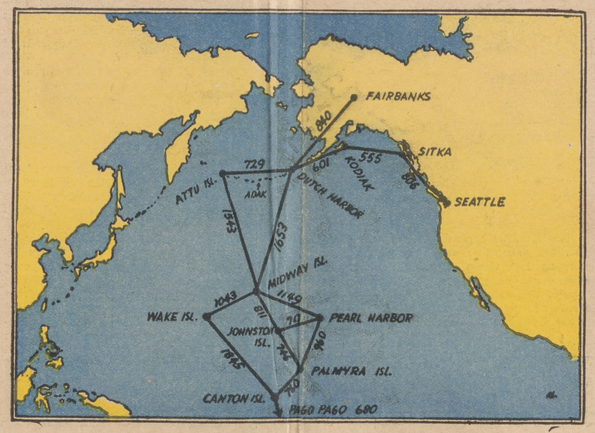
Under construction now, the "fence" will provide the nation with an ever-ready facility for information and security. Exact details are closely guarded, but the objective was recently disclosed before the House Naval Affairs Committee — and now to you

BY WALDO DRAKE



FORERUNNER OF THE NEW PLANES, THE TWO-MOTORED PBY-2 WHICH HAS PERFORMED BRILLIANTLY FOR THE NAVY



SKETCH SHOWING HYPOTHETICAL LINES THAT WILL BE FORMED WHEN 'FENCE' IS COMPLETE

A 8000-mile "fence" down the center of the Pacific, to provide the nation with an ever-ready facility for information and security, is being quietly built by the Navy.

Briefly, it will consist of bases for both military and commercial seaplanes along this far-flung line; with special attention being focused on facilities to be constructed along its center, at Midway, Wake and Canton islands.

Although exact details are being closely guarded by the Navy, the objective was recently disclosed by Admiral William D. Leahy, Chief of Naval Operations. In testimony before the House Naval Affairs Committee, Admiral Leahy made the following succinct explanation of America's new mid-Pacific frontier:

"It is impossible for anybody to say where the line of defense is going to be. We have a line shown on the map which we are going to cover in in order to obtain information of the enemy.

"It is not a line of defense. The line of defense may be much closer to our own shores than that; it may be beyond that, but that is a line where we expect to obtain sufficient information upon which to base our operations."

The most significant thing about this plan is that it comprises a program which can—in the observable future, at least—be successfully executed, in either peace or war, by just one agency on the face of the earth—the United States Navy.

That is because the Navy has expended ten years of tireless, well-directed effort in the development of the long-range patrol flying boat, together with the perfection of a doctrine for the operation of this type of plane under the most arduous conditions.

The result is that today the United States Fleet has some 200 huge bimotored flying boats in the five wings of the Scouting Force patrol squadrons; each plane capable of transoceanic flights in excess of 3000 miles. These big air cruisers, carrying and sustaining seven-man crews, are likewise able to land and take off in midocean in any but the most boisterous weather.

THEIR pilots have been schooled and indoctrinated in exact transoceanic navigation. They have proved their efficiency in this respect in the recent numerous mass flights from San Diego to Hawaii and to Panama, and from Seattle to Alaska, all completed without mishap and exactly on schedule. Likewise, the squadrons have maintained constant radio communication with distant bases during these flights.

It is this great aerial patrol force, unequaled in world aviation, that is already prepared to take over the constant patrol of the Pacific if and when danger of war appears. To those familiar with the accomplishments of the patrol squadrons in recent maneuvers it is inconceivable that an enemy naval force of consequence could enter an area under their patrol without being observed and reported.

As indicated by the accompanying chart, the Navy's gigantic "fence" of air observation bases would begin at the Sand Point base near Seattle and continue out and down the center of the Pacific as follows: 806 miles north to Sitka, where an operating base has been in operation for a year; 555 miles across the Gulf of Alaska to Kodiak Island, where $5,000,000 is to be expended for a similar fleet air base; 600 miles down the Alaskan Peninsula to the naval base at Dutch Harbor; thence through the Aleutian island chain to westernmost Attu Island, 729 air miles west of Dutch Harbor.

From Attu, or more properly, Dutch Harbor, the "fence" will run south 1653 miles to Midway Island. At this mid-Pacific atoll, already under development as a station on the California-China route of Pan American Airways, the War Department is preparing to expend more than $1,000,000 to build a breakwater and seaplane basin for the Navy. Before this is published, the Navy transport Sirius will have departed San Francisco for Midway with the Army expedition, headed by Lieut. Henry L. Hille, Jr., Corps of Engineers.

West of Midway 1034 miles lies Wake Island, where a similar seaplane harbor will be constructed after completion of the Midway project. The next vital "post" in the line is Canton Island, 1845 miles southeast of Wake. From Canton Island, recently annexed to the United States by President Roosevelt's executive order, the line runs 680 miles south to its southern terminus, the magnificent natural harbor at Pago Pago, American Samoa.

Incidentally, it is observed that the line from Wake to Canton Island runs directly in front of the Japanese-mandated Marshall Islands, which, observers believe, would be used by Japan as points d'appui in any trans-Pacific naval expedition.

THE great fleet base at Pearl Harbor, Hawaii, where the bulk of the Navy's transoceanic aerial patrol force is already stationed, would of course play a vital role in this Pacific reconnaissance plan. In fact, Pearl Harbor would most likely prove the keystone of the entire scheme. As indicated on the chart, the squadrons from Pearl Harbor could operate to the south and westward via intermediate bases at Johnston Island and Palmyra Island.

In the remote possibility that enemy air or surface forces did slip by this line unobserved, either to the south or north, there remain strong secondary safeguards. At Fairbanks, 840 miles northeast of Dutch Harbor, the Army is building its primary Alaskan air base. At Panama, the three squadrons of Patrol Wing Three are on station. Their 3000-mile scouting line to the westward could easily be extended, to meet the Pearl Harbor radius, by seaplane tenders.

Pearl Harbor will be the center of a gigantic circle, with a 1500-mile radius, which would be kept under constant patrol by both Army and Navy scouting and bombing squadrons. In addition, air patrols maintaining scouting lines far off the Pacific Coast would operate from Navy bases at San Diego, San Pedro, San Francisco Bay and Puget Sound, from Army airdromes at March Field, San Francisco and Spokane. Finally, there would be the United States Fleet itself, with its hordes of carrier-based aircraft, plus the air and surface scouting of its cruisers and their planes, its destroyers and submarines.

Actually, this "aerial line of observation" plan is only in its infancy. All of the Navy's mass flight records of the past several years have been established by the Consolidated two-motored "PBY" flying boats. These are remarkable planes, but their brilliant performance has already been eclipsed by another Consolidated product, the giant four-motored "XPB2Y-1," now completing rigid Navy tests at San Diego.

This $1,000,000 air-borne cruiser, powered with four 1050-horsepower motors, has a gross weight in excess of 60,000 pounds and an extreme range of nearly 5000 miles. Her two decks contain complete living and sleeping quarters for a crew of twelve, plus two auxiliary engines for supplying current for both lighting and a complex radio equipment.

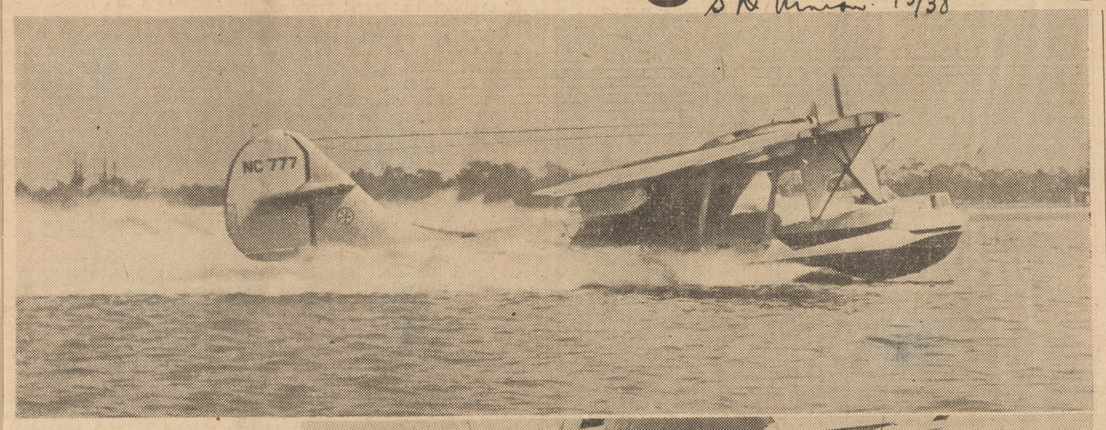
But, although the "XPB2Y-1" will greatly expand the radius of the Navy patrol wings, she herself is soon to be dwarfed by the Boeing Clippers to be used in trans-Pacific and trans-Atlantic routes by Pan American Airways.

AND the Navy is planning even bigger flying cruisers. When the "XPB2Y-1" was designed the 1050 horsepower motors were the highest-powered engines available. Today, the 1600-horsepower motor is here and the 3000-horsepower plant is in sight. This additional power and advances in design and construction practice promise seaplanes whose size and inherent strength will definitely eliminate existing restrictions of operating radius and seaworthiness of hulls.

Observers regard the scheme of aerial observation bases as the greatest advance in Pacific naval strategy since selection of Pearl Harbor as a naval operating stronghold. Development of the plan was not possible, however, until Japan abrogated the London Naval Treaty of 1936.

'Flying Lab' 1100 Miles at Sea On Scientific Flight to Jungles

S D Union 6/3/38



Ready to lift its wings in flight to Honolulu, the $250,000 "flying laboratory" (upper) is shown taking off after having been launched from the seaplane ramp at Lindbergh field. The crew (lower, left to right), Stephan Barrinka, Ray Booth, Lewis Yancey, Russell Rogers, Richard Archbold and Gerald Brown.

Archbold Off In S. D. Plane; At Hawaii Today

BULLETIN

Roaring through clear weather, Richard Archbold, who took off from here at 2:43 yesterday afternoon for Honolulu, reported his position by radio at 11:15 last night as 1119 land miles west of San Diego.

On an air adventure which will take them over the trackless wastes of the South Pacific and the jungles of New Guinea, Richard Archbold, research associate of the American Museum of Natural History, with five flight companions, took off in their $250,000 "flying laboratory" at 2:46 p. m. yesterday for Hollandia via Honolulu and Wake island.

Russell Rogers, pilot, gave a masterly exhibition of airmanship at the takeoff. Pointing the nose of the 14-ton craft seaward, he opened the throttle of the two 1000-horsepower motors and in exactly one minute after a run of less than 1000 yards, lifted the plane into the air.

Flying with Archbold on the 6284-mile air voyage to New Guinea are, in addition to Rogers, who hails from New York, Lewis A. Yancey, navigator, New York; Gerald D. Brown, flight engineer, New York; Stephan Barrinka, assistant flight engineer, New York, and Ray Booth, radio operator, Rosland, N. J.

BAD WEATHER AHEAD

Ten minutes before the take-off, Archbold and Yancey conferred with Dean Blake, meteorologist. Weather conditions were far from ideal. Heavy clouds extended far out into the Pacific, but Blake advised Archbold to take the plane up to the 6000-foot level, where he would meet with tail winds and be above the cloud banks. Rainstorms will be encountered 500 miles west of the island of Oahu.

Archbold said he expected to land at Pearl Harbor within 18 hours or in time for a late breakfast this morning. Sunday at dawn he will take off for Wake island, 1999 miles distant, and Tuesday for Hollandia on the north coast of New Guinea. This leg of the flight, 2018 miles, over an unblazed airway, will take the air adventurers well east of Japan's mandated islands, over the Ralik chain of atolls into the area of the Southern Cross.

Awaiting Archbold at Hollandia is a party of scientists from the American Museum of Natural His-

(Continued on Page 3, Col. 3)

S. D. AMATEUR WILL WATCH BY RADIO

Barney Boyd, amateur radio operator (left), bids farewell to Richard Archbold and his flight companions. Boyd plans to keep in constant radio communication with the plane.

* * *

Flying Lab Due At Hawaii Today

(Continued from Page 1)

tory including Dr. Austin Rand; Dr. Charles Brass, botanist from Brisbane, Australia; William Richards, mammalogist, and Harold Rann, radio engineer.

TO SHUTTLE SUPPLIES

For the next two years the plane will shuttle between the main base at Hollandia and a camp to be established at Lake Habbema, 12,500 feet above sea level and 300 miles inland. Over jungle trails scientific expedition members traveled for days with mules or native Papuan carriers, Archbold's plane, named the Guba, will be able to traverse in minutes. Jungle camps where the plane cannot land will be provisioned by parachute. Specimens of New Guinea's plant and animal life will be flown back to Hollandia and thence shipped to New York.

The Guba is the second built by Consolidated for the New Guinea expedition. The first ship was sold to Russia when a plane of this type was needed to search for the missing Russian polar fliers.

LIKE NAVAL BOMBERS

It is similar in construction to the navy's long-range patrol bombers, is equipped with life rafts and parachute flares and emergency rations to last several weeks. The gas capacity at the take-off was 1725 gallons.

Barney Boyd, short-wave radio expert, 4635 Fifty-sixth st., has made arrangements to keep in constant communication with Archbold during the entire flight to Hollandia. The radio call letters of the Guba are KHAHX and those of Boyd's station W6L-44. Messages will be exchanged on 6210 and 12400 kilocycles.

Mrs. Margaret Barron, an aunt of Archbold's, and the wife of Capt. Yancey were the only relatives present at the take-off. Archbold's mother, at Bonita, preferred to remain at home after bidding her son farewell.

Archbold Hops For Wake Island

S D Union 6/7/38

Night Trip to Avert Japanese Protest

BULLETIN

Roaring smoothly through ideal weather at 120 knots, Richard amateur, reported at 11:35 last night that he was 529 miles the hop. Archbold gave his position as 12.20 north latitude, 166.30 west longitude, 270 degrees west. He said the "flying laboratory" was up 7500 feet, and estimated Wake arrival time at 11:15 a. m. (P.C.T.), if winds and weather continue favorable. The distance to Wake from the position given was reported as 1547 miles.

HONOLULU, June 6 (A.P.)—The big seaplane which Richard Archbold, expedition leader, is flying from California to New Guinea took off from here at 5 p. m. (7:30 p. m. San Diego time) today and headed for Wake island, 2300 miles away.

Archbold observed as he left that his flying boat should alight at Wake island at dawn Wednesday—as they lose a day crossing the international dateline.

The craft will complete its journey around the world at the conclusion of two years' scientific work for the American Museum of Natural History at New Guinea, Archbold said.

First, however, it must prove itself on the flight to Wake island, and also on the final leg of the present trip—2300 miles from Wake to Hollandia, New Guinea, with Archbold and six other men aboard. It functioned well Friday in alighting here from San Diego after flying 2624 miles in fast time.

Crew members of the "flying laboratory" pointed out that departure from Wake island was in the afternoon to reach New Guinea after dawn. Therefore if the plane passes over Japanese mandated islands it will be in the night time and the crew will see nothing. It has been reported the Japanese authorities might object to such flight.

Archbold Hops For New Guinea

S D Union 6/9/38

On the last leg of his 2-stop flight from here to New Guinea, Richard Archbold, who hopped from Wake island at 9:03 local time last night, reported "everything O.K." in a radio contact a short time later with Bernard F. Boyd, local amateur. The flying explorer, said Boyd, in frequent contact with the plane, estimated that it would take from 16 to 17 hours to negotiate the 2300-mile open-water flight.

WAKE ISLAND, June 9 (Thursday) (A.P.)—The seaplane Guba, bearing Richard Archbold and five companions on a pioneer research flight to Hollandia, New Guinea, hopped from here today.

The American Museum of Natural History's flying laboratory will be the first plane ever to undertake flight of the 2300 miles of open ocean from Wake to New Guinea.

While Archbold, New York scientist explorer, is head of the expedi-

(Continued on Page 2, Col. 3)

Archbold Hops For New Guinea

(Continued from Page 1)

tion, Lewis A. Yancey, New York, veteran transatlantic flight navigator, will have the job of navigating the twin-motored flying boat to its destination.

The Guba arrived here yesterday after a non-stop, 2300-mile flight from Honolulu in 16 hours, 45 minutes. It was the first time the distance had been flown without a stop. Pan American clippers travel the route but stop at Midway island.

6 S. D. NAVY BOMBERS HOP TODAY ON FIRST LEG OF ALASKA FLIGHT

S D Union 6/13/38

En route to the navy's new fleet air base at Sitka, Alaska, first of a number of aerial bases to be established in America's "last frontier," six multi-motored long-range patrol bombers will take off from San Diego at 9 this morning for Seattle.

The planes, comprising Squadron 16, commanded by Lt. Comdr. Delbert L. Conley, with a crew of 12 officers and 30 men, will make a continuous nine-hour flight from Pt. Loma to Puget Sound.

Squadron 16 is a unit of Patrol Wing 4, which operates in the Seattle-Alaska sector.

Rear Adm. Charles A. Blakely, commander of aircraft, Scouting force, will sail aboard the flagship Wright next Monday for the north coast. He will be absent two months. The tender Langley will accompany the Wright but will not return to San Diego until late in the fall.

Several changes have been made on Admiral Blakely's staff. Comdr. Dixie Keifer has been ordered to duty as inspector of aircraft engines at Hartford, Conn. He has been relieved as engineer officer by Lt. Comdr. T. S. Combs, formerly attached to Scouting Squadron 5 aboard the new carrier Yorktown. Lt. W. P. Cogswell, formerly on the staff of Vice Adm. Ernest J. King, has taken over duties of communications officer as relief of Lt. H. C. Owen.

Non-Stop Flight to Seattle Set for 6 S. D. Planes

Under command of Lt. Comdr. D. L. Conley, six naval airboats of Patrol Squadron 16 will leave San Diego early Monday on a non-stop flight to the Sand Point Naval Air Station, Seattle. Next month the squadron will fly to the new fleet air base at Sitka. The personnel includes seven officers and 40 men.

CONSAIR'S CHAMPIONSHIP TEAM OF KEGLERS

S D Union 6/22/38

The Sheet Metal team recently defeated the Office department to gain undisputed title of the championship bowling club of the Consolidated Aircraft leagues, just ended at Sunshine alleys. Members of the winning team are (left to right): Ward LeVere, Henry Meyers, Kenneth Williams, Ray J. Dyjak and Matt R. Dyjak.

Secret Ballot To Determine Consair Bargaining Unit

Date For Election Set Tomorrow; Employes As Of May 6 To Be Eligible

S. D. Sun 6/27/38

Date for an election by secret ballot to determine which group will represent employes of the Consolidated Aircraft Corporation in collective bargaining will be decided tomorrow.

Such was the word received late yesterday from Maurice Howard, field examiner for the National Labor Relations Board office in Los Angeles, following issuance of an order Friday by the NLBR in Washington that an election be held within 15 days.

Unions to Confer

Representatives of aircraft division, local 506, of the United Automobile Workers of America, a CIO affiliate, and of the International Association of Machinists, aircraft local 1125, an AFL affiliate, will meet with representatives of the NLRB and of Consolidated at 10 a. m. in the office of Donald Frye, plant personnel director, to arrange details of the poll and its date.

Eligible As of May 6

In its order for the election, the NLRB specified that all men employed by Consolidated as of May 6, last, will be eligible to vote. Only exceptions to the eligible voters will be those who voluntarily left the employ of the company or who were discharged for cause since May 6.

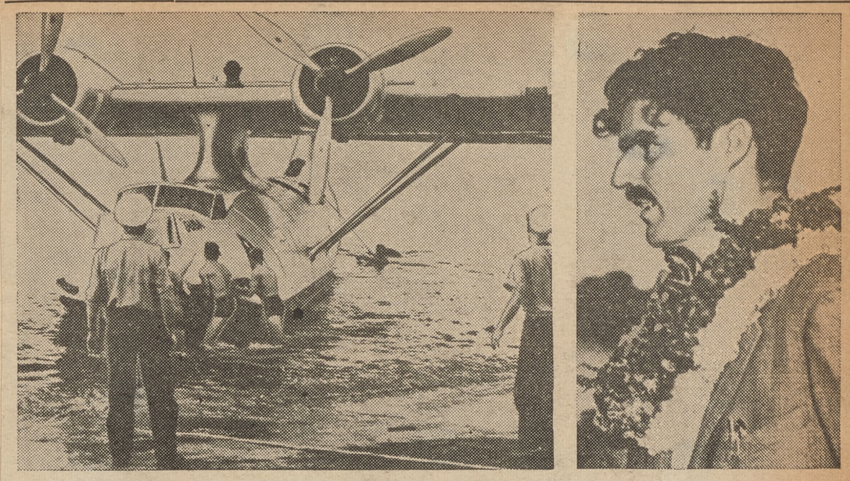
Officials of the local CIO affiliated union interpret the order to mean that all men laid off since that date by reason of a slack in work orders will be able to vote.

It was reliably, but unofficially, reported that from 70 to 100 workers have been laid off each week since May 6 because of the asserted lack of work.

Thirty-seven planes are reported to be under construction in the plant at present.

Flying Laboratory on Record Trip

JUNE 15, 1938



The "Guba," huge flying laboratory of Richard Archbold expedition into New Guinea, is moored (left above) on landing at Pearl Harbor, Hawaii, after record flight from San Diego. Ship will be expedition headquarters and laboratory on arrival in New Guinea. Archbold wears leis on arrival. The 6,284-mile flight was completed without incident on June 10. The expedition will explore New Guinea for two years.

SENATE APPROVES CLAIM OF CONSAIR

SD "NOON" 6/29/37

A bill by Sen. McAdoo, authorizing payment of $92,993 to settle claims of the Consolidated Aircraft Corp. for additional costs incurred in carrying out a contract with the war department in 1933, was approved yesterday by the senate, The Associated Press reported.

Another bill, by Sen. Walsh (D-Mass), authorizing the navy to transfer to San Diego certain lands within the naval supply depot in the city, also was passed.

PLANS FOR CONSAIR ELECTION MAPPED

S D Sun 6-27-38

To determine the date and rules of conduct of the labor election which the National Labor Relations Board ordered held at the Consolidated Aircraft Corp. plant within the next two weeks, representatives of the company, the rival aircraft unions, and the NLRB, met in the San Diego plant today.

Contesting for the privilege of representing the hourly paid employes in collective bargaining are Aircraft Local 1125, of the AFL International Association of Machinists; and Aircraft Local 560 of the CIO United Auto Workers of America.

CONSOLIDATED Aircraft Corp. celebrated its fifteenth birthday May 29 with an open house that brought 32,000 visitors through the plant.

WITHOUT the fan-fare accompanying similar accomplishments, Richard Archbold spans the Pacific Ocean to New Guinea in his Consolidated flying boat "Guba." The crew consists of Russel Rogers, pilot; Lewis A. Yancy, navigator; Gerald Brown, flight engineer; Stephen Barrinka, assistant flight engineer; and Ray Booth, radio operator.

June 20 '38 NEWSWEEK

AVIATION

Epic of Private Flying: New York Zoologist Pioneers in Air and Jungle

Two years ago, a tall thin young man stood cursing on the beach at Port Moresby, New Guinea. A sudden storm had just swept across the bay, sinking Richard Archbold's $85,000 Fairchild amphibian. But it wasn't the financial loss that disturbed the American Museum of Natural History's zoologist. The fortune founded by a grandfather who had once been the president of Standard Oil Co. of New Jersey would stand far worse blows than that. The plane was Archbold's only means of sending supplies to his expedition, which was laboring far in the mountainous interior of the island. He had to order a long, laborious retreat. But he didn't give up.

Last week Archbold stood squinting through the early morning sunlight at another New Guinea harbor scene—this time with intense satisfaction.

It had been a long two years. Back in the United States, he had waited months for delivery of the best plane he could buy for his purposes—a $250,000 twin-engined Consolidated flying boat, sister ship of the Navy's crack patrol bombers. Then Levanevsky's Moscow-California plane disappeared in the Arctic, and Archbold let the Russians buy his new delight to press their search.

A second Consolidated delivered, Archbold assembled his crew: Russell Rogers, veteran of the 1936 expedition, as pilot; Lewis Yancey, transatlantic flyer, as navigator; Ray Booth, as radio man; Gerald Brown and Stephen Barrinka, as mechanics.

June 2, with no more apparent effort than a Pan American Clipper crew shows taking off on a weekly flight to the Orient, Archbold and his companions set out from San Diego. Last Friday their ship rode peacefully at her moorings in Hollandia on the northern coast of Dutch New Guinea. Stopping only at Hawaii and Wake they had spanned 7,000 miles of ocean with a brilliance unparalleled in private flying. And ahead lay a two-year expedition in a region of the interior that promised science even richer finds than the country of his 1936 efforts: Stone Age tribes, whole jungles of uncatalogued plants and case after case of animal forms no white man had yet seen.

48 BOMBERS SCHEDULED FOR MASS FLIGHT

S D Sun 6/23/38

Secrecy Shrouds Saturday Takeoff Of Squadron For Seattle

One of the most ambitious mass flights, in number of planes involved, in Navy history will get under way here Saturday, it was revealed officially today.

Forty-eight of the Navy's powerful, long-range PBY-type patrol bombers will begin taking off the harbor here at 5:30 a. m., and by 8 a. m. the big craft will be swinging along in formation, over the Pacific, heading for Seattle.

Secret Maneuvers

Rumors were current that the squadrons, after arrival in Seattle, would head for the Fleet airbase at Sitka, Alaska, for secret maneuvers, testing the defenses of the nation's most northerly outpost.

Rear Adm. Charles A. Blakely, commander of the aircraft scouting force, will be in command of the flight. It could not be learned officially, but it was rumored, that Adm. Blakely would transfer his flag to one of the planes for the hop. His flagship, the USS Wright, sailed from San Diego Monday to take part in tactical maneuvers now in progress off the coast and then head for Seattle.

Langley En Route

The aircraft tender USS Langley, a converted carrier, also sailed Monday for Seattle.

Unusual secrecy surrounded all plans for the flight, and its objective was known only to members of the high command.

It was known, however, that an unusual concentration of warships will take place in northwestern waters on July 4. Five dreadnaughts are to be in Puget Sound at that time, and virtually all heavy cruisers will be in and around Puget Sound and in Alaskan waters, leading to rumors these surface craft would co-operate with the planes in secret maneuvers.

Pacific Flyer-Explorer Due Here At End Of Year

MELBOURNE "HERALD" 1 JUNE 1938

Richard Archbold, young millionaire explorer and scientist, who is expected to begin his Pacific flight from California to New Guinea within the next two weeks, will almost certainly fly on to Sydney about December.

Mr Archbold would already have been in Australia had not a Soviet trans-Polar flight ended in disaster.

Although he originally planned to visit Australia and New Zealand before settling down to exploration and scientific work in the unmapped portions of New Guinea, he now proposes to spend six months there before coming south, according to private advice received here.

Sydney is now mentioned as his destination, but it is thought certain here that he will wish to see more of Australia and will fly on at least as far as Melbourne.

The Tasman flight he originally planned would be very easy compared with some of the stages of the California-New Guinea flight.

SOVIET REQUEST

Mr Archbold, whose scientific work will be done for the American Museum of Natural History, first intended to set up a base in New Guinea a year ago. His first flying-boat, a modification of the famous American Navy Consolidated II patrol boat, was ready when the Russian airman, Levanevsky, was lost on a Polar flight.

The Soviet Government asked Mr Archbold to sell his boat, as it was the most suitable aircraft available for long Arctic flights. He agreed, and since then Sir Hubert Wilkins and Mr Hollick-Kenyon—who was Lincoln Ellsworth's pilot on his Antarctic flight two years ago—have flown the boat many thousands of miles on the unavailing Arctic search for the lost plane.

Mr Archbold's present boat, the Guba II, is a sister-ship of the first.

4 JUNE 1938

AIR EXPLORATION OF N. GUINEA

MELBOURNE "SUN NEWS-PICTORIAL"

American Expedition Leaves San Diego

Sun World Cables

SAN DIEGO (Cal.), Friday.

The Archbold air expedition left for Honolulu yesterday, en route for New Guinea by way of Wake Island.

The aerial explorers are Richard Archbold, a wealthy scientist and five companions. They are accompanied by two aviation experts, who assisted Sir Hubert Wilkins in his recent search for the missing Russian flyers.

Their plane, which cost £62,000, is expected to reach Honolulu in 18 hours. It has a cruising range of 4000 miles.

Mr. Archbold expects to spend two years in Dutch New Guinea collecting mammalogical species.

Services plan huge craft

Unofficial reports indicate Army and Navy developing 100,000 pound bombers

Military aircraft grossing more than 100,000 pounds are in the making, according to reports that leaked out last month when the launching of Boeing's 4¼-ton clipper and Douglas' 30-ton land transport created an aircraft size-conscious public. A 160,000-pound Army bomber going into construction at the Douglas plant and an experimental Navy craft weighing in excess of 100,000 pounds were said to be the latest developments of large craft by the military services of this nation.

The proposed bomber was said to have a span of 250 feet, will probably have six 2,000 h.p. engines and will cruise at a speed comparable to that of the Boeing "Flying Fortress." It is believed that the proposal Douglas made to Pan American Airways was based on the engineering figures obtained from the Army experimental contract for this huge bomber, the Pan Am plane being the commercial version of the military plane.

Recent appropriations for Naval experimental projects has included $2,400,000 that has been earmarked for the development of a huge flying boat grossing about 100,000 pounds—a forerunner of a fleet of 15. Reports vary as to the placing of the order with both Martin and Consolidated coming in for mention. According to past Navy practices it is quite possible that both of these firms have been issued an experimental contract with experimental appropriations apportioned over a period of two or more years.

The exact plans of the military services are unknown and probably will remain in that state for some time to come but it is certain that at present the services are at least seriously experimenting with the idea of large aircraft and we will soon see today's "big" ships dwarfed with craft of almost unbelievable size.

CONSAIR VOTE SET JULY 12

All Workers As Of May 6 Eligible To Ballot

S.D. Sun—7/1/38

The collective bargaining agent for hourly paid employes at Consolidated Aircraft Corp. will be determined at a labor vote to be held at the plant July 12, it was agreed late yesterday after a series of conferences attended by repsentatives of the National Labor Relations Board, the CIO and AFL Aircraft locals, and the company.

May 6 Deadline

Eligible to cast ballots will be all workers who were on the Consolidated payroll May 6, 1938, except those who voluntarily left employment or were discharged for violation of company rules.

The ballot will enable approximately 2500 factory workers to determine whether they wish to have CIO Aircraft Lodge 506, United Automobile Workers of America, of AFL Aircraft Lodge 1125, International Association of Machinists, as their representatives in bargaining for a new contract with the management.

Ballots Mailed

Sample ballots will be mailed to all unemployed Consolidated employes eligible to vote, and to former employes now working in aircraft concerns in the Los Angeles area. The latter will be allowed to vote in the vicinity of their present employment.

Meanwhile, Mayor Percy J. Benbough and members of the City Council today received a plea from Otto W. Benziger, executive secretary of the CIO San Diego In-

Turn to Pge 2, Col. 5.

CONSAIR VOTE SET JULY 12

(Continued from Page 1)

dustrial Council to "do your part to provide employment for all those in need" as a result of alleged recent "wholesale layoffs by Consolidated Aircraft Corp."

"Hundreds of men are being added to the list of unemployed here because of wholesale layoffs by the Consolidated Aircraft Corp," Benziger wrote. "We appeal to you to exert your influence to the utmost to make sure that none of San Diego shall go hungry or without proper shelter.

Ask Investigation

"We ask you to investigate the causes back of these wholesale layoffs, and to correct them if it is in your power."

In another communication to Benbough and the council,, Benziger called attention to "interruption by a member of the San Diego Police Department of the distribution work of the Aircraft News (CIO publication)" on June 20 at the Consolidated plant.

Benziger said this matter was placed before council to "prevent a repetition of the unfortunate incident."

Aircraft Innovation Successful

HARRY DOWNES, Lockheed test pilot, in Lockheed Altair monoplane, with two high-power motors operating a single propeller, which he put through strenuous tests declared to have been satisfactory in first tryout.

—Wide World photo.

New 2-Motor Plane Uses 1 Propeller

Two high-powered airplane motors operating a single propeller!

This revolutionary aircraft power principle was being tried out yesterday on a redesigned Lockheed Altair monoplane at the Municipal Airport by Harry Downes, Lockheed test pilot.

Equipped with the dual side-by-side Menasco 260-horsepower engines, which are geared to operate the single propeller, the plane was put through strenuous tests and performed "very satisfactorily," according to Downes.

The two motors operate the propeller with a "free-wheeling" clutch, which assures the pilot that if one engine should fail, the other will operate the "prop" without drag from the dead unit, officials explained.

Already Vega Aircraft Company, a subsidiary of Lockheed Aircraft Corporation, is building a new type airplane designed to accommodate the uni-twin engines, it was revealed.

Navy Gets New Link In Mid-Pacific Stations

SD SUN JULY 13, 1938

Another link in the encirclement of the Hawaiian Islands by a network of warning stations has been acquired by the Navy in the Pacific, San Diego naval headquarters were notified today.

The Tiny Palmyra group of 30 islets, totalling little more than a square mile of land and enclosing a U-shaped lagoon, has been purchased from private interests. The new possession is near Canton and Enderbury Islands, recently secured by the United States by executive order.

A $25,000 fuel station will be constructed starting in October, according to Washington reports. Later a radio station and repair facilities will be established to accommodate the Navy's giant twin-motored Consolidated patrol bombers on reconnaissance flights out of Hawaii.

Coral reefs in the lagoon will be blasted to provide safe landing areas for the airboats.

AFL Union Winner In Consair Vote On Bargaining Agency

1098 Workers Cast Votes For Federation; 487 Go CIO

S.D. SUN — JULY 13 1938

Employes of Consolidated Aircraft Corp. yesterday named the International Association of Machinists, an AFL affiliate, their official collective bargaining agent, in a poll conducted by the National Labor Relations Board.

The vote was 1098 for the American Federation of Labor local, to 487 for the United Automobile Workers of America, a Committee for Industrial Organization affiliate.

Tabulation of the ballot by Dr. Towne Nylander, regional director of the labor board, brought to an end a lengthy dispute in the Consair plant between the rival labor factions, both seeking the official bargaining privilege.

Out of the entire ballot, only 187 workers voted for no union representation.

After the ballot, it was disclosed that more than 600 votes were cast by former employes of the San Diego aircraft factory, now working in Los Angeles and Burbank. Dr. Nylander explained that these men, now absent from Consair during a temporary layoff, were held by the NLRB as still eligible voters. The former workers now are employed either at the North American Aviation Corp. or the Lockheed Co.

John M. Orr, international representative of the UAWA, losers in the ballot, issued a statement from local 506, after the voting. He said, in part:

"The fact that only 187 votes of the 1778 voting were for no representation indicates that organization for workers for better conditions is realized.

"This local will continue to work toward advancement of the cause of organized labor in Consolidated with the belief that in the future the men will come to the realization that the rank and file through oranization will be better able to raise the standard of all labor."

George Dayton, president of the AFL local here, said the lodge was "extremely gratified" at the result.

"The officials and membership of the AFL in San Diego, and particularly the membership of the Aircraft lodge, although confident of the victory that resulted from the vote, are extremely gratified at the overwhelming majority given the AFL," he said.

Given Their Answer

"This marks the second time that the AFL has been certified as the official bargaining agency for Consair employes, and the membership trusts that the few disrupters who forced this second election have been given their answer, and that unhampered organization will result in further gains for men in the Consair plant."

GEORGE DAYTON
He trusts "disrupters" are satisfied

JOHN M. ORR
". . . will work for the cause"

Col. F. D. Lackland, now chief of the air corps training school at Kelly Field and until recently chief of the field service at Wright Field, was a visitor at Wright, Friday. He flew in from Texas, Thursday.

Maj. Rudolph W. Propst and Maj. James A. Woodruff flew from Wright Field to St. Louis Friday, and Capt. Charles A. Bassett took off for Pittsburgh. Capt. R. P. Williams flew in from Baltimore.

Conference visitors at the materiel division included J. J. Gould and N. N. Tilley of the Continental Aircraft Co., Detroit, and E. N. Gott, of the Consolidated Aircraft Co., San Diego.

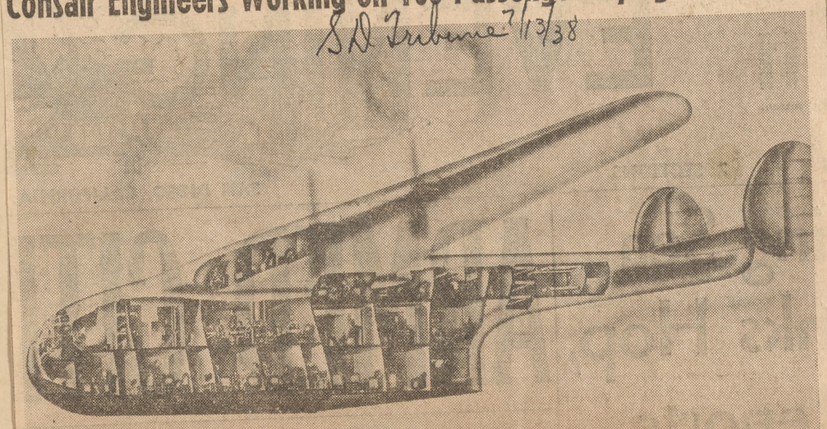
Consair Engineers Working on 100-Passenger Flying Boat

S.D. Tribune 7/13/38



Designed to meet requirements of Pan-American Airways, which recently announced it is in the market for such a craft, this 100-passenger flying boat is on the drawing boards of Consolidated Aircraft Corp. engineers. In addition to the passengers, the 200,000-pound, six-engined giant would carry a 25,000-pound payload, fuel for 5000-mile range and a crew of 16. It is contemplated the interior would be supercharged to allow the plane to operate at 20,000 feet altitude. It would contain dining room, lounging and promenade facilities.

NAVY PLANES ROAR DOWN COAST TO S. D.

Sun—AUG 1'38

44 Giant Bombers Expected To Arrive At 4 P.M. From Seattle

Forty-four giant Navy patrol bombers today were roaring down the coast on a non-stop flight to San Diego from Seattle, having completed the greatest aerial maneuvers ever conducted in the Far North.

The flight group, composed of Patrol Squadrons 7, 9, 11 and 12, is commanded by Capt. Alva Bernhard, Aircraft Scouting Force chief of staff, according to radio advices received at 11th Naval District headquarters. The planes took off at 6:30 a. m., are due to pass over San Francisco at noon, and are expected to end their 1200-mile journey in San Diego harbor at about 4 p. m.

Whether Rear Adm. Charles A. Blakely, commander of Aircraft Scouting Force, is flying down with the squadrons in the status of a passenger, or whether he will come later aboard his flagship, the USS Wright, was not revealed to North Island authorities. Rear Adm. Blakely ordinarily would lead a mass flight of this nature if he were included in the aviation personnel.

Since mid-June, the twin-motored Consolidated bombers have performed secret tactical exercises in the Puget Sound-Alaska area. For two weeks during July the long-range craft staged dangerous maneuvers over the Gulf of Alaska, between Sitka, where the Fleet's newest air base is located, and Kodiak.

Four planes of the flight group returned to San Diego last week. They included one of Squadron 7, two of Squadron 9, and one of Squadron 11.

The takeoff today was earlier than expected, it was said at North Island. Previous dispatches from Seattle indicated that the squadrons might return to San Diego between Aug. 4 and Aug. 15.

Commanders of the units making today's flight are: Patrol Squadron 11, Lieut. Comdr. Rossmore D. Lyon; Patrol Squadron 9, Lieut. Comdr. Boynton L. Braun; Patrol Squadron 12, Lieut. Comdr. Thomas A. Gray Jr.; and Patrol Squadron 7, Lieut. Comdr. Silas B. Moore.

S.D. Sun 8/2/38

Two Hops to Hawaii, 1 to Panama Will End Navy's Mass Fligts for 1938

S.D. UNION Aug 3, 1938

48 Bombers To Leave S. D.; First 16 Aug. 31

Two flights of 16 long-range patrol bombers to Hawaii in September and November and one of 16 planes to Panama from San Diego Aug. 31, 48 planes in all, will complete the navy's long-distance mass non-stop flights for 1938, naval aviation authorities announced yesterday.

Patrol Squadron 4, under command of Lt. Comdr. Robert L. Fuller, will take off from San Diego Sept. 6 for Pearl Harbor.

Patrol Squadron 5, Lt. Comdr. Warren K. Berner commanding, will leave here for a non-stop flight to Coco Solo Aug. 31.

LAST IN NOVEMBER

Patrol Squadrons 1 and 18, personnel of which will arrive here from Hawaii Saturday on the aircraft tender Langley, probably will have their 16 Consolidated built bombers ready for a flight to Pearl Harbor prior to the Thanksgiving holidays.

Rear Adm. Charles A. Blakely, commander aircraft, scouting force, who supervised the Alaskan air maneuvers of Patrol Wing 1, which returned to San Diego Monday, will arrive from Kodiak island via Seattle Friday on the U.S.S. Wright.

About Sept. 4 Adm. Blakely will sail on the Wright for Pearl Harbor to inspect Patrol Wing 2. En route the Wright will act as plane guard ship for Squadron 4.

GANNET, THRUSH TO SAIL

The aircraft tenders Gannet and Thursh will sail from Panama Aug. 27 to take up positions along the Central American coast as plane guards for Patrol Squadron 5.

Counting Richard Archbold's Guba, which was flown to Honolulu from San Diego while bound for Hollandia on the east coast of Netherlands New Guinea in June, a total of 61 Consolidated twin-motored planes will have been ferried to Hawaii from San Diego with the arrival of the two squadrons "sailing" in September and November.

18 IN JANUARY HOP

In a routine navy delivery Jan. 28, 1937, 12 PBY planes landed at Pearl Harbor, covering 2553 miles in 21 hours, 43 minutes. A second flight of 12 navy bombers was made April 12-13, 1937, when they flew from Pt. Loma to Diamond Head in 21 hours, 21 minutes.

The navy's greatest mass flight to the crossroads of the Pacific was achieved Jan. 18-19 this year when 18 flew the 2553-mile airway in 20 hours, 30 minutes. Archbold flew the distance in 18 hours, nine minutes.

Some of the navy's most skilled airmen will take part in the coming flights to Hawaii and Panama, among them Lt. A. P. Storrs III, a member of the famed Three Sea Hawks.

NAVY SLATES 3 MASS HOPS

Dates Announced For Last Flights Of Year

Dates of three long-distance mass flights by Navy patrol bombers, two to Hawaii and one to Panama, were announced today by local naval aviation authorities.

A total of 48 planes will take part in the last three flights scheduled for this year.

The 16 planes of Patrol Squadron 5, under command of Lieut. Comdr. Warren K. Berner, will take off Aug. 31 on a non-stop trip to Coco Solo, Panama.

On Sept. 6, Patrol Squadron 4, commanded by Lieut. Comdr. Robert L. Fuller, will leave for the first of two scheduled mass flights to Hawaii. The second will be made in mid-November by Patrol Squadrons 1 and 18.

Sixteen bombers will fly formation in both Hawaiian flights, naval authorities said.

Aircraft tenders Gannett and Thrush will take up positions along the Central American coast as plane guards for the Panama flight. S.D.SUN 8/3/38

240 Navy Planes To Participate In Maneuvers

S.D. UNION Aug 5, 1938

More than 240 fighting, scouting, bombing and long-range patrol planes, under command of Vice Adm. Ernest J. King, commander of aircraft, battle force, and Rear Adm. Charles A. Blakely, commander of aircraft, scouting force, will participate in fleet maneuvers scheduled to be held off the central California coast Wednesday and Thursday.

Operating with the planes will be the carriers Saratoga, Lexington and Ranger and the tenders Wright and Langley. Admiral King will hoist his flag aboard the Saratoga and Admiral Blakely's flagship will be the Wright.

Included in the aircraft forces will be fleet air force Patrol Wing 1 which recently returned from Alaskan waters.

The Saratoga and Lexington, which have been based the past week in Coronado roads, will get under way early tomorrow.

The planes, carriers and tenders will return to port Friday morning.

Jugoslav Airline Buys 2 U.S.-Built Transports

S.D. UNION 8/5/38

BURBANK, Aug. 4 (A.P.)—Lockheed Aircraft Corp. today announced the sale of two transport planes to a Jugoslavian airline for $115,000 for delivery next February. They are to be placed in service between Belgrade and Vienna.

CREWS PREPARE FOR MASS HOP

S.D.SUN — AUG. 6, 1938

Training for a mass flight to Hawaii late this year will begin this week for officers and men of Patrol Squadrons 1 and 18, who arrived here from Pearl Harbor yesterday aboard the aircraft tender U.S.S. Langley.

The flight personnel which disembarked at North Island yesterday consisted of six officers, nine aviation cadets, and 65 enlisted men of Patrol Squadron 1, commanded by Lieut. Clifford S. Cooper, and 12 officers and 95 enlisted men of Patrol Squadron 18, commanded by Lieut. Thomas B. Williamson.

Preceding this group in mass flights this year will be Patrol Squadron Five, due to leave here about Aug. 31 for the Canal Zone; and Patrol Squadron Four, scheduled to take off for Pearl Harbor about Sept. . Each squadron will ferry approximately 16 Consolidated PBY bombers.

TRIAL BOARD TO SEE PLANE

S.D. SUN — AUG 4, 1938

Scheduled to inspect Consolidated Aircraft Corp.'s $1,000,000 25-ton "air dreadnaught" for final approval of delivery to the Navy, a trial board from Washington, D. C., is expected to convene in San Diego the last week of August, Lieut. Comdr. Roland G. Mayer, Naval aircraft inspector, announced yesterday.

The four-motored bomber made several test flights last week with a full load of munitions, and was returned to the factory for minor adjustments before continuation of trial hops over the bay.

Launched late last year, the airboat has since undergone alterations in design calculated to increase its combat and patrol effectiveness. When it is finally delivered to the Navy, it will compete against a four - motored bomber manufactured by the Sikorsky Aircraft Co., for a five-to-ten plane contract. Consolidated Aircraft Corp. and the Navy together have spent approximately $1,000,000 in engineering this experimental craft.

AFL UNIT CERTIFIED AS CONSAIR AGENCY

S.D.SUN — AUG. 4, 1938

The National Labor Relations Board in Washington, D. C., today certified the International Association of Machinists, Aircraft Lodge No. 1125, as exclusive collective bargaining agency for employes of the Consolidated Aircraft Corporation, the United Press reported to The Sun.

Certification of the American Federation of Labor affiliate followed a secret ballot held July 11 which gave the AFL union 1098 votes against 487 for the United Automobile Workers of America, a CIO union.

21 NAVY BOMBERS HOP FOR ALASKA

By United Press — S.D. SUN JULY 13, 38

SEATTLE, July 13.—Twenty-one U. S. Navy patrol bombers hopped off on a non-stop flight to new bases in Alaska today to join 30 other planes in extensive mass maneuvers in the far north.

Three planes remained at Sand Point naval air station because of engine trouble aboard one. They will make the fligt within the next few days, said Comdr. A. W. Radford, station commandant. Comprising squadrons VP-7 and VP-9, the ships were part of the mass flight of 44 planes that came here recently from San Diego.

ALAN ESSERY NEW GLIDER CLUB LEADER

Alan R. Essery today was the new president of the Associated Glider Club of Southern California, as result of elections held recently in the home of Rolland Fetters, 5011 Hawley-blvd, former secretary of the organization.

Other new officers are: Ernest Stout, vice president; John Robinson, secretary, and Woodbridge Brown, treasurer. Outgoing executives include: Woodbridge Brown, president; John Robinson, vice persident; and Rolland Fetters.

S.D. SUN JULY 10, 38

Navy Honor Medal Goes To Dead Hero

S.D. SUN — AUGUST 4, 1938

Lieut. Hutchins Of Coronado Posthumously Wins High Award

Exactly six months after he died at the controls of a large Navy PBY bomber as it dived into the sea, Lieut. Carlton Barmore Hutchins, of Coronado, yesterday was awarded the Navy Medal of Honor.

And thus the United States government ruled the bomber pilot died a hero's death in the mid-air collision that brought death to 10 other San Diego men last Feb. 3.

During war drills off the Southern California coast, the two North Island planes crashed during a sudden rain squall. One of the planes burst into flames and all its seven occupants died.

The other plane was piloted by Lieut. Huchins. Though one of its wings had been severed and its nose shattered, Lieut. Hutchins remained at his post, valiantly hoping to land the plane and save its seven crew members.

It was only a matter of minutes, but Lieut. Hutchins kept calm in the face of death. As the plane, falling apart from the seaward plunge, neared the ocean, Lieut. Hutchins ordered his crew to "bail out." He stayed in the plane.

Four of the seven took to their parachutes. Three of them were saved and still live to praise the heroism of their lieutenant.

The surviving crew members are D. B. McKay, aviation chief machinist's mate; V. O. Hatfield, aviation machinist's mate, and L. S. Carpenter, aviation machinist's mate.

Yesterday, Secretary of the Navy Claude A. Swanson announced the award, the United Press in Washington reported to The Sun. The posthumous recognition will be given to Lieut. Hutchins' widow, Elizabeth, of Coronado.

LIEUT C. B. HUTCHINS
For him: A medal for a hero's death

A.F.L. Wins Poll At Consolidated

S.D. Union 7/13/38

C.I.O. Loses NLRB Vote, 1098 to 487

By a vote of 1098 to 487, lodge 1125, International Association of Machinists, A.F.L. affiliate, was selected as collective bargaining agency at Consolidated Aircraft plant yesterday in a National Labor Relation board election. The minority vote was recorded by local 506, United Automobile Workers of America, C.I.O. A total of 187 votes was cast for no representation, either by A.F.L. or C.I.O.

More than 600 votes in the election were cast at Los Angeles and Burbank where former employes of Consolidated are working in plants of the North American Aviation Corp. and the Lockheed Co.

L. A. WORKERS VOTE

Dr. Towne Nylander, NLRB regional director, explained that the labor board holds the 625 aircraft workers in the Los Angeles area are eligible employes of Consolidated and are working in the Los Angeles and Burbank factories only during a temporary lay-off at Consolidated.

A statement by Local 506, United Automobile Workers of America, signed by John M. Orr, international representative, follows:

"Local 506, U. A. W. A. at its meeting last night expressed approval of the attitude of the workers of Consolidated Aircraft in their choice between a union organization in the plant rather than no representation.

"The fact that only 187 votes of the 1778 voting were for no representation indicates that organization for workers for better conditions is realized.

CONTINUE TO WORK

"This local will continue to work toward advancement of the cause of organized labor in Consolidated with the belief that in the future the men will come to the realization that the rank and file through organization will be better able to raise the standard for all labor.

"The 487 votes cast for local 506 are greatly appreciated and under the circumstances are considered a strong indorsement of the principles of industrial organization.

"The orderly conduct of the election under the National Labor Relations board demonstrates the value to the public of the Wagner act and its machinery in its peaceful and democratic settlement of labor disputes."

AVIATORS TO PREPARE FOR MASS FLIGHT

Patrol Squadrons 1, 18 To Arrive From Hawaii

S.D.SUN — AUG. 7, 38

With personnel of Patrol Squadrons 1 and 18 aboard, the aircraft tender USS Langley is scheduled to arrive in San Diego today from Pearl Harbor.

The officers and men will comprise flight crews for approximately 16 Consolidated patrol bombers in a non-stop mass flight to Hawaii late this year.

To Start Training

The two squadrons have been functioning at North Island on a limited scale during the past few weeks, with fliers having been transferred from other squadrons now at North Island. Arrival of the Langley will complete the flight personnel of Squadrons 1 and 18 and will enable these groups to begin intensive training for their forthcoming transpacific venture.

Meanwhile, preparations are being completed for the first mass flight to Hawaii since last January, when 18 bombers negotiated the 2500-mile jaunt in 20 hours, 30 minutes. Patrol Squadron Four, commanded by Lieut. Comdr. Robert L. Fuller, is tentatively slated to take off from San Diego harbor Sept. 6 with 15 or 16 airboats.

Canal Zone Hop Set

Only six days prior to this flight, Patrol Squadron Five, led by Lieut. Comdr. Warren K. Berner, will deliver 16 planes to the Fleet Air Base at Coco Solo, Canal Zone. Both squadrons have been training at North Island for several months.

Consair Union Vote To Be Held Today

S.D. Union 7/14/38

Workers at the Consolidated Aircraft Corp. plant will vote today in a national labor relations board election to determine whether they will be represented in collective bargaining by Local 506, United Automobile Workers of America, C.I.O., or Lodge 1125, International Association of Machinists, A.F.L. More than 2000 are said to be eligible to vote. The polls will open at 7:30 a.m. The election was ordered after a recent board hearing in the federal building.

Labor Relations

CONSOLIDATED AIRCRAFT

The National Labor Relations Board yesterday announced that an election would be held within 15 days among employees of Consolidated Aircraft Corporation, San Diego, California, to determine whether they wish to be represented by International Union, United Automobile Workers of America, Local No. 506, (CIO), by International Association of Machinists, Aircraft Lodge No. 1125, (AFL), or by neither.

Neither union claimed to have within the ranks of its membership a majority of the approximately 2500 production employees of the company.

The United Aircraft Welders of America, an unaffiliated union, claimed that the welders constituted a separate unit. However, since the company considered the 28 welders to be like other production employees, and in view of previous decisions, the Board included them in the larger unit.

Board Ruling On Welders

Board Member Edwin S. Smith entered a concurring opinion. He said:

"I do not think, however, that the question of whether or not the welders are a craft is determinative of the issue raised here. I believe that welders are a class of skilled workers with common economic interests and that they may, under certain circumstances, constitute a unit appropriate for the purposes of collective bargaining."

Pointing to his dissent in The Novelty Steam Boiler Works Company case, where he stated that since there was no other union in the plant, the process of collective bargaining could best be encouraged by certifying the welders as a separate unit, Mr. Smith added:

"However, in the instant case, where collective bargaining has proceeded for over a year on the basis of an industrial unit as defined in a written contract and where the welders now seek for the first time to bargain as a distinct unit, I do not believe that the effectiveness of the bargaining power of the great majority of the employees should be impaired by splitting off from the industrial unit a separate unit for the welders, even if they constituted a craft or may constitute an appropriate unit under other circumstances."

Plans For 84-Ton Air Giant Revealed By Consair

SD Sun 7/17/38

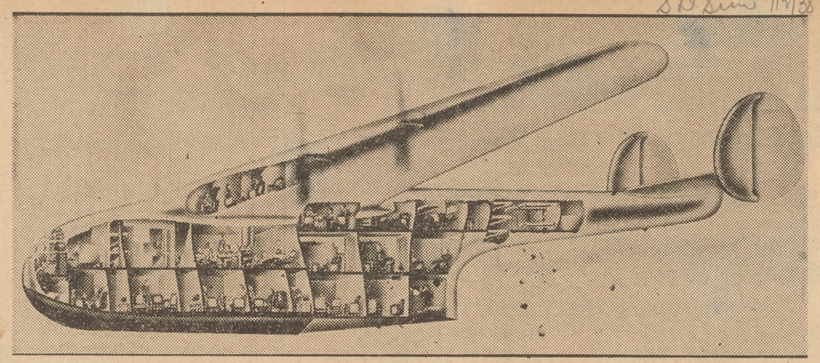
New Plane Could Carry 100 Passengers With Ease

An amazing, 84-ton gargantuan airship, with a 100-passenger capacity and ability to fly 5000 miles non-stop at a speed of 276 miles per hour—

The details of such a plane, designed for transoceanic travel, were revealed by engineers of Consolidated Aircraft Corp. for the first time today. Kept secret since Pan-American Airways called for plans on a palatial sky cruiser last December, the specifications are the first released by any of the aircraft companies competing for the contract.

Included in the bidders against

Turn to Page 2, Col. 6.



An interior view of the 100-passenger airboat Consolidat ed Aircraft Corp. is prepared to build, when and if Pan-American Airways gives the order, is shown above. Sixty-four passengers can be comfortably accommodated in the hull, with the remaining 36 in the wing.

ymphony Concert Tonight In Ford Bowl; Edith

ans For 100-Passenger Giant Airship Revealed

(Continued from Page 1)

Consolidated are the Boeing, Sikorsky, Douglas, Seversky and Martin aircraft plants.

The 100-passenger flying boat design and performance characteristics were disclosed just as Consolidated workmen completed the third of four Navy contracts for approximately 250 PBY bombers, including spares, and entered production on 33 planes of the final order.

Divided into three decks, the hull is designed to accommodate 64 passengers, with the remaining 36 placed in the wing. A crew of 16 is required to operate the craft.

The power plant consists of four 2150 horsepower liquid cooled engines completely housed in the wing, through which access may be had during flight for servicing and minor repair.

The passengers are accommodated in individual two or four-place cabins, in which lounging swivel chairs are provided for daytime use. The seats are quickly converted to form commodious lower berths for night, while the upper berths are lowered, in Pullman fashion, from the wall.

Cabins Soundproofed

Sufficient headroom is provided between the berths to permit an upright sitting position on each. The cabins are completely soundproofed and air conditioned.

Other details follow:

"The dining room, centrally located with all passageways and stairs leading directly to it, accommodates 18 persons at one time. The galley is located adjacent to and forward of the dining salon, thus affording convenient service. Three baggage compartments are located in the nose directly beneath the pilots' room, in the leading edge of the wing, and over the galley."

194-Foot Wing Span

The wing span is 194 feet, its area is 3450 square feet; overall height and length are 31 feet and 102½ feet, respectively. Fuel capacity is 8450 gallons, and a 25,000-pound pay load can be carried. The airboat is designed to perform most efficiently in the sub-stratosphere at 20,000 feet, although its service ceiling is 30,000 feet. Its rate of climb at sea level would be 680 feet per minute.

The almost unbelievable dimensions of the airboat may be realized when they are compared with those of the largest plane ever to leave the Consolidated assembly line — the 25-ton four-motored bomber now being tested for the Navy.

Consair Workers Cast NLRB Ballots Today

SD Sun 7/17/38

Election Ordered By Federal Labor Board To Decide Collective Bargaining Agent For Employes

A jurisdictional dispute between rival unions at the Consolidated Aircraft Corp. plant will be decided tonight when the ballots in a labor election ordered by the NLRB will be tallied.

Approximately 2500 workers were eligible to vote today to determine whether the A. F. L. Aircraft Local 1125, International Association of Machinists, or the CIO Aircraft Local 506, United Automobile Workers of America, shall represent Consolidated's hourly paid employes in future negotiations for labor agreements with the management.

Election Approved

That number was employed by the concern on May 6, 1938, one week before the opening of the NLRB hearing which decided in favor of the CIO aircraft local's petition for an election.

Consolidated officials agreed to allow voting by all workmen laid off through no fault of their own since May 6. About 700 have been discharged or have quit, in the last two months, Personnel Director Don Frye announced.

Today's election is the second in 15 months held at the local plant. On April 10, 1937, Aircraft Local 1125 received 1823 of 2354 votes cast to defeat a union known as the "Consolidators" in the claim of representing the factory workers, who numbered 3295 at that time.

First Agreement

Negotiations for a contract were entered into immediately by the union, and on May 2, 1937, the first agreement between workers and management went into effect at Consolidated. It granted a blanket increase of 10 per cent to the hourly workers, and a minimum rate of pay of 40 cents per hour for minors and 50 cents for adults for the first four months of employment.

Little more than two months later, Aircraft Local 1125 was split, with an insurgent group withdrawing to form the nucleus of the CIO Aircraft Local 506.

The 1800 men still on Consolidated's payrolls were to vote between 6:45 a. m., and 7:30 p. m., today in polls set up at the north side of the plant, between the factory buildings and the fence.

Workers laid off since May 6 will be allowed to vote, unless they were discharged for cause, at three different times today, from 8 a. m. to 11:30 a. m.; 1:15 p. m. to 3:30 p. m., and 5 p. m. to 7:30 p. m., at booths inside the gate at the north entrance and to the rear of the personnel building. They must bring proper identification, such as social security card, unemployment registration card or their service record before the NLRB observers supervising the election will allow them to vote.

Appeals Denied

A last minute NLRB decision turned down appeals of both unions to strike the word "neither" from the ballot, thus restricting the vote to an outright choice between the two labor organizations. As a result, Consolidated workmen will have an opportunity to express an unwillingness to have either the CIO nor AFL unions represent them.

The ballots will be counted by the government representatives immediately after closing of the polls at 7:30 p. m., today.

LABOR VOTE TUESDAY TO DECIDE ISSUE

700 Employes Laid Off By Concern In Past Two Months

Preparations were complete today for the labor election to be held in the Consolidated Aircraft Corp. plant Tuesday to determine which labor organization shall represent the company's hourly paid employes in future collective bargaining.

Contesting for this privilege will be the AFL Aircraft Local 1125, International Association of Machinists, and CIO Aircraft Local 506, United Automobile Workers of America.

Ordered By NLRB

The vote was ordered by the National Labor Relations Board after a hearing in San Diego May 12, at which the CIO union petitioned for the election.

The contract which sets up current wages and working conditions at the Consolidated plant went into effect May 2, 1937, and was signed by representatives of the AFL International Association of Machinists. Since then, however, the local aircraft unit of this organization was split with the CIO Aircraft Local 506 a product of the breach.

Eligible to participate in the balloting Tuesday will be all hourly paid workers employed by Consolidated on May 6, 1938—a total of approximately 2500 men. Workers discharged for inefficiency, and those who left of their own accord since that date will not be allowed to vote.

700 Laid Off

Seven hundred men have been laid off by the concern in the past two months because new contracts had not been forthcoming, Don Frye, personnel manager, announced yestedlay.

The number of factory workers still on the Consolidated payroll is about 1800, Mr. Frye said.

With only enough work on hand to keep the plant open, on a basis of steadily diminishing employment, until the end of this year, it was learned yesterday that Consolidated officials have been negotiating for a production contract which may prevent further large - scale layoffs. Details of the negotiations have been kept secret.

32 Bombers To Make Hawaii, Canal Hops

SD Sun July 10-1938

Navy Slaps Secrecy On Takeoff Date; Bases In North Will Be Strengthened Soon

Two mass flights, involving approximately 32 giant Consolidated PBY patrol bombers, will be made from San Diego to the Fleet Air Bases at Pearl Harbor and Coco Solo, Canal Zone, late in August or early in September, it was learned from authoritative sources at North Island yesterday.

In the

Unusual censorship, which has blocked off specific information on future Naval activities, prevents local officers from revealing the tentative takeoff date. Adm. Claude C. Bloch, Fleet commander-in-chief, will make the announcement only a few days before the flights are ready to start, it was indicated at the Naval Air Station.

Plan Spectacular Trips

The two squadrons which will stage the spectacular delivery flights of new planes to their permanently assigned bases are VP-4, of Pearl Harbor, and VP-5, of the Canal Zone.

Each trip will consist of 12 "regular" bombers attached to a squadron plus about four "spares," it was disclosed.

The flights will be the first long distance delivery jaunts since last Jan. 18, when 18 bombers completed a record breaking dash to Pearl Harbor in 20 hours, 30 minutes.

Since then, the longest nonstop hops, aside from those performed during the 1938 war games last spring, have been to Seattle. Two six-plane squadrons have been sent north this year and in the largest mass flight of Navy seaplane history, 44 San Diego-based airboats flew to Puget Sound last month. They have since flown to Sitka and Kodiak, Alaska, for intensive exercises over the Gulf of Alaska.

Strength in North

Meanwhile, reports have been heard at North Island to the effect that Patrol Wing Four, now operating three squadrons out of Seattle and Sitka, will soon be enlarged to five units, indicating the strategic importance the Navy is attaching to its northernmost bases.

Another squadron from Pearl Harbor, believed to be VP-18, is scheduled to send its personnel to San Diego to accept delivery on new Consolidated bombers for another transpacific mass flight later this year.

175 Planes Completed

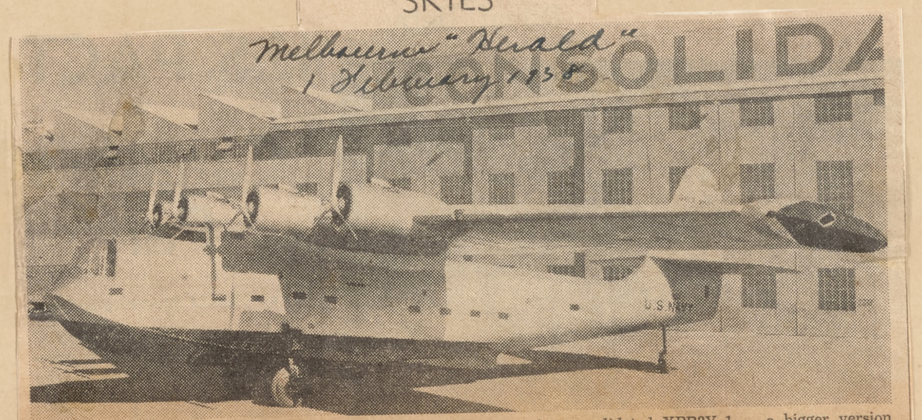
Approximately 175 airboats have been turned out by Consolidated since delivery of the first one in October, 1936. Its four PBY contracts call for a total of 250 planes, including spares. The Gleen Martin Co., of Baltimore, several months ago was awarded a contract for 22 large twin-engined airboats, some of which may be assigned to patrol squadrons of Wing Five at Norfolk, Va., none of which have yet received modern equipment.

Forty-two planes have been delivered to Hawaii in three mass flights since January, 1937, and 26 to Coco Solo, in two ferry trips.

NEW GIANT OF SKIES

Melbourne "Herald" 1 February 1938

CONSOLIDA



LATEST GIANT FLYING BOAT for the United StatesNavy — the consolidated XPB2Y-1 — a bigger version of the 18 machines which recently flew from California to Hawaii. Its total horsepower is 4200. Speed and range are secret, but both are believed to be high. The range may be as great as 5000 miles. The plane is not an amphibian, the wheels being only a cradle for launching. The floats can be seen retracted as wingtips.

Postal Department Survey Shows Phenomenal Gains; City As Large As Omaha

S D Sun 7/17/38

EXCLUSIVE!

The City of San Diego is populated by 227,290 persons, an increase of nearly 80,000 since the last U. S. census in 1930.

The figures were officially released today after a government survey conducted through the Post Office Department and announced by Postmaster Don Stewart.

The spectacular climb in San Diego population is shown in the following chart:

YEAR	POPULATION
1860	731
1870	2,300
1880	2,637
1890	16,159
1900	17,700
1910	39,578
1920	**74,361**
1930	**147,995**
1938 (Estimated)	**227,290**

Not since 1935 has the government made an official estimate of San Diego's population. At that time, the postal survey showed San Diego's population to be 183,000. The increase of 43,000 since that time is indicative of the continual upturn for western areas.

San Diego's new population figure raises it in size to approximate that of Omaha, Neb., and San Antonio, Tex.

The survey conducted this year by postal carrier foremen was the first complete one of its kind in three years. It covered the period from July 1, 1937 to June 30, 1938, Postmaster Stewart said.

If the rate of increase continues until 1940 when the next U. S. census is taken, San Diego's population will be nearly 250,000.

The survey was taken by carefully checking each dwelling in the city where a family receives mail and multiplying that figure by 3½, the average number of persons—adult and minor—known to be included in San Diego families.

On Wednesday County Registrar of Voters Charles Duffy estimated the population of the entire county to be 337,500, compared with 247,000 in 1930. Duffy arrived at his population figure by multiplying the registration of the county by 2.7.

Figure Conservative

The postal figure is conservative, Postmaster Stewart said. Although the San Diego main postoffice area includes Coronado and a few very thin slices of county territory, this is more than offset by parts of the city proper which are not included. For instance: La Jolla, Pacific Beach, Old Town and Encanto.

The survey also revealed other facts which verify the city's active growth.

For the quarter ending June 30, of this year, there was an increase of 11 per cent in the number of "home town" newspapers received by San Diegans over the previous year. This means families from cities far away have moved here.

Airmail Increases

Airmail increased 10.2 per cent for the same period, over the year before.

And do San Diego's Navy men write home to their wives and sweethearts when they are away? You bet they do!

The months the fleet was out early this year resulted in an increase of 23.81 per cent in incoming mail. Outgoing mail dropped only 3 per cent.

Parcel post climbed 3 per cent.

During the 1937-38 fiscal year, the number of new dwellings where mail was delivered was 1188, Stewart said.

How S. D.'s Population Now Ranks

The following chart shows San Diego's present position in the "league" standings of the nation's largest cities. Populations of other cities are as of 1930.

New York	6,930,446
Chicago	3,376,438
Philadelphia	1,950,961
Detroit	1,568,662
Los Angeles	1,238,048
Cleveland	900,429
St. Louis	821,960
Baltimore	840,874
Boston	781,188
Pittsburgh	669,817
San Francisco	634,394
Milwaukee	578,249
Buffalo	573,076
Washington	686,869
Minneapolis	464,356
New Orleans	458,762

Gordon Mounce Dies In Airplane Crash

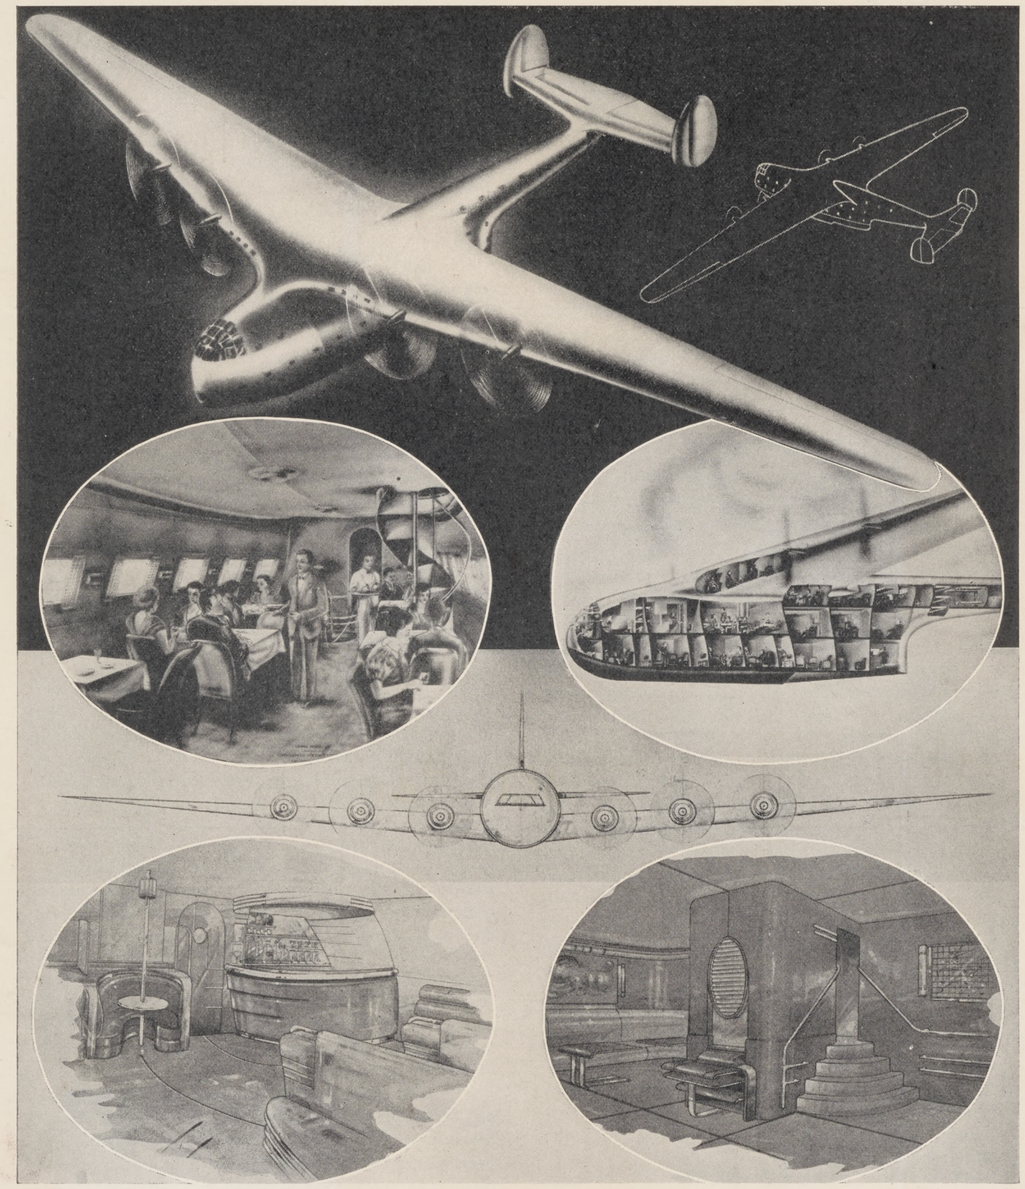
6/3/38

Gordon E. Mounce, Consolidated Aircraft executive and flying salesman, crashed to his death in Belgrade, Yugoslavia, last Thursday. He was formerly a member of The San Diego Club in which he was very popular.

He is survived by the widow, Mrs. Lorin Mounce, 2202 La Jolla Shores Dr. His body will be cremated and the ashes sent here.

S.D. CLUB LIFE

Today's design, tomorrow's airplane—



Pan American Airways' request for proposals for a huge trans-oceanic aircraft capable of transporting 100 passengers plus mail and express at speeds approximating 300 m.p.h. brought forth answers from five manufacturers; four are being considered. Top, left page, with the two upper inserts are the artist's conception of the Consolidated Aircraft Corp. proposal, the only craft incorporating but four engines. Bottom, left, represents

BIRTHDAY PARTY: Consolidated Aircraft last month went to town in celebration of its fifteenth anniversary. Here are five who (very properly) drew lions' shares of the congratulations. LES AVIONS AMÉRICAINS

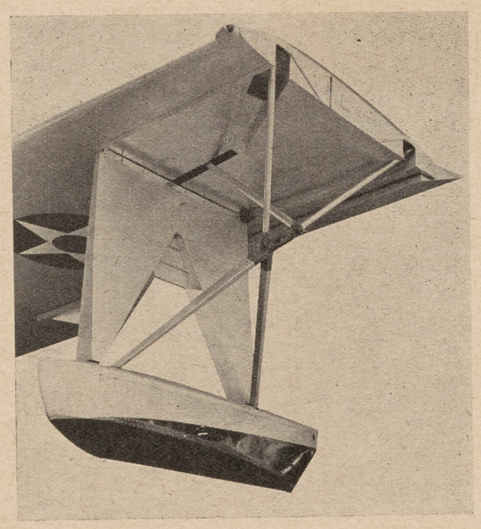
graphie sont assurées par un opérateur spécialisé, mais toute personne du bord peut, en phonie, converser avec l'extérieur au moyen d'un dispositif approprié, en jonction avec l'équipement radio.

Dès le début de l'étude du **P.B.Y.,** il avait été prévu que l'appareil pourrait voler à pleine charge avec un seul de ses moteurs. Après un certain nombre d'essais, le chef-pilote en vint à exprimer sa conviction que l'avion pourrait également décoller sur un seul moteur. Le calcul ayant montré le bien-fondé théorique de cette assertion, on entreprit des essais méthodiques desquels il résulte que le décollage est possible avec un seul moteur, en ayant à bord une provision de combustible suffisant à parcourir plus de deux mille kilomètres.

Le rapport élevé du poids utile au poids total du **P.B.Y.,** ainsi que sa grande vitesse de croisière en font un appareil des plus intéressants. Parmi les particularités constructives qui ont permis de lui donner ses qualités, Consolidated signale surtout les flotteurs repliables en bout d'aile, et les réservoirs faisant partie intégrante de la construction de l'aile.

Dans leur position repliée, les flotteurs n'ont qu'une très faible trainée, et ils agissent comme des écrans, améliorant l'allongement apparent de l'aile, et, par conséquent, ses caractéristiques aérodynamiques. Même en position repliée, leur action stabilisatrice est suffisante pour maintenir l'appareil à flot, si l'on amérissait en oubliant de les descendre. On peut les relever ou les abaisser à la surface de l'eau. En position abaissée, non seulement ils donnent la stabilité à



flot et la tenue à la mer (nécessaire pour opérer en haute mer), mais ils agissent également comme freins aérodynamiques durant la période qui précède l'amérissage.

Les réservoirs faisant partie intégrante de l'aile permettent de loger de grandes quantités de combustibles, en y consacrant seulement une petite fraction du poids qui serait nécessaire pour établir des réservoirs séparés. En même temps, cette disposition a l'avantage de mettre l'équipage et les passagers à l'abri des émanations d'essence toujours désagréables En outre, cette installation permet de réserver au transport toute la capacité intérieure de la coque.

En version commerciale, on peut installer des sièges pour transporter jusqu'à 40 passagers. Pour des vols de longue durée, on peut normalement transporter 24 passagers assis, ou 12 couchés.

Un train de roulement, avec pneus de forte section, est prévu pour l'utilisation des plages de sable. Ce train peut très facilement être logé à bord, ce qui rend le **P.B.Y.** particulièrement intéressant pour l'exploration, la reconnaissance, la cartographie, ou tout autre service pouvant exiger l'utilisation d'une base temporaire ne possédant pas les intallations habituelles.

Ces diverses particularités ne diminuent en rien la valeur militaire de l'appareil, bien au contraire.

Pour sa défense, le **P.B.Y.** porte 4 mitrailleuses, une à l'avant, une de chaque côté du pont, juste derrière l'aile, et une sous tunnel dans le fond de coque, juste en avant des empennages. L'appareil est ainsi complètement protégé dans toutes les directions.

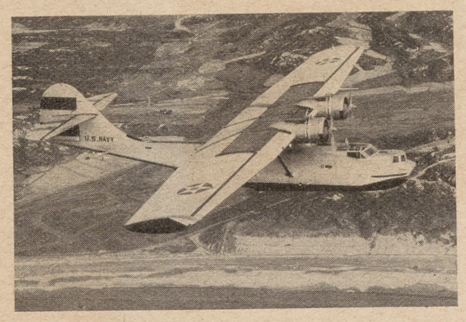
La pièce avant montée sur tourelle carénée couvre l'hémisphère avant. L'hémisphère supérieur est couvert par les mitrailleuses du pont, dont les champs de tir se recouvrent avec ceux des pièces avant et sous tunnel.

Enfin, la pièce sous tunnel couvre l'hémisphère inférieur, en croisant ses feux avec ceux des autres pièces.

Pour l'offensive, les bombes ou les torpilles sont suspendues sous les ailes à l'extérieur des fuseaux-moteurs. Les porte-bombes sont logés dans les ailes, où ils restent en permanence, sans occasionner de trainée supplémentaire. On dispose, sur cet appareil, de 4.600 kgs pour bombes et combustible. On peut, en conséquence, envisager celle des combinaisons qui donnera le meilleur résultat militaire, compte tenu de la distance à parcourir, et de la nature de l'objectif à atteindre.

Le largage des bombes s'effectue depuis le poste du bombardier qui est installé dans la coque, juste derrière le poste de tir avant.

Le **P.B.Y.** est entièrement construit en duralumin, à l'exception du bord de fuite de l'aile et des parties mobiles des empennages. Ces éléments comportent également une charpente



métallique, mais sont revêtus de toile. Les méthodes de revêtement et de protection du dural les plus modernes sont employées, pour résister à la corrosion en atmosphère saline.

La coque est divisée en cinq grands compartiments étanches séparés par des cloisons munies de portes étanches.

Un quelconque de ces compartiments peut être avarié et inondé sans que l'appareil soit en danger, la flottabilité restante étant amplement suffisante pour le maintenir à flot.

Des cloisons auxiliaires subdivisent chacun de ces compartiments de telle façon que la version militaire comporte, de l'avant à l'arrière:

1° Poste AV de tir et de bombardement;
2° Poste de pilotage;
3° Poste de navigation et de radio;
4° Poste du mécanicien, avec divers apparaux, lits et groupe moteur auxiliaire;
5° Chambre de repos, avec lits;
6° Poste de tir de pont;
7° Poste de tir sous tunnel.

Le poste avant, doté de larges champs de vision, sert pour la prise de repères de navigation et pour les manœuvres de mouillage, la mitrailleuse étant effacée lorsqu'elle n'a pas à être utilisée.

Le poste de pilotage comporte la disposition habituelle, avec double commande. Volants et pédales sont disposés pour assurer la meilleure visibilité et le plus grand confort. Les sièges sont réglables en position et en angle. Les divers instruments relatifs à la conduite des moteurs et à leur contrôle sont répartis entre le pilote et le mécanicien volant.

Le pilote a seulement ce qui est nécessaire à la manœuvre et à la sécurité; mais, par contre, il est en communication constante avec le mécanicien, aussi bien par signaux visuels que par le réseau téléphonique du bord.

La table du navigateur et son équipement occupent la partie droite du compartiment suivant. Le côté gauche est pris par l'installation radio, et par le tableau électrique qui contrôle la lumière, le téléphone et l'action du groupe auxiliaire moteur-génératrice.

Le mécanicien volant, dont le poste surélevé est logé dans la superstructure qui relie la coque à l'aile, pour qu'il puisse observer directement ses moteurs, a sous les yeux la plupart des instruments relatifs à leur conduite. Il commande directement tout ce qui ne doit pas nécessairement être fait par le pilote: réglage de la température, richesse du mélange, etc... Il dispose également de la commande des flotteurs de bout d'aile, et peut les actionner soit électriquement, soit à la main.

En bas de ce compartiment, ainsi que dans la chambre de repos qui lui fait suite, sont disposés des placards pour les effets personnels de l'équipage, ainsi que pour les rechanges utiles.

Les mitrailleurs de pont sont protégés, dans le 6e compartiment, par des portes coulissantes formant écran lorsqu'elles sont ouvertes.

Quand elles ne sont pas utilisées, les mitrailleuses sont rentrées à l'intérieur de la coque, leurs supports présentant à cet effet, les articulations nécessaires.

La mitrailleuse arrière est également rétractable, tout en restant, à l'intérieur de la coque, prête à être mise en position de tir par une simple action sur sa genouillère de support. L'ouverture nécessaire au passage de l'arme est obturée par une porte étanche manœuvrée de l'intérieur.

Les moteurs installés sont habituellement des **Pratt et Whitney S-CG,** mais on peut aussi bien monter des **Wright Cyclone** ou tout autre moteur analogue de 900 à 1.000 CV.

♣

Telles sont les principales caractéristiques de ce très intéressant hydravion qui, soulignons-le, n'est pas un prototype, mais existe à plus de deux cents exemplaires, donnant en service une vitesse maximum de 350 km/h. à 3.500 mètres, une vitesse minimum de 100 km/h., une distance franchissable de 6.500 kms, un plafond de 8.800 mètres, montant à 4.500 mètres en 13 minutes et demie, et décollant en 18 secondes en eau calme.

Sur ces mêmes principes constructifs, Consolidated sort, depuis quelques mois, des quadrimoteurs sur lesquels nous aurons peut-être à revenir.

♣

AVION BEECHCRAFT MODELE 18
de la Besch Aircraft Corporation

Cet appareil me paraît présenter un intérêt tout particulier, parce qu'en utilisant une puissance motrice égale à celle des biplaces monomoteurs actuellement en service comme avions d'observation, de photo, etc..., en un mot, de coopération, il emporte quatre personnes, va plus vite, est mieux défendu, etc... Il peut également être utilisé comme bombardier léger et comme avion sanitaire. Il vole parfaitement avec un moteur, non seulement ralenti, mais même complètement coupé.

Le **Beechcraft 18** est un monoplan cantilever à aile basse, qui a été étudié tout particulièrement pour atterrir doucemen, décoller en peu d'espace, avoir une grande vitesse ascentionnelle et une bonne vitesse de croisière. En outre, l'atterrisseur a été étudié pour l'usage de mauvais terrains. Des essais réels ont permis d'atteindre 1 fois 1/2 les efforts de chocs demandés par la Marine des U.S.A. pour ses avions embarqués, sans aucune faiblesse du train. Une vitesse verticale de chute de 3 m./sec. donne déjà lieu à des efforts très

FLEET PREDICTS SEA AIR LINES THIS YEAR

By United Press

MONTESANO, Wash., July 27. —Regularly scheduled transatlantic passenger air service before the end of summer was forecast here today by Maj. R. H. Fleet, president of the Consolidated Aircraft Corporation of San Diego. Maj. Fleet also predicted the eventual construction of planes with a wingspread of from 600 to 800 feet.

Mystery Hides Return Flight Of Navy Plane

S.D. SUN — JULY 22, 1938

Lieut. Peters Due Back In S. D. After Hop Across Country In Consolidated Airboat

By HAROLD KEEN
The Sun's Navy Editor

His secret mission on the east coast fulfilled, Lieut. (jg) James M. Peters, the first Navy aviator to pilot a seaplane nonstop across the continent, today awaited favorable weather at Pensacola before attempting a similar return trip in his PBY bomber, it was learned at North Island.

Last April, Lieut. Peters and a flight crew of Patrol Squadron Seven took off in a new Consolidated PBY bomber without public announcement of their destination and landed in Pensacola, Fla., after an unprecedented non-stop dash across mountains, deserts, dry valleys and inland cities. The last few hundred miles the flight, of course, was over the Gulf of Mexico, but never before had the Navy even considered sending an airboat overland across the continent without a stop.

Underwent Torpedo Tests

From Pensacola, Lieut. Peters headed up the Atlantic shoreline for Newport, R. I., where experimental torpedo tests were conducted behind a wall of Navy censorship.

The Navy has attempted to keep Lieut. Peters' flight westward this week as quiet as his hop to Pensacola three months ago. Aircraft Scouting Force authorities at North Island, however, admitted today that Litut. Peters took off this week from Newport for San Diego via Pensacola, retracing the route he took last April.

First Such Flight

Although Lieut. Peters' transcontinental flight was the first ever made in a Navy airboat, his feat was preceded by three cross-country dashes, all made by a civilian crew headed by Richard Archbold, American Museum of Natural History research associate now using his Consolidated plane to transport personnel and supplies to a two-mile high lake in Dutch New Guinea, where a scientific expedition is under way.

Archbold flew twice to Miami from San Diego, and once to New York City.

Should Lieut. Peters' round trip be considered a satisfactory demonstration of the ability of the Consolidated PBY's to span land surfaces over a considerable distance, the entire war strategy of the Navy's aviation branch may be altered.

For Protecting East

Under present plans, virtually all the new long range bombers will be stationed on the West Coast, the Canal Zone, Hawaii, and Alaska. The East Coast will be defended, at best, by only a few of the PBY's, according to the assignment of these planes recently disclosed here.

However, should a major emergency confront the Atlantic Coast's population centers, squadrons will be ready to fly non-stop across the continent at short notice. The trail blazing flight of Lieut. Peters will have shown the way.

LOCKHEED SETS SALES RECORD

S.D. SUN — JULY 31, 1938

LOS ANGELES, July 26.—Airplane deliveries of the Lockheed Aircraft Corporation established an all time monthly record in June, exceeding the corresponding 1937 month by 158 per cent, President Robert E. Gross reported today.

Gross announced that his company completed 14 new all-metal twin-engined transport planes during the month with a total value of $1,079,900. This compared with deliveries of $418,085 in June 1937.

Preliminary figures, he added, indicated that deliveries for the first 6 months of this year would aggregate about $4,700,000 or an increase of about 80 per cent over the 1937 period.

NAVY BOMBERS MAY RETURN IN FLIGHT GROUPS

47 Planes Now In Alaska Area; Flagship Due Aug. 14

S.D. Sun 7/27/38

Possibility that the 47 San Diego-based Navy patrol bombers which have been operating in the Puget Sound-Alaska region for more than a month, will be divided into two mass flight groups for the return trip in August, was foreseen at North Island today.

First Of August

Reports received this week in the headquarters of Patrol Squadrons Four and Five, the only Aircraft Scouting Force units now operating at the Naval Air Station, indicated that two of the four squadrons in Seattle may arrive here the first week of August, with the remainder due about August 15. Which units are expected first have not been disclosed.

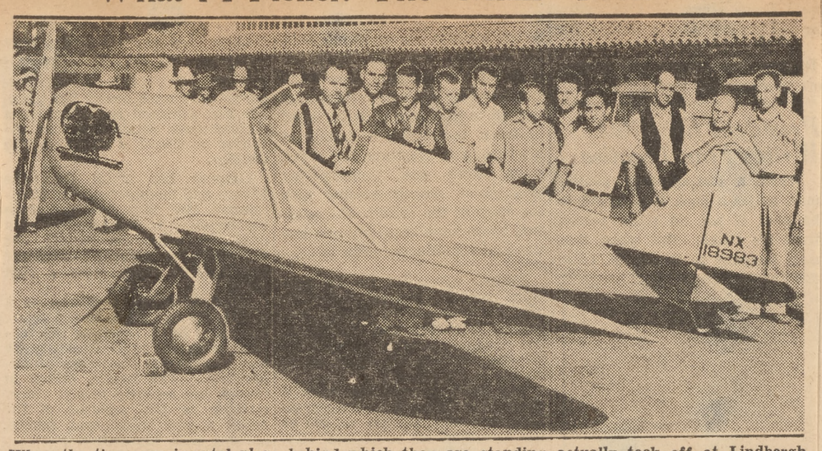
Meanwhile, from the Sand Point Naval Air Station, Seattle, today came word that no official take-off time for the San Diego hop had yet been set. The planes recently returned to Seattle after a fortnight's tactical exercises at Sitka and Kodiak, Alaska.

Wright To Return

The Aircraft Scouting Force flagship USS Wright, which served as tender for the PBY plane squadrons in the Far North, is scheduled to dock at North Island August 14. Her sister ship, the Langley, is en route to Pearl Harbor, and will return here August 8 for a three-day stay before returning to Puget Sound.

Patrol Squadrons Four and Five are training at North Island for mass flights of 16 planes each to Pearl Harbor and the Canal Zone, respectively, within the next six weeks.

What A Relief! The 'Minx' Took Off!



When the tiny experimental plane behind which they are standing actually took off at Lindbergh Field last Thursday, the 12 men pictured above breathed a lot easier, because most of them had sunk a great portion of their savings as well as all their spare time for the past six months in its construction. Left to right, Claude C. Flagg, designer of the "Minx"; L. A. MacDonald, in whose shop it was built; Hugh G. Nicholson, test pilot; D. E. Southwick, C. F. Taylor, L. L. Eickmeyer, Ed Postel, C. C. Alder, Curtis W. May, C. D. Lunt, Gerald Roberts, and William Hammond.

11 S. D. Mechanics Eye Low-Cost Plane Field

JULY 24, 1938
S.D. SUN

In a silver wisp of a plane they have named the "Minx" because she's a pert, saucy little mechanism, are wrapped the hopes of 11 Consolidated Aircraft Corp. employes, who today believe they may have the answer to the most-repeated demand of the aviation enthusiast with modest income:

"Build a plane that doesn't fly out of reach of my pocketbook, and I'll buy it!"

For the past six months these men have toiled away in their spare time on their streamlined, flying midget; they pooled their savings so they could meet the construction bills, totaling some $3000, and finally, last Friday, they entrusted this untried craft to the experienced and capable Hugh G. Nicholson, another Consolidated worker who "test pilots" occasionally.

She Actually Flew!

The 11 builders of the "Minx" held their breath when Nicholson accelerated the 40 h.p. Continental engine and sped down the Lindbergh Field runway. There was no insurance on the plane, so that if it didn't respond as it theoretically should—

But the sturdy little ship, tail still down, took off in the amazingly swift time of seven seconds, and proceeded to pirouette so gracefuly beneath the blue sky as to dispel any doubts about her air worthiness.

Designer of San Diego's newest contribution to the experimental airplane field is Claude C. Flagg, who drew the plans for the tiny craft which Tony Le Vier cracked up at the National Air Races last year.

The ten other banded together in an organization they call the Aircraft Mechanics' Association are:

D. E. Southwick, C. F. Taylor, L. L. Eickmeyer, Ed Postel, C. C. Adler, Curtis W. May, C. D. Lunt, Gerald Roberts, William Hammond, and Thomas J. McAleer.

Economical To Operate

The "Minx" is a low wong monoplane with a 24-ft. six inch wing spread and a 450-mile cruising range. Mr. Flagg claims that it will use only two and one-half gallons of gasoline and one quart of oil per hour at cruising speed of 90 miles uer hour. Top speed has been estimated at 115 miles.

It is a single seater, and if further tests prove satisfactory, plans may be started to manufacture it to sell at a cost of $1200. And that will be the answer to the large army of private fliers who yearn for a plane with moderately high performance characteristics that doesn't require a major pocketbook excavation to acquire.

As the "Minx" continues her tests on Lindbergh Field next week, San Diego will be the scene of trials on one of the largest and one of the smallest experimental planes in the country. For, just across the field from the "Minx's" take-off lane, Consolidated's giant four-motored bomber is being prepared for final official acceptance inspection by the Navy.

Shoes to New Guinea

RICHARD ARCHBOLD
. . . helpers' feet warm.

S.D. Union 7/5/38

Archbold's Gift Stuns Natives

No longer are natives of New Guinea, who are assisting Richard Archbold, research associate, American Museum of Natural history, in scientific explorations, going barefoot.

Transferring the natives from Hollandia, on the north coast of New Guinea, to Lake Habbema, 300 miles inland and 12,000 feet above sea level in his $250,000 Consolidated built plane, Archbold discovered they suffered from the intense cold. Therefore he issued them heavy socks and footwear, the first ever worn by the amazed natives.

MESSAGE TO BOYD

Word to this effect was received by short wave radio at 3:30 yesterday from Archbold to Barney Boyd, radio amateur.

"Archbold reported he is making daily trips from Hollandia to Lake Habbema with natives and supplies," Boyd said. "Archbold said the temperature on the lake was near freezing and that the natives hopped around on their bare feet so much he was compelled to provide them with shoes if any work was to be done in establishing camp.

LANDED BLIND IN FOG

"He further reported that twice he had to land the heavily loaded plane blind on the lake because of thick fog. Archbold plans to retain

Consair Near Mark Of 61 Hawaii Hops

S.D. Union 7/5/38

With the departure of 16 long-range bombers of Patrol Squadron 4 from San Diego for Pearl Harbor next month, a total of 61 Consolidated-built planes will have attempted non-stop flights from Pt. Loma to Diamond Head in 20 months.

Twelve of the multimotored bombers were flown by navy personnel to Hawaii Jan. 28, 1937, and a like number on April 12 of that year. Last Jan. 18, 18 planes flew the 2250-mile airroute without mishap.

The lone commercial craft, that piloted by Capt. Richard Archbold of the American Museum of Natural history, left here June 2 and landed at Pearl Harbor in 18 hours, the fastest time yet recorded between San Diego and the crossroads of the Pacific.

Army Speeding Aviation Plan; Goal Is 2,320

WASHINGTON, July 2.—(UP)—The army air corps gave its entire mobilization program "the gun" today in an effort to reach its goal of 2,320 modern fighting planes by July 1, 1939.

It adopted "speed" as the watchword for the next 12 months—speed in every branch of the air service and in every undertaking—to give the nation an adequate air fighting force.

Ten airplane manufacturing companies are now delivering five to 10 new planes to the air corps each week. The air corps wants faster deliveries. War department and air corps officials wish to reach the Baker board goal of 2,320 modern fighting planes a full year ahead of the July 1, 1940 objective

"AVIATION" JULY '38

International

OUTH SEA ISLANDERS—left to right: Lewis Yancy, vigator; Richard Archbold, captain; Russell Rogers, ot; Ray Booth, radio. These men lifted their Consoli-ted Guba off San Diego harbor June 2, landed at Pearl Harbor. June 7 they crossed direct to Wake Island. On June 9 they finished a pioneer 2300 mile crossing to Dutch New Guinea. Archbold will use the big ship in a two-year research expedition.

July 1938

LES AVIONS AMÉRICAINS

Dans le précédent numéro de « **L'Avion** », nous avons examiné un bombardier et un chasseur américains; nous allons, aujourd'hui, voir un des hydravions en service dans la Marine, et un avion de bombardement léger et d'observation.

♣

HYDRAVIONS de la CONSOLIDATED AIRCRAFT CORP. de San Diégo.

Cette firme est peut-être moins connue du grand public, en France, que Sikorsky ou Martin. Cela tient peut-être à ce qu'en ces dernières années elle a surtout travaillé pour la Marine des Etats-Unis, ce qui ne l'obligeait pas à la même publicité, évidemment, que si elle avait produit des avions commerciaux.

Elle n'en sort pas moins des machines de haute qualité. La preuve nous en est fournie par le fait que la firme Fokker en a pris la représentation pour l'Europe, mettant ainsi la Consolidated, en hydravions, sur le même plan que Douglas pour les terrestres.

Fondée il y a quinze ans par le major Fleet, la firme de San Diégo construisit d'abord un grand hydravion commercial, le « **Commodore** », pour équiper une des premières lignes reliant les Etats-Unis à l'Amérique du Sud, la N.Y.R.B.A., c'est-à-dire la ligne New-York, Rio de Janeiro, Buenos-Ayres. Des 14 appareils de ce type qui furent construits, 12 sont encore en service.

Pour répondre aux désidérata de la Marine des U.S.A., on construisit ensuite le « **Ranger** » dont 55 exemplaires furent mis en service. C'était un biplan à ailes inégales, à coque centrale et flotteurs de bout d'aile, double dérive, équipé de deux moteurs en étoile, à air.

Enfin, au cours de ces dernières années, on a construit, toujours pour la Marine, plus de deux cents exemplaires du type **P.B.Y.** qui est un monoplan, à flotteurs de bout d'aile relevables, équipé de deux **Pratt et Withney « Twin Wasp »** à capotage N.A.C.A. Ce type d'appareil parait présenter de très sérieuses qualités d'endurance et de sécurité; il est désigné comme « patrouilleur-bombardier », et est couramment employé pour étendre l'action de patrouille et d'éclairage exercée par les forces légères de surface. En présence des résultats obtenus, les Américains déclarent, d'ailleurs, que l'on ne saurait fixer actuellement de limite à la mesure dans laquelle ces hydravions sont susceptibles de remplacer les navires éclaireurs et patrouilleurs.

En effet, peu de temps après sa mise en service, le premier **P.B.Y.** battait le record international de distance, en allant de Cocò Solo, dans la zone du canal de Panama, à Alameda, en Californie. Des perfectionnements de détail permirent ultérieurement de porter à 6.000 kms la distance franchissable de ce type d'appareil. Cette distance permet d'envisager le transfert, en un jour, d'escadrilles ayant à opérer en des bases très éloignées de leur port d'attache primitif.

Pour les Américains en particulier, ce point est de la plus haute importance, car, en raison de la forme de leur continent, le transfert des destroyers de San-Francisco à New-York, par le Canal de Panama, ne demanderait pas moins de onze jours, tandis que des hydravions comme le **P.B.Y.** peuvent passer d'un point à l'autre en une journée.

Des déplacements de 4.000 kms sont devenus, pour l'amirauté américaine, si fréquents qu'ils font partie intégrante du service normal, et que les journaux n'en parlent même plus.

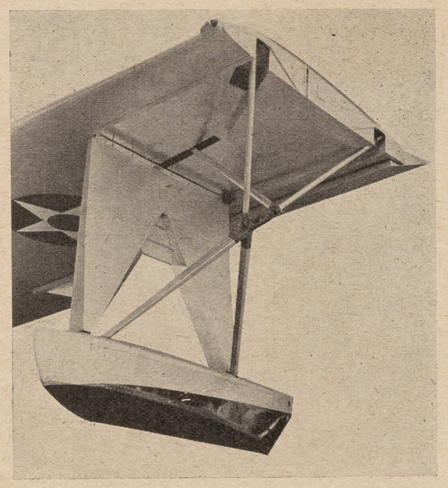
C'est d'ailleurs avec la version commerciale de ce type d'appareil que Sir Hubert Wilkins a effectué plus de trente mille kilomètres dans les régions arctiques, malgré les pires circonstances atmosphériques, lorsqu'il était à la recherche de l'expédition transpolaire russe de Levanevsky. Il lui arriva parfois d'être fort alourdi par le givrage, mais il put toujours continuer à voler correctement, malgré la lourde charge de combustible et de ravitaillement qu'il transportait.

Un point à souligner, relativement à ces divers vols, est que la liaison radio a toujours pu être maintenue avec la base de départ, ce qui prouve que le matériel et l'installation de T.S.F. sont parfaitement adaptés. Les communications en graphie sont assurées par un opérateur spécialisé, mais toute personne du bord peut, en phonie, converser avec l'extérieur au moyen d'un dispositif approprié, en jonction avec l'équipement radio.

Dès le début de l'étude du **P.B.Y.**, il avait été prévu que l'appareil pourrait voler à pleine charge avec un seul de ses moteurs. Après un certain nombre d'essais, le chef-pilote en vint à exprimer sa conviction que l'avion pourrait également décoller sur un seul moteur. Le calcul ayant montré le bien-fondé théorique de cette assertion, on entreprit des essais méthodiques desquels il résulte que le décollage est possible avec un seul moteur, en ayant à bord une provision de combustible suffisant à parcourir plus de deux mille kilomètres.

Le rapport élevé du poids utile au poids total du **P.B.Y.**, ainsi que sa grande vitesse de croisière en font un appareil des plus intéressants. Parmi les particularités constructives qui ont permis de lui donner ses qualités, Consolidated signale surtout les flotteurs repliables en bout d'aile, et les réservoirs faisant partie intégrante de la construction de l'aile.

Dans leur position repliée, les flotteurs n'ont qu'une très faible traînée, et ils agissent comme des écrans, améliorant l'allongement apparent de l'aile, et, par conséquent, ses caractéristiques aérodynamiques. Même en position repliée, leur action stabilisatrice est suffisante pour maintenir l'appareil à flot, si l'on amérissait en oubliant de les descendre. On peut les relever ou les abaisser à la surface de l'eau. En position abaissée, non seulement ils donnent la stabilité à



flot et la tenue à la mer (nécessaire pour opérer en haute mer), mais ils agissent également comme freins aérodynamiques durant la période qui précède l'amérissage.

Les réservoirs faisant partie intégrante de l'aile permettent de loger de grandes quantités de combustibles, en y consacrant seulement une petite fraction du poids qui serait nécessaire pour établir des réservoirs séparés. En même temps, cette disposition a l'avantage de mettre l'équipage et les passagers à l'abri des émanations d'essence toujours désagréables En outre, cette installation permet de réserver au transport toute la capacité intérieure de la coque.

En version commerciale, on peut installer des sièges pour transporter jusqu'à 40 passagers. Pour des vols de longue durée, on peut normalement transporter 24 passagers assis, ou 12 couchés.

Un train de roulement, avec pneus de forte section, est prévu pour l'utilisation des plages de sable. Ce train peut très facilement être logé à bord, ce qui rend le **P.B.Y.** particulièrement intéressant pour l'exploration, la reconnaissance, la cartographie, ou tout autre service pouvant exiger l'utilisation d'une base temporaire ne possédant pas les intallations habituelles.

Ces diverses particularités ne diminuent en rien la valeur militaire de l'appareil, bien au contraire.

Pour sa défense, le **P.B.Y.** porte 4 mitrailleuses, une à l'avant, une de chaque côté du pont, juste derrière l'aile, et une sous tunnel dans le fond de coque, juste en avant des empennages. L'appareil est ainsi complètement protégé dans toutes les directions.

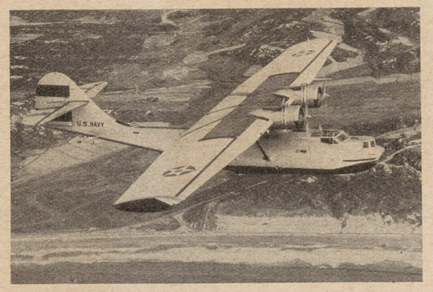
La pièce avant montée sur tourelle carénée couvre l'hémisphère avant. L'hémisphère supérieur est couvert par les mitrailleuses du pont, dont les champs de tir se recouvrent avec ceux des pièces avant et sous tunnel.

Enfin, la pièce sous tunnel couvre l'hémisphère inférieur, en croisant ses feux avec ceux des autres pièces.

Pour l'offensive, les bombes ou les torpilles sont suspendues sous les ailes à l'extérieur des fuseaux-moteurs. Les porte-bombes sont logés dans les ailes, où ils restent en permanence, sans occasionner de traînée supplémentaire. On dispose, sur cet appareil, de 4.600 kgs pour bombes et combustible. On peut, en conséquence, envisager celle des combinaisons qui donnera le meilleur résultat militaire, compte tenu de la distance à parcourir, et de la nature de l'objectif à atteindre.

Le largage des bombes s'effectue depuis le poste du bombardier qui est installé dans la coque, juste derrière le poste de tir avant.

Le **P.B.Y.** est entièrement construit en duralumin, à l'exception du bord de fuite de l'aile et des parties mobiles des empennages. Ces éléments comportent également une charpente



métallique, mais sont revêtus de toile. Les méthodes de revêtement et de protection du dural les plus modernes sont employées, pour résister à la corrosion en atmosphère saline.

La coque est divisée en cinq grands compartiments étanches séparés par des cloisons munies de portes étanches.

Un quelconque de ces compartiments peut être avarié et inondé sans que l'appareil soit en danger, la flottabilité restante étant amplement suffisante pour le maintenir à flot.

Des cloisons auxiliaires subdivisent chacun de ces compartiments de telle façon que la version militaire comporte, de l'avant à l'arrière:

1° Poste AV de tir et de bombardement;
2° Poste de pilotage;
3° Poste de navigation et de radio;
4° Poste du mécanicien, avec divers apparaux, lits et groupe moteur auxiliaire;
5° Chambre de repos, avec lits;
6° Poste de tir de pont;
7° Poste de tir sous tunnel.

Le poste avant, doté de larges champs de vision, sert pour la prise de repères de navigation et pour les manœuvres de mouillage, la mitrailleuse étant effacée lorsqu'elle n'a pas à être utilisée.

Le poste de pilotage comporte la disposition habituelle, avec double commande. Volants et pédales sont disposés pour assurer la meilleure visibilité et le plus grand confort. Les sièges sont réglables en position et en angle. Les divers instruments relatifs à la conduite des moteurs et à leur contrôle sont répartis entre le pilote et le mécanicien volant.

Le pilote a seulement ce qui est nécessaire à la manœuvre et à la sécurité; mais, par contre, il est en communication constante avec le mécanicien, aussi bien par signaux visuels que par le réseau téléphonique du bord.

La table du navigateur et son équipement occupent la partie droite du compartiment suivant. Le côté gauche est pris par l'installation radio, et par le tableau électrique qui contrôle la lumière, le téléphone et l'action du groupe auxiliaire moteur-génératrice.

Le mécanicien volant, dont le poste surélevé est logé dans la superstructure qui relie la coque à l'aile, pour qu'il puisse observer directement ses moteurs, a sous les yeux la plupart des instruments relatifs à leur conduite. Il commande directement tout ce qui ne doit pas nécessairement être fait par le pilote: réglage de la température, richesse du mélange, etc... Il dispose également de la commande des flotteurs de bout d'aile, et peut les actionner soit électriquement, soit à la main.

En bas de ce compartiment, ainsi que dans la chambre de repos qui lui fait suite, sont disposés des placards pour les effets personnels de l'équipage, ainsi que pour les rechanges utiles.

Les mitrailleurs de pont sont protégés, dans le 6e compartiment, par des portes coulissantes formant écran lorsqu'elles sont ouvertes.

Quand elles ne sont pas utilisées, les mitrailleuses sont rentrées à l'intérieur de la coque, leurs supports présentant à cet effet, les articulations nécessaires.

La mitrailleuse arrière est également rétractable, tout en restant, à l'intérieur de la coque, prête à être mise en position de tir par une simple action sur sa genouillère de support. L'ouverture nécessaire au passage de l'arme est obturée par une porte étanche manœuvrée de l'intérieur.

Les moteurs installés sont habituellement des **Pratt et Whitney S-CG,** mais on peut aussi bien monter des **Wright Cyclone** ou tout autre moteur analogue de 900 à 1.000 CV.

♣

Telles sont les principales caractéristiques de ce très intéressant hydravion qui, soulignons-le, n'est pas un prototype, mais existe à plus de deux cents exemplaires, donnant en service une vitesse maximum de 350 km/h. à 3.500 mètres, une vitesse minimum de 100 km/h., une distance franchissable de 6.500 kms, un plafond de 8.800 mètres, montant à 4.500 mètres en 13 minutes et demie, et décollant en 18 secondes en eau calme.

Sur ces mêmes principes constructifs, Consolidated sort, depuis quelques mois, des quadrimoteurs sur lesquels nous aurons peut-être à revenir.

♣

AVION BEECHCRAFT MODELE 18 de la Besch Aircraft Corporation

Cet appareil me paraît présenter un intérêt tout particulier, parce qu'en utilisant une puissance motrice égale à celle des biplaces monomoteurs actuellement en service comme avions d'observation, de photo, etc..., en un mot, de coopération, il emporte quatre personnes, va plus vite, est mieux défendu, etc... Il peut également être utilisé comme bombardier léger et comme avion sanitaire. Il vole parfaitement avec un moteur, non seulement ralenti, mais même complètement coupé.

Le **Beechcraft 18** est un monoplan cantilever à aile basse, qui a été étudié tout particulièrement pour atterrir doucemen, décoller en peu d'espace, avoir une grande vitesse ascentionnelle et une bonne vitesse de croisière. En outre, l'atterrisseur a été étudié pour l'usage de mauvais terrains. Des essais réels ont permis d'atteindre 1 fois 1/2 les efforts de chocs demandés par la Marine des U.S.A. pour ses avions embarqués, sans aucune faiblesse du train. Une vitesse verticale de chute de 3 m./sec. donne déjà lieu à des efforts très

FLEET PREDICTS SEA AIR LINES THIS YEAR

By United Press

MONTESANO, Wash., July 27. —Regularly scheduled transatlantic passenger air service before the end of summer was forecast here today by Maj. R. H. Fleet, president of the Consolidated Aircraft Corporation of San Diego. Maj. Fleet also predicted the eventual construction of planes with a wingspread of from 600 to 800 feet.

Mystery Hides Return Flight Of Navy Plane

S.D. SUN — JULY 22, 1938

Lieut. Peters Due Back In S. D. After Hop Across Country In Consolidated Airboat

By HAROLD KEEN
The Sun's Navy Editor

His secret mission on the east coast fulfilled, Lieut. (jg) James M. Peters, the first Navy aviator to pilot a seaplane nonstop across the continent, today awaited favorable weather at Pensacola before attempting a similar return trip in his PBY bomber, it was learned at North Island.

Last April, Lieut. Peters and a flight crew of Patrol Squadron Seven took off in a new Consolidated PBY bomber without public announcement of their destination and landed in Pensacola, Fla., after an unprecedented non-stop dash across mountains, deserts, dry valleys and inland cities. The last few hundred miles the fight, of course, was over the Gulf of Mexico, but never before had the Navy even considered sending an airboat overland across the continent without a stop.

Underwent Torpedo Tests

From Pensacola, Lieut. Peters headed up the Atlantic shoreline for Newport, R. I., where experimental torpedo tests were conducted behind a wall of Navy censorship.

The Navy has attempted to keep Lieut. Peters' flight westward this week as quiet as his hop to Pensacola three months ago. Aircraft Scouting Force authorities at North Island, however, admitted today that Litut. Peters took off this week from Newport for San Diego via Pensacola, retracing the route he took last April.

First Such Flight

Although Lieut. Peters' transcontinental flight was the first ever made in a Navy airboat, his feat was preceded by three cross-country dashes, all made by a civilian crew headed by Richard Archbold, American Museum of Natural History research associate now using his Consolidated plane to transport personnel and supplies to a two-mile high lake in Dutch New Guinea, where a scientific expedition is under way.

Archbold flew twice to Miami from San Diego, and once to New York City.

Should Lieut. Peters' round trip be considered a satisfactory demonstration of the ability of the Consolidated PBY's to span land surfaces over a considerable distance, the entire war strategy of the Navy's aviation branch may be altered.

For Protecting East

Under present plans, virtually all the new long range bombers will be stationed on the West Coast, the Canal Zone, Hawaii, and Alaska. The East Coast will be defended, at best, by only a few of the PBY's, according to the assignment of these planes recently disclosed here.

However, should a major emergency confront the Atlantic Coast's population centers, squadrons will be ready to fly non-stop across the continent at short notice. The trail blazing flight of Lieut. Peters will have shown the way.

LOCKHEED SETS SALES RECORD

S.D. SUN — JULY 31, 1938

LOS ANGELES, July 26.—Airplane deliveries of the Lockheed Aircraft Corporation established an all time monthly record in June, exceeding the corresponding 1937 month by 158 per cent, President Robert E. Gross reported today.

Gross announced that his company completed 14 new all-metal twin-engined transport planes during the month with a total value of $1,079,900. This compared with deliveries of $418,085 in June 1937.

Preliminary figures, he added, indicated that deliveries for the first 6 months of this year would aggregate about $4,700,000 or an increase of about 80 per cent over the 1937 period.

NAVY BOMBERS MAY RETURN IN FLIGHT GROUPS

47 Planes Now In Alaska Area; Flagship Due Aug. 14

S.D. Sun 7/27/38

Possibility that the 47 San Diego-based Navy patrol bombers which have been operating in the Puget Sound-Alaska region for more than a month, will be divided into two mass flight groups for the return trip in August, was foreseen at North Island today.

First Of August

Reports received this week in the headquarters of Patrol Squadrons Four and Five, the only Aircraft Scouting Force units now operating at the Naval Air Station, indicated that two of the four squadrons in Seattle may arrive here the first week of August, with the remainder due about August 15. Which units are expected first have not been disclosed.

Meanwhile, from the Sand Point Naval Air Station, Seattle, today came word that no official take-off time for the San Diego hop had yet been set. The planes recently returned to Seattle after a fortnight's tactical exercises at Sitka and Kodiak, Alaska.

Wright To Return

The Aircraft Scouting Force flagship USS Wright, which served as tender for the PBY plane squadrons in the Far North, is scheduled to dock at North Island August 14. Her sister ship, the Langley, is en route to Pearl Harbor, and will return here August 8 for a three-day stay before returning to Puget Sound.

Patrol Squadrons Four and Five are training at North Island for mass flights of 16 planes each to Pearl Harbor and the Canal Zone, respectively, within the next six weeks.

Consair Near Mark Of 61 Hawaii Hops

S.D. Union 7/5/38

With the departure of 16 long-range bombers of Patrol Squadron 4 from San Diego for Pearl Harbor next month, a total of 61 Consolidated-built planes will have attempted non-stop flights from Pt. Loma to Diamond Head in 20 months.

Twelve of the multimotored bombers were flown by navy personnel to Hawaii Jan. 28, 1937, and a like number on April 12 of that year. Last Jan. 18, 18 planes flew the 2250-mile airroute without mishap.

The lone commercial craft, that piloted by Capt. Richard Archbold of the American Museum of Natural history, left here June 2 and landed at Pearl Harbor in 18 hours, the fastest time yet recorded between San Diego and the crossroads of the Pacific.

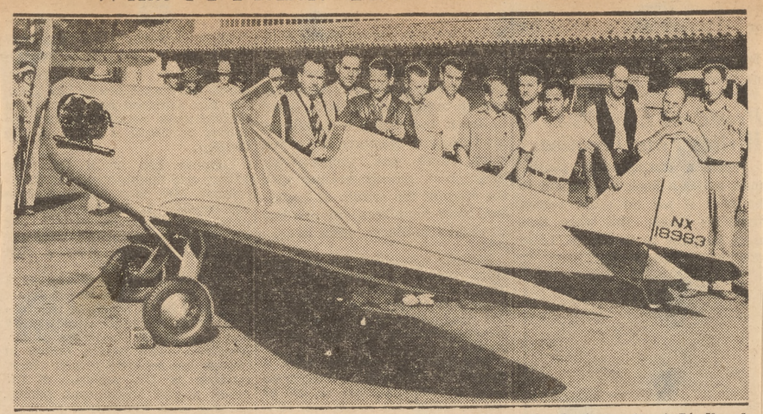
Army Speeding Aviation Plan; Goal Is 2,320

WASHINGTON, July 2.—(UP)—The army air corps gave its entire mobilization program "the gun" today in an effort to reach its goal of 2,320 modern fighting planes by July 1, 1939.

It adopted "speed" as the watchword for the next 12 months—speed in every branch of the air service and in every undertaking—to give the nation an adequate air fighting force.

Ten airplane manufacturing companies are now delivering five to 10 new planes to the air corps each week. The air corps wants faster deliveries. War department and air corps officials wish to reach the Baker board goal of 2,320 modern fighting planes a full year ahead of the July 1, 1940 objective

What A Relief! The 'Minx' Took Off!



When the tiny experimental plane behind which they are standing actually took off at Lindbergh Field last Thursday, the 12 men pictured above breathed a lot easier, because most of them had sunk a great portion of their savings as well as all their spare time for the past six months in its construction. Left to right, Claude C. Flagg, designer of the "Minx"; L. A. MacDonald, in whose shop it was built; Hugh G. Nicholson, test pilot; D. E. Southwick, C. F. Taylor, L. L. Eickmeyer, Ed Postel, C. C. Alder, Curtis W. May, C. D. Lunt, Gerald Roberts, and William Hammond.

11 S. D. Mechanics Eye Low-Cost Plane Field

JULY 24, 1938
S.D. SUN

In a silver wisp of a plane they have named the "Minx" because she's a pert, saucy little mechanism, are wrapped the hopes of 11 Consolidated Aircraft Corp. employes, who today believe they may have the answer to the most-repeated demand of the aviation enthusiast with modest income:

"Build a plane that doesn't fly out of reach of my pocketbook, and I'll buy it!"

For the past six months these men have toiled away in their spare time on their streamlined, flying midget; they pooled their savings so they could meet the construction bills, totaling some $3000, and finally, last Friday, they entrusted this untried craft to the experienced and capable Hugh G. Nicholson, another Consolidated worker who "test pilots" occasionally.

She Actually Flew!

The 11 builders of the "Minx" held their breath when Nicholson accelerated the 40 h.p. Continental engine and sped down the Lindbergh Field runway. There was no insurance on the plane, so that if it didn't respond as it theoretically should—

But the sturdy little ship, tail still down, took off in the amazingly swift time of seven seconds, and proceeded to pirouette so gracefuly beneath the blue sky as to dispel any doubts about her air worthiness.

Designer of San Diego's newest contribution to the experimental airplane field is Claude C. Flagg, who drew the plans for the tiny craft which Tony Le Vier cracked up at the National Air Races last year.

The ten other banded together in an organization they call the Aircraft Mechanics' Association are:

D. E. Southwick, C. F. Taylor, L. L. Eickmeyer, Ed Postel, C. C. Adler, Curtis W. May, C. D. Lunt, Gerald Roberts, William Hammond, and Thomas J. McAleer.

Economical To Operate

The "Minx" is a low wong monoplane with a 24-ft. six inch wing spread and a 450-mile cruising range. Mr. Flagg claims that it will use only two and one-half gallons of gasoline and one quart of oil per hour at cruising speed of 90 miles uer hour. Top speed has been estimated at 115 miles.

It is a single seater, and if further tests prove satisfactory, plans may be started to manufacture it to sell at a cost of $1200. And that will be the answer to the large army of private fliers who yearn for a plane with moderately high performance characteristics that doesn't require a major pocketbook excavation to acquire.

As the "Minx" continues her tests on Lindbergh Field next week, San Diego will be the scene of trials on one of the largest and one of the smallest experimental planes in the country. For, just across the field from the "Minx's" take-off lane, Consolidated's giant four-motored bomber is being prepared for final official acceptance inspection by the Navy.

Archbold's Gift Stuns Natives

No longer are natives of New Guinea, who are assisting Richard Archbold, research associate, American Museum of Natural history, in scientific explorations, going barefoot.

Transferring the natives from Hollandia, on the north coast of New Guinea, to Lake Habbema, 300 miles inland and 12,000 feet above sea level in his $250,000 Consolidated built plane, Archbold discovered they suffered from the intense cold. Therefore he issued them heavy socks and footwear, the first ever worn by the amazed natives.

MESSAGE TO BOYD

Word to this effect was received by short wave radio at 3:30 yesterday from Archbold to Barney Boyd, radio amateur.

"Archbold reported he is making daily trips from Hollandia to Lake Habbema with natives and supplies," Boyd said. "Archbold said the temperature on the lake was near freezing and that the natives hopped around on their bare feet so much he was compelled to provide them with shoes if any work was to be done in establishing camp.

LANDED BLIND IN FOG

"He further reported that twice he had to land the heavily loaded plane blind on the lake because of thick fog. Archbold plans to retain

His Voice Spans 6500 Miles

Every Saturday night, B. F. "Barney" Boyd, San Diego disabled war veteran and amateur radio operator, picks up his microphone and says "Hello!" to Dick Archbold and flight crew of the Consolidated-built Guba, now in far-off Dutch New Guinea.

Jungle Jolly as Archbold Crew Dedicates Outpost

S.D. Sun JULY 31

Barney Boyd Keeps Tab On Scientific Flight Through Radio In San Diego

On the shores of a two-mile high lake in the Dutch New Guinea wilderness, a unique celebration took place last night.

Richard Archbold, the flight crew of five who accompanied him on the 6500-mile air journey from San Diego in the Consolidated-built flying boat "Guba" last month, and a small band of scientists for a few hours forgot about the difficult job confronting them, and unleashed their emotions to the bewilderment of 100 dark-skinned natives.

Dedicate Base

The occasion was the "dedication" of a new scientific outpost, the base camp Lake Habbema, from which the American Museum of Natural History expedition of which Archbold is leader, will operate in its search for rare biological specimens.

After almost two months of transporting personnel, supplies and equipment from the seacoast to the lake, more than 11,000 feet above sea level and about 150 miles inland, the Guba (Papuan dialect for "sudden storm") finally had completed its gargantuan job and Archbold and mates decided that a party was in order.

All this was revealed here yesterday in radio conversation of Archbold with his San Diego representative, B. F. "Barney" Boyd, in whose home at 4635 56th-st, a 1000-watt transmitter was installed shortly before the scientist-aviator flew across the Pacific.

Jungles Roar

And from what was indicated in this conversation, the Dutch New Guinea jungles echoed with revelry that would have done justice to New Year's Eve and the Fourth of July rolled up into one.

Since arrival of the Guba at Hollandia, in Dutch New Guinea's Humboldt Bay, last month, Barey Boyd has maintained a constant weekly radio watch in his "ham shack."

Promtly at 10.30 p. m. each Saturday (6 p. m. Sunday in New Guinea) he calls into his "mike": "W6LYY calling PK6XX! W6LYY calling PK6XX!"

And from out across 6500 miles of space comes the response of Raymond Booth, Archbold's radio operator. For two or three hours messages are exchanged. The expedition members wish to send word to their friends or wives, and they're relayed by Barney, either by long-distance telephone, telegrams, or mail. Or Archbold has a lengthy report on the expedition's progress he has promised the New York newspapers; Barney takes it all down in the early hours of Sunday morning.

And, occasionally during the [illegible] the station at Hollandia for supplementary messages.

The story of Barney Boyd itself is packed with human interest. Three and one-half years ago, an old spinal injury, suffered in the World War, became aggravated and he was paralyzed from the waist down.

Doomed to a wheelchair existence, he cast about for some activity that would compensate for a gloomy "shut-in" life. He found it in amateur radio, to which he was introduced by a fellow war veaeran in La Mesa, Howard Breedlove.

Barney acquired a modest transmitter and receiver, learned the secrets of "ham" operation. Last year, during the disastrous Southern California flood which swept away communication facilities, his radio station was the bottleneck through which much of the wire service news filtered into San Diego from Los Angeles.

Hired On Spot

When Archbold, in casting about for an amateur operator suited to act as San Diego base station operator during the entire two years' duration of the expedition, was introduced to Barney, he "hired" him on the spot.

The one kilowatt transmitter, most powerful allowed amateurs, was installed, and Barney Boyd today finds life more interesting than a lot of people who can move about freely, go anywhere and do anything they please.

CLIPPER HUNT TO BE PRESSED

Army, Navy To Continue Search For Week

S.D. Sun —— Aug. 1, '38

By United Press

MANILA, Aug. 1.—Military authorities said tonight the search for the Hawaii Clipper, missing since 8:09 a. m., P. S. T., Thursday with 15 persons aboard, probably would be continued another week, unless a definite clue to the fate of the giant flying boat was discovered.

This announcement came at the end of the third day of searching the sea 565 miles east of Manila, where Capt. Leo Terletzky of the ill-fated plane made his last report.

Penguin To Search

The Navy minesweeper Penguin was expected to reach the area of the search from Guam tomorrow. Two amphibian planes from the USS Heron today flew considerably south of the southernmost route any Clipper plane travels in an ever widening hunt for the lost ship.

The Army's 28th Bombardment Squadron flew in a long triangle, pointing approximately five degrees east of the Clipper's last reported position.

Hope Abandoned

The Navy tender Meigs circled about 50 miles south of the Clipper's radioed position.

However, hope had been virtually abandoned that the fate of the Clipper would ever be known.

Archbold Offers To Join Search

An offer by Richard Archbold, millionaire scientist-aviator, to aid in the search for the missing Hawaii Clipper with his long-range San Diego-built patrol plane "Guba," today was under consideration by Pan-American officials.

Barney Boyd, San Diego radio amateur, yesterday was informed by Archbold from the latter's American Museum of Natural History base in Dutch New Guinea that his craft, capable of flying 4000 miles non-stop, was available to Pan-American authorities.

AVIATION MAG. June '38

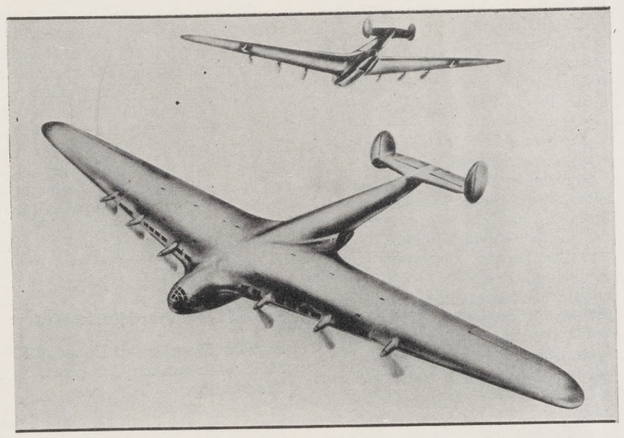
Consolidated Looks Ahead

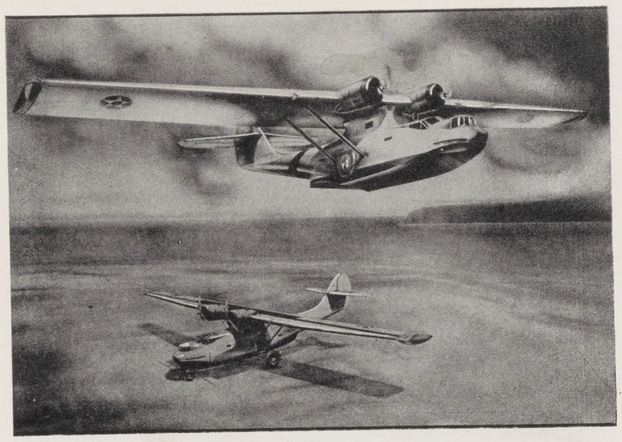
Engineers have completed a preliminary study of a really big airplane—also, a modification of the PBY.

LOOKING TO THE NEAR FUTURE Consolidated Aircraft Corporation has completed a study of a three hundred passenger plane. Using materials and technique now available, and power plants that would be available by the time such a plane could be completed, the study envisions a single hull flying boat in which outboard floats retract into the under side of the wing, and the main float retract up against the body of the plane. Power is furnished by six two-thousand horsepower engines within the wing driving three-blade propellers of 20 ft. diameter through extension shafts. All passenger accommodations are on one deck which extends approximately 88 ft. fore and aft in the hull and 116 ft. laterally through the wing, with windows in the leading edge and sky lights in the upper surface of the wing. Wing thickness at the root is a maximum of over eleven feet, with a root chord of 48 ft. and a tip chord of 14 ft. Span of the ship is 272 ft., length 144 ft., height 20 ft., wing area 8400 sq. ft., gross weight 400,000 lb., wing loading 47.7 lb. per sq. ft., power loading 33.3 lb. per h.p., total power 12,000 h.p., cruising speed 300 m.p.h. and range of 5000 mi., with a crew of thirty, three hundred passengers, baggage, mail and express.

Latest version of the Consolidated PBY being offered to the world market is an amphibian with retractable tricycle landing gear. As a military patrol bomber it would retain practically all features of the PBY boats as used by the U. S. Navy, plus the ability to operate off land fields. As a commercial transport it would provide accommodations for approximately forty passengers in four separate compartments. Rumors are current of interest in this model for export.

Flying Equipment





Above: As Consolidated's engineers envision a 200-ton flying boat for the future Main central float is designed to retract against fuselage bottom. Below: The familiar PBY modified to become amphibious.

CONSAIR OFFICIAL DIES IN CRASH

S.D. TRIBUNE JULY 28, 1938

SAN DIEGO, CALIFORNIA, THURSDAY, JULY 28, 1938 S.D. SUN

Plane Crash Kills Consair Test Pilot In Yugoslavia

Gordon Mounce Victim As He Demonstrates S. D. Craft

Gordon E. Mounce, experienced test pilot and assistant to the manager at Consolidated Aircraft Corp., was killed today when his two-seater training plane crashed while stunting over an airport in Belgrade, Yugoslavia, according to a cablegram received by Maj. R. H. Fleet, Consolidated president.

Mounce, 40, leaves a widow and three children, living at 2202 La Jolla Shores-dr, La Jolla.

Demonstrating Plane

The plane was being demonstrated to Yugoslavian officials at the time of the crash. Mounce left San Diego for a sales tour of European countries in January, accompanied by C. A. Van Dusen, vice-president of the local aircraft firm.

Mounce, a former United States Army captain, was assistant to Major Flee, and for six years had been active in the sales division of Consolidated Corp. He represented the firm in Europe from 1932 to 1935.

5000 Hours In Air

A veteran pilot, Mounce had over 5000 hours in the air to his credit. He joined Consolidated in 1930 as West Coast representative and demonstration pilot, being advanced to Maj. Fleet's assistant on his return from Europe in 1935. He was born in Lewiston, Ida., in 1898.

Surviving are the widow, Mrs. Lorin Mounce, and three children by a previous marriage; Gordon Jr., of La Jolla, and Robert and Lionne, both of Port Angeles, Wash.

San Diego Pilot's 'Fun' Cause Of Tragic Death

Gordon E. Mounce, Consair Demonstrator-Salesman Killed In Yugoslavia, Liked Aerial Acrobatics

S.D. SUN JULY 29, 1938

By HAROLD KEEN
The Sun's Navy Editor

Aerial acrobatics, in which 40-year old Gordon E. Mounce found relaxation, yesterday were the cause of his death in Belgrade, Yugoslavia.

Ironically, the foreign representative of Consolidated Aircraft Corp. early this year commented to friends in San Diego that two things gave him the most pleasure in his spare time. They were aerial acrobatics and golf.

Tragic Touch

Mounce's biography, which appeared in the May issue of Consolidated's magazine, "The Consolidator," mentioned this fact. It proved the tragic final touch in what today is the San Diego flier's obituary.

For Gordon E. Mounce yesterday plunged to his death after he had successfully completed 24 loops while demonstrating a small Fleet training plane.

Few American aviators equalled Mounce's proficiency in aerobatics, or in general handling of small planes, Consolidated officials declared today. Mounce had left the United States last January 15 with C. A. Van Dusen, vice president of the concern, to comb the European market for aircraft contracts.

Demonstrated Ships

Van Dusen presumably was to concentrate on sales for Consolidated's big airboats, while Mounce was to demonstrate and attempt to sell smaller ships, such as the Fleet trainer, manufactured by a Canadian concern in which Consolidated has large holdings.

Last year, at a picnic held for Consolidated employes at Mission Beach, Mounce staged the principal attraction—a series of intricate stunts that had even the air-wise factory workers gasping. That was one of his final aviation performances locally.

GORDON E. MOUNCE
Aerial Acrobatics His "Relaxation"

Born in Lewiston, Ida., in May, 1898, he entered the aviation industry via the automotive field, operating a general garage soon after leaving college. During the war, he served with the Army Air Corps, then went into the business of aerial mapping, advertising and student instruction.

At the time of his death, he had more than 5000 hours of piloting time.

Since 1932, he has been European representative and demonstration pilot for Consolidated, becoming assistant to Maj. Reuben H. Fleet, president, three years ago.

Surviving the aviator are his widow, Mrs. Lorin Mounce, 2202 La Jolla Shores-dr, La Jolla, and three children by a previous marriage; Gordon Jr., 18, of La Jolla, and Robert, 15, and Lionne, 17, both of Port Angeles, Wash., where they reside with their grandparents, Mr. and Mrs. E. Mounce.

Loop Is Fatal To La Jollan On Sales Tour

Gordon E. Mounce, 40, Consolidated Aircraft Corp. official, was killed today in a plane crash at Belgrade, Jugoslavia, The Associated Press reports.

At Belgrade Airport

Mounce, assistant to Maj. R. Fleet, president and manager of aircraft firm, crashed to his de after 24 successful demonstrati in looping his baby "Fleet" pl at Belgrade's airport at Zemun.

A resident of La Jolla, where he lived at 2202 La Jolla Shores dr., Mounce went to Europe on a sales tour in January, accompanied by C. A. Van Dusen, vice president and works manager. He had several years' experience in Europ as Consolidated's representati there from 1932 to 1935.

Veteran of Air

The Consolidated official, former United States army captain, was credited with having made the first outside loop in a small commercial plane. Born in Lewiston, Id., in May, 1898, Mounce served with the United States army air corps during the World war, following which he entered t business of aerial mapping, adv sing an student instruction. He partment of commerc license, F.A.I. license, and engine mechanics' l

Capt. Archbold's "Guba" trying its wings high over a Pacific Coast city in preparation for flight to New Guinea.

Man's Latest Creation Visits Stone-Age New Guinea

ON June 2nd, 1938, Captain Richard Archbold, well-known explorer and scion of the Archbolds who made Standard Oil history, took off from San Diego, California, with five companions in his $250,000 "flying laboratory" to collect specimens in New Guinea for the American Museum of Natural History.

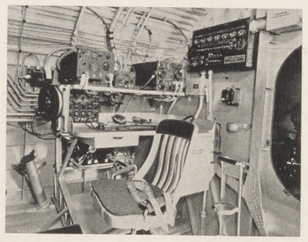
Captain Archbold, who is thirty years old, made the flight by way of Honolulu and Wake Island to his final destination, Hollandia on the northeast coast of New Guinea in less than fifty hours' flying time. The 2267 miles from San Diego to Honolulu were covered in about 17 hours and the second hop of 2300 miles to Wake Island took but 16 hours and 45 minutes. In the final leg of the 7,000-mile journey, he traversed an area over which no plane had ever flown in 14 hours and 41 minutes.

The plane structually is identical to the Navy PBY flying boats and is the most completely equipped flying laboratory in the world—particularly for all-weather flights over land or sea. It was furnished especially for the expedition and its installation of instruments, radio and navigational devices are the latest known to science.

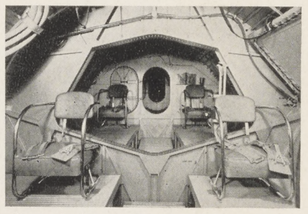
Built by the Consolidated Aircraft Corporation the ship is powered with Pratt & Whitney (Model SBG) Twin Row Wasp Engines of 14 cylinders developing 900 HP each. The cubic inch displacement is 1535 and the engine has a bore and stroke of 5.1875 x 5.1875" with a compression ratio of 6.75 to 1.0. The supercharger is geared at 12:10. The horsepower required for normal take off is 825 and for normal and maximum climb rate 750.

The interior equipment of the ship is the result of months of study and experience gained on Captain Archbald's former expedition to New Guinea in 1936. In the bow compartment are an airspeed indicator, an altimeter and an aperiodic compass—the turret is graduated in degrees and shadow bars are provided for taking azimuth and for operation of a sun compass. In the pilot's compartment there are two complete sets of blind flying instruments and a Sperry Gyropilot. A right and left indicator for a tele-magnetic compass, an indirectly lighted compass and an aperiodic compass. The radio operator in the same compartment as the navigator has two transmitters, two all-wave receivers and two remotely controlled radio direction finders. One transmitter and receiver are remotely controlled from the pilot's cockpit by a dial system.

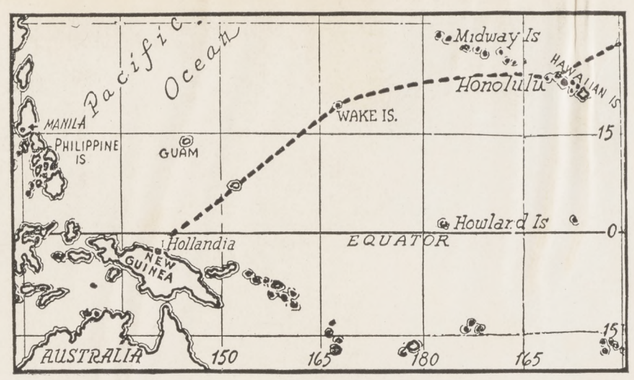
There are four sturdy platforms to support five tons of cargo and ten chairs for passengers. The "Guba", which in Papuan dialect means "Sudden Storm", will be required to carry almost daily, supplies and personnel from the seacoast base at Hollandia to the advance party of the expedition stationed on Lake Habbema, near the summit of Mt. Wilhelmina, altitude 12,500'. This is some 300 miles inland and a three months' journey on foot whereas the "Guba" will make the flight in two hours.



The radio equipment installation on the flying boat "Guba" is the last word in science of the air-waves.



One of the spacious compartments especially designed for the comfort of the expedition members. View from bulkhead No. 4 looking aft.



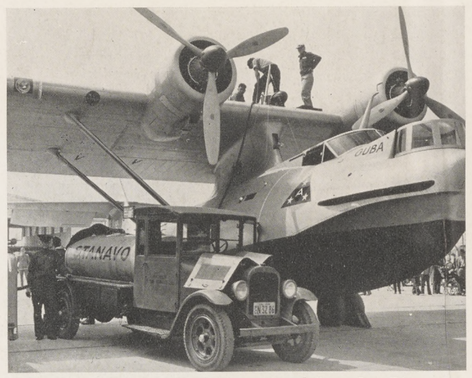
Richard Archbold, heading a group of scientists seeking specimens for the American Museum of Natural History, made this 7,000-mile flight from California to Hollandia, Dutch New Guinea. Stops were made at Honolulu and Wake Island.

The Expedition will spend 1½ years in New Guinea collecting zoological data on birds, mammals and plants to further complete the valuable contributions to science which Captain Archbald brought from the almost unknown region two years ago. The base station will be equipped with a 500 watt radio transmitter and the lake base with a portable set thus permitting constant communication between the bases and the plane.

To make a complete zoological record of the area survey trips of three and four weeks duration will be made from the Lake—slow and tedious journeys of but a few miles a day under conditions making it impossible to carry supplies. In order to overcome the difficulty the same method will be employed which was practiced successfully on the former expedition, namely the dropping of food supplies by parachute for it was due to the loss of their plane that the first expedition was obliged to return. For the purpose the "Guba" has installed a special cargo dropping chute in the tunnel hatch. Thus one of the greatest problems of exploration has been solved by placing this burden on the wings of a flying boat.

Accompanying Captain Archbold is Russell Rogers who acted as pilot on the 1936 New Guinea expedition; Lewis Yancey, forty-one-year old veteran navigator of the first New York-to-Rome flight in 1929; Gerald Brown, flight engineer, who flew Ethyl Gasoline Corporation's C. J. MacFarlane to Fairbanks, Alaska, last summer (see Jan. "News") and there joined Sir Hubert Wilkins in his search for the Russian flyers; Raymond Booth, radio operator, also a veteran of the Wilkins expedition and Stephen Barinka, assistant engineer.

For this material and photographs we are indebted to: American Museum of Natural History, Mr. F. A. Learman of Consolidated Aircraft Corporation and Mr. Gerald Brown.



Flying boat "Guba" at U. S. Coast Guard Base, San Diego, just before take-off for Honolulu at 2:45 P. M. June 2nd. 1,750 gallons of Stanavo Aviation Ethyl with an 87 octane rating were put aboard. 17 hours later she came down safely at her first port of call.

The "Guba's" intrepid crew shortly before the start of their trail-blazing flight.

TWO CAMPS ESTABLISHED

Food and Supplies Dropped for Ground Parties From Expedition Flying Boat

The following dispatch is from the leader of the 1938 New Guinea expedition. Mr. Archbold, research associate of the Department of Mammals, American Museum of Natural History, and the members of his expedition expect to spend about two years in a study of mammals, birds and plants in New Guinea.

By RICHARD ARCHBOLD

Copyright, 1938, by The New York Times Company and The North American Newspaper Alliance, Inc.

HOLLANDIA, Dutch New Guinea, Aug. 13.—Over a period of ten days, 110 men and thirty tons of supplies and equipment were transported approximately 180 miles into the unexplored interior of New Guinea by the twin-motored flying boat large island. The airplane is the one in which your correspondent and five companions crossed the Pacific Ocean from San Diego, Calif., to Hollandia early in June.

Considering the rugged and unexplored jungle and the mountainous country in which the airplane is operating, the transporting of so large a party and its supplies without an accident in so short a time is thought to be something of a record.

Two advance camps have been established, one of sixty men on the Idenburg River, about 125 miles northwest of the base camp at Hollandia, and the second of 110 men about seventy miles farther south on the shores of Lake Habbema, a small mountain lake situated near the center of the island at an altitude of approximately 11,000 feet.

Party Investigates Country

The latter part of July an exploring party of twenty-four men left the Idenburg River camp on foot to work their way through the mountains and investigate the country which had previously been seen from the air. A few days ago a second party of twenty-four men left the Lake Habbema camp to work their way east and north on a similar mission. Each party is equipped with a portable radio telephone, which keeps them in daily contact with the base camp at Hollandia or direct to the airplane, should it be in the air. Every few days food and other supplies are dropped to the exploring parties by parachute from the airplane, as the country through which they are traveling affords no possible landing place.

Du[illegible] made prior to the establishment of the advance camps, a large valley was sighted from the air lying just east of Lake Habbema. It was carefully photographed. Many native villages and gardens were visible, indicating a very large population hitherto unknown. The ground party from Lake Habbema is now in this valley and reports having made friendly contact with many of the natives, finding them a very primitive people, with nothing to indicate previous contact with the outside world.

The party working south from the Idenburg River has covered a little more than half the distance between these camps in two weeks, having found travel very difficult, as the jungle is so thick in many places that it is necessary to cut a trail. There are a few scattered villages in the mountains and valleys but the bulk of the population appears to be concentrated in the big valley east of Lake Habbema.

Get Reports by Radio

The airplane crew maintains headquarters at the base camp at Hollandia, where supplies and stores are received from the outside world via a small coastwise steamer which calls once each month. Here complete maintenance and overhaul equipment has been assembled to care for the big plane. By radio telephone daily reports of progress are made by each field party and by the Lake Habbema advance camp to the base camp. Requests for special supplies, equipment and medicine are made at the same time. At the base camp supplies are assembled in small packages to be dropped to the field parties by parachute or delivered to the advance camp, where landings can be made.

Back in Hollandia for a few days' rest, I feel enthusiastic about the progress of the expedition to date, as everything has proceeded exactly according to schedule. Aside from some pretty nasty flying weather, which the airplane crew has taken in its regular stride, everything is working out perfectly. There has been no sickness, even minor ailments being comparatively few. The collecting parties at both the Idenburg River and Lake Habbema camps are doing excellent work, having already obtained several rare specimens in the large and rapidly growing collection of mammals, birds and plants.

Our exploration parties are in virgin territory and their investigations will add greatly to world knowledge and fill an exceedingly large blank spot on the map of the island. From what has already been accomplished, and from what we have learned about the country in the last few weeks, indications are that the final results of the present expedition will far exceed our most sanguine expectations.

NAVY TO HOLD RITES FOR AIR CRASH VICTIMS

Memorial Services For Five Fliers Slated Tomorrow

S.D. SUN AUG. 19, 1938

Memorial services for five Navy fliers who were killed in the crash of two airboats of Patrol Squadron 5 in San Diego harbor Monday night will be held in the Naval Air Station Chapel, tomorrow, at 10:30 a. m. Chaplain Edgar C. Andrews of the USS Wright, Aircraft Scouting Force flagship, will conduct the rites.

Raymond O. Chrisinger, 26, aviation machinist's mate 3c, died in Naval Hospital yesterday afternoon. He had suffered a fractured left thigh, fractured right leg and shock, and his condition had been aggravated by pneumonia. He is survived by his father, William L. Chrisinger of Winfield, Ia.

Disposition of Bodies

Disposition of the bodies of the remaining victims of the airboat crashes and of the three fliers who were killed on Kearney Mesa, Monday afternoon, in a Douglas torpedo bomber, which spun out of control from an altitude of 3000 feet, will be as follows:

Beryl Thomas McKenzie, Radioman 2c, 21, to be buried in Portland, Ore., home of his father, W. R. McKenzie. The body will be escorted north by his sister, Mrs. Alice Holbert, of 2544 J-st. Mr. McKenzie had been in San Diego only two months while in training for a mass flight of 16 bombers of Squadron VP-5 to Coco Solo, Canal Zone, Aug. 31.

Henry Paul Boeckmann, radioman 3c, 22, who also arrived here from Coco Solo in June, to be buried in Dayton, O., home of his father, Henry Boeckmann. The body will be provided naval escort to Dayton.

Arlington Burial

Lieut. (jg) Clarence E. Kasparek, 28, of 516 I-av, Coronado. The body will be escorted to Arlington National Cemetery by the widow, Mrs. Catherine Kasparek, leaving San Diego Saturday morning. The officer had lived in Coronado three years.

Don Fay Smith, radioman 3c, 19, probably will be buried in San Diego. The youth's father, Oscar Smith, is en route here from Des Moines, Ia., to complete funeral arrangements. Mr. Smith was a local resident since Feb. 25.

Pensacola Rites

Mike Frank Moscicki, aviation machinist's mate 2c, 38, to be buried in Pensacola, home of his wife, Mrs. Willie Mae Moscicki. The body will have a naval escort east. Mr. Moscicki came to San Diego in January from Pensacola.

Ralph Thomas Carter, aviation chief ordnance man, 29, of 4037 38th-st, to be buried in Clyde, N. C. The body will be escorted to North Carolina by the widow, Mrs. Juanita Carter, tomorrow afternoon. Funeral services for Mr. Smith, Mr. Moscicki and Mr. Carter will be held at 10 a. m. tomorrow in Bonham Bros. mortuary.

The body of Frank Freeman, aviation machinist's mate 2c, of 3259 Date-st, was found last night after more than 48 hours of searching in the bay bottom.

Consair Plant To Be Revamped

S.D. Union - 8/10/38

New-Type Plane Will Be Built

The whole equipment of the Consolidated Aircraft plant at Lindbergh field will have to be revamped in the next six months to produce an entirely new model, Reuben H. Fleet, Consolidated's president, announced last night. The factory, however, will retain some 700 men while the work is being done. About 1400 men are now employed.

The company is completing the last of the PBY type planes built for the navy's fleet patrol wings.

Thirty-two of these will be flown to Hawaii by patrol squadrons 1, 4 and 18, in relays of 18, Sept. 6 and early November, and 16 will be ferried to Panama by squadron 5, Aug. 31.

Consolidated still is testing the new $1,000,000 4-motored "flying battleship," which has yet to be given its final trials by a navy board. It is huge, long-range patrol bombers of this type, now being built by Consolidated, Martin and Boeing, that will supplant the twin-motored PBY's. Officials estimate that it will be at least six months before the navy department awards any contracts for the 4-motored patrol bombers.

NEW TEST FOR BIG BOEING PLANE DUE

SEATTLE, Wash., Aug. 23.—New tests of the 74-passenger Boing transoceanic Clipper were scheduled today after the installation of twin rudders in the hope they would allow the giant craft to maneuver on the water with greater stability.

Engineers said the rudders replaced a single rudder and fin. A 41-ton aerial giant, the Clipper, built for use by Pan-American Airways, has made successful flights.

S.D. SUN AUG. 23, 1938

WASH "STAR" 6/7/38

NAVY WILL BUILD 50-TON WARPLANE

Construction Work to Start Soon on Craft With 5,000-Mile Range.

By the Associated Press.

The Navy is ready to start building the world's largest military plane—possibly the largest of any type.

The original model will cost upward of $3,000,000 four times as much as the Army's 32-ton "super flying fortress." Its weight may reach 50 tons, compared to the 41½-ton Atlantic Clipper, the Nation's largest ocean air transport, now being tested at Seattle.

After shielding details for more than a year, the Navy disclosed some facts about the flying patrol boat in asking Congress to double the $1,000,000 appropriated last year for its construction.

The House Appropriations Committee included the sum in the second deficiency bill introduced yesterday. The lowest bid, opened last month, was $2,400,000 without engines or propellers, but officials said they could divert the extra $400,000 from other funds.

Rear Admiral Arthur B. Cook, chief of the Bureau of Aeronautics, said the new plane "will be a very great and important advance over airplanes of the flying boat type now in existence, and its potential naval value is extremely high."

Just how far and fast the craft will go is confidential, Admiral Cook said, but he indicated its range would exceed considerably the 5,000-mile range needed for a non-stop round-trip from San Francisco to Honolulu. The plane will be partially armored and will carry a crew of 10 to 14 men.

It is expected to be the forerunner of a squadron of 15 or more in the next few years. In lots of that number, Admiral Cook said, the unit cost would be about $1,000,000.

BODY OF AIR CRASH VICTIM RECOVERED

S.D. SUN AUG. 19, 1938

The body of Frank Freeman, 28, aviation machinist's mate (2c) who was killed in the crash of a Navy patrol bomber Monday night, was recovered from the bay bottom last night, Aircraft Scouting Force officials announced today. Funeral arrangements will be made at Bonham brothers mortuary.

Mr. Freeman, a native of Kenosha, Wis., is survived by his widow, Doris, and a three-year-old daughter, of 3269 Date-st. He was believed to have been co-pilot of the first of two PBY airboats which fell into the harbor off the National City shore, bringing death to five and injuries to three.

AIRBOAT TESTS START

Final tests on Consolidated Aircraft Corporation's $1,000,000 four-motored bomber were started in San Diego harbor today.

Representatives of the Naval Air Station will check the 25-ton airboat before turning it over to a trial board, tentatively scheduled to leave Washington for San Diego Wednesday. S.D. SUN AUG. 15, 38

44 NAVY PLANES RETURN HERE; HOP FROM SEATTLE NON-STOP

8/7/38 S.D. Union

(Pictures on Page 8, Section A)

Ending summer exercises which took them as far north as Sitka and Kodiak, Alaska, 44 planes comprising Patrol Wing 1 of the scouting force, under Capt. Alvin D. Bernhard, landed at Naval Air station late yesterday, following a non-stop flight from Seattle. Patrol bombers of the latest type, the planes—from squadrons VP-7, 9, 11 and 12—made the trip in 10 hours, through practically every kind of weather. There were clouds, and overcast sky, and surface fog—but once the big flying boats had climbed up over the mists, they had sunshine for practically the entire trip.

At noon, in what Capt. Bernhard described last night as the most beautiful weather he had ever seen, the planes flew over the units of the fleet which were at anchor in San Francisco bay. The bridges, Treasure island, the city itself and the surrounding communities, all were spread out like a huge, colored map below the crews of the big planes. Then, without landing, the wing turned south, with San Diego as its goal. Around 4 they were over San Diego bay.

Return of the patrol wing to its base at North Island brought 80 officers and 200 men back to their homes here. The group left San Diego the morning of June 25, landing the same day at the Sand Point air station on Lake Washington, Seattle. After a brief visit there, they headed seaward again, this time to the northwest, and have been operating in Aleskan waters, as well as from the Puget Sound base.

In command of the flight, Capt. Bernhard made the hop from Seattle to San Diego in plane 12-P-1, flown by Lt. Comdr. T. A. Gray jr., commanding VP-12. Capt Bernhard is chief of staff of the scouting force aircraft.

BIG NAVY BOMBER GETS FINAL TEST

Last-minute check-up before submitting the craft for inspection of a Navy Trial Board were made today of Consolidated's experimental four-motored 25-ton patrol bomber, by Lieut. Comdr. Andrew Crinkley and William Wheatley, Consair chief test pilot.

The trial board, headed by Lieut. Comdr. R. E. Jennings, is slated to begin work tomorrow. Its job is expected to last a month, after which official acceptance of the plane, which cost $1,000,000, is due. S.D. SUN AUG. 23, 1938

S.D. UNION AUG. 17, 1938

Navy Probes 3 Air Crashes Fatal to 7; Pilot Escapes in Emergency Landing

4 Dead In 2 Bomber Crack-Ups; Mass Rites Likely

Two naval boards of investigation were appointed yesterday to delve into causes of the triple aircraft crashes Monday that took the lives of seven naval airmen and injured four. It was the first time in naval aviation history that the traditional fatal three accidents occurred with such startling rapidity. Less than seven hours elapsed between the crashes, two of them on the bay, the other at Camp Kearny.

Piloted by P. Johnson, aviation cadet, a fighting plane from Squadron 4, U.S.S. Saratoga, made an emergency landing at the airport near Del Mar yesterday afternoon. Johnson dived swiftly to the emergency airport when the motor's fuel line clogged. He escaped unhurt, the plane undamaged. Later Johnson flew the ship back to Naval Air station.

Rear Adm. Charles A. Blakeley, commander aircraft, scouting force, announced that Rear Adm. Royal E. Ingersoll, commander Cruiser Division 6, will be president of the special board to determine the cause of the crash of the two long-range patrol bombers of Patrol Squadron 5 off the foot of Twenty-fourth st., National City, Monday night. Other board members include Lt. Comdr. Thomas A. Gray, commanding Patrol Squadron 12, and Lt. Comdr Boynton L. Braun, commander Patrol Squadron 9. Gray is attached to the aircraft tender Langley and Braun to the U.S.S. Wright.

BODY NOT RECOVERED

Vice Adm. Ernest J. King, battle force aircraft commander, appointed Lt. Comdr. A. K. Doyle, commander Fighting Squadron 3, U.S.S. Saratoga, as president of the board to investigate the crash of a torpedo plane from this squadron on Camp Kearny mesa Monday afternoon in which three were killed.

Killed in the accident to the first patrol bomber, which was attempting to land after a short night practice flight, were its pilot, Lt. Clarence Emory Kasparek; H. P. Boeckmann, RM3C, and F. Freeman, AMM2C. The body of Freeman has not been recovered. Trapped in the plane as it crashed and sank, the body later floated free of the wreckage and is believed to have drifted northward along the channel with the outgoing tide.

SIX ESCAPE UNHURT

Killed in the crash landing of the second patrol bomber was B. T. McKenzie, RM2C. Six other members of the crew escaped uninjured.

Injured in the two bomber crashes were:

A. A. Bellamacina, AMM2C, scalp wounds and severe shock.

R. O. Chrisinger, AMM3C, fractured left thigh and fractured right leg.

J. R. Holt, AMM2C, severe scalp lacerations.

G. D. Dawson, aviation mechanic 1c, fractured ribs.

Bellamacina, whose head had been wedged between part of the engine and the plane's bulkhead, was freed when the flying boat turned over.

(Continued on Page 12, Col. 6)

Striking proof that "13" is an unlucky number, Plane 13 being hoisted aboard a navy wrecking barge, the second of two bombers that crashed within a few minutes of each other Monday night near the Destroyer base, killing four and injuring four. The first plane is resting on the barge, its bow caved in.

He was the most seriously injured, but all are expected to recover, it was announced at Naval hospital.

Those killed in the crash of the Saratoga's torpedo plane were Mike F. Moscicki, AMM2C, pilot; Don Fay Smith, RM3C, and Ralph Thomas Carter, aviation chief ordnanceman.

At least three of the fliers killed had been attached to local naval aviation units only a short time. Kasparek, 28, is survived by his wife, who resides at 516 L ave., Coronado. He came here two months ago from Patrol Wing 3 at Coco Solo, C. Z. Boeckmann, 22, resided at Dayton, Ohio. McKenzie, 21, was from Portland, Ore. Moscicki, 28, was from Chicago, and Smith, 19, from Wichita, Kan.

Both the patrol bombers were engaged in night flying operations preparatory to leaving with Squadron 5 on a non-stop flight to the Canal Zone Aug. 31. They crashed within a few minutes of each other. Sixteen Consolidated planes are scheduled to make the flight with Squadron 5. Another flight of 16 long-range patrol bombers attached to Squadron 4 will leave on a non-stop flight to Hawaii Sept. 6.

METAL PIERCES HULL

An investigation of the plane in which McKenzie met his death revealed that the instant the bomber struck the water the hull just beneath the wing was pierced by a jagged piece of metal. This was the section of the plane in which McKenzie was seated at the radio instruments. The theory is that he was struck by a piece of metal, knocked unconscious and then drowned when the plane sank. Other crew members succeeded in leaping to safety.

It was almost a year ago to the day that six men were killed in a Consolidated bomber in almost the same place as was Monday's double accident. On Aug. 24 a patrol bomber of Patrol Squadron 2, also practicing for a flight to Panama landed near the Destroyer base, crashed and sank.

Funeral arrangements for the men killed in the two bombers and the torpedo plane will be announced by Bonham Brothers. It was reported that services for all seven will be held at the Naval Air station Friday.

8TH NAVY PLANE CRASH VICTIM DIES; MEMORIAL RITES SET AT AIR STATION

Bringing the total number of fatalities in the navy's triple aircrash at Camp Kearny and in the bay Monday to eight, R. O. Chrisinger, aviation machinist's mate third class, member of the crew of ill-fated patrol bomber 5-P-13, died yesterday afternoon at Naval hospital.

Three were killed in the crash of a torpedo plane at Camp Kearny and five in patrol bombers 13 and 14 of patrol squadron 5 off the National City waterfront. It was revealed yesterday that the first bomber crashed at 9:14 p. m. and the second airboat a few minutes later. Mute testimony to this effect was adduced from the radio log of plane 13, picked-up from the bay yesterday by a fisherman.

Memorial services for those killed in the two bombers will be conducted at Naval Air station chapel at 10:30 a. m. tomorrow with Chaplain E. C. Andrews of the aircraft carried Wright officiating.

Services will be for the following officers and men: Lt. C. E. Kasparek, B. T. McKenzie, RM2c; Frank Freeman, aviation pilot; H. P. Boeckmann, RM3c, and R. O. Chrisinger. The bodies will be sent today to their homes for burial.

A special board of investigation to determine the cause of the bomber crashes convened at the air station at 10 a. m. yesterday. The board was headed by Rear Adm. Royal E. Ingersoll, commander, Cruiser Division 6. The findings will be sent to the navy department.

The aircraft carriers Saratoga and Lexington, which have been operating off Pt. Loma the last fortnight and whose planes have figured in three mishaps here since Monday, will begin fall gunnery exercises in the San Clemente area next week. The Saratoga is scheduled to return to Coronado Roads Sept. 26 for a brief stay.

S.D. UNION AUG. 18, 1938

S.D. UNION AUG. 26, 1938

14 Navy Bombers to Hop For Canal Zone Wednesday

32 Planes Also Will Make Two Flights to Hawaii

Weather conditions along the 3000-mile airway permitting, 14 twin-motored long-range patrol bombers of Squadron 5, under command of Comdr. Warren K. Berner, will take off between 7 and 9 a. m. Wednesday for a nonstop flight to Coco Solo at the eastern entrance of the Panama canal.

The flight over the international airway is expected to be completed in 20 hours. The aircraft tenders Gannett and Sandpiper will act as plane guards along the west coast of Central America.

A week later, Sept. 6, 16 planes of Patrol Squadron 4, commanded by Lt. Comdr. A. P. Storrs III, of Seahawk fame, will take off for a 2400-mile nonstop flight to Pearl Harbor, Hawaii.

CADETS ASSIGNED

No other long-distance mass flights will be made by the scouting wing forces until November, when 16 more planes are scheduled to be ferried to Hawaii, bringing the total number of squadrons based at the crossroads of the Pacific to nine. Arrival of Squadron 5 at Panama will bring the total number of long-range patrol bombers based there to 46. There are 48 at San Diego and six at Kodiak.

Fourteen aviation cadets who have completed their flight training at Pensacola, Fla., have been ordered to duty with aircraft squadrons of the battle and scouting forces. The cadets and the ships to which they have been assigned are:

James B. Arbes, Bombing Squadron 3, Saratoga; William M. Romberger, Torpedo Squadron 2, Lexington; James F. Patterson, Scouting Squadron 2, Lexington; Charles E. Roemer, Scouting Squadron 2, Lexington; Wade E. Bertram, Bombing Squadron 3, Saratoga; Kenneth P. Hance, Scouting Squadron 3, Saratoga; Paul E. Anderson, Scouting Squadron 3, Saratoga; Maurice E. McGuire, Bombing Squading 4, Ranger; Arthur J. Brassfield, Scouting Squadron 41, Ranger; Charles R. Tassan, Scouting Squadron 5, Yorktown; Lawrence G. Whitcher, Scouting Squadron 6, Enterprise; Thomas A. Aspell, Torpedo Squadron 6, Enterprise, Lloyd E. Parker, Patrol Squadron 9, Wright; Allen R. Waggoner, Patrol Squadron 12, Langley.

Naval authorities here yesterday received a letter from the bureau of navigation setting forth the precedence of naval reserve aviation cadets with other naval personnel. The letter states aviation cadets will rank as follows:

Ensigns, U.S.N., and U.S.N.R.; commissioned warrant officers, U.S.N., and U.S.N.R.; aviation cadets; midshipmen; warrant officers, U.S.N. and U.S.N.R.

Remote East Indies Isle Explored

Radio and Airplane Span Jungles

RICHARD ARCHBOLD

This is the first dispatch received from Richard Archbold since he and five companions flew in a seaplane in June from San Diego, Cal., 8000 miles across the Pacific to join the 1938 New Guinea expedition in The Netherlands East Indies.

By RICHARD ARCHBOLD

Copyright, 1938, by Buffalo Evening News and North American Newspaper Alliance.

HOLLANDIA, Dutch New Guinea, July 23.—The twin-motored flying boat Guba, flown by your correspondent and manned by a crew of five, made a safe landing and take-off a few days ago at Lake Habbema, a small, isolated body of water at 11,000 feet altitude in the heart of the mountainous section of unexplored new Guinea.

Inhabited by a primitive people, surrounded by almost impenetrable jungles and impassable mountains, this section of the second largest island remained, until the flight of the Guba, a challenge to explorers.

Reconnaissance flights in the vicinity of Lake Habbema revealed a large valley, not previously known and containing many native villages.

From a study of aerial photographs, authorities believe this valley and adjacent ones contain the largest concentration of native population on the entire island.

In the next two or three weeks, about 130 men and three months' supplies will be flown from our Hollandia base camp to Lake Habbema.

We plan to make regular flights from the coast to the advance camp, with fresh provisions, mail and reading material. The camp will be equipped with radio so messages may be exchanged at will.

Small parties will explore the surrounding country, visit and establish friendly relations with natives and collect specimens of mammals, birds and plants.

It may be necessary to drop food or medicine to these small parties when they are far from camp. For this purpose we have about 200 small parachutes, each capable of lowering about 70 pounds without damage.

6 Injured; 3 Planes Involved In Mishap Series

S.D. Union 8/16/38

Bomber Cracks Up In Bay; Mesa Scene Of Earlier Tragedy

In two death-dealing crashes, one at Camp Kearny mesa yesterday afternoon and the other last night in the bay at the foot of Twenty-fourth st., National City, five navy fliers perished and six were injured, two seriously.

Smashing nose first into the bay as the pilot tried a night landing, a giant, new PBY Consolidated-built patrol bomber, with a crew of six, carried two fliers to their death. Four others were saved by heroic rescues. The bodies were taken to Bonham Brothers' mortuary. One dead man was tentatively identified as H. Boeckman, about 23.

SAVED BY YOUTHS, SAILORS

Pulled from the water by four National City youths and two sailors just as the flying boat went under, A. A. Bellamacima, aviation machinist's mate, was taken to Elwyn hospital, National City, and later transferred to Naval hospital. He suffered severe skull injuries, scalp laceration, chest injuries and multiple bruises. Also in serious condition at Naval hospital was R. O. Chrisinger.

The bomber, attached to VP-5 squadron, was practicing night landing, in preparation for a flight to Coco Solo. As the pilot leveled off to alight on the bay, the nose of the plane failed to come up, and the bomber smashed into the water, trapping the occupants.

Four National City boys, Jose Asuma, 8; Alfonso Lopez, 9; Robert Valderamma, 9, and Gabriel Calderon, 8, saw the crash, hopped into a rowboat at the Twenty-fourth st. pier and rowed feverishly towards the scene.

Simultaneously, crash boats of the U. S. S. Rigel, relief ship, and the U. S. S. Wright sped towards the plane. Stationed on a light buoy out in the bay, David Roller and Edmund Kiely, attached to the Wright, and two other sailors began swimming towards the half-submerged bomber.

Three crew members fought their way out of the plane and were picked up by crash boats. Bellamacima, rescued by the National City youths and the four sailors, was the last one out of the plane. One of the engines, showed into the body of the plane by the terrific impact, had pinned Bellamacima's head against the framework, and it wasn't until the plane lurched over and began sinking that he was freed.

Roller, Kiely and the youth pulled him aboard the rowboat, and took him to the Twenty-fourth pier, where he was picked up by an ambulance and taken to Elwyn hospital. The two dead fliers apparently were unable to free themselves from the wreckage and were drowned as the bomber went under water. Roller and Kiely, who suffered from shock and exposure, were taken to Naval hospital.

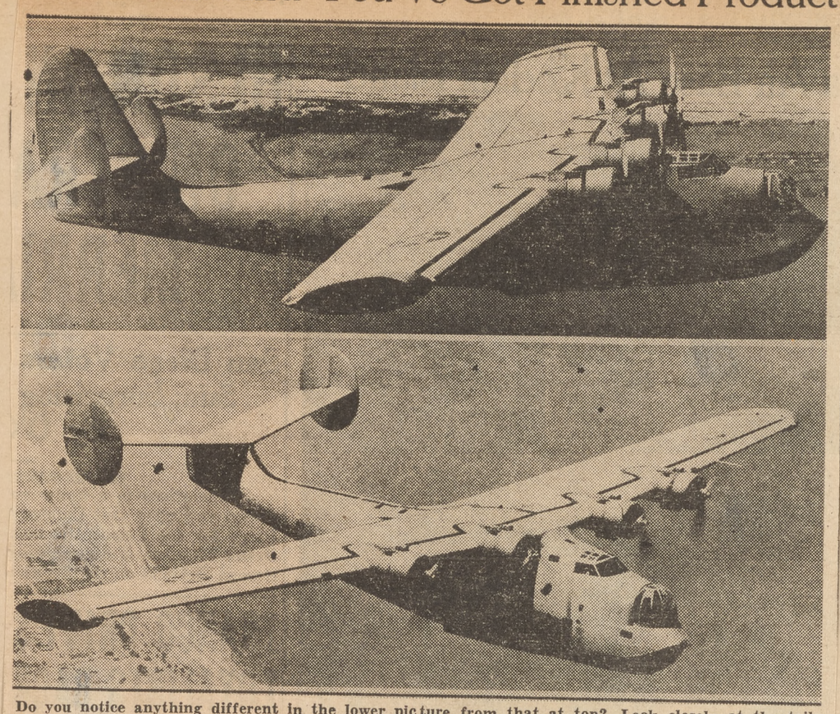
Two navy crash boats, a salvage barge and two other rescue vessels were dispatched to the scene immediately after the crash and soon recovered the two bodies. Salvage operations continued throughout the night.

Another patrol bomber, also carrying a crew of six, almost crashed as it landed a few seconds after its sister ship. Landing in almost identical fashion as the bomber which crashed, the ship headed nose first into the water, but the pilot managed to right her before she went under.

Two mysteries confronted officials investigating the crash on Camp Kearny mesa: First, the cause of the crash and, second, failure of the doomed fliers to resort to their parachutes.

The dead were Mike Frank Moscicki, pilot, aviation machinist's mate 2c; Don Fay Smith, radioman 3c, and Ralph Thomas Carter, aviation chief ordnanceman.

Add 2 Fins And You've Got Finished Product



Do you notice anything different in the lower picture from that at top? Look closely at the tails in both photos, and you'll see how an engineering problem was successfully solved by Consolidated aircraft Corp. and the Navy. Eight months ago, Consolidated launched its four-motored plane with a single rudder. Later two fins were added, as shown in top photo. Today, the bomber, almost ready to turn over to the Navy, has twin circular rudders, at the ends of stabilizers meeting at a seven-degree dihedral angle.

S.D. SUN + + Aug. 21, 1938

New-Fangled Tail Brings Navy Bomber To Perfection

The tail of an airplane may be a humble thing, but when you've spent $1,000,000 in the construction of an airboat and you're not completely satisfied with its performance, one of the first places you look for improvement is at the "stern."

XPB2Y-1, the four-motored "battleship of the air" which is considered the most powerful Navy bomber in the world.

Last December, the craft, in the development of which Consolidated and the Navy had spent a cool million dollars, was launched in San Diego bay. Tests were conducted continuously thereafter. Officials of the Navy and the aircraft plant felt that the peak of the plane's efficiency had not been reached. So they set about revamping the ship in several vital places—most important of which was the tail.

Tomorrow, eight months after the 25-ton experimental plane was first wheeled into the bay, final trials will be started on an airboat whose designers claim it is now without an equal among heavy planes anywhere for stability in the air and on the water.

And the tail, first of its kind in Colsolidated's history, has a lot to do with this new-found excellence of performance.

Two Fins Added

The metamorphosis of the XPB2Y-1's tail is indicative of American engineering's quick adaptibility. The tail at first was characterized by a single rudder design, with the rudder in the center. To gain more directional stability, two small fins were installed, one on each side of the rudder.

When the problem remained unsolved, Consolidated and Navy engineers decided a whole new tail would be the only solution. In hardly any respect does the four-motored plane's present tail assembly resemble the original design.

Circular Rudder

The stabilizers now are constructed at a dihedral angle of seven degrees instead of lying horizontally, and on the end of each stabilizer is a circular rudder. When it finally was completed and installed, Consolidated executives crossed their fingers until they heard from Chief Test Pilot Bill Wheatley as to how the bomber performed with is new tail. The report was highly satisfactory, and as a result the airboat finally is ready to be turned over to the Navy.

This week's tests will be made for the benefit of the Naval Air Station commandant, who will be represented by Lieut-Comdr. Andrew Crinkley. When the ship meets with his approval, it will be placed under the scrutiny of a Navy Trial Board, headed by Lieut.-Comdr. R. E. Jennings, which has just arrived here from Washington, D. C.

14 PLANES ON CANAL FLIGHT

S.D. Sun — 20 Aug. 1938

The crash of two airboats of Patrol Squadron Five in the bay last Monday night, resulting in death to five and complete destruction of the planes, probably will not cause postponement of the non-stop mass flight from San Diego to the Canal Zone tentatively scheduled for Aug. 31.

Go On Schedule

This was revealed today by Rear Adm. Charles A. Blakely, Aircraft Scouting Force commander, who declared:

"Because of last Monday's accident, only 14 instead of the originally planned number of 16 will make the delivery trip which, as far as I know, will take place as scheduled."

Patrol Squadron Five has been training at North Island for several months for the hazardous 3190-mile flight.

16 Hop Later

Had it not been for the airboat crashes, the squadron would have set a record in the number of planes attempting this hop. Last December, 14 bombers were "ferried" from San Diego to Coco Solo by 98 officers and men.

One week following the Canal Zone flight, Patrol Squadron Four is slated to fly 16 bombers from San Diego to Pearl Harbor.

S.D. UNION Aug. 24, 1938

Archbold Deserts Plane for Climb

News that Richard Archbold, American Museum of Natural History, research associate, who flew from San Diego to Hollandia, New Guinea, in his Consolidated-built "flying laboratory" in June, is climbing 12,000-foot Mt. Wilhelmina, was received yesterday by short-wave radio.

The mountain, 300 miles in the interior of New Guinea, is 75 miles northwest of Lake Habbema, where Archbold has established his main base.

Archbold is leading a party of scientists to the top of Mt. Wilhelmina to obtain specimens of bird and animal life.

CONSAIR CIO UNION URGES NATIONALIZED AIRPLANE INDUSTRY

S. D. Labor Group Submits Resolution To Roosevelt With Approval Of State Convention

S.D. Sun — 8/22/38

San Diego CIO aircraft workers today submitted a resolution to President Roosevelt asking him to consider nationalization of the airplane industry to prevent profiteering.

The resolution bore the approval of the California State convention of the CIO, which ended in Los Angeles last night after a two-day session attended by 415 delegates from 30 Committee for Industrial Organization unions in the state. Approximately 20 represented San Diego CIO locals.

Proposed By S. D. Group

The plea to President Roosevelt was proposed by San Diego Aircraft Local 506, United Automobile Workers of America, and referred directly to the situation at Consolidated Aircraft Corp., where the payroll has been drastically cut within the past year as the backlog of orders, which once reached a peak of $19,000,000, diminished.

The resolution follows:

WHEREAS, Local 506 feels maladministration and abuses in the aircraft industry have become chronic; and,

WHEREAS, government ownership and operation of the aircraft industry would:

"1. Eliminate profiteering during time of war.

"2. Stop the present exorbitant profit-milking by private manufacturers who enter into collusive competitive bidding.

"3. Stabilize the industry's workers who are at this time in the same position as the migratory workers because of recurrent series of unemployment, and because the workers must drift from plant to plant.

"4. Lighten the relief and WPA loads which are needlessly weighed down by the unemployed aircraft worker, who is forced to accept relief while awaiting the allotment of contracts and rehiring.

"5. Make possible the building of more and better planes per tax dollar spent by the government

Turn to Page 3, Col. 3

Consair CIO Union Urges Nationalized Air Plants

(Continued from Page 1)

through increased efficiency of plants and workers.

"6. Retain the skilled type of workman who is deserting the aircraft industry because of low wages, insecurity and an extremely small possibility of advancement and recognition.

"7. Stimulate permanently local business through an established payroll. At present, local business men are feeling the loss of work by the man in the industry. An example of this may be seen by layoffs in the Consolidated Aircraft Corp., San Diego. In 1937, this plant hired 3600 men as compared with 700 working in August, 1938. The plant has no orders in sight and has issued statements that the men will not be able to return to work for nine months. The number of relief applicants from this plant is growing at an alarming rate. Many of the men are San Diego residents, stranded in San Diego, unable to do anything. Consolidated workers have a tremendous effect upon business because airplane manufacturing is the only mass production industry in this region. Consolidated has a payroll which, in total, amounted to three times that of the second and third largest industries combined. The mass layoffs at this plant have been felt in every business, both wholesale and retail. Credit has been denied any employe of the plant whether employed or unemployed.

"8. Give the aircraft worker a feeling of security and independence and a decent wage, which has never been his good fortune to possess at any time. Aircraft wages have always been the lowest in the nation in proportion to the amount of skill involved.

"THEREFORE, be it resolved, that Local 506, U. A. W. A., feels that it should be the duty of the President of the United States to inquire into every possible means of nationalizing the industry as the people of the United States are one mass against the profiteering of aircraft and munitions manufacturers during the time of peace as well as war;

"And, be it further resolved, that the California CIO state convention go on record to support the nationalizing of the aircraft industry or government ownership and operation of said industry; or, in event of such being an immediate impossibility, we propose the setup of an aircraft factory under governmental agency to be used as a yardstick for the industry."

AFL Pact Urged

In another resolution adopted by the convention, peace and unification with the AFL was urged. All labor unions were urged to "establish and maintain unity on every possible issue, both economic and political."

The LaFollette congressional Civil Liberties committee was asked to investigate the Associated Farmers of California, which the delegates claimed is "sponsored by banking interests and big business" to "beat down labor wage scales in the rural areas." The Dies committee was called upon to cease "harrassing Harry Bridges and turn its attention to Henry Ford, who was recently decorated by the Nazi party."

Longshoremen Rally

Longshoremen, who outnumbered other groups of delegates, backed up Bridges. When Bridges called for the question without debate, there were shouts of "gag rule" and some delegates stalked out, but returned when he reopened discussion.

Izac Asks Aid

At the request of the San Diego aircraft union, Rep. Ed V. Izac has written to WPA Administrator Harry Hopkins asking whether the relief organization would consider setting up a project to employ laid-off Consolidated workers. No answer has yet been received from Washington.

Other resolutions objected to state relief camps which were likened to Hitler's labor camps; favored WPA expansion among white collar workers; urged a Japanese boycott.

Delegates Walk Out

A dispute over voting procedure, with smaller unions lined up against Harry Bridges' longshoremen, flared so bitterly that some delegates walked out in a huff. The issue was electing nine vice presidents to serve on the executive committee of the new state industrial council with Phillip M. Connelly, president of the Los Angeles Newspaper Guild, the unanimous choice for president.

Smaller unions supported the majority report of the constitution committee recommending selec-

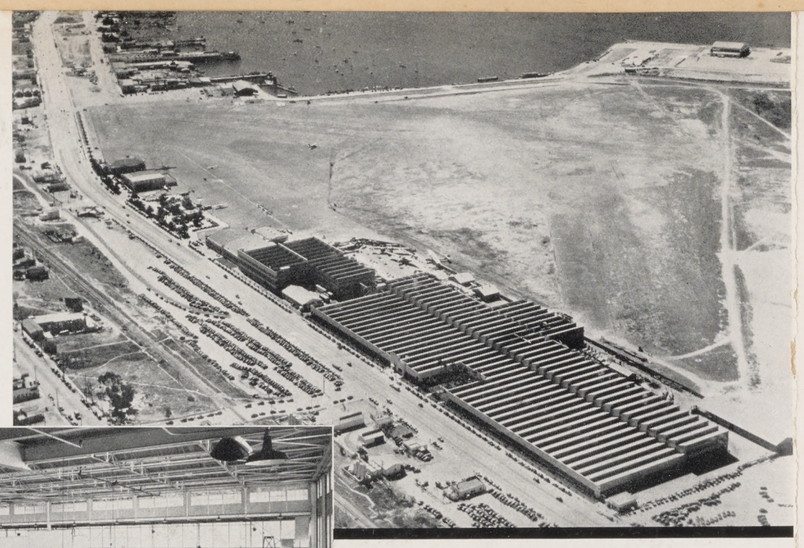
Giant Bomber To Receive Test Over S. D. Today

Lt. Comdr. Arthur L. Crinkley, member of the navy's crack team of fliers who participated in the international seaplane races for the Schneider cup off the Isle of Wight several years ago, will be at the controls of Consolidated's $1,000,000 "flying battleship" when it receives its final acceptance tests over San Diego beginning today.

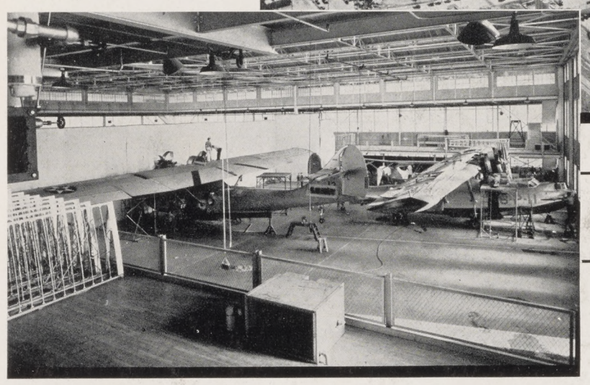
Associated with Crinkley as a member of the navy trial board, which will determine whether the huge 4-motored, 25-ton craft is acceptable to the navy, is Lt. Comdr. R. E. Jennings, attached to the office of naval operations, navy department.

Consolidated officials await the outcome with much interest, as success or failure of the "flying battleship" in meeting navy department approval will mean the loss or securing of contracts totaling several million dollars, it was reported yesterday.

The long-range bomber, said to be the heaviest armed craft of its type in the world and capable of extending the navy's bombing radius to more than 4000 miles, is designed to supplant the present PBY type twin-motored planes.



Consolidated's plant on San Diego Bay from the air. It is one of the largest and most modern aircraft manufacturing factories in the West



(Below) A glimpse inside the Consolidated plant; two Navy PBY flying boats in the foreground, of the type which have helped make aviation history during the past few years

BY APPOINTMENT TO UNCLE SAM

One of the largest manufacturers of military airplanes in the U. S., Consolidated Aircraft of San Diego is celebrating its fifteenth birthday this year. This year, also, Shell marks almost three continuous years of supplying Consolidated Shell Aviation Gasoline with which its planes are test flown and delivered.

TWELVE NAVY FLYING boats today completed a 2553 mile flight from San Diego to the Pearl Harbor Naval base near Honolulu in 21 hours and 43 minutes."

Last year, and for several years previous news of this and other mass Navy long distance hops made headlines and aviation history. These great overwater flights are a tribute to U. S. Navy efficiency and personnel. They are also a noteworthy tribute to the flying ships that made them —and to the men who made those ships. Now, the Navy airboats that so easily, almost casually completed these record breaking flights were Consolidated Patrol Bombers—PBY's in the Navy's numerical classification.

They are truly magnificent airplanes; one of the important reasons why the world bows to American leadership in aircraft design and production.

Since an airplane is no better than the men who design and build it, it's logical to start with the man behind Consolidated Aircraft—Major Reuben H. Fleet.

In the fall of 1922, Major Reuben H. (for Hollis) Fleet had enough of the Army. Just thirty when the U. S. entered the war, he won the rating of junior military aviator at San Diego in 1917; became officer in charge of flying at Mather Field (Sacramento); executive officer in charge of training in the office of the Chief of Air Corps; contracting officer for the Air Corps and business manager of McCook Field.

A business career, however, held out possibilities of a greater future to an ambitious young man so Uncle Sam received a Major's resignation and industry welcomed a new recruit.

In 1923, Major Fleet organized the Consolidated Aircraft Corporation, capitalized at $25,000 and started building training planes for the Army in a modest way in Rhode Island. The training planes were good and the Army ordered more. The Navy became interested and bought Consolidated training planes—the birth of Consolidated's long and successful association with the Navy. As business expanded, need arose for more plant space, and the young company moved to Buffalo, N. Y., where it continued to build planes until 1935 when Consolidated opened its big plant in San Diego.

During the years in Buffalo Major Fleet and his associates in Consolidated made rapid strides in plane building. In 1927 the first of the long line of Consolidated flying boats took form on the drawing board of the firm's engineers and the success of these Naval air cruisers as the years passed demanded a new and larger base of operations. So in 1935 the San Diego move was made. Here for the first time, the company found itself in a position where it seemed possible to build a plant to house the business, rather than fitting the business into ready made quarters.

The matter of arrangement of the new plant was the subject of careful study for two years. Planned by Consolidated executives, the layout of the new factory embodied all the elements of continuous flow production from raw material to the end of the final assembly line.

The size and complexity of present day aircraft is such that no one man is capable of mastering all the detail involved. Consequently the production of a satisfactory article is dependent on engineering specialists handling the separate components of the design. Construction and assembly of the various parts of the plane are done in different departments, all flowing smoothly toward final assembly.

Realizing that the success of any organization is inseparably bound up in satisfied personnel, Major Fleet has kept his men happy, given them the benefits of his leadership, allowed them comparatively free reign in their jobs. It is not surprising then to find 10 and 15-year employees still at their life-work, encouraged in promotions gained by devotion to the task at hand.

Thus in unpretentious surroundings and in a modest way Consolidated Aircraft Corporation achieved its start. Today, after 15 years of ladder climbing it can look back on a record of real achievement. It has built over 2000 airplanes which have flown over 615 million miles. And those who know Major Fleet know that's only the beginning. America's future is in the air and Consolidated Aircraft, for one, is going to see that that future is well taken care of.

Major Reuben H. Fleet, founder and head of Consolidated Aircraft Corporation greets one of his "oldtimers"

AUG. 26-1938

THE EVENING TRIBUNE, San D

Tiniest Plane Off for Cleveland Races With Three Amity Envoys From San Diego; Trio To Extend Bids to 1942 Air Show Here

'Flaggship' 3 Feet, 10 Inches Tall; Entering 4 Events

Three San Diego "goodwill air ambassadors," taking with them the smallest plane entered in the Cleveland national air races, left here today for Cleveland to invite the participants and guests at the races to visit San Diego in 1942 when an air show and water carnival will be held as part of this city's quadricentennial celebration in observance of the 400th anniversary of Cabrillo's arrival here. The three are Walter McClain, instructor of the San Diego Flying club and a pilot for 12 years, and L. M. McCannon and Lionel Machado, two of the five builders of the miniature craft.

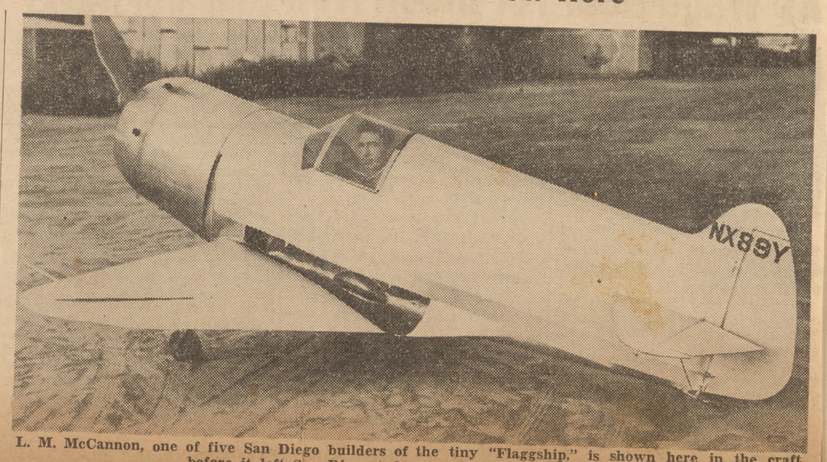
Standing only 3 feet, 10 inches tall, the plane, which has been christened "San Diego Flaggship," will be entered in four events at the Cleveland races, which will be held Sept. 3-4-5. New records will be sought in the 100-kilometer and 500-kilometer races, and the craft is also to participate in the 200-mile Louis W. Grove trophy race and the 300-mile Thompson trophy race. McClain will be pilot.

Going East in Trailer

The plane is being taken east in a trailer. It was designed by C. C. Flagg, employe of Consolidated Aircraft Corp. Its builders, in addition to McCannon and Machado, are Joseph Sturgess, Herbert Jewell and Young McClure, also all Consolidated employes.

Just before leaving for Cleveland the plane was decorated with blue and gold letters—"San Diego Flaggship—Aviation Capital of America." The trip, for which $300 was allocated by the city council, is sponsored by the junior chamber of commerce.

Although the plane is only 12½ feet in length and weighs only 430 pounds it is reported to have a top speed of 235 miles an hour. It is powered by a 90-horsepower Pobjoy engine. Its wing spread is 13 feet.



L. M. McCannon, one of five San Diego builders of the tiny "Flaggship," is shown here in the craft before it left San Diego today for the Cleveland air races.

CONSOLIDATED PLANES

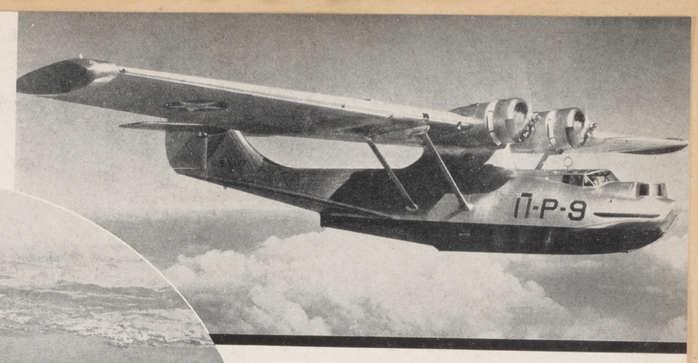
Past, Present and Future

(Above) The type of plane first manufactured by Consolidated back in 1923—a PT 1 Army trainer, rugged, easy to fly, dependable. It was this type of ship which first helped to make the firm's reputation

(Right) The "Commodore," twin motored flying boat (about 1930) a famous Consolidated model used by Pan-American Airways on their West Indian run, and in military form by the Navy. Many of these rugged air boats are still in active service

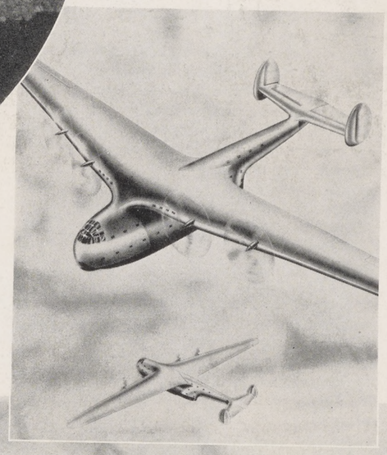
(Right) Consolidated's latest creation, a veritable battle cruiser of the clouds, the XPB2Y1 in flight over San Diego Bay

(Left) Three Consolidated Navy PBY's homeward bound after a patrol flight over Hawaiian waters. They were flown from San Diego to Honolulu in spectacular non-stop group flights without a hitch; magnificent testimony to the efficiency of both men and airplanes

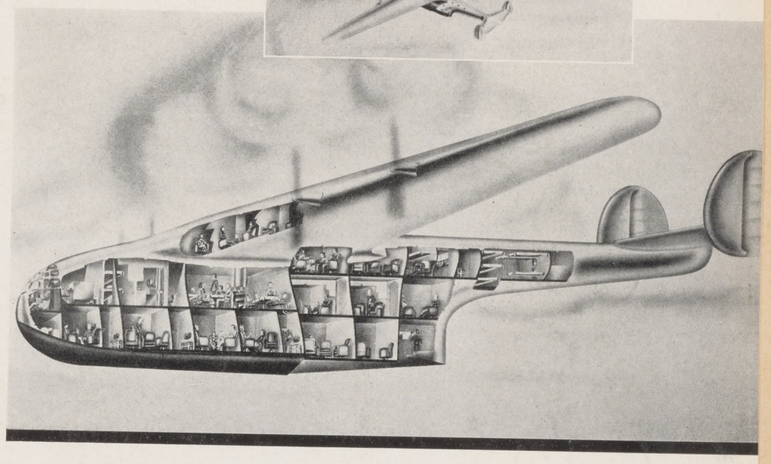


A beautiful action view of a Navy Consolidated PBY patrol bomber. Ships of this type made the famous massed long distance flights from San Diego to Hawaii in 1937 and from the Canal Zone to San Diego—unequaled in the annals of naval flying. (Official U. S. Navy Photo.)

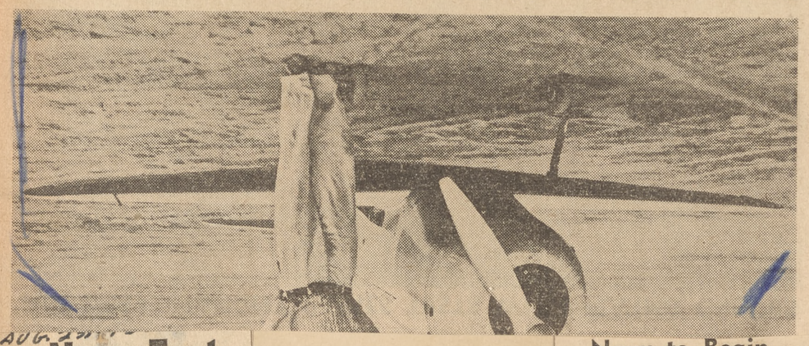
(Circle) A Consolidated PBY type flying boat over Boulder Dam and Lake Mead. PBY boats have set an enviable record in civil aviation also. Sir Hubert Wilkins, noted Arctic explorer used a PBY in hunting the lost Russian flyers in the Polar wastes last year



Late in 1937 Pan American Airways invited major U. S. plane manufacturers to submit preliminary plans for a monster commercial ocean crossing plane capable of carrying 100 passengers and a crew of 16 into the sub-stratosphere and developing between 200 and 300 m.p.h. Four firms responded, and this is Consolidated's answer to the challenge. It would weigh over eighty tons, have a wing spread of 194 feet, be over 30 feet in height. Several cabins are built in the gigantic center wing section. Fantastic? Authorities say such a ship, or one like it, is practically a certainty within three or four years



A cross section of the 100-passenger, ocean-crossing liner of the air. Note the three decks, wing cabins, wing enclosed motors, and other construction details of the giant flying boat



This midget of the airlanes, named the "Flaggship" in honor of its designer, C. C. Flagg, went through a recent test flight so successfully that the owners mayenter it in the Cleveland National air races Sept. 3, 4 and 5. Capable of attaining a speed of 235 miles an hour, the plane was built here by a group of Consolidated Aircraft Corp. employes. Best de it is L. M. McCannon, one of the builders.

For Navy Tests

A giant flying boat built by the Consolidated Aircraft Corp., estimated to be capable of a 5000-mile flight to patrol or bomb, today was ready for tests by the United States navy. The aircraft company yesterday completed the company's final demonstration tests of the $1,000,000 craft and turned it over to the navy.

Rigid inspection and test flights for the next week or longer are ahead of the four-motored "air dreadnaught" before the navy accepts it as perhaps the most powerful unit of the navy airforce.

Specifications of the plane, which resembles the transpacific clipper ships, are closely guarded naval secrets, and officials of Consolidated Aircraft Corp., which built it, refused to elaborate on the test flights.

Executives said they were more than satisfied with the way the plane performed in flights over the city, but beyond that they would not comment.

Today, Lt. Comdr. Arthur L. Crlinkley expects to pilot the plane, which has sleeping accommodations for a crew of eight but reportedly will carry 16 on duty flights.

The plane was designed to supplant the present twin-motored PBY type bombers, many of which have been flown more than 2500 miles from here to Hawaii, and over 3000 miles to Coco Solo, C. Z.

Observers made the following estimates: Engines, 1050 horsepower each; wingspread, 115 feet; height, on beach landing gear, 22 feet; top speed, 240 miles an hour, weight 30 tons; range 5000 miles.

Armament of the new fighter also was a secret, but reports said it would be protected by large caliber machine guns in the turret nose, turret tail and fuselage, top and bottom, permitting destructive fire in any direction.

If the 5000-mile range is correct, the craft could carry a devastating load of bombs, drop them on an objective more than 2000 miles away, and return to its base non-stop.

A galley, rest rooms and other features for comfort on long flights are installed in the craft.

PILOT'S SKILL AVERTS NAVY PLANE CRASH

Scout-Bomber Landed On Bay With 'Dead' Motor

"The engine sounded as if a lead sledge-hammer had suddenly hit it."

This was how Lieut. (jg) Robert B. Moore, of Squadron VS-42, today described what might have developed into another Navy aviation tragedy last night.

Engine Goes Dead

While over the harbor entrance channel last night a terrific burst of flame shot out from under Lieut. Moore's scout-bomber. The engine went dead.

Overcoming his momentary shock, Lieut. Moore piloted the "dead" plane in a steady glide into the bay, landing about one-half mile from where the Navy tanker USS Neches was anchored.

Immediate Action

Action was instantaneous aboard the Neches. Launches, filled with rescue crews were sent immediately. Huge searchlights from the vessel illuminated the entire area.

The flotation gear kept the plane afloat, enabling Lieut. Moore and his passenger, Harold Stang, seaman 1c, to escape. They were taken aboard the Neches' boats uninjured.

Bomber Sank

The scout-bomber sank and salvage operations by the Naval Air Station's crash barge, the "Mary Ann," were resumed this morning.

Among the civilians who saw the accident was P. A. Giraud, of 3120 Goldsmith-st. He was on the front porch of the San Diego Yacht Club when the "explosion" occurred.

Pilot Lauded

"What looked like an unusually bright backfire flash shot out from under the plane," he said today. "Then there was a sound similar to an explosion, and the plane, its engine dead, came down under complete control. The pilot did a beautiful piece of work."

Last night's mishap was the third engine failure resulting in a Navy plane's forced landing this week. Last Monday a craft of Squadron VS-41 plunged into the ocean 10 miles west of Point Loma and Tuesday morning, a dive bomber of Squadron VB-4 fell into Sweetwater Lake. There were no injuries in either of these accidents.

Navy to Begin Acceptance Trials

More than meeting expectations, according to plant officials, Consolidated Aircraft Corp.'s giant four-engined patrol bombing plane yesterday was put through final company flying tests by William B. Wheatley, test pilot.

The air dreadnaught for the next week will undergo rigid inspection and air tests before final acceptance by the navy. Lt. Comdr. Arthur L. Crinkley, navy trial board member, will be at the controls.

PERFORMANCE SECRET

Because of naval secrecy, performance details of yesterday's flight were not revealed. Installation of a new tail structure featuring double rudders eliminated minor faults noted when the ship first was tested several months ago.

The craft is one of the world's most powerful fighting machines. While no official specifications of the air giant ever have been made public, expert observers have made the following estimates: Engines, 1050 horsepower each; wing span overall, 115 feet; length overall, 80 feet; height, on beach landing gear, 22 feet; range, 5000 miles, loaded; top speed, 240 miles an hour; weight, 30 tons.

Secrecy also shrouded the plane's armament. Authorities have said that the ship will be protected by machine guns of large caliber mounted in the turret nose, turret tail and fuselage, top and bottom, permitting rapid, effective, long-range firing in any direction.

CARRIES CREW OF 16

A crew of 16, it was reported, will man the craft on duty flights. Sleeping accommodations are provided for half that number and the plane is equipped with a galley, restrooms and other features for comfort on long flights.

The Consolidated plant has been revamped to put the newer and larger ships into production immediately, it was said.

Here with Crinkley as a board member is Lt. Comdr. R. E. Jennings, office of naval operations, navy department. On completion of the tests, Crinkley and Jennings will submit reports and recommendations to the navy department, it was said.

Consair to Revamp Plant for New Ships

San Diego, Aug. 11—With the last of the Navy's orders for PBY patrol bombers nearing completion, extensive changes in Consolidated Aircraft Corp.'s plant here are announced for the next six months in preparation for production of a new model. Maj. Reuben H. Fleet, president, said the firm will install eight air driven drop hammers, four of which will be the largest in the industry. Another large hydraulic press, of 2,000 tons capacity, also will be added. The payroll, now totaling 1,400, will be reduced gradually to about 700 during the alterations.

Thirty-two of the PBYs will be flown to Hawaii by patrol squadrons 1, 4, and 18 in relays of 18 on Sept. 6 and early in November, and 16 will be ferried to Panama by squadron 5 on Aug. 31.

Consair's giant 25-ton four-motored, long range patrol bomber on whose engineering the firm and the Navy have spent about $1,000,000, is awaiting its final trials by a Navy board here late in August. It will compete with another four-motored bomber built by Sikorsky Aircraft Division of United Aircraft Corp. for a five to 10 plane contract.

Navy Tests Continue On 4-Motor Plane

Test flights of the navy's new 4-motored "flying battleship," which started last week with Lt. Comdr. Arthur Crinkley at the controls, will be conducted for several more days.

Data on various tests will be assembled and forwarded to the bureau of aeronautics.

Consolidated Aircraft officials said yesterday 33 airboats of the PBY-4 type are to be delivered to the navy as soon as they are completed. According to present navy department plans the planes will be stationed at the fleet air bases at Sitka and Pearl Harbor.

S.D.-Honolulu Fliers Start 'Happy Landing' Flight

Wives, relatives and friends lined the sea wall at the Naval Air station seaplane ramp at North Island yesterday to wish "happy landings" to crews of 17 giant patrol bombers of Patrol Squadron 4 before their take-off on a non-stop mass flight to Pearl Harbor, T. H. Upper, the plane of Lt. (jg) B. M. Strean is aided over side by beaching crews. Lower, Lt. (jg) H. T. Johnson lifts his heavily loaded craft into the air after a run down the bay. Each plane carried a crew of seven.

14 Navy Bombers to Hop For Canal Zone Wednesday

32 Planes Also Will Make Two Flights to Hawaii

Weather conditions along the 2000-mile airway permitting, 14 twin-motored long-range patrol bombers of Squadron 5, under command of Comdr. Warren K. Berner, will take off between 7 and 9 a. m. Wednesday for a nonstop flight to Coco Solo at the eastern entrance to the Panama canal.

The flight over the international airway is expected to be completed in 20 hours. The aircraft tenders Gannett and Sandpiper will act as plane guards along the west coast of Central America.

A week later, Sept. 6, 16 planes of Patrol Squadron 4, commanded by Lt. Comdr. A. P. Storrs III, of Seahawk fame, will take off for a 2400-mile nonstop flight to Pearl Harbor, Hawaii.

CADETS ASSIGNED

No other long-distance mass flights will be made by the scouting wing forces until November, when 16 more planes are scheduled to be ferried to Hawaii, bringing the total number of squadrons based at the crossroads of the Pacific to nine. Arrival of Squadron 5 at Panama will bring the total number of long-range patrol bombers based there to 46. There are 48 at San Diego and six at Kodiak.

Fourteen aviation cadets who have completed their flight training at Pensacola, Fla., have been ordered to duty with aircraft squadrons of the battle and scouting forces. The cadets and the ships to which they have been assigned are:

James B. Arbes, Bombing Squadron 3, Saratoga; William M. Romberger, Torpedo Squadron 2, Lexington; James F. Patterson, Scouting Squadron 2, Lexington; Charles E. Roemer, Scouting Squadron 2, Lexington; Wade E. Bertram, Bombing Squadron 3, Saratoga; Kenneth P. Hance, Scouting Squadron 3, Saratoga; Paul E. Anderson, Scouting Squadron 3, Saratoga; Maurice E. McGuire, Bombing Squading 4, Ranger; Arthur J. Brassfield, Scouting Squadron 41, Ranger; Charles R. Tassan, Scouting Squadron 5, Yorktown; Lawrence G. Whitcher, Scouting Squadron 6, Enterprise; Thomas A. Aspell, Torpedo Squadron 6, Enterprise, Lloyd E. Parker, Patrol Squadron 9, Wright; Allen R. Waggoner, Patrol Squadron 12, Langley.

Naval authorities here yesterday received a letter from the bureau of navigation setting forth the precedence of naval reserve aviation cadets with other naval personnel. The letter states aviation cadets will rank as follows:

Ensigns, U.S.N., and U.S.N.R.; commissioned warrant officers, U.S.N., and U.S.N.R.; aviation cadets; midshipmen; warrant officers, U.S.N. and U.S.N.R.

Y CUTS TIME OF HAWAII HOP M S.D. TO 17 HOURS, 17 MINUTES

er a recheck of figures, the navy department at Washington, oday set the official time for the newest San Diego-Honolulu p mass flight at 17 hours, 17 minutes, more than three hours than the navy's previous mark for a similar trip of 20 hours, set Jan. 18-19.

The flight, which began here yesterday afternoon and ended at Pearl Harbor just before dawn today, was the seventh such "routine delivery" of aircraft to Honolulu or the Canal Zone. The navy's record for the flight to the Canal Zone is 22 hours, set Dec. 8-9, 1937.

The first air delivery to Honolulu was undertaken in June, 1934, from San Francisco, when six naval flying boats flew the distance non-stop in 25 hours, 15 minutes. S.D. TRIBUNE 9/7/38

NAVY BOMBERS REACH PANAMA

14 S. D. Planes At Coco Solo After Re-fuel Stop

Fourteen Navy bombers which took off from San Diego for the Canal Zone Wednesday morning arrived at the Coco Solo Fleet Air Base at 11:20 a. m. (PST) today, the Aircraft Scouting Force flagship Wright was notified at North Island.

The squadron had been forced down early yesterday at Gulf of Fonseca after several hours of bucking strong headwinds had cut down its fuel supply. They left at 5:43 a. m. on the 580-mile final lap, and actual flying time for the 3100-mile San Diego-Coco Solo trip was 26 hours, 40 minutes.

The aircraft tender Thrush refueled the planes at the Gulf of Fonseca throughout yesterday. More than one-third of today's trip was over Nicaragua jungle country and the largest inland water body of Central America, Lake Nicaragua.

S. D. Planes Set Speed Mark To Hawaii; 17 Hours, 17 Min.

S.D. UNION SEPT. 6, 1938

17 Bombers Land Before Dawn; Weather Perfect

Clipping off the 2150 miles between Pt. Loma and Diamond Head in 17 hours, 17 minutes, 17 planes of Patrol Squadron 4, Lt. Comdr. A. P. Storrs commanding, set a speed record yesterday from San Diego to Hawaii.

The flight bettered by more than three hours the former navy record of 20 hours and 30 minutes and eclipsed the 18-hour 7-minute mark made by Richard Archbold, scientist, in the Guba June 3.

The great bombing planes, bearing 119 men, glided down upon Pearl Harbor before dawn, after flying in mass formation throughout the night, The Associated Press reported.

FEW SEE ARRIVAL

Only 100 spectators, and they mostly relatives of the fliers or air base attaches, witnessed the end of the flight—officially described as a routine transfer of patrol bombers.

The big seaplanes left San Diefo yesterday afternoon.

"We had no trouble at all," said Storrs. "They are beautiful planes to fly. I am not tired, although I have been up all night. This is a lot different than stunt flying."

The fastest time flown, said Lt. A. L. Truslow, navigator of the leading plane, was 160 knots, and the average 145 knots.

PRAISE FOR CREWS

Perfectly timed, perfectly executed.

In these four words naval aviation authorities at North island expressed their admiration for the record-smashing flight.

While praising the flight personnel for a remarkable exhibition of airmanship, naval aviation officials stressed the importance of the weather reports flashed from the plane guard ships scattered along the flight route.

Their combined meteorological reports resulted in speeding up the flight 24 hours to take advantage of virtually perfect flying conditions.

Arrival of Patrol Squadron 4 at Pearl Harbor brought the total number of Consolidated bombers ferried to the crossroads of the Pacific since January, 1937, to 59. In the same period 40 have been delivered to Panama.

S. D. BOMBERS GET SURPRISE FLIGHT ORDER

S.D. SON SEPT. 6, 1938

Weather Conditions Ideal On Route To Hawaii, Admiral Radios

A surprise order from Rear Adm. Charles Blakely, commander of Aircraft, Scouting Force, today directed 17 Navy patrol bombers to take off for Pearl harbor at once instead of tomorrow.

The message advising to start the flight "as soon as practicable" today, came from the USS Wright on which Adm. Blakely is en route to Honolulu.

Lieut. Aaron Storrs, commanding Patrol Squadron 4, ordered the planes into the air soon after 1 p. m. for the non-stop flight to Pearl Harbor.

Weather Ideal

Adm. Blakely radioed that weather conditions appeared certain to be ideal for the next two days and recommended an immediate departure.

The planes had been secured at North Island since last Friday. Only fueling of the airboats was necessary to prepare them for the 2570-mile transpacific flight.

No Confusion

Although the order from Rear Adm. Blakely caught the flight crews of 119 officers and enlisted men unaware, no confusion resulted and the bombers were immediately made ready for the delivery trip, expected to take about 18 hours.

(Continued From Page 1)

In addition to the Wright, other plane guard ships stationed along the flight route, are the San Diego destroyers Simpson and Craven, and the Pearl Harbor warships Sicard and Litchfield. They have been submitting weather data and will serve further as rescue ships in case any of the PBY bombers are forced down in the Pacific.

The 17 bombers will be apportioned as follows on arrival at the Pearl Harbor Fleet Air Base:

Twelve will be assigned regular duty with Patrol Squadron Four, under whose banner tomorrow's flight will be made.

Three will serve as spare planes for Squadron VP-4.

Two will be given Patrol Squadron 10 as spares.

A shortage of pilots necessitated the transfer of five officers from San Diego-based patrol squadrons to VP-4 for the delivery flight duty.

17 Navy Patrol Bombers Set Mark On 'Surprise' Hop

S.D. SUN SEPT. 7, 1938

Fliers Chop More Than Three Hours From Old Record Set Last January; Archbold's Time Beaten

Seventeen Navy patrol bombers landed at Pearl Harbor, Honolulu, today, completing a record-breaking flight from San Diego.

The first plane landed at 7:09 a. m. (P. S. T.), and the others followed in quick succession, the United Press reported.

Unofficial elapsed time was 17 hours and 17 minutes, breaking by more than three hours the old Navy record of 20 hours 30 minutes for the San Diego-Honolulu hop, made last January by a squadron of 18 planes.

The flight time also exceeded that of Richard Archbold, wealthy explorer, who flew his "flying laboratory" from San Diego in 18 hours, 7 minutes, on the first lap of a trans-Pacific exploration trip to Dutch New Guinea.

Lieut. Aaron Storrs, III, flight commander, said his own plane functioned perfectly throughout the trip and, as far as he knew, none of the others had any difficulty.

"We flew between 7000 and 10,000 feet last night because there was a beautiful moon," Lieut. Storrs said. "Below us there probably were rain squalls, but up

Turn to Page 2. Col. 7.

S. D. BOMBERS SET RECORD

(Continued from Page 1)

where we were it was like broad daylight."

Lieut. Storrs revealed the squadron sighted all five of the Navy vessels which were stationed at 500-mile intervals along the route to give assistance to the flight. This indicated the squadron never got off its charted course.

"I think we saw the liner, Lurline, also," Lieut. Storrs said.

A small crowd, mostly Navy officers, greeted the squadron. Seachlights played over the harbor.

The weather was misty, but the planes landed without incident.

The take-off from San Diego was completed even more quickly than the record-breaking one of last week, when 14 bombers were in the air, bound for the Canal Zone, in 35 minutes after the first was launched.

The flagship plane of Lieut. Storrs was rolled off the North Island ramp at 1:25 p. m. At 1:57 p. m., 32 minutes later, all 17 airboats had left the harbor after one-and-one-half-mile runs due west off Municipal Pier 1.

Difficulty in leaving the water with their heavy loads of 13 tons each was encountered by only two planes—those of Lieut. M. T. Evans, executive officer, and Lieut. H. P. Cooper, flight officer, of Patrol Squadron 4.

Lieut. Evans made one unsuccessful start and Lieut. Cooper brought his plane to a stop after two attempted take-offs.

With delivery of the 17 bombers to Pearl Harbor, the Hawaiian air base now has a fleet of 59 new long-range Consolidated PBY airboats, flown across from San Diego in four mass flights since January, 1937. Forty more have been delivered in a similar manner to Coco Solo, Canal Zone.

Bomber Crashes Worry Navy High Command

S.D. SUN AUG. 25, 1938

Commander-In-Chief Orders Airboats To Stay On Ground During Unfavorable Flying Weather

San Diego Navy personnel today was assured by Vice Adm. Adolphus Andrews, Scouting Force commander, that the Fleet's high command deeply is concerned over the heavy toll of life in patrol bomber crashes during the last year, and is ordering all possible precautions to prevent recurrence of such disasters.

Vice-Adm. Andrews, who arrived here Tuesday afternoon aboard his flagship, the heavy cruiser USS Indianapolis, yesterday afternoon conferred with Rear-Adm. Chas. A. Blakely, Aircraft Scouting Force commander, regarding the morale of officers and men and the condition of the planes in the Navy's patrol squadrons.

ADM. ANDREWS

He began a thorough inspection of the facilities and personnel of the Scouting Force at North Island yesterday, and will continue it for the remainder of this week.

Poor Visibility

The officer revealed today that Adm. Claude C. Bloch, Fleet commander-in-chief, has issued orders forbidding dispatch of the Navy's new long-range airboats from their bases in unfavorable weather. Several patrol plane crashes within the last year were caused, in part, by flying conditions in which visibility was poor because of storms.

"These accidents are deplorable," Vice-Adm. Andrews declared aboard his flagship, "but we are an active Navy; our planes are flying all the time and in thousands of hours of intricate maneuvers, accidents are bound to happen.

"The commander-in-chief is very much concerned over the recent crashes and has ordered extreme precautions taken in flying operations.

New Branch

"The PBY bombers comprise a relatively new branch of the service, and we are still gaining experience with them. It is unfortunate that in the process we have lost valuable officers and enlisted men—aviators we can ill afford to do without."

While Vice-Adm. Andrews is making his inspection tour of the Aircraft Scouting Force at North Island, a Navy board of inquiry headed by Rear Adm. Royal E. Ingersoll, will be correlating the findings in its probe of the two airboat crashes during night practice landings in the bay, Aug. 15. Five were killed in these mishaps, raising the total dead in patrol bomber accidents during the year to 40.

Acquaintance Visit

Vice-Adm. Andrews, former chief of the bureau of navigation with a rear admiral's rank, took over the Scouting Force command July 15, and his visit to San Diego this week, he pointed out, is for the purpose of acquainting himself with the local units under his command.

Yesterday, official calls were made on Vice-Adm. Andrews by Rear-Adm. Sinclair Gannon; Capts. Byron McCandless and Paul P. Blackburn of the Navy, and Maj. Gen. Louis McCarty Little, Fleet Marine Force commander.

An inspection by Vice-Adm. Andrews of the Aircraft Scouting Force flagship, the USS Wright, is scheduled for Saturday morning.

S. D. Navy Plane Explodes, Plunges Into Bay; 2 Saved

S.D. UNION AUG. 26, 1938

Craft Sinks After Pilot, Seaman Rescued

Cool skill of a naval pilot last night was credited with saving two lives after a naval scouting plane was disabled by a mid-air explosion.

Lt. (jg) R. B. Moore piloted the crippled land ship on a wobbly glide that ended in the bay off Ballast point, north island officials said. Lt Moore and H. Stange, seaman, were rescued from the ship by boats from the U.S.S. Neches a few minutes before it sank in shallow water.

SEES FLASH IN AIR

Neither was injured, officials said.

"I was sitting on the porch of the San Diego Yacht club," related P. A. Giraud, 3120 Goldsmith st., "when I saw a flash of light and heard an explosion. In the darkness, I could see the plane as it started a wobbly glide toward the surface of the bay.

"It went out of sight just before it hit the water."

Naval officials were unable to give details of the crash and merely stated it was caused by "engine failure."

PILOT WINS PRAISE

Civilian pilots said Lt. Moore had done a remarkable piece of work in landing the ship on the water without injury to himself or his passenger.

Naval salvage boats cruised in the crash area for more than two hours attempting to locate the sunken ship. Salvage attempts were scheduled to be resumed at dawn today.

Pilots Named For Massed Hop To Canal Zone

SD Union 8-30-38

Four warships and auxiliaries, including the cruiser Raliegh, destroyer Selfridge and the aircraft tenders Gannet and Thrush, will act as plane guards for the 14 long-range patrol bombers of squadron 5 which will leave San Diego early tomorrow for a 3000-mile nonstop flight to Coco Solo, C.Z.

The squadron, a unit of patrol wing 3, will be commaded by Comdr. W. K. Berner.

SIXTH MASSED FLIGHT

The Selfridge will be stationed off Cape Falso, lower California; the Raleigh at Acapulco; the Thrush in the Gulf of Fonseca and the Gannet at Chiriqui lagoon, Panama. The flight track will follow the regular steamer routes on a direct course to Coco Solo.

Rear Adm. Charles A. Blakely, scouting force aircraft commander, announced that tomorrow's flight, which is expected to be consummated in 25 hours, will be the sixth massed distance flight of the twin-motored patrol bombers from San Diego to Hawaii and the canal zone. Another flight of 16 planes, comprising squadron 4, is scheduled for Sept. 6, the planes to be delivered to the fleet air base at Pearl harbor.

FLYING CREWS NAMED

Pilots and crews of Squadron 5, include:

5-P-1—Lt. Comdr. W. K. Berner; Av. Cadet W. G. Von Bracht, L. L. Hughes (N.A.P.), ACMM; R. T. Bruton, ACMM; W. M. Allen, AMM3c; J. C. Lawrence, CRM; A. H. Borresen, RM2C.

5-P-2—Lt. F. Funke jr.; Av. Cadet Mehrman, W. R. Van Liere (N.A.P.), AMM3c; C. Sjurson, AMM2c; G. E. Bullis, RM3c; C. W. Pittan, RM3c.

5-P-3—Lt. S. P. Weller; J. E. Hurley (N.A.P.), AMM1c; W. R. Shaver (N.A.P.), AMM2c; H. G. Dunn, AMM1c; V. J. Harigel, AMM3c; J. Wilhelm, RM2c; G. G. Alexander, RM3c.

5-P-4—Lt. R. R. Johnson, Av. Cadet P. C. Griggs, E. J. Kolazyk (N.A.P.), AMM1c; C. L. Clarke, ACMM; R. C. Mauldin, AMM3c; G. C. Gardner, RM1c; D. Vander Veen, RM3c.

5-P-5—Lt. B. V. Clark; Av. Cadet H. R. Swenson, J. A. O. Turcotte (N.A.P.), AMM2c; A. G. Straley, AMM1c; O. F. Keith, AMM2c; J. W. C. Edmonds, RM2c; J. A. Ceresna, AOM1c.

5-P-6—Lt. (jg) J. G. Craig; Av. Cadet W. R. Turner, R. L. Cousineau (N.A.P.), ACM1c; W. L. Porter, AMM1c; R. R. Abbott, AMM2c; H. C. Boutte, RM3c; T. A. Said (N.A.P.), RM2c.

5-P-7—Lt. H. B. Miller; Av. Cadet A. V. Parunak, W. O. Needham (N.A.P.), AMM1c; H. R. Davenport, ACMM; C. A. Johnston, AMM3c; S. Girard, CRM; J. A. Barnes, RM3c.

5-P-8—Lt. A. W. McKechnie; Av. Cadet N. C. Porter; E. F. Dyer (N.A.P.), AMM2c; J. L. Joyce, AMM1c; T. T. Smith, AMM2c; T. W. Wheeler, RM2c; G. H. Bloodworth, RM3c.

5-P-9—Lt. (jg) M. G. O'Conner; Av. Cadet W. F. Dawson, J. W. Irby (N.A.P.), AMM2c; R. E. Shackelford, RM3c.

Flying Fortresses

SD Tribune 8/25/38

The forecast regarding developments in civil and military aviation, made at Salt Lake City on Tuesday by General H. H. Arnold of the Army Air Corps, has a special interest for air-minded San Diegans.

Envisioning planes carrying 100 passengers in sealed cabins, flying 300 miles an hour 30,000 feet above the earth, General Arnold added: "We must look into the future, perhaps not so far distant, and glimpse the flying fortress that can strike any part of an enemy country, anywhere in the world, at any distance."

Probably no single feature of progress in aviation contributes more than do the military needs, actual or potential, of the world's great nations. All that is well enough, so far as it goes; but the loss of advantage in this lies in the fact that such progress may some day be used to destroy us instead of to benefit us. For it must always be remembered that this country does not and never can possess any monopoly in the development, construction and operation of "flying fortresses that can strike . . . anywhere in the world, at any distance."

Where boundaries of belligerent nations may be close together or may even actually join, as in Europe, conditions usually tend more to land-surface warfare, with swift raids and, reconnaissance by airplanes. But where distances are great, as would be the case in any war between the United States and any European or Asiatic nation, monstrous planes capable of carrying tremendous loads of bombs and gas would be indicated.

All of which serves to remind us that we do, indeed, have a very special interest in the development of the flying fortress—an interest not by any means confined solely to our own progress in this field.

AIR DREADNAUGHT PASSES TESTS WITH FLYING COLORS

W. B. WHEATLEY, TEST PILOT (INSET), AND CONSOLIDATED "AIR DREADNAUGHT" . . . one of its huge bombs could demolish Hodges dam (lower right).

S.D. TRIBUNE

Big Plane Set For Navy Tests

AUG. 23, 1938

A giant flying boat built by the Consolidated Aircraft Corp., estimated to be capable of a 5000-mile flight to patrol or bomb, today was ready for tests by the United States navy. The aircraft company yesterday completed the company's final demonstration tests of the $1,000,000 craft and turned it over to the navy.

Rigid inspection and test flights for the next week or longer are ahead of the four-motored "air dreadnaught" before the navy accepts it as perhaps the most powerful unit of the navy airforce.

Specifications of the plane, which resembles the transpacific clipper ships, are closely guarded naval secrets, and officials of Consolidated Aircraft Corp., which built it, refused to elaborate on the test flights.

Executives said they were more than satisfied with the way the plane performed in flights over the city, but beyond that they would not comment.

Today, Lt. Comdr. Arthur L. Crlinkley expects to pilot the plane, which has sleeping accommodations for a crew of eight but reportedly will carry 16 on duty flights.

The plane was designed to supplant the present twin-motored PBY type bombers, many of which have been flown more than 2500 miles from here to Hawaii, and over 3000 miles to Coco Solo, C. Z.

Observers made the following estimates: Engines, 1050 horsepower each; wingspread, 115 feet; height, on beach landing gear, 22 feet; top speed, 240 miles an hour, weight 30 tons; range 5000 miles.

Armament of the new fighter also was a secret, but reports said it would be protected by large caliber machine guns in the turret nose, turret tail and fuselage, top and bottom, permitting destructive fire in any direction.

If the 5000-mile range is correct, the craft could carry a devastating load of bombs, drop them on an objective more than 2000 miles away, and return to its base non-stop.

A galley, rest rooms and other features for comfort on long flights are installed in the craft.

PILOT'S SKILL AVERTS NAVY PLANE CRASH

S.D. SUN AUG. 26, '38

Scout-Bomber Landed On Bay With 'Dead' Motor

"The engine sounded as if a lead sledge-hammer had suddenly hit it."

This was how Lieut. (jg) Robert B. Moore, of Squadron VS-42, today described what might have developed into another Navy aviation tragedy last night.

Engine Goes Dead

While over the harbor entrance channel last night a terrific burst of flame shot out from under Lieut. Moore's scout-bomber. The engine went dead.

Overcoming his momentary shock, Lieut. Moore piloted the "dead" plane in a steady glide into the bay, landing about one-half mile from where the Navy tanker USS Neches was anchored.

Immediate Action

Action was instantaneous aboard the Neches. Launches, filled with rescue crews were sent immediately. Huge searchlights from the vessel illuminated the entire area.

The flotation gear kept the plane afloat, enabling Lieut. Moore and his passenger, Harold Stang, seaman 1c, to escape. They were taken aboard the Neches' boats uninjured.

Bomber Sank

The scout-bomber sank and salvage operations by the Naval Air Station's crash barge, the "Mary Ann," were resumed this morning.

Among the civilians who saw the accident was P. A. Giraud, of 3120 Goldsmith-st. He was on the front porch of the San Diego Yacht Club when the "explosion" occurred.

Pilot Lauded

"What looked like an unusually bright backfire flash shot out from under the plane," he said today. "Then there was a sound similar to an explosion, and the plane, its engine dead, came down under complete control. The pilot did a beautiful piece of work."

Last night's mishap was the third engine failure resulting in a Navy plane's forced landing this week. Last Monday a craft of Squadron VS-41 plunged into the ocean 10 miles west of Point Loma and Tuesday morning, a dive bomber of Squadron VB-4 fell into Sweetwater Lake. There were no injuries in either of these accidents.

Secrecy Shrouds Bomber's Feats

S.D. Union 8/23/38

Navy to Begin Acceptance Trials

More than meeting expectations, according to plant officials, Consolidated Aircraft Corp.'s giant four-engined patrol bombing plane yesterday was put through final company flying tests by William B. Wheatley, test pilot.

The air dreadnaught for the next week will undergo rigid inspection and air tests before final acceptance by the navy. Lt. Comdr. Arthur L. Crinkley, navy trial board member, will be at the controls.

PERFORMANCE SECRET

Because of naval secrecy, performance details of yesterday's flight were not revealed. Installation of a new tail structure featuring double rudders eliminated minor faults noted when the ship first was tested several months ago.

The craft is one of the world's most powerful fighting machines. While no official specifications of the air giant ever have been made public, expert observers have made the following estimates: Engines, 1050 horsepower each; wing span overall, 115 feet; length overall, 80 feet; height, on beach landing gear, 22 feet; range, 5000 miles, loaded; top speed, 240 miles an hour; weight, 30 tons.

Secrecy also shrouded the plane's armament. Authorities have said that the ship will be protected by machine guns of large caliber mounted in the turret nose, turret tail and fuselage, top and bottom, permitting rapid, effective, long-range firing in any direction.

CARRIES CREW OF 16

A crew of 16, it was reported, will man the craft on duty flights. Sleeping accommodations are provided for half that number and the plane is equipped with a galley, restrooms and other features for comfort on long flights.

The Consolidated plant has been revamped to put the newer and larger ships into production immediately, it was said.

Here with Crinkley as a board member is Lt. Comdr. R. E. Jennings, office of naval operations, navy department. On completion of the tests, Crinkley and Jennings will submit reports and recommendations to the navy department, it was said.

Consair to Revamp Plant for New Ships

Aviation, Aircraft 38

San Diego, Aug. 11—With the last of the Navy's orders for PBY patrol bombers nearing completion, extensive changes in Consolidated Aircraft Corp.'s plant here are announced for the next six months in preparation for production of a new model. Maj. Reuben H. Fleet, president, said the firm will install eight air driven drop hammers, four of which will be the largest in the industry. Another large hydraulic press, of 2,000 tons capacity, also will be added. The payroll, now totaling 1,400, will be reduced gradually to about 700 during the alterations.

Thirty-two of the PBYs will be flown to Hawaii by patrol squadrons 1, 4, and 18 in relays of 18 on Sept. 6 and early in November, and 16 will be ferried to Panama by squadron 5 on Aug. 31.

Consair's giant 25-ton four-motored, long range patrol bomber on whose engineering the firm and the Navy have spent about $1,000,000, is awaiting its final trials by a Navy board here late in August. It will compete with another four-motored bomber built by Sikorsky Aircraft Division of United Aircraft Corp. for a five to 10 plane contract.

Navy Tests Continue On 4-Motor Plane

S.D. Union 8/31/38

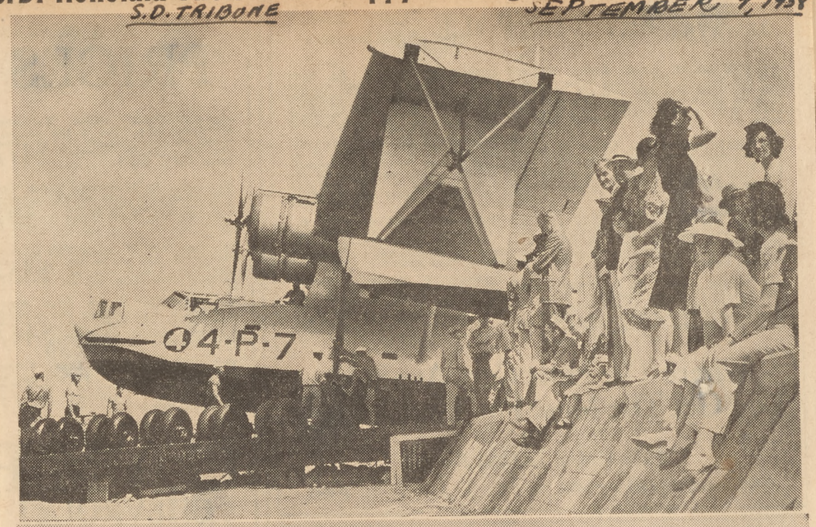
Test flights of the navy's new 4-motored "flying battleship," which started last week with Lt. Comdr. Arthur Crinkley at the controls, will be conducted for several more days.

Data on various tests will be assembled and forwarded to the bureau of aeronautics.

Consolidated Aircraft officials said yesterday 33 airboats of the PBY-4 type are to be delivered to the navy as soon as they are completed. According to present navy department plans the planes will be stationed at the fleet air bases at Sitka and Pearl Harbor.

S.D.-Honolulu Fliers Start 'Happy Landing' Flight

S.D. TRIBUNE SEPTEMBER 7, 1938



Wives, relatives and friends lined the sea wall at the Naval Air station seaplane ramp at North Island yesterday to wish "happy landings" to crews of 17 giant patrol bombers of Patrol Squadron 4 before their take-off on a non-stop mass flight to Pearl Harbor, T. H. Upper, the plane of Lt. (jg) B. M. Strean is aided over side by beaching crews. Lower, Lt. (jg) H. T. Johnson lifts his heavily loaded craft into the air after a run down the bay. Each plane carried a crew of seven.

14 Navy Bombers to Hop For Canal Zone Wednesday

S.D. UNION AUG. 24, 1938

32 Planes Also Will Make Two Flights to Hawaii

Weather conditions along the 2000-mile airway permitting, 14 twin-motored long-range patrol bombers of Squadron 5, under command of Comdr. Warren K. Berner, will take off between 7 and 9 a. m. Wednesday for a nonstop flight to Coco Solo at the eastern entrance of the Panama canal.

The flight over the international airway is expected to be completed in 20 hours. The aircraft tenders Gannett and Sandpiper will act as plane guards along the west coast of Central America.

A week later, Sept. 6, 16 planes of Patrol Squadron 4, commanded by Lt. Comdr. A. P. Storrs III, of Seahawk fame, will take off for a 2400-mile nonstop flight to Pearl Harbor, Hawaii.

CADETS ASSIGNED

No other long-distance mass flights will be made by the scouting wing forces until November, when 16 more planes are scheduled to be ferried to Hawaii, bringing the total number of squadrons based at the crossroads of the Pacific to nine. Arrival of Squadron 5 at Panama will bring the total number of long-range patrol bombers based there to 46. There are 48 at San Diego and six at Kodiak.

Fourteen aviation cadets who have completed their flight training at Pensacola, Fla., have been ordered to duty with aircraft squadrons of the battle and scouting forces. The cadets and the ships to which they have been assigned are:

James B. Arbes, Bombing Squadron 3, Saratoga; William M. Romberger, Torpedo Squadron 2, Lexington; James F. Patterson, Scouting Squadron 2, Lexington; Charles E. Roemer, Scouting Squadron 2, Lexington; Wade E. Bertram, Bombing Squadron 3, Saratoga; Kenneth P. Hance, Scouting Squadron 3, Saratoga; Paul E. Anderson, Scouting Squadron 3, Saratoga; Maurice E. McGuire, Bombing Squading 4, Ranger; Arthur J. Brassfield, Scouting Squadron 41, Ranger; Charles R. Tassan, Scouting Squadron 5, Yorktown; Lawrence G. Whitcher, Scouting Squadron 6, Enterprise; Thomas A. Aspell, Torpedo Squadron 6, Enterprise, Lloyd E. Parker, Patrol Squadron 9, Wright; Allen R. Waggoner, Patrol Squadron 12, Langley.

Naval authorities here yesterday received a letter from the bureau of navigation setting forth the precedence of naval reserve aviation cadets with other naval personnel. The letter states aviation cadets will rank as follows:

Ensigns, U.S.N., and U.S.N.R.; commissioned warrant officers, U.S.N., and U.S.N.R.; aviation cadets; midshipmen; warrant officers, U.S.N. and U.S.N.R.

Y CUTS TIME OF HAWAII HOP M S.D. TO 17 HOURS, 17 MINUTES

er a recheck of figures, the navy department at Washington, oday set the official time for the newest San Diego-Honolulu p mass flight at 17 hours, 17 minutes, more than three hours than the navy's previous mark for a similar trip of 20 hours, set Jan. 18-19.

The flight, which began here yesterday afternoon and ended at Pearl Harbor just before dawn today, was the seventh such "routine delivery" of aircraft to Honolulu or the Canal Zone. The navy's record for the flight to the Canal Zone is 22 hours, set Dec. 8-9, 1937.

The first air delivery to Honolulu was undertaken in June, 1934, from San Francisco, when six naval flying boats flew the distance non-stop in 25 hours, 15 minutes. S.D. TRIBUNE 9/7/38

NAVY BOMBERS REACH PANAMA

S.D. SUN — SEPT. 2, 1938

14 S. D. Planes At Coco Solo After Re-fuel Stop

Fourteen Navy bombers which took off from San Diego for the Canal Zone Wednesday morning arrived at the Coco Solo Fleet Air Base at 11:20 a. m. (PST) today, the Aircraft Scouting Force flagship Wright was notified at North Island.

The squadron had been forced down early yesterday at Gulf of Fonseca after several hours of bucking strong headwinds had cut down its fuel supply. They left at 5:43 a. m. on the 580-mile final lap, and actual flying time for the 3100-mile San Diego-Coco Solo trip was 26 hours, 40 minutes.

The aircraft tender Thrush refueled the planes at the Gulf of Fonseca throughout yesterday. More than one-third of today's trip was over Nicaragua jungle country and the largest inland water body of Central America, Lake Nicaragua.

S. D. Planes Set Speed Mark To Hawaii; 17 Hours, 17 Min.

S.D. UNION SEPT. 6, 1938

17 Bombers Land Before Dawn; Weather Perfect

Clipping off the 2150 miles between Pt. Loma and Diamond Head in 17 hours, 17 minutes, 17 planes of Patrol Squadron 4, Lt. Comdr. A. P. Storrs commanding, set a speed record yesterday from San Diego to Hawaii.

The flight bette d by more than three hours the former navy record of 20 hours and 30 minutes and eclipsed the 18-hour 7-minute mark made by Richard Archbold, scientist, in the Guba June 3.

The great bombing planes, bearing 119 men, glided down upon Pearl Harbor before dawn, after flying in mass formation throughout the night, The Associated Press reported.

FEW SEE ARRIVAL

Only 100 spectators, and they mostly relatives of the fliers or air base attaches, witnessed the end of the flight—officially described as a routine transfer of patrol bombers.

The big seaplanes left San Diefo yesterday afternoon.

"We had no trouble at all," said Storrs. "They are beautiful planes to fly. I am not tired, although I have been up all night. This is a lot different than stunt flying."

The fastest time flown, said Lt. A. L. Truslow, navigator of the leading plane, was 160 knots, and the average 145 knots.

PRAISE FOR CREWS

Perfectly timed, perfectly executed.

In these four words naval aviation authorities at North island expressed their admiration for the record-smashing flight.

While praising the flight personnel for a remarkable exhibition of airmanship, naval aviation officials stressed the importance of the weather reports flashed from the plane guard ships scattered along the flight route.

Their combined meteorological reports resulted in speeding up the flight 24 hours to take advantage of virtually perfect flying conditions.

Arrival of Patrol Squadron 4 at Pearl Harbor brought the total number of Consolidated bombers ferried to the crossroads of the Pacific since January, 1937, to 59. In the same period 40 have been delivered to Panama.

S. D. BOMBERS GET SURPRISE FLIGHT ORDER

S.D. SUN SEPT. 6, 1938

Weather Conditions Ideal On Route To Hawaii, Admiral Radios

A surprise order from Rear Adm. Charles Blakely, commander of Aircraft, Scouting Force, today directed 17 Navy patrol bombers to take off for Pearl harbor at once instead of tomorrow.

The message advising to start the flight "as soon as practicable" today, came from the USS Wright on which Adm. Blakely is en route to Honolulu.

Lieut. Aaron Storrs, commanding Patrol Squadron 4, ordered the planes into the air soon after 1 p. m. for the non-stop flight to Pearl Harbor.

Weather Ideal

Adm. Blakely radioed that weather conditions appeared certain to be ideal for the next two days and recommended an immediate departure.

The planes had been secured at North Island since last Friday. Only fueling of the airboats was necessary to prepare them for the 2570-mile transpacific flight.

No Confusion

Although the order from Rear Adm. Blakely caught the flight crews of 119 officers and enlisted men unaware, no confusion resulted and the bombers were immediately made ready for the delivery trip, expected to take about 18 hours.

In addition to the Wright, other plane guard ships stationed along the flight route, are the San Diego destroyers Simpson and Craven, and the Pearl Harbor warships Sicard and Litchfield. They have been submitting weather data and will serve further as rescue ships in case any of the PBY bombers are forced down in the Pacific.

The 17 bombers will be apportioned as follows on arrival at the Pearl Harbor Fleet Air Base:

Twelve will be assigned regular duty with Patrol Squadron Four, under whose banner tomorrow's flight will be made.

Three will serve as spare planes for Squadron VP-4.

Two will be given Patrol Squadron 10 as spares.

A shortage of pilots necessitated the transfer of five officers from San Diego-based patrol squadrons to VP-4 for the delivery flight duty.

BOMBERS GET FLIGHT ORDER

(Continued From Page 1)

17 Navy Patrol Bombers Set Mark On 'Surprise' Hop

S.D. SUN SEPT. 7, 1938

Fliers Chop More Than Three Hours From Old Record Set Last January; Archbold's Time Beaten

Seventeen Navy patrol bombers landed at Pearl Harbor, Honolulu, today, completing a record-breaking flight from San Diego.

The first plane landed at 7:09 a. m. (P. S. T.), and the others followed in quick succession, the United Press reported.

Unofficial elapsed time was 17 hours and 17 minutes, breaking by more than three hours the old Navy record of 20 hours 30 minutes for the San Diego-Honolulu hop, made last January by a squadron of 18 planes.

The flight time also exceeded that of Richard Archbold, wealthy explorer, who flew his "flying laboratory" from San Diego in 18 hours, 7 minutes, on the first lap of a trans-Pacific exploration trip to Dutch New Guinea.

Lieut. Aaron Storrs, III, flight commander, said his own plane functioned perfectly throughout the trip and, as far as he knew, none of the others had any difficulty.

"We flew between 7000 and 10,000 feet last night because there was a beautiful moon," Lieut. Storrs said. "Below us there probably were rain squalls, but up

Turn to Page 2, Col. 7.

S. D. BOMBERS SET RECORD

(Continued from Page 1)

where we were it was like broad daylight."

Lieut. Storrs revealed the squadron sighted all five of the Navy vessels which were stationed at 500-mile intervals along the route to give assistance to the flight. This indicated the squadron never got off its charted course.

"I think we saw the liner, Lurline, also," Lieut. Storrs said.

A small crowd, mostly Navy officers, greeted the squadron. Seachlights played over the harbor.

The weather was misty, but the planes landed without incident.

The take-off from San Diego was completed even more quickly than the record-breaking one of last week, when 14 bombers were in the air, bound for the Canal Zone, in 35 minutes after the first was launched.

The flagship plane of Lieut. Storrs was rolled off the North Island ramp at 1:25 p. m. At 1:57 p. m., 32 minutes later, all 17 airboats had left the harbor after one-and-one-half-mile runs due west off Municipal Pier 1.

Difficulty in leaving the water with their heavy loads of 13 tons each was encountered by only two planes—those of Lieut. M. T. Evans, executive officer, and Lieut. H. P. Cooper, flight officer, of Patrol Squadron 4.

Lieut. Evans made one unsuccessful start and Lieut. Cooper brought his plane to a stop after two attempted take-offs.

With delivery of the 17 bombers to Pearl Harbor, the Hawaiian air base now has a fleet of 59 new long-range Consolidated PBY airboats, flown across from San Diego in four mass flights since January, 1937. Forty more have been delivered in a similar manner to Coco Solo, Canal Zone.

Bomber Crashes Worry Navy High Command

S.D. SUN AUG. 25, 1938

Commander-In-Chief Orders Airboats To Stay On Ground During Unfavorable Flying Weather

San Diego Navy personnel today was assured by Vice Adm. Adolphus Andrews, Scouting Force commander, that the Fleet's high command deeply is concerned over the heavy toll of life in patrol bomber crashes during the last year, and is ordering all possible precautions to prevent recurrence of such disasters.

Vice-Adm. Andrews, who arrived here Tuesday afternoon aboard his flagship, the heavy cruiser USS Indianapolis, yesterday afternoon conferred with Rear-Adm. Chas. A. Blakely, Aircraft Scouting Force commander, regarding the morale of officers and men and the condition of the planes in the Navy's patrol squadrons.

ADM. ANDREWS

He began a thorough inspection of the facilities and personnel of the Scouting Force at North Island yesterday, and will continue it for the remainder of this week.

Poor Visibility

The officer revealed today that Adm. Claude C. Bloch, Fleet commander-in-chief, has issued orders forbidding dispatch of the Navy's new long-range airboats from their bases in unfavorable weather. Several patrol plane crashes within the last year were caused, in part, by flying conditions in which visibility was poor because of storms.

"These accidents are deplorable," Vice-Adm. Andrews declared aboard his flagship, "but we are an active Navy; our planes are flying all the time and in thousands of hours of intricate maneuvers, accidents are bound to happen.

"The commander-in-chief is very much concerned over the recent crashes and has ordered extreme precautions taken in flying operations.

New Branch

"The PBY bombers comprise a relatively new branch of the service, and we are still gaining experience with them. It is unfortunate that in the process we have lost valuable officers and enlisted men—aviators we can ill afford to do without."

While Vice-Adm. Andrews is making his inspection tour of the Aircraft Scouting Force at North Island, a Navy board of inquiry headed by Rear Adm. Royal E. Ingersoll, will be correlating the findings in its probe of the two airboat crashes during night practice landings in the bay, Aug. 15. Five were killed in these mishaps, raising the total dead in patrol bomber accidents during the year to 40.

Acquaintance Visit

Vice-Adm. Andrews, former chief of the bureau of navigation with a rear admiral's rank, took over the Scouting Force command July 15, and his visit to San Diego this week, he pointed out, is for the purpose of acquainting himself with the local units under his command.

Yesterday, official calls were made on Vice-Adm. Andrews by Rear-Adm. Sinclair Gannon; Capts. Byron McCandless and Paul P. Blackburn of the Navy, and Maj. Gen. Louis McCarty Little, Fleet Marine Force commander.

An inspection by Vice-Adm. Andrews of the Aircraft Scouting Force flagship, the USS Wright, is scheduled for Saturday morning.

S. D. Navy Plane Explodes, Plunges Into Bay; 2 Saved

S.D. UNION AUG. 26, 1938

Craft Sinks After Pilot, Seaman Rescued

Cool skill of a naval pilot last night was credited with saving two lives after a naval scouting plane was disabled by a mid-air explosion.

Lt. (jg) R. B. Moore piloted the crippled land ship on a wobbly glide that ended in the bay off Ballast point, north island officials said. Lt Moore and H. Stange, seaman, were rescued from the ship by boats from the U.S.S. Neches a few minutes before it sank in shallow water.

SEES FLASH IN AIR

Neither was injured, officials said.

"I was sitting on the porch of the San Diego Yacht club," related P. A. Giraud, 3120 Goldsmith st., "when I saw a flash of light and heard an explosion. In the darkness, I could see the plane as it started a wobbly glide toward the surface of the bay.

"It went out of sight just before it hit the water."

Naval officials were unable to give details of the crash and merely stated it was caused by "engine failure."

PILOT WINS PRAISE

Civilian pilots said Lt. Moore had done a remarkable piece of work in landing the ship on the water without injury to himself or his passenger.

Naval salvage boats cruised in the crash area for more than two hours attempting to locate the sunken ship. Salvage attempts were scheduled to be resumed at dawn today.

Pilots Named For Massed Hop To Canal Zone

S.D. Union 8-30-38

Four warships and auxiliaries, including the cruiser Raliegh, destroyer Selfridge and the aircraft tenders Gannet and Thrush, will act as plane guards for the 14 long-range patrol bombers of squadron 5 which will leave San Diego early tomorrow for a 3000-mile nonstop flight to Coco Solo, C.Z.

The squadron, a unit of patrol wing 3, will be commaded by Comdr. W. K. Berner.

SIXTH MASSED FLIGHT

The Selfridge will be stationed off Cape Falso, lower California; the Raleigh at Acapulco; the Thrush in the Gulf of Fonseca and the Gannet at Chiriqui lagoon, Panama. The flight track will follow the regular steamer routes on a direct course to Coco Solo.

Rear Adm. Charles A. Blakely, scouting force aircraft commander, announced that tomorrow's flight, which is expected to be consummated in 25 hours, will be the sixth massed distance flight of the twin-motored patrol bombers from San Diego to Hawaii and the canal zone. Another flight of 16 planes, comprising squadron 4, is scheduled for Sept. 6, the planes to be delivered to the fleet air base at Pearl harbor.

FLYING CREWS NAMED

Pilots and crews of Squadron 5, include:

5-P-1—Lt. Comdr. W. K. Berner; Av. Cadet W. G. Von Bracht, L. L. Hughes (N.A.P.), ACMM; R. T. Bruton, ACMM; W. M. Allen, AMM3c; J. C. Lawrence, CRM; A. H. Borresen, RM2C.

5-P-2—Lt. F. Funke jr.; Av. Cadet Mehrman, W. R. Van Liere (N.A.P.), AMM3c; C. Sjurson, AMM2c; G. E. Bullis, RM3c; C. W. Pittan, RM3c.

5-P-3—Lt. S. P. Weller; J. E. Hurley (N.A.P.), AMM1c; W. R. Shaver (N.A.P.), AMM2c; H. G. Dunn, AMM1c; V. J. Harigel, AMM3c; J. Wilhelm, RM2c; G. G. Alexander, RM3c.

5-P-4—Lt. R. R. Johnson, Av. Cadet P. C. Griggs, E. J. Kolazyk (N.A.P.), AMM1c; C. L. Clarke, ACMM; R. C. Mauldin, AMM3c; G. C. Gardner, RM1c; D. Vander Veen, RM3c.

5-P-5—Lt. B. V. Clark; Av. Cadet H. R. Swenson, J. A. O. Turcotte (N.A.P.), AMM2c; A. G. Straley, AMM1c; O. F. Keith, AMM2c; J. W. C. Edmonds, RM2c; J. A. Ceresna, AOM1c.

5-P-6—Lt. (jg) J. G. Craig; Av. Cadet W. R. Turner, R. L. Cousineau (N.A.P.), ACM1c; W. L. Porter, AMM1c; R. R. Abbott, AMM2c; H. C. Boutte, RM3c; T. A. Said (N.A.P.), RM2c.

5-P-7—Lt. H. B. Miller; Av. Cadet A. V. Parunak, W. O. Needham (N.A.P.), AMM1c; H. R. Davenport, ACMM; C. A. Johnston, AMM3c; S. Girard, CRM; J. A. Barnes, RM3c.

5-P-8—Lt. A. W. McKechnie; Av. Cadet N. C. Porter; E. F. Dyer (N.A.P.), AMM2c; J. L. Joyce, AMM1c; T. T. Smith, AMM2c; T. W. Wheeler, RM2c; G. H. Bloodworth, RM3c.

5-P-9—Lt. (jg) M. G. O'Conner; Av. Cadet W. F. Dawson, J. W. Irby (N.A.P.), AMM2c; R. E. Shackelford

Flying Fortresses

SD Tribune 8/25/38

The forecast regarding developments in civil and military aviation, made at Salt Lake City on Tuesday by General H. H. Arnold of the Army Air Corps, has a special interest for air-minded San Diegans.

Envisioning planes carrying 100 passengers in sealed cabins, flying 300 miles an hour 30,000 feet above the earth, General Arnold added: "We must look into the future, perhaps not so far distant, and glimpse the flying fortress that can strike any part of an enemy country, anywhere in the world, at any distance."

Probably no single feature of progress in aviation contributes more than do the military needs, actual or potential, of the world's great nations. All that is well enough, so far as it goes; but the loss of advantage in this lies in the fact that such progress may some day be used to destroy us instead of to benefit us. For it must always be remembered that this country does not and never can possess any monopoly in the development, construction and operation of "flying fortresses that can strike ... anywhere in the world, at any distance."

Where boundaries of belligerent nations may be close together or may even actually join, as in Europe, conditions usually tend more to land-surface warfare, with swift raids and reconnaissance by airplanes. But where distances are great, as would be the case in any war between the United States and any European or Asiatic nation, monstrous planes capable of carrying tremendous loads of bombs and gas would be indicated.

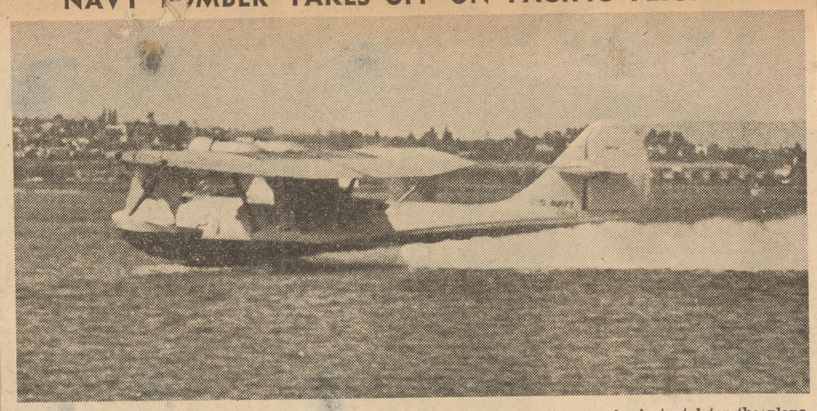
All of which serves to remind us that we do, indeed, have a very special interest in the development of the flying fortress—an interest not by any means confined solely to our own progress in this field.

They'll Make 3100-Mile Air Hop

S. D. SUN Aug. 29, 1937

The men who will pilot 14 Consolidated patrol bombers on a non-stop, 3100-mile flight to the Canal Zone Wednesday are shown above. Left to right, kneeling, Aviation Cadets N. C. Porter, R. D. Hutchins, P. C. Griggs, W. G. Von Bracht, A. Mehrmann, and A. V. Parunak; standing, front row, Lieuts. J. S. Thach, B. V. Clark, S. P. Weller, W. C. Asserson Jr., Lieut. Comdr. W. K. Berner, squadron commander; Lieut. Harold B. Miller, executive officer, and Lieuts. A. W. McKechnie and R. R. Johnson. Rear row, Aviation Cadets J. C. Skorcz, O. A. Finley, R. G. Tourart, H. R. Swenson, and W. F. Dawson.

NAVY BOMBER TAKES OFF ON PACIFIC FLIGHT



Flagplane of Lt. Comdr. A. P. Storrs smashing down the mile take-off area. An instant later the plane left the water and headed seaward.

* * *

17 Planes Hop For Hawaii

(Continued from Page 1)

6000 to 10,000 feet, the squadron will be aided by tail winds varying from 10 to 20 miles an hour.

The navy's terse comment that the flight from San Diego to the crossroads of the Pacific was "merely a routine transfer of 17 planes," was borne out amply by the matter-of-fact manner which characterized the take-off.

The planes began warming up their motors at 1:20 p.m. The flagplane went over the ramp at 1:26 and in 11 minutes all of the 13-ton airboats were in the water.

Comdr. Storrs, in the flagplane, started down the mile take-off area from a point immediately west of Pier 1 to abeam the U.S.S. Concord and at 1:40 was aloft.

SAILBOAT AVOIDED

With propellers spilling at top speed the other planes followed at 30-second intervals until Plane 4 was forced to head about to prevent crashing into a small sailboat that had escaped patrols.

After a 4-minute delay the take-off was resumed, the last plane getting aloft at 1:58.

Circling the Coronado islands once to attain a 6000-foot altitude the squadron formed in two divisions of nine and eight planes, Storrs leading the first division and Lt. H. P. Cooper the second. In two huge flying V's the 17 planes then headed westward.

Lt. A. R. Truslow, squadron navigator, estimated the entire squadron, barring mishap, would land at Pearl Harbor in time for breakfast between 7 and 8 this morning.

BREAKFAST IN HAWAII

Comdr. Storrs plainly was elated over the ideal flying conditions. So confident was the squadron commander of bringing the airboats into Pearl Harbor soon after sunrise he took only a couple of chocolate bars to eat during the midwatch. He expected to sight the island soon after sunrise.

The flight of 119 officers and men in the 17 airboats to Hawaii is the second scheduled for 1938. The same number of planes, comprising squadron 1, commanded by Lt. Comdr. Sam La Hache, is to leave San Diego for Pearl Harbor early in December if Consolidated makes deliveries as expected. Officers and men of squadron 1 are now at North Island using VJ-1 planes in day and night practice flights.

Adm. Blakely, once the planes pass over the Wright, is to proceed to Pearl Harbor to inspect aircraft of fleet wing 2. He plans to make several flights, one possibly to French Frigate shoals, before returning here Oct. 1.

On Jan. 4, commanding 48 planes of patrol wing 1, he will leave for the Caribbean to take part in fleet problem 20.

The destroyers Simpson, Craven, Sicard and Litchfield will start returning to San Diego at dawn today.

Crews For Navy Bomber Flight To Canal Named

S D Sun 9/30/38

Flight crews of the 14 PBY bombers scheduled to take off from San Diego harbor at 10 a. m. tomorrow on a non-stop 3100-mile flight to the Canal Zone were announced today by Rear Adm. Charles A. Blakely, Aircraft Scouting Force commander. They are listed below, with the planes they will operate.

5-P-1

Lieut. Comdr. W. K. Berner, Av. Cadet W. G. Von Bracht, L. L. Hugh (NAP) ACMM; R. T. Bruton, ACMM; W. M. Allen, AMM3c; J. C. Lawrence, CRM; A. H. Borreson, RM2c.

5-P-2

Lieut. F. Funke Jr., Av. Cadet Mehrman, W. R. Van Liere (NAP) AMM3c; C. Sjurson, AMM1c; C. H. Spawn, AMM2c; G. E. Bullis, RM3c; C. W. Pittam, RM3c.

5-P-3

Lieut. S. P. Weller, J. E. Hurley (NAP), AMM1c; W. R. Shaver (NAP), AMM2c; H. G. Dunn, AMM1c; V. J. Harigel, AMM3c; J. Wilhelm, RM2c; G. G. Alexander, RM3c.

5-P-4

Lieut. R. R. Johnson, Av. Cadet P. C. Griggs, E. J. Kolazyk (NAP), AMM1c; C. L. Clarke, ACMM; R. C. Mauldin, AMM3c; G. C. Gardner, RM1c; D. Vander Veen, RM3c.

5-P-5

Lieut. B. V. Clark, Av. Cadet H. R. Swenson, J. A. O. Turcotte (NAP), AMM2c; A. G. Straley, AMM1c; O. F. Keith, AMM2c; J. W. C. Edmonds, RM2c; J. A. Ceresna, AOM1c.

5-P-6

Lieut. (jg) J. G. Craig, Av. Cadet W. R. Turner, R. L. Cousineau (NAP) ACM1c; W. L. Porter, AMM1c; R. R. Abbott, AMM2c; H. C. Boutte, RM3c; T. A. Said (NAP), RM2c.

5-P-7

Lieut. H. B. Miller, Av. Cadet A. V. Parunak, W. O. Needham (NAP), AMM1c; H. R. Davenport, ACMM; C. A. Johnston, AMM3c; S. Girard, CRM; J. A. Barnes, RM3c.

5-P-8

Lieut. A. W. McKechnie, Av. Cadet N. C. Porter, E. F. Dyer (NAP), AMM2c; J. L. Joyce, AMM1c; T. T. Smith, AMM2c; T. W. Wheeler, RM2c; G. H. Bloodworth, RM3c.

5-P-9

Lieut. (jg) M. G. O'Conner, Av. Cadet W. F. Dawson, J. W. Irby (NAP), AMM2c; R. E. Shackelford Jr., AMM1c; N. E. Perkins, AMM2c; H. C. Stempfel, RM2c; A. L. Garris, RM3c.

5-P-10

Lieut. W. C. Asserson Jr., Av. Cadet R. G. Touart, L. B. Williamson (NAP), AMM3c; T. J. Murray, ACMM; O. K. Thomas, ACMM; F. E. Sileo, RM3c; R. A. Kulig, RM3c.

5-P-11

Lieut. J. S. Thach, Av. Cadet J. C. Skoroz, E. L. Collins (NAP), AMM2c; W. Russell, AMM1c; G. W. Blair, AMM3c; C. W. Kreiger, RM2c; D. H. L. Rohde, RM3c.

5-P-12

Av. Cadet J. P. Sager, R. L. Nichols (NAP), AMM1c; P. A. Porter (NA), AM2c; P. D. Dovell, AMM1c; J. F. Wake, AMM3c; H. G. Allison, RM2c; O. R. Smith, AOM1c.

5-P-14

Av. Cadet W. L. Meili, Av. Cadet O. A. Finley, L. R. Ware (NAP) ACMM; C. Wright Jr., AMM2c; W. J. J. Diestel, ACMM; C. B. Diehl, ACM; R. M. Nichols, RM2c.

5-P-15

Av. Cadet Eastman, Av. Cadet R. D. Hutchins, R. C. Wicke (NAP), AMM1c; J. A. Bowel AMM3c; V. B. Rigdon, ACMM A. J. Wotring, AMM1c; A. R. Osborne, RM3c.

Pilot Crinkley Knows His Stuff; Gets 'Big' Job

S.D. SUN Aug. 28, 1938

Lieutenant - Commander Veteran Of Navy Air Service

LIEUT.-COMDR. A. CRINKLEY
He "chauffeurs" 25 tons

The Navy Department had to make sure that the 25 tons of intricate mechanism known officially as XPB2Y-1, but more familiarly as Consolidated's million-dollar four-motored bomber, was in capable hands when it was ready to take the craft over.

That was the primary reason for the choice of Lieut.-Comdr. Andrew Crinkley to serve as the big ship's first commanding officer. Lieut.-Comdr. Crinkley will be the man at the controls when the big airboat gracefully circles over San Diego harbor this week, while Washington officials of a trial board are checking every detail.

Ex-War Flier

Lieut.-Comdr. Crinkley is one of the rapidly diminishing number of Navy pilots who entered aviation from civilian life during the World War. In the past 21 years of uninterrupted service with the air branch of the Fleet he has gained a reputation of being one of its topflight seaplane experts.

Like others of his pioneering mates, he is, today, in the peculiar position of having served as instructor to many of the officers who now rank above him and give him orders. For in the Navy, an officer, midway in his career, may decide to enter aviation, is sent to Pensacola for a year's training, then retains his rank in the air service.

Outranked By Commander

Thus, a commander just out of Pensacola, and with only one year of actual flying experience, is senior to lieutenants and lieutenant-commanders who may have spent ten, fifteen, twenty years—in fact, their entire Navy careers—in aviation.

The late Rear Adm. Moffett was one of Lieut.-Comdr. Crinkley's students, and a capable one, too. He was one of the few high-ranking Navy aviation officials who actually did a great deal of flying, and he died "with his boots on" in a dirigible disaster several years ago.

Among Lieut.-Comdr. Crinkley's most notable experiences was the famed path-finding flight of Patrol Squadron F5L in 1920 from San Diego to Coco Solo, Canal Zone. The 12 seaplanes, considered radically advanced long-range craft in their day, made the trip in the phenomenal time of 14 days, each way. They required seven stops, being able to develop no more than a 500-mile crusing range. Compare this with the proposed non-stop flight of 3100 miles by 14 seaplanes Wednesday from San Diego to the Canal Zone, which Scouting Force officials predict will be completed in 24 hours or less.

Ordered to the Navy's first aircraft carrier, the Langley, in 1925, Lieut.-Comdr. Crinkley aided in the development of improved landing gears on the flight deck, and was on the spot when the Navy's first sea-going fighting squadrons were organized on the vessel, now an aircraft tender with one-third of her flight deck removed.

When the President's "floating White House," USS Houston, was commissioned early in the 30's, he was attached to the aviation unit and managed to fly over several European countries, including a memorable trip from Le Havre to Paris, where he landed in the Seine river, an unusual feat for a U. S. Navy plane.

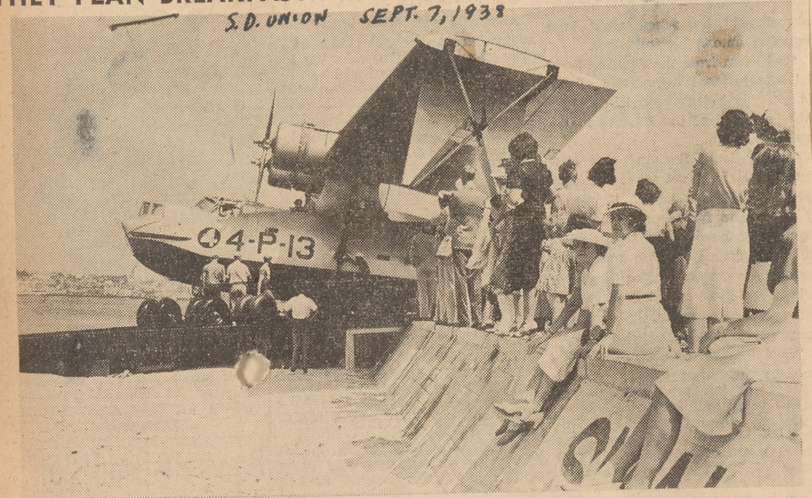
Holds Endurance Record

With Lieut.-Comdr. R. D. Lyon, he still holds the world's endurance record for single-engined seaplanes at Anacostia. The pair remained aloft 21 hours to determine whether the Curtiss had sufficient cruising range to fly the Pacific. Not until some time later did the Navy attempt such a flight, and it ended disastrously under Comdr. John Rodgers. Lieut.-Comdr. Crinkley, by the way, was pilot of one of the three seaplanes which took off from San Francisco for Pearl Harbor; his ship's propeller flew to pieces just outside the Golden Gate, forcing him down and causing him to taxi back to port, the dream of a trans-Pacific flight blasted.

Since 1917, when Lieut.-Comdr. Crinkley joined the Navy to see the world from the air, he has compiled 5000 flight hours.

THEY PLAN BREAKFAST IN PEARL HARBOR THIS MORNING

S.D. UNION SEPT. 7, 1938



Plane 13 of Patrol Squadron 4, Lt. C. R. Robertson at the controls, leaving the Naval Air station seaplane ramp while friends and relatives bid the crew bon voyage.

ron into Honolulu within 18 hours or possibly less. Rain squalls will be encountered 1000 miles east of Honolulu but the planes will be at least 2000 feet above them.

Flying at altitudes varying from

(Continued on Page 3, Col. 2)

17 Planes Hop For Hawaii

18-Hour Flight Seen In Weather Report

Seventeen navy patrol bombers roared toward Hawaii late last night, more than 1320 miles west of here. The squadron commander radioed to naval headquarters here that the planes flew 510 miles between 8 and midnight through fair weather.

* * *

Acting on orders from Rear Adm. Charles A. Blakely, commander scouting force aircraft, who radioed from his flagship, the U. S. S. Wright, 1100 miles west of Pt. Loma, 17 2-motored patrol bombers of patrol squadron 4 took off at 1:40 yesterday afternoon for Honolulu. The squadron was commanded by Lt. Comdr. A. P. Storrs III, member of the navy's famed Sea Hawk aerial acrobatic team.

Adm. Blakely's instructions, which sent the planes into the air a day ahead of the original schedule, were based on meteorological reports which forecast virtually perfect flying conditions along the 2261-mile airway between Pt. Loma and Makapuu Pt., 15 miles from Pearl Harbor.

In addition to the Wright, four destroyers are acting as plane guards. The Simpson is stationed 300 miles from Pt. Loma; the Craven, 731 miles; the Wright, 1105 miles; Sicard, 1483 miles, and the Litchfield, 1863 miles.

18-HOUR FLIGHT SEEN

At 11 p.m. Monday, radio reports from the plane guards clearly indicated that the flight, if started yesterday, would bring the squad-

New Type Of Navy Teamwork Illustrated In Mass Flights Of San Diego Bombers

S.D.SUN SEPT. 5, 1938

Once the Navy's outstanding stunt flier, Lieut. Aaron P. Storrs III, pictured above seated, today is busy with plans for a straight, "on-the-level" flight of 17 patrol bombers he will lead to Hawaii next Wednesday. He is shown conferring with his flight officer and executive officer Lieuts, H. P. Cooper and M. T. Evans, left to right.

Leader of Honolulu Hop Once Thrilled Crowds With Aerobatics

By HAROLD KEEN

Ten years ago this month, Lieut. Aaron P. Storrs III and two flying mates thrilled Americans with the acrobatic feats of the Navy's first stunt trio.

Next Wednesday, piloting his plane quite evenly, exhibiting none of the characteristics that won him international fame a decade ago, Lieut. Storrs will lead a squadron of 17 long-range bombers non-stop across the Pacific on a 2570-mile flight from San Diego to Pearl Harbor.

It will be another milestone in a colorful career, and graphically represents the contrast between Navy flying of 1928 and 1938.

Three "Sea Hawks"

Ten years ago, Navy aviation was acclaimed for the difficult precision stunt flying of the daring "Sea Hawks." Today, it no longer encourages the inverted flying and formation acrobatics which electrified the spectators at the 1928 National Air Races; instead, its giant airboats span the Pacific to Hawaii and vault into the tropics at the Canal Zone in groups of 12, 14, 17 and 18 at a time with business-like efficiency. The achievement of Lieut. Storrs and his fellow aviators this week wil exhibit the Navy's new kind of teamwork.

No Navy air unit has ever approached the famed "Sea Hawks" for glamor and thrill. The three fliers consisted of Lieut. Storrs, Lieut. W. V. Davis, and Lieut. D. W. "Tommy" Tomlinson.

Just Like Puppets

They were members of the same section of Squadron VB-2, attached to the aircraft carrier Saratoga. During military maneuvers near San Diego in their speedy little Boeing F2-B's, the three lieutenants suddenly realized that their flying abilities were attuned to each other, that they could put their planes through the most intricate tactics as though they were tied together by a puppeteer's string.

That gave Lieut. Tomlinson, since resigned from the service, and now one of TWA's vice presidents, the idea of the stunt team, Lieut. Storrs recalled yesterday.

They gained their reputation in the 1928 air races. During that year—1928—thousands of persons throughout the country watched the amazing "Sea Hawks" in dedications of air ports, aviation meets, etc.

Then Transferred

This remarkable team ended its comparatively short existence when the inevitable Navy orders transferring each man to other duty were issued. Today, Lieut. Davis, who also is renowned for his job of flying the winning plane with Art Goebbels in the Dole transpacific race, is a member of Squadron VO-3 on the battleship Idaho.

Lieut. Storrs will be the first officer with a rating lower than lieutenant-commander to lead a mass flight of Navy PBY bombers to distant bases. He was named commanding officer of Patrol Squadron Four last January, was relieved in July by Lieut. Comdr. Robert Fuller, and then resumed command about two weeks later when the latter fell ill. In the Hawaii flight, he will be responsible for 17 bombers, each worth $200,000, and the lives of 36 officers and 83 enlisted men, who are listed below in the planes they will occupy:

How They'll Fly

4-P-1

Lt. A. P. Storrs, Lt. A. R. Truslow Jr, Boas, W. H., ACMM (NAP), Tyler, H. M., ACMM, Rice, E., AOM1c, Spagnola, R., CRM., Buckley, O. B., RM1c.

4-P-2

NAVY SET FOR MASS FLIGHT

14 Patrol Bombers To Hop To Zone Wednesday

S.D.SUN AUG. 29

Ninety-eight officers and men of Patrol Squadron 5 today completed preparations for the 3100-mile mass flight of 14 bombers from San Diego to the Canal Zone, scheduled Wednesday, weather permitting.

The planes will take off from the harbor at 10 a. m. and will fly down the west coast of Mexico and Central America, crossing Nicaragua jungle country to the Caribbean sea and on to Coco Solo.

4 Ships on Route

Four warships will stand "guard" along the flight route, furnishing advance weather information and rushing to the planes' assistance of necessary.

The flight will be the sixth of its kind since January, 1937, when 12 Consolidated PBY planes were "ferried" to Pearl Harbor.

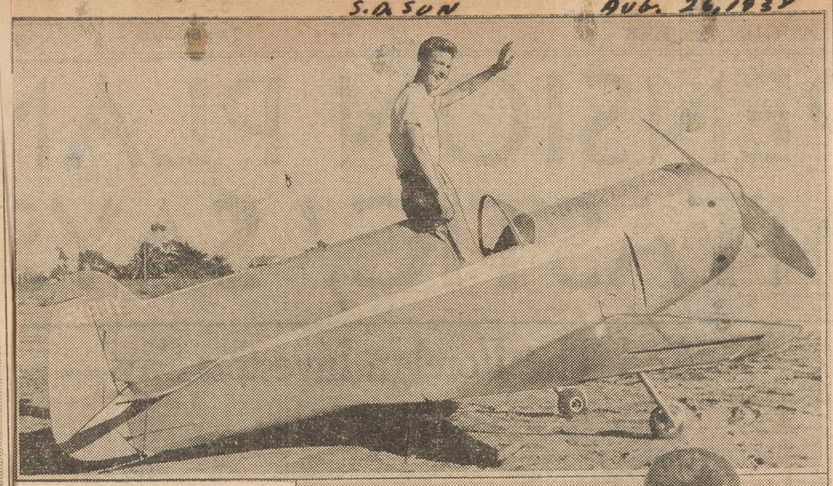
25-Hour Hop

Although estimated time of the flight is 25 hours, officers today felt they could equal Patrol Squadron 2's record-breaking time of 22 hours, 20 minutes, set last Dec. 8-9.

Leader of the squadron will be Lieut.-Comdr. W. K. Berner, whose executive officer is Lieut Harold B. Miller.

Tiny Wings To Bear S. D. Invitation

S.D.SUN AUG. 26, 1938



On the wings of the "flying beetle" pictured above with its pilot, Walter McClain, will go San Diego's invitation to the world's premier aviators to participate in an air show to feature San Diego's quadricentennial celebration in 1942. En route to the National Air Races with the plane today are Mr. McClain and L. M. McCannon, one of its builders, shown right to left below.

S. D. 'Flying Ambassador' Off To Cleveland Races

San Diego's "flying ambassador," a locally-built vest-pocket airplane that will seek speed laurels in the National Air Races Sept. 3 to 5, left today for qualifying tests in Cleveland.

Securely lashed to a trailer, the tiny craft, which is only 12½ feet long and three feet 10 inches high, bore the title "San Diego Flagship, Aviation Capital of America" in neat blue and gold letters. The name "Flagg" was given the ship in honor of its designer, C. C. Flagg, of San Diego.

Escorting the plane east are L. M. McCannon and Lionel Machado, two of the men who helped build it, and Walter McClain, San Diego Flying Club instructor and veteran flier who will pilot the craft in the National Air Races.

With the plane goes an invitation to the greatest aviators of the world, gathered in Cleveland, to participate in an elaborate air show and water carnival scheduled for 1942—the 400th anniversary of Cabrillo's landing at Point Loma.

The trip's costs, $300, is being borne by the City Council. The plane is sponsored by the Junior Chamber of Commerce.

Mr. McClain said yesterday that the ship will seek to set new world's records in the 100 kilometer and 500 kilometer races for planes of this class.

S.D. Tribune 8/29/38

98 S. D. Fliers Leaving Wednesday On Non-Stop Dash to Coco Solo

Bound for Coco Solo, C. Z., 98 officers and men will take off from San Diego Wednesday in 14 navy bombers of patrol plane squadron 5, according to announcement today by aircraft scouting force authorities. The planes, expected to leave the waters of San Diego bay during the morning hours, will be in the air an estimated 25 hours on the 3051-mile flight.

Lt. Comdr. W. K. Berner will command the flight, which is described as a "routine delivery of new equipment to the fleet air base, Coco Solo," where the planes will be stationed as part of Patrol Wing 3. The flight will be made by planes of the PBY-3 type, manufactured by the Consolidated Aircraft Corp. plant here.

Undertaking a non-stop flight, the bombers will follow in general the regular steamer routes on a direct course to Coco Solo.

Four navy ships will be located along the route of the flight to furnish weather information and act as guard ships. The new destroyer Selfridge will be located off Cape Falso, Lower California; the light cruiser Raleigh off Acapulco, Mex.; the seaplane tender Thrush at the Gulf of Fonseca, and the seaplane tender Gannet at Chiriqui lagoon, Republic of Panama.

The list of the planes' crews assigned for the flight is as follows:

5-P-1—Lt. Comdr. W. K. Berner; Av. Cadet W. G. Von Bracht, L. L. Hughes (N.A.P.), ACMM; R. T. Bruton, ACMM; W. M. Allen, AMM3c; J. C. Lawrence, CRM; A. H. Borresen, RM2C.

5-P-2—Lt. F. Funke jr.; Av. Cadet Mehrman, W. R. Van Liere (N.A.P.), AMM3c; C. Sjurson, AMM2c; G. E. Bullis, RM3c; C. W. Pittan, RM3c.

5-P-3—Lt. S. P. Weller; J. E. Hurley (N.A.P.), AMM1c; W. R. Shaver (N.A.P.), AMM2c; H. G. Dunn, AMM1c; V. J. Harigel, AMM3c; J. Wilhelm, RM2c; G. G. Alexander, RM3c.

5-P-4—Lt. R. R. Johnson, Av. Cadet P. C. Griggs, E. J. Kolazyk (N.A.P.), AMM1c; C. L. Clarke, ACMM; R. C. Mauldin, AMM3c; G. C. Gardner, RM1c; D. Vander Veen, RM3c.

5-P-5—Lt. B. V. Clark; Av. Cadet H. R. Swenson, J. A. O. Turcotte (N.A.P.), AMM2c; A. G. Straley, AMM1c; O. F. Keith, AMM2c; J. W. C. Edmonds, RM2c; J. A. Ceresna, AOM1c.

5-P-6—Lt. (jg) J. G. Craig; Av. Cadet W. R. Turner, R. L. Cousineau (N.A.P.), ACM1c; W. L. Porter, AMM1c; R. R. Abbott, AMM2c; H. C. Boutte, RM3c; T. A. Said (N.A.P.), RM2c.

5-P-7—Lt. H. B. Miller; Av. Cadet A. V. Parunak, W. O. Needham (N.A.P.), AMM1c; H. R. Davenport, ACMM; C. A. Johnston, AMM3c; S. Girard, CRM; J. A. Barnes, RM3c.

5-P-8—Lt. A. W. McKechnie; Av. Cadet N. C. Porter; E. F. Dyer (N.A.P.), AMM2c; J. L. Joyce, AMM1c; T. T. Smith, AMM2c; T. W. Wheeler, RM2c; G. H. Bloodworth, RM3c.

5-P-9—Lt. (jg) M. G. O'Conner; Av. Cadet W. F. Dawson, J. W. Irby (N.A.P.), AMM2c; R. E. Shackelford jr., AMM1c; N. E. Perkins, AMM2c; H. C. Stempfel, RM2c; A. L. Garris, RM3c.

5-P-10—Lt. W. C. Asserson jr.; Av. Cadet R. G. Touart, L. B. Williamson (N.A.P.), AMM3c; T. J. Murray, ACmm; O. K. Thomas, ACMM; F. E. Sileo, RM3c; R. A. Kulig, RM3c.

5-P-11—Lt. J. S. Thach; Av. Cadet J. C. Skoroz, E. L. Collins (N.A.P.), AMM2c; W. Russell, AMM1c; G. W. Blair, AMM3c; C. W. Kreiger, RM2c; D. H. L. Rohde, RM3c.

5-P-12—Av. Cadet J. P. Sager; R. L. Nichols (N.A.P.), AMM1c; P. A. Porter (N.A.P.), AM2c; P. D. Dovell, AMM1c; J. F. Wake, AMM3c; H. G. Allison, RM2c; O. R. Smith, AOM1c.

5-P-14—Av. Cadet W. L. Meili; Av. Cadet O. A. Finley, L. R. Ware (N.A.P.), ACMM; C. Wright jr., AMM2c; W. J. Diestel, ACMM; C. B. Diehl, ACM; R. M. Nichols, RM2c.

5-P-15—Av. Cadet Eastman; A- Cadet R. D. Hutchins, R. C. Wi (N.A.P.), AMM1c; J. A. F AMM3c; V. B. Rigdon, ACM Wotring, AMM1c; A. F RM3c.

Leaders Of Navy Flight

S.D. SUN AUG. 30, 1938

Leaders of the non-stop 3100-mile mass flight of 14 bombers from San Diego to the Canal Zone tomorrow will be Lieut. Comdr. W. K. Berner, commanding officer of Patrol Squadron Five, at left, and Lieut. Harold B. Miller, executive officer.

☼ ☼ ☼

Navy Doctors Test Fliers' 'Night Eyes'

Experiments Launched After Recent Patrol Bomber Crashes In Bay; Canal Hop Pilots Examined

Navy doctors at North Island are experimenting with methods of testing ability of aviators to discern objects in darkness, it was learned today.

Great significance is attached to the tests, especially as a result of the fatal crashes of two patrol bombers in San Diego harbor Aug. 15, when the pilots apparently misjudged proximity of the water in night practice landings. It has been pointed out that, without float lights to mark off a landing area in the bay, night landings are very hazardous in the PBY airboats.

Squadron Five 'Tested'

The experimental tests have been made on flight personnel of Patrol Squadron 5—98 officers and enlisted men who will take off in 14 patrol bombers tomorrow morning on a non-stop hop to the Canal Zone.

With the successful completion of this latest Navy adventure in the air, 82 long-range Consolidated airboats will have been delivered to the Pearl Harbor and Coco Solo bases since January, 1937. Three "ferry flights" will have been made to each station from San Diego.

Tomorrow's dash down the west coast of Mexico and Central America, and across Nicaragua to the Canal Zone will be similar in several respects to the last non-stop flight of Navy planes to Coco Solo.

Route Pioneered

On Dec. 8-9, 1937 14 bombers of Squadron VP-2 flew the exact route to be followed by Squadron VP-5 in 22 hours, 20 minutes, more than five hours better than the first San Diego-to-Coco Solo flight of 12 planes last year.

The navigator on that flight, Lieut. B. V. Clark, also will chart the route for tomorrow's trip. He has been especially careful the last few weeks about where he steps. Only a short time before Patrol Squadron 2 took off last December, Lieut. Clark tripped over a railroad track at the Air Station, broke his leg and almost didn't go along with his flying mates.

Five "Veterans" On Hop

In addition to Lieut. Clark, there will be five more veterans of that VP-2 flight. They include Lieut. W. C. Asserson Jr., structures officer of Squadron VP-5, and Aviation Cadets Eastman, Hutchins, Meili and Finley. The latter quartet will pilot the two spare planes which have been assigned to Squadron 2.

For 215 miles—from Corinto on the west coast of Nicaragua to San Juan Del Norte on the east coast—the fliers will traverse jungle country and the inland Lake Nicaragua, following the proposed line of the Nicaraguan Canal which San Diego's Rep. Ed V. Izac has championed in Congress.

Four warships will serve as "plane guards." The Raleigh, homeward bound after more than two years absence in the Mediterranean and on the east coast, will be off Acapulco, Mexico, the local 1850-ton destroyer Selfridge will be stationed at Cape Falso, Lower California, and the aircraft tenders Thrush and Gannet will be at the Gulf of Fonseca and Chiriqui Lagoon, Panama, respectively.

100 S. D. Navy Fliers Ready For Mass Flight To Pearl Harbor

S.D. SUN AUG. 31, 1938

16-Plane Hop Scheduled For Next Week; Lieut. Storrs To Command Squadron

With the 14 planes of Patrol Squadron Five off on their non-stop flight to Coco Solo, Canal Zone, today, more than 100 officers and men of Patrol Squadron Four entered the final week of training for their 16-plane hop to Pearl Harbor.

Squadron VP-4's tentative takeoff date is set for exactly one week from today, although unfavorable weather may cause a change in the present schedule.

Acting Commander

Leader of the Hawaii air jaunt will be Lieut. Aaron P. Storrs, 3rd, Navy ace who is acting commander of the squadron while Lieut.-Comdr. Robert L. Fuller is undergoing observation at San Diego Naval Hospital.

Lieut.-Comdr. Fuller originally was to have led the flight, but became ill recently, and is receiving metabolism tests at the hospital, it was reported today. He was commander of the San Diego-based Patrol Squadron Seven when it was awarded the Herbert Schiff Memorial Trophy last November for the best safety record of any air unit in the Navy.

When Patrol Squadron Four lands at Pearl Harbor, 98 Consolidated PBY bombers will have been delivered in seven non-stop flights to Hawaii and the Canal Zone within the past 20 months. The potential record would have been an even 100, had not two airboats of Patrol Squadron Five crashed in the harbor Aug. 15 while making night practice landings. Twelve long-range seaplanes have been "ferried" to the Sand Point Naval Air Station at Seattle, Wash.

Almost all of the 209 bombers ordered by the Navy from Consolidated Aircraft Corp. in four separate contracts have been delivered, with the firm now turning out the PBY-4 type, of which 33 were ordered.

Meanwhile, a Navy Trial Board from Washington, D. C. is conducting exhaustive tests on Consolidated's experimental four-motored plane. It is understood that a two to three-million dollar production contract on these air leviathans is awaiting either Consolidated or Sikorsky Aircraft Corp., both of whom spent more than two years engineering the Navy's largest airboats.

The mass flights today and next week will, if operating conditions are favorable, attempt to better the present Navy records to the Canal Zone and Hawaii.

Standout Performance

Last December, 14 planes of Patrol Squadron Two negotiated the 3100 miles from San Diego to Coco Solo in 22 hours, 20 minutes, and last January, the Navy's most spectacular aviation achievement took place, with the successful delivery of 18 bombers to Hawaii in 20 hours, 30 minutes.

Rear Adm. Charles A. Blakely, Aircraft Scouting Force commander, has conservatively estimated that 25 hours will be required for today's flight, but squadron leaders believe they can make it in 21 or 22 hours.

With a fair "break" in tail winds on the Pearl Harbor trip, Patrol Squadron Four might easily shatter the present record, coming close to Richard Archbold's time of slightly more than 18 hours two months ago in his "Guba," a commercial adaptation of the PBY type.

STORM IN PATH OF NAVY FLIERS

14 Bombers Take Off For Canal Zone

S.D. SUN AUG. 31, 1938

BULLETIN

Averaging 120 miles per hour, 14 Navy bombers en route from San Diego to the Canal Zone were 180 miles south of here at 11 a. m. today.

With a tropical storm confronting them off the Central American coast along their flight route, 14 PBY patrol bombers of Squadron VP-5 took off from San Diego harbor soon after 9 a. m. today for the Canal Zone.

The planes will fly 3100 miles non-stop to the Fleet Air Base at Coco Solo. The flight crews of 98 officers and men are commanded by Lieut. Comdr. Warner K. Berner.

A last-minute conference was held this morning aboard the Aircraft Scouting Force flagship USS Wright between Lieut. Comdr. Berner and Rear Adm. Charles A. Blakely to determine if any chnges in flight plans are necessary as a result of the tropical disturbance.

The airboats will fly in formation down the Mexican and Central American coasts at about a

Turn to Page 2, Col. 8.

(Continued from Page 1)

10,000-foot altitude. They will be "protected" by four warships stationed at intervals along the flight route—the Selfridge, at Cape Falso, Baja California; the Raleigh, at Acapulco, Mexico; the Thrush, at Gulf of Fonseca, and the Gannet, at Chiriqui Lagoon.

Hurricane's Tail-End

Rear Adm. Blakely declared, just before the takeoff, that the disturbance appeared to be the "tail-end" of a hurricane which swept across the Caribbean Sea several days ago. Weather conditions along the route were described as "average," with the usual squalls to be expected as the squadron nears the Canal Zone.

Today's takeoff was the speediest and smoothest of all six delivery flights to Pearl Harbor and Coco Solo in the past 20 months. Slightly more than one-half hour after Lieut. Comdr. Berner's plane was launched, all were in the air and proceeding to a 10,000 rendezvous above the Baja California coast.

Little Wind

The bay was glassy and there was little wind to help lift the 13-ton airboats from the water.

If the squadron's performance is similar to that of the 14-plane unit which flew from San Diego to the Canal Zone last December, the airboats should complete their flight at about 7:30 a. m. (P. S. T.), tomorrow, after a 22-hour jaunt.

14 S. D. Planes 1880 Miles South on Panama Hop; Voyage 'Uneventful' But Storm Area Near

S.D. UNION SEPTEMBER 1, 1938

Local Craft Get Into Air Quickly; To Defend Canal

At 11 last night, 13½ hours after they took off from here, 14 naval seaplanes bound for Panama were 1880 land miles from San Diego, North Island naval officials reported. Radio bulletins from the flight commander said the flight was "uneventful." Best mileage recorded was 150 miles in an hour. The planes were aided by a light tail wind and were reported entering a storm area.

Exhibiting the masterly airmanship that has become traditional with the navy's big airboat flying operations, 14 pilots of Patrol Squadron 5 took off from the bay starting at 9:10 a.m. yesterday and an hour later, in open squadron formation, were winging their way to Coco Solo at the eastern entrance of the Panama canal.

The huge airboats, weighing a total of more than 180 tons, were aloft in exactly 21 minutes from the time the flagplane, piloted by Lt. Comdr. W. K. Berner, was launched from the Naval Air station ramp. The average run of each plane on the take-off before they lifted clear of the water was less than 300 yards. As daylight showed between the glistening hull and the bay the pilots pulled in the wing tip floats, thereby adding at least 15 knots speed to the airboats.

AVERAGE WEATHER

Reports received by Rear Adm. Charles A. Blakely, aircraft scouting force commander, from the four plane guard ships scattered along the 3000-mile course, indicated the squadron would encounter average weather conditions over a flight of such length. Both head and tail winds will be met with but no rains.

The most difficult leg of the flight over the international airway was scheduled to be flown between 2 and 3 o'clock this morning, when the airboats will traverse the 215 miles of jungle country extending from the Gulf of Fonseca to Juan del Norte on the east coast of Nicaragua. Here the route followed a section of the proposed Nicaraguan canal.

The plane guard ships and their respective stations along the flight track are: Destroyer Selfridge, Cape Falso, Lower California; cruiser Raleigh, Acapulco; aircraft tender Thrush, Gulf of Fonseca; aircraft tender Gannet, Chiriqui lagoon in the Caribbean.

Arriving at Coco Colo in time for a late breakfast this morning, Patrol Squadron 5 will become a unit of Patrol Wing 3, commanded by Capt. Frederick C. Sherman. A total of 46 long-range patrol bombers are based in the Canal Zone.

Next Wednesday at almost the same hour, 16 airboats of Patrol Squadron 4, commanded by Lt. Comdr. A. P. Storrs III, will leave San Diego for a nonstop flight to Pearl Harbor.

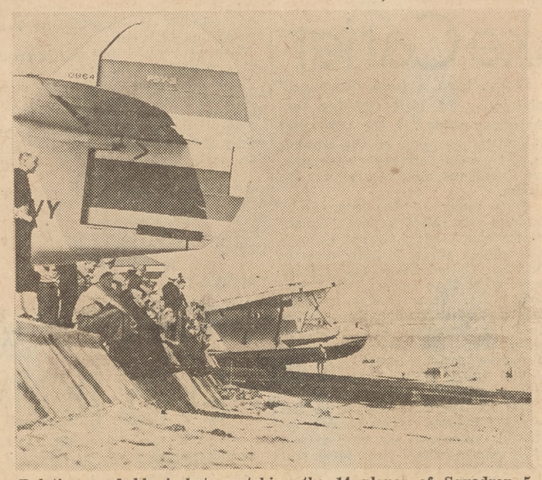
WRIGHT TO SAIL

Four destroyers and the aircraft tender Wright, flagship of Adm. Blakely, will act as plane guards on this flight to the crossroads of the Pacific. The Wright will sail at 2 p.m. tomorrow. While at Pearl Harbor Adm. Blakely will inspect the six squadrons of patrol bombers based at the Hawaiian naval base and is scheduled to make a number of flights with the planes before he returns here on the Wright, Oct. 1.

The third and last mass flight of navy patrol bombers this year will take place early in December when 16 Consolidated-built planes of Squadron 1, commanded by Lt. Comdr. Sam L. La Hache, will leave San Diego for Pearl Harbor.

This will bring the total number of airboats ferried to Panama and Hawaii in the last two years to 130.

Patrol Plane 10 of Squadron 5, folding in its pontoon wings as it takes off for the 3000-mile sustained flight to Panama. Like its sister airboats, 5-P-10 took less than 300 yards for the take-off.



Relatives and bluejackets watching the 14 planes of Squadron 5 being launched yesterday for the flight to Panama.

NAVY BOMBERS PLAN FLIGHTS IN SOUTH SEAS

New Destroyers To Have 'Shakedown' Tests In Same Waters

S.D. SUN SEPT. 14, 1938

Extensive maneuvers by the Navy's new long-range patrol bombers in the South Pacific will be conducted this week out of Pearl Harbor under direction of Rear Adm. Charles Blakely, the United Press reported from Honolulu.

Seventeen of these Consolidated PBY planes were delivered to Hawaii last week in a non-stop flight. Rear Adm. Blakely arrived in Pearl Harbor from San Diego Sunday aboard his flagship, the USS Wright, which served as a guard ship along the flight route.

The planes may visit Johnston Island, French Frigate Shoals and other South Pacific points in the Navy's general program of familiarizing its pilots with the area surrounding Hawaii in case the need ever arose to ferret out an enemy approaching the strategic islands.

Cruise for New Ships

Lending further significance to the exercises will be the "shakedown cruises" of two newly commissioned destroyers, the McCall and the Maury, both of which will be stationed in San Diego. The McCall today was enroute south from Honolulu on a journey expected to take it as far as Tahiti, while the Maury is reported due in Hawaii within a fortnight, and possibly will include Auckland, New Zealand, and Adelaide, Australia, in its itinerary.

The plane exercises and the cruises of the two destroyers will serve to consolidate naval and aerial defense lines in the Pacific, Honolulu observers pointed out. In co-operation with the French and British, such a line would stretch from Singapore across the east South Pacific, through French Tahiti to the Panama Canal, with Honolulu and Alaska forming a right angle axis flanking the North American continent.

Australia Prepares

In this connection was recalled the visit of the Australian cruiser Achilles to Honolulu last year, and the return visit of the American cruisers Milwaukee, Louisville, Memphis, and Trenton to Australia thereafter, which emphasized the friendly relations between the British and U. S. navies.

Australia at present is rushing defense measures with 11,531,000 pounds appropriated in the 1937-38 fiscal year and planned expenditures for defense purposes of 24,850,000 pounds in the next three years. Australia also is reported planning to increase its airforce by at least 198 first-line planes.

NIGHT LIGHTING USED OFTEN FOR LANDINGS BY ARCHBOLD

TRIBUNE 9-13-38

Recent night-lighting exercises carried on by navy planes off Pt. Loma, when brilliant parachute flares were dropped, have a counterpart in night landings being made by Richard Archbold, heading a scientific expedition in New Guinea after a transpacific flight from San Diego in a Consolidated Aircraft Corp. PBY plane, the Guba. Ken Jackman, in an article entitled "Man-Made Sunshine" appearing in the current issue of Consolidator, monthly publication of the aircraft firm, describes Archbold's use of night lights and writes of other features of lighting, in part, as follows:

"Seldom do we realize how helpless we would be without some form of man-made sunshine. Not only can we dispel darkness by artificial illumination, but we can also, by photographic means, see objects outside the limits of human vision. But to realize how dependent man is on his man-made sunshine (of the simple form that dispels darkness) imagine how curtailed would be Capt. Richard Archbold in Dutch New Guinea without artificial illumination.

"With the tardy arrival of the steamer bringing mail from home, Archbold knew that the Guba would have to make its first night landing on Lake Habbema. The take-off from Hollandia on the sea coast is uneventful. In a short while complete darkness settles as the plane soars up and on. Then in a few minutes the welcoming glow of the cooking fires of the base camp is discernible, where the base camp will greet the approaching plane on this lake at the 11,500 foot altitude.

"Yes, there are the groups of campfires on the lake's edge. How different and uninviting is the water at night! All landmarks, except for those pinpoints of light are lost in the gloom below the plane. Rogers at the controls, knows that the landing will have to be made by keeping those camp fires 15 points off the port bow. Just to be doubly sure a circuit of the landing area is made. The altimeters, reading zero at Hollandia indicate 12,200 feet . . approximately 700 feet above the lake's surface. Someone at camp has heard the motors and is gyrating a flashlight. Almost directly above the fire Rogers pulls a handle. Suddenly the jungle and surrounding area is bathed in the brilliant glow of a swaying parachute flare. This 300,000 candlepower will last for only three minutes, so he quickly swings the PBY around, settling and keeping the campfires off the port bow, switches on his landing lights and bow searchlight and makes his landing. The night flight is completed without incident.

"Note that even the modern explorer-pilot in an outpost of civilization, is dependent on powerful flares, searchlights, luminous panel instruments, camp fires and landing lights . . . all man-made sunshine."

TRIBUNE SEPT. 14, 1938

Firm Buyer Of S. D. Plane For Surveys

A non-military adaptation of Consolidated Aircraft Corp.'s famed PBY navy patrol bombing plane has been purchased by American Export Airlines, Inc., the airlines' president, W. H. Coverdale, announces.

The plane will be used in making long-range survey flights across the Atlantic preparatory to inauguration of regular passenger and freight service to Europe.

Brought to light by the news was establishment of American Export, for 20 years operators of American flag steamships to Mediterranean and Black sea ports, as a direct rival of Pan-American Airways for the transatlantic trade.

Pan-American, believed to have been assured of a huge United States mail subsidy, has been pointing toward the inauguratoin of the transocean run for some time. The line already has established, without opposition, transpacific and inter-America service.

Important Role Seen

Choice of the Consolidated plane by American Export may indicate that the San Diego-built ships may play an important part in development of ocean air travel.

The plane, which will be used in charting routes to principal European countries, North Africa and Asia Minor, will weigh 15 tons and will cost $200,000. It will carry crew of six and will be fitted for survey flights. At cruising speed, the ship will have a range of 4000 miles with a payload of 2000 pounds and the crew.

Specifications for larger, faster and more luxurious aircraft for nonstop transatlantic passenger, mail and express service now are in the hands of American Export, Consolidated officials announced.

The line plans to coordinate closely the long-established steamship services with the proposed airlines. Ships along the routes to be flown will serve as weather observatories and mobile bases. Officers of the line's ships have been undergoing training for this service in the last year, it was revealed.

17-17-17 Spells New Consair Hop Record

To set a new mass flight record to Honolulu last week, 17 Consolidated patrol planes of the Navy took 17 hours and 17 minutes. The record bests the Navy's previous mark of 20½ hours, and also improves upon Richard Archbold's 18-hour-7-minute record in the Guba, another Consolidated plane, last June. S.D.Cl Tribune 9/14/38

Collier Trophy Awarded Army

S.D. UNION SEPT. 16 1938

WASHINGTON, Sept. 15 (A.P.)—The National Aeronautics association today awarded the Collier trophy to the army air corps for having "designed, constructed and completely equipped the XC-35 substratosphere plane, the first pressure cabin airplane to be flown successfully anywhere in the world."

The Collier trophy, the association said, is aviation's highest honor. Army officers cited as the principals in the research and development work on the plane were: Maj. Carl F. Greene and Capt. Albert H. Johnon, stationed at Wright field, Dayton, and Dr. John E. Younger, formerly aeronautical mechanical engineer at Wright field, and now professor of engineering at the University of Maryland.

Lt. Col. Oliver P. Echols, Wright field, was cited as administrative director of the research.

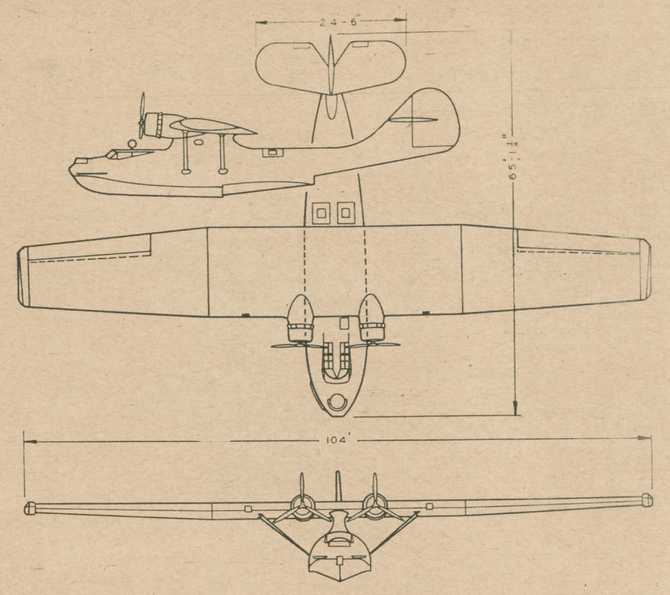
DOETINCHEM.

verdeeld in een aantal waterdichte compartimenten. Geheel voor in den neus is een ruim voor het bergen van tuig. De stuurhut heeft een eigen ingang, terwijl in den staart een luik is aangebracht voor toegang tot de cabine.

De hulpdrijvers worden door een schroef zonder einde, welke electrisch wordt gedreven, opgetrokken. De vorm dezer drijvers is zoo gekozen, dat zij in opgetrokken stand gelijk liggen met den onderkant van den vleugel. Zij worden in dezen stand automatisch vastgezet, terwijl een rood lichtje den piloot waarschuwt. Deze intrekbare hulpdrijvers vormen een patent van Consolidated. Waar zij zich aan de vleugelpunten bevinden, kunnen zij vrij klein worden gehouden, hetgeen een gewichtsbesparing beteekent. In opgetrokken stand bieden zij slechts weinig weerstand, terwijl bij het manoeuvreeren in smalle kanalen, zij eventueel gedeeltelijk kunnen worden opgehaald bij het passeeren van obstakels. Ook kunnen booten nu gemakkelijker langszij komen.



Maatschets van de Consolidated P B Y-1.

De motoren zijn in het vleugel-middenpaneel gemonteerd op bokken van gelaschte molybdenum stalen buizen. De motorkappen en de beplating der gondels zijn gemakkelijk afneembaar voor inspectie en reparaties. Voor de besturing beschikt men over een enkele kolom met twee wielen voor de bediening voor het hoogteroer en de ailerons. Het richtingsroer wordt bediend door voetpedalen, welke niet verstelbaar zijn. Daarentegen zijn de zitplaatsen wèl verstelbaar. Kabels loopen naar het hoogte- en het richtingsroer; kabels en stangen naar de ailerons. Deze laatsten zijn zoo gearrangeerd, dat iedere aileron onafhankelijk van den anderen bestuurd wordt, zoodat, mocht één aileronbesturing defect geraken, de andere te gebruiken blijft.

De electrische installatie omvat twee batterijen met twee, door de motoren aangedreven dynamo's. Het instrumentarium is zeer compleet en bestaat uit:

Voor de piloten: Twee snelheidsmeters, twee hoogtemeters, een klok, twee kompassen, twee bochtaanwijzers met dwarshellingmeters, twee toerentellers, twee inlaatdrukmeters en twee stijgsnelheidsmeters

Voor den navigator: Een snelheidsmeter, een klok en een hoogtemeter.

Voor den boord-werktuigkundige: Een thermo-koppel voor het meten der cylinderkop-temperaturen, een dwarshellingmeter, twee gecombineerde meters voor het aflezen van den olie-temperatuur, van den oliedruk en den benzinedruk, een stel benzinemeters, twee carburator-lucht-thermometers, twee benzine-doorstroommeters en een uitlaat-analysator.

Consolidated „Commodore" vliegboot.

Duitsche sterktevoorschriften voor zweefvliegtuigen

door H. BUS, Beemster.

DAAR er in ons land nog geen sterktevoorschriften voor zweefvliegtuigen bestaan, is het misschien wel gewenscht de Duitsche voorschriften eens onder de aandacht van de Nederlandsche zweefvliegers te brengen. De Duitsche voorschriften zijn tamelijk eenvoudig; dit is een voordeel, daar ze natuurlijk veel door amateurs gebruikt worden.

In Duitschland verdeelt men de motorlooze vliegtuigen in drie categorieën, n.l.:

Cat. 1. Glijvliegtuigen.

Onder glijvliegtuigen worden verstaan alle motorlooze vliegtuigen, waarvan de spanwijdte kleiner is dan 11 m en de vleugelslankheid (b^2/F) kleiner is dan 9.

Hiertoe behooren dus de verschillende lestoestellen, als Zögling, E. S. G., enz.

b = de spanwijdte van den vleugel.
F = het vleugeloppervlak van het toestel.

Cat. 2. Zweefvliegtuigen.

Tot deze groep worden gerekend alle motorlooze vliegtuigen, die boven de voor categorie 1 geldende grenzen liggen.

Hiertoe behooren alle prestatie-typen.

Cat. 3. Motorlooze experimenteele vliegtuigen.

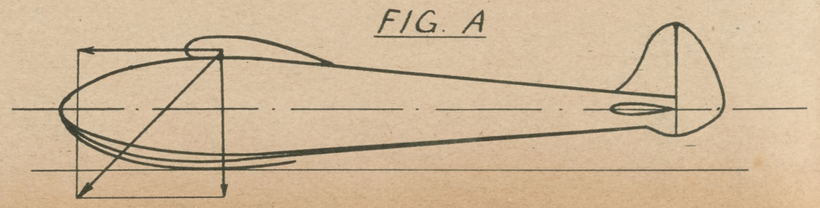
De voorschriften voor deze groep zijn voor ons van weinig belang.

Aan de tot Cat. 1 behoorende vliegtuigen worden, wat betreft de sterkte in de vlucht, minder hooge eischen gesteld dan aan Cat. 2. Daarentegen moeten zij bij de landing grootere krachten kunnen opnemen, daar bij deze toestellen, die hoofdzakelijk voor lessen gebruikt worden, harde landingen eerder verwacht kunnen worden.

I. Berekening van den vleugel.

Voor de berekening van motorlooze vliegtuigen worden verschillende belastinggevallen aangenomen. Die voor de vleugelberekening zijn aangegeven in onderstaande tabel. Er wordt onderscheid gemaakt tusschen een vijftal gevallen: afvangen (plotselinge vergrooting van den invalshoek na een duikvlucht); steile glijvlucht gecombi-

FIG. A

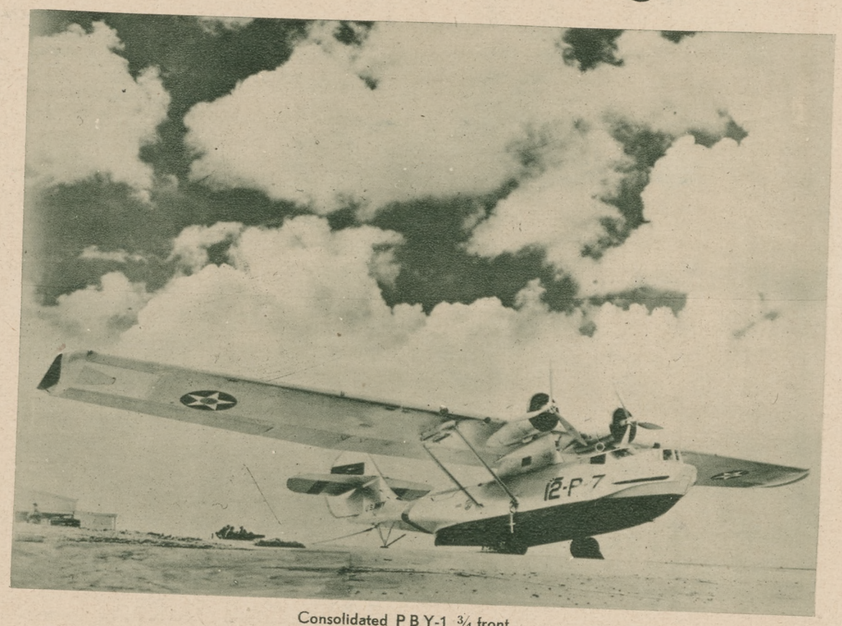


De Consolidated PBY-1 marine-vliegboot.

De Consolidated XPBY—I, het prototype der huidige serie, werd gebouwd naar aanleiding van een specificatie der Amerikaansche Marine voor patrouille-vliegbooten en bommenwerpers. De machine werd laat in het voorjaar van 1935 voorgevlogen en de daarop volgende proefvluchten bewezen dermate definitief de goede kwaliteiten van deze boot, dat de Consolidated Aircraft Corporation een order kreeg voor 60 stuks.

Kort daarna verhuisde de fabriek van Buffalo (N.Y.) naar San Diego in Californië, waar een moderne fabriek was gebouwd op het Lindbergh vliegveld aan de San Diego Baai. Niet alleen beschikt men hier over betere faciliteiten dan in de oude fabriek, de nabijheid van het detachement van den Marine Luchtvaartdienst op North Island maakt, dat men uit de eerste hand alle inlichtingen krijgt inzake de verschillende problemen, welke zich voordoen bij het dagelijksch omgaan met groote vliegbooten.

De XPBY—I, welke door de Marine was overgenomen, werd per gewone dienstvlucht van Norfolk (Virginia) naar San Diego gevlogen via het Panama Kanaal. En passant werd een wereldrecord gevestigd door de vlucht van Coco Solo, Panama Kanaal zone, naar Alameda, San Francisco Baai, een afstand van 5541 km, welke de goede kwali-



Consolidated P B Y-1 ¾ front.

Consolidated P B Y-1 ¾ voor-aanzicht met neergelaten hulpdrijvers, welke in de vlucht de vleugelpunten vormen.

teiten van het type bevestigde. Een tweede en een derde bestelling volgden, waardoor het totaal werd gebracht op niet minder dan 176 PBY—I vliegbooten plus onderdeelen ter waarde van 35 machines, waarmede een totaal bedrag van ruim 19 millioen dollar was gemoeid.

Intusschen is Consolidated geen nieuweling op het gebied van vliegbooten. Reeds in 1928 bouwde men voor de Amerikaansche Marine de XPY—I, de eerste geheel metalen vliegboot. Een commercieele versie hiervan, de „Commodore", werd voor Pan American Airways gebouwd en in de loop van 1929 en 1930 afgeleverd. In totaal kocht Panair 14 stuks dezer booten, welke, hoewel nu zoo langzamerhand verouderd, nog steeds dienst doen op de Zuid-Amerikaansche lijnen. In 1932 bouwde Consolidated 23 P2Y—I patrouille-vliegbooten voor de Marine; dit type was een verdere ontwikkeling van de PY—I en bleek zeer goed te voldoen. De laatste bestelling voor de groote order op de PBY—I was voor 23 stuks P2Y—3 vliegbooten, wederom voor de Amerikaansche Marine. Dit type is meer bekend onder de benaming Consolidated „Ranger" en de Argentijnsche Marine kocht een serie van zes stuks dezer booten.

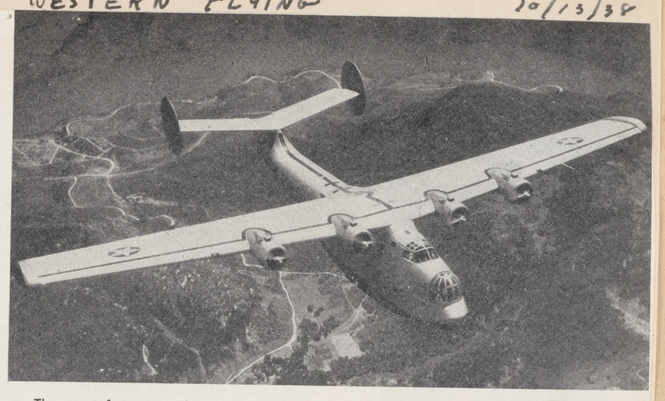
Na te zijn afgeleverd aan de basis van den Marine Luchtvaartdienst op North Island, wordt iedere PBY—I vliegboot aan een proefvlucht van 24 uur non-stop onderworpen. Het pleit voor het fabrikaat, dat deze proefvluchten tot nu toe alle zonder haperen verliepen. Den 28sten Januari van dit jaar vlogen 12 PBY—I booten, bemand met 80 officieren en minderen, van San Diego naar Pearl Harbor (Honoloeloe) onder commando van den overste William McDade, een vlucht, welke reeds in 1934 was gemaakt door zes P2Y—I vliegbooten onder het commando van majoor McGinnis. Men deed er ditmaal echter vier uur korter over.

Den 13en April werd een tweede escadrille van 12 PBY—I booten van San Diego naar Honoloeloe gezonden, deze keer onder het commando van den overste L. A. Pope en wederom verliep de non-stop-vlucht zonder eenig incident. Een derde dienstvlucht van San Diego naar Coco Solo werd ondernomen door een escadrille van twaalf dezer booten op den 21sten en 22sten Juni van dit jaar, onder het commando van den luitenant ter zee Robert W. Morse, waarbij een nieuw wereldrecord werd gevestigd voor het vliegen in gesloten formatie over een afstand van 4968 km. En op den 24sten Juni j.l. vloog een commercieele versie van de PBY—I, toebehoorende aan Richard Archbold, die verbonden is aan het American Museum of Natural History te New York, non-stop van San Diego Baai naar New York in 17 uur. Bij de landing had men voldoende benzine aan boord voor een vlucht naar St. Johns op New Foundland, naar Puerto Rico in West-Indië of naar de Bermuda-eilanden en terug.

Waar de PBY—I nog steeds op de geheime lijst staat, kunnen gegevens inzake gewichten en prestaties niet worden gepubliceerd en zijn deze slechts beschikbaar voor

Consolidated P B Y-1 ¾ voor-aanzicht in de vlucht.

WESTERN FLYING 10/13/37



The great four-engined Navy patrol boat, just finished by Consolidated Aircraft Corp.

Manufacturers

The biggest patrol boat

Consolidated completes new PBY and Navy begins testing the million dollar giant

CONSOLIDATED Aircraft Corporation of San Diego officially turned over its latest and biggest flying boat, the XPB2Y-1 to the Navy Department on August 24, and the Navy forthwith began putting the big patrol boat through its paces. Previously, Consolidated had conducted a brief series of preliminary flight tests, with Test Pilot Bill Wheatley at the controls.

The Navy trial board which is conducting the tests is composed of Lieut. Com. R. E. Jennings, Lieut. Com. O. A. Waller, Lieut. Com. J. V. Carney, all of the Naval Bureau of Aeronautics at Washington, Lieut. Com. Andrew Crinkley, and Lieutenants W. K. Goodney, C. H. Duerseldt, and Roy Jackson; of the Naval Air Station at North Island.

The big bomber is powered with four engines, weighs over 80,000 pounds, and has a range of 4000 miles. Its cost was about $1,000,000.

WESTERN FLYING 10/13/37

CONSOLIDATED Aircraft Corporation has received an order from American Export Airlines for one PBY long range patrol flying boat, with which the buyer proposes to chart its proposed Trans-Atlantic airline. The boat will be similar in most respects to the Navy version, without armament, and with the interior fitted for ocean survey flights. Cost is approximately $200,000.

Consolidated was the only bidder in the Navy's call for bids on spare parts for airplanes (Navy 900-2017) which were opened Sept. 16. On Lot 1, Consolidated bid $4,428.10; on Lot 2, Consolidated bid—A. $65,949.00; B. $65,297.00.

Seventeen Navy PBY's flew in formation from San Diego to Honolulu with 119 men on the night of Sept. 6-7. The 2570 miles was flown in 17 hours, 17 minutes.

WESTERN FLYING 10/13/37

CONSOLIDATED Aircraft Corporation will go through a period of plant modernization as soon as the present order of PBY boats for the Navy is completed. The work will include the installation of new machinery, such as drop-hammers, presses, and shears of latest design, and a general overhaul of the plant.

WESTERN FLYING 10/13/37

Another Ocean Survey

AMERICAN EXPORT AIRLINES, INC., through its president, W. H. Coverdale, announced in New York the purchase of a $200,000 Consolidated long range patrol flying boat for making survey flights across the Atlantic preparatory to regular scheduled service.

Flights will start at New York next summer and it is planned to chart routes to principal European countries; also North African countries and Asia Minor. The routes to be flown will supplement the service of the American Export Lines, for 20 years operators of American flag steamships to Mediterranean and Black Sea countries. Permits for survey flights have been granted by the United States and the principal European countries involved.

The new 15-ton Consolidated ship, a two-engine semi-cantilever monoplane with a top speed of over 200 miles per hour at 8,000 feet, will be flown by a crew of six. At cruising speed, the ship will have a range of approximately 4,000 miles with a payload of 2,000 pounds and the six-man crew.

Specifications and prices for larger, faster and more luxurious aircraft for non-stop trans-Atlantic passenger, mail and express service are now in the hands of American Export Airlines officials.

NIGHT LIGHTING USED OFTEN FOR LANDINGS BY ARCHBOLD

TRIBUNE 9-13-38

Recent night-lighting exercises carried on by navy planes off Pt. Loma, when brilliant parachute flares were dropped, have a counterpart in night landings being made by Richard Archbold, heading a scientific expedition in New Guinea after a transpacific flight from San Diego in a Consolidated Aircraft Corp. PBY plane, the Guba. Ken Jackman, in an article entitled "Man-Made Sunshine" appearing in the current issue of Consolidator, monthly publication of the aircraft firm, describes Archbold's use of night lights and writes of other features of lighting, in part, as follows:

"Seldom do we realize how helpless we would be without some form of man-made sunshine. Not only can we dispel darkness by artificial illumination, but we can also, by photographic means, see objects outside the limits of human vision. But to realize how dependent man is on his man-made sunshine (of the simple form that dispels darkness) imagine how curtailed would be Capt. Richard Archbold in Dutch New Guinea without artificial illumination.

"With the tardy arrival of the steamer bringing mail from home, Archbold knew that the Guba would have to make its first night landing on Lake Habbema. The take-off from Hollandia on the sea coast is uneventful. In a short while complete darkness settles as the plane soars up and on. Then in a few minutes the welcoming glow of the cooking fires of the base camp is discernible, where the base camp will greet the approaching plane on this lake at the 11,500 foot altitude.

"Yes, there are the groups of campfires on the lake's edge. How different and uninviting is the water at night! All landmarks, except for those pinpoints of light are lost in the gloom below the plane. Rogers at the controls, knows that the landing will have to be made by keeping those camp fires 15 points off the port bow. Just to be doubly sure a circuit of the landing area is made. The altimeters, reading zero at Hollandia indicate 12,200 feet . . approximately 700 feet above the lake's surface. Someone at camp has heard the motors and is gyrating a flashlight. Almost directly above the fire Rogers pulls a handle. Suddenly the jungle and surrounding area is bathed in the brilliant glow of a swaying parachute flare. This 300,000 candlepower will last for only three minutes, so he quickly swings the PBY around, settling and keeping the campfires off the port bow, switches on his landing lights and bow searchlight and makes his landing. The night flight is completed without incident.

"Note that even the modern explorer-pilot in an outpost of civilization, is dependent on powerful flares, searchlights, luminous panel instruments, camp fires and landing lights . . . all man-made sunshine."

Consair Plane Bought By Export Airlines

S.D. UNION SEPT. 15, 1938
SEPT 15

Purchase of a $200,000 Consolidated Aircraft Corp. long-range patrol flying boat for making survey flights across the Atlantic preparatory to regular scheduled service was announced in New York by American Export Airlines, Inc. Flights will start from New York soon.

The 15-ton San Diego-built ship, a 2-engine semi-cantilever monoplane with a top speed of over 200 miles an hour at 8000 feet, will be flown by a crew of six. At cruising speed, the ship will have a range of 4000 miles with a payload of 2000 pounds and the 6-man crew.

17-17-17 Spells New Consair Hop Record

To set a new mass flight record to Honolulu last week, 17 Consolidated patrol planes of the Navy took 17 hours and 17 minutes. The record bests the Navy's previous mark of 20½ hours, and also improves upon Richard Archbold's 18-hour-7-minute record in the Guba, another Consolidated plane, last June. S.D. Union 9/14/38

Collier Trophy Awarded Army

S.D. UNION SEPT. 16 1938

WASHINGTON, Sept. 15 (A.P.)—The National Aeronautics association today awarded the Collier trophy to the army air corps for having "designed, constructed and completely equipped the XC-35 substratosphere plane, the first pressure cabin airplane to be flown successfully anywhere in the world."

The Collier trophy, the association said, is aviation's highest honor. Army officers cited as the principals in the research and development work on the plane were: Maj. Carl F. Greene and Capt. Albert H. Johnon, stationed at Wright field, Dayton, and Dr. John E. Younger, formerly aeronautical mechanical engineer at Wright field, and now professor of engineering at the University of Maryland.

Lt. Col. Oliver P. Echols, Wright field, was cited as administrative director of the research.

Officers of the line's ships have been undergoing training for this service in the last year, it was revealed.

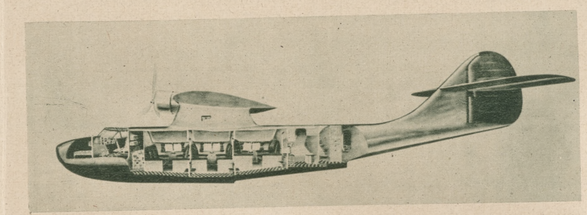
FOKKER T. 4

Tweemotorige bommenwerper en lange afstandzeeverkenner op drijvers.

De Fokker T. 4 is in verschillende series geleverd ten behoeve van de Koninklijke Marine voor den dienst in Nederlandsch Indië.

N.V. NEDERLANDSCHE VLIEGTUIGENFABRIEK FOKKER

(Adv.).



Consolidated P B Y-1, uitgevoerd als verkeersvliegtuig voor 24 passagiers en een bemanning van 5 koppen (2 piloten, een marconist, een boordwerktuigkundige en een steward).

serieuze koopers, op voorwaarde, dat zij zich verbinden ze niet openbaar te maken.

De PBY—1 is een geheel metalen hoogdekker-vliegboot met half-vrijdragenden vleugel, gebouwd als lange-afstand zee-verkenner, resp. ook te leveren als lange-afstand verkeersvliegtuig. Twee motoren zijn gemonteerd, n.l. Wright „Cyclone" ofwel Pratt & Whitney „Twin Wasp". Beide types zijn luchtgekoeld en hebben een startvermogen van ruim 1100 pk. De vleugel is bevestigd aan een gestroomlijnde bovenbouw van den romp en tegen den onderkant van den romp afgevangen door vier stijlen. Iedere machine wordt geleverd met een stel losse wielen voor het manoeuvreeren op de steiger en het land.

In het algemeen gesproken is de monocoque constructie voor alle samenstellende deelen, zooals de romp, de hulpdrijvers, de vleugel en de staartvlakken, toegepast, waarbij gebruik gemaakt is van metaalplaat en van getrokken Z en L profielen. Alle lichtmetalen deelen zijn tegen corrosie behandeld voordat de verflaag wordt opgebracht. De uitrusting der machine voor militaire, resp. voor verkeersdoeleinden is zoo geplaatst, dat het zwaartepunt der leege machine op vrijwel dezelfde plaats ligt als dat der geheel geladen machine. In beide gevallen is de stuurhut gesloten en biedt plaats aan twee piloten, naast elkander gezeten, terwijl in den bovenbouw van den romp, waaraan de vleugel is bevestigd, een kleine cabine voor den boord-werktuigkundige is gemaakt.

De vleugel is in drie deelen en de motoren zijn ondergebracht in het middenpaneel, waarin zich ook de benzinetanks bevinden. De hulpdrijvers zijn bevestigd aan de vleugeluiteinden; zij kunnen worden opgetrokken en vormen dan de vleugelpunten. In opgetrokken stand verdwijnen de stijlen in openingen in den onderkant van den vleugel. Tot en met den achtersten ligger is de vleugel bekleed met een dragende licht-metalen huid, versterkt door getrokken Z-profielen. De vleugel-achterrand wordt gevormd door dural-ribben, met doek bekleed. De ailerons zijn uitgebalanceerd en hebben een licht-metalen geraamte met doek bekleed.

De staartvlakken zijn geheel vrijdragend en bevestigd aan de staartvin, welke één geheel met den romp vormt. Het stabilo- en het kielvlak hebben een licht-metalen geraamte, dat bekleed is met een gladde licht-metalen huid, versterkt door getrokken profielen. De roervlakken hebben eveneens een licht-metalen geraamte, doch zijn met doek bekleed. Het stabilo is niet verstelbaar, doch zoowel het hoogteroer als het richtingsroer zijn voorzien van in de vlucht verstelbare trimvlakjes.

De romp heeft een geraamte van lichtmetalen getrokken profielen en is bekleed met een licht-metalen dragende huid. Hij is

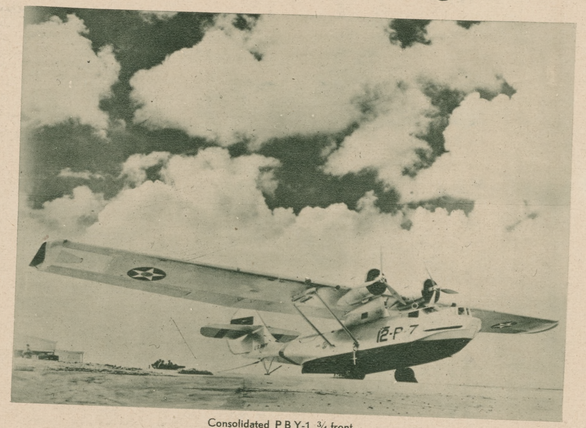
De Consolidated XPBY—I, het prototype der huidige serie, werd gebouwd naar aanleiding van een specificatie der Amerikaansche Marine voor patrouille-vliegbooten en bommenwerpers. De machine werd laat in het voorjaar van 1935 voorgevlogen en de daarop volgende proefvluchten bewezen dermate definitief de goede kwaliteiten van deze boot, dat de Consolidated Aircraft Corporation een order kreeg voor 60 stuks.

Kort daarna verhuisde de fabriek van Buffalo (N.Y.) naar San Diego in Californië, waar een moderne fabriek was gebouwd op het Lindbergh vliegveld aan de San Diego Baai. Niet alleen beschikt men hier over betere faciliteiten dan in de oude fabriek, de nabijheid van het detachement van den Marine Luchtvaartdienst op North Island maakt, dat men uit de eerste hand alle inlichtingen krijgt inzake de verschillende problemen, welke zich voordoen bij het dagelijksch omgaan met groote vliegbooten.

De XPBY—I, welke door de Marine was overgenomen, werd per gewone dienstvlucht van Norfolk (Virginia) naar San Diego gevlogen via het Panama Kanaal. En passant werd een wereldrecord gevestigd door de vlucht van Coco Solo, Panama Kanaal zone, naar Alameda, San Francisco Baai, een afstand van 5541 km, welke de goede kwalificeren en minderen, van San Diego naar Pearl Harbor (Honoloeloe) onder commando van den overste William McDade, een vlucht, welke reeds in 1934 was gemaakt door zes P2Y—I vliegbooten onder het commando van majoor McGinnis. Men deed er ditmaal echter vier uur korter over.



Consolidated P B Y-1 ¾ front.

Consolidated P B Y-1 ¾ voor-aanzicht met neergelaten hulpdrijvers, welke in de vlucht de vleugelpunten vormen.

Den 13en April werd een tweede escadrille van 12 PBY—I booten van San Diego naar Honoloeloe gezonden, deze keer onder het commando van den overste L. A. Pope en wederom verliep de non-stop-vlucht zonder eenig incident. Een derde dienstvlucht van San Diego naar Coco Solo werd ondernomen door een escadrille van twaalf dezer booten op den 21sten en 22sten Juni van dit jaar, onder het commando van den luitenant ter zee Robert W. Morse, waarbij een nieuw wereldrecord werd gevestigd voor het vliegen in gesloten formatie over een afstand van 4968 km. En op den 24sten Juni j.l. vloog een commercieele versie van de PBY—I, toebehoorende aan Richard Archbold, die verbonden is aan het American Museum of Natural History te New York, non-stop van San Diego Baai naar New York in 17 uur. Bij de landing had men voldoende benzine aan boord voor een vlucht naar St. Johns op New Foundland, naar Puerto Rico in West-Indië of naar de Bermuda-eilanden en terug.

Waar de PBY—I nog steeds op de geheime lijst staat, kunnen gegevens inzake gewichten en prestaties niet worden gepubliceerd en zijn deze slechts beschikbaar voor teiten van het type bevestigde. Een tweede en een derde bestelling volgden, waardoor het totaal werd gebracht op niet minder dan 176 PBY—I vliegbooten plus onderdeelen ter waarde van 35 machines, waarmede een totaal bedrag van ruim 19 millioen dollar was gemoeid.

Intusschen is Consolidated geen nieuweling op het gebied van vliegbooten. Reeds in 1928 bouwde men voor de Amerikaansche Marine de XPY—I, de eerste geheel metalen vliegboot. Een commercieele versie hiervan, de „Commodore", werd voor Pan American Airways gebouwd en in de loop van 1929 en 1930 afgeleverd. In totaal kocht Panair 14 stuks dezer booten, welke, hoewel nu zoo langzamerhand verouderd, nog steeds dienst doen op de Zuid-Amerikaansche lijnen. In 1932 bouwde Consolidated 23 P2Y—I patrouille-vliegbooten voor de Marine; dit type was een verdere ontwikkeling van de PY—I en bleek zeer goed te voldoen. De laatste bestelling voor de groote order op de PBY—I was voor 23 stuks P2Y—3 vliegbooten, wederom voor de Amerikaansche Marine. Dit type is meer bekend onder de benaming Consolidated „Ranger" en de Argentijnsche Marine kocht een serie van zes stuks dezer booten.

Na te zijn afgeleverd aan de basis van den Marine Luchtvaartdienst op North Island, wordt iedere PBY—I vliegboot aan een proefvlucht van 24 uur non-stop onderworpen. Het pleit voor het fabrikaat, dat deze proefvluchten tot nu toe alle zonder haperen verliepen. Den 28sten Januari van dit jaar vlogen 12 PBY—I booten, bemand met 80 offi-

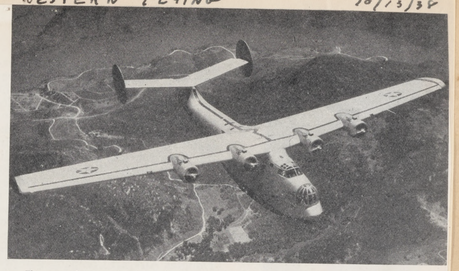
WESTERN FLYING 10/13/38



The great four-engined Navy patrol boat, just finished by Consolidated Aircraft Corp.

Manufacturers

The biggest patrol boat

Consolidated completes new PBY and Navy begins testing the million dollar giant

CONSOLIDATED Aircraft Corporation of San Diego officially turned over its latest and biggest flying boat, the XPB2Y-1 to the Navy Department on August 24, and the Navy forthwith began putting the big patrol boat through its paces. Previously, Consolidated had conducted a brief series of preliminary flight tests, with Test Pilot Bill Wheatley at the controls.

The Navy trial board which is conducting the tests is composed of Lieut. Com. R. E. Jennings, Lieut. Com. O. A. Waller, Lieut. Com. J. V. Carney, all of the Naval Bureau of Aeronautics at Washington, Lieut. Com. Andrew Crinkley, and Lieutenants W. K. Goodney, C. H. Duerseldt, and Roy Jackson, of the Naval Air Station at North Island.

The big bomber is powered with four engines, weighs over 80,000 pounds, and has a range of 4000 miles. Its cost was about $1,000,000.

WESTERN FLYING 10/13/38

CONSOLIDATED Aircraft Corporation has received an order from American Export Airlines for one PBY long range patrol flying boat, with which the buyer proposes to chart its proposed Trans-Atlantic airline. The boat will be similar in most respects to the Navy version, without armament, and with the interior fitted for ocean survey flights. Cost is approximately $200,000.

Consolidated was the only bidder in the Navy's call for bids on spare parts for airplanes (Navy 900-2017) which were opened Sept. 16. On Lot 1, Consolidated bid $4,428.10; on Lot 2, Consolidated bid—A. $65,949.00; B. $65,297.00.

WESTERN FLYING 10/13/38

CONSOLIDATED Aircraft Corporation will go through a period of plant expansion as soon as the present order of PBY boats for the Navy is completed. The work will include the installation of new machinery, such as drop-hammers, presses, and shears of latest design, and a general overhaul of the plant. 10/13/38

Seventeen Navy PBY's flew in formation from San Diego to Honolulu with 119 men on the night of Sept. 6-7. The 2570 miles was flown in 17 hours, 17 minutes.

WESTERN FLYING 10/13/38

Another Ocean Survey

AMERICAN EXPORT AIRLINES, INC., through its president, W. H. Coverdale, announced in New York the purchase of a $200,000 Consolidated long range patrol flying boat for making survey flights across the Atlantic preparatory to regular scheduled service.

Flights will start at New York next summer and it is planned to chart routes to principal European countries; also North African countries and Asia Minor. The routes to be flown will supplement the service of the American Export Lines, for 20 years operators of American flag steamships to Mediterranean and Black Sea countries. Permits for survey flights have been granted by the United States and the principal European countries involved.

The new 15-ton Consolidated ship, a two-engine semi-cantilever monoplane with a top speed of over 200 miles per hour at 8,000 feet, will be flown by a crew of six. At cruising speed, the ship will have a range of approximately 4,000 miles with a payload of 2,000 pounds and the six-man crew.

Specifications and prices for larger, faster and more luxurious aircraft for non-stop, trans-Atlantic passenger, mail and express service are now in the hands of American Export Airlines officials.

Increased Navy Funds for Coast Seen by Solons

(Continued from Page 1)

the navy is stationed in these waters and it is the firm conviction the Pacific coast will be the permanent naval center of the nation.

"While congress is deeply interested in the report to be submitted by the special navy board headed by Rear Adm. Arthur J. Hepburn, we felt that a first-hand study of the physical aspects and particularly the work now under way and projected would be of material help. It is possible naval appropriations in the coming congress will exceed $1,000,000,000. It is a foregone conclusion it will surpass the $600,000,000 appropriated for the navy by the last congress."

COOPERATION VITAL

Commenting on a plea made by Maj. R. H. Fleet, president of Consolidated, during an inspection of the Lindbergh field plant, Rep. Bates said:

"Maj. Fleet was right in asserting there should be closer cooperation between the government and the nation's principal aircraft manufacturing plants. This cooperation is vital in facilitating designing of new planes and after acceptance by the government assuring quick and efficient mass production."

Maj. Fleet stressed that from two years to 30 months are required to deliver planes following completion of accepted engineering plans and tests. He urged the congressmen to appropriate at least $20,000,000 for experimental work in connection with army and navy aircraft.

"The period to achieve this important engineering and experimental work is in time of peace and not in the stress of a national emergency," Fleet said. He explained that 209 long-range bombers of the PBY type have been delivered to the navy in the last two years and that it cost $1,000,000 to design and construct the new four-motored bomber which ultimately may supplant the PBYs.

Leaving Hotel del Coronado at 9 a. m., escorted by Roy Wilsford and James Gilchrist, motorcycle policemen, the congressional party, accompanied by naval officers and representatives of the San Diego and Los Angeles chambers of commerce, went to the destroyer base via Coronado Strand.

VIEW DESTROYER BASE

At the destroyer base Capt. Byron McCandless explained in detail work of the big navy base, specifically mentioning it does not compete with the Mare Island or Bre erton Navy yards. Capt. McCan less told the congressmen 1200 e listed men each month pass throu the receiving ship Rigel. He told work involved in placing the 48 d commissioned destroyers in reac ness for recommissioning. To e phasize manifold problems involv he escorted the solons aboard t destroyers Swasey, Shubrick a McLanahan. He then outlined t plan of expending $600,000 in add tional improvements, a proje which is to be submitted to the nav department soon.

From the destroyer base the part motored to 11th Naval district head quarters were Rear Adm. Sincla Gannon escorted the solons throug the building.

Arriving at the marine base th congressmen were greeted by Ma Gen. Louis McLittle and Brig. Ge John C. Beaumont, a guard of hono and a 17-gun salute. En route fro the marine base to the Naval Train ing station the party inspected th site of the new $900,000 barrack capable of housing 1000 men. Actua construction of these buildings wil be started next month.

LUNCH WITH SAILORS

To make the congressmen feel at home during the luncheon served in the enlisted men's mess hall Capt. Paul Blackburn of the Naval Training station assigned two bluejackets from the home state of each solon to eat with them.

CONGRESSIONAL PARTY GETS FIRST-HAND INFORMATION ON S. D. BASES

Members of the congressional party inspecting San Diego naval shore establishments yesterday. Left to right: Reps. W. Sterling Cole, New York; James G. Scrugham, Nevada; Byron N. Scott, Long Beach; Ed Izac, San Diego; George J. Bates, Massachusetts.

Rep. Scrugham of Nevada enjoying lunch at Naval Training station with two bluejackets from his native state. Left, C. C. Honeywell, Reno, and L. P. Quinn, Sparks, Nev.

Flanking Rep. Scrugham were C. C. Honeywell, Reno, and L. P. Quinn, Sparks, Nev. On either side of Rep. Scott were P. H. Sullivan, Long Beach, and M. L. Tousseau, San Pedro. With Cole were J. J. Sullivan, Elmira, and John Kiuli, Binghamton, N. Y. With Bates were John A. Patterson, North Andover, and E. L. Davis, Fitchburg, Mass.

Asserting there was little difference between San Diego's famed climate and that of Nevada during the noon hour, Rep. Scrugham doffed his coat, reached for a cafeteria combination plate and platter and was served soup, salad, roast beef, mashed potatoes, asparagus, pie and iced tea. Rapidly behind him came the other congressmen and the rest of the entourage with Capt. Blackburn, Comdr. Rivers J. Carstarphen, executive officer, and other training station officers.

From the training station the inspection part went to the La Playa fuel base where six huge new fuel tanks are in course of construction. At Ft. Rosecrans the solons greeted Col. Guthrie, were honored with a 17-gun salute and then went to El Cabrillo national monument on Pt. Loma where they paused a few minutes to watch progress of the international yacht races in Coronado roads.

TOUR AIR STATION

From the monument the solons went to the Naval hospital, thence made a brief tour of the Naval Air station before returning to Hotel del Coronado where last night they were guests at a stag dinner tendered by the chamber of commerce.

A former governor of Nevada, Rep. Scrugham also owned and edited for several years the Nevada State Journal. He easily won renomination for congress at the primaries and expects to be re-elected in November. His opponent is a former mayor of Reno. Scrugham was commissioner for Ne la at San Diego's 1915 Exposition and is thoroughly conversant with local naval facilities.

The six visiting congressmen will leave the Naval Air station at 10:30 this morning in a navy plane for Long Beach. Accompanying them will be Capt. A. H. Mayo of the bureau of supplies and accounts and Capt. E. R. Hagenah, fleet marine corps reserves, aid.

TO ATTEND LEGION PARLEY

Although scheduled to leave Los Angeles Tuesday for San Francisco the congressional party, according to Rep. Scrugham, will delay d parture until Wednesday to atte American Legion convention s sions. They will confer today w Adm. Claude Bloch aboard the b tleship Pennsylvania and tomorr will inspect the fleet air base San Pedro and shore facilities Long Beach.

Before concluding their tour Puget Sound Navy yard the so will visit the dirigible base at Sunnyvale, the site of the $15,000,000 naval base at Alameda, the Bethlehem shipbuilding plant at south San Francisco where it is proposed to build a number of warships; Mare Island Navy yard, projected submarine and fleet air base at Tongue Point, Ore., the Sand Point Naval Air station in Puget Sound and the Bremerton Navy yard. Flying back to Washington a visit will be made to the naval ammunition depot at Hawthorne, Nev.

More Navy Funds Seen for Coast

Solons Inspect Bases; Urge Aid For Plane Plants

By Howard Morin

World conditions as exemplified in Asia and Europe make it compulsory for America to safeguard its interests by expansion of the fleet and its shore bases, in the opinion of four members of the house appropriations and naval affairs committees who started their tour of Pacific coast navy yards and bases here yesterday.

Rep. James G. Scrugham, Nevada, ranking member of the subcommittee of naval appropriations, declared that while last year's $600,000,000 naval appropriation was the largest since World war days, he expected congress to appropriate even a greater sum for 1939-40.

Rep. Scrugham also voiced the belief that congress will take action at the next session which may fundamentally affect operation of Consolidated and other major aircraft manufacturing plants throughout the country. He expressed his personal opinion that plants like Consolidated should receive government aid in financing important engineering projects and that the number of employes of such aircraft plants should remain stable.

ACCORDED SALUTES

Traveling with Rep. Scrugham on the inspection trip during which they were accorded 17-gun salutes at the marine base and Ft. Rosecrans were Reps. Byron Scott, Long Beach; W. Sterling Cole, New York; George J. Bates, Massachusetts, and Ed Izac.

Two other members of the congressional party, Warren G. Magnusson, Washington, and James W. Mott, Oregon, landed at Burbank yesterday afternoon after a flight from Seattle and Salem, Ore., in a navy plane piloted by Lt. Sylvious Gazze.

While expressing amazement at tremendous changes that have taken place at local naval establishments since his last visit, Rep. Scrugham intimated that additional funds will be expended here in expanding existing fleet shore facilities.

FACILITIES FOR FLEET

In this he was supported by Rep. Bates of the naval affairs committee who said:

"There is a strong feeling in congress not enough attention has been paid to the Pacific coast in the matter of providing adequate facilities for the fleet. The greater part of

ARCHBOLD SET FOR NEW HOP

S. D. SUN Oct. 3, 1938

Due to return to Hollandia, on the Dutch New Guinea seacoast, this week from the peak of the 15,000-foot Mt. Wilhelmina, Richard Archbold, scientist - aviator, will fly his Consclidated airboat 800 miles to Port Moresby, British Guinea, in about two weeks, it was learned here today.

Mr. Archbold and a crew of five piloted their $250,000 "flying laboratory" from San Diego to Dutch New Guinea last June. Recently the former, who is leader of an American Museum of National History expedition, temporarily abandoned his plane for mountain climbing with the other scientists of the expedition searching for rare biological specimens.

The Port Moresby hop will be made to obtain a new refrigerator for the expedition's advanced base at Lake Habbema, 300 miles inland and at the foot of Mt. Wilhelmina. Mr. Archbold is keeping in constant communication with B. F. Boyd, San Diego amateur radio operator.

Consair May Get $7,000,000 Job

S.D. UNION 10/9/38

'Flying Battleship' Said O.K.'d by Navy

Word that the bureau of aeronautics, navy department, is planning to award contracts totaling more than $7,000,000, for construction of a squadron of four-engined patrol bombers early in February was received yesterday from Washington.

Only two types of bombers are being considered in the proposed contracts, it is reported. They include the "flying battleship," built by Consolidated Aircraft Corp. at Lindbergh field, whose experimental flights were said to have proved highly satisfactory to the navy trial board, and a bomber built by Sikorsky.

The bureau of aeronautics is reported to be especially pleased by performance of the Consolidated bomber, said to be the fastest, most heavily armed and having the longest cruising range of any patrol bomber yet built.

Consolidated built the PBY type patrol bombers used by the navy and successful on long flights.

ARCHBOLD PLANS FLIGHT OF 800 MILES TO GET ICE BOX FOR CAMP

S.D. UNION OCT. 3, 1938

Piloting his San Diego-built "flying laboratory" in which he already has written a brilliant chapter in American aviation history, Richard Archbold, associate director of American Museum of Natural History, will take off from Hollandia, New Guinea, Oct. 15 for Port Moresby, British Guinea. Word to this effect was received by short-wave radio from Archbold by Barney Boyd, local radio amateur.

The 800-mile flight is being made primarily to procure a new refrigerator from the British supply depot at Port Moresby. The ice box is to be flown to Archbold's advanced base at Lake Habbema, 300 miles inland from the coast.

Boyd reported that while talking with the scientific expedition members they told of a terrific fight being waged in Humboldt bay by natives attempting to subdue a large shark. It was at Humboldt bay that Archbold landed his plane after his flight from San Diego to New Guinea last June.

Archbold is due to return to Lake Habbema this week from a scientific expedition to the top of Mt. Wilhelmina, 12,000 feet above sea level.

Supplies from the scientific expedition are being transported each month on a Dutch steamer plying out of Batavia.

S.D. UNION 10/10/38

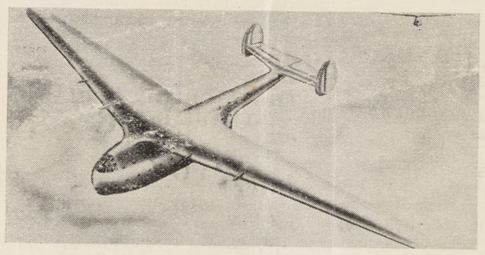
Archbold Gets Rare Specimens On Mountain

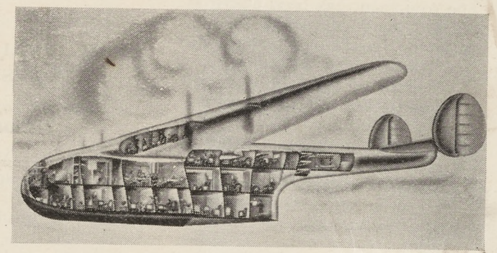
Reporting that he was successful in obtaining rare and valuable specimens for the American Natural History museum during his recent scientific expedition up the slopes of Mt. Wilhelmina in New Guinea, Richard Archbold, noted aviator and explorer, has returned to the expedition's main base at Hollandia.

Word to this effect was received by shortwave radio yesterday from Archbold by Barney Boyd, local radio amateur.

Archbold, piloting his $250,000 Consolidated-built "flying laboratory" in which he flew from San Diego to New Guinea last June, will leave Hollandia Saturday by plane for Port Moresby, British Guinea, to obtain supplies. He plans to return to Hollandia within a week.

CONSOLIDATED 100-PASSENGER FLYING BOAT





Designed to meet the exacting requirements as set forth by Pan American Airways, the Consolidated 100-passenger flying boat provides not only fast, economical transportation for long range but also comfort and convenience for its passengers. The essential requirements for this 100-passenger airplan were: payload of 25,000 lbs., 16 crew, range of 5,000 miles and the ship preferably supercharged to operate at 20,000 feet altitude with an interior cabin pressure equivalent to 8,000 feet.

As a result of early studies it appeared that with power plants now in existence, or to be available in the near future, that the proposed ship must have six engines with a resulting gross weight in excess of 200,000 lbs., unless means could be developed to improve efficiency and to permit a material reduction in size from the original conception. Such a reduction would automatically carry with it further refinements, such as eliminating inefficiencies resulting from the greater number of engines. This original ship, consistent with Consolidated practice, incorporates such features as high wind aspect ratio and loading, flush external rivetting throughout and auxiliary floats retractable to the lower surface of the wing.

Cabins in Wings

It was apparent that this reduction in size tied in directly with the housing of the 100-passengers and 16 crew and their living facilities. Study on this phase of the design revealed that with but slight thickening of the wing, and but very small accompanying drag increase, that 36 of the 100 passengers could be completely housing in the wing, thereby further improving the performance.

The main problem encountered in putting the passengers in the wing was the cutting of cabins by the wing bulkheads. This was overcome by putting main bulkheads at the sides of each compartment and using auxiliary arched ribs between, which did not impair the effective head room of the compartment. The development of the wing for this purpose proved to have another advantage. The skin covering used to react normal wing bending loads would be ample, without further re-inforcement, to withstand the pressure loads incurred in sub-stratosphere flight.

Four Engines Sufficient

The design of Consolidated 100-passenger flying boat was thus established. This supercharged ship with four engines was capable of meeting Pan American's requirements with a gross weight of 168,000 pounds, developing a minimum average cruising speed of 240 m.p.h. for a 5,000 mile range. The four 2,150 h.p. liquid cooled engines are located between spars in the wing with an extension shaft driving the tractor propellers. Access to these engines may be had during flight for servicing and minor repairs.

The interior of the ship is arranged with 36 passengers in the wing, and the balance of 64 in the hull with individual 2 or 4 place cabins. Lounging swivel chairs, adjustable type and comfortably upholstered, are provided for daytime use. For night accommodations the seats are quickly converted to form commodious lower berths. The upper berths are lowered, in pullman fashion, from the wall. There is sufficient head room between the berths to permit an upright sitting position on each. All two-place cabins have the convenience of a folding wash-stand toilet combination, while the 4-place cabins are provided with the facilities of 12 passenger toilets located throughout the ship.

Passenger Accommodation

Each cabin, in addition to being beautifully carpeted and decorated, is completely soundproofed and air conditioned with a nondraft pressure defuser. The temperature, pressure and humidity throughout the ship is regulated from a central control panel.

The dining room, centrally located with all passageways and stair leading directly to it, accommodates 18 persons at one time. While enjoying a meal, the diner is afforded a clear unobstructed view through the window beside his seat. The passengers' comfort is further enhanced by lounging, writing and promenade facilities.

The crew is accommodated in two separate cabins. The larger of the two is in the aft portion of the ship and has living quarters for seven. In addition to the seven large bunks in this cabin, there is a toilet and washstand. There are also lockers for the personal belongings of the crew. The other crew cabin, bunks and lockers for two of the crew is located in the forward portion of the ship.

The galley is located adjacent to

ITALIAN AIRLINERS TO SPAN ATLANTIC; CONSAIR SHIP TO SURVEY ROUTE

S.D. UNION 6 Oct. 1938

NEW YORK, Oct. 5 (A.P.)—Italy today gave notice it would be ready next spring to start its airliners shuttling across the North Atlantic.

In a Wall street building high above the turbid East river, Dr. James H. Kimball, the man who gave Charles A. Lindbergh the signal to take off for Paris in 1927, drew a weather map to indicate a future route of transport planes to Europe.

The route will be used jointly by Ala Littoria, the Italian airline, and American Export Airlines, subject to approval of the new civil aeronautics authority.

Kimball called it the most nearly perfect Atlantic weather forecast ever made.

The Italian line and American export steamship lines, parent company of the American airline, will help plot the course of the airliners by supplying hour-to-hour weather data.

James Eaton, export airlines executive vice president, said the two companies, effecting a "close working agreement," were engaged in drawing designs for a fleet of flying boats with a maximum passenger capacity of 125.

Col. Carlo Pezzani, Ala Littoria official and who flew the Atlantic with Gen. Italo Balbo in 1933, said the four-motored, 65,000-pound seaplanes which Italy proposed to use would be capable of carrying passengers, but that only a mail service was contemplated at first. Export airlines will use a recently purchasd Consolidated flying boat for its survey flights by way of the Azores, Lisbon and Mediterranean ports.

Entry of Italy brought to five the number of nations bidding for airline business over the North Atlantic. The only American company other than Export, Pan American Airways, has indicated it would be ready to fly both passengers and mail to Europe with its new Boeing "Atlantic clippers" within a few weeks.

The other nations are Great Britain, Germany and France.

EXPERIMENTAL FUND FOR NAVY FLYING SHRINKS

S.D. SUN 9/22/38

Proportion To Other Air Appropriations Lowest In 10 Years

Expenditures for experimental work on Navy planes will be lower in proportion to other naval aviation appropriations during the 1938-39 fiscal year than at any time in the past decade, it was reported here from Washington, D. C.

In this connection, it was recalled today that Maj. Reuben H. Fleet, president of Consolidated Aircraft Corp., last Saturday informed a Congressional subcommittee inspecting local naval establishments that "at least $20,000,000 should be provided for experimentation on Army and Navy aircraft."

For the current fiscal year, only $2,803,500 is set aside for development of secret experimental planes—6.6 per cent of the total Navy aviation budget. In the 1927-28 fiscal year, the appropriation was 8.4 per cent, and the average for the 1927-38 period was 7.4 per cent.

In making his statement to the congressmen, Maj. Fleet pointed out that the Consolidated four-motored experimental bomber alone has cost $1,000,000. On it more than two years' effort already has been expended, and it is yet to be officially accepted by the Navy.

S. D.-HAWAII MASS FLIGHT DELAYED; 2 SQUADRONS TRAIN

S.D. UNION 10/10/38

Probability that Patrol Squadrons 1 and 18 of Patrol Wing 2 will not be ready to take off for Hawaii with 16 new Consolidated long-range bombing planes until just before the Thanksgiving holidays was expressed yesterday by Scouting force aircraft authorities.

None of the twin-motored planes has been delivered to the two squadrons, temporarily based at North Island. Several weeks will be required to test the planes thoroughly before the 2250-mile flight from San Diego to Pearl Harbor.

The flight had been planned for early November.

Meanwhile officers and enlisted men of the two squadrons are making practice flights with planes of VJ-1 and aircraft of Patrol Wing 1.

Rear Adm. Charles A. Blakely, Scouting force aircraft commander, who recently returned from an inspection trip to Hawaii, will remain in port with the flagship Wright until Jan. 4 when the fleet sails for its six-month cruise to the Atlantic coast.

Forty-eight planes of Patrol Wing 1 are scheduled to hop from San Diego for Panama early in January.

S.D. UNION Oct. 12, 1938

S. D. Navy Personnel To Get 2200 Boost

2 New Carriers, 144 Planes Due Here in June

By HOWARD MORIN

Word that the new 20,000-ton aircraft carriers Yorktown and Enterprise, with their 2200 officers and men and total complement of 144 planes, will come to San Diego when the fleet returns from the Atlantic cruise in June, was brought here from Washington yesterday by Rear Adm. Arthur B. Cook, bureau of aeronautics chief.

Flying in a glistening, all-metal plane piloted by Lt. Turner Day, Adm. Cook landed at the Naval Air station at 4:45 p. m. after a flight from Seattle via Oakland.

The bureau of aeronautics, Adm. Cook said, plans to call for bids on the 4-motored, long-range patrol bombers recently completed by Consolidated and Sikorsky Aircraft companies early in December.

FEBRUARY START SLATED

Asked pointblank what chance Consolidated had of being the successful bidder. Adm. Cook said:

"The firm submitting the best ship at the lowest price undoubtedly will receive such a contract."

Construction of these powerful bombers, each capable of better than 4000 miles of sustained flight, is expected to start in February, with delivery scheduled for 1940.

Adm. Cook frankly stated the expansion program of the aerial forces of the fleet in the next few years, and specifically establishment of fleet operating bases in Alaska, the Aleutian islands and the West Indies, will be determined from the report to be sumbitted to congress Jan. 4 by the special board headed by Rear Adm. Arthur J. Hepburn, former U. S. fleet commander.

BOARD NEAR ADJOURNMENT

This board, which recently completed a survey of existing and potential navy bases in the Pacific, South Atlantic and the Caribbean, now is in final session at the navy department.

Indications that the board will complete its findings and recommendations within the next fortnight were seen in word received yesterday that Capt. Arthur L. Bris-

(Continued on Page 2, Col. 3)

Navy Personnel Will Gain 2200

(Continued from Page 1)

tol, North Island Naval Air Station. Commander, and a board member, will return to San Diego, Nov. 1.

That the bureau of aeronautics has no definite plans for proceeding with the construction of a dirigible to replace the ill-fated Macon was seen in Adm. Cook's reply to a question as to the present status of the navy's airship program.

"Ask President Roosevelt," was the admiral's laughing rejoinder.

At the last session, congress authorized construction of a dirigible and appropriated $3,000,000 to start work whenever the navy is ready.

BASE FAR FROM COMPLETE

Adm. Cook revealed it will be several years before the proposed $15,000,000 navy base at Alameda is ready for either ships or planes. He reported work is progressing according to schedule.

Abandonment of the Army Air corps depot on the western end of North Island, which will be completed within the next two months, will enable the navy to carry out its plans for basing planes of the Yorktown and Enterprise at the Naval Air station.

Four of the old army hangars are being remodeled and made ready for the two carriers. A new barracks, capable of housing several hundred men, is completed.

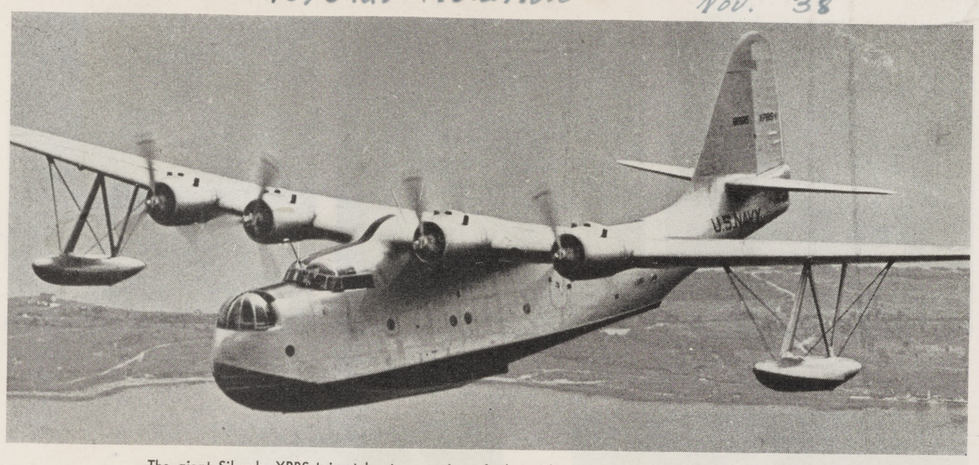
FIELD TO BE EXTENDED

The navy also is planning to extend its flying field westward to within a few hundred yards of the ocean shoreline and is planning to dismantle many of the barracks, shops and hangars used by the army.

Adm. Cook was greeted at the Air station by Comdr. A. E. Montgomery, acting commander; Capt. Leigh Noyes, chief of staff to Vice Adm. Ernest J. King, fleet air force commander, and Comdr. Cato D. Glover, fleet air assistant operations officer.

After a conference today with naval aviation officials, Adm. Cook will leave tomorrow by plane for Washington.

Popular Aviation Nov. '38



The giant Sikorsky XPBS-1 is at least a warning of what a future war holds in store for the admirals.

FLYING BATTLESHIPS

by KURT RAND

Will the airplane ever replace the battleship? There are those who believe it is possible.

ENEMY beware!

Uncle Sam is going in for winged battleships, with a destructive power as great as, perhaps greater than, any known existing airplane!

The Army has its sensational four-motored "flying fortresses".

Now, after three years of secret experimentation, the Navy reveals that it is ready to organize squadrons of "air battleships", 35-ton leviathans that could machine-gun annihilation large numbers of enemy planes, while bombing and torpedoing impotency invading warships below.

Closely guarded today lest foreign agents obtain the clues to their great destructive strength and their phenomenal performance characteristics are the Navy's two experimental dreadnaughts of the sky, forerunners of dozens of similar airboats which will make certain for the United States domination of all the seas within the scope of the mainland and its "lifeline" territorial possessions.

One is on the east coast—Sikorsky's great four-engined bomber, designated as XPBS-1 when it was accepted by the Navy as an experimental plane late last year.

The other is on the west coast—Consolidated's giant seaplane XPB2Y-1, which only recently was finally declared acceptable by a Navy Trial Board.

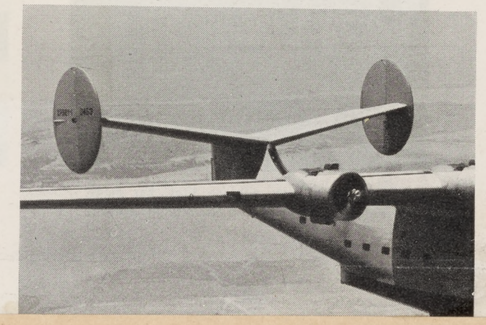
Into each have gone hundreds of thousands of man hours of engineering and shop labor; endless detail drawings were required of each vital part of the huge planes; the mockups alone—wood-and-fabric full scale replicas of the finished job—required six months and more to build. Mistakes were made, and costly delays resulted. The requirements of ruggedness—the ability to take terrific punishment from heavy seas as well as from enemy bullets and shells—and the further need for safety and efficiency proved a challenge to America's best talent in aircraft engineering and designing. It was a challenge successfully hurdled.

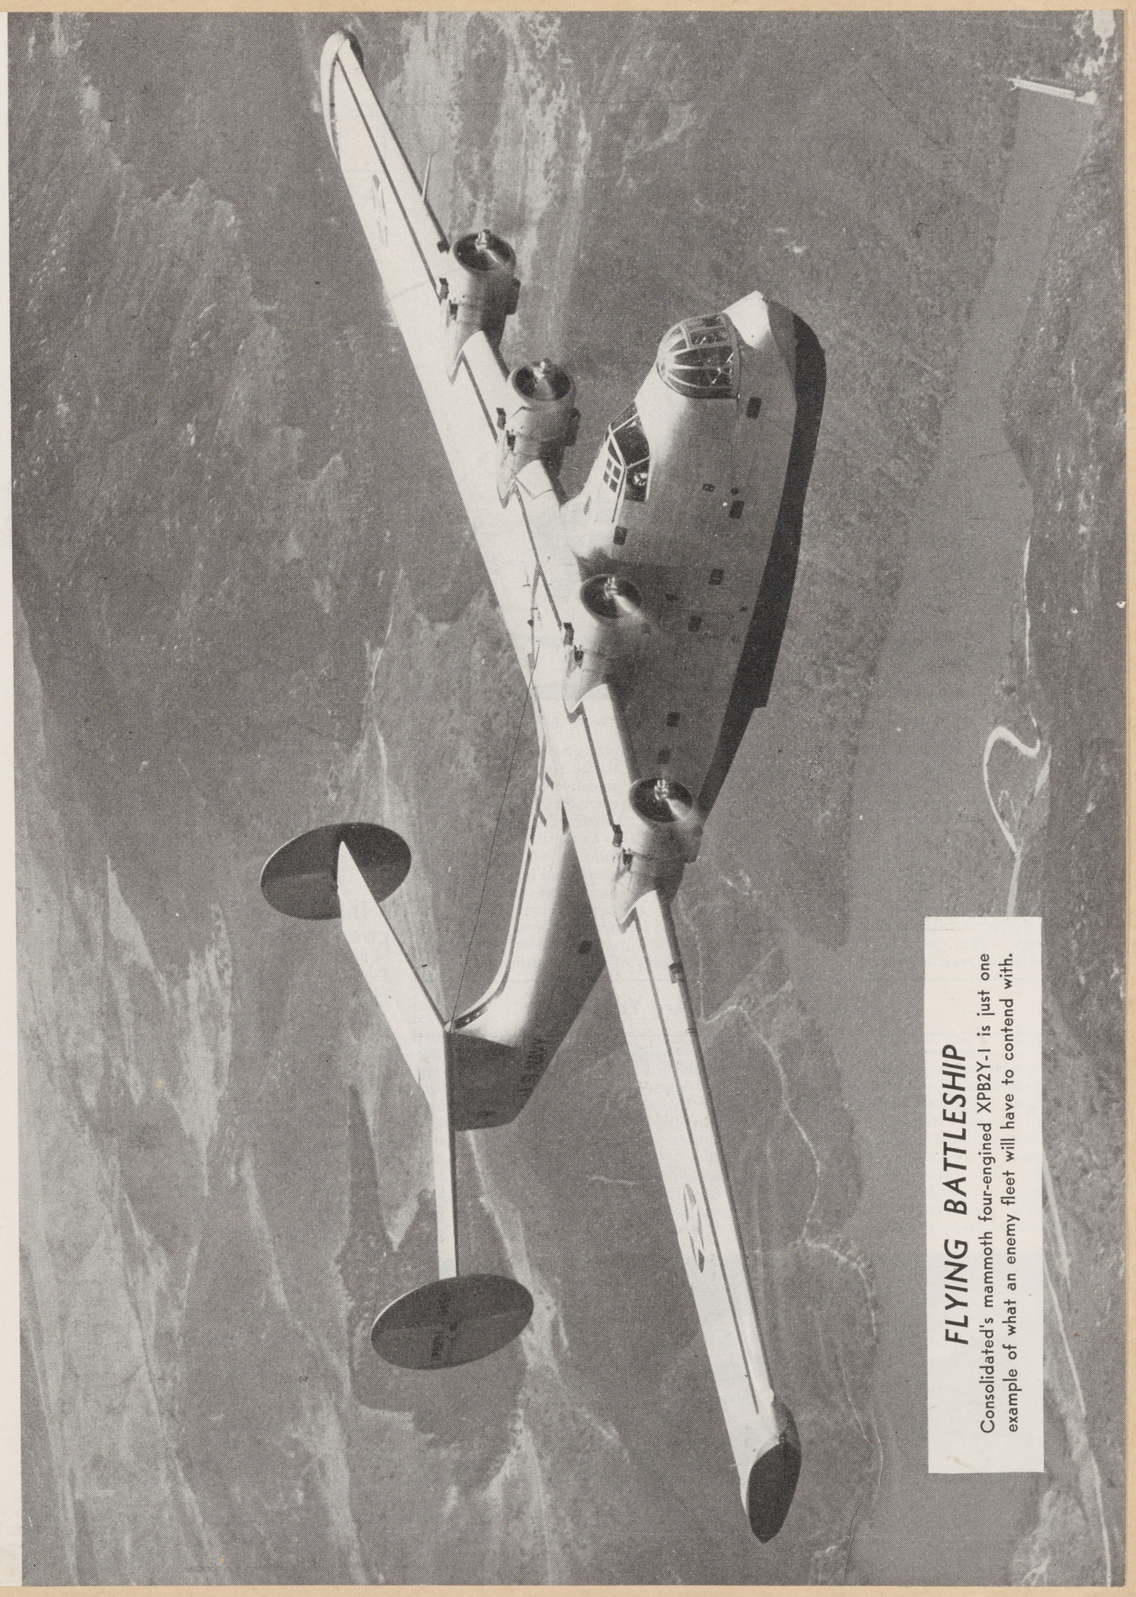
And today the United States Navy proclaims to the world that it has a lethal weapon which can cut an attacker to bits hundreds, yes thousands, of miles from American soil only a few hours after the first alarm is spread.

With Consolidated's bomber accepted, the Bureau of Aeronautics will compare performance data of the two experimental airboats, awarding a production contract to the company whose plane

(*Continued on page* 80)

Consolidated's flying battleship got the three tails above and below. The two above failed; that below has been accepted.





FLYING BATTLESHIP

Consolidated's mammoth four-engined XPB2Y-1 is just one example of what an enemy fleet will have to contend with.

P.P. 50

Flying Battleships

(Continued from page 52)

appears best suited to the Navy's needs.

The awarding of that contract will mean exultation to the successful bidder, and bitter disappointment to the loser. For both Consolidated and Sikorsky have concentrated their greatest efforts since 1935 in the development of this military plane of the future.

In competition with other aircraft manufacturers, these concerns won experimental contracts granted by the Bureau on the basis of preliminary designs.

Before the finished product left the final assembly shops, the producers had spent a lot more than the Navy had given them in the original contracts.

For instance, Consolidated received $600,000 from the Navy. But, if another $400,000 had not been added by the company, its bomber would never have been completed.

The two airboats are similar in many respects, radically different in others. The motive power for both is exactly alike. Each has four 1,050 h.p. Pratt & Whitney *Twin Wasp* engines. They are all-metal, high wing, full cantilever types. Machine gun turrets in the bow, the tail and in the center of the hull afford protection on all sides—at a moment's notice, the air in a complete circle around the planes could be sprayed with death-dealing lead.

Both have 110-volt electrical systems—an innovation in military airboat construction—which generate power for the radio, anchor winch, lighting system, bomb controls, and miscellaneous electrical appliances, such as those in the galley. Electrical current on flying boats previously has been supplied through a 12-volt direct current system.

Complete telephone hookups are installed, enabling crew members to speak to each other from any point of the planes, bow to extreme tail.

The radio equipment, placed in a separate compartment, is comparable to that on a destroyer. Commodious living accommodations are provided the crew—what with a galley that would satisfy the most exacting housewife, water distiller, refrigerator, clothes lockers, toilet and washing facilities, heating and ventilating system, soundproofing, and even a completely equipped mechanic's workshop.

The non-stop range of each has not been officially disclosed, but it is believed to be about 1,000 miles greater than the Navy's PBY airboats which have made seven successful delivery flights—involving 99 bombers—from San Diego to the Canal Zone and Pearl Harbor, Hawaii. That would give the experimental "air battleships" a potential cruising radius of about 5,000 miles without refuelling. This in itself is a startling fact. For instance, if Hawaii suddenly was threatened with aggression, a fleet of four-motored bombers could take off from Pearl Harbor, roar defiantly 2,500 miles to sea, drop their heavy "eggs" and return for another load—all without alighting!

In effect, Uncle Sam's new aerial defenders have overnight further extended by hundreds of miles his defense frontier, already a great distance from the shores of this country and its possessions.

In two important respects, Consolidated's XPB2Y-1 and Sikorsky's XPBS-1 are strikingly dissimilar. The tail and the wing floats of each airboat are widely different in design.

When Consolidated's bomber was launched last December, its tail was of the usual construction—with single rudder in the center. In its first trial flights, the plane's performance did not measure up to the "on-paper" expectations. To gain more directional stability, two small fins were installed, one on each side of the rudder. But this experiment proved a failure, and Consolidated and Navy engineers finally decided that the solution meant scrapping of the whole tail and the evolving of a new design. *(Boeing made the same mistake with its new Pan American Clipper.—Ed.)*

This creation has become popularly known as the "twin tail" and consists of two circular rudders at the end of stabilizers which meet at a seven-degree dihedral angle instead of lying horizontally.

The single rudder of the Sikorsky airboat apparently has functioned satisfactorily.

Unlike the Sikorsky wing float, the Consolidated plane's pontoons are retractable and fold back to form the wing tips during flight. This characteristic is present also in the twin-engined PBY's.

Failure to secure a production contract on the four-motored bomber will not spell complete loss to the unsuccessful

bidder. Both planes have great commercial possibilities.

Maj. Reuben H. Fleet, president of Consolidated, has, for example, pointed out that the XPB2Y-1 could easily be converted into a transatlantic passenger plane, carrying 30 passengers and six crew members in luxurious comfort. And on shorter trips, the graceful hull would have a 50-passenger capacity.

The Sikorsky XPBS-1 weighs five to six tons more than its previous commercial flying boats and represents a marked advancement in design, especially in the full cantilever wings flush with the top deck. The older-type Sikorskys have the wing placed up and above the hull, and kept secure by semi-cantilever strut bracing, allowing for a far less streamlined effect. It takes little stretch of the imagination to place this ship in the forefront of the famous Sikorsky transoceanic clippers.

A jealously kept secret of the Navy is the bomb and torpedo-carrying capacity of the giant airboats. The Navy Department has issued a general statement to the effect that the planes will be able to carry a "tremendous load of bombs", comparable "with that of any known existing airplane". To one acquainted with military understatement, especially in confidential and experimental matters, such an admission by the Navy Department carries little but forebodings to potential enemies.

Still more hushed are such facts as the speed with which these mighty new wings will be able to beat through the air. It is known for a fact, however, that the cruising speed of the bombers, even with capacity loads, will be in excess of 150 m.p.h., and top speed is expected to be more than 200 m.p.h.

Dimensions are more easily obtainable. The Consolidated airboat, for example, has a wing spread of 115 feet, only 11 feet more than its twin-engined PBY predecessors; an over-all length of 80 feet, and height, when raised on the beach landing gear, of 22 feet.

When these sharp-clawed eagles join the Navy's air forces, a virtually impenetrable network of sky patrols will bulwark the national defense along a hypothetical "fence" thousands of miles to sea.

Already at Hawaii are 59 of the new two-motored long-range PBY's, delivered in four spectacular non-stop flights from San Diego. At the Canal Zone are 40 of these airboats. Defending Puget Sound and Alaska are 12 more, reinforced by 18 of the P2Y craft, an older but still efficient Navy patrol plane. At North Island in San Diego harbor are 48 ready to dash out on their grim task of protecting the west coast from surprise attack. By the end of this year, more than 200 will be in the service of the Navy.

And when their roar is augmented by the deep rumble of four-engined "battleships of the air", the nation can rest assured that not even the wiliest tactician could hope to slip past the imaginary battlements patrolled by these sentinels 2,500 miles from shore.

END

Consair Proud of Mass Hops of PBY

San Diego Club Life Oct. 12, 1938

A total of 106 Consolidated PBY patrol type bombers have flown on nonstop flights in the past year and a half, and all have arrived safely and in fast time at their destinations, a recent tabulation of the San Diego aircraft factory showed.

In the company's tabulation, the mass hops to Sitka, Alaska, and Seattle were not included.

The Navy fliers on August 9, last, set a new record to Hawaii, flying 17 planes from San Diego to Honolulu in 17 hours, 17 minutes and 17 seconds. That time was considerably faster than the time of the first PBY group flight, of 12 planes to Pearl Harbor, Jan. 28, 1937. It took them 21 hours, 43 minutes.

Biggest mass flight was on Jan. 19, 1938, when 18 planes made it to Pearl Harbor in 20½ hours.

Richard Archbold's flights across the country, to Miami and New York, were repeated successfully so often that they became "routine."

Now the Navy is rumored ready to spend $7,000,000 to purchase a squadron of the Consair "flying battleship" four-engined patrol bombers, fastest, most heavily-armored and longest-ranged military flying boat in the world.

AIRCRAFT FIRM EXPANSION SET

S.D. SUN OCT. 15, 1938

Indication of Consolidated Aircraft Corp.'s plans to improve its plant equipment in preparation for construction of advanced-type flying boats will be noted on the waterfront tomorrow.

A 15-ton drop hammer will be unloaded from the intercoastal freighter San Anselmo at Pier 1, the Quaker line office announced. A 10,000-pound machine part will accompany the hammer.

In the vessel's 406 tons for local delivery will be more than 100 tons of steel sheets for construction of new buildings at the Naval Air Station.

Tests on the 25-ton "flying battleship," Consolidated's experimental four-motored bomber, are being completed and company officials are awaiting call for bids on a production contract.

Four-Motored Bomber May Go East For '39 Navy War Games

S.D. SUN OCT. 12, 1938

Reports that Consolidated's experimental four-motored bomber may accompany the Fleet to the Canal Zone and the each coast on the 1939 war games circulated at North Island today.

It was learned that Rear Adm. Charles A. Blakely, Aircraft Scouting Force commander, is considering use of the giant plane as his air flagship, with Lieut.-Comdr. Andrew Crinkley as pilot. The latter has been flying the bomber for the past few weeks in final tests for the Navy Trial Board, which has "conditionally" accepted the craft.

Final official acceptance will be made at completion of minor adjustments now being effected.

Should the four-engined XPB2Y be sent on Fleet Problem 20, it will be the largest plane ever to participate in the annual maneuvers.

Command Shifts

Meanwhile, a reorganization of the high command of the North Island patrol squadrons was effected today, as Rear Adm. Blakely was relieved of command of Patrol Wing One, and was left to concentrate on his duties as commander of Aircraft Scouting Force, made up of five patrol wings—in San Diego, Seattle, Pearl Harbor, the Canal Zone, and Norfolk, Va.

It is believed that Capt. Marc A. Mitscher, present commander of the Aircraft Scouting Force flagship USS Wright, will be placed in charge of Patrol Wing One.

Other Changes

Other changes just ordered affect Lieut.-Comdr. Alfred M. Pride, who will be transferred from duty as air officer on the USS Wright to the staff of Patrol Wing One Commander as operations officer. He will be succeeded by Lieut.-Comdr. William M. McDade, formerly attached to the aviation unit of the USS Tennessee, who led the first non-stop mass flight of PBY bombers in January, 1937, from San Diego to Pearl Harbor.

It was revealed today that a new "mockup," or wooden model, of the four-motored bomber is under construction at Consolidated Aircraft Corp., following re-designing of the interior arrangement, not totally satisfactory at present. The inside of the experimental plane will not be changed; the "mockup," however, will provide a practical model for the succeeding ships in case Consolidated wins a production contract from the Bureau of Aeronautics.

Archbold's Plane Hops to Australia

S.D. UNION OCT. 17, 1937

Word that Richard H. Archbold's $250,000 Consolidated-built "flying laboratory" is at Cairns, Queensland, was received here yesterday by short wave.

Piloted by Russell Rogers, the airboat left Hollandia, New Guinea, for Port Moresby, British Guinea, Friday, and after a brief stay proceeded to Australia. Rogers reported he will leave Cairns tomorrow for the return flight to Hollandia, main base of the American Museum of Natural History's scientific expedition in New Guinea. Archbold remained at Hollandia.

RYAN TO BUILD 6 WAR PLANES

S.D. SUN OCT. 17, 1938

Six military training planes have been purchased by the Guatemala army air force in its second order from Ryan Aeronautical Co., President T. Claude Ryan announced today.

Six craft were delivered to the Central American country from San Diego three months ago. Amount of the new contract is approximately $50,000, and lifts Ryan's backlog of business to $360,000, highest in the company's history.

Completion of the work in 60 days will increase to 22 the number of Ryan planes bought by Latin-American air forces in the past year—12 by Guatemala, three by Honduras, six by Mexico and one by Nicaragua.

The Ryan plant has been placed on a double-shift basis. Bulk of the work is represented by two $100,000 contracts for exhaust manifolds for U. S. Army bombing planes and for British war craft being manufactured by the Lockheed Aircraft Co.

PLANE SECRETS UNDER GUARD

To prevent leakage of information on secret experimental work for the Army and Navy, employes of Consolidated Aircraft Corp. today were warned they would be discharged if they revealed confidential data.

RULES RELEASED

A general set of rules governing control of restricted information was released by C. A. Van Dusen, vice president and works manager. It banned the description to persons outside the plant or to other employes not connected with the project of "secret construction projects, operations or plans of the Army or Navy or any other customer until such information is released for publication by these sources."

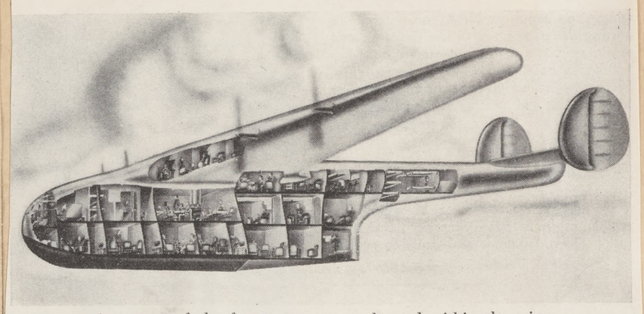
Mr. Van Dusen called attention to the espionage laws of the United States, under which persons giving out secret or confidential military information are subject to as high as $10,000 fine and long terms of imprisonment.

CIVILIANS CHECKED

"This applies," he stated, "not only to those who may be working for the company, but to anyone who comes in possession of such secret information and gives it out to others."

Strict adherence to these rules is necessary not only to protect Consolidated in its experimental work for the Army and Navy but from a standpoint of national defense, officials of the concern pointed out. Admittance of civilians into the factory has been carefully controlled since Consolidated moved here from Buffalo three years ago.

October 1935



A portent of the future—passengers housed within the wing

Design Trends in Giant Flying Boats

WHILE American, English, French, and German airlines are making their transatlantic survey flights with existing equipment, it is interesting to consider what transatlantic flying boats may be like in a very few years. According to a paper by I. M. Laddon and T. P. Faulkner in the *Consolidator*, even the latest Boeing Clipper is but a forerunner of greater things to come. These authors predict:

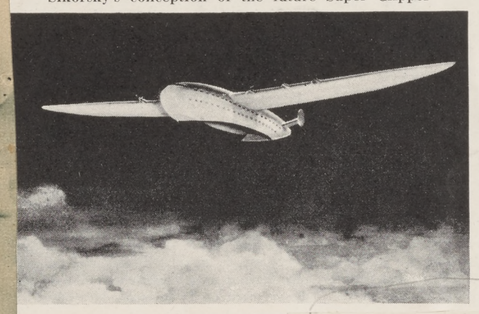
1—Increase in size to a gross weight of 400,000 pounds and more. 2—Three hundred passengers, with baggage, mail, and express, and a range sufficient to cross any ocean non-stop. 3—Speeds of over 300 miles an hour in the stratosphere. 4—Comfort and equipment fully equal to that of an ocean liner. 5—A means of "assisted take-off" (such as a catapult) so that schedules will not be affected by water conditions. 6—Increase in size of wings, allowing all passengers and operators to be accommodated within the wing; thus the hull will assume much smaller proportions and project far less below the wing. 7—Higher wing loadings and the use of stainless steel instead of aluminum alloys, particularly in places of great stress concentration. 8—Large, dependable, liquid-cooled engines completely housed. At the beginning of a voyage, all six engines might be brought into play, and then as fuel load is lightened, two engines might be taken out of commission with "hydromatic feathering" propellers set edgewise into the air stream.

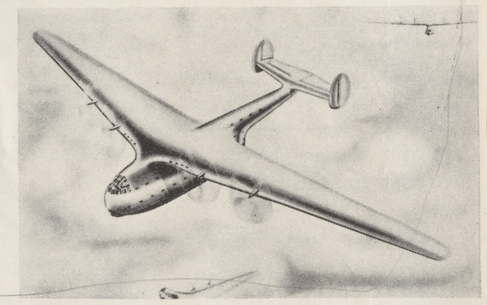
Announcements of the bids recently submitted to Pan American Airways substantiate these trends. Five important companies—Boeing, Consolidated, Douglas, Seversky, and Sikorsky—have submitted designs which are being examined by a Technical Committee of which Colonel Lindbergh is a member.

The design presented by Consolidated Aircraft is to weigh 168,000 pounds and develop a minimum average cruising speed of 240 miles an hour for a 5000-mile range. Four liquid-cooled engines of 2150 horsepower each are to be located between spars in the wing, with an extension shaft driving the tractor propellers. Access to these engines will be available during flight for servicing and minor repairs. Auxiliary tip floats disappear into the wing in flight. It is proposed to house 36 passengers in the wing. The main problem encountered in putting the passengers within the wing was the interference with the cabin by the wing bulkheads or ribs. This was overcome by putting main bulkheads at the sides of each compartment and using arched auxiliary ribs which did not impair the effective head room of the compartment.

In the design submitted by Irog Sikorsky the hemispherical nose of the beaufifully streamlined hull is necessary for stratosphere use, with a supercharged cabin. The payload of the proposed Sikorsky flying boat will be 25,000 pounds and cruising speeds may reach 300 miles an hour.--A.K.

Sikorsky's conception of the future Super Clipper





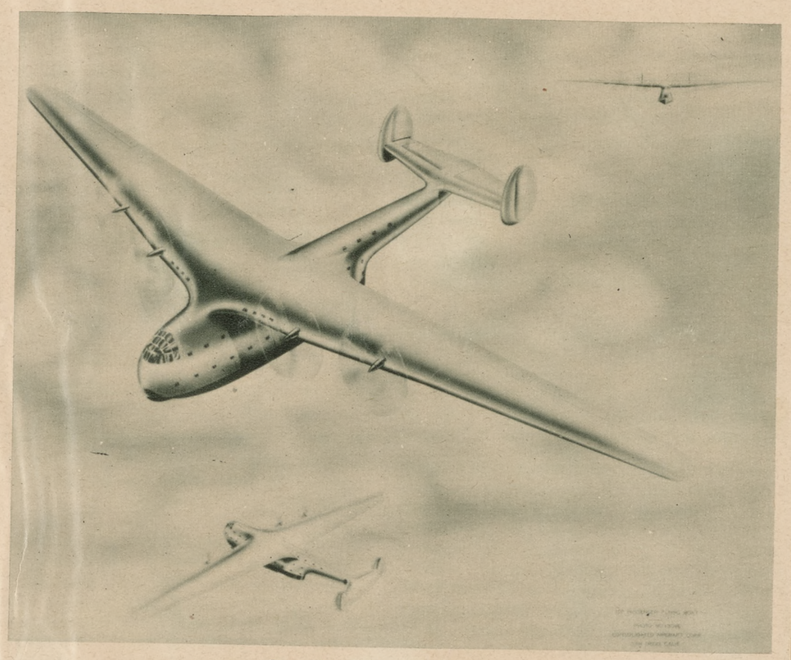
A projected 168,000-pound Consolidated flying boat

Consolidated.

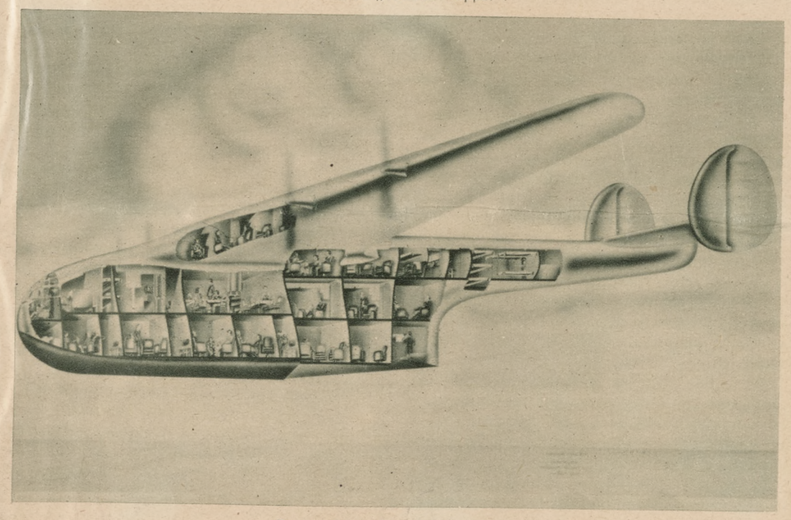
De Consolidated PBY, of, zooals de exportbenaming is, de Consolidated 28, is een tweemotorige vliegboot, welke door de Amerikaansche Marine in den Stillen Oceaan wordt gebruikt als de voorpostenlinie van de vloot. Alhoewel het ontwerp gelijk is gebleven, heeft men in den loop der jaren zoo het een en ander aan details verbeterd, waardoor deze boot aan alle eischen, welke men kan stellen aan een patrouille-vliegboot, volkomen beantwoordt. De geschiedenis van dit type is bijna als een roman en, hoewel men de PBY reeds voor allerlei werk gebruikt, ontdekt men geregeld nieuwe mogelijkheden. Reeds vervangen de Consolidated vliegbooten de torpedojagers en andere lichte schepen der Amerikaansche Marine in den Stillen Oceaan, doch het groote vliegbereik en de mogelijkheid de uitrusting in belangrijke mate te doen varieeren, heeft de autoriteiten reeds op de gedachte gebracht om deze vliegtuigen ook voor ander werk te gebruiken, waarvoor men thans nog schepen bezigt.

Kort na de aflevering van de eerste machine, vloog deze non-stop van Coco Solo bij het Panama Kanaal naar Alameda in Californië, een afstand van ruim 5500 km. Alhoewel later door verschillende verbeteringen het vliegbereik werd gebracht op meer dan 6400 km, was het direct duidelijk, dat dergelijke vliegbooten in minder dan een ag van een basis naar een anderen, op ooten afstand gelegen, basis zouden kunen worden gevlogen. Zooiets is natuurlijk niet mogelijk met schepen, vooral niet als een groot stuk land tusschen de beide bases ligt. Torpedojagers zouden een dag of elf noodig hebben om van San Francisco naar New York te gaan, via het Panama Kanaal, terwijl de PBY's in één dag in New York zouden kunnen zijn. De prestaties der PBY vliegbooten, sedert die eerste recordvlucht, zouden een boek vullen, doch een overzicht der voornaamste vluchten zal u duidelijk maken, waarom dit type, dat thans ook voor den export beschikbaar is, in zoo grooten getale bij de Amerikaansche Marine in gebruik is.

Geheel normaal is bijv., dat escadrilles PBY vliegbooten met de complete bemanning en uitrusting, van Californië naar Honoloeloe vliegen, een afstand van bijna 5000 km over de open zee. Zoo normaal is dit zelfs, dat de Amerikaansche kranten aan een dergelijke vlucht vrijwel geen aandacht meer besteden, doch het feit, dat alle overtochten onder een enkel incident verliepen en met



Consolidated „Yankee Clipper".



De inrichting der plaatsruimten.

De eetzaal van de „Yankee Clipper".

de regelmaat van een klok, spreekt voor de betrouwbaarheid van dit vliegtuig. De machines der Marine vliegen geregeld over water, doch Richard Archbold, die de eerste commercieele versie van de PBY kocht, maakte met zijn machine een vlucht van San Diego naar New York, ruim 4300 km dwars over het Amerikaansche continent. Bij zijn aankomst had hij nog genoeg benzine aan boord om halverwege San Diego te kunnen terugvliegen. Sir Hubert Wilkins gebruikte hetzelfde toestel voor zijn tochten over het Noordpoolgebied, toen hij in opdracht der Russische regeering zocht naar Sigismund Levaneffski en zijn mannen, waarbij hij een afstand van meer dan 30.000 km in totaal aflegde. Alhoewel geregeld de vleugels en staartvlakken met ijs waren bedekt, bleef de machine goed functionneeren en zulks ondanks het feit, dat zij reeds was overbelast door de groote lading aan levensmiddelen, speciale uitrusting en brandstof.

Van het begin af aan werd verwacht, dat de PBY op slechts één motor zou kunnen vliegen bij het volle vlieggewicht. Niemand echter dacht aan de mogelijkheid om ook op slechts één motor te kunnen starten, totdat de chef der fabrieksvliegers op grond van zijn ervaring, dit idee opperde. Als gevolg hiervan werden verschillende proeven genomen met het starten met slechts één

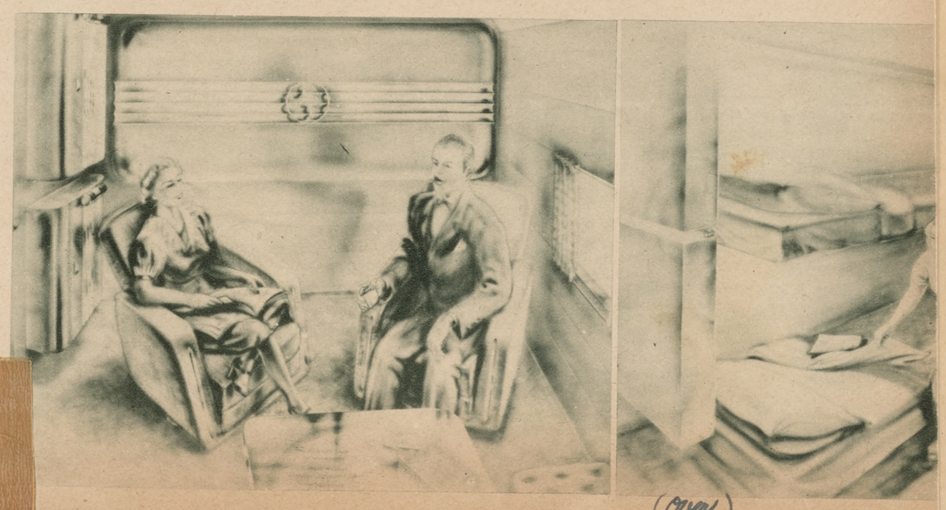
Een vier-persoons kajuit overdag.

motor en men kwam tot de ontdekking, dat zulks mogelijk was met de compleet uitgeruste machine plus een hoeveelheid benzine in de tanks, voldoende voor een nonstopvlucht van meer dan 2000 km. Natuurlijk moet een patrouille-vliegboot op de open zee kunnen neerstrijken en ook weer kunnen starten, zelfs bij ruwe zee en ook in dit opzicht heeft de PBY aan alle verwachtingen voldaan.

Waar wij in „De Vliegsport" van den 17en September verleden jaar op blz. 6 reeds een volledige beschrijving van de PBY gaven, willen wij er hier niet meer op terugkomen. Intusschen zijn thans wel verschillende prestaties bekend geworden; de maximum snelheid op 3650 m bedraagt 312 km/u, de minimum snelheid is 98 km/u, het vliegbereik 6758 km bij windstilte en kruissnelheid, het practische plafond 8900 m, terwijl een hoogte van 4575 m in 13′ 24″ wordt bereikt en de boot bij windstilte en gladde zee in 18″ los is.

Uit de PBY is een verkeersvliegtuig voor 24 passagiers ontwikkeld, dat wij ook reeds eerder beschreven en nu ook een amphibievliegboot met een driewielig onderstel. De beide achterwielen verdwijnen in de zijwanden van den romp en het neuswiel in de voorsteven; een en ander heeft aan de structuur van den romp niets veranderd, terwijl de maximum snelheid door dit arrangement slechts met 10 km/u is verminderd. Het vlieggewicht bedraagt 7711 kg en de bemanning bestaat uit vier koppen. Op een basis van een kruissnelheid van 241 km/u bij 60 % van het beschikbare vermogen en vliegende op een hoogte van 3650 m, bedraagt het vliegbereik 965 km indien 30 passagiers worden vervoerd en 2900 km met 12 passagiers, in welk geval de kajuit is uitgerust met fauteuils, welke 's nachts in couchettes kunnen worden veranderd. Andere inrichtingen van de kajuit zijn natuurlijk eveneens mogelijk en zoo zijn de PBY amphibie en vliegboot ook te leveren als vrachtvliegtuig, luchtjacht of exploratie-vliegtuig. In dezen laatsten vorm maakt een PBY deel uit van de uitrusting van de expeditie van Richard Archbold naar Nieuw Guinea.

Consolidated heeft ook meegedongen naar de prijsvraag van Pan American Airways voor de „Yankee Clippers", welke in staat moeten zijn om een betalende lading van 11.340 kg, w.o. 100 passagiers met hun bagage en een bemanning van 16 koppen te vervoeren over een afstand van 8000 km, terwijl het toestel zal moeten kunnen vliegen op een hoogte van 6100 m, waarbij de druk in de kajuit gelijk moet zijn aan die, welke heerscht op een hoogte van 2450 m. In tegenstelling tot de andere fabrieken, heeft Consolidated dit type ontworpen als een vier-motorige vliegboot. Men heeft dit kunnen doen door 36 der 100 passagiers in den vleugel onder te brengen; wel is waar is de vleugel hierdoor wat dikker geworden dan strikt noodzakelijk is voor de sterkte, doch hiertegenover staat een belangrijk geringer motorvermogen, dus een goedkoopere



Een twee-persoons kajuit ingericht als dag- en als nachtverblijf.

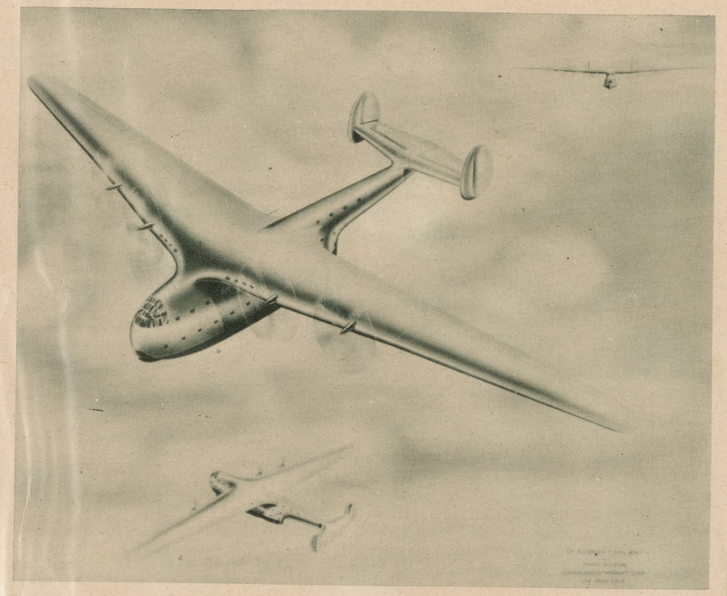
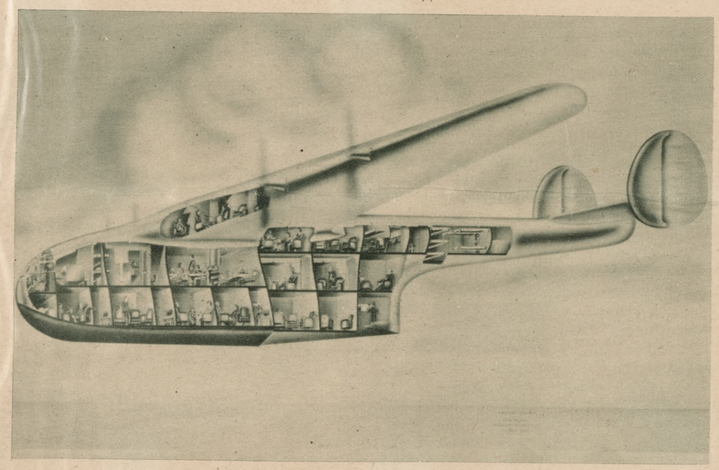
Torpedojagers zouden een dag of elf noodig hebben om van 'San Francisco naar New York te gaan, via het Panama Kanaal, terwijl de PBY's in één dag in New York zouden kunnen zijn. De prestaties der PBY vliegbooten, sedert die eerste recordvlucht, zouden een boek vullen, doch een overzicht der voornaamste vluchten zal u duidelijk maken, waarom dit type, dat thans ook voor den export beschikbaar is, in zoo grooten getale bij de Amerikaansche Marine in gebruik is.

Geheel normaal is bijv., dat escadrilles PBY vliegbooten met de complete bemanning en uitrusting, van Californië naar Honoloeloe vliegen, een afstand van bijna 5000 km over de open zee. Zoo normaal is dit zelfs, dat de Amerikaansche kranten aan een dergelijke vlucht vrijwel geen aandacht meer besteden, doch het feit, dat alle overtochten onder een enkel incident verliepen en met



Consolidated „Yankee Clipper".



De inrichting der plaatsruimten.

De eetzaal van de „Yankee Clipper".

de regelmaat van een klok, spreekt voor de betrouwbaarheid van dit vliegtuig. De machines der Marine vliegen geregeld over water, doch Richard Archbold, die de eerste commercieele versie van de PBY kocht, maakte met zijn machine een vlucht van San Diego naar New York, ruim 4300 km dwars over het Amerikaansche continent. Bij zijn aankomst had hij nog genoeg benzine aan boord om halverwege San Diego te kunnen terugvliegen. Sir Hubert Wilkins gebruikte hetzelfde toestel voor zijn tochten over het Noordpoolgebied, toen hij in opdracht der Russische regeering zocht naar Sigismund Levaneffski en zijn mannen, waarbij hij een afstand van meer dan 30.000 km in totaal aflegde. Alhoewel geregeld de vleugels en staartvlakken met ijs waren bedekt, bleef de machine goed functionneeren en zulks ondanks het feit, dat zij reeds was overbelast door de groote lading aan levensmiddelen, speciale uitrusting en brandstof.

Van het begin af aan werd verwacht, dat de PBY op slechts één motor zou kunnen vliegen bij het volle vlieggewicht. Niemand echter dacht aan de mogelijkheid om ook op slechts één motor te kunnen starten, totdat de chef der fabrieksvliegers op grond van zijn ervaring, dit idee opperde. Als gevolg hiervan werden verschillende proeven genomen met het starten met slechts één

Een vier-persoons kajuit overdag.

motor en men kwam tot de ontdekking, dat zulks mogelijk was met de compleet uitgeruste machine plus een hoeveelheid benzine in de tanks, voldoende voor een nonstopvlucht van meer dan 2000 km. Natuurlijk moet een patrouille-vliegboot op de open zee kunnen neerstrijken en ook weer kunnen starten, zelfs bij ruwe zee en ook in dit opzicht heeft de PBY aan alle verwachtingen voldaan.

Waar wij in „De Vliegsport" van den 17en September verleden jaar op blz. 6 reeds een volledige beschrijving van de PBY gaven, willen wij er hier niet meer op terugkomen. Intusschen zijn thans wel verschillende prestaties bekend geworden; de maximum snelheid op 3650 m bedraagt 312 km/u, de minimum snelheid is 98 km/u, het vliegbereik 6758 km bij windstilte en kruissnelheid, het practische plafond 8900 m, terwijl een hoogte van 4575 m in 13′ 24″ wordt bereikt en de boot bij windstilte en gladde zee in 18″ los is.

Uit de PBY is een verkeersvliegtuig voor 24 passagiers ontwikkeld, dat wij ook reeds eerder beschreven en nu ook een amphibievliegboot met een driewielig onderstel. De beide achterwielen verdwijnen in de zijwanden van den romp en het neuswiel in de voorsteven; een en ander heeft aan de structuur van den romp niets veranderd, terwijl de maximum snelheid door dit arrangement slechts met 10 km/u is verminderd. Het vlieggewicht bedraagt 7711 kg en de bemanning bestaat uit vier koppen. Op een basis van een kruissnelheid van 241 km/u bij 60 % van het beschikbare vermogen en vliegende op een hoogte van 3650 m, bedraagt het vliegbereik 965 km indien 30 passagiers worden vervoerd en 2900 km met 12 passagiers, in welk geval de kajuit is uitgerust met fauteuils, welke 's nachts in couchettes kunnen worden veranderd. Andere inrichtingen van de kajuit zijn natuurlijk eveneens mogelijk en zoo zijn de PBY amphibie en vliegboot ook te leveren als vrachtvliegtuig, luchtjacht of exploratie-vliegtuig. In dezen laatsten vorm maakt een PBY deel uit van de uitrusting van de expeditie van Richard Archbold naar Nieuw Guinea.

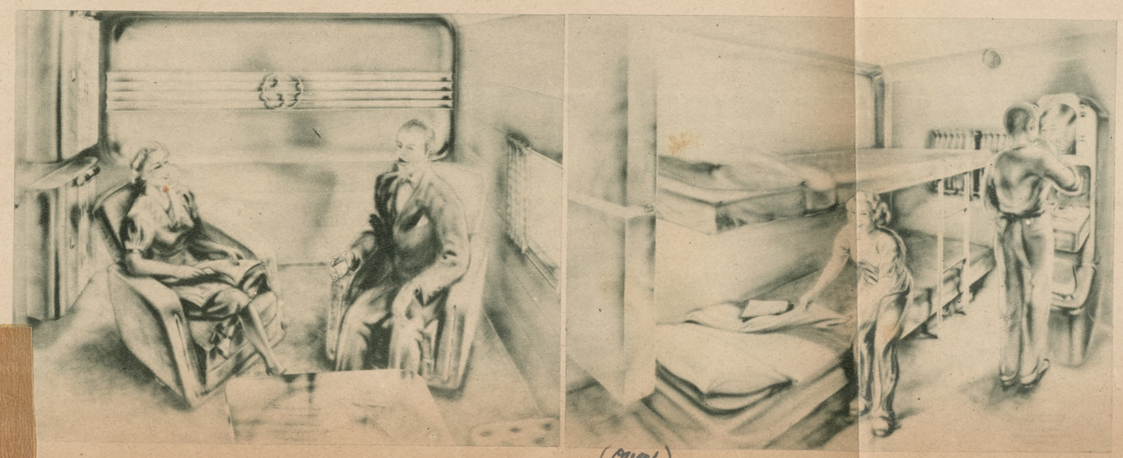
Consolidated heeft ook meegedongen naar de prijsvraag van Pan American Airways voor de „Yankee Clippers", welke in staat moeten zijn om een betalende lading van 11.340 kg, w.o. 100 passagiers met hun bagage en een bemanning van 16 koppen te vervoeren over een afstand van 8000 km, terwijl het toestel zal moeten kunnen vliegen op een hoogte van 6100 m, waarbij de druk in de kajuit gelijk moet zijn aan die, welke heerscht op een hoogte van 2450 m. In tegenstelling tot de andere fabrieken, heeft Consolidated dit type ontworpen als een vier-motorige vliegboot. Men heeft dit kunnen doen door 36 der 100 passagiers in den vleugel onder te brengen; wel is waar is de vleugel hierdoor wat dikker geworden dan strikt noodzakelijk is voor de sterkte, doch hiertegenover staat een belangrijk geringer motorvermogen, dus een goedkoopere exploitatie, hetgeen de wat grootere weerstand en dus wat lagere kruissnelheid meer dan compenseert.

Ten einde de vrije ruimte in de cabines in den vleugel niet te verminderen, zijn de wanden uitgevoerd als de hoofdribben, terwijl hulpribben langs het plafond en den voorkant loopen, zonder dat de passagiers hier last van hebben. Een voordeel van deze constructie is nog, dat de dragende vleugelhuid nu voldoende sterk bleek te zijn om de druk bij het vliegen in de sub-stratosfeer te weerstaan zonder dat het noodig was extra versterkingen aan te brengen.

Vier vloeistof gekoelde Allison motoren van 2150 pk elk zijn geheel in den vleugel ondergebracht en drijven de schroeven door verlengde assen. De motoren zijn gedurende de vlucht bereikbaar en kleine reparaties kunnen zonder moeite worden verricht. De kruissnelheid bedraagt 386 km/u. Aan de inrichting der cabines is natuurlijk alle zorg besteed. Er zijn cabines voor twee en voor vier passagiers, die overdag beschikken over draaibare fauteuils met verstelbare leuning. 's Nachts kunnen deze stoelen worden veranderd in couchettes; de boven-couchettes zijn in de wanden geborgen zooals in een slaapwagen. Er is voldoende ruimte tusschen de bedden om rechtop te kunnen zitten. Alle twee-persoons kajuiten hebben een wegklapbare waschtafel, terwijl voor de vierpersoons kajuiten toiletkamers voor 12 menschen zijn ingericht. De eetzaal ligt op het middendek en trappen leiden naar het boven- en benedendek. Achttien menschen kunnen tegelijkertijd dineeren. De passagiers beschikken verder nog over een lounge, een schrijfzaal en een promenadedek.

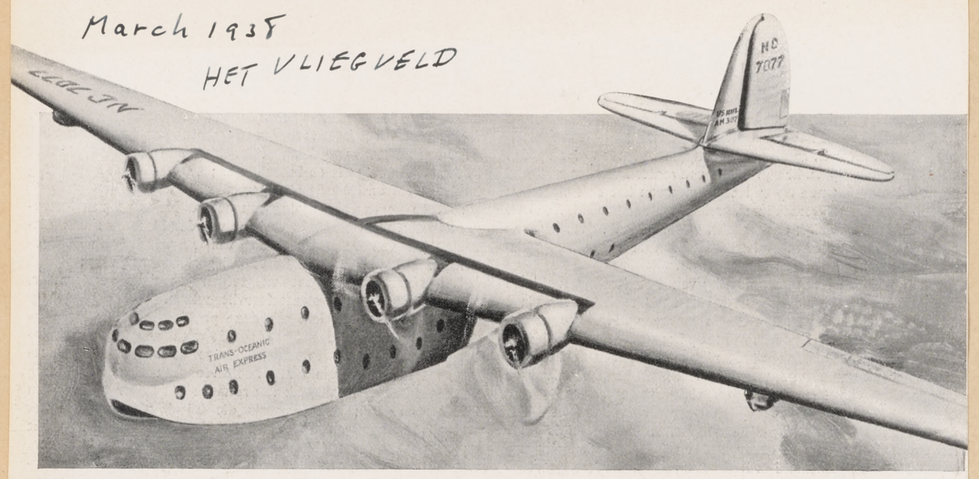
De bemanning beschikt over twee kajuiten. De grootste ligt op het bovendek in de rompstaart en is ingericht voor zeven menschen. Behalve de zeven bedden is hier een waschtafel en een toilet, terwijl ieder lid der bemanning over één eigen kast beschikt. Een kleinere kajuit voor twee man bevindt zich op het middendek achter de stuurhut en voor de keuken. Deze keuken ligt vlak naast de eetzaal en is zoo volledig ingericht als die van een luxe-jacht. Zeer complete warme maaltijden kunnen dan ook gedurende de reis worden geserveerd.

De handbagage gaat met den passagier in zijn cabine, doch de groote bagage wordt gestouwd in de ruimen, waar ook de post en vrachtgoederen worden geladen. Er zijn drie van dergelijke ruimen, één onder de stuurhut, één boven de keuken in den vleugel en één achter in de staart; zij zijn gedurende de vlucht bereikbaar. De stuurhut neemt het voorste deel van het middendek in beslag. Dienst doen steeds een 1ste officier en een 2e officier als bestuurders, een werktuigkundige, een marconist en een navigator. De marconist en de navigator zitten achter de stuurhut en hun instrumenten zijn langs de wanden opgesteld. De werktuigkundige zit tegen den achterwand, waar op een paneel alle motorinstrumenten zijn ge-



Een twee-persoons kajuit ingericht als dag- en als nachtverblijf.

(over)

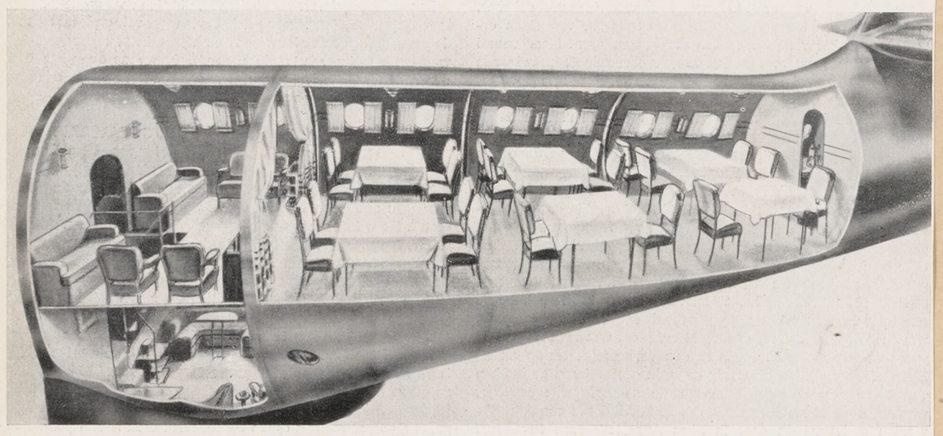


Vier-motorige vliegboot voor transatlantisch verkeer, ontworpen door de Consolidated Aircraft Corporation

Consolidated Oceaan-vliegboot

EVENALS zulks reeds het geval is met vele andere vormen en uitingen van technisch-kunnen, zoo begint zich bij de Amerikanen, in steeds sterkere mate, ook op het gebied van den vliegtuigbouw de zin voor het „kolossale" te ontwikkelen. Al lang kennen we Amerika als het land van de hoogste huizen, de grootste bruggen, de dikste boomen, de rijkste menschen en de 't schoonst opgemaakte filmvrouwen, mitsgaders als het land van duizend-en-één andere zaken die de biggest en greatest en largest in dit ondermaansche zijn. Waarom zouden de Yankees zich dus ook niet met het praedicaat tooien, de scheppers van de grootste vliegtuigen ter wereld te mogen heeten? Op het oogenblik zijn ze dat gedecideerd nog niet, maar men is aan gene zijde van den grooten plas toch ijverig doende, om het te worden.

Indrukwekkende apparaten zijn reeds de Sikorsky „flying dreadnought", de XPBS-1 met vier 1050 pk Pratt & Whitney „Twin Wasp" motoren, een voor de Amerikaansche Marine bestemde vliegboot, die 13 Augustus van het vorige jaar haar eerste vlucht maakte, alsmede de Consolidated XPB2Y-1, 'n eveneens voor de Amerikaansche Marine gebouwde vliegboot met vier Twin Waspen van 1050 pk elk, die in December vorig jaar klaar kwam (zie afbeelding bl 71 en 80). Verder noemen we de vier-motorige Martin 156, een Oceaan-vliegboot voor 46 passagiers, uitgerust met vier Wright „Cyclone" motoren, elk van 1000 pk. Deze boot heeft 47,85 m vlucht en weegt leeg 13.479 kg en volledig belast 28.148 kg. Voor de proefvluchten gereed, is de vier-motorige Douglas DC-4 landeendekker, die ingericht is voor het vervoer van 40 passagiers. Dit jongste lid van de vermaarde familie der DC-2's en DC-3's, heeft 42,16 m vlucht en weegt, volledig belast, 27.240 kg. Voor de Pan American



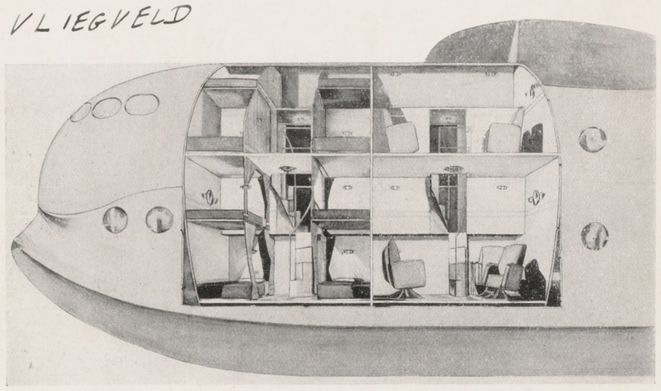
De eetzaal en het salon op het bovendek. Onderaan links de cocktail lounge

Airways staan nog op stapel zes Boeings-314, een vier-motorige hoogdekker vliegboot voor trans-atlantisch verkeer, ingericht voor het vervoer van 72 passagiers. Deze luchtreus heeft bijna 46½ m vluchtwijdte, 22.185 kg eigen gewicht en een totaal vliegvaardig gewicht van 37.340 kg.

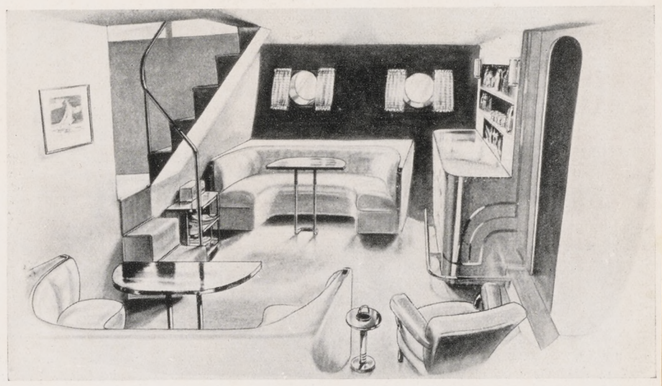
Maar nog weer veel grooter zijn de ontwerpen van voor de nabije toekomst bestemde luchtreuzen, waaraan in de teekenkamers van verschillende Amerikaansche vliegtuigfabrieken momenteel het leven wordt, of reeds is gegeven. De directie der Pan American Airways, die dan bij de Boeing fabriek zes vier-motorige Boeing-314 vliegbooten in bouw heeft gegeven, heeft alweer aan de toekomst gedacht en de luchtvaart-wereld in verbazing gebracht, door een competitie uit te schrijven betreffende den bouw van een Oceaan-vliegboot voor het vervoer van 100 passagiers met een bemanning van 16 koppen. De P.A.A. maakt hier ineens een heel groote stap, want wat zij thans vraagt, is een vliegboot die tweemaal de lading moet kunnen torsen en het dubbele van den afstand kunnen afleggen van de Boeing-314, die nog op stapel staat. De nieuwe boot moet kunnen vliegen op een hoogte van 6000 meter of hooger, terwijl de druk in de cabine overeenkomt met een hoogte van 2400 meter.

Tot deelneming aan de competitie zijn uitgenoodigd Boeing, Consolidated, Curtiss-Wright, Douglas, Lockheed, Glenn Martin, North American en Sikorsky. Daar met het uitwerken van een dergelijk ontwerp natuurlijk groote kosten gemoeid zijn, kan elke fabriek eerst een vóór-ontwerp inleveren met een voorloopige bsschrijving van de typen motoren die men denkt te gebruiken. Indien de Pan American Airways voor dit vóórontwerp belangstelling heeft, zal zij bij de betrokken fabriek een tweede, meer gedetailleerde beschrijving aanvragen. Elke fabriek die uitgenoodigd zal worden een meer uitgewerkt ontwerp in te zenden, ontvangt als tegemoetkoming in de kosten, een bedrag van f. 42.000.—, welk bedrag zij mag behouden, ook wanneer zij geen opdracht ontvangt.

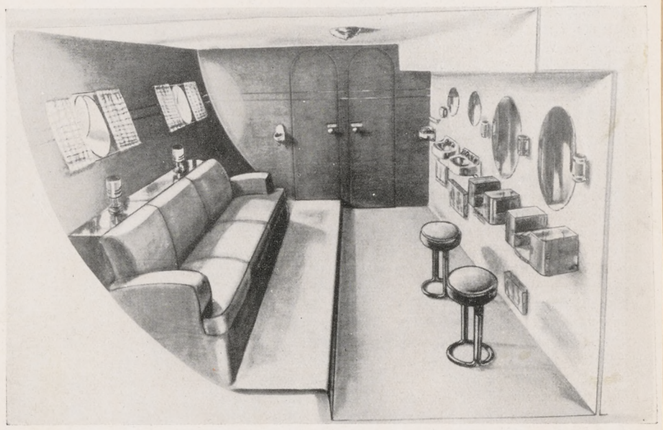
De ervaring heeft bewezen, hoe gevaarlijk en onverstandig het met betrekking tot het aviatisch menschelijk-vernuft is, te beweren „dat het niet kan". Men heeft vroeger zoo dikwijls gezegd, dat iets niet kon, terwijl al spoedig bleek, dat het wèl kon. Toch zijn er menschen, die vrij sceptisch staan tegenover de wijze



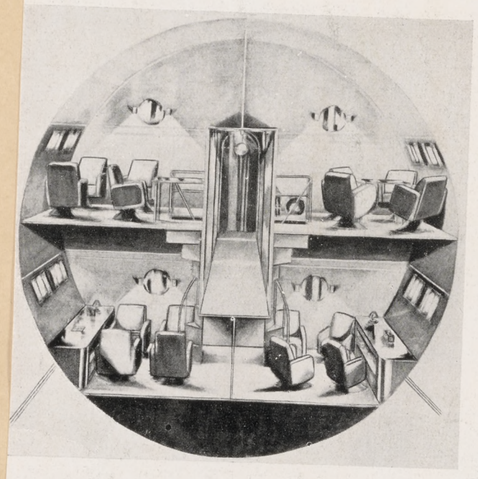
Nacht- en dagverblijven.



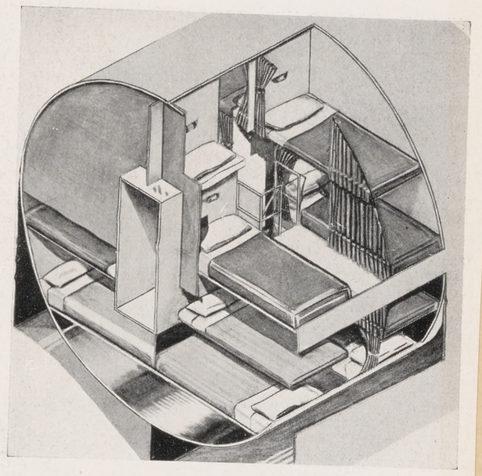
De cocktail-lounge



Dames-toilet.



Passagiers-dagverblijf



Slaapvertrekken

waarop de P.A.A. thans de scheppingskracht der Amerikaansche constructeurs uitdaagt. De bekende Amerikaansche vliegermajoor All Williams bijv., heeft zich over de competitie der Pan American Airways als volgt uitgelaten.

„Wie heeft in ons land" — aldus All Williams — „de motoren, die 2500 pk kunnen leveren bij een kruissnelheid van 62 pCt. van het totale vermogen? Droomen zijn mooi, maar wat nu gevraagd wordt, moet verwezenlijkt worden. Iemand moet zóó mooi droomen, dat we tot het ontwerp van de motoren komen, die straks het werk moeten doen"... . Anderen weer, zijn minder pessimistisch dan All Williams. Ook zijn er, die het heele probleem eenvoudig nonchalant wegwuiven, door te zeggen: „Als Pan American Airways kans ziet om het geld voor zoo'n boot te vinden, zien onze ingenieurs wel kans, om zoo'n boot te bouwen". Ongetwijfeld heeft het vernuft het geld gemaakt. Maar het geld kan geen vernuft maken. Het wèl een handje helpen. Met groote belangstelling wachten we het resultaat der P.A.A.-competitie af.

Intusschen heeft de Consolidated Aircraft Corporation te San Diego in Californië, die voor Europa vertegenwoordigd wordt door de Fokker fabriek hier te lande, het ontwerp van een Oceaan-vliegboot gereed, die toch ook alweer een heele stap in de richting van het door de P.A.A. gevraagde monster-project is. Aan ontwerpen en voorproefnemingen voor dit project, heeft Consolidated reeds een bedrag van meer dan $ 100.000 besteed. Het ontwerp, waarvan wij hierbij eenige interieur-afbeeldingen geven, betreft een geheel metalen eendekker-vliegboot met twee dekken, ingericht voor het vervoer van 54 passagiers en een bemanning van 10 koppen. Er zijn 14 hutten, voor twee tot vier passagiers elk. Het bovendek loopt door tot achter in den bootsromp, waarin zich, onder het stabilo, de keuken bevindt. De op dit dek gelegen eetzaal, biedt plaats aan 20 passagiers, verdeeld over 6 tafels. Het voorste gedeelte van de eetzaal, is ingericht als lounge, terwijl we vlak hieronder, op het beneden dek, de cocktail lounge vinden. In het voorste gedeelte van den bootsromp, zijn zoowel op het beneden- als het bovendek, de verschillende passagiersverblijven en de toiletten ingericht. In den neus van de boot bevinden zich het ruime stuurhuis, de kaartenkamer en de verblijven voor de bemanning. In deze luxueuse uitvoering kunnen, als gezegd, 54 passagiers worden vervoerd. De Consolidated Oceaan-vliegboot kan echter, wanneer uitgerust met een meer eenvoudige cabine-inrichting, zooals in de bestaande groote vliegbooten, zeer wel 75 passagiers met bagage, vervoeren op een Oceaanvlucht van Engeland naar Amerika en 100 passagiers met bagage, op een vlucht over den Oceaan in oostelijke richting. Vliegende naar Europa kan de betalende lading grooter zijn, omdat dan, in verband met den overheerschenden westenwind, minder bedrijfsstof behoeft te worden meegenomen.

De voornaamste cijfers betreffende dezen luchtreus zijn: vluchtwijdte 56,39 meter en vleugeloppervlak 270 m². Leeggewicht 25.199 kg, nuttige last 24.741 kg, totaal vliegvaardig gewicht 49.940 kg. Motorvermogen 4 × 1500 pk. Snelheid op 3050 meter 364 km/h, op zeeniveau 330 km/h. Vliegbereik met 4535 kg baatlast 9660 km, met 13.605 kg baatlast 4830 km.

HENRI HEGENER

Voordrachtavond op 25 Maart a.s.

DE Koninklijke Nederlandsche Vereeniging voor Luchtvaart zal, in samenwerking met de Amsterdamsche Aero-Club, een voordrachtavond houden op Vrijdag 25 Maart in Hotel Krasnapolsky te Amsterdam, waar de heer Prof. Dr. J. Kampé de Fériet, directeur van het stroomingsinstituut van de Universiteit van Rijssel (Lille) zal spreken. De voordracht, die verlucht zal worden met lichtbeelden en film, is getiteld

Sur la Turbulence de l'Atmosphère

Deze onderzoeker heeft veel aandacht besteed aan de inwendige bewegingen van de atmosfeer, welke bij slecht weer de onrustige stooten geven, die de constructie der vliegtuigen zwaar kunnen belasten. De veiligheid der vliegtuigen wordt pas verzekerd, indien voldoende over deze luchtbewegingen bekend is. Bij zijn onderzoek is gebruik gemaakt van registreer-instrumenten in vliegtuigen en aan den grond. Verder zijn zeer interessante kinofilms gemaakt, die te Amsterdam zullen worden vertoond, van het ontstaan en groei en verval van wolken, ook bij de Matterhorn. Van dezen pyramidevormigen berg, is een model in de windtunnel onderzocht ter vergelijking met hetgeen in de vrije afmosfeer is waargenomen.

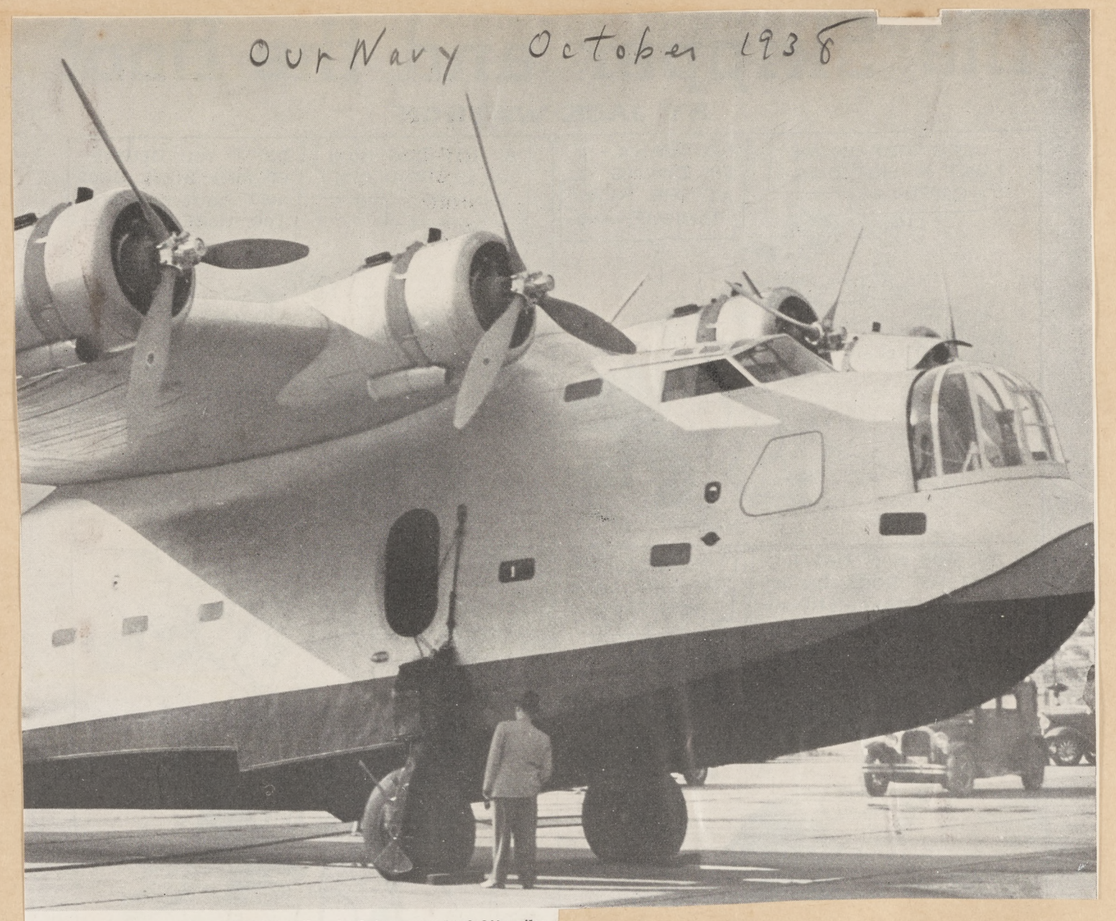
Wij zijn overtuigd, dat Prof. Kampé de Fériet, zijn toehoorders zal weten te boeien. Zijn bekendheid met de Duitsche taal, kan het debat vergemakkelijken.

March 1938
HET VLIEGVELD

Consolidated XPB2Y-1 verkennings- en bomwerpvliegboot der Amerikaansche Marine

Our Navy October 1938

Here is one million dollars worth of Navy long-range bomber. (Later ones will not cost as much.) It is Consolidated's XPB2Y-1 and is the very last word, afloat, in naval aircraft along the line of air cruisers. The tail surfaces (empennage) appear on the cover of this issue and are featured by a machine gun nest in what there is of a vertical fin. Performance figures have not been released, but expert observers have noted engines (four) of 1050 horsepower each; a wing span of 115 feet; a length of 80 feet; a height (on landing gear) of 22 feet; have



estimated a range of 5,000 miles, loaded; a speed of 240 miles per hour; a weight of 30 tons. The air cruiser will be manned by a crew of 16. Sleeping accommodations are provided for eight and the ship is fully equipped with a galley, restrooms and other comfort features during long flights. Machine guns of extra large caliber will be mounted in the turrets in nose, fuselage and tail. Consolidated's huge plant has been revamped to put these long-range bombers into quantity production immediately.

'GUBA' ON FLIGHT TO GET SUPPLIES

S.D. SUN 10/15/38

To obtain supplies, Richard Archbold's $250,000 Consolidated airboat, the "Guba," has been flown from Hollandia, Dutch New Guinea, to Cairns, Queensland, Australia, Barney F. Boyd, local amateur radio operator said today.

The "flying laboratory" was piloted by Russell Rogers, who was accompanied by Raymond Booth, raidoman; Capt. Lewis Yancey, navigator; and Gerald Brown and Stephen Barrinka, engineers. Mr. Archbold and Harold Ramm, operator of the scientific party's base radio station at Hollandia, remained in Dutch New Guinea, where the former is leading a biological expedition for the American Museum of Natural History.

NAVY TO SPEAK AROUND WORLD

S.D. SUN OCT. 30, 1938

A voice from the sky nearly a mile above San Diego will comprise part of an international pre-Navy day program to be held Sunday.

The voice of Vice Adm. Ernest J. King, commander of Fleet Air Force, will be heard from the radio room of the new Consolidated four-motor bomber at 11 a.m. Lieut. Comdr. Andrew Crinkley will be at the controls.

From San Diego the broadcast will shift to Adm. Harry E. Yarnell, commander-in-chief of the Asiatic fleet, aboard the USS Augusta, in Shanghai. Rear Adm. Henry E. Lackey, commander of Squadron 40-T, Villefrance, France, will follow. He will speak from the cruiser Omaha. Adm. Alfred W. Johnson, commander of the Atlantic Squadron, will be the last to be heard, speaking from the battleship New York in New York.

'Flying Laboratory Returns to Hollandia

S.DUNION 10/24/38

Piloted by Russell Rogers, the American Museum of Natural History's $250,000 "flying laboratory," in which Capt. Richard Archbold flew from San Diego to New Guinea last June, returned Friday to Hol landia after an 1800-mile flight to Cairns, N. Z. Word to this effect was received by short wave yesterday from Archbold.

En ruote from New Zealand, Russell stopped at Port Moresby, British Guinea, for supplies.

Archbold has reported to the New York office of the Natural History museum the expedition has obtained rare and beautiful specimens of bird and animal life in New Guinea. A number of these were obtained, he said, on the ascent of 12,000-foot Mt. Wilhelmina, 50 miles northeast of the expedition's advance base at Lake Habbema, 300 miles from the coast.

LONG PATROL BOMBER FLIGHTS REDUCED

S.D. SUN 11/14/38

Long offshore flights by San Diego patrol bombers will be held to a minimum until opening of Fleet Problem 20 on Jan. 4, Rear Adm. Charles Blakely, Aircraft Scouting Force commander, announced today. The 48 North Island-based planes last week participated in extensive maneuvers which served as 'dress rehearsal" for the annual war games.

Two Pearl Harbor squadrons—VP-1 and VP-18 — are being equipped with Consolidated PBY-4 bombers in preparation for a non-stop delivery flight from San Diego to Hawaii early in 1939.

Society Takes To Hills As Hunters' Moon Blazes Trail

Verne Sutherlands Are Buffet Supper Hosts; Sustaining Members To Entertain Junior League

By PATRICIA DENNSTEDT

There are certain prescribed happenings that influence society's divertissements . . . . . the arrival of a houseguest, the hither and thither wanderings of our travelers, the announcement of betrothals and far on down the list.

But did you ever stop to think how a moon can affect the social routine?

In June, it's the Honey Moon that plays havoc with our social columns, crowding out all else in favor of the radiant brides. Last month the Harvest Moon inspired all sorts of barn dances (you'll remember the Fletcher-Royle-Steen "shindig"), hay rides and numerous country outings in keeping with the onrush of fall.

And this month it's that silver satellite, the Hunters' Moon, that is adding yet a different touch to our social goings-on.

Of course the opening of duck season may have a little something to do with it. But moon tradition has it that this is the month to hunt. And we believe it now we've discovered that so many hardy socialites have deserted the city limits to shoulder their guns for the first big "shoot."

There's that congenial group, Mr. and Mrs. Joe Brennan, Maj. Rueben H. Fleet, Comdr. Samuel Zeigler, Mr. and Mrs. Kneeland Jenkins, Maj. Jimmy Doolittle and Charles Babb, the latter four of Los Angeles, who hunted together during dove season. Several of them are at the Harry Schnells' "Sky Ranch," in the mountains above Barrett Dam, to bag their first ducks of the season this weekend. Maj. Fleet is missing from the group, having been called to Seattle by the illness of his mother.

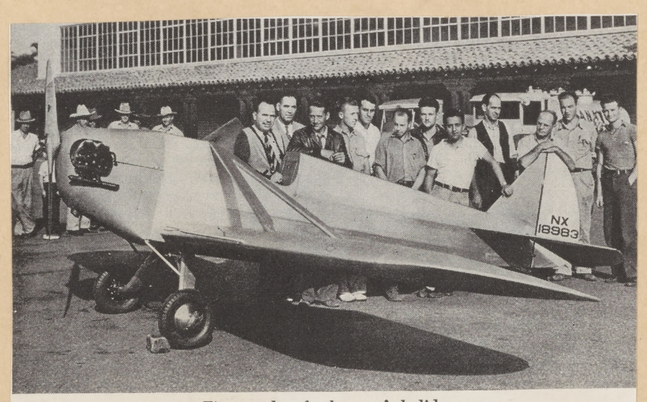
Lake Cuyamaca and Corte Madera are popular spots during duck season. Practically the entire Fletcher clan with some 20 or 30 of their friends are at the Fletcher cottages in Cuyamaca this weekend hoping to get their limit. For this party, however, the wives were left at home.

Wiley Ambrose is in charge of the hunt at Corte Madera. At the Ambrose ranch house today are Mr. and Mrs. Earl Gustafson, Mr. and Mrs. Charles Davis and Mr. and Mrs. Wade Ambrose.

Ducks 'n Dove, Their Social 'Game'

S.D. SUN Oct. 16, 1938

Relaxing at the Brennans' Descanso lodge, "Falcon Lair," after a recent hunting party are, left to right, Mr. Joseph Brennan, Maj. Rueben H. Fleet, Comdr. Samuel Bregantes, Mrs. Brennan, Mr. Charles Babb, Mrs. Kneeland Jenkins and Mr. Jenkins.



Fine results of a busman's holiday

Seventeen American November 1938

Busman's Holiday

NO one has ever heard of the employees of a shoe factory banding together to build shoes on their own time, but the construction of new types of aircraft is so fascinating an activity that men whose vocation lies in the construction or development of aircraft, will take a long busman's holiday and devote the major portion of their leisure hours to the construction of a novel design of airplane. Thus our readers will perhaps remember that the young engineers of the N.A.C.A. laboratory at Langley Field, under the leadership of Fred Weick, built a light plane with a nose-wheel or "tricycle" type landing gear, and this type of gear has now been quite widely adopted.

Now we hear that the employees of Consolidated Aircraft Corporation have formed an Aircraft Mechanics Association, and instead of plotting strikes or joining the C.I.O., the Association has designed and built a very trim and workmanlike light plane, which is shown in our photograph. While the new ship is designed on the conventional lines of a low-wing single-seater, it shows excellent streamlining, good structure, and a simplicity which will help if the ship is ever put on the market. Equipped with a 40 horsepower Continental engine, carrying fuel for 400 miles, and 20 pounds of baggage, the machine attained a top speed of 94 miles per hour—a highly satisfactory figure for such a craft.—*A. K.*

S.D. SUN Oct. 26, 1938

Lost Your Card? Call The Sun

Seventeen men in one department of the Consolidated Aircraft plant had lost their Social Security cards, but thanks to Sidney Long, one of their fellow-workers, they will get the engraved metal cards from The Sun with the number stamped thereon.

Mr. Long told The Sun that he rounded up all those with lost cards in his department and had them send their names to The Sun to get the metal cards, which are indestructible.

Any person in San Diego who has a Social Security number may obtain one of the cards with their name and number stamped on the card by sending their name and number to The Sun, accompanied by 10 cents. The dime pays for the cost of handling and mailing.

BOMBER LANDS AFTER SECOND U. S. CROSSING

15 Hours Required For Return Trip; Fought Winds

S.D. SUN 11/10/38

The Navy's largest and most powerful airplane, the $1,000,000 Consolidated four-motored experimental bomber, today rested on North Island after its second daring non-stop transcontinental flight in two weeks.

Following a route southerly of that transversed in 13 hours 55 minutes, Oct. 27, the 25-ton airboat, operated by Lieut. Comdr. Andrew Crinkley, two co-pilots, five enlisted men and two civilians, landed in the harbor at 6:55 p. m. yesterday, 15 hours 10 minutes after taking off from Anacostia, D. C.

LANDING LIGHTS ON

The landing area was brilliantly illumined by serachlights on the Naval Air Station's north beach.

The flight crew included, in addition to Lieut. Comdr. Crinkley, Lieuts. C. H. Duerfeldt and E. R. Sanders, co-pilots; G. K. Herman, chief radioman; C. R. Roos, aviation machinist mate 1c; Albert H. Geck, aviation machinist mate 1c; J. A. Peters, chief machinist mate; F. R. Vanderhoef, radioman 1c; William Wheatley, chief test pilot, and R. R. Keith, engineer, both of Consolidated Aircraft Corp.

Average speed attained by the ship, which bucked headwinds a major part of its 2400-mile trip across an area where a forced landing might have proved fatal, was approximately 160 miles per hour.

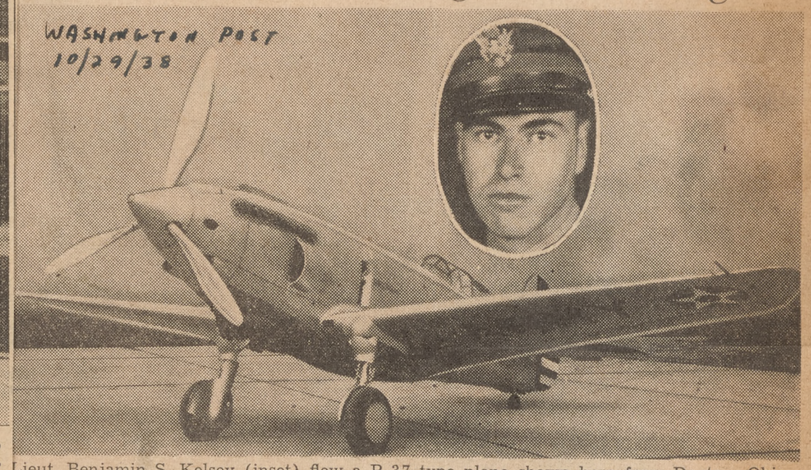
DEMONSTRATION OF POWER

The routine manner in which the bomber twice crossed the continent has demonstrated the ease with which squadrons of Navy patrol planes might be transferred at a moment's notice from one coast to another in event of a national emergency, North Island authorities pointed out today.

THE WASHINGTON POST: SA

-Mile-a-Minute Flight by New Army Plane Hailed as Answer to Foreign Air Challenge

WASHINGTON POST 10/29/38



Lieut. Benjamin S. Kelsey (inset) flew a P-37-type plane shown here from Dayton, Ohio, to Buffalo—360 miles in 61 minutes—for an unofficial Army plane speed record

Navy's 'Fortress' Here Makes Dash From Coast President Will See It

America's answer to the challenge for air supremacy was revealed yesterday when the Army disclosed details of the flight of a pursuit plane which traveled 360 miles in 61 minutes.

Military authorities were particularly gratified by the fact that the 6-mile-a-minute flight, which took place Wednesday, was made in a pursuit plane carrying full military equipment, because bombers recently have been developing speeds outstripping the small fighting craft intended to intercept bombardment planes.

Foreign speed claims also will be answered by the new fighter. The German Messerchmitt is believed to have traveled at 380 miles per hour, but reports received here state that it was stripped for racing. Britain's Spitfire exceeded 400 miles per hour, but was aided by a 75-mile-an-hour tail wind, officials declared.

As the Army was checking on the new record, the Navy's $1,000,000 Flying Dreadnaught arrived at Anacostia Naval Air Station yesterday after a 13-hour and 55 minute dash from San Diego, Calif.

Neither flight was made as a stunt, officials stressing the fact they were routine performances.

Lieut. Benjamin Kelsey made his 360-mile trip from Dayton, Ohio, to Buffalo, N. Y., to inspect another new Army plane while the Navy flying boat, commanded by Lieut. Comdr. Andrew Crinkley, came here on one day's notice for inspection by President Roosevelt.

The plane flown by Lieut. Kelsey already has passed the experimental stage and a squadron of 13 of them have been ordered for the Air Corps, officials said.

Although pleased by the success of the plane, known as the P-37, the Army intends to announce completion in a few days of another and even faster model, designated the P-40. An experimental craft, details of its design will not be made public for some time.

An all-metal, single-seater monoplane powered by a liquid-cooled Allison motor, the P-37 is a considerable departure from the earlier P-36, of which 210 have been ordered by the Army.

Most notable change is the use of a liquid-cooled engine rather than an air-cooled power plant. Army officials describe the older engine as "a big job which is like pushing a barn door through the atmosphere" and point to the superior streamlining and maneuverability which can be attained by use of the liquid-cooled type of motor.

To incorporate recent improvements, however, it has been necessary to turn out the new fleet with little regard for the possibility of mass production. Standardization and mass production are being carefully studied as part of the Administration's re-examination of defense needs.

President Roosevelt, who has frequently hinted that an increase in the Nation's air power may be necessary, will drive to Bolling Field and the Naval Air Station today to inspect first-line Army and Navy planes.

BOMBER TO FLY BACK TO S. D.

S.D. SUN 11/1/38

The Consolidated four-motored experimental bomber, which flew non-stop from San Diego to Anacostia Air Station, near Washington, D. C. in 13 hours, 55 minutes last Thursday, probably will take off on the return flight the latter part of this week.

This was the official announcement received here today from the Navy Department. Reports circulated yesterday that the plane would leave Anacostia for San Diego today were declared without foundation.

A complete list of the crew which operated the 25-ton, $1,000,000 airboat on its record-breaking dash, was issued at North Island for the first time today. The fliers were:

Lieut.-Comdr. Andrew Crinkley, chief pilot.

Lieuts. Clifford Duerfeldt and E. R. Sanders, co-pilots.

Chief Radioman G. K. Herman and Radioman 1c F. V. Vanderhoff, in charge of radio equipment.

Aviation Chief Machinist's Mate G. A. Peters; Aviation Machinist's Mate 1c C. R. Roof; and Aviation Machinist's Mate 2c H. H. Geck, who guarded against mechanical difficulties.

William Wheatley and R. R. Keith, Consolidated Aircraft Corp. observers.

Here is one million dollars worth of Navy long-range bomber. (Later ones will not cost as much.) It is Consolidated's XPB2Y-1 and is the very last word, afloat, in naval aircraft along the line of air cruisers. The tail surfaces (empennage) appear on the cover of this issue and are featured by a machine gun nest in what there is of a vertical fin. Performance figures have not been released, but expert observers have noted engines (four) of 1050 horsepower each; a wing span of 115 feet; a length of 80 feet; a height (on landing gear) of 22 feet; have

Our Navy October 1938

estimated a range of 5,000 miles, loaded; a speed of 240 miles per hour; a weight of 30 tons. The air cruiser will be manned by a crew of 16. Sleeping accommodations are provided for eight and the ship is fully equipped with a galley, restrooms and other comfort features during long flights. Machine guns of extra large caliber will be mounted in the turrets in nose, fuselage and tail. Consolidated's huge plant has been revamped to put these long-range bombers into quantity production immediately.

'GUBA' ON FLIGHT TO GET SUPPLIES

S.D. SUN 10/15/38

To obtain supplies, Richard Archbold's $250,000 Consolidated airboat, the "Guba," has been flown from Hollandia, Dutch New Guinea, to Cairns, Queensland, Australia, Barney F. Boyd, local amateur radio operator said today.

The "flying laboratory" was piloted by Russell Rogers, who was accompanied by Raymond Booth, raidoman; Capt. Lewis Yancey, navigator; and Gerald Brown and Stephen Barrinka, engineers. Mr. Archbold and Harold Ramm, operator of the scientific party's base radio station at Hollandia, remained in Dutch New Guinea, where the former is leading a biological expedition for the American Museum of Natural History.

NAVY TO SPEAK AROUND WORLD

S.D. SUN OCT. 30, 1938

A voice from the sky nearly a mile above San Diego will comprise part of an international pre-Navy day program to be held Sunday.

The voice of Vice Adm. Ernest J. King, commander of Fleet Air Force, will be heard from the radio room of the new Consolidated four-motor bomber at 11 a.m. Lieut. Comdr. Andrew Crinkley will be at the controls.

From San Diego the broadcast will shift to Adm. Harry E. Yarnell, commander-in-chief of the Asiatic fleet, aboard the USS Augusta, in Shanghai. Rear Adm. Henry E. Lackey, commander of Squadron 40-T, Villefrance, France, will follow. He will speak from the cruiser Omaha. Adm. Alfred W. Johnson, commander of the Atlantic Squadron, will be the last to be heard, speaking from the battleship New York in New York.

S.D.UNION 10/24/38

'Flying Laboratory' Returns to Hollandia

Piloted by Russell Rogers, the American Museum of Natural History's $250,000 "flying laboratory," in which Capt. Richard Archbold flew from San Diego to New Guinea last June, returned Friday to Hollandia after an 1800-mile flight to Cairns, N. Z. Word to this effect was received by short wave yesterday from Archbold.

En ruote from New Zealand, Russell stopped at Port Moresby, British Guinea, for supplies.

Archbold has reported to the New York office of the Natural History museum the expedition has obtained rare and beautiful specimens of bird and animal life in New Guinea. A number of these were obtained, he said, on the ascent of 12,000-foot Mt. Wilhelmina, 50 miles northeast of the expedition's advance base at Lake Habbema, 300 miles from the coast.

LONG PATROL BOMBER FLIGHTS REDUCED

S.D. SUN 11/14/38

Long offshore flights by San Diego patrol bombers will be held to a minimum until opening of Fleet Problem 20 on Jan. 4, Rear Adm. Charles Blakely, Aircraft Scouting Force commander, announced today. The 48 North Island-based planes last week participated in extensive maneuvers which served as 'dress rehearsal" for the annual war games.

Two Pearl Harbor squadrons—VP-1 and VP-18 — are being equipped with Consolidated PBY-4 bombers in preparation for a non-stop delivery flight from San Diego to Hawaii early in 1939.

Society Takes To Hills As Hunters' Moon Blazes Trail

Verne Sutherlands Are Buffet Supper Hosts; Sustaining Members To Entertain Junior League

By PATRICIA DENNSTEDT

There are certain prescribed happenings that influence society's divertissements . . . . . the arrival of a houseguest, the hither and thither wanderings of our travelers, the announcement of betrothals and far on down the list.

But did you ever stop to think how a moon can affect the social routine?

In June, it's the Honey Moon that plays havoc with our social columns, crowding out all else in favor of the radiant brides. Last month the Harvest Moon inspired all sorts of barn dances (you'll remember the Fletcher-Royle-Steen "shindig"), hay rides and numerous country outings in keeping with the onrush of fall.

And this month it's that silver satellite, the Hunters' Moon, that is adding yet a different touch to our social goings-on.

Of course the opening of duck season may have a little something to do with it. But moon tradition has it that this is the month to hunt. And we believe it now we've discovered that so many hardy socialites have deserted the city limits to shoulder their guns for the first big "shoot."

There's that congenial group, Mr. and Mrs. Joe Brennan, Maj. Rueben H. Fleet, Comdr. Samuel Zeigler, Mr. and Mrs. Kneeland Jenkins, Maj. Jimmy Doolittle and Charles Babb, the latter four of Los Angeles, who hunted together during dove season. Several of them are at the Harry Schnells' "Sky Ranch," in the mountains above Barrett Dam, to bag their first ducks of the season this weekend. Maj. Fleet is missing from the group, having been called to Seattle by the illness of his mother.

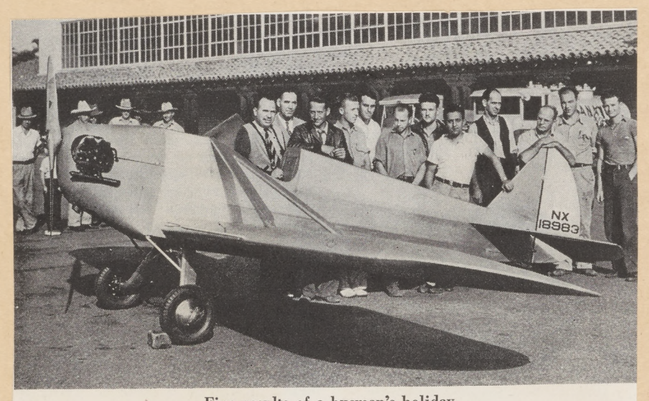
Lake Cuyamaca and Corte Madera are popular spots during duck season. Practically the entire Fletcher clan with some 20 or 30 of their friends are at the Fletcher cottages in Cuyamaca this weekend hoping to get their limit. For this party, however, the wives were left at home.

Wiley Ambrose is in charge of the hunt at Corte Madera. At the Ambrose ranch house today are Mr. and Mrs. Earl Gustafson, Mr. and Mrs. Charles Davis and Mr. and Mrs. Wade Ambrose.

Ducks 'n Dove, Their Social 'Game'

S.D. SUN Oct. 16, 1938

Relaxing at the Brennans' Descanso lodge, "Falcon Lair," after a recent hunting party are, left to right, Mr. Joseph Brennan, Maj. Rueben H. Fleet, Comdr. Samuel Bregantes, Mrs. Brennan, Mr. Charles Babb, Mrs. Kneeland Jenkins and Mr. Jenkins.



Fine results of a busman's holiday

Scientific American November 1938

Busman's Holiday

NO one has ever heard of the employees of a shoe factory banding together to build shoes on their own time, but the construction of new types of aircraft is so fascinating an activity that men whose vocation lies in the construction or development of aircraft, will take a long busman's holiday and devote the major portion of their leisure hours to the construction of a novel design of airplane. Thus our readers will perhaps remember that the young engineers of the N.A.C.A. laboratory at Langley Field, under the leadership of Fred Weick, built a light plane with a nose-wheel or "tricycle" type landing gear, and this type of gear has now been quite widely adopted.

Now we hear that the employees of Consolidated Aircraft Corporation have formed an Aircraft Mechanics Association, and instead of plotting strikes or joining the C.I.O., the Association has designed and built a very trim and workmanlike light plane, which is shown in our photograph. While the new ship is designed on the conventional lines of a low-wing single-seater, it shows excellent streamlining, good structure, and a simplicity which will help if the ship is ever put on the market. Equipped with a 40 horsepower Continental engine, carrying fuel for 400 miles, and 20 pounds of baggage, the machine attained a top speed of 94 miles per hour—a highly satisfactory figure for such a craft.—*A. K.*

S.D. SUN Oct. 26, 1938

Lost Your Card? Call The Sun

Seventeen men in one department of the Consolidated Aircraft plant had lost their Social Security cards, but thanks to Sidney Long, one of their fellow-workers, they will get the engraved metal cards from The Sun with the number stamped thereon.

Mr. Long told The Sun that he rounded up all those with lost cards in his department and had them send their names to The Sun to get the metal cards, which are indestructible.

Any person in San Diego who has a Social Security number may obtain one of the cards with their name and number stamped on the card by sending their name and number to The Sun, accompanied by 10 cents. The dime pays for the cost of handling and mailing.

S.D. SUN 11/13/38

In the CHART HOUSE

By HAROLD KEEN

Mayor Benbough and the Chamber of Commerce stood for a lot of good-natured joshing on San Diego weather by Rear Adm. R. R. Waesche, Coast Guard commandant who inspected local facilities during his first visit here in two years last Thursday.

◇ ◇ ◇

"Back in 1910, when I first came to San Diego," he recalled, "the only place I could find to live in had no heat; they didn't think it was necessary in this wonderful climate, you know.

"Well, sir, it was so cold that winter that I had to chop the ice out of the basin to wash myself in the mornings."

◇ ◇ ◇

The mayor assured Rear Adm. Waesche that San Diego homes today on the whole have adequate heating. "That's for your information," quoth the mayor, "just in case you are looking for some place to settle."

◇ ◇ ◇

The engineers who constituted the technical party sent to Taganrog, Russia, by Consolidated Aircraft Corp. last year took advantage of their European sojourn to do the traveling every person dreams of, but somehow never gets around to in his lifetime.

◇ ◇ ◇

Take the case of Tom Palsulich, for example. Being a bachelor, he had no one but himself to consult as to the itinerary to be followed on the return trip to the States on completion of the Russian mission.

◇ ◇ ◇

From Taganrog, in southern Russia on the Sea of Azov, he went to Moscow, then to Warsaw, and in succession, he visited Riga, Latvia; Tallinn, Estonia; Helsingfors, Finland; Stockholm, Copenhagen, Berlin, Dresden, Munich, Prague and Uzhorod, Czechoslovakia; Budapest, Vienna, Trieste, Venice, Milan, Genoa, Pisa, Florence, Naples, the isle of Capri, Messina, Palermo, Tunis, Kairowan, Africa; Marseilles, Monte Carlo, Frankfurt, Amsterdam, Hague and Paris.

Whew! After that, you can't tell him anything about geography!

◇ ◇ ◇

Being aviation-minded, Mr. Palsulich welcomed the opportunity to observe at first hand the Lockheed equipment of the Polish airline; the Junkers planes used in the Vienna-Trieste run; and the French flying boats operating alongside the Douglas DC craft in and out of Marseilles.

BOMBER LANDS AFTER SECOND U. S. CROSSING

15 Hours Required For Return Trip; Fought Winds

S.D. SUN 11/10/38

The Navy's largest and most powerful airplane, the $1,000,000 Consolidated four-motored experimental bomber, today rested on North Island after its second daring non-stop transcontinental flight in two weeks.

Following a route southerly of that transversed in 13 hours 55 minutes, Oct. 27, the 25-ton airboat, operated by Lieut. Comdr. Andrew Crinkley, two co-pilots, five enlisted men and two civilians, landed in the harbor at 6:55 p. m. yesterday, 15 hours 10 minutes after taking off from Anacostia, D. C.

LANDING LIGHTS ON

The landing area was brilliantly illumined by serachlights on the Naval Air Station's north beach.

The flight crew included, in addition to Lieut. Comdr. Crinkley, Lieuts. C. H. Duerfeldt and E. R. Sanders, co-pilots; G. K. Herman, chief radioman; C. R. Roos, aviation machinist mate 1c; Albert H. Geck, aviation machinist mate 1c; J. A. Peters, chief machinist mate; F. R. Vanderhoef, radioman 1c; William Wheatley, chief test pilot, and R. R. Keith, engineer, both of Consolidated Aircraft Corp.

Average speed attained by the ship, which bucked headwinds a major part of its 2400-mile trip across an area where a forced landing might have proved fatal, was approximately 160 miles per hour.

DEMONSTRATION OF POWER

The routine manner in which the bomber twice crossed the continent has demonstrated the ease with which squadrons of Navy patrol planes might be transferred at a moment's notice from one coast to another in event of a national emergency, North Island authorities pointed out today.

THE WASHINGTON POST: SA

6-Mile-a-Minute Flight by New Army Plane Hailed as Answer to Foreign Air Challenge

WASHINGTON POST 10/29/38

Lieut. Benjamin S. Kelsey (inset) flew a P-37-type plane shown here from Dayton, Ohio, to Buffalo—360 miles in 61 minutes—for an unofficial Army plane speed record

Navy's 'Fortress' Here Makes Dash From Coast President Will See It

America's answer to the challenge for air supremacy was revealed yesterday when the Army disclosed details of the flight of a pursuit plane which traveled 360 miles in 61 minutes.

Military authorities were particularly gratified by the fact that the 6-mile-a-minute flight, which took place Wednesday, was made in a pursuit plane carrying full military equipment, because bombers recently have been developing speeds outstripping the small fighting craft intended to intercept bombardment planes.

Foreign speed claims also will be answered by the new fighter. The German Messerchmitt is believed to have traveled at 380 miles per hour, but reports received here state that it was stripped for racing. Britain's Spitfire exceeded 400 miles per hour, but was aided by a 75-mile-an-hour tail wind, officials declared.

As the Army was checking on the new record, the Navy's $1,000,000 Flying Dreadnaught arrived at Anacostia Naval Air Station yesterday after a 13-hour and 55 minute dash from San Diego, Calif.

Neither flight was made as a stunt, officials stressing the fact they were routine performances.

Lieut. Benjamin Kelsey made his 360-mile trip from Dayton, Ohio, to Buffalo, N. Y., to inspect another new Army plane while the Navy flying boat, commanded by Lieut. Comdr. Andrew Crinkley, came here on one day's notice for inspection by President Roosevelt.

The plane flown by Lieut. Kelsey already has passed the experimental stage and a squadron of 13 of them have been ordered for the Air Corps, officials said.

Although pleased by the success of the plane, known as the P-37, the Army intends to announce completion in a few days of another and even faster model, designated the P-40. An experimental craft, details of its design will not be made public for some time.

An all-metal, single-seater monoplane powered by a liquid-cooled Allison motor, the P-37 is a considerable departure from the earlier P-36, of which 210 have been ordered by the Army.

Most notable change is the use of a liquid-cooled engine rather than an air-cooled power plant. Army officials describe the older engine as "a big job which is like pushing a barn door through the atmosphere" and point to the superior streamlining and maneuverability which can be attained by use of the liquid-cooled type of motor.

To incorporate recent improvements, however, it has been necessary to turn out the new fleet with little regard for the possibility of mass production. Standardization and mass production are being carefully studied as part of the Administration's re-examination of defense needs.

President Roosevelt, who has frequently hinted that an increase in the Nation's air power may be necessary, will drive to Bolling Field and the Naval Air Station today to inspect first-line Army and Navy planes.

BOMBER TO FLY BACK TO S. D.

S.D. SUN 11/1/38

The Consolidated four-motored experimental bomber, which flew non-stop from San Diego to Anacostia Air Station, near Washington, D. C. in 13 hours, 55 minutes last Thursday, probably will take off on the return flight the latter part of this week.

This was the official announcement received here today from the Navy Department. Reports circulated yesterday that the plane would leave Anacostia for San Diego today were declared without foundation.

A complete list of the crew which operated the 25-ton, $1,000,000 airboat on its record-breaking dash, was issued at North Island for the first time today. The fliers were:

Lieut.-Comdr. Andrew Crinkley, chief pilot.

Lieuts. Clifford Duerfeldt and E. R. Sanders, co-pilots.

Chief Radioman G. K. Herman and Radioman 1c F. V. Vanderhoff, in charge of radio equipment.

Aviation Chief Machinist's Mate G. A. Peters; Aviation Machinist's Mate 1c C. R. Roof; and Aviation Machinist's Mate 2c H. H. Geck, who guarded against mechanical difficulties.

$1,000,000 Experimental Craft Makes Record Flight

Having completed the second non-stop west-east transcontinental flight by a Navy airboat in record time, the $1,000,000 four-motored Consolidated experimental patrol bomber XPB2Y-1 today was at the Anacostia, D. C., Naval Air Station.

With Lieut.-Comdr. Andrew Crinkley at the controls, the 25-ton plane, considered one of the most powerful long-range bombers in the world, arrived at Anacostia at 11:05 p. m. (Pacific time) yesterday after a 2473-mile flight of 13 hours, 55 minutes from San Diego, at an average speed of 180 miles per hour.

It took off from the harbor unannounced at 9:10 a. m., bound for a destination which local Aircraft Scouting Force officials refused to divulge throughout the day.

Lieut.-Comdr. Crinkley was aided by two co-pilots, Lieuts. Clifford H. Duerfeldt and E. R. Sanders. There were five enlisted men in the crew and two civilian passengers from Consolidated Aircraft Corp.

A twin-engined Consolidated

NAVY BOMBER SPANS U. S.

(Continued from Page 1)

PBY plane was flown non-stop from San Diego to Pensacola, Fla. —an airline distance of about 2000 miles—last April by Lieut. (jg) James M. Peters under conditions of similar secrecy. The bomber then proceeded up the east coast to Newport, R. I., for several weeks' experimental torpedo tests.

Yesterday's flight, however, completely eclipsed this feat. It was made over a route across the center of the continent, where water bodies able to accommodate a plane of the XPB2Y's size are few and far between. If any of the four 1050-horsepower engines had failed, a forced landing might have proved fatal.

The cross-country jaunt of Lieut.-Comdr. Crinkley was similar to that of Richard Archbold, who required 17 hours, 4 minutes to effect the first transcontinental non-stop flight of a seaplane in aviation history June 24-25, 1937, from San Diego to New York City.

Purpose of the secret trip, it was learned today, is to compare the ship at close quarters with the four-motored Sikorsky bomber, accepted by the Navy several months ago, and the giant twin-engined Martin airboat now under construction on an experimental contract.

The flight crew's orders are for a "short period of temporary duty" on the east coast.

WASHINGTON STAR 10/29/38

Navy's New Bomber Flies Here From West Coast in 13 Hours

The Navy's new $1,000,000 experimental long-range bomber landed at the Naval Air Station, in Anacostia, at 2:05 a.m. today, completing a non-stop flight from San Diego, Calif., in an elapsed time of 13 hours and 55 minutes.

Carrying a crew of seven, the huge craft actually made the approximately 2,300-mile flight in about 13 hours. The ship arrived here about 1 a.m., but, because of a number of unlighted buoys in the Anacostia River, the commander circled the area for about three-quarters of an hour to make sure of his bearings, naval officials said.

Meanwhile, a 6-mile-a-minute war plane was viewed as the Army's immediate answer to European rivalry for speed supremacy in the air following a 360-mile flight in 61 minutes from Dayton, Ohio, to Buffalo, N. Y., yesterday by Lt. Benjamin S. Kelsey. This flight lifted the wraps from a pursuit ship about which the Air Corps previously had little to say.

The Navy's huge airboat had slipped off secretly at San Diego at 12:10 p.m. (Eastern standard time) yesterday. At the controls of the 25-ton craft was Lt. Comdr. Andrew Crinkley, pioneer naval aviator, who has been conducting final acceptance tests since the ship was turned over to the Navy Trial Board by Consolidated Aircraft Corp.

With a crew of 15, the craft is said to be capable of flying 4,000 miles without refueling. It was the first big flying boat to make a transcontinental flight without landing gear equipment.

The ship is equipped with four 14-cylinder Pratt-Whitney motors, each of which has a Navy Department rating of 900 horsepower. Its wing span is 115 feet and it measures 23 feet 3 inches in height.

Naval officials would not disclose any details of the craft's armament, speed or altitude.

The Army's new pursuit plane, the Curtis P-37, already had passed the experimental stage before yesterday's 360-mile flight. An initial squadron of 13 ordered last December soon will be delivered, officials said.

Without halting to gloat over the P-37, the Army intends to announce in a few days another and presumably even faster plane. Designated the P-40, it is an experimental job, and most de-

(See NEW NAVY, Page A-4.)

New Navy

(Continued From First Page.)

tails will not be disclosed for the present.

Both Germany and Great Britain have combat planes for which they have boasted even greater speed than that attained by the P-37. But the Air Corps has a ready answer.

Lt. Kelsey's flight and earlier trials, which were kept secret, were made with full military equipment. Germany claimed some 380 miles an hour for its Messerschmitt, but reports here are that it was stripped for racing. Although Britain's Spitfire exceeded 400 miles an hour, it was aided by a 75-mile tailwind, American officials contended.

Officials took particular satisfaction in the performance of the American plane because high-powered bombers, both here and abroad, have been threatening to outspeed pursuit ships, whose primary function is to intercept the bombers.

After months of testing a single experimental model, the Army gave a $531,305 order to the Curtiss plant at Buffalo for the first P-37 squadron.

In order to incorporate improvements, it has been necessary to turn out the new fleet with little regard for the possibility of mass production. That possibility is involved in the administration's restudy of defense needs.

The new pursuit plane is an all-metal, low-winged monoplane, with single engine and single seat. It is similar to the Curtiss P-36 pursuit, 210 of which are being delivered to the Army. Officials credit the new plane with a high rate of climb and great maneuverability.

The Army also has ordered a squadron of fighting planes of another type, the Bell "Airacuda," which has two motors, propellers in the rear, six guns, including two aircraft cannon, and a crew of five.

Its speed has not been announced, but the War Department said it was believed sufficient to overhaul and vanquish any modern bomber now in production.

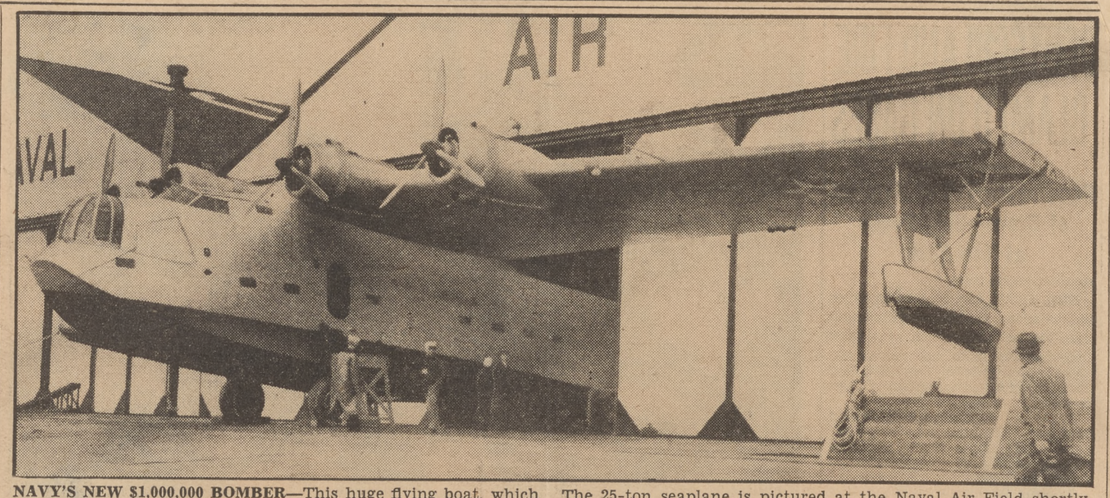
'FLYING BATTLESHIP' ROARS ON NON-STOP U. S. DASH

S. D. UNION OCT. 28, 1938

THE XPB2Y-1
. . . Consair's bid for naval air contract. (Story on Page 1).

OCTOBER 29, 1938.

THE EVENING STAR, WASHINGTON, D. C., SATURDAY,



NAVY'S NEW $1,000,000 BOMBER—This huge flying boat, which flew from San Diego to the Naval Air Station here in 13 hours, 55 minutes, is one of the craft which President Roosevelt was scheduled to visit today during inspection of first-line Army and Navy planes. The 25-ton seaplane is pictured at the Naval Air Field shortly after completion of its transcontinental flight yesterday. Note the retractable wing tip floats which form tips of wings when the plane is in flight. —Associated Press Photo.

25-Ton Boat, 15 Aboard, Cuts Archbold's Time

Secrecy Shrouds Take-Off Here For Navy Test

(Picture on Page 3, Section A)

BULLETIN

WASHINGTON, Oct. 28 (Friday) (A.P.)—The navy's $1,000,000 experimental long-range bomber arrived at the Anacostia air station at 1:50 a. m. (10:50 Pacific Time) today after a flight from San Diego, Calif. Naval officials declined to give other information about the flight, which started at 9 a. m. (Pacific Time) yesterday.

Taking off from San Diego in secrecy, the navy's new $1,000,000 experimental long-range bomber started a non-stop flight at 9 a. m. yesterday for the naval air station at Anacostia, Washington, D. C.

At the controls of the huge 25-ton air boat was Lt. Comdr. Andrew Crinkley, pioneer naval aviator who has been conducting final acceptance tests since the craft was turned over to the navy trial board by Consolidated Aircraft Corp.

AIR STATION GETS REPORTS

At 6 p. m. yesterday, naval air station here reported receiving a radio message from the flying boat over Davenport, Ia. The next report came at 8 p. m. when the plane's position was reported as 13 miles east of Michigan City, Ind. At 9 p. m., the plane was 5 miles east of Finley, O. and within 325 miles of its goal.

Carrying a crew of 15, the plane was said to be capable of flying more than 4000 miles without refueling. It has no equipment for descending on land.

No announcement was made concerning a return flight.

The XPB2Y-1 has a wingspread of 115 feet. The length of the hull is 77 feet. It is powered with four 1250-horsepower Pratt-Whitney Wasp engines.

SETS FAST PACE

On yesterday's flight the huge craft, loaded with several tons of gasoline, averaged nearly 190 miles an hour from San Diego toward the Anacostia naval air station.

The four-motored bomber, reported to be the most powerful armed craft of its type in the world, exceeded the transcontinental flight speed established by Richard Archbold in the American Museum Natural History's "flying laboratory" when he flew from San Diego to New York in 17 hours and 3 minutes on June 24, 1937. Last June the 13-ton Archbold ship, which is about half the size of the XPB2Y-1, flew from San Diego to Hollandia, New Guinea and is now at that port.

The bureau of aeronautics, navy department, plans to call for bids on a squadron of new long-range bombers early in November. In these bids, the XPB2Y-1 will compete with a new-type bomber recently completed by Sikorsky.

S. D. Bomber Will Return Tomorrow; Hope to Lower Eastward Flight Mark

S.D. UNION OCT. 31, 1938

Roosevelt Views Plane; Compared With Army Craft

After thrilling the nation with its record-breaking nonstop flight of 13 hours and 55 minutes from San Diego to Washington, Navy day, the XPB2Y-1, a 25-ton four-motored "flying battleship," is expected to take off from Potomac river near Anacostia naval air station tomorrow morning on its return flight across the continent.

Lt. Comdr. Andrew Crinkley, pioneer naval flier, again will be at the controls of the long-range patrol bomber. Co-pilot will be William B. Wheatley, test pilot at Consolidated Aircraft Corp., builder of the giant craft.

Local naval aviation authorities announce the time of departure from Anacostia station will depend on orders issued by Rear Adm. Arthur B. Cook, chief bureau of areonautics.

MAY CLIP RECORD

With weather and wind conditions more favorable generally on a transcontinental flight from east to west, belief is expressed by North island aviation officials that Crinkley can materially lower his eastward flight record if he opens up to full throttle the "flying battleship's" four 1250-horsepower Wasp motors.

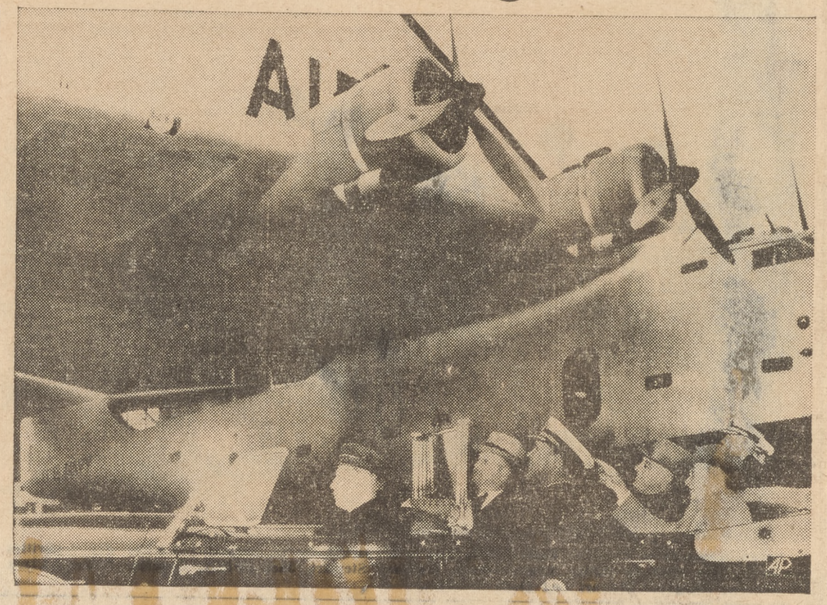
It was revealed yetserday that on a recent altitude flight over San Diego bay in which the bomber attained an altitude in excess of 20,000 feet, flames as thick as a man's forearm shot out from the exhausts, a striking indication of the enormous driving power of the four engines.

The flight was made primarily to permit President Roosevelt and navy department authorities to compare the salient construction features of the offshore bomber with the new bombers recently built by Igor Sikorsky and Glenn H. Martin and Boeing's new army "flying fortresses."

PRESIDENT INTERESTED

President Roosevelt, Charles Edison, assistant secretary of the navy, and Louis Johnson, assistant secretary of war, were reported from Washington to have been particularly interested in the San Diego-built bomber which is capable of flying nonstop from San Diego well beyond the 180th meridian in the Pacific.

A graphic example of the progress made in aviation since 1922 is the fact that the 25-ton bomber clipped 13 hours off the transcontinental flight time of Lts. Oakley Kelly and John A. Macready in their famed monoplane T-2, a craft that weighed with its load of gasoline and oil less than three tons. The old Fokker monoplane was a land plane whereas the bomber piloted by Comdr. Crinkley is an airboat capable of landing safely only on water. As a further comparison the T-2 carried a crew of two, the "flying battleship" a crew of 15.



President Roosevelt was one of a group of government officials thrilled by sight of the navy's new "flying battleship" which flew last week from San Diego to Washington. Here is Charles Edison, assistant secretary of the navy, pointing out its salient features to the President. In front seat is Louis Johnson, assistant secretary of war, and Comdr. John Price, commander Anacostia naval air station. (Associated Press photo.)

Navy's New 'Flying Battleship' Spans U. S. in Less Than 14 Hours

The Navy's new $1,000,000 "Flying Dreadnaught" landed at the Naval Air Station at Anacostia today, after making a cross-country flight from San Diego, Calif., in 13 hours and 55 minutes, an average of more than 200 miles an hour.

The huge flying boat, a high wing monoplane with a 115-foot wing span, was commanded by Lieut. Comdr. Andrew Crinkley and carried a crew of seven men.

Powered with four 900-horsepower motors, the plane is able to travel about 4,000 miles without refueling, and is regarded as one of the most powerful planes in the world. It is heavily armed with machine guns in addition to bombs. It is 77 feet long, 28 feet high and 16 feet wide.

WORLD'S LARGEST "FLYING BATTLESHIP"

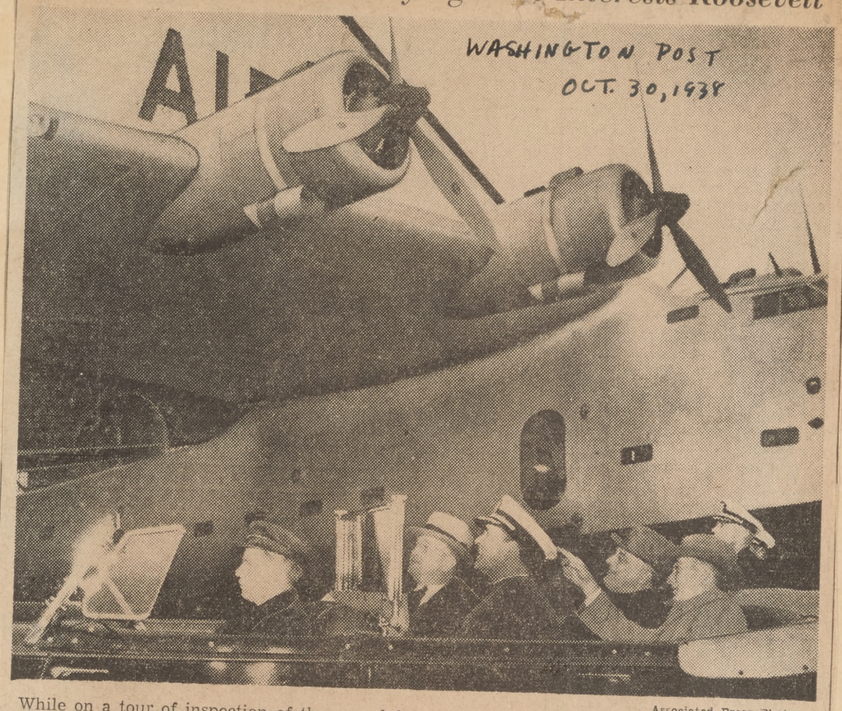
Huge Plane Delays San Diego Flight

WASHINGTON, Oct. 31 (A.P.)—The navy today said the new million dollar "flying battleship," the XPB 2Y, probably would leave Anacosta air station here to return to San Diego late this week. It had been expected to hop tomorrow.

The 24-ton flyingboat, built by Consolidated Aircraft Corp., San Diego, flew here non-stop last week from San Diego in slightly over 13 hours, in what navy officials said was the first transcontinental nonstop flight for a seaplane of that size.

Navy's Million-Dollar Flying Boat Interests Roosevelt

WASHINGTON POST OCT. 30, 1938



Associated Press Photo

While on a tour of inspection of the armed forces' newest fighting planes at Bolling Field and the Anacostia Naval Air Station, the President paused beside the giant four-engined naval flying boat which arrived in Washington Friday on a nonstop flight from San Diego, Calif. The ship carries eight 1,000-pound bombs and cruises at about 225 miles per hour. Assistant Secretary of the Navy Charles Edison is shown pointing out features of the big craft. Assistant Secretary of War Louis Johnson and Commander John D. Price of the Naval Air Station are seated in front.

2 Air Forces Inspected By President

Views Latest Craft Aims for Supremacy Visits Two Bases

Determined to make the United States invincible in the air, President Roosevelt yesterday made a two-hour inspection tour of fighting planes of the land and sea forces to check on the progress of his program.

At the Naval Air Station the President showed keen interest in the Navy's new giant "Flying Dreadnaught" which made a nonstop flight here from San Diego, Calif., for the occasion. He also watched closely while a sailor demonstrated the operation of the collapsible wings with which some Navy monoplanes are fitted.

On display at Bolling Field for Mr. Roosevelt and the members of his party were the Army's new mystery plane, the P-40, which is expected to be even faster than the 6-mile-a-minute P-37, and aircraft representing every type of plane in use by the land forces.

Chatting animatedly with high officials of the national defense forces the President drove slowly by long lines of planes and through several of the hangars at Bolling Field, while officers and mechanics stood at attention beside their bombers, pursuit and attack aircraft.

See AIR, Page 6, Column 5.

Sees Flying Laboratory

Drawn up at the reviewing line at Bolling Field were the Army's high altitude "Flying Laboratory", which is equipped with a pressure cabin for flying at heights of 25,000 feet. Stubby little pursuit aircraft, with their crews standing before them, also were on view.

Side by side stood the three finest bombers in the Army, the Flying Fortress, the twin-engined B-18 and the enormous B-15, largest bombardment plane in the service.

Included in the Navy line-up were examples of its latest fighters, patrol and observation planes.

While the President watched, the retractable pontoons on the wings of the "Flying Dreadnaught" were lowered to landing position and then returned to their flying stations at the ends of the 110-foot wings. The huge plane was moored on the Anacostia River runway since no hangar at the Naval Air Station is large enough for it.

Accompanied by Aides

Army and Navy officials both evinced great interest in construction details of the $1,000,000 bomber and pointed to its excellent streamlining and the small size of the four engines with which it is powered.

Mr. Roosevelt was accompanied on the trip by Commander Daniel J. Callaghan and Col. Edwin Watson, his naval and military aides; Secretary of the Treasury Morgenthau, Undersecretary of the Treasury John W. Hanes; Chairman Edward G. Noble and Administrator Clinton M. Hester and other members of the Civil Aeronautics Authority and its air safety board.

On his tour of the Army field the President was joined by Assistant Secretary of War Louis Johnson, Maj. Gen. Henry H. Arnold, chief of the Air Corps, and other high Army officials. At the Naval Air Station he was met by Secretary of the Navy Swanson, Assistant Secretary Charles Edison, Admiral William D. Leahy, chief of naval operations, and Rear Admiral Arthur B. Cook, chief of the Bureau of Aeronautics.

S.D. SUN 10/31/38

NAVY'S GIANT BOMBER READY FOR RETURN

Plane Expected To Try For East-West Flight Record

Ready to duplicate or better its feat of last Thursday, when it spanned the continent non-stop in 13 hours, 55 minutes, the four-motored experimental Consolidated bomber today awaited orders at Anacostia, D. C., for a return flight to San Diego.

The 25-ton plane, which was designed and built at a cost of $1,000,000, was inspected by President Roosevelt Saturday at the Anacostia Naval Air Station. Alongside it for comparison were the latest Army and Navy war planes, including the four-engined Sikorsky ship which will compete with the San Diego plane in bids for a production contract in 1939, the new Martin airboats, and the Army's four-motored Boeing "flying fortresses."

Lieut.-Comdr. Andrew Crinkley, chief pilot during tests of the plane for the Navy in the past few months, was at the controls on the west-east dash and will guide the bomber home, aided by Lieuts. Clifford H. Duerfeldt and E. R. Sanders as co-pilots. Five enlisted men and two Consolidated Aircraft Corp. observers, including Chief Test Pilot William Wheatley, will make up remainder of the crew.

Aircraft Scouting Force officials at North Island today announced they had received no information as to the takeoff time.

BIG BOMBER CROSSES COUNTRY IN 14 HOURS

N.Y. TIMES 10/29/38

Navy to Make Further Tests of 25-Ton Craft

Special to THE NEW YORK TIMES.

WASHINGTON, Oct. 28.—The navy's newest long-range bomber of the patrol-boat type, flown by Lieut. Comdr. Andrew Crinkley, dropped quietly down on the waters of the Anacostia River at 2 o'clock this morning after a non-stop flight from San Diego.

The huge flying boat, its four 900-horsepower Pratt & Whitney wasp motors turning at little more than half-throttle, made the crossing from take-off to landing in 13 hours and 55 minutes. The plane was built by the Consolidated Aircraft Corporation at San Diego.

Range, speed and the ceiling of the twenty-five ton bomber are navy secrets, but the big monoplane is similar in general type to the four-engined Sikorsky bought by the navy last year.

The Navy Department made public no figures on actual mileage flown, but, in order to follow the airway providing emergency water landing places, Commander Crinkley flew close to 3,000 miles, it was said.

The trip, the Department stated, was a "routine" affair and no attempts were made to establish a record.

The pilot circled over Washington for several minutes before settling slowly for his night landing on the river, where temporary flares had been placed to aid him.

The plane will be submitted to further tests at the Anacostia Naval Air Station.

It is equipped with Hamilton Standard controllable pitch propellers, giving the pilot a virtual "gear shift" in the air by enabling him to set the blades at any angle he wishes for climb or cruising.

ROOSEVELT SEES U. S. WAR PLANES

WASHINGTON, D.C. SUNDAY STAR 10/30/38

Review Thought Designed to Focus Attention on Expansion Plans.

President Roosevelt inspected the country's aerial fighting might yesterday afternoon. He visited Bolling Field and the Naval Air Station, where ships brought from as far away as Panama and California were on display for the special benefit of the Commander in Chief of the Army and Navy.

Secretary of the Navy Swanson, Assistant Secretary of War Johnson, Secretary of the Treasury Morgenthau, Undersecretary of the Treasury Hanes and high-ranking military officials accompanied Mr. Roosevelt during his two-hour round of the air bases in Anacostia.

Daniel Bell, acting director of the budget, rode in the automobile procession from the White House to the air fields, and the members of the Civil Aeronautics Authority met the President at Bolling Field and at Naval Air Station.

The men and officers of both posts were ready in formation and at attention when the President's car appeared. The review was thought to be designed to focus attention on the defense expansion program which the President is expected to launch at the coming session of Congress.

$1,000,000 Air Dreadnaught.

Among the 75 planes grounded in line for Mr. Roosevelt, the President saw for the first time the $1,000,000 flying dreadnaught of the Navy, which was flown without landing gear across the continent two days ago from San Diego, Calif., and the Army's Curtiss P-40 air-conditioned pursuit ship, on which experiments are still being made at Wright Field, Dayton, Ohio.

Dressed in the Army's new two-toned blue dress uniform, the chief of the Army Air Corps, Maj. Gen. Henry H. Arnold, with a gold sash around his middle sat by the President's side in the White House car at the Army's Chieftan rode through Bolling Field. Lt. Col. F. E. Galloway, commanding Bolling Field, rode with them.

Ten minutes after the President left Bolling and reached the Naval Air Station, Gen. Arnold appeared in a brown civilian suit to take a professional look at the flying dreadnaught. It is slightly smaller than the Army's flying fortress, the Boeing XB-15, four-engined monoplane which was put on view for the President.

Tail-Chamber Interests Arnold.

Gen. Arnold was chiefly interested in the dreadnaught's tail-chamber, from which fire can be directed. He said that he had been trying for years to obtain such a feature for Army planes without success. He added that he trusted now he would have no trouble getting his wants fulfilled. Such a tail arrangement greatly increases the fighting efficiency of the super planes.

Admiral William D. Leahy, chief of operations, U. S. N.; Rear Admiral Arthur B. Cook, chief of aeronautics, U. S. N., and Comdr. John Dale Price, commanding Naval Air Station, greeted the President on his arrival at the Navy base and pointed out to him the marvels of their new dreadnaught. They also arranged a demonstration of unfolding and folding the wings of a monoplane built for service on plane carriers.

Two of the naval planes came from Coco Solo, Panama, by non-stop flight, arriving yesterday after running through a severe storm over the Caribbean. The others were brought from San Diego, Norfolk and Philadelphia for the occasion.

The Army planes came to Bolling from Langley Field, Va.; Barksdale Field, Shreveport, La.; Wright Field, Mitchell Field, Long Island, and Selfridge Field, Detroit, Mich.

The engine of the P-40, which was the prize object of the Army's display to the President, is liquid-cooled and of the conventional V-type construction. This fact gives a materially reduced frontal area when compared to radial-type engines. The smaller engine permits the use of a correspondingly smaller fuselage.

Because the plane is built to climb 30,000-foot altitudes, it has the unusual equipment of a heater.

One of the test pilots working on the P-40 jokingly remarked at Wright Field, after a trip aloft in it, that it was the first time he had ever enjoyed the comforts of an air-conditioned cockpit. The heater may be set to provide either hot or cool air, as the pilot desires.

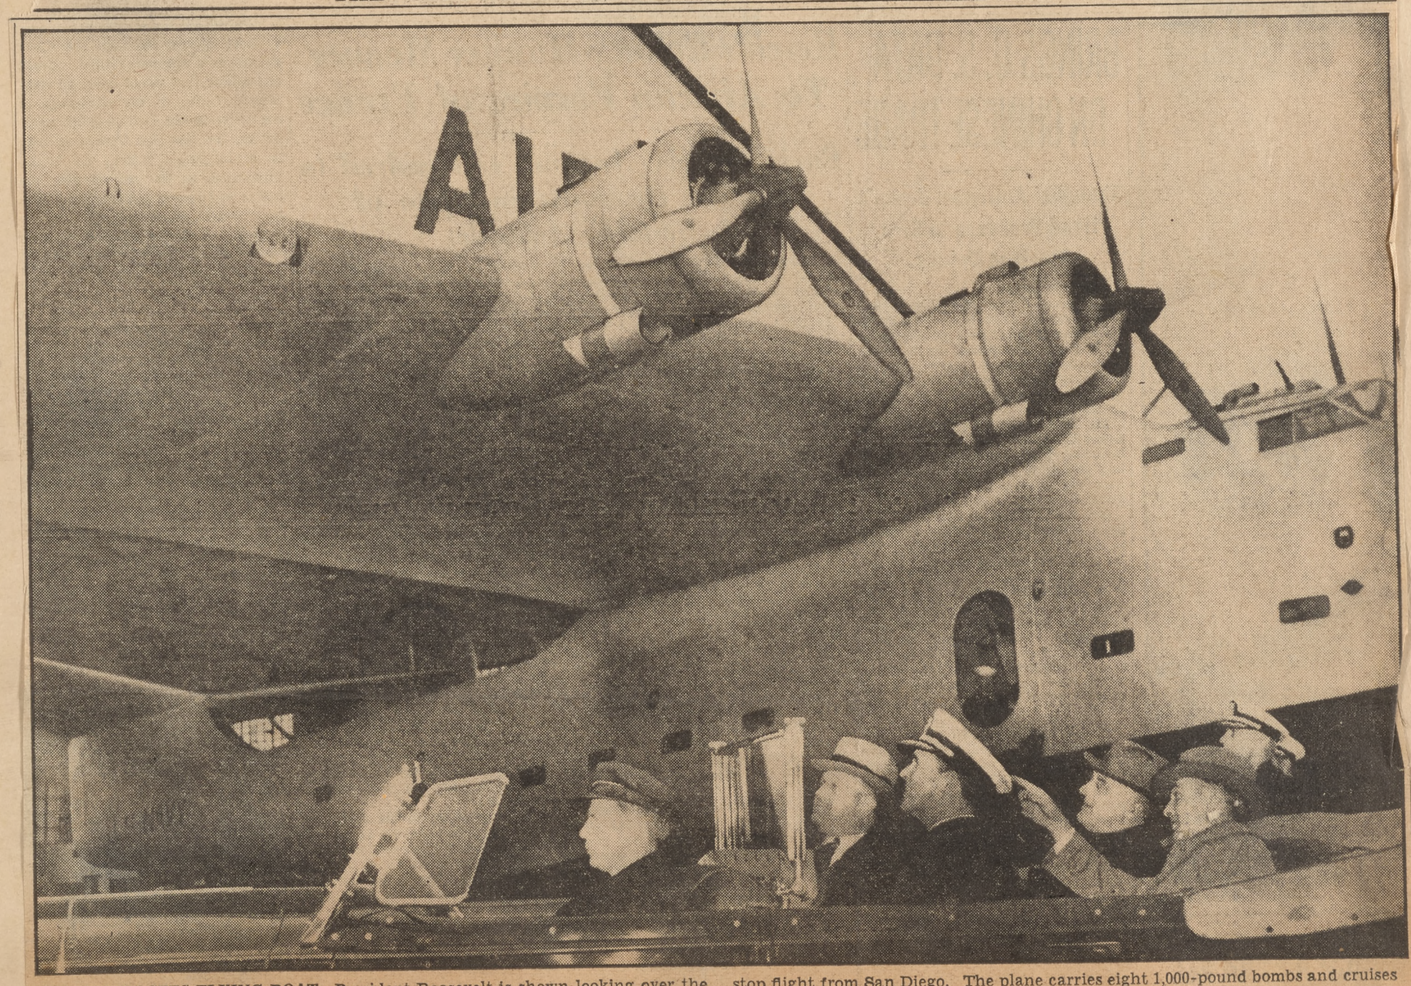
The reason for this provision is that the sudden changes from extreme altitude, with its intense cold, to the high temperatures encountered on the ground during the summer months, would make it impossible to wear just the right flying clothes for all conditions. With the two-way heater, the pilot can wear his ordinary amount of clothing and remain comfortable.

Flying Laboratory Shown.

Another plane displayed at Bolling was the Army's high-altitude flying laboratory, now being flight-tested as a prelude to making a practical study of the many technical and physiological problems connected with the operation of planes at high altitudes.

This "substratosphere plane" is fitted with a specially constructed pressure cabin and with supercharged engines. The pressure cabin is equipped to maintain with it atmospheric pressure corresponding to fairly low altitudes while the airplane is cruising at very high altitudes. At an altitude of 25,000 feet the atmosphere in the cabin is supercharged to correspond to an altitude of 12,000 feet, at which the average passenger or pilot would experience no discomfort.

The Army showed the President at least one of every type of plane in its possession—bombers, basic trainers, basic combats, attack ships, primary trainers, pursuit planes.



PRESIDENT SEES FLYING BOAT—President Roosevelt is shown looking over the Navy's new million-dollar flying boat at the Anacostia Naval Air Base yesterday. Assistant Secretary of the Navy Charles Edison is pointing out to the Chief Executive features of the giant four-engined craft, which arrived Friday after a non-stop flight from San Diego. The plane carries eight 1,000-pound bombs and cruises at around 225 miles an hour. In front are seated Assistant Secretary of War Louis Johnson (left) and Comdr. John D. Price of the air station.

SUPPLEMENT
to No. 581
Oct.1,1938

CONSOLIDATED PBY (MODEL 28).

The Consolidated long-range patrol, bomber and commercial flying-boat is a twin-engined all-metal semi-cantilever monoplane, powered by either Wright Cyclone or Pratt & Whitney Twin Wasp engines.

Well over 200 boats fitted with Pratt & Whitney Twin Wasp or Wright Cyclone engines have been delivered to the United States Navy and have been flown as a routine Navy delivery, in non-stop formation, to their various stations, such as from San Diego to Pearl Harbour, Hawaii, and to Coco Solo, Canal Zone, distances of 2553 and 3087 miles.

The culmination of many years of continuous development and research, the PBY is to-day the world's outstanding service patrol bomber flying-boat.

Shortly after delivery, the first boat of the PBY series established a new international distance record of 3443 miles (5540 km).

After this first achievement many record-breaking flights have been accomplished with PBY boats, but it would lead us too far to enumerate them all.

It is a fact that these boats have become a most important part of naval equipment.

Routine transfer flights have become commonplace in the United States.

It is anticipated from the beginning that take-offs on one engine would be possible and consequently, single-engine take-off tests were made and it was found possible to start on one engine with sufficient fuel to continue flying over distances of 1300 miles (2100 km). It is believed that this fact is unequalled in flying-boat history.

The load-carrying capacity and high cruising speed of the PBY places it almost on an equal footing with larger flying-boats, utilizing 4 engines, which are operating on the transoceanic airways to-day.

Among the features which contribute to this superior load carrying capacity are retractable wing-tip floats and fuel tanks built integral with the wing.

As a passenger carrier, seating arrangements for up to forty passengers are available.

Published twice weekly in 4 languages. - The reproduction or partial utilisation of photographs and texts may only be made with the assent of the editors.

For defence, the PBY carries 4 machine guns, one in the bow, one on each side of the deck just aft of the wing and one tunnel gun in the hull bottom just forward of the tail.

The bow gun, mounted in a protected revolving turret, covers the front hemisphere, the upper hemisphere is covered by the two deck guns with fields of fire overlapping portions of the bow gun field. For offensive purposes, bombs or torpedoes are suspended from the wings just outboard of the engines. When bombs or torpedoes are carried, part of the fuel capacity is unused. From this it is evident that almost any combination and load of bombs may be carried, depending on the quantity of fuel retained.

Structure.

The wing, hull, auxiliary floats and tail fins are of riveted aluminium alloy monocoque construction.

WING.

The wing structure is of the beam bulkhead and stressed-skin type and consists of 3 parts, namely: a centre section, carrying the engine nacelles and fuel tanks, and two outer panels, the latter carrying the auxiliary floats. The aerodynamically and statically balanced ailerons are of aluminium alloy construction with fabric covering.

HULL.

The hull structure, including bulkhead, framing stringers and skin, is of aluminium alloy. It is divided into water-tight compartments. An unobstructed passage is provided inside the hull from the bow cockpit to the tunnel gun position. The hull is divided up as follows:

a) A combined gunner's and bomber's cockpit in the bow.
b) A double enclosed cockpit for a pilot and co-pilot operating side by side.
c) A radio and navigator's compartment.
d) An engineer's compartment.
e) A living compartment.
f) A rear top gun position.
g) A rear tunnel gun position in the bottom of the hull.

NACELLES.

The engines are mounted on each side of the centre line of the airplane on nacelle structures of welded chrome-molybdenum steel tubing. The N.A.C.A.-type cowlings are provided with controllable skirt flaps.

CONTROLS.

Dual control consisting of steering column, control wheel and pedals. Control system by means of cables.

All usual instruments and equipment are mounted in the pilot's cockpit, radio navigator compartment and in the engineer's station.

TAIL PLANES

The vertical and horizontal fixed tail surfaces are full cantilever monoplane structures, attached to fin structures, built integral with the hull.

CONSOLIDATED PBY (MODEL 28) - PERFORMANCE SUMMARY

==========oooOooo==========

The stabilizer and fin are of aluminium alloy, covered with smooth sheeting.

Elevator and rudder are of aluminium alloy construction with fabric covering. Both are provided with controllable tabs.

WING TIP FLOATS.

The wing tip floats are of aluminium alloy, each being divided by bulkheads into three compartments.

They are retracted by means of a patented electrically and mechanically operated screw mechanism and form the wing tips in the retracted position.

POWER PLANT.

The PBY is powered with Pratt & Whitney or Wright Cyclone engines. Three-blade, hydraulically operated constant-speed c.p. airscrews are used.

The normal fuel capacity amounts to 1750 U.S. Gallons (6620 litres), stored in 2 tanks, located in the wing center, with 2 oil tanks of about 160 U.S. Gallons (600 litres) located behind the engines, one in each nacelle.

ARMAMENT.

The armament is as follows:

1 movable gun in the bow	with 1,000 rounds
2 movable guns in the rear cockpit	" 2,000 rounds
1 movable gun in the tunnel position	" 500 rounds

Bomb racks for a bomb load of 4,000 lbs. (1816 kg), which may be divided as follows:

4 bombs of 1000 lb. (454 kg)

or 8 bombs of 500 lb. (227 kg)

or 2 torpedoes of 2000 lb. (908 kg)

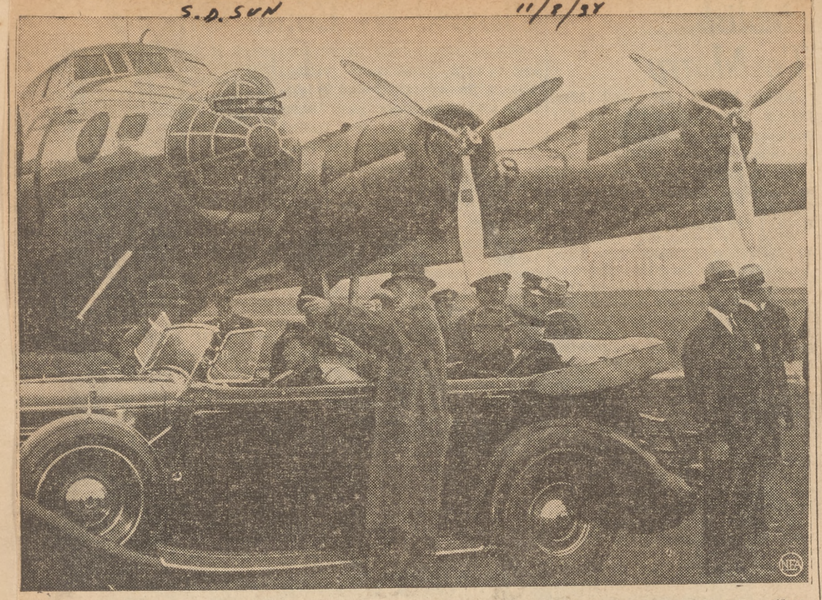
President Attends War Bird Show

S.D. SUN 11/2/38



The flower of the Army's and the Navy's air equipment was put on display in Washington the other day for inspection of the President of the United States. Included in the show was the Navy's new $1,000,000 experimental bomber, built by Consolidated Aircraft Corp., of San Diego, the Army's new six-mile-a-minute pursuit plane and the latest of the "flying fortress," seen in the photo above. Picture shows the President in the back seat of the automobile with Brig. Gen. Henry H. Arnold, new chief of the Army Air Corps. Col. Ed Starling (pointing) chief of the White House Secret Service, was in the Presidential party.

MILLION-DOLLAR AIRLINE SLATED

New York Capitalists Back Enterprise

S.D. Sun 11/4/38

Nearly one million dollars will be required to finance experimental transatlantic flight of a twin-engined Consolidated PBY-4 plane next spring and summer, it was revealed here today.

SHARES OFFERED

To raise this sum, a banking group headed by Lehman Bros. of New York, will offer 88,000 capital shares of stock at $10.50 a share.

The operating company to benefit from this transaction will be American Export Airlines, which last September announced the purchase in San Diego of a Consolidated long-range airboat for the survey flights between the United States, Europe and Africa.

NEW COMPETITION

Eventually this line, a subsidiary of American Export Lines, operators of steamships to Mediterranean and Black Sea ports for the last 20 years, will establish a transatlantic service in competition with Pan-American Airways.

Consolidated engineers have submitted specifications for a 100-passenger super-plane for use by the new airline when regular schedules are under way.

Flying Fortress Near Albuquerque On Flight to S. D.; Bucks Winds

The navy's new $1,000,000 Consolidated-built "flying fortress," winging its way to San Diego on a nonstop flight from Washington, D. C., was 107 miles east of Albuquerque, N. M., at 2 p.m., North Island Air station authorities reported.

The trip west was reported as without incident up to that point. The giant seaplane had been bucking headwinds en route, but was maintaining its schedule. Lt. Comdr. A. Crinkley, in command of the air giant, expected to fly it over the city about 7 p.m., completing the journey in about 15 hours.

HOP WEST BEGUN BY GIANT S. D. NAVY BOMBER

S.D. TRIBUNE 11/9/38

The navy's new $1,000,000 experimental "flying fortress," which Oct. 28 successfully completed a spectacular nonstop flight to Washington, D. C., today was winging its way westward on the return journey here. North Island air station authorities reported the big patrol bomber was over Elk City, Okla., at 1 p.m.

The Consolidated-built air giant left the nation's capital at 3:45 a.m., Pacific standard time. While the flight east was made in the fast time of 14 hours, authorities believed that the return journey may take an hour longer because of headwinds. If this estimate is correct, the big

Giant Navy Plane Off On Return to S. D.

CONTINUED FROM PAGE ONE

seaplane should be over San Diego about 7 p.m.

Ten in Crew

The ship was under command of Lt. Comdr. A. Crinkley and carried a crew of nine. Crinkley was at the controls when the plane established its record on the nonstop flight to Washington.

The patrol bomber, which experts believe will become the navy's most potent aerial weapon, has a wingspread of 115 feet. Its hull is 77 feet long and it is driven through the skies by four 1250-horsepower engines. With a crew of 15 and carrying a deadly bomb "payload," the craft has a range of some 4000 miles.

Built at the local Consolidated plant under the designation XPB2Y1, the huge ship underwent rigid tests over the bay here before being turned over to the navy. Success of the cross-country flights may result in the purchase of a number of similar planes by the navy, it was believed.

Bomber Battles Winds, Spans U.S. in 15 Hours

S.D. UNION 11/10/38

Lands Here Safely After Hazardous Hop From Potomac

Battling strong head winds over the greater part of the transcontinental airway, the navy's experimental $1,000,000 long-range bomber XPB2Y-1, with Lt. Comdr. Andrew Crinkley at the controls, landed in the harbor at 6:55 last night after a flight of 15 hours and 10 minutes from Anacostia, D. C.

The bomber took off from the Potomac river opposite Anacostia Naval Air station at 3:45 a.m., Pacific time. In a sustained flight from San Diego to the national capital on Navy day, the four-motored "flying battleship" covered the 2240 miles in 13 hours and 50 minutes.

LIGHTS AID LANDING

Darkness had set in long before the airboat reached San Diego from its second thrilling flight across the continent, a trip particularly hazardous because the plane is not fitted with wheels. To facilitate alighting safely on the waters of the bay, the brilliant landing lights on the north beach of the Naval Air station were turned on.

Accompanying Comdr. Crinkley on the westward flight were Lts. C. H. Duerfeldt and E. J. Sanders, co-pilots; G. K. Herman, chief radioman; C. R. Roos, aviation machinist mate 1c; Albert H. Geck, aviation machinist mate 1c; J. A. Peters, chief machinist mate; F. R. Vanderhoef, radioman 1c, and William Wheatley, chief test pilot, Consolidated Aircraft Co., builders of the plane.

IN RADIO COMMUNICATION

From the moment of take-off until arrival at San Diego the bomber, which has a wing spread of 115 feet and the hull of which is 78 feet long, was in constant radio communication with the air station. The plane backtracked over the same route traversed in the eastward flight.

At 1 p.m., mountain standard time (noon, Pacific time), Comdr. Crinkley radioed the plane was 22 miles northwest of Amarillo, Tex., and two hours later it was smashing through the airlanes 100 miles west of Albuquerque. It then swept into the Arizona airways.

Comdr. Crinkley, pioneer airman, and his airmates have the distinction of having within a fort-night eaten breakfast the same day in San Diego and dinner in Washington, and breakfast in Washington and dinner in San Diego. The average speed of the "flying battleship" on its westward voyage was 140 knots an hour.

According to naval aviation authorities, yesterday's flight concluded the bomber's final acceptance trials. During its stay at Washington it was inspected by President Roosevelt. It is reported the huge plane will become the "flying flagship" of Rear Adm. Charles Blakely, Scouting Force aircraft commander, during the fleet maneuvers in the Caribbean and Atlantic starting in January. In Fleet Problem 20 more than 100 long-range bombers will operate with the Scouting Force, including the patrol wings based at San Diego and Coco Solo, C.Z.

EQUIPMENT ARRIVES FOR CONSOLIDATED

S.D. SUN 11/3/38

Modernization of Consolidated Aircraft Corp. plant equipment in preparation for manufacture of new type airboats is being effected, it was revealed today.

Four large drop hammers, ranging in weight from 11,000 to 68,000 pounds were unloaded from the Quaker freighter San Bernardino yesterday. Last month, a 15-ton drop hammer and 10,000-pound machine part were delivered to Consolidated by the freighter San Anselmo.

PLANES PASSE IN NEW GUINEA; AUTO REAL THRILL

S.D. Union 11/1/38

Natives of New Guinea are exhibiting more interest in an automobile which recently was shipped to Hollandia from Java than in the American Museum of Natural History's "flying laboratory," according to word received by short wave yesterday from Richard H. Archbold, explorer-aviator.

Archbold, who flew from San Diego to New Guinea last June, reported, due to lack of roads through the jungles, the automobile engine is to be used as a power plant for an ice cream refrigerator. He said that mail is reaching the scientific expedition's main base at Hollandia once a month by steamer from Batavia. On the return voyage the vessel carries specimens of bird and animal life collected by Archbold and his associates for transshipment to New York.

CONSOLIDATED NEAR END OF NAVY WORK

S.D. SUN 11/16/38

Current Year Deliveries To Total Close To $12,000,000

On the final lap in its $19,000,000 worth of work on 209 Navy PBY bombers, Consolidated Aircraft Corp. has a backlog of unfilled orders totalling $4,600,000, it was learned today.

Deliveries of planes and parts during the current year will total about $12,000,000, approximately the same amount as that of last year, with 70 per cent of the work performed for the Navy and the remainder comprising spare parts and miscellaneous sales.

Up to Nov. 1, total value of the concern's 1938 deliveries was $10,300,000. Thus, with an estimated, $1,700,000 to be completed by Jan. 1, Consolidated's backlog at the opening of 1939 will be only $2,900,000—one of the lowest figures in the company's history.

The plant is working on its last Navy PBY contract—for 33 PBY-4 type planes, most of which will be assigned to Patrol Squadrons 1 and 18, now training at North Island for a non-stop mass flight to Pearl Harbor early next year.

In the four months prior to Nov. 1, Consolidated booked approximately $500,000 business, with the greatest part of this believed to be a replica of its PBY bombers to American Export Airlines for use in trans-Atlantic survey flights next spring and summer.

1320 Men Work On S. D. Planes For U. S. Fleet

S.D. UNION 11/17/38

With 1320 men still employed at Consolidated Aircraft corp., workmen are rushing to completion the last 24 twin-motored bombers scheduled for delivery prior to March 1, it was announced yesterday at the Lindbergh field plant.

Consolidated now has built for the navy 209 bombers, which, with spare parts, totaled $25,000,000. The ships have been under construction three years.

According to word from the navy department, bids will be called for next month for construction of eight to 12 four-motored bombers such as were recently constructed by Consolidated and Sikorsky. Each of these ships will cost between $800,000 and $900,000. Consolidated expended $1,000,000 in building the XPB2Y—1, which finished its tests.

S.D. TRIBUNE

Ends New Hop Across Nation

11/11/38

Completing its return transcontinental flight to San Diego at 6:55 p.m. yesterday, a huge experimental bombing plane, built by Consolidated Aircraft Corp. here as a bid for use by the navy of four-motored bombers of its type, remained tied up at a buoy in the harbor today. The plane, which bears the designation XPB2Y-1, made its westward flight in 15 hours, 10 minutes from Anacostia, D. C. Two weeks ago today it flew non-stop from here to Anacostia in 13 hours, 50 minutes.

The XPB2Y-1, which was launched here last December after it had been built at a cost of $1,000,000, was inspected by President Roosevelt while it was at the Anacostia naval air station. The huge bomber has a wing span of 115 feet, is 77 feet 3 inches in length, and stands 28 feet 3 inches high. It has retractable wing tip floats which "streamline" into and form the tips of the wings in flight.

Lt. Comdr. Andrew Crinkley, navy flier, was at the controls on both transcontinental flights. With him when the plane settled to a landing on San Diego bay last evening were Lts. C. H. Duerfeldt and E. J. Sanders, co-pilots; G. K. Herman, chief radioman; C. R. Roos, aviation machinist mate 1c; Albert H. Geck, aviation machinist mate 1c; J. A. Peters, chief machinist mate; F. R. Vanderhoef, radioman 1c, and William Wheatley, chief test pilot of the Consolidated Aircraft Corp.

Head winds were encountered by the plane on its flight yesterday. Throughout the 2240-mile flight constant radio communication was maintained with San Diego naval aviation authorities. The plane left Anacostia at 3:45 a.m. (PST). At noon (PST) it was 22 miles northwest of Amarillo, Tex. For the landing at San Diego night landing lights were turned on at the north beach of the naval air station.

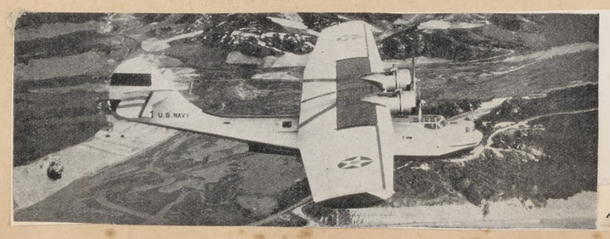
S.D. UNION 11/4/38

Navy's Huge Bomber May Return Tonight

Although no official word has been received at Naval Air station, possibility was expressed yesterday the navy's new experimental bomber which flew from San Diego to Anacostia, D. C., Navy day in 13 hours 50 minutes will return here tonight.

Weather permitting, the huge 4-motored 25-ton bomber with a crew of 11 will take off from Potomac river early today, backtracking the route it followed on the eastward flight.

Lt. Comdr. Andrew Crinkley will be at the controls.



Consolidated PBY-1, 2 Bomber

The brilliant performance of the Consolidated patrol boats of the U. S. Navy is too well known to bear repetition. Power plant is 2—1,000 hp. Pratt & Whitney Twin Wasp engines. Dimensions (PBY-1) are: span, 104 ft.; length, 54 ft. 10 in.; height, 17 ft. 9 in. Performance figures have not yet been released.
